CITY OF ROSEVILLE
CALIFORNIA

AGENDA
April 16, 2025

CITY COUNCIL
6:00 p.m.
Council Chambers
311 Vernon Street
Roseville, CA
www.roseville.ca.us

THE CITY OF ROSEVILLE WELCOMES YOUR PARTICIPATION

If an agenda item is open to public comment, such public comment shall be addressed to the chair of the meeting.

Public Comment - Speakers have three minutes under Public Comment to speak on issues that are not listed on the agenda and are within the City's jurisdiction. The Brown Act does not permit any action or discussion on items not listed on the agenda.

Consent Calendar - If applicable, the Consent Calendar consists of routine items that may be approved by one motion. Any person can remove an item from the Consent Calendar to be discussed separately.

Agenda Items - Speakers have five minutes to address items that are listed on the agenda.

Levine Act Provisions - The Levine Act requires a Party (or its agent (s)) to a Proceeding before the City of Roseville that involves any action or consideration to their contract, license, permit, or other entitlement for use, to disclose any campaign contribution made to City elected or appointed officers (including Councilmembers, Planning Commissioners, and members of other City boards and commissions) totaling more than $250 within the 12 months before the City decision.

Americans with Disabilities Act - Notify the City Clerk or Secretary at least 72 hours in advance if special assistance is required to participate in a meeting including the need of auxiliary aids or services.

Audio/Visual Presentations - If making a presentation regarding an agenda item, audio/visual materials must be submitted to the City Clerk or Secretary at least 72 hours in advance.

Security procedures are in place to attend Roseville City Council meetings. All attendees must successfully pass through a security metal detector. Any person with a prohibited item will not be allowed entry. Prohibited items include, but are not limited to: firearms (even with valid CCW), knives, pepper spray/mace, explosives of any kind/ any weapons and/or dangerous devices of any kind, illegal drugs and alcohol.

Bids / Purchases / Services

7.1. Roseville Electric Utility - Generation Maintenance Support Services - Contract Purchase Agreement

Memo from Power Generation Superintendent Nathan Ribordy and Electric Utility Director Dan Beans recommending the City Council adopt RESOLUTION NO. 25-095 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PERFORMANCE MECHANICAL, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3004426). Staff requests Council approve a contract purchase agreement with Performance Mechanical, Inc., to provide maintenance support services to Roseville Electric Utility's generation facilities. Staff also requests authorization to exercise the four (4) optional one-year extensions to the contract without further City Council approval. The first-year contract will not exceed $2,000,000. The total cost of the purchase agreement is not to exceed $10,000,000 over five years. Funding is included in the Electric Department's FY2024-25 budget in the Electric Fund. Future year funding will be contingent on City Council's approval of the respective budget.

7.2. East Radio Site Relocation Project - Contract Purchase Agreement

Memo from Information Technology Program Manager Karl Grover and Chief Information Officer Hong Sae recommending the City Council adopt RESOLUTION NO. 25-102 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND E.F. JOHNSON COMPANY, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3004429). Staff requests Council approve a contract purchase agreement with E.F. Johnson Company in the amount of $483,210.79 for the City's East Radio Site Relocation project to enhance system performance, reliability, scalability and coverage. The City's east radio site will be relocated to a new location in order to enhance performance, reliability, scalability and coverage for the City's radio systems. Site construction is in progress and there is a significant effort required post-construction to prepare the site for service. This includes equipment and related services for antenna systems, radio equipment, system optimization and decommissioning of the old radio site. The total cost of the agreement is $483,211 plus a 10% contingency of $48,321 to ensure successful completion. The project is funded by multiple sources including the Strategic Improvement Fund, Public Facilities Fund and Information Technology Replacement Fund.

CONTACT: Karl Grover 916-774-5145 kgrover@roseville.ca.us

7.3. Microtransit Vans - Purchase Order Amendment

Memo from Assistant Transportation Planner Zachary Presley and Public Works Director Jason Shykowski recommending the City Council approve an amendment to an existing purchase order with A-Z Bus Sales for the purchase of twelve (12) Ford E-Transit Vans. When this item was initially brought to Council for approval, there were options for the vans that were being finalized and could not be included in the total cost at that time. Some of the optional items included an on-board camera system and an exterior finish. As the vans have made their way through production, staff worked with A-Z bus to prepare an updated quote. The finalized quote that includes the above optional items reflects an increase of $10,005.74 per vehicle for a total increase of $120,068.93. The increased cost of these updates fit within the existing project budgets for the replacement vehicles and the purchase of new vehicles. This $120,068.93 increase would raise the total not-to-exceed amount for the purchase from $2,429,666.64 to $2,549,735.57. Funding for the increase will come from the approved grant funding sources for the projects, with a small match from the state-provided Transportation Development Act funds. No General Fund resources are being used for this purchase.

7.4. Vernon Street/Atlantic Street Multimodal Safety Improvement Project - Approval of Plans and Specifications and Authorization to Call for Bids

Memo from Assistant Engineer Karen Vences and Public Works Director Jason

Shykowski recommending the City Council approve the plans and specifications for the Vernon Street/Atlantic Street Multimodal Safety Improvement Project and authorize staff to call for bids. The project scope includes enhanced pedestrian crosswalks, green bike lanes, pavement rehabilitation, lane reductions, and raised landscaped medians. The project is estimated to cost $1.9 million and will be funded with Highway Safety Improvement Program grant funds, Highway Users Tax funds, and Local Transportation Funds. New landscaping improvements along the corridor will require maintenance by the City's Parks, Recreation and Libraries Department (PRL), and the estimated annual cost increase as a result of the improvements is approximately $2,000 annually in future PRL operating budgets in the General Fund. No General Fund resources will be used for construction of the project.

7.5. Aquifer Storage and Recovery Wells 13 (Campus Oaks) and 19 (Misty Wood) – Approve Plans and Specifications, Design-Assist Construction Agreement, and Budget Adjustment

Memo from Senior Engineer Keith Schmidt and Environmental Utilities Director Sean Bigley recommending the City Council adopt RESOLUTION NO. 25-099 APPROVING A DESIGN-ASSIST CONSTRUCTION AGREEMENT, BY AND BETWEEN AUBURN CONSTRUCTORS, LLC, AND THE CITY OF ROSEVILLE, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE; and adopt ORDINANCE NO. 6929 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2024-25 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. Staff requests Council approval of plans and specifications, a budget adjustment, and approval of a design-assist construction contract for construction of Aquifer Storage and Recovery Wells 13 and 19. The source of funding for this agreement is the Water Construction Fund, as well as a state grant approved by Council on September 20, 2023. The ARTESIAN grant provides this project with $8,010,000 in funding to be utilized by December 31, 2025. A budget adjustment in the amount of $2,950,000 is requested to fully fund the project, including $2,704,000 for capital outlay and $246,000 for internal secondary labor. This budget adjustment will bring the current project budget of $16,625,865 to a new total project cost of $19,575,865, using available funds in the Water Construction Fund.

7.6. Dry Creek Wastewater Treatment Plant Operations and Laboratory Building Project - Approval of Construction Plans and Specifications and Authorize Staff to Call for Bids

Memo from Senior Engineer Inderpreet Chaggar and Environmental Utilities Director Sean Bigley recommending the City Council approve the construction plans and specifications and authorization to advertise the Dry Creek

Wastewater Treatment Plant Operations and Laboratory Building (Project) for contractor bidding. The estimated construction cost of this project is $16,884,014. The Project will be funded from available resources in the Wastewater Regional Rehabilitation Fund for the rehabilitation portion of the project and from the capital improvement project budget approved by the South Placer Wastewater Agency for the building expansion.

7.7. Maintenance of the Gas Conditioning Systems at the Dry Creek and Pleasant Grove Wastewater Treatment Plants – Sole Source Contract Purchase Agreements

Memo from Administrative Technician Audrey Ficker and Environmental Utilities Director Sean Bigley recommending the City Council adopt RESOLUTION NO. 25-088 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND UNISON SOLUTIONS, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3004434); and adopt RESOLUTION NO. 25-089 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND UNISON SOLUTIONS, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3004433). Staff requests Council approval of two (2) sole source contract purchase agreements including four (4) additional one-year renewals with Unison Solutions, Inc. to provide filtering media replacement and parts, gas testing, and media change out and support services for the maintenance of the gas conditioning systems at the Dry Creek and Pleasant Grove Wastewater Treatment Plants. Sourcing the replacement filtering media, replacement parts, and the media change out, gas testing, and support services from the equipment manufacturer guarantees the certified performance of the system as designed. The estimated total cost of the two contract purchase agreements for the first year is $930,000, and the total not-to-exceed cost including the renewals for both agreements is $5,710,000. Funding will be provided from the Environmental Utilities Department's annual approved budgets for the Wastewater Operations Fund.

7.8. Distribution Transformers (RFQ 10-3385) - Purchase Orders

Memo from Buyer Sue Jessup and Finance Director Scott Pettingell recommending the City Council adopt RESOLUTION NO. 25-090 APPROVING PURCHASE ORDERS FOR DISTRIBUTION TRANSFORMERS. Staff requests Council authorize open purchase orders with Anixter, Inc., First Philec, Inc., Hyundai Corporation USA, Mader Supply LLC, and Next Gen Power, Inc. as the lowest responsive and responsible bidders for the purchase of distribution transformers in response to Request for

Quotations No. 10-3385. Funding is included in the Electric Fund budget. The total spend for the initial contract period and optional renewal years through FY2028-29 is a not-to-exceed amount of $9,500,000. The bid allowed for four optional renewal years at one-year intervals. Staff requests authorization to continue utilizing the remaining optional renewal years without further Council approvals until the contract expires, or until City staff determines that continuing with the same vendors is not in the City's best interest.

Resolutions

7.9. 2025/2026 Landscaping and Lighting Districts Assessments - Initiate Proceedings, Intent to Levy, Approval of Engineer's Reports

Memo from Management Analyst Jeannine Thrash and Finance Director Scott Pettingell recommending the City Council adopt RESOLUTION NO. 25-106 INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE HISTORIC DISTRICT LANDSCAPING AND LIGHTING DISTRICT, FOR FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-107 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE HISTORIC DISTRICT LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-108 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE HISTORIC DISTRICT LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-109 INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE INFILL AREA LANDSCAPING AND LIGHTING DISTRICT, FOR FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-110 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE INFILL AREA LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-111 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE INFILL AREA LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-112 INITIATING PROCEEDINGS FOR THE LEVY OF ASSESSMENTS FOR THE JOHNSON RANCH LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-113 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE JOHNSON RANCH LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-114 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE JOHNSON RANCH LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026;

and adopt RESOLUTION NO. 25-115 INITIATING PROCEEDINGS FOR THE LEVY OF ASSESSMENTS FOR THE NORTH CENTRAL ROSEVILLE SPECIFIC PLAN LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-116 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE NORTH CENTRAL ROSEVILLE SPECIFIC PLAN LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-117 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE NORTH CENTRAL ROSEVILLE SPECIFIC PLAN LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-118 INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE NORTHWEST ROSEVILLE SPECIFIC PLAN LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-119 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE NORTHWEST ROSEVILLE SPECIFIC PLAN LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-120 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S LEVY REPORT FOR THE NORTHWEST ROSEVILLE SPECIFIC PLAN LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-121 INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-122 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-123 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE OLYMPUS POINTE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-124 INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, FOR FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-125 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-126 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE RIVERSIDE AVENUE LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-127 INITIATING PROCEEDINGS FOR THE ANNUAL LEVY OF ASSESSMENTS FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, FOR FISCAL YEAR 2025/2026, PURSUANT TO THE PROVISIONS OF

PART 2 OF DIVISION 15 OF THE CALIFORNIA STREETS AND HIGHWAYS CODE; and adopt RESOLUTION NO. 25-128 DECLARING ITS INTENTION TO LEVY ANNUAL ASSESSMENTS FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026; and adopt RESOLUTION NO. 25-129 FOR PRELIMINARY APPROVAL OF THE ENGINEER'S ANNUAL LEVY REPORT FOR THE VERNON STREET LANDSCAPING AND LIGHTING DISTRICT, FISCAL YEAR 2025/2026. Staff requests Council adopt resolutions relating to annual landscaping and lighting district assessments. These landscaping and lighting Districts were formed within the City to levy and collect assessments for maintenance of public improvements pursuant to the Landscaping and Lighting Act of 1972, Part 2 of Division 15 of the Streets and Highways Code Sections 22500, et seq., and Article XIII D of the California Constitution. All charges are needed to fully fund landscape services in each Landscaping and Lighting District. There is no fiscal impact to the General Fund.

7.10. Sales Tax Revenue Consulting Services - Professional Services Agreement Amendment

Memo from Budget Manager Nancy Rothlisberger and Finance Director Scott Pettingell recommending the City Council adopt RESOLUTION NO. 25-096 APPROVING A FOURTH AMENDMENT TO PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND MUNISERVICES, LLC, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve a fourth amendment to the professional services agreement with MuniServices, LLC to provide sales tax and transactions and use tax auditing, projection, recovery, and consultant services. The agreement is structured to only compensate MuniServices, LLC based on the amount of additional revenues received by the City due to their audit and recovery services. This additional (and final) one-year extension will increase the total not-to-exceed amount from $1 million to $1.25 million. The additional sales and use tax revenues that the City receives for the General Fund from these services more than offsets the cost.

File #: 0210

CONTACT: N. Rothlisberger 916-774-5314 nrothlisberger@roseville.ca.us

7.11. Municipal Advisor Services - Professional Services Agreements

Memo from Management Analyst Jeannine Thrash and Finance Director Scott Pettingell recommending the City Council adopt RESOLUTION NO. 25-091 APPROVING A PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND FIELDMAN, ROLAPP & ASSOCIATES, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE; and adopt RESOLUTION NO. 25-092 APPROVING A PROFESSIONAL SERVICES

AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PFM FINANCIAL ADVISORS LLC, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff recommends Council approval of professional services agreements with Fieldman, Rolapp & Associates, Inc. and PFM Financial Advisors LLC for Municipal Advisor Services. Staff issued a Request for Proposals for Municipal Advisor Services in December 2024, receiving several proposals. After reviewing submissions and interviewing top-ranked proposers, City staff selected the two consultants to support the City's financial needs. The agreements have a not-to-exceed amount of $500,000 and $350,000, respectively, and both contracts expire June 30, 2028, with two options to extend in one (1) year increments for up to an additional two (2) years. This fee covers financial advisory services related to bond issuances and is structured based on the amount and type of bonds issued. These expenses are categorized as bond issuance costs, with the total amount dependent on the number of bond issuances each year.

7.12. Five Star Intertie Improvement Project – Agreements

Memo from Assistant Engineer William Montz and Environmental Utilities Director Sean Bigley recommending the City Council adopt RESOLUTION NO. 25-103 APPROVING AN AGREEMENT, BY AND BETWEEN PLACER COUNTY WATER AGENCY AND THE CITY OF ROSEVILLE, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE; and adopt RESOLUTION NO. 25-104 APPROVING AN AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND SIERRA NATIONAL CONSTRUCTION, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approval of an agreement with Placer County Water Agency for construction, operation and maintenance of the Five Star Intertie Improvements Project. Staff also requests approval of an award of a construction agreement with Sierra National Construction, Inc. in the amount of $698,640 and authorization for the City Manager or his designee to approve and pay for contract change orders for the project that could increase the contract amount by no more than 10% ($69,864), for a not-to-exceed total contract amount of $768,504. This project will be funded from available resources in the Water Construction Fund. The Water Construction Fund is funded by water connection fees paid for by developers.

7.13. Sewer System Management Plan Recertification

Memo from Wastewater Utility Manager Tracie Mueller and Environmental Utilities Director Sean Bigley recommending the City Council adopt RESOLUTION NO. 25-097 RECERTIFICATION OF THE CITY OF

ROSEVILLE SEWER SYSTEM MANAGEMENT PLAN. Staff requests Council approve the recertification of the City's Sewer System Management Plan (SSMP), which is required by the California State Water Resources Control Board's Statewide General Waste Discharge Requirements. The costs for compliance for all elements of the SSMP are funded annually through the Wastewater Operations Fund budget.

7.15. On-Call Qualified Stormwater Pollution Prevention Plan Developer and Qualified Stormwater Pollution Prevention Plan Practitioner Services – Professional Services Agreement Amendment

Memo from Senior Park Development Project Manager Heather Buck and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt RESOLUTION NO. 25-093 APPROVING A SECOND AMENDMENT TO ON-CALL PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND HYDROCOMPLIANCE, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve the second amendment to the contract increasing the annual authorization for the current term from $75,000 to $150,000. Additionally, staff requests authorization to increase the annual authorization for the final renewal from $75,000 to $150,000. Funding for services shall be provided through capital improvement projects as approved during the fiscal year budgets, an approved professional services budget, or developer reimbursements. Project specific quotes will be obtained prior to the start of any work. The base year contract was not to exceed $75,000. With the increase in authorization for the first optional year extension and the final optional year extension of $150,000 per year, the updated total contract will be not to exceed $375,000.

CC #: 3835

7.18. 201 Pacific Street, Second Floor - Lease Agreement

Memo from Economic Development Project Manager Robert Cline and Economic Development Director Melissa Anguiano recommending the City Council adopt RESOLUTION NO. 25-100 APPROVING A LEASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND TEN TWENTY-THREE LLC DBA TEN TWENTY 3D, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve a three (3) year lease agreement with Ten Twenty 3D for the second floor of 201 Pacific Street. The Roseville Train Station, owned by the City, is located at 201 Pacific Street and within the Downtown Roseville Specific Plan. Ten Twenty 3D has occupied the second floor of the train station since the lease assignment, and approval of the proposed lease agreement will formalize the agreement and the terms of understanding set forth in the lease assignment. Execution of the lease agreement would result in a positive fiscal impact of $7,224 in rent revenue for the General Fund in the first year, $7,704 in year two, and $8,196 in year three. In addition to annual rent, the tenant will pay

property tax on the leased space.

Ordinances (for introduction and adoption - appropriation/urgency measures)

7.20. International Brotherhood of Electrical Workers, Local 1245 - 2025 Labor Market Wage Adjustments and Staffing Update

Memo from Human Resources Manager Macy Dippert and Human Resources Director Stacey Peterson recommending the City Council adopt ORDINANCE NO. 6932 AMENDING ORDINANCE 6872, THE SALARY ORDINANCE FOR PERSONNEL REPRESENTED BY THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 1245, AS AMENDED BY APPENDIX “J” TO BE EFFECTIVE MAY 3, 2025, AS AN URGENCY MEASURE; and adopt RESOLUTION NO. 25-130 APPROVING A SIDE LETTER TO THE MEMORANDUM OF UNDERSTANDING FOR EMPLOYEES REPRESENTED BY THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 1245, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff recommend Council adopt an ordinance to approve the updated International Brotherhood of Electrical Workers, Local 1245 (IBEW) A & B (Appendix J) salary schedules to reflect labor market adjustments effective May 3, 2025, and adopt a resolution authorizing the City Manager to execute the side letter agreement with IBEW Local 1245 pertaining to the Labor Market Adjustments, and approve the attached citywide allocation schedule, effective May 3, 2025. The City engaged a consulting firm to conduct a compensation study of benchmark International Brotherhood of Electrical Workers, Local 1245 (IBEW) classes in the Electric, Environmental Utilities and Public Works

departments in accordance with the provisions in the current IBEW Memorandum of Understanding, to determine labor market driven adjustments to remain competitive in the labor market. The average percentage wage increases for the IBEW bargaining group is 4.55%. Further, the Public Works Department's Fleet Services Division has requested an additional Fleet Services Supervisor position be added to the allocation schedule. The estimated total cost to the Electric, Fleet Services, Water Operations and Wastewater Operations enterprise funds for the recommended labor market adjustments and staff change is $248,852 for the remainder of FY2024-25 and $1,548,062 annually ongoing.

7.22. Community Facilities Districts and Lighting and Landscape District - Budget Adjustment

Memo from Parks & Open Space Superintendent Eric Dexter and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt ORDINANCE NO. 6928 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2024-25 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. Staff requests Council approval of a budget adjustment in three special district areas totaling $47,000. The recommended budget adjustment will provide resources to increase the repairs and maintenance budgets to repair soundwall damage due to accidents in the Infill Lighting and Landscape District (LLD), Zone C, and the Creekview Community Facilities District (CFD) No. 2 (Public Services), and to increase the budget for a landscape project in Longmeadow CFD No. 2 (Services District). Funding is available in the Infill LLD, Zone C; Creekview CFD No. 2 (Public Services); and Longmeadow CFD No. 2 (Services District). There is no impact on the General Fund.

7.23. Vehicle Purchase – Budget Adjustment

Memo from Parks, Recreation & Libraries Superintendent Rob Nakamura and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt ORDINANCE NO. 6930 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2024-25 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. Staff requests Council approve a budget adjustment in the amount of $158,000 for the purchase of two (2) motorized utility carts, one (1) trailer-mounted pressure washer, one (1) electric golf cart and one (1) electric utility cart to support the maintenance and the operations of the soccer complex. The vehicles will support the maintenance and operations of the soccer complex which is scheduled to open in late 2025. Funding is available from the Soccer Complex project budget using the Citywide Park - West Roseville Specific Plan Fund.

9. PUBLIC HEARING

NOTICE TO THE PUBLIC

City Council, when considering the matter scheduled for hearing, will take the following actions:

1. Open the Public Hearing
2. Presentation by Staff
3. Presentation by applicant or Appellant
4. Accept Public Testimony
5. Appellant or Applicant Rebuttal Period
6. Close the Public Hearing
7. City Council Comments and Questions
8. City Council Action

In the future, if you wish to challenge in court any of the matters on this agenda for which a public hearing is to be conducted, you may be limited to raising only those issues, which you, or someone else raised orally at the Public Hearing or in written correspondence received by the City on or before the hearing.

Public Hearings listed for continuance will be continued as noted and posting of this agenda serves as notice of continuation.

9.1. Adoption of a Schedule of Maintenance Costs and Charges for Community Facilities Districts

Memo from Management Analyst Jeannine Thrash and Finance Director Scott Pettingell recommending the City Council adopt RESOLUTION NO. 25-087 ADOPTING A SCHEDULE OF MAINTENANCE COSTS AND

CHARGES FOR COMMUNITY FACILITIES DISTRICTS. Staff requests Council approve and adopt the Schedule of Maintenance Costs and Charges for Maintenance Community Facilities Districts effective July 1, 2025, through June 30, 2026. The Schedule of Maintenance Costs and Charges for Maintenance Community Facilities Districts (CFDs) identifies costs for services provided by the City at the request of, or on behalf of, individual districts, as opposed to the public at large, and is reviewed annually. The Schedule of Maintenance Costs and Charges for Maintenance CFDs is intended to target full cost recovery in a fair and reasonable manner for all future maintenance CFDs, and annexations into existing maintenance CFDs, once implemented. The proposed schedule of costs and charges, effective July 1, 2025, through June 30, 2026, is based on the results of a study completed in FY2024-25. The fees currently in place are sufficient to recover approximately 90-98% of the City's service district maintenance costs. The adjusted fees are intended to recover 100% of the maintenance costs. Fiscal impact will be dependent on the number of future districts formed and the array of maintenance activities required for each district. For illustrative purposes, for every ten (10) acres of parks/streetscape to be maintained for a new service district, adjusted fees would recover an additional $1,369 per acre, per year.

9.3. 2025 Weed Abatement - Public Hearing

Memo from Fire Division Chief Michael Bradley and Fire Chief Ryan Harrigan recommending the City Council adopt RESOLUTION NO. 25-086 ORDERING THE DESTRUCTION OR REMOVAL OF ALL WEEDS, DIRT, RUBBISH, AND/OR RANK GROWTHS WITHIN THE CITY OF ROSEVILLE AND OVERRULING ANY AND ALL OBJECTIONS THERETO. Staff requests Council approve the second and final step necessary to initiate the 2025 Weed Abatement Program. Owners of private parcels that are abated by the City are responsible for the costs associated with providing abatement services. A bill is sent to each property owner detailing the abatement costs, as well as an administrative fee. If the property owner fails to pay the bill, the City places a

lien on the subject property and the monies owed are reimbursed through the property tax collection process.

Title: Proclamation - National Donate Life Month April 2025
Contact: Blair Hutchison 916-774-5266 bmhutchison@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 5.2.

RECOMMENDATION TO COUNCIL

Proclaim April 2025 as National Donate Life Month and encourage all residents to register their decision to be an organ, eye and tissue donor in the National Donate Life Registry at DonateLifeCalifornia.org or at your local California DMV.

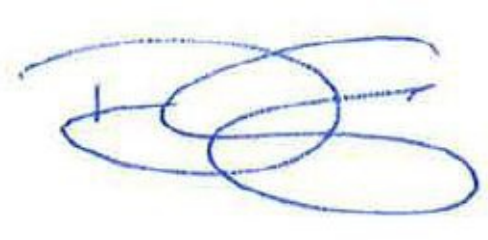
BACKGROUND

Not applicable.

FISCAL IMPACT

Not applicable.

ENVIRONMENTAL REVIEW



The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Ceremonial documents meet the above criteria and are not subject to CEQA. No additional environmental review is required.

Description

National Donate Life Month April 2025

Proclamation

NATIONAL DONATE LIFE MONTH
APRIL 2025

WHEREAS, more than 100,000 Americans and nearly 20,000 Californians are currently on the national transplant waiting list; and

WHEREAS, another person is added to the waiting list every eight minutes, and, on average, 17 people die each day while waiting for a lifesaving organ transplant; and

WHEREAS, Sierra Donor Services serves at the center of a dynamic, interconnected system that involves donor families, local hospitals, and transplant centers across Northern California, including the greater Sacramento region, in the delicate and time-sensitive mission of saving lives through transplant; and

WHEREAS, in 2024, Sierra Donor Services had its second-highest record year after almost four decades, making 912 organ transplants possible thanks to the selfless generosity of 170 Northern California organ donor heroes. A total of 426 tissue donors, including musculoskeletal and heart valve donors, contributed to saving and improving lives. Sierra Eye Bank provided 384 corneas from these donor heroes, restoring sight to many people.

WHEREAS, organ transplants have directly impacted the lives of Roseville residents, as several transplant recipients live in Roseville and continue to spread the importance of registering to become an organ, eye, and tissue donor.

NOW, THEREFORE, I, KRISTA BERNASCONI, MAYOR OF THE CITY OF ROSEVILLE, CALIFORNIA, do here by proclaim **April 2025** as **NATIONAL DONATE LIFE MONTH** and encourage all residents to register their decision to be an organ, eye and tissue donor in the National Donate Life Registry at DonateLifeCalifornia.org or at your local California DMV.

SIGNED AND APPROVED this 16th day of April 2025.

Title:	Roseville Electric Utility - Generation Maintenance Support Services - Contract Purchase Agreement
Contact:	Nathan Ribordy 916-746-1673 nribordy@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.1.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution authorizing the City Manager to execute a contract purchase agreement (3004426) with Performance Mechanical, Inc., to provide maintenance support services to Roseville Electric Utility's generation facilities. Staff also requests authorization to exercise the four (4) optional one-year extensions to the contract without further City Council approval, provided that the applicable budget is approved by the City Council, or until staff determines that continuing with this vendor is not in the best interest of the City.

BACKGROUND

Roseville Electric Utility owns and operates approximately 260 MW of generating facilities which includes the Roseville Energy Park, Roseville Peakers, and Roseville Power Plant #2. In addition to our own staff expertise to maintain these facilities, the electric utility often relies on the support of contractors to provide supplemental and specific maintenance support. This can include a comprehensive range of services, including but not limited to unique maintenance, repairs, specialized welding, testing of power plant equipment and systems, as well as additional engineering support to meet the overall maintenance needs of the generating facilities.

In order to continue the important maintenance support services needed for our generating facilities, Roseville Electric Utility solicited proposals through a Request for Proposals (RFP) 07-108 for generation maintenance support services. Two (2) vendors responded to the RFP. After determining the vendors were responsive and responsible, the evaluation team reviewed and scored the proposals, finding Performance Mechanical, Inc., to be the most suitable vendor to provide the requested scope of services based on their safety, quality, demonstrated experience, completeness of proposal, and price.

FISCAL IMPACT

This contract purchase agreement is for work on an as-needed basis for a period of one year, with four (4) optional one-year extensions. The initial contract cost will not exceed $2,000,000, with $2,000,000 per year for the optional renewal years. The total not-to-exceed costs for the full term

is $10,000,000. Funding is included in the Electric Department's FY2024-25 budget in the Electric Fund. Future year funding is contingent on City Council's approval of the respective budget each year.

ENVIRONMENTAL REVIEW

The proposed project involves the repair, maintenance, and minor alteration of existing facilities. This activity is categorically exempt from CEQA as a Class 1 Exemption (State CEQA Guidelines Section 15301). The Exemption has been prepared and no further CEQA action is required.

Contract Purchase Agreement 3004426

Class 1 Exemption

RESOLUTION NO. 25-095

APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PERFORMANCE MECHANICAL, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a contract purchase agreement (3004426) to provide maintenance support services to Roseville Electric Utility's generation facilities, by and between the City of Roseville and Performance Mechanical, Inc., has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is hereby approved and the City Manager is authorized to execute it on behalf of the City of Roseville.

BE IT FURTHER RESOLVED, that the City Manager or his or her designee is authorized to execute four (4) additional one (1) year renewals without further City Council approval, provided that the applicable budget is approved by the City Council, or until staff determines that continuing with this consultant is not in the best interest of the City.

Contract Terms and Conditions

1. To the fullest extent allowed by law, Contractor shall defend, indemnify, and save and hold harmless City, its officers, agents, employees and volunteers from any claims, suits or actions of every name, kind and description brought forth, or on account of, injuries to or death of any person (including but not limited to workers and the public), or damage to property, to the extent caused by Contractor's willful misconduct or negligent act or omission while engaged in the performance of obligations or exercise of rights created by this Agreement, Contractor's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law. The defense and indemnity obligations of this Agreement are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Agreement.

Notwithstanding anything herein or in any related document, in no event shall: (a) either party be liable to the other for any indirect, incidental, special, punitive, exemplary, or consequential damages or lost profits, income, gross revenue, or net revenue regardless of each party's alleged fault or allocation of fault between each other; and (b) contractor's cumulative liability and amount of damages under this agreement, inclusive of the proceeds of any applicable insurance including but not limited to either party's status as an additional insured, exceed ten million U.S. dollars ($10.000.000.00).

2. Contractor is an independent contractor, and shall not be considered an officer, agent or employee of the City.

3. Without the written consent of the City, this Agreement is not assignable by Contractor either in whole or in part.

4. Time is of the essence of this Agreement.

5. At any time during the term of this Agreement, the City has the right to terminate this Agreement, provided Contractor is given thirty (30) days written notice. City's termination shall be without further liability to City; however, Contractor shall be entitled to all costs reasonably incurred prior to the date of termination. Contractor acknowledges that City may terminate this Agreement should funds not be appropriated by its governing body to continue services under this Agreement.

6. This Agreement may only be amended or modified in a writing signed by both parties. It is integrated and contains the complete understanding of the parties.

7. All equipment, supplies and services sold to the City of Roseville shall conform to the general safety orders of the State of California.

8. Unless notified to the contrary, in writing, the City assumes that the Contractor has accepted the work in accordance with the plans and specifications (if any) and agrees to do the work in compliance with this Agreement.

9. All fair employment practices must be adhered to. In addition, if the project referenced on this service agreement is a Public Works project, all prevailing wage laws must be complied with. For prevailing wage contracts over $25,000, copies of certified payroll must be submitted with invoices. Prevailing wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm. In compliance with Labor Code Section 1773.2, as may be amended from time to time, Contractor shall cause a copy of this website to be posted at each jobsite, as applicable.

10. Contractor agrees to the below insurance requirements:

a. Unless otherwise specified, the Contractor shall maintain the policies of insurance outlined in Attachment A, incorporated herein by this reference, in force and effect during the term of this Agreement. The City of Roseville retains sole discretion in determining the types and proper levels of insurance coverage.

b. Form. Contractor shall submit a certificate evidencing such coverage for the period covered by this Agreement in a form satisfactory to Risk Management and the City Attorney, prior to undertaking any work hereunder. Any insurance written on a claims made basis is subject to the approval of Risk Management and the City Attorney.

c. Additional Insureds. Contractor shall also provide a separate endorsement or section of the policy showing City, its officers, agents, employees, and volunteers as additional insureds for each type of coverage, except for Workers' Compensation/Employer's Liability. Such insurance shall specifically cover the contractual liability of Contractor. The additional insured coverage under the Contractor's policy shall be primary and noncontributory, as evidenced by a separate endorsement or section of the policy, and shall not seek contribution from City's insurance or self-insurance. In addition, the additional insured coverage shall be at least as broad as the Insurance Services Office (ISO) CG 20 01 Endorsement. Furthermore, the requirements for coverage and limits shall be:

(1) the coverage and limits specified in this Agreement; or

d. Cancellation/Modification. Contractor shall provide thirty (30) days written notice to City prior to cancellation or modification of any insurance required by this Agreement.

e. Umbrella/Excess Insurance. The limits of insurance required in this Agreement may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of City (if agreed to in a written contract) before City's own insurance shall be called upon to protect it as a named insured.

f. Subcontractors. Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Agreement, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, Contractor shall require its subcontractors to agree to be bound to Contractor and City in the same manner and to the same extent as Contractor is bound to City under this Agreement. Additionally, Contractor shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request.

g. Self-Insured Retentions. All self-insured retentions (SIR) must be disclosed to Risk Management for approval and shall not reduce the limits of liability.

h. Waiver of Subrogation. Contractor hereby agrees to waive subrogation which any insurer of Contractor may acquire from Contractor by virtue of the payment of any loss under a Workers Compensation, Commercial General Liability or Automobile Liability policy. All Workers Compensation, Commercial General Liability and Automobile Liability policies shall be endorsed with a waiver of subrogation in favor of City, its officers, agents, employees and volunteers for all work performed by Contractor, its employees, agents and subcontractors.

i. Liability/Remedies. Insurance coverage in the amounts set forth herein shall not be construed to relieve Contractor of liability in excess of such coverage, nor shall it preclude City from taking such other actions as are available to it under any other provisions of this Agreement or law.

11. Contractor shall comply with all federal, state, and local laws and ordinances, including but not limited to the City's storm water regulations, as may be applicable to the performance of services under this Agreement. Failure to comply with local ordinances may result in monetary fines and cancellation of this Agreement. Refer to www.roseville.ca.us/stormwater for links to more information on the City's storm water regulations.

12. In the event that the terms of any attachment or exhibit conflict with any terms of this Agreement, the terms of this Agreement shall control.

13. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. In the event that any signature is delivered by facsimile transmission or by e-mail delivery of a ".pdf" format data file, such signature shall create a valid and binding obligation of the party executing (or on whose behalf such signature is executed) with the same force and effect as if such facsimile or ".pdf" signature page were an original hereof.

14. If either party commences any legal action against the other party arising out of this Agreement or the performance thereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorneys' fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

15. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

16. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

17. For purposes of this Agreement, the terms "Contractor," "Consultant," and "Supplier" are used interchangeably.

18. If the project referenced on this agreement is a Public Works project, then the following shall apply: No contractor or subcontractor may work on a public works project unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. During the performance of this agreement, Contractor and its subcontractors shall have a continuing legal obligation to maintain current registration with the Department of Industrial Relations. Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

19. Vehicles with a gross vehicle weight rating (GVWR) greater than 8,500 lbs. and light-duty package delivery vehicles operated in California may be subject to the California Air Resources Board (CARB) Advanced Clean Fleets regulations. Such vehicles may therefore be subject to requirements to reduce emissions and air pollutants. For more information, visit the CARB Advanced Clean Fleet webpage at https://ww2.arb.ca.gov/our-work/programs/advanced-clean-fleets.

20. Contractor/consultant's duties and services under this agreement shall not include preparing or assisting the public entity with any portion of the public entity's preparation of a request for proposals, request for qualifications, or any other solicitation regarding a

subsequent or additional contract with the public entity. The public entity entering this agreement shall at all times retain responsibility for public contracting, including with respect to any subsequent phase of this project. Contractor/consultant's participation in the planning, discussions, or drawing of project plans or specifications, if any, shall be limited to conceptual, preliminary, or initial plans or specifications. Contractor/consultant shall cooperate with the public entity to ensure that all bidders for a subsequent contract on any subsequent phase of this project have access to the same information, including all conceptual, preliminary, or initial plans or specifications prepared by contractor pursuant to this agreement.

21. If the project referenced on this agreement is a Public Works project, then the following shall apply: Contractor must submit all claims as defined in and in accordance with the claim resolution process set forth in Section 9204 of the Public Contract Code. Each such claim must be sent to the City by registered mail or certified mail with return receipt requested and must contain reasonable documentation to support the claim. All claims must be received prior to acceptance of the work.

22. Contractor certifies that Contractor, its employees, directors, officers, agents, subcontractors, vendors, and volunteers are not presently debarred, excluded, suspended, declared ineligible, voluntarily excluded, or proposed for debarment, exclusion, suspension, or ineligibility by any federal, state, or local department or agency.

23. The Levine Act (Govt. Code, Section 84308) requires a Party (and its agent(s), if any) to a Proceeding before the City of Roseville that involves any action or consideration related to their contract, license, permit, or other entitlement for use, to disclose any campaign contributions made to City elected or appointed officers totaling more than $250 within the twelve (12) months prior to the City decision and while a proceeding is pending, and includes certain prohibitions on contribution activity thereafter. If applicable campaign contributions have been made by Contractor and/or its agent(s), Contractor is responsible for compliance, including for its disclosure obligations, if any, as further described at: https://www.roseville.ca.us/government/departments/city_clerk/transparency/levine_act.

24. This Agreement may be amended via change order, but only if such change order is made in writing, approved by the City, and signed by both parties.

25. CONTRACTOR agrees to defend and indemnify CITY if, despite the parties intent and practice, any venue, agency, or court with competent jurisdiction determines that CONTRACTOR and/or any of its agents, officers, employees, volunteers, independent contractors, or subcontractors, are characterized as employee(s) of CITY.

    CONTRACTOR and CITY agree that: (a) CONTRACTOR is free from the control and direction of CITY in connection with the performance of the work; (b) CONTRACTOR is providing services directly to CITY; (c) CONTRACTOR has and will maintain at all relevant times a business license; (d) CONTRACTOR maintains a business location that is separate from CITY; (e) CONTRACTOR is customarily engaged in an independently established business of the same nature as that involved in the work performed hereunder; (f) CONTRACTOR actually contracts with other businesses to provide the same or similar services and maintains a clientele without restrictions from CITY; (g) CONTRACTOR advertises and holds itself out to the public as available to provide the same or similar services; (h) CONTRACTOR provides its own tools, vehicles, and equipment to perform the services; (i) CONTRACTOR has negotiated its own rates; (j) CONTRACTOR set its own hours and location of work in accomplishing CITY's on-call needs; and (k) CONTRACTOR has the right to control the manner and means of accomplishing the result desired and exercises its own expert independent judgement.

The supplier named hereon by the acceptance of this order agrees to the provisions of this document titled "Contract Purchase Agreement" and all accompanying terms, conditions, and attachments.

Insurance Submission Process

The City of Roseville Human Resources/Risk Management Department uses a service called EBIX to manage our insurance certificate tracking.

How It Works

- The vendor's contact information is entered into EBIX. EBIX will contact the vendor to request proof of insurance.
- The Vendor can forward the request to their Insurance Agent(s) if necessary.
- Vendor/Insurance Agent submits insurance to EBIX by email to roseville@ebix.com or by fax to (770) 325-5727. After faxing or emailing the certificate, please DO NOT send the certificate by mail to EBIX. Please do not mail, email or fax any certificates to the City of Roseville.
- Once submitted, EBIX reviews the insurance documentation. If there are deficiencies, EBIX will send a follow up letter or email requesting additional information.

Questions Regarding Insurance Submission: Contact EBIX at (951) 652-4239
Questions Regarding Insurance Requirements Contact Risk Management at (916) 774-5202

Asbestos-Containing Materials in City-Owned Buildings

California Health and Safety Code Section 25915 requires that all City of Roseville employees, contractors and lessees be notified annually of the presence of asbestos in City-owned buildings constructed prior to 1979. Please post this notice in an area(s) accessible to all employees, contractors and lessees. Contact Facility Maintenance & Operations at (916) 774-5740 for more information about Asbestos Containing Materials (ACMs) in specific City-owned buildings. For more information about asbestos refer to the OSHA website.

The City of Roseville is committed to maintaining a safe and healthy work environment. The City's Facility Maintenance & Operations staff conducts ongoing inspections to identify and safely manage previously installed asbestos-containing products. Renovation of City-owned buildings **MUST** be reviewed in advance by Facility Maintenance & Operations to ensure the City is in compliance with building codes, Americans with Disabilities Act and that no ACMs are disturbed without proper safeguards. Work that requires removal or repair of ACMs is restricted to trained and qualified persons only. **Facility Maintenance & Operations will need to approve the qualified contractors**.

Use the following measures to protect you and others from exposure to airborne asbestos:

- Presume all building materials contain asbestos until determined otherwise by Facility Maintenance & Operations.
- Do not install walls, closets, cabinets, ceilings.
- Do not remove, cut, drill, sand, grind or otherwise disturb any material in the buildings, including carpet and tile.
- Do not paint (this includes any walls, ceilings, floors and electrostatic painting of office furniture).
- Do not remove any items nailed or screwed to the walls (this includes pictures, cabinets, electrical, etc.).
- Do not go above ceilings, behind walls or into building spaces such as attics and crawlspaces unless these areas have been inspected and cleared by Facility Maintenance & Operations.
- Do not pull cable or wiring through above-ceiling spaces with asbestos.
- Do not install screws, pins, nails or hangers into asbestos ceiling or wall plaster.
- Be careful not to damage walls, ceilings or floors when moving furniture or equipment. It is recommended that Facility Maintenance & Operations be contacted prior to moving furniture or equipment.
- Do not brush, sweep or vacuum textured asbestos ceiling plaster or plaster debris.
- Immediately report any damage or deterioration of suspect building materials to Facility Maintenance & Operations or Risk Management.

It is important to note that the presence of asbestos does not mean you have been exposed. Exposure results when friable asbestos particles are inhaled or ingested. Asbestos becomes friable when material containing asbestos is drilled, sanded or disturbed by remodeling or demolition work or when the ACM has deteriorated. Intact, bonded, sealed or undisturbed asbestos does not pose a hazard.

Employees may review the asbestos survey reports, results of bulk sampling or air monitoring conducted in City-owned buildings. All asbestos data will be available by appointment with Facility Maintenance & Operations.

Notice of Exemption

To: Placer County Clerk
Recorder's Office
2954 Richardson Drive
Auburn, CA 95603

From: City of Roseville
Development Services Dept.
311 Vernon Street
Roseville, CA 95678

Project Title: Maintenance Support Services

Project Location(s): 5120 Phillip Road, Roseville, CA 95747 (APNs 017-101-020-000 and 017-101-021-000) and 2155 Nichols Drive, Rocklin, California 95677 (APN 017-063-005-000).

Project Description: Roseville Electric staff seeks approval for a maintenance contract to support maintenance activities at Roseville Electric's generation facilities. Work may be performed at the Roseville Energy Park (REP) or Roseville Power Plant 2 (RPP2). The REP operates two combustion turbines and one steam turbine with associated auxiliaries and is co-located next to two simple cycle gas turbines. RPP2 operates two simple cycle gas turbines. Both facilities undergo planned preventative maintenance activities as well as corrective maintenance activities. Activities may include but are not limited to pump and motor alignments, welding services, millwright services, off site shop fabrication, and other ancillary support activities as needed for the generation fleet. Work completed will not result in an expansion of use.

Public Agency Approving Project: Roseville City Council

Agency/Individual Carrying Out Project: Roseville Electric Utility

Reason why this Project is Exempt: The project qualifies for a Class 1 Categorical Exemption as described in Section 15301 of the California Environmental Quality Act (CEQA) guidelines which states:

> "Class 1 consists of the…repair, maintenance,...or minor alteration of existing public or private structures, facilities, mechanical equipment, or topographical features, involving negligible or no expansion of existing or former use… Examples include, but are not limited to: (a) Interior or exterior alterations involving such things as interior partitions, plumbing, and electrical conveyances; [and] (b) Existing facilities of both investor and publicly owned utilities used to provide electrical power, natural gas, sewerage, or other public utility services…"

The project consists of performing routine preventative and corrective maintenance activities at the REP and RPP2. The project would not result in expansion of use. The project would not result in expansion of use. Consequently, the Class 1 Categorical Exemption applies.

COUNCIL COMMUNICATION

CC #: 3846
File #: 0203-05

Title:	East Radio Site Relocation Project - Contract Purchase Agreement
Contact:	Karl Grover 916-774-5145 kgrover@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.2.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution authorizing the City Manager to execute a Contract Purchase Agreement with E.F. Johnson Company in the amount of $483,210.79 for the City's East Radio Site Relocation project to enhance system performance, reliability, scalability and coverage. Additionally, staff requests authorization for the City Manager or designee to approve change orders up to an additional 10%, or $48,321, of the purchase agreement to cover costs of unexpected changes to ensure successful completion of the project.

BACKGROUND

Radio transmission is the primary communication method for the City's emergency services and many of the daily operations providers (i.e., Police, Fire, Electric, Roseville Transit, and Environmental Utilities), as well as outside agencies during mutual aid incidents. The City's radio system handles approximately 1.5 million transmissions per year and providing coverage throughout the City is crucial.

Roseville currently operates two other 180-foot radio communications towers. One is in west Roseville near the Roseville Energy Park and the second is in central Roseville at the Police Department building on Junction Boulevard. The east side of Roseville is currently served by radio equipment located on the third floor of a commercial building in a leased electrical closet. As previously established with Council at the September 7, 2022, meeting, the current east radio site has many limitations and needs to be relocated to a new site that will improve its reliability, availability, capacity and coverage.

Consultants were engaged to develop plans for the 2001 Strauch Drive site and complete the required environmental clearance. On September 7, 2022, Council adopted the Initial Study/Mitigated Negative Declaration (IS/MND), IS/MND Mitigation Monitoring and Reporting Plan (MMRP), and approved agreements for acquisition of permanent and temporary easements allowing access to the site. Subsequent to Council's action, the easements have been acquired and the plans submitted for building and civil improvement permits. On December 6, 2023, Council provided approval to accept the project's plans and specifications as well as proceed with

a call for construction bids.

On July 31, 2024, Council authorized awarding the construction bid to SLC, Inc. Site construction is currently in progress with an estimated completion date in August 2025.

Subsequent to completion of site construction, equipment and services are needed in the radio shelter and on the tower including repeaters, antenna systems and simulcast alignment to properly integrate with the existing radio sites for reliable citywide communications. The equipment and corresponding services will be provided by E.F. Johnson, including decommissioning the old radio site to restore the private property owner's site to its original state.

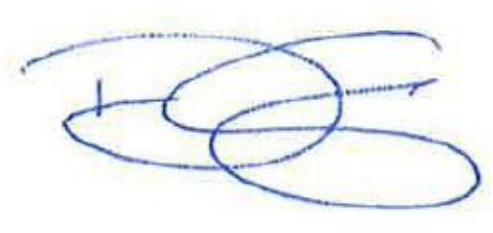
FISCAL IMPACT

The total cost for EFJohnson's equipment and services to install antenna systems, provision a microwave link between sites, relocate radio equipment to the new site, perform system optimization, update as-built documentation and decommission the old site is $483,210.79. The contingency amount of $48,321.00 will cover unexpected costs during the course of this project implementation.

This project is funded with multiples sources including the Strategic Improvement Fund, Public Facilities Fund and Information Technology Replacement Fund.

ENVIRONMENTAL REVIEW

Council approval of construction is an action that is subject to CEQA. Project level CEQA compliance for the (Citywide) East Site Radio Communications Relocation Project was accomplished with preparation of the Initial Study/Mitigated Negative Declaration (IS/MND), adopted by City Council on September 7, 2022 (SCH No. 2022070353).



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal C - Maintain a safe and healthy community
Goal E - Deliver exceptional city services
Goal F - Invest in well-planned infrastructure and growth

Respectfully Submitted,

Karl Grover, IT Program Manager

Hong Sae, Chief Information Officer

Dominick Casey, City Manager

Description

Resolution 25-102

CPA #3004429 Signed

RESOLUTION NO. 25-102

APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND E.F. JOHNSON COMPANY, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a contract purchase agreement (3004429) for equipment and services for the East Radio Site Relocation project, by and between the City of Roseville and E.F. Johnson Company, has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is hereby approved and the City Manager is authorized to execute it on behalf of the City of Roseville, upon receipt and approval of bonds by the City Attorney's office.

BE IT FURTHER RESOLVED that the City Manager or his designee is authorized to approve change orders for the project, consistent with the contract terms, provided that the net cost of all change orders shall not exceed ten percent (10%) of the contract price.

PASSED AND ADOPTED by the Council of the City of Roseville this ___ day of _____, 2025, by the following vote on roll call:

Contract Terms and Conditions

1. To the fullest extent allowed by law, Consultant agrees to indemnify, including the cost to defend City, and its officers, agents, employees and volunteers from any and all claims, demands, costs or liability that arise out of, or pertain to, or relate to the negligence, recklessness, or willful misconduct of Consultant and its agents in the performance of services under this contract, but this indemnity does not apply to liability for damages for death or bodily injury to persons, injury to property, or other loss, arising from the sole negligence, willful misconduct or defects in design by City or the agents, servants, or independent contractors who are directly responsible to City, or arising from the active negligence of City. Consultant's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law. The defense and indemnity obligations of this Agreement are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Agreement.

2. Consultant is an independent contractor, and shall not be considered an officer, agent, or employee of the City.

3. Without the written consent of the City, this Agreement is not assignable by Consultant either in whole or in part.

4. Time is of the essence of this Agreement.

5. At any time during the term of this Agreement, the City has the right to terminate this Agreement, provided Consultant is given thirty (30) days written notice. City's termination shall be without further liability to City; however, Consultant shall be entitled to all costs reasonably incurred prior to the date of termination. Consultant acknowledges that City may terminate this Agreement should funds not be appropriated by its governing body to continue services under this Agreement.

6. This Agreement may only be amended or modified in writing. It is integrated and contains the complete understanding of the parties.

7. All equipment, supplies and services sold to the City of Roseville shall conform to the general safety orders of the State of California.

8. Unless notified to the contrary, in writing, the City assumes that the Consultant has accepted the work in accordance with the plans and specifications (if any) and agrees to do the work in compliance with this Agreement. Any work product created for City pursuant to this Agreement is deemed owned by City.

9. All prevailing wages and fair employment practices must be adhered to. For prevailing wage contracts over $25,000, copies of certified payroll must be submitted with invoices. Prevailing wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm. In compliance with Labor Code Section 1773.2, as may be amended from time to time, Contractor shall cause a copy of this website to be posted at each jobsite, as applicable.
10. Consultant agrees to the below insurance requirements:

    a. Unless otherwise specified, the Consultant shall maintain the policies of insurance outlined in Attachment A, incorporated herein by this reference, in full force and effect during the term of this Agreement. The City of Roseville retains sole discretion in determining the types and proper levels of insurance coverage.

b. Form. Consultant shall submit a certificate evidencing such coverage for the period covered by this Agreement in a form satisfactory to Risk Management and the City Attorney, prior to undertaking any work hereunder. Any insurance written on a claims made basis is subject to the approval of Risk Management and the City Attorney.

c. Additional Insureds. Consultant shall also provide a separate endorsement or section of the policy showing City, its officers, agents, employees, and volunteers as additional insureds for each type of coverage, except for Workers' Compensation and Professional Liability. Such insurance shall specifically cover the contractual liability of Consultant. The additional insured coverage under the Consultant's policy shall be primary and noncontributory, as evidenced by a separate endorsement or section of the policy and shall not seek contribution from City's insurance or self-insurance. In addition, the additional insured coverage shall be at least as broad as the Insurance Services Office (ISO) CG 20 01 Endorsement. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be:

(1) the minimum coverage and limits specified in this Agreement; or

(2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

d. Cancellation/Modification. Consultant shall provide thirty (30) days written notice to City prior to cancellation or modification of any insurance required by this Agreement.

e. Umbrella/Excess Insurance. The limits of insurance required in this Agreement may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of City (if agreed to in a written contract) before City's own insurance shall be called upon to protect it as a named insured.

f. Subconsultants. Consultant agrees to include in its contracts with all subconsultants the same requirements and provisions of this Agreement, including the indemnity and insurance requirements, to the extent they apply to the scope of the subconsultants work. Furthermore, Consultant shall require its subconsultants to agree to be bound to Consultant and City in the same manner and to the same extent as Consultant is bound to City under this Agreement. Additionally, Consultant shall obligate its subconsultants to comply with these same provisions with respect to any tertiary subconsultant, regardless of tier. A copy of City's indemnity and insurance provisions will be furnished to the subconsultant or tertiary subconsultant upon request.

g. Self-Insured Retentions. All self-insured retentions (SIR) must be disclosed to Risk Management for approval and shall not reduce the limits of liability. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

h. Waiver of Subrogation. Consultant hereby agrees to waive subrogation which any insurer of Consultant may acquire from Consultant by virtue of the payment of any loss under a Workers Compensation, Commercial General Liability or Automobile Liability policy. All Workers Compensation, Commercial General Liability and Automobile Liability policies shall be endorsed with a waiver of subrogation in favor of City, its officers, agents, employees, and volunteers for all worked performed by Consultant, its employees, agents, and sub consultants.

i. Liability/Remedies. Insurance coverage in the minimum amounts set forth herein shall

not be construed to relieve Consultant of liability in excess of such coverage, nor shall it preclude City from taking such other actions as are available to it under any other provisions of this Agreement or law.

11. Consultant shall comply with all federal, state, local laws, ordinances, and policies as may be applicable to the performance of services under this Agreement. Failure to comply with local ordinances may result in monetary fines and cancellation of this Agreement.

12. In the event that the terms of any attachment or exhibit conflict with any terms of this Agreement, the terms of this Agreement shall control.

13. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. In the event that any signature is delivered by facsimile transmission or by e-mail delivery of a ". pdf" format data file, such signature shall create a valid and binding obligation of the party executing (or on whose behalf such signature is executed) with the same force and effect as if such facsimile or ".pdf" signature page were an original thereof.

14. If either party commences any legal action against the other party arising out of this Agreement or the performance thereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorneys' fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

15. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

16. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

17. For purposes of this Agreement, the terms "Contractor," "Consultant," and "Supplier" are used interchangeably.

18. Consultant agrees that any and all information furnished by City shall be deemed proprietary and confidential. All such information, to the extent previously, presently, or subsequently disclosed to Consultant and/or processed and derived by Consultant services is the property of City and such property shall be deemed and treated as "Confidential Information" of City. Consultant acknowledges that such Confidential Information may contain information provided and/or generated by third-parties. Consultant agrees that such Confidential Information shall not be disclosed to any third party without written permission from City, except as required by law. Consultant shall not use the Confidential Information except to perform Consultant's services as directed by City.

19. All facilities, devices, networks, and services used to store, deliver, process, backup or purge Confidential Information will employ administrative, physical, technical, and procedural safeguards and best practices at a level sufficient to secure Confidential Information from unauthorized access, destruction, use, modification, or disclosure. Such measures will be no less protective than those used to secure Consultant's own information of a similar type, and in no event less than reasonable in view of the type and nature of the information involved. It is the City's expectation that Consultant, at its own expense, shall perform annual audits for any data centers that house Confidential Information, using an independent third-party audit that meets industry standards applicable to the services under this Agreement, and provide the audit report or certification upon request to City.

20. Consultant will retain Confidential Information until deleted by City or City-authorized third

party, or for a time period mutually agreed upon by the parties to this Agreement.

21. Upon termination or expiration of this Agreement, Consultant will ensure that all Confidential Information is securely transferred to City within thirty (30) calendar days. Consultant will ensure that any transfer of Confidential Information is accomplished by methods that are compatible with the relevant City systems, and that City will have access to all Confidential Information during any such transfer. Consultant shall securely dispose of all Confidential Information when requested by City and Consultant will provide written notification to City once all Confidential Information has been securely disposed of.

22. Consultant shall report to City any data compromise or unauthorized access to Confidential Information within twenty-four (24) hours after Consultant discovers such data compromise or unauthorized access. Consultant will take commercially reasonable measures to address any such data compromise or unauthorized access in a timely manner. Except as otherwise required by law, Consultant will not provide notice to end users or other entities of any such data compromise or unauthorized access without written permission from City. Consultant will promptly reimburse City in full for all fees and costs incurred by City in any investigation, remediation or litigation resulting from any such data compromise or unauthorized access, including identity protection and restoration services for each person, who in the City's sole discretion, could be impacted by identity theft.

23. Consultant may not advertise that City is a client, list City as a reference or otherwise use City's name, logos, trademarks, or service marks without prior written permission from City.

24. Consultant acknowledges that services rendered under this agreement (including but not limited to service levels and operational levels) shall be performed in accordance with industry standards.

25. If the project referenced on this agreement is a Public Works project, then the following shall apply: No contractor or subcontractor may work on a public works project unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. During the performance of this agreement, Contractor and its subcontractors shall have a continuing legal obligation to maintain current registration with the Department of Industrial Relations. Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

26. If the project referenced on this agreement is a Public Works project, then the following shall apply: Contractor must submit all claims as defined in and in accordance with the claim resolution process set forth in Section 9204 of the Public Contract Code. Each such claim must be sent to the City by registered mail or certified mail with return receipt requested and must contain reasonable documentation to support the claim. All claims must be received prior to acceptance of the work.

27. Contractor/consultant's duties and services under this agreement shall not include preparing or assisting the public entity with any portion of the public entity's preparation of a request for proposals, request for qualifications, or any other solicitation regarding a subsequent or additional contract with the public entity. The public entity entering this agreement shall at all times retain responsibility for public contracting, including with respect to any subsequent phase of this project. Contractor/consultant's participation in the planning, discussions, or drawing of project plans or specifications, if any, shall be limited to conceptual, preliminary, or initial plans or specifications. Contractor/consultant shall cooperate with the public entity to ensure that all bidders for a subsequent contract on any subsequent phase of this project have access to the same information, including all conceptual, preliminary, or initial plans or specifications prepared by contractor pursuant to this agreement.

28. Consultant certifies that Consultant, its employees, directors, officers, agents, subcontractors, vendors, and volunteers are not presently debarred, excluded, suspended, declared ineligible, voluntarily excluded, or proposed for debarment, exclusion, suspension, or ineligibility by

any federal, state, or local department or agency.

29. The Levine Act (Govt. Code, Section 84308) requires a Party (and its agent(s), if any) to a Proceeding before the City of Roseville that involves any action or consideration related to their contract, license, permit, or other entitlement for use, to disclose any campaign contributions made to City elected or appointed officers totaling more than $250 within the twelve (12) months prior to the City decision and while a proceeding is pending, and includes certain prohibitions on contribution activity thereafter. If applicable campaign contributions have been made by Contractor and/or its agent(s), Contractor is responsible for compliance, including for its disclosure obligations, if any, as further described at: https://www.roseville.ca.us/government/departments/city_clerk/transparency/levine_act.

30. This Agreement may be amended via change order, but only if such change order is made in writing, approved by the City, and signed by both parties.

31. CONSULTANT agrees to defend and indemnify CITY if, despite the parties intent and practice, any venue, agency, or court with competent jurisdiction determines that CONSULTANT and/or any of its agents, officers, employees, volunteers, independent contractors, or subcontractors, are characterized as employee(s) of CITY.

    CONSULTANT and CITY agree that: (a) CONSULTANT is free from the control and direction of CITY in connection with the performance of the work; (b) CONSULTANT is providing services directly to CITY; (c) CONSULTANT has and will maintain at all relevant times a business license; (d) CONSULTANT maintains a business location that is separate from CITY; (e) CONSULTANT is customarily engaged in an independently established business of the same nature as that involved in the work performed hereunder; (f) CONSULTANT actually contracts with other businesses to provide the same or similar services and maintains a clientele without restrictions from CITY; (g) CONSULTANT advertises and holds itself out to the public as available to provide the same or similar services; (h) CONSULTANT provides its own tools, vehicles, and equipment to perform the services; (i) CONSULTANT has negotiated its own rates; (j) CONSULTANT set its own hours and location of work in accomplishing CITY's on-call needs; and (k) CONSULTANT has the right to control the manner and means of accomplishing the result desired and exercises its own expert independent judgement.

The supplier named hereon by the acceptance of this order agrees to the provisions of this document titled "Contract Purchase Agreement" and all accompanying terms, conditions, and attachments.

Insurance Submission Process

The City of Roseville Human Resources/Risk Management Department uses a service called EBIX to manage our insurance certificate tracking.

How It Works

- The vendor's contact information is entered into EBIX. EBIX will contact the vendor to request proof of insurance.
- The Vendor can forward the request to their Insurance Agent(s) if necessary.
- Vendor/Insurance Agent submits insurance to EBIX by email to roseville@ebix.com or by fax to (770) 325-5727. After faxing or emailing the certificate, please DO NOT send the certificate by mail to EBIX. Please do not mail, email or fax any certificates to the City of Roseville.
- Once submitted, EBIX reviews the insurance documentation. If there are deficiencies, EBIX will send a follow up letter or email requesting additional information.

Questions Regarding Insurance Submission: Contact EBIX at (951) 652-4239
Questions Regarding Insurance Requirements Contact Risk Management at (916) 774-5202

1. Proposal Summary

E.F. Johnson Company, a JVCKENWOOD Company, ("EFJohnson") appreciates the opportunity to present this quote to the City of Roseville ("Customer"), California, to relocate their East Site from 2999 Douglas Boulevard to the new East Site at 2001 Strauch Drive.

Based on the information provided to EFJohnson by the City of Roseville, EFJohnson proposes the following:

- Two (2) SecureSync frequency reference and timing kits
- Antennas, feedline, combiners and multicouplers needed for the project as defined.
- RF antenna installation
- Microwave installation

EFJohnson's understanding is that existing equipment, including but not limited to racks, rack grounding, and rack power, is to remain in service or to be provided by others. If, upon inspection, the equipment is found to require remediation it is expected of the City of Roseville to provide the aforementioned equipment. If the City chooses not to provide the aforementioned equipment, a separate quote may be requested.

2. Pricing Summary

Pricing includes equipment and services identified as needed for the project as defined. A detailed list of the equipment may be found in the Equipment Summary. Services, in addition to those specifically detailed in the Statement of Work, include equipment installation as well as limited services associated with the first year of equipment warranty.

All pricing is valid for 60 days from the date of this quote: January 29, 2025.

Please note: Coverage testing and/or coverage analysis is not included in the services' pricing. Coverage can be evaluated in a separate request.

Shipping Cost					$1,500.00
				TOTAL	**$483,210.74**

3. Terms and Conditions

This proposal and any future sale shall be governed by The City of Roseville Terms and Conditions.

4. Freight, Title, and Risk of Loss

Freight charges are not included in the price. Title to the equipment provided herein will pass to Customer, or End User, upon final payment, except that title to software will not pass to Customer, or End User, at any time. Risk of loss for the equipment will pass to Customer upon shipment from EFJohnson. EFJohnson will pack and ship all equipment in accordance with standard commercial practices.

5. Assumptions

Revisions to the estimated price or other details in this proposal may be required if the following assumptions are incorrect or incomplete.

Network

- Bandwidth on existing network is sufficient for both existing applications and proposed additional new equipment.
- Customer- and/or End User- supplied backhaul network links, where applicable, support multicast traffic, support an MTU size of up to 1526 bytes, and provide a dedicated interface in the form of Ethernet (RJ-45) connector or T-1 suitable for connection to EFJohnson's Cisco routers.
- IP addresses are available for use in blocks of sufficient quantity on any existing network to accommodate routing between the sites and equipment specified. If only analog circuits are available, routers have been considered with DSU/CSU capability.
- Networks conform to the performance and design criteria specified in the Carrier Transport Requirements document, available on request.

Sites

- Customer will ensure/supply adequate physical space at existing sites for the installation, use, and maintenance of the system. New site development is not required.

- Customer will ensure/provide adequate temperature/environmental control, grounding and lightning protection at existing sites.

- Uninterruptible power supplies (UPS) or power conditioning equipment if required/desired is the responsibility of the Customer.
- Power adequate for the installation, use, and maintenance of the system will be provided at all sites, to include adequate outlets, distribution, and source power. Necessary upgrades are the responsibility of the Customer.
- Transmit and receive antennas will be mounted on existing towers at all locations using standard mechanical fasteners.
- Customer is responsible for tower analysis and changes related to wind and/or ice loading.
- Ready access to all facilities will be available as necessary during the scheduled visit. To reduce the number of days in the field, access is frequently necessary for 10 working hours per day (e.g., 7 am to 6 pm).

RF Equipment

- Customer is responsible for site surveys.
- Coverage analysis and testing are not included. Customer is responsible for Coverage analysis, and testing. Any issues related to lack of coverage are the responsibility of the Customer.

Services

- Post installation testing and test plan creation not specifically identified in this proposal is not included.
- Training not identified in this proposal is not included.

Products

- Software and equipment specified in the proposal are generally released EFJohnson solutions. No tailoring of existing features or new feature development will be performed unless otherwise stated in this proposal.

Warranty and Maintenance

- All proper preventative maintenance procedures shall be followed. Retention of maintenance records will be the responsibility of the Customer and/or End User and may be requested before Warranty services are provided.
- For EFJohnson to service software maintenance/warranty, a customer, or end user, supplied Virtual Private Network (VPN) will be available to access the system for remote trouble shooting/corrective action. If no VPN access is

available and travel is required for initial trouble shooting, travel costs will be quoted and billed on a by-incident basis.

- Software is licensed in accordance with the Software License Agreement. A Software Maintenance Agreement may be purchased to ensure updated software.

6. Scope of Work

This Statement of Work (SOW) describes EFJohnson's proposed effort, as well the expected effort of the City of Roseville, based on our understanding of the system requirements.

Please note that any services needed by EFJohnson personnel outside the proposed scope will be billed to the Customer on a time & materials basis.

General and Budgetary Scope of Work:

- EFJohnson will provide limited onsite technical support during testing, installation, and commissioning of the equipment identified in this proposal.
- EFJohnson will ship new equipment and deliver both new and old components to system installation site(s).
- EFJohnson will provide updated As-Built drawings for East Site.
- No additional services by EFJohnson have been provided in this proposal. If additional remote or on-site support is desired, it will be billed at the then published rate (currently $248/hour) plus any travel expenses marked up 15%. Overtime, weekends and holidays will incur additional charges.

Ceragon Microwave

- New microwave link installation at 2001 Strauch terminating at the PD tower at 1051 Junction Blvd. Complete installation including antenna on tower, transmission line, shelter equipment, path survey, configuration, testing and turn up/
- New microwave will have capacity to allow for the City's contractor to move and setup the VHF equipment.
- Ceragon shall identify new frequencies, establish power needed, microwave dish height AGL, and submit application to license new frequencies with the FCC for the East-PD link.

Silke Communications

Silke Communications will provide Project Management, logistics and an EFJohnson Trained and Certified team to support the City of Roseville and EFJohnson partners during the relocation of the East Site from 2999 Douglas to 2001 Strauch.

Site work ***includes:***

- Kick off meetings, attending status meetings and conference calls, inspection and planning of the new 2001 Strauch location.
- Antenna sweeps of the new antenna for verification and documentation.
- A coordinated move and cut over of the existing 800MHz and VHF systems located at the East Site from 2999 Douglas to 2001 Strauch.
- Un-racking Transport Re-racking Labeling
- Patching (Network and RF) Cable dressing
- Bonding and grounding Test and turn-up
- At 2001 Strauch Silke Com will provide new GPS coax, connectors & protectors, reusing the GPS antenna from the existing site.
- After the completion of the move at 2999 Douglas, Silke Com will remove original racks, original antenna, original TTA, entry boots, and coax. These will be delivered to the City of Roseville IT for spares or recycling.

FCC License Compliance and Optimal P25 System Operation:

- Measure ERP in Watts, make adjustments as necessary, and perform calculations to ensure compliance with the City's 800MHz FCC License parameters.
- Perform simulcast alignment accounting for new location, new 800MHz TX antenna types and new heights AGL.

Information Technology & Microwave bandwidth/transport:

Silke Com has included budgetary hours for IT and System Architecture Support. EFJohnson will provide the NMS configuration and programming.

Ceragon link provisioning, configuration and testing will be performed by Ceragon.

Assumptions:

At 2001 Strauch Silke Communications will install the:

- Tower, shelter, site grounding, cable supports, entry ports, ice bridge and associated site material.

EFJohnson will provide:

- Five (5) 800 MHz antenna
- Two (2) VHF antennas
- One (1) Tower Top Amplifier (TTA)
- Coaxial cable for eight (8) antenna runs
- Lightning protection at the new shelter

Silke Communications will provide:

- All coaxial connectors, jumpers, coaxial support hardware, ground kits and miscellaneous passive parts and hardware for the installation, bonding, and grounding
- Two 7-foot racks and associated cable tray.
- Shelter bonding and grounding.
- AC power

Exclusions:

- Site FCC licensing, microwave path studies, simulcast overlap studies.
- Post move coverage study.
- Additional hours for scope not listed.
- Additional training or certifications required by any manufacturer.

- Hardware repairs (SR-0499-0)
- Dedicated Support Account management
- Software Repairs for NMS and product embedded SW
- Software Upgrades for NMS and product embedded SW
- Website access to the Ceragon CRM

APPENDIX A Warranty Statement and Software License Agreement

EFJohnson warrants to the original purchaser for use ("Customer") that the new system equipment provided by EFJohnson ("System") with products manufactured by EFJohnson ("Products") are free from defects in material and workmanship and will conform to EFJohnson's published technical specifications as of the date of purchase during the warranty period. The warranty program start date is the date of system acceptance from EFJohnson or beneficial use which means use for operational purposes and shall expire one (1) year thereafter (the "Warranty Period"). EFJohnson makes no warranty with respect to the equipment not manufactured by EFJohnson, and any such equipment shall carry the original equipment manufacturer's warranty only. EFJohnson further makes no warranty as to, and specifically disclaims liability for, availability, range, coverage, grade of service or operation of the repeater system provided by the carrier or repeater operator.

If any Product fails to meet the Warranty set forth above during the applicable Warranty Period and is returned to a location designated by EFJohnson, EFJohnson, at its option, shall either repair or replace such defective Product, directly or through an authorized service agent, by expedited and priority service within thirty (30) days of receipt of same. Any repaired or replaced Products shall be warranted for the remainder of the original Warranty Period. EFJohnson shall arrange for the return of all defective Products to EFJohnson or EFJohnson's authorized service agent at no charge to Customer if returned from within the continental United States and if returned under warranty. EFJohnson will pay the returned shipping charges if the Product is repaired or replaced under warranty. If no problem is found with the Product, the Customer shall be responsible for the reimbursement of two-way shipping to EFJohnson. Repair or replacement of defective Products as set forth in this paragraph fulfills any and all warranty obligations on the part of EFJohnson.

SOFTWARE WARRANTY AND MAINTENANCE

EFJohnson warrants to the original purchaser for use ("Customer") that the software provided in response to Customer requirements and/or contractual agreement are free from defects in material and workmanship and will conform to EFJohnson's published technical specifications as of the date of purchase during the Warranty Period. The warranty program start date is the completion of system acceptance provided by EFJohnson or beneficial use which means use for operational purposes and shall expire one (1) year thereafter. EFJohnson makes no warranty as to, and specifically disclaims liability for, availability, range, coverage,

grade of service or operation of the repeater system provided by the carrier or repeater operator.

Software Warranty: If any Software fails to meet the warranty set forth above during the applicable Warranty Period, the Customer must notify EFJohnson in writing before the expiration of the Warranty Period. Whether Software defects occur will be determined solely upon reference to EFJohnson's published operational and technical specifications effective as of the date of purchase, and to any additional technical documentation incorporated into the mutually agreed-upon contractual agreement. EFJohnson does not warrant that the use of the Software will be uninterrupted or error-free or that the Software will meet particular (other than contractually agreed-upon) requirements, if applicable.

Upon receipt of such notice, EFJohnson will investigate the warranty claim. If this investigation confirms a valid warranty claim, EFJohnson will, at its option and at no additional charge to the Customer, repair the defect, replace the defective Software with the same or equivalent Software, or refund the price of the defective Software or individual Product in which the Software is embedded or for which it is provided. Such action will be the full extent of EFJohnson's liability and the Customer's sole remedy for a breach of this Warranty. If the investigation indicates that the Warranty claim is not valid, then EFJohnson may invoice the Customer for responding to a claim on a time and materials basis using EFJohnson's then current labor rates. Any repaired or replaced Software or Software Products shall be warranted for the remainder of the original Warranty Period or for thirty (30) days from the Customer's receipt of the repaired or replaced Software, whichever is longer.

Software Maintenance: EFJohnson will provide: (i) feature releases for System Software packages licensed pursuant to the contractual agreement between EFJohnson and Customer; (ii) enhancements to existing System Software features;

(iii) new features implemented via existing System components and Software for product migration (may require purchase of new Products). The support will cover System Software updates and System upgrades to address Software issues during the Warranty but expressly excludes any priced options provided in the proposal, if applicable.

7 day/24 hour (7/24) Customer Support: During the Warranty Period, EFJohnson shall provide the Customer a 7/24 toll free (in the United States) support line to reach an EFJohnson-employed customer support representative who will record

the Customer's issue, open a trouble ticket, issue an RMA and/or provide further details as applicable.

8:00 am – 5:00 CST Technical Support: During the Warranty Period, EFJohnson shall provide a technical support line available from 8:00 am – 5:00 CST, Monday-Friday, excluding national US holidays, staffed by an EFJohnson-employed factory technologist trained to answer the Customer's technical questions and to troubleshoot System performance issues. In order to maximize the ability for the technologist to resolve such issues, the Customer must sign a system access agreement to authorize EFJohnson remote secure access to the Customer's System, including access to the Customer's System logs.

EQUIPMENT AND SOFTWARE WARRANTY/MAINTENANCE EXCLUSIONS

This warranty is void and EFJohnson shall not be obligated to replace or repair any Products and/or Software if: (i) the Product and/or Software has been used in other than its normal and customary manner; (ii) the Product and/or Software has been subject to misuse, accident, neglect or damage or has been used with other than EFJohnson approved accessories and equipment or has been improperly installed;

(iii) the Products and/or Software have been repaired, installed and/or maintained by individuals who have not followed EFJohnson's then current installation or maintenance procedures and/or who are not trained and certified by EFJohnson on the Products and/or Software; (iv) unauthorized alterations or repairs have been made or unapproved parts have been used with the Product and/or Software; or

(v) Customer failed to notify EFJohnson or EFJohnson authorized service agent of the defect during the applicable Warranty Period.

THE AFORESAID WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED AND IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. EFJOHNSON AND CUSTOMER AGREE THAT CUSTOMER'S EXCLUSIVE REMEDY FOR ANY BREACH OF ANY SAID WARRANTIES IS AS SET FORTH ABOVE. The purpose of the

exclusive remedies set forth above shall be to provide Customer with repair or replacement of non-complying Products in the manner provided above. These exclusive remedies shall not be deemed to have failed of their essential purpose so long as EFJohnson is willing and able to repair or replace non-complying Products in the manner set forth above.

SOFTWARE LICENSE AGREEMENT

WARNING: If you elect to use the Equipment, you agree to be bound by this Software License Agreement.

5) **Limited License.** If Licensee elects to use the Products, Licensee agrees to be bound by the terms and conditions set forth in this Software License Agreement. For any software provided with, or contained or embedded in, the System and Subscriber Equipment manufactured by E.F. Johnson Company (the "Equipment") and sold the user of such Equipment that this Software License Agreement accompanied (the "Licensee") pursuant to an agreement between E.F. Johnson Company ("EFJohnson") and Licensee regarding the purchase of the Equipment by the Licensee (the "Contract") and any additional EFJohnson manufactured equipment which Licensee may purchase from EFJohnson from time to time hereinafter for use with the Equipment (collectively, the "Software"), EFJohnson hereby grants to Licensee a personal, non-exclusive, non-transferable, non-assignable (by operation of law or otherwise), terminable license to use the Software on the terms and subject to the conditions contained herein with the exception of software developed by a manufacturer other than EFJohnson ("third-party software manufacturer") pursuant to a third-party license agreement. Such third-party software manufacturer may be a beneficiary of this Software License Agreement if required under such third-party license agreement. Licensee shall not have the right to sublicense, rent, lease, copy, modify, reverse engineer, disassemble, decompile or otherwise transfer the Software, except as provided herein. The license granted herein authorizes Licensee to use the Software for its own internal purposes and only in connection with the use of the Equipment. Licensee agrees not to use the Software for any other purpose or install the Software on any replacement or additional computer or equipment. EFJohnson prohibits (a) the use of the programs for rental, timesharing, subscription service, hosting or outsourcing; (b) the removal or modification of any program markings or any notice of proprietary rights: (c) the Licensee from making the programs available in any manner to any third party for use in any third party's business operations. Licensee shall not exercise any rights with respect to the Software that are not expressly granted herein.

6) **Maintenance; New Releases; Copies.** Provided Licensee is current in its payment of software maintenance fees, Licensee shall be entitled to receive any error or bug fixes provided by EFJohnson as part of the software maintenance. Further, so long as the customer is current in its payment of

software maintenance fees, the customer shall receive any software updates released on a regular basis after system acceptance that include enhancements to existing features for all designated System backbone components and subscriber equipment; new features implemented via the System components already contained within the System; and Software for product migrations where a new generation of Software is developed for the designated System component, rather than the older generation of Software being updated.

Maintenance shall be provided in accordance with the EFJohnson maintenance policy. EFJohnson may, but has no obligation to do so, offer for an additional license fee new features or enhancements to the Software.

Licensee shall not copy, print, disassemble, modify, distribute, translate, reverse engineer or reproduce all or any portion of the Software or related documentation; provided that Licensee shall be entitled to make two (2) copies for back-up purposes only and not production use of the portions of the Software provided to Licensee.

7) **Proprietary Rights.** Licensee acknowledges that (a) the Software, including each program or system of which it is a part, and all supporting documentation and materials therefore, are the exclusive property of EFJohnson and/or any third-party software manufacturer as applicable, and

(b) title to and all rights to the Software, including copyright, patent, intellectual property rights, trade secret and other rights in the Software, shall remain with EFJohnson and/or any third-party software manufacturer as applicable. Licensee shall not copy, reproduce, disclose or divulge the Software to any person, except to the extent reasonably required for purposes consistent with this license to an officer, employee, independent accountant, attorney or other similar agent of Licensee, and then only if Licensee uses the same degree of care, but no less than a reasonable degree of care, that Licensee uses to protect the confidentiality and title thereto of its own confidential or proprietary information of a like nature. Licensee shall not publish any results of benchmark tests run on the programs. Licensee acknowledges EFJohnson's right to seek equitable relief, including an injunction in the event of any breach or threatened breach by Licensee of this license. Notwithstanding the foregoing, Licensee shall have the right to disclose the Software to the extent required by a governmental agency or court with appropriate jurisdiction, provided that Licensee notifies EFJohnson in writing of the need to so disclose in advance of such disclosure. Licensee agrees that if any use of the Software comes to Licensee's attention which, in its opinion is

unauthorized, Licensee shall promptly notify EFJohnson of such unauthorized use. Licensee, however, shall be under no affirmative obligation to make investigations to determine if

an unauthorized use has occurred. In addition to the system key and encryption keys (and any programming materials or documents foregoing, Licensee acknowledges and agrees that, in order to protect the privacy of its radio system, it shall treat its encryption key and/or Multi-Net containing such keys) as highly confidential information and not disclose such keys to any third party unless such third party is subject to obligations of confidentiality in favor of Licensee.

8) **Warranty of Title.** EFJohnson warrants that it has good title to the Software or the right to license the same hereunder and that, to the best of EFJohnson's knowledge, the Software does not infringe upon any valid U.S. patent issued prior to the date of the Contract. Subject to the terms of this license, EFJohnson will defend, at its expense, any action brought against Licensee to the extent it is based on a claim that the Software, used within the scope of this license, infringes upon any such U.S. patent, but only if (a) Licensee promptly notifies EFJohnson in writing of any such claim or proceeding, (b) Licensee permits EFJohnson to fully control the defense of such action, (c) Licensee fully cooperates with EFJohnson in connection with such defense, (d) Licensee does not compromise or settle any claim without the prior written consent of EFJohnson and (e) the infringement does not relate to any (i) modifications to the Software made other than by EFJohnson, (ii) modifications made to Licensee's specifications or (iii) use of the Software in combination with any equipment or products not manufactured by EFJohnson. EFJohnson shall have no other or further obligation or liability with respect to any claim of infringement or for breach of its warranty of title. If any part of the Software becomes, or if EFJohnson considers any of the Software likely to become, subject to a claim of infringement, EFJohnson may in its sole discretion (a) procure for Licensee the right to continue using such Software, (b) replace or modify the Software to make it non-infringing, refund the paid purchase price of the Equipment upon return of the Equipment upon return of the Equipment in undamaged condition, or (c) take such other action as is necessary and feasible to maintain Licensee's use of the Software.

9) **Limited Operational Warranty.** EFJohnson warrants the Software in accordance with the Warranty Statement provided in Appendix A.

10) **Term and Termination.** This license shall become effective as of the date of the initial shipment of the Equipment and shall remain effective thereafter so long as Licensee owns and operates the Equipment in accordance with the terms of this Software License Agreement; provided that, this license and all Licensee's rights under this license shall be deemed to automatically terminate

upon the cancellation, breach or termination of the Contract. Immediately upon such termination, Licensee shall cease use of the Software and either return to EFJohnson or destroy the original and all copies of the Software and, if requested by EFJohnson, certify in writing that the Software has been so destroyed.

11) **Export.** Licensee will fully comply with all relevant export laws and regulations of the United States and other applicable export and import laws to assure that neither the programs, not any direct product thereof, are exported, directly or indirectly, in violation of applicable laws.

12) **Audit.** Licensee grants E.F. Johnson the right to audit the use of the programs, and may require the Licensee to provide reasonable assistance and access to information in the course of such audit and allows E.F. Johnson to report the audit results to third-party software manufacturers of the Software if applicable.

13) THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. ANY LIABILITY OF E.F. JOHNSON OR ANY THIRD-PARTY SOFTWARE MANUFACTURER RELATED TO THE SOFTWARE FOR ANY CAUSE WHATSOEVER AND WHETHER SUCH LIABILITY IS BASED ON CONTRACT, TORT OR ANY OTHER THEORY OF LIABILITY, SHALL BE LIMITED TO THE DIRECT AND ACTUAL DAMAGES INCURRED BY LICENSEE, TO THE EXTENT RECOVERABLE BY LAW AND, IN NO EVENT, SHALL SUCH DAMAGES EXCEED THE PORTION OF THE PURCHASE PRICE OF THE EQUIPMENT WHICH IS ALLOCATED TO THE SOFTWARE ACCORDING TO E.F. JOHNSON'S PRICING POLICIES. UNDER NO CIRCUMSTANCES SHALL E.F. JOHNSON OR ANY THIRD- PARTY SOFTWARE MANUFACTURER BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, PUNITIVE OR CONSEQUENTIAL OR DAMAGES OF ANY KIND, EVEN IN THE EVENT THAT E.F. JOHNSON IS ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. NEITHER E.F. JOHNSON NOR ANY THIRD-PARTY SOFTWARE MANUFACTURER SHALL BE LIABLE FOR ANY LOSS OF PROFITS, REVENUE, DATA OR DATA USE, ARISING FROM THE USE OF THE PROGRAMS. THIS SOFTWARE LICENSE EXCLUDES THE APPLICATION OF THE UNIFORM COMPUTER INFORMATION TRANSACTIONS ACT.

COUNCIL COMMUNICATION

Title:	Microtransit Vans - Purchase Order Amendment
Contact:	Zach Presley 916-774-5365 zpresley@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.3.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council approve an amendment to an existing purchase order with A-Z Bus Sales for the purchase of twelve (12) Ford E-Transit Vans.

BACKGROUND

On June 5, 2024, the City Council approved the procurement of twelve (12) electric Ford E-Transit vans for Roseville Transit. Eight of these vans will replace existing diesel-powered cut-away vehicles that have surpassed their useful lives and need to be replaced. The additional four new vehicles are necessary to address the limited range in the vans and will allow for more reliable service for Roseville Transit customers.

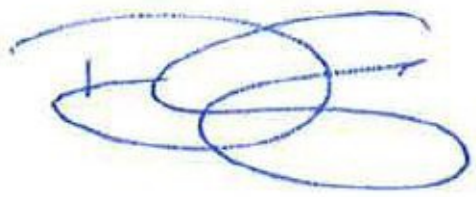
When the item was initially brought to Council for approval, there were options for the vans that were being finalized and not included in the total cost. Some of the optional items included an on-board camera system and an exterior finish. As the vans have made their way through production, staff worked with A-Z bus to prepare an updated quote. The finalized quote that includes the optional items reflects an increase of $10,005.74 per vehicle for a total increase of $120,068.93. These updates include the items mentioned above and fit within the existing project budgets for the replacement vehicles and the purchase of new vehicles.

FISCAL IMPACT

The price increases in this procurement for twelve Ford E-Transit Vans remain funded through Federal Transit Administration (FTA) grant funding. Roseville will be utilizing a FTA Low/No Emissions grant for the eight replacement vehicles and FTA 5339 funds for the purchase of the four new vehicles. Local Transportation Funds (LTF) will be used for matching purposes on both projects. This procurement will have no impact to the General Fund.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Approval of a purchase order amendment meets the above criteria and is not subject to CEQA. No additional environmental review is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal E - Deliver exceptional city services
Goal F - Invest in well-planned infrastructure and growth

Title:	Vernon Street/Atlantic Street Multimodal Safety Improvement Project - Approval of Plans and Specifications and Authorization to Call for Bids
Contact:	Karen Vences 916-774-5412 kavences@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.4.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council approve the plans and specifications for the Vernon Street/Atlantic Street Multimodal Safety Improvement Project and authorize staff to call for bids.

BACKGROUND

Vernon Street through Downtown Roseville is a two-lane collector road with on-street parking and posted speed limits ranging between 15 of 25 mph. The Council-adopted Downtown Specific Plan identifies the need for intersection improvements at Vernon Street/Atlantic Street and Folsom Road to improve traffic circulation, improve accessibility for bicyclists and pedestrians, and provide better connectivity between Historic Old Town and Downtown.

The project will include improvements to Vernon Street beginning at Lincoln Street, and will extend through the S-curve up to Yosemite Street. The project scope includes the construction of enhanced pedestrian crosswalks, rectangular rapid flashing beacons, green bike lanes to improve visibility, pavement rehabilitation, lane reductions to slow vehicle speeds, and turning restrictions at low volume intersections to reduce conflict zones. All of these improvements are designed to benefit driver, bicyclist, and pedestrian safety through the corridor. This project will also improve corridor aesthetics by including a raised landscaped median upon entering Vernon Street into the Downtown area.

Construction of the project is anticipated to begin in late summer 2025 and be complete by early spring of 2026. Construction plans and specifications for the project have been completed and are attached.

Public Outreach:

A range of public outreach occurred during the development of the project plans including two postcard mailers, project informational webpage (roseville.ca.us/Atlantic), and a community open house held on June 29, 2022 at the Civic Center.

Public Works staff will be working closely with the Public Affairs and Communications Department to keep the community informed of the project's benefits, progress, and traffic impacts during the construction phase of the project through a variety of methods including, but not limited to, direct mail, signage, social media, web, and email notifications.

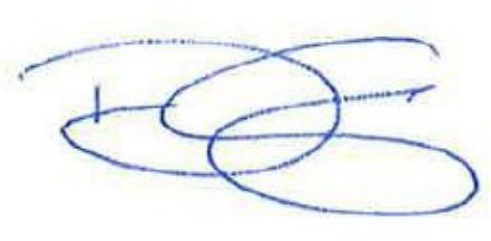
FISCAL IMPACT

The project is estimated to cost $1.9 million and will be funded with Highway Safety Improvement Program (HSIP) grant funds, Highway Users Tax (HUT) funds, and Local Transportation Funds (LTF). Once the actual construction costs are known, a budget adjustment will be recommended for approval at the time of Council award of the construction contract if necessary. No General Fund resources will be used for construction of the project.

New landscaping improvements along the corridor will require maintenance by the City's Parks, Recreation and Libraries Department (PRL), and the estimated annual cost increase as a result of the improvements is approximately $2,000 annually in future PRL operating budgets in the General Fund.

ENVIRONMENTAL REVIEW

Development of the Vernon Street/Atlantic Street Multimodal Safety Improvement Project was previously evaluated in the Downtown Specific Plan EIR (certified April 3, 2009, SCH No. 2007102090.), and identified in the associated Downtown Specific Plan. Construction of the Vernon Street/Atlantic Street Multimodal Safety Improvement Project is found to be within the scope of the project covered by the Downtown Specific Plan EIR. As discussed in the Specific Plan EIR, the EIR provides environmental analyses of community infrastructure and facilities, including Gateway Elements, landscaping, and multimodal safety improvements, to the extent applicable. Because the project is consistent with Downtown Specific Plan EIR and Specific Plan, no new effects would be expected to occur and all applicable mitigation measures from the Downtown Specific Plan EIR will be implemented during the design and construction of the Vernon Street/Atlantic Street Multimodal Safety Improvement Project. Because the proposed project meets the requirements identified in Section 15183 of the State CEQA Guidelines, no additional CEQA review is required.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal C - Maintain a safe and healthy community
Goal F - Invest in well-planned infrastructure and growth

XREFS: BDR-23378-01_J-Sht | 23378_XR-TOPO | 23378_XR-SITE

GENERAL NOTES:

1. ALL CONSTRUCTION AND MATERIALS SHALL CONFORM TO THESE PLANS AND THE LATEST EDITION AND AMENDMENTS OF THE CITY OF ROSEVILLE DESIGN AND CONSTRUCTION STANDARDS, AND 2023 STATE STANDARD SPECIFICATIONS AND PLANS.
2. THE CITY OF ROSEVILLE IS A MEMBER OF THE UNDERGROUND SERVICE ALERT (U.S.A.) ONE-CALL SYSTEM. THE CONTRACTORS SHALL NOTIFY THE U.S.A. CENTER 48 HOURS IN ADVANCE OF PERFORMING ANY EXCAVATION WORK BY CALLING 1-800-227-2600.
3. THE CONTRACTOR SHALL MARK IN WHITE PAINT ALL AREAS TO BE EXCAVATED PRIOR TO CONTACTING U.S.A. ANY AREAS NOT MARKED WILL NOT BE SUBJECT TO U.S.A., AND THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE RESULTING FROM EXCAVATION.
4. THE CONTRACTOR SHALL EXPOSE AND VERIFY LOCATIONS AND ELEVATIONS OF EXISTING UNDERGROUND UTILITIES PRIOR TO CONSTRUCTION OF THE NEW IMPROVEMENTS CONNECTING TO OR IN THE VICINITY OF THE SAME.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL EXISTING MONUMENTS AND OTHER SURVEY MARKERS ON THE JOB SITE.
6. THE CONTRACTOR SHALL PLACE BOXED SURVEY MONUMENTS WITH 1-1/2" BRONZE HEAD SET IN CONCRETE (STD. DWG. ST-36) AT LOCATIONS SHOWN ON THESE PLANS.
7. A.C. SURFACE SHALL BE CUT TO A NEAT, STRAIGHT LINE PARALLEL WITH THE STREET CENTERLINE AND THE EXPOSED EDGE SHALL BE TACKED WITH EMULSION PRIOR TO PAVING. THE EXPOSED BASE MATERIAL SHALL BE GRADED, RE-COMPACTED, AND RESEALED PRIOR TO PAVING.
8. ANY EXISTING CONCRETE SURFACE TO BE REMOVED SHALL BE SAW CUT TO A NEAT, STRAIGHT LINE.
9. THE CONTRACTOR SHALL SUBMIT A TRAFFIC CONTROL PLAN THAT SHALL BE ACCEPTED BY THE ENGINEERING DIVISION OF PUBLIC WORKS BEFORE START OF WORK IN RIGHT-OF-WAY AND SHALL BE IN ACCORDANCE WITH CALIFORNIA MUTCD LATEST EDITION. MAINTAIN LANES OPENED AS SPECIFIED IN THE SPECIAL PROVISIONS UNLESS OTHERWISE SHOWN ON THE PLANS. TRAFFIC CONTROL HOURS ARE SUBJECT TO LIMITATION BY THE CITY. TRAFFIC CONTROL WITH LANE CLOSURES THAT AFFECT TRAFFIC FLOW MAY REQUIRE NIGHT WORK. IF, AS A PART OF TRAFFIC CONTROL MEASURES, A ROADWAY CLOSURE HAS BEEN APPROVED, THE CONTRACTOR SHALL NOTIFY THE ENGINEER 72 HOURS IN ADVANCE OF SETTING UP THIS CLOSURE.
10. CURB RAMPS CONFORMING TO ALL ADA AND TITLE 24 REQUIREMENTS SHALL BE PLACED AT ALL NEW STANDARD CURB RETURNS (STANDARD DRAWING ST-27) AND STANDARD TYPE A-7 DRIVEWAYS. WHERE EXISTING RAMPS DO NOT MEET CURRENT ADA AND TITLE 24 REQUIREMENTS, THE RAMPS SHALL BE UPGRADED IN CONFORMANCE WITH MINIMUM TITLE 24 REQUIREMENTS. WHERE EXISTING RAMPS DO NOT INCLUDE DETECTABLE WARNING PANELS (TRUNCATED DOMES), PANELS SHALL BE RETROFITTED PER THE CONSTRUCTION STANDARDS.
11. DRAIN INLETS NOT WITHIN A PAVED AREA SHALL HAVE A 12" WIDE COLLAR OF 6" THICK P.C.C. OR 2" THICK A.C.
12. PRIOR TO THE CERTIFICATE OF COMPLETION ON ALL SINGLE-FAMILY RESIDENTIAL SUBDIVISIONS, THE DEVELOPER SHALL SUBMIT A LETTER FROM THE POST OFFICE STATING THAT ITS REQUIREMENTS FOR MAILBOX CLUSTER PADS HAVE BEEN SATISFIED.
13. ALL UNDERGROUND UTILITIES WITHIN EXISTING OR PROPOSED CITY OF ROSEVILLE EASEMENTS SHALL REQUIRE A MINIMUM OF 90% COMPACTION ON THE TRENCH BACKFILL. COMPACTION OF BACKFILL BY JETTING IS NOT PERMITTED IN CITY OF ROSEVILLE RIGHT OF WAY AND EASEMENT AREAS OR WITHIN DEDICATED RECLAIMED WATER, STORM, SEWER OR WATER EASEMENTS AND MAINS.
14. THE CONTRACTOR SHALL CONDUCT A PRE-CONSTRUCTION MEETING ONE-WEEK PRIOR TO STARTING WORK. MEMBERS OF THE CITY OF ROSEVILLE DEVELOPMENT SERVICES DEPARTMENT, ENVIRONMENTAL UTILITIES DEPARTMENT AND ALL OTHER UTILITY REPRESENTATIVES SHALL BE NOTIFIED BY THE CONTRACTOR AS TO THE DATE AND LOCATION OF THE MEETING.
15. PRIOR TO EXCAVATION OF TRENCHES 5 FEET OR DEEPER, THE CONTRACTOR SHALL SUBMIT TO THE DEVELOPMENT SERVICES DEPARTMENT OR ENVIRONMENTAL UTILITIES DEPARTMENT INSPECTOR A COPY OF THE COMPANY'S ANNUAL CALOSHA TRENCHING PERMIT AND A COPY OF THE COMPANY'S LETTER INFORMING CALOSHA OF THE TIME THE TRENCHING IS COMMENCING AND THE LOCATION OF THE WORK.
16. ALL PAINTED TRAFFIC STRIPES, ARROWS, AND PAVEMENT MARKINGS SHALL BE CONSTRUCTED WITH THERMOPLASTIC MATERIAL TO THE SPECIFICATIONS SET FORTH IN CHAPTER 3 OF THE CALIFORNIA MUTCD LATEST EDITION. NON-REFLECTIVE PAVEMENT MARKERS SHALL CONSIST OF CERAMIC MARKERS ONLY CONFORMING TO CHAPTER 3 OF THE CALIFORNIA MUTCD LATEST EDITION.
17. THE CONTRACTOR SHALL TAKE EXTREME CARE TO PROTECT EXISTING SITE AND ADJACENT IMPROVEMENTS FROM DAMAGE. THE CONTRACTOR SHALL BE RESPONSIBLE TO REPAIR OR MAKE REPLACEMENT OF ALL CRACKED AND OTHERWISE PRE-EXISTING DAMAGED PUBLIC IMPROVEMENTS ALONG THE FRONTAGE OF THE PROJECT SITE AND ANY DAMAGE RESULTING FROM CONSTRUCTION TO CURRENT CITY STANDARDS AND AT THEIR OWN EXPENSE. THE EXTENT OF THE REPAIRS SHALL BE DETERMINED BY THE DEVELOPMENT SERVICES CONSTRUCTION INSPECTOR AND SHALL BE COMPLETED PRIOR TO THE CITY ACCEPTANCE OF THE IMPROVEMENTS.
18. WHERE COMBINATIONS OF SIDEWALK OR CURB AND GUTTER ARE PLACED CONTIGUOUS TO EXISTING, ALL ADJOINING EXISTING CONCRETE VERTICAL FACES SHALL BE DOWELED. ALL ABUTTING SIDEWALK ENDS SHALL BE DOWELED MID-SECTION VERTICALLY WITH TWO DOWELS FOR FOUR THROUGH SIX-FOOT WIDE SIDEWALK AND THREE DOWELS FOR WIDER SIDEWALK. ABUTTING CURB AND GUTTER ENDS SHALL BE DOWELED TWICE, 18 INCHES APART AT GUTTER PAN MID-SECTION. DOWEL CONNECTIONS OF LONGITUDINAL RUNS OF SIDEWALK TO BACK OF CURB SHALL BE THREE FEET ON CENTER. ALL DOWELS SHALL BE 16 INCHES LONG, GRADE 60; #4 REBAR PENETRATING FOUR INCHES. THE DOWEL HOLE SHALL BE 5/8-INCH DIAMETER AT A SLIGHT HORIZONTAL ANGLE FROM PERPENDICULAR. THE PENETRATING PORTION OF THE DOWEL AND THE ENTIRE (CLEANED) VERTICAL SURFACE OF THE ADJOINING, EXISTING CONCRETE SHALL BE THOROUGHLY COATED WITH STATE STANDARD TWO-PART EPOXY.
19. WHEN SAWCUTTING WITHIN THE STREET FOR TRENCHING OR OTHER PURPOSES, CONTRACTOR SHALL GRIND 1½' OF PAVEMENT BETWEEN THE LANE LINES (FROM LANE STRIPE TO LANE STRIPE) UPON COMPLETION OF THE SAWCUTTING AND OR TRENCHING WORK. WHERE THE SAWCUTTING OCCURS BETWEEN THE CURB AND GUTTER AND NEAREST LANE STRIPE (INCLUDING BIKE LANES), THE SAME 1 ½' GRIND SHALL BE REQUIRED. CONTRACTOR TO PLACE A PETROMAT FABRIC OR APPROVED EQUAL BY THE CITY OF ROSEVILLE AND OVERLAY FROM LANE STRIPE TO LANE STRIPE, OR CURB TO LANE STRIPE AND RESTRIPE OR REPLACE ANY DELINEATORS REMOVED DURING THE GRIND.
20. THE CONTRACTOR SHALL PLACE FILTER FABRIC BETWEEN THE INITIAL BEDDING AND BACKFILL AND THE TRENCH BACKFILL FOR SANITARY SEWERS DEPTH GREATER THAN 15 FEET MEASURED TO THE PIPE INVERT.

VERIFICATION-LOCATION:

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFICATION OF ALL EXISTING UNDERGROUND UTILITIES, WHETHER OR NOT THEY ARE SHOWN ON THESE PLANS. THE CONTRACTOR SHALL CONTACT U.S.A. AND HAVE UTILITIES MARKED AT LEAST 72 HOURS BEFORE BEGINNING WORK. WHERE MARKINGS ARE NEAR PROPOSED FOUNDATIONS, THE CONTRACTOR SHALL LOCATE UNDERGROUND UTILITIES BY POT HOLING PRIOR TO EXCAVATING.
2. THE CONTRACTOR IS SOLELY RESPONSIBLE TO PROVIDE ALL LABOR AND EQUIPMENT NECESSARY TO LOCATE EXISTING UNDERGROUND FACILITIES BEYOND THE INFORMATION PROVIDED BY U.S.A. MARKING INCLUDE, BUT NOT LIMITED TO, METAL DETECTORS, WIRE LOCATIONS (OR WIRE LOCATING EQUIPMENT), AND POTHOLING.
3. LOCATIONS OF SIGNAL STANDARDS, CONTROLLERS, SERVICE PEDESTALS, PULL BOXES AND LOOP DETECTORS AS SHOWN ON THESE PLANS ARE APPROXIMATE. THE CONTRACTOR SHALL LOCATE THESE ITEMS AND THE ENGINEER SHALL APPROVE SAID LOCATIONS PRIOR TO EXCAVATION.
4. IN CASE OF BORING, CONTRACTOR SHALL VERIFY LOCATIONS AND ELEVATIONS OF EXISTING UNDERGROUND UTILITIES PRIOR TO CONSTRUCTION.

TRAFFIC CONTROL PLANS:

1. THE CONTRACTOR SHALL SUBMIT A TRAFFIC CONTROL PLAN THAT SHALL BE ACCEPTED BY THE ENGINEERING DIVISION OF PUBLIC WORKS BEFORE START OF WORK IN RIGHT-OF-WAY AND SHALL BE IN ACCORDANCE WITH CALIFORNIA MUTCD LATEST EDITION. MAINTAIN LANES OPENED AS SPECIFIED IN THE SPECIAL PROVISIONS UNLESS OTHERWISE SHOWN ON THE PLANS. TRAFFIC CONTROL HOURS ARE SUBJECT TO LIMITATION BY THE CITY. TRAFFIC CONTROL WITH LANE CLOSURES THAT AFFECT TRAFFIC FLOW MAY REQUIRE NIGHT WORK. IF, AS A PART OF TRAFFIC CONTROL MEASURES, A ROADWAY CLOSURE HAS BEEN APPROVED, THE CONTRACTOR SHALL NOTIFY THE ENGINEER 72 HOURS IN ADVANCE OF SETTING UP THIS CLOSURE.
2. THE CONTRACTOR SHALL BE REQUIRED TO SUBMIT A WRITTEN TRAFFIC CONTROL PLAN REQUESTING TO DISCONNECT OR DISABLE ANY TRAFFIC SIGNAL LOOP OR SIGNAL INTERCONNECT WIRE. THIS WRITTEN NOTIFICATION SHALL INCLUDE DATE AND TIME OF DISCONNECT, DESCRIPTION OF WORK, INCLUDING LOOP INPUTS IF APPLICABLE, CONTACT PERSON, AND ESTIMATED DATE OF RECONNECTION. THIS REQUEST SHALL BE ON COMPANY LETTERHEAD, FAX OR VIA COMPANY E-MAIL. UPON APPROVAL OF REQUEST, THE CONTRACTOR SHALL NOTIFY THE INSPECTOR 48 HOURS PRIOR TO WORK TO VERIFY SCHEDULE. A COPY OF THE APPROVED REQUEST SHALL BE GIVEN TO THE SIGNAL TECHNICIAN DISCONNECTING THE REQUESTED SYSTEM. THIS COPY IS TO BE PLACED IN THE NEAREST CONTROLLER CABINET DURING THE COURSE WORK. REQUEST TO DISCONNECT OR DISABLE ANY TRAFFIC SIGNAL SYSTEM FOR A PERIOD LONGER THAN FIVE (5) WORKING DAYS WILL NOT BE APPROVED.
3. THE CONTRACTOR SHALL PROVIDE ALL LIGHTS, SIGNS, BARRICADES, FLAGGERS OR OTHER DEVICES NECESSARY TO PROVIDE SAFETY.
4. THE CONTRACTOR SHALL POST EMERGENCY TELEPHONE NUMBERS FOR POLICE, FIRE, AMBULANCE, AND THOSE AGENCIES RESPONSIBLE FOR MAINTENANCE OF UTILITIES IN THE VICINITY OF JOB SITE.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING AND MAINTAINING ALL CONSTRUCTION SIGNING AS REQUIRED BY THE LATEST EDITION OF THE CMUTCD TO DELINEATE CONSTRUCTION HAZARDS AT HIS OWN EXPENSE.
6. ALL TRAFFIC STRIPES AND PAVEMENT LEGENDS SHALL BE THERMOPLASTIC.
7. SIGNING AND STRIPING DETAILS REFER TO THOSE SHOWN IN THE LATEST EDITION OF THE CMUTCD.
8. LOCATIONS OF SIGNING AND STRIPING AS SHOWN ON THESE PLANS ARE APPROXIMATE. THE CONTRACTOR SHALL LOCATE THESE ITEMS AND THE ENGINEER SHALL APPROVE SAID LOCATIONS PRIOR TO CONSTRUCTION/INSTALLATION.
9. THE CONTRACTOR SHALL REMOVE ALL EXISTING NON-CONFORMING STRIPING AS DIRECTED BY THE ENGINEER AND ALL EXISTING STRIPING THAT CONFLICTS WITH THE PROPOSED STRIPING.

AIR QUALITY:

THE FOLLOWING NOTES ARE PROVIDED AS REFERENCE TO APPLICABLE PLACER COUNTY AIR POLLUTION CONTROL DISTRICT ADOPTED RULES AND REGULATIONS. COMPLIANCE WITH ALL APPLICABLE APCD RULES IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR. AIR QUALITY RULES ARE ENFORCED SOLELY BY THE PLACER COUNTY AIR POLLUTION CONTROL DISTRICT.

1. CONSTRUCTION EQUIPMENT EXHAUST EMISSIONS SHALL NOT EXCEED PLACER COUNTY APCD RULE 202 VISIBLE EMISSION LIMITATIONS. OPERATORS OF VEHICLES AND EQUIPMENT FOUND TO EXCEED OPACITY LIMITS ARE TO BE IMMEDIATELY NOTIFIED BY APCD TO CEASE OPERATIONS AND THE EQUIPMENT MUST BE REPAIRED WITHIN 72 HOURS. (BASED ON APCD RULE 202)
2. THE CONTRACTOR SHALL SUSPEND ALL GRADING OPERATIONS WHEN FUGITIVE DUST EXCEEDS PLACER COUNTY APCD RULE 228 (FUGITIVE DUST) LIMITATIONS. THE PRIME CONTRACTOR SHALL BE RESPONSIBLE FOR HAVING AN INDIVIDUAL WHO IS CARB-CERTIFIED TO PERFORM VISIBLE EMISSIONS EVALUATIONS (VEE). THIS INDIVIDUAL SHALL EVALUATE COMPLIANCE WITH RULE 228 ON A WEEKLY BASIS. IT IS TO BE NOTED THAT FUGITIVE DUST IS NOT TO EXCEED 40% OPACITY AND NOT GO BEYOND THE PROPERTY BOUNDARY AT ANY TIME. LIME OR OTHER DRYING AGENTS UTILIZED TO DRY OUT WET GRADING AREAS SHALL NOT EXCEED PLACER COUNTY APCD RULE 228 FUGITIVE DUST LIMITATIONS. OPERATORS OF VEHICLES AND EQUIPMENT FOUND TO EXCEED OPACITY LIMITS WILL BE NOTIFIED BY APCD AND THE EQUIPMENT MUST BE REPAIRED WITHIN 72 HOURS. ALL PROJECTS IN EXCESS OF 5 ACRES SHALL HAVE AN APPROVED DUST CONTROL PLAN FROM THE PLACER COUNTY AIR POLLUTION CONTROL DISTRICT. (BASED ON APCD RULE 228)
3. DURING CONSTRUCTION, TRAFFIC SPEEDS ON ALL UNPAVED SURFACES SHALL BE LIMITED TO 15 MILES PER HOUR OR LESS. (BASED ON APCD RULE 228 / SECTION 401.2)
4. DURING CONSTRUCTION, NO OPEN BURNING OF REMOVED VEGETATION SHALL BE ALLOWED UNLESS PERMITTED BY THE PCAPCD. ALL REMOVED VEGETATIVE MATERIAL SHALL BE EITHER CHIPPED ON SITE OR TAKEN TO AN APPROPRIATE RECYCLING SITE, OR IF A SITE IS NOT AVAILABLE, A LICENSED DISPOSAL SITE. (BASED ON APCD RULE 310)
5. A PERSON SHALL NOT DISCHARGE INTO THE ATMOSPHERE VOLATILE ORGANIC COMPOUNDS ('VOC'S) CAUSED BY THE USE OR MANUFACTURE OF CUTBACK OR EMULSIFIED ASPHALTS FOR PAVING, ROAD CONSTRUCTION OR ROAD MAINTENANCE, UNLESS SUCH MANUFACTURE OR USE COMPLIES WITH THE PROVISIONS RULE 217. (BASED ON APCD RULE 217).
6. PROCESSES THAT DISCHARGE 2 POUNDS PER DAY OR MORE OF AIR CONTAMINANTS, AS DEFINED BY HEALTH AND SAFETY CODE SECTION 39013, TO THE ATMOSPHERE MAY REQUIRE A PERMIT. PERMITS MAY BE REQUIRED FOR BOTH CONSTRUCTION AND OPERATION. DEVELOPERS/CONTRACTORS SHOULD CONTACT THE DISTRICT PRIOR TO CONSTRUCTION AND OBTAIN ANY NECESSARY PERMITS PRIOR TO THE ISSUANCE OF A BUILDING PERMIT. (BASED ON THE CALIFORNIA HEALTH & SAFETY CODE SECTION 39013: (NEED LINK)

TREE PRESERVATION:

1. GRADING AROUND TREES TO BE LIMITED TO OUTSIDE THE DRIPLINE. ANY TREE WELL GRADED SHOULD BE DRAINED TO SOME OUTFALL OR SWALE.
2. THE FOLLOWING CONDITIONS SHALL APPLY TO ENSURE THE PRESERVATION OF TREES:
   A. EACH TREE OR GROUP OF TREES TO BE SAVED SHALL BE FENCED BY A CHAIN-LINK FENCE PRIOR TO ANY GRADING OR MOVEMENT OF HEAVY EQUIPMENT OR ISSUANCE OF ANY PERMITS.
   B. FENCING SHALL BE LOCATED ONE FOOT (1') OUTSIDE THE DRIPLINE OF THE TREE OR TREES.
   C. SIGNS SHALL BE POSTED ON ALL SIDES OF SAID FENCES STATING:

      WARNING:
      THIS FENCE SHALL NOT BE REMOVED
      OR RELOCATED WITHOUT WRITTEN
      AUTHORIZATION FROM THE
      PLANING DEPARTMENT
3. THE GRADING PLAN FOR THE PROJECT HAS BEEN DESIGNED FOR NO GRADING TO OCCUR WITHIN THE DRIPLINE OF ANY OAK TREE UNLESS SPECIFICALLY APPROVED BY PLANNING DEPARTMENT AND SHOWN ON THESE PLANS. NO GRADES SHALL BE MODIFIED WITHOUT THE APPROVAL OF THE CIVIL ENGINEER AND THE CITY OF ROSEVILLE.
4. NO TRENCHING SHALL OCCUR BENEATH THE DRIPLINE OF ANY OAK TREE TO BE SAVED UNLESS STATED ON THESE PLANS "TRENCHING UNDER THIS TREE IS APPROVED".
5. PARKING OF VEHICLES AND EQUIPMENT OR STORAGE OF MATERIALS UNDER THE DRIPLINE OF TREES SHALL NOT OCCUR AT ANY TIME.

GRADING:

1. GRADING SHALL CONFORM TO APPENDIX CHAPTER 33 UBC, LATEST EDITION, AND TO THE RECOMMENDATIONS OF THE GEOTECHNICAL ENGINEERING REPORT BY GEOCON FEBRUARY 2013.
2. NON-POTABLE WATER SHALL BE SPRAYED ON ALL EXPOSED EARTH SURFACES DURING CLEARING GRADING EARTH MOVING, AND OTHER SITE PREPARATION ACTIVITIES. THE EXPOSED EARTH SHALL BE WATERED THROUGHOUT THE DAY TO MINIMIZE DUST.
3. TARPAULINS OR OTHER EFFECTIVE COVERS SHALL BE USED ON ALL STOCKPILED EARTH MATERIAL AND ON HALL TRUCKS TO MINIMIZE DUST
4. THE CITY SHALL HAVE THE AUTHORITY TO STOP ALL GRADING OPERATIONS, IF, IN OPINION OF CITY STAFF, INADEQUATE DUST CONTROL MEASURES ARE BEING PRACTICED OR EXCESSIVE WIND CONDITIONS CONTRIBUTE TO FUGITIVE DUST EMISSIONS
5. ADJACENT STREET FRONTAGES SHALL BE SWEPT AT LEAST ONCE A DAY TO REMOVE SILT AND OTHER DIRT WHICH IS EVIDENT FROM CONSTRUCTION ACTIVITIES REFER TO SCHEDULES WITHIN SWPPP.
6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CLEANING CONSTRUCTION VEHICLES LEAVING THE SITE ON A DAILY BASIS TO PREVENT DUST, SILT AND DIRT FROM BEING RELEASED OR TRACKED OFFSITE. REFER TO SWPPP FOR SPECIFIC REQUIREMENTS.
7. CONSTRUCTION SHALL STOP IF CULTURAL RESOURCES ARE SUSPECTED. IT IS POSSIBLE THAT PREVIOUS ACTIVITIES HAVE OBSCURED SURFACE EVIDENCE OF CULTURAL RESOURCES. IF SIGNS OF AN ARCHEOLOGICAL SITE, SUCH AS ANY UNUSUAL AMOUNTS OF STONE, BONE, OR SHELL, ARE UNCOVERED DURING GRADING OR OTHER CONSTRUCTION ACTIVITIES, WORK SHALL BE HALTED WITHIN 100 FEET OF THE FIND AND THE ROSEVILLE COMMUNITY DEVELOPMENT DEPARTMENT SHALL BE NOTIFIED A QUALIFIED ARCHEOLOGIST SHALL BE CONSULTED FOR AN ON-SITE EVALUATION THE ARCHEOLOGIST MAY REQUIRE ADDITIONAL MITIGATION
8. SHOULD GRADING OPERATIONS UNCOVER HAZARDOUS MATERIALS, OR WHAT APPEARS TO BE HAZARDOUS MATERIALS. THE FIRE DEPARTMENT SHALL BE CONTACTED IMMEDIATELY AT (916) 774-5820. THE AREA WHICH CONTAINS THE HAZARDOUS MATERIALS, SHALL BE MARKED OFF UNTIL AN INVESTIGATION BY A MEMBER OF THE FIRE DEPARTMENT IS CONDUCTED
9. THE CONTRACTOR IS EXPECTED TO COMPLY WITH THE FUGITIVE DUST CONTROL REQUIREMENTS FROM THE PLACER COUNTY AIR POLLUTION CONTROL DISTRICT: WWW.PLACERCA.GOV/APCD CONTAMINATED SOIL- CONTRACTOR AGREES TO PROPERLY ADHERE TO ALL THE CURRENT STATE AND FEDERAL REQUIREMENTS WHEN ANY EVIDENCE OF TOXIC HAZARDOUS OR CONTAMINATED SOILS ARE ENCOUNTERED DURING ANY AND ALL EXCAVATION OR GRADING OPERATIONS.
10. TEMPORARY EXCAVATION SLOPES MUST MEET CAL-OSHA REQUIREMENTS AS APPROPRIATE AND THE CONTRACTOR SHOULD HAVE A CAL-OSHA-APPROVED COMPETENT PERSON ONSITE DURING EXCAVATIONS
11. PERMANENT FILL AND CUT SLOPES ADJACENT TO THE ROADWAY (IF ANY) SHOULD BE CONSTRUCTED AT 4H:1V OR FLATTER
12. ENGINEERED FILL WILL NOT CONTAIN DELETERIOUS MATTER, ORGANIC MATERIAL, ROCK OR CEMENTATION LARGER THAN 3 INCHES IN MAXIMUM DIMENSION. EXCAVATED SOILS GENERATED FROM CUT OPERATIONS ALONG THE ALIGNMENT, NEARBY DESIGNATED BORROW AREAS OR EXISTING PAVEMENT SECTION MATERIALS MAY BE INCORPORATED INTO ENGINEERED FILL PROVIDED IT MEETS THE ENGINEERED FILL REQUIREMENTS
13. IF REQUIRED, IMPORT FILL MATERIAL SHOULD BE SIMILAR TO OR BETTER THAN NATIVE SOILS WITH A MINIMUM R-VALUE OF 25, MEETS THE ENGINEERED FALL REQUIREMENTS, AND WILL BE SAMPLED, TESTED, AND APPROVED BY THE GEOTECHNICAL INSPECTOR OR ENGINEER PRIOR TO ITS TRANSPORTATION TO THE SITE APPROVAL MAY TAKE UP TO ONE WEEK IF LABORATORY TESTING IS REQUIRED.
14. CONTRACTORS SHOULD BE AWARE OF MOISTURE SENSITIVITY OF SOILS AND THE POTENTIAL COMPACTION/WORKABILITY DIFFICULTIES. IT IS ANTICIPATED THAT EXPOSED SUBGRADE AND EXCAVATION BOTTOMS WILL LIKELY BE WET AND UNSTABLE, REGARDLESS OF THE TIME OF YEAR, AND MITIGATION ALTERNATIVES MAY BE USED TO ACHIEVE WORKABLE SOIL SITE SPECIFIC RECOMMENDATIONS DURING CONSTRUCTION MAY BE NEEDED BASED ON CONDITIONS ENCOUNTERED
15. OPTIMUM MOISTURE CONTENT OF SUBGRADE SOILS IS APPROXIMATELY 9 PERCENT.
16. GRADING AND EARTHWORK OPERATIONS WILL BE CONTINUOUSLY OBSERVED AND ALL FILLS TESTED FOR RECOMMENDED COMPACTION AND MOISTURE CONTENT BY A GEOTECHNICAL INSPECTOR
17. SITE PREPARATION SHOULD BEGIN WITH REMOVAL OF EXISTING SURFACE AND SUBSURFACE STRUCTURES NOT DESIGNATED TO REMAIN EXISTING PAVEMENT MATERIALS, VEGETATION, TOPSOIL, AND DELETERIOUS MATERIAL SHOULD BE REMOVED AND EXPORTED FROM THE SITE.
18. ANTICIPATED DEPTH OF 2 TO 6 INCHES WILL BE REQUIRED TO EFFECTIVELY REMOVE SURFACE VEGETATION
19. EXISTING LANDSCAPED AND NON-LANDSCAPED MEDIAN AREAS SHOULD BE CLEARED OF VEGETATION AND OTHER UNSUITABLE SURFACE MATERIALS AND EXCAVATED TO REMOVE SATURATED/UNSTABLE SOIL TO EXPOSE FIRM, UNDISTURBED MATERIALS
20. EXCAVATIONS OR DEPRESSIONS TO BE RESTORED WITH ENGINEERED FILL
21. AREAS LEFT AT GRADE. TO RECEIVE FILL, AND THE BOTTOMS OF OVER-EXCAVATED AREAS SHOULD BE SCARIFIED AT LEAST 12 INCHES, UNIFORMLY MOISTURE CONDITIONED TO AT OR ABOVE OPTIMUM MOISTURE CONTENT, AND COMPACTED TO AT LEAST 90% RELATIVE COMPACTION AND PERFORMED IN THE PRESENCE OF A GEOTECHNICAL INSPECTOR.
22. ENGINEERED FILL MATERIAL WILL BE COMPACTED IN HORIZONTAL LIFTS NOT TO EXCEED 8 INCHES (LOOSE THICKNESS) AT OR ABOVE OPTIMUM AND COMPACTED TO AT LEAST 90% RELATIVE COMPACTION, AND BROUGHT TO FINAL SUBGRADE ELEVATIONS
23. THE TOP 6 INCHES OF FINAL PAVEMENT SUBGRADE MUST BE MOISTURE-CONDITIONED AT OR ABOVE OPTIMUM AND COMPACTED TO AT LEAST 95% RELATIVE COMPACTION, AND BE FINISHED TO A SMOOTH, UNYIELDING SURFACE. IT IS RECOMMENDED TO PROOF-ROLL THE SUBGRADE WITH A LOADED WATER TRUCK TO VERIFY STABILITY OF SUBGRADE.
24. UNDERGROUND UTILITY TRENCHES SHOULD BE BACKFILLED WITH PROPERLY COMPACTED MATERIAL (AS USTED ABOVE). PIPE BEDDING, SHADING, AND TRENCH BACKFILL SHOULD CONFORM TO THE REQUIREMENTS OF THE APPROPRIATE UTILITY AUTHORITY.
25. CARE MUST BE TAKEN TO PROPERLY GRADE IMPROVEMENTS SO THAT SURFACE DRAINAGE IS DIRECTED TOWARD APPROPRIATE DRAINAGE FACILITIES.

EROSION/ / SEDIMENT CONTROL:

1. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE IMPLEMENTED AS SPECIFIED IN THE WATER POLLUTION CONTROL PLAN (WPCP) FOR THIS PROJECT OR AS DETERMINED BY THE CITY INSPECTOR. THE WPCP IS CONSIDERED A DYNAMIC DOCUMENT AND WILL CHANGE AS CONDITIONS WARRANT. PERMANENT EROSION AND SEDIMENT CONTROL MEASURES WILL BE CONSTRUCTED AS SHOWN ON THE WPCP PLAN.
2. THE PROJECT WATER POLLUTION CONTROL PLAN (WPCP) IS INCORPORATED BY REFERENCE INTO THIS SET OF PLANS. THE WPCP IS CONSIDERED A DYNAMIC DOCUMENT AND WILL CHANGE AS CONDITIONS WARRANT. PERMANENT EROSION AND SEDIMENT CONTROL MEASURES WILL BE CONSTRUCTED AS SHOWN ON THESE PLANS.
3. A COPY OF THE WPCP SHALL BE KEPT AT THE PROJECT SITE AT ALL TIMES.
4. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE IMPLEMENTED AS SPECIFIED IN THE WPCP AND/OR AS DIRECTED BY CITY QSD.
5. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED IN ACCORDANCE WITH THE WPCP.
6. THE CONTRACTOR SHALL ESTABLISH A SPECIFIC SITE WITHIN THE DEVELOPMENT FOR MAINTENANCE AND STORAGE OF EQUIPMENT OR ANY OTHER ACTIVITY THAT MAY ADVERSELY CONTRIBUTE TO THE WATER QUALITY OF THE RUNOFF IN ACCORDANCE WITH THE WPCP.

CONSTRUCTION NOTES:

1. PROTECT IN PLACE
2. ADJUST TO GRADE
3. CONSTRUCT MODIFIED TYPE 1 BARRIER CURB WITH REBAR PER DETAIL 3 ON SHEET CD-2
4. CONSTRUCT MODIFIED TYPE 2 CURB & GUTTER PER DETAIL 2 ON SHEET CD-2
5. CONSTRUCT 36" VALLEY GUTTER PER CITY STD DRAWING ST-18
6. CONSTRUCT TYPE D DRIVEWAY APRON PER CITY STD DRAWING ST-21
7. CONSTRUCT CURB RAMP PER CALTRANS STD PLAN A88A
8. MODIFY CURB RAMP TO MEET ADA REQUIREMENTS
9. CONSTRUCT TYPE A1-6 CURB PER CALTRANS STD PLAN A87A
10. CONSTRUCT TYPE 2 BARRIER CURB PER CITY STANDARD DETAIL ST-18
11. PROPOSED UTILITY BOX. SEE SHEET E-1 THROUGH E-3 FOR MORE DETAILS.
12. INSTALL PEDESTRIAN HANDRAILS PER PROWAG SECTION R409
13. CONSTRUCT MODIFIED VALLEY GUTTER PER DETAIL 4 ON SHEET CD-2
14. CONSTRUCT MOUNTABLE LANDSCAPE CURB PER DETAIL 5 ON SHEET CD-2
15. CONSTRUCT TYPE 1 BARRIER CURB PER CITY STD DRAWING ST-18
16. INSTALL FIXED BOLLARD PER CITY STD DRAWING ST-38A. CONTRACTOR TO POSITIVELY LOCATE UTILITIES NEAR BOLLARDS AND ADJUST BOLLARD LOCATIONS TO AVOID.
17. INSTALL DECORATIVE POST-TOP STREET LIGHT. SEE SHEET E-1 THROUGH E-3 FOR MORE DETAILS.
18. INSTALL DROP INLET TYPE "C" PER CITY STD DR-1 AND DR-9. TIE INTO EXISTING STORM DRAIN LATERAL.
19. CONSTRUCT TYPE 2 CURB & GUTTER PER CITY STANDARD DETAIL ST-17
20. CONSTRUCT TRENCH DRAIN WITH GRATE PER DETAIL 5 SHEET CD-1
21. ABANDON EXISTING 12" SD PIPE AND REMOVE EXISTING DI
22. FINAL DIGOUT AREAS TO BE DETERMINED BY THE ENGINEER IN THE FIELD.

LEGEND:

- MICROSURFACING (TYPE 2)
- CONCRETE
- HMA
- STAMPED CONCRETE
- DETECTABLE WARNING SURFACE (PER CITY STD ST-35)
- LANDSCAPING (SEE SHEET PL-1)
- CLASS II AB
- GRIND AND OVERLAY

STRIPING & SIGNAGE NOTES:

1. INSTALL LIMIT LINE PER CALTRANS STD DETAIL A24G
2. INSTALL BASIC YELLOW CROSSWALK PER CALTRANS STD DETAIL A24F
3. INSTALL BIKE LANE MARKING PER MUTCD FIGURE 9C-3(C)
4. INSTALL WHITE TRIPLE FOUR CROSSWALK PER CALTRANS STD DETAIL A24F
5. INSTALL BASIC WHITE CROSSWALK PER CALTRANS STD DETAIL A24F
6. INSTALL YELLOW TRIPLE FOUR CROSSWALK PER CALTRANS STD DETAIL A24F
7. INSTALL DETAIL 39A MOD PER CITY STD TS-18

NOTES:

1. ALL PAVEMENT MARKINGS SHALL BE PER CALTRANS STANDARD PLANS A24A – A24E.
2. CONTRACTOR SHALL BE RESPONSIBLE FOR REMOVING EXISTING STRIPING AND MARKINGS THAT CONFLICT WITH PROPOSED STRIPING AND AS DETERMINED BY THE ENGINEER.
3. CONTRACTOR SHALL COORDINATE REMOVAL OF FLASHING PEDESTRIAN SIGNS WITH CITY SIGNAL TECHNICIANS.
4. W11-2 SIGNS SHALL BE FLUORESCENT YELLOW-GREEN.

LEGEND:

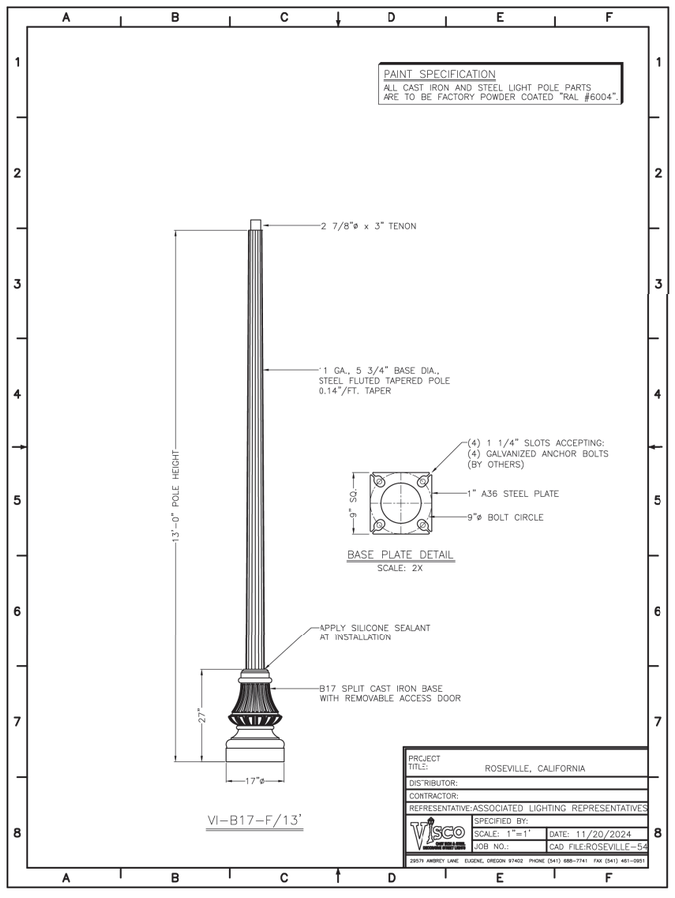
ELECTRICAL INDEX:



SHEET	DESCRIPTION
E-1	ELECTRICAL INDEX, NOTES AND LEGEND
E-2	RECTANGULAR RAPID FLASHING BEACON SYSTEM
E-3 TO E-4	ELECTRICAL DETAILS

ELECTRICAL GENERAL NOTES:

1. ALL ELECTRICAL WORK SHALL CONFORM TO THE LATEST VERSION OF CITY OF ROSEVILLE DESIGN AND CONSTRUCTION STANDARDS, THE LATEST CALIFORNIA MANUAL ON UNIFORM TRAFFIC CONTROL (CAMUTCD), THE 2024 STATE OF CALIFORNIA DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS AND PLANS, AND SUBSEQUENT REVISED STANDARD SPECIFICATIONS AND PLANS, AND THE SPECIAL PROVISIONS.
2. IN CASE OF DIFFERENCES BETWEEN CITY AND CALTRANS STANDARDS, CITY STANDARDS SHALL GOVERN. IN CASE OF DIFFERENCES BETWEEN CITY DESIGN STANDARDS AND CITY CONSTRUCTION STANDARDS, CITY CONSTRUCTION STANDARD SHALL GOVERN.
3. ALL EXISTING ELECTRICAL EQUIPMENT TO REMAIN, UNLESS OTHERWISE NOTED. IF DAMAGED BY THE CONTRACTOR'S OPERATIONS, EQUIPMENT SHALL BE REPAIRED OR REPLACED BY THE CONTRACTOR AT HIS EXPENSE.
4. THE CONTRACTOR SHALL CONTACT ALL UTILITIES TO VERIFY UNDERGROUND AND OVERHEAD UTILITIES. THE CONTRACTOR SHALL CALL 811, UNDERGROUND SERVICE ALERT (U.S.A.), 48 HOURS PRIOR TO ALL EXCAVATION.
5. THE CONTRACTOR SHALL VERIFY OVERHEAD AND UNDERGROUND CLEARANCE REQUIREMENTS WITH ROSEVILLE ELECTRIC, COMCAST, AT&T, AND OTHER AFFECTED UTILITIES PRIOR TO THE START OF WORK.
6. THE LOCATION OF ALL EQUIPMENT SHOWN ON THIS PLAN ARE APPROXIMATE AND MAY BE CHANGED TO SUIT FIELD CONDITIONS AS DIRECTED BY THE ENGINEER.
7. NEW PULL BOXES SHALL BE FIBERLYTE FL-36 UNLESS OTHERWISE NOTED ON THE PLAN.
8. NEW PULL BOXES SHALL BE LOCATED IN THE SIDEWALK WHERE APPLICABLE AND SHALL NOT BE INSTALLED WITHIN ADA TACTILE STRIP, DETECTABLE WARNING SURFACE, RAMPS OR LANDINGS. PULL BOX RIM AND LID SHALL BE FLUSH WITH THE SURROUNDING SURFACE.
9. "E" SHEETS ARE ACCURATE FOR ELECTRICAL WORK ONLY.

ELECTRICAL LEGEND AND ABBREVIATIONS:

AID	AUDIBLE INFORMATION DEVICE
	EXISTING CITY STREET LIGHT
	EXISTING CITY DECORATIVE STREET LIGHT
	EXISTING CITY RECEPTACLE FOR LANDSCAPE LIGHTING

Description

The A850SRLED Old Town luminaire blends form and function into a classic shape. It is supplied with a cast aluminum finial and a solid, cast aluminum roof which includes optimized heat sinks to provide maximum life and performance for the LED light sources. The acorn is sealed to the cast aluminum roof to provide a moisture free and bug-free optics chamber for the LED light source.

EPA: 1.21 (ft²) | WEIGHT: 43 LBS

Features

Mounting Configuration	**1W:** Wall Mount **1A:** 1 Arm Mount **2A:** 2 Arm Mount @ 180° **2APT:** 2 Arm @ 180° & Post Top **3APT:** 3 Arm @ 120° & Post Top **1AM:** 1 Arm Mid-Mount **450PB:** Pier Base **PT:** Post Top **1APT:** 1 Arm & Post Top **2A90:** 2 Arm Mount @ 90° **3A:** 3 Arms @ 120° **3A90:** 3 Arms @ 90° **4A:** 4 Arms @ 90° **4APT:** 4 Arm @ 90° & Post Top **2AM:** 2 Arm Mid-Mount @180°
Optional Control Receptacle	**R7:** 7-Pin control receptacle only **SRR7:** Roof Mounted 7-Pin Control Receptacle Only
Optional Control	**PE:** Twist-Lock Photocontrol (120V-277V) **PE4:** Twist-Lock Photocontrol (347V-480V) **SC:** Shorting Cap **PEC:** Electronic Button Photocontrol (120V-277V) **PEC4:** Electronic Button Photocontrol (480V)
Optional Fuse	**FHD:** Double Fuse and Holder
Optional House Side Shield	**HSS:** 120° House Side Shield **BLOC:** Back Light Optical Control
Optional Fixed Dimming Resistor Board	**FDRB:** Fixed Dimming Resistor Board

VERNON ST/ATLANTIC ST MULTIMODAL SAFETY IMPROVEMENT PROJECT

IRRIGATION PLAN

CITY OF ROSEVILLE CALIFORNIA

IR-1
18 OF 23

IRRIGATION NOTES

1. SPECIFICATIONS: SEE IRRIGATION SPECIFICATIONS FOR ADDITIONAL INFORMATION.
2. POINT OF CONNECTION: CONNECT NEW MAINLINE TO EXISTING IRRIGATION SYSTEM.
3. UTILITIES: CONTRACTOR SHALL VERIFY LOCATION OF ALL ON-SITE UTILITIES. RESTORATION OF DAMAGED UTILITIES SHALL BE MADE AT THE CONTRACTOR'S EXPENSE TO THE SATISFACTION OF THE OWNER.
4. SCHEMATIC: SYSTEM FEATURES ARE SHOWN SCHEMATICALLY FOR GRAPHIC CLARITY. INSTALL ALL PIPING AND VALVES IN COMMON TRENCHES WHERE FEASIBLE AND INSIDE PLANTING AREAS WHENEVER POSSIBLE. ALL VALVES SHALL BE LOCATED IN GROUNDCOVER OR SHRUB AREAS WHENEVER POSSIBLE.
5. CODES: IRRIGATION SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH ALL LOCAL CODES AND MANUFACTURER'S SPECIFICATIONS. NOTIFY LANDSCAPE ARCHITECT BY TELEPHONE AND IN WRITING OF ANY CONFLICTS PRIOR TO INSTALLATION.
6. SLEEVING: CONTRACTOR SHALL SIZE ALL SLEEVES TO BE A MINIMUM TWO TIMES THE SIZE OF THE INTERIOR PIPE. SLEEVES SHALL BE INSTALLED AT THE NECESSARY DEPTHS PRIOR TO PAVEMENT CONSTRUCTION. SLEEVING SHALL EXTEND 1'-0" FROM EDGE OF PAVEMENT INTO LAWN OR PLANTING AREA, AND SHALL HAVE ENDS CLEARLY MARKED ABOVE GRADE.
7. MAINTAINING EXISTING IRRIGATION: SHOULD THE EXISTING MAINLINE BREAK OR BE SHUT OFF FOR ANY REASON DURING THE COURSE OF CONSTRUCTION THE CONTRACTOR SHALL HAND WATER ALL TREES, SHRUBS, TURF, AND GROUNDCOVER THAT THE EXISTING IRRIGATION SYSTEM WATERS. THE CONTRACTOR SHALL CONTINUE TO DO SO UNTIL THE IRRIGATION SYSTEM IS OPERABLE.
8. EXISTING IRRIGATION INFORMATION: EXISTING IRRIGATION PLANS WERE MADE AVAILABLE TO THE LANDSCAPE ARCHITECT AND IS SHOWN ON THESE PLANS HALF TONE. LANDSCAPE ARCHITECT SHALL NOT BE HELD LIABLE FOR CHANGES, INACCURACIES, OMISSIONS, OR OTHER ERRORS ON THESE DOCUMENTS. THIS INFORMATION IS PROVIDED AS AN AID ONLY AND THE CONTRACTOR SHALL BE RESPONSIBLE VERIFYING IN THE FIELD. FOR REFERENCE, THE FOLLOWING RECORD DRAWINGS WERE PROVIDED: VERNON STREET IMPROVEMENT PROJECT, 900 BLOCK, SHEET L1.9, 6/8/01.
9. IRRIGATION EQUIPMENT: IN ADDITION TO EQUIPMENT SPECIFICALLY NOTED ON THE PLANS, REMOVAL OF ALL VISIBLE EXISTING IRRIGATION EQUIPMENT AND ANY BELOW-GRADE COMPONENTS THAT WOULD INTERFERE WITH THE WORK IN DURING TRENCHING AND/OR ROUGH GRADING.
10. MAINLINE FLUSH: ALL MAINLINES SHALL BE FLUSHED PRIOR TO INSTALLATION.
11. WIRE SPLICING: ALL WIRE SPLICING SHALL BE DONE IN VALVE BOXES PER SPECS.
12. PUBLIC RIGHT OF WAY: ALL WORK PERFORMED WITHIN THE PUBLIC-RIGHT-OF-WAYS SHALL COMPLY WITH ALL APPLICABLE CITY REQUIREMENTS AND SPECIFICATIONS.
13. IRRIGATION CROSSINGS: EXISTING CROSSOVERS SHOWN IN APPROXIMATE LOCATION BASED ON AS BUILD DRAWINGS. CONTRACTOR TO VERIFY IN FIELD.
14. IRRIGATION MAINLINE LOCATION: PRIOR TO START OF CONSTRUCTION, CONTRACTOR SHALL LOCATE AND FLAG EXISTING MAINLINE LOCATION IN FIELD FOR REVIEW BY LANDSCAPE ARCHITECT AND CITY CONSTRUCTION MANAGER.
15. PARK STANDARD DETAILS: THE CITY OF ROSEVILLE STANDARD DETAILS ARE SHOWN FOR REFERENCE ONLY, CONTRACTOR MUST COMPLY TO THE MOST CURRENT VERSION OF THE PARKS STANDARD DETAILS

NOTE: REFER TO MOST CURRENT CITY OF ROSEVILLE PARKS, RECREATION AND LIBRARIES STANDARD DETAILS AND SPECIFICATIONS

01 / IR-2 CONNECTION TO EXISTING MAINLINE
N.T.S.

LANDSCAPE DOCUMENTATION NOTES

1. MWELO CODES AND REFERENCES: A COPY OF THE MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (MWELO) DOCUMENT CAN BE FOUND AT WATER.CA.GOV. REFER TO MWELO SECTION 492.9 FOR CERTIFICATE OF COMPLETION REQUIREMENTS AND APPENDIX C FOR SAMPLE OF CERTIFICATE OF COMPLETION AND CERTIFICATE OF INSTALLATION FORM.
2. IRRIGATION PLAN CONTROLLER COPY: THE CONTRACTOR SHALL PLACE A LAMINATED 11X17 COPY OF THE IRRIGATION PLAN SHOWING THE HYDROZONES WITHIN THE IRRIGATION CONTROLLER(S) CABINET FOR FUTURE MANAGEMENT USE.

WATER EFFICIENT LANDSCAPE WORKSHEET

WATER EFFICIENT LANDSCAPE WORKSHEET

This worksheet is filled out by the project applicant and it is a required element of the Landscape Documentation Package.

Reference Evapotranspiration (ETo) 52.2

Hydrozone # /Planting Description[a]	Plant Factor (PF)[f]	Irrigation Method[b]	Irrigation Efficiency (IE)[c]	ETAF (PF/IE)	Landscape Area (sq. ft.)	ETAF x Area	Estimated Total Water Use (ETWU)[d]
Regular Landscape Areas							
Low Water Use Plantings	0.2	Drip	0.81	0.25	4,338	1,071	34,665
Medium Water Use Trees	0.4	Drip	0.81	0.49	300	148	4,795
				Totals	4,638 (A)	1,219 (B)	
Special Landscape Areas							
				1			
				1			
				1			
				Totals	0 (C)	0 (D)	
						ETWU Total	39,460
						Maximum Applied Water Allowance (MAWA)[e]	67,547

[a]Hydrozone #/Planting Description
E.g
1.) front lawn
2.) low water use plantings
3.) medium water use planting

[b]Irrigation Method
overhead spray or drip

[c]Irrigation Efficiency
0.75 for spray head
0.81 for drip

[d]ETWU **(Annual Gallons Required) =**
Eto x 0.62 x ETAF x Area
where 0.62 is a conversion factor that converts acre-inches per acre per year to gallons per square foot per year

[e]MAWA (Annual Gallons Allowed) =
(Eto) (0.62) [(ETAF x LA) + ((1-ETAF) x SLA)]
where 0.62 is a conversion factor that converts acre-inches per acre per year to gallons per square foot per year, LA is the total landscape area in square feet (including SLA), SLA is the total special landscape area in square feet, and ETAF is .55 for residential areas and 0.45 for non-residential areas.

[f]Plant Factor
(0.0 - 0.1) very low water use
(0.2 - 0.3) low water use
(0.4 - 0.6) medium water use
(0.7 - 1.0) high water use

ETAF Calculations

Regular Landscape Areas

Total ETAF x Area	1,219	(B)
Total Area	4,638	(A)
Average ETAF	**0.26**	**B ÷ A**

Average ETAF for Regular Landscape Areas must be 0.55 or below for residential areas, and 0.45 or below for non-residential areas.

All Landscape Areas

Total ETAF x Area	1,219	(B + D)
Total Area	4,638	(A + C)
Sitewide ETAF	**0.26**	**(B + D) ÷ (A + C)**

I AGREE TO COMPLY WITH THE CRITERIA OF THE WATER EFFICIENT LANDSCAPE ORDINANCE AND SUBMIT A COMPLETE LANDSCAPE DOCUMENTATION PACKAGE

SIGNATURE MELISSA RUTH

NOTES:

1. WATERING WINDOW: THIS IRRIGATION SCHEDULE IS BASED ON AN 8 HOUR WATERING WINDOW WITH 5 DAYS OF OPERATION PER WEEK. OVERHEAD IRRIGATION SHALL BE SCHEDULED BETWEEN 8:00 PM AND 10:00 AM.
2. VALVE OPERATION: THIS SCHEDULE IS NOT A "STACKING" SCHEDULE, AND DOES NOT OUTLINE WHICH VALVES SHOULD RUN AT THE SAME TIME. ALL PROGRAMMING AND STACKING SHALL BE WITHIN THE LIMITS OF THE AVAILABLE WATER PRESSURE.
3. SCHEDULE ADJUSTMENTS: DUE TO VARIABLE AND UNFORESEEN SITE CONDITIONS, THE IRRIGATION SYSTEM RUN TIMES MAY NEED TO BE ADJUSTED TO ENSURE THAT PROPER MOISTURE IS MAINTAINED IN THE LANDSCAPE.
4. PLANT ESTABLISHMENT PERIOD: CONTRACTOR SHALL PROVIDE THE IRRIGATION SCHEDULE DURING THE PLANT ESTABLISHMENT PERIOD. INCREASE THE OPERATION RUN TIME BY AT LEAST 20% AND DAYS OF OPERATION BY AT LEAST ONE DAY PER WEEK.

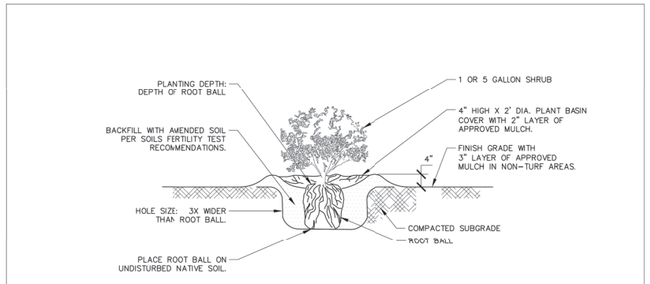
PLANT LEGEND

BARK MULCH ONLY



TURF FROM SOD SHALL BE TALL FESCUE BLEND, PER CITY OF ROSEVILLE PARKS STANDARD SPECIFICATIONS

ROOT BARRIER: DEEP ROOT CORP. #UB18, CONTACT 415-781-9700
INSTALL FLUSH WITH INSIDE FACE OF CURB OR PAVING IN LOCATIONS INDICATED. SHOWN ON OUTSIDE OF CURB FOR GRAPHIC PURPOSES ONLY.

PLANTING NOTES

1. EXISTING PLANT MATERIAL: PROTECT ALL EXISTING PLANT MATERIAL TO REMAIN. CONTRACTOR TO REPLACE ANY DAMAGED PLANT MATERIAL INCURRED AS A DIRECT RESULT OF THIS CONTRACT AT NO ADDITIONAL COST TO OWNER.
2. QUANTITIES: THE QUANTITIES SHOWN ON THE LABELS ARE NOT TO BE CONSTRUED AS THE COMPLETE AND ACCURATE LIMITS OF THE CONTRACT. FURNISH AND INSTALL ALL PLANTS SHOWN SCHEMATICALLY ON THE DRAWINGS.
3. TOPSOIL: ALL PLANTING AREAS ELEVATED ABOVE ORIGINAL GRADE AND/OR PREVIOUSLY COVERED BY PAVING SHALL RECEIVE A ONE FOOT LAYER OF IMPORT TOP SOIL AND A TWO FOOT LAYER OF IMPORT TOPSOIL AT TREE PLANTING, PER SPECIFICATIONS. ALL TOPSOIL SHALL BE AMENDED, PER SPECS.
4. SOILS TESTING: SEE SPECIFICATIONS FOR TESTING OF TOPSOIL AND AMENDMENTS. IN ADDITION, CONTRACTOR SHALL SUBMIT A FIVE GALLON SAMPLE OF IMPORT TOPSOIL AND NATIVE TOPSOIL FROM ANY AREAS PREVIOUSLY COVERED BY PAVING, TO WAYPOINT ANALYTICAL IN ANAHEIM, (714) 282-8777, FOR CONFIRMATION TESTING. TESTING REQUIRES FOUR TO FIVE WEEKS. CONTRACTOR SHALL ALLOW SUFFICIENT TIME FOR TESTING PRIOR TO CONSTRUCTION. IF TEST RESULTS INDICATE THAT SOILS FAIL TO MEET THE SPECIFICATION, OVER EXCAVATING BEYOND SPECIFIED MAY BE REQUIRED. OBTAIN OTHER SOURCES OF IMPORT MATERIAL OR RE-AMEND AS REQUIRED. RETEST AND RESUBMIT UNTIL PASSING RESULTS ARE OBTAINED.
5. TREES IN MEDIANS: NEW TREES PLANTED IN MEDIANS ARE TO BE OFFSET TO AVOID A VISUAL "PICKET FENCE" EFFECT.
6. MULCH IN MEDIANS: INSTALL A UNIFORM 3 INCH COVERING, REGULAR "WALK ON" FIR BARK, MANUFACTURED BY REDI-GRO CORPORATION OR APPROVED EQUAL, PER PARKS STANDARDS IN ALL MEDIANS.

   PROVIDE 1'-0" CLEAR ZONE FROM EDGE OF PLANT TO BACK OF CURB. CLEAR ZONE TO BE WALK ON MULCH ONLY PER PARKS STANDARDS, TYPICAL OF ALL BACK OF CURBS.
7. STANDARD SPECIFICATIONS: ALL WORK TO COMPLY WITH THE PARKS CONSTRUCTION STANDARDS LATEST EDITION.
8. PARK STANDARD DETAILS: THE CITY OF ROSEVILLE STANDARD DETAILS ARE SHOWN FOR REFERENCE ONLY, CONTRACTOR MUST COMPLY TO THE MOST CURRENT VERSION OF THE PARKS STANDARD DETAILS

NOTICE TO CONTRACTORS

CITY OF ROSEVILLE

DEPARTMENT OF PUBLIC WORKS

Name of Project: VERNON STREET/ATLANTIC STREET MULTIMODAL SAFETY IMPROVEMENT PROJECT

NOTICE TO CONTRACTORS

NOTICE IS HEREBY GIVEN THAT sealed Proposal will be received at the Office of the City Clerk, 311 Vernon Street, Roseville, California, until _____ at 3:00 p.m. Late proposals will be rejected. No exceptions.

The Proposals will be publicly opened and read by the City Clerk or designee of the City of Roseville at 3:05 p.m. on _____, 20__ at the Office of the City Clerk located at 311 Vernon Street, Roseville California for the following project: VERNON STREET/ATLANTIC STREET MULTIMODAL SAFETY IMPROVEMENT PROJECT.

A pre-bid meeting will be held at _____

_____.

A Project Manual, including all Contract Documents and the Proposal forms for bidding this project, may be obtained on-line from the City of Roseville's website at https://www.roseville.ca.us/business/procurement_services/bids_rfps. All communications relative to this project shall be conducted through Public Purchase.

Bids shall be submitted on the City's Proposal Forms included in the Project Manual, plainly endorsed with the Bidder's name together with signed acknowledgement of any and all addenda. Proposal Forms shall be securely sealed in a suitable envelope marked with the name

and address of the Bidder, and marked in capital letters on the front and back of the envelope as follows:

VERNON STREET/ATLANTIC STREET MULTIMODAL SAFETY IMPROVEMENT PROJECT

(Name of Bidder)

(Address of Bidder)

Whether mailed or personally delivered, all bids shall be addressed to the City of Roseville, Office of the City Clerk, 311 Vernon Street, Roseville, California, 95678.

Each bid must be accompanied by a Bid Guaranty in the form of a Certificate of Deposit, Certified or Cashier's Check, Bidder's Bond or Irrevocable Standby Letter of Credit in an amount equal to at least ten percent (10%) of the Bidder's Grand Total Price. The Bid Guaranty will be retained by the City and applied to any and all damages sustained by the City in the event that the successful Bidder fails or refuses to enter into the Contract awarded to it and to furnish all required bonds and Certificates of Insurance. The City intends to award the Contract to the lowest responsible Bidder based on the Grand Total Bid Price for all components of the Project. To the extent allowed by law, the City reserves the right to reject any and all bids and/or to waive any irregularities or informalities in any bid or in the bidding procedure. The City specifically reserves the right to not award the Contract after the opening of bids.

Any bid may be withdrawn at any time prior to the time fixed in the public notice for the deadline submission of bids only by written request for the withdrawal of the bid filed with the City Clerk. The request shall be executed by the Bidder or his or her duly authorized representative. The withdrawal of a bid does not prejudice the right of the Bidder to file a new

bid by the submission deadline. Whether or not bids are opened exactly at the time fixed in the public notice for opening bids, a bid will not be received after the deadline submission of bids nor may any bid be withdrawn after the time fixed in the public notice for deadline for submission of bids. Immediately following the deadline for submission of bids all bids shall become the property of the City of Roseville and the City is under no obligation to return bids.

Bids will be examined and reported to the City Council within sixty (60) business days after the bid opening. Except as permitted by applicable law, no Bidder may withdraw its bid for a period of sixty (60) business days after the date of bid opening. Each Bidder will be notified of any award of the Contract by the City.

The City will affirmatively ensure non-discrimination on the basis of one or more of the following: race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, genetic information, marital status, sex, age, sexual orientation, or military and veteran status in the award and administration of contracts that it awards.

Pursuant to Public Contract Code Section 22300, the successful Bidder may submit certain securities in lieu of the City withholding retention of payments during the Project.

The City has determined that the Contractor shall possess a valid **CLASS A, GENERAL ENGINEERING** Contractor's license at the time that the bid is submitted, as well as any other license classification as may be required by the laws of the California for the performance of the work specified in the Contract Documents. Said license shall be maintained during the Contract period. Failure to possess the specified license shall render the bid nonresponsive and will act as a bar to the award of the Contract to any Bidder not possessing such a license at the time of bid submittal. The Contractor shall provide certification of the license, its number and the expiration date on the proposal form.

The work is to be done in Placer County. Pursuant to California Labor Code Section 1773, the City has ascertained the General Prevailing Rate of Wages in the County in which the work is to be done to be as determined by the Director of Industrial Relations of the State of California. The Contractor is hereby made aware that information regarding prevailing wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm. The Contractor is required to post a copy of the applicable wage rates at the job site. Attention is directed to Section 7 "Legal Relations and Responsibility" of the Standard Construction Specifications.

Pursuant to Labor Code Section 1771.1(b), notice is hereby given that a contractor or subcontractor shall not be qualified to bid on, be listed in a bid proposal, subject to the requirements of Section 4104 of the Public Contract Code, or engage in the performance of any contract for public work, as defined in Labor Code Sections 1720, et seq., unless currently registered and qualified to perform public work pursuant to Labor Code Section 1725.5 or exempt from registration requirements pursuant to Labor Code Section 1725.5(f). It is not a violation of Labor Code Section 1771.1 for an unregistered contractor to submit a bid that is authorized by Section 7029.1 of the Business and Professions Code or by Section 10164 or 20103.5 of the Public Contract Code, provided the contractor is registered to perform work pursuant to Labor Code Section 1725.5 at the time the contract is awarded or is exempt from registration requirements pursuant to Labor Code Section 1725.5(f). The Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

All questions prior to the deadline for bid submissions shall be directed to the attention of KAREN VENCES via PUBLIC PURCHASE. The deadline for submissions of questions and

clarifications regarding the Contract Documents is _____ calendar days before the deadline for bid submissions. Only Addenda issued by the City are binding.

_____
City Clerk, City of Roseville

INSTRUCTIONS TO BIDDERS

INSTRUCTIONS TO BIDDERS

SECTION 1. GENERAL

1-1.01 **GENERAL.** These Instructions to Bidders form a part of the Contract Documents. Capitalized terms are defined in Standard Construction Specifications Section 1.

1-1.02 **EXAMINATION OF PLANS, CONTRACT DOCUMENTS AND SITE OF THE WORK.** The Bidder shall examine carefully the site of the Work and all the Contract Documents, including these Instructions to Bidders, and shall inform itself of the conditions relating to the execution of the Work. Failure to do so will not relieve the successful Bidder of its obligation to enter into an Agreement and complete the Work in strict accordance with the Contract Documents. Conditions relating to the execution of the Work include the requirements of federal, state, and local laws, statutes and ordinances relative to the execution of Work, including, but not limited to, applicable regulations concerning prevailing wage rates, non-discrimination in the employment of labor, protection of the public, employee health and safety, and environmental protection.

The submission of a bid shall be conclusive evidence that the Bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality, and scope of Work to be performed, the quantities of materials to be furnished, and as to the requirements of all the Contract Documents.

1-1.03 **EXISTING INFORMATION.** Where the Department has made investigations of site conditions, including subsurface conditions in areas where Work is to be performed under the Contract, such investigations are made only for the purpose of study and design. City does not represent that such conditions as found in these investigations or inferences or conclusions drawn as a result of these investigations will represent actual site

conditions and hereby disclaims any liability as a result of Contractor's or Bidder's reliance on such investigations. City will presume that all Bidders have conducted their own site investigations, including investigations of subsurface conditions. Where such investigations have been made, Bidders or Contractors may, upon written request, inspect the records of the Department as to such investigations subject to the conditions set forth in these Instructions to Bidders. Such inspection of records may be made only at the location noted above. The records of such investigations are not a part of the Contract Documents and are shown solely for the convenience of the Bidder or Contractor. The City assumes no responsibility whatsoever with respect to the sufficiency or accuracy of the investigations made, the records thereof, or of the interpretations set forth therein or made by the City in its use thereof. The City makes no warranty or guarantee, either express or implied, that the conditions indicated by such investigations or records are representative of those existing throughout such areas, or any part thereof, or that unforeseen developments may not occur, or that materials other than, or in proportions different from those indicated, may not be encountered.

No information derived from such inspection of records of investigations or compilation thereof made by the City, the Department or from the Engineer, or his or her assistants, will in any way relieve the Bidder or Contractor from properly examining the site and making such additional investigations as it may elect, or from properly fulfilling the terms of the Contract.

SECTION 2: BID REQUIREMENTS

2-1.01 **PROPOSAL FORMS.** The Department will furnish to each Bidder standard Proposal Forms, which, when filled out and executed may be submitted as the bid. Proposals shall include all pages in the Project Manual with page numbers marked "PROP" plus the Addendum acknowledgment form (front sheet) from all Addenda received by the Bidder. Proposals shall be removed from the Project Manual. The full Project Manual shall not be submitted with the proposal. Bids not presented on forms so furnished will be disregarded.

The Proposal and one (1) copy thereof shall be submitted as directed in the "Notice to Contractors" under sealed cover plainly marked as a Proposal, and identifying the project to which the Proposal relates and the date of the bid opening therefor. Proposals which are not properly marked may be disregarded.

All blank spaces in the Proposal must be completed, as required, in ink. All price information shall be shown, clearly legible, in figures where required.

The Bidder shall sign the Proposal in the blank space provided therefor. If the Bidder is the sole owner, the Proposal shall be signed by the owner. If the Bidder is a corporation, the legal name of the corporation and its State of incorporation shall be set forth and the Proposal shall be signed by at least two officers authorized to sign contracts on behalf of the corporation. If the Bidder is a partnership, the true name of the firm shall be set forth, the names and addresses of all partners shall be given and the Proposal shall be signed by a partner in the firm authorized to sign contracts on behalf of the partnership. If the Bidder is a joint venture, the Proposal shall be signed on behalf of each participating company by officers or other individuals who have the full and proper authorization to do so. If the Proposal is signed by an agent of the Bidder other than an officer of a corporation or a member of a partnership, a notarized Power of

Attorney must be on file with the City prior to opening of bids or must be submitted with the Proposal. If requested by the City, the Bidder shall promptly submit evidence satisfactory to the City of the authority of the person signing the Proposal.

2-1.02 **SUBMISSION OF BIDS.** Bids must be submitted at the prescribed time and location specified in the Notice to Contractors. Any submission received after the prescribed time shall be rejected, regardless of whether or not bids are opened exactly at the prescribed time.

Any unauthorized conditions or qualifications entered on, or changes made to, the Proposal may render it invalid and may cause its rejection.

No telegraphic, telephonic, or facsimile or other electronically transmitted bids will be considered.

2-1.03 **REQUIRED LISTING OF PROPOSED SUBCONTRACTORS.** Each Proposal shall list the name, address and Contractor license number of each Subcontractor to whom the Bidder proposes to subcontract portions of the Work in an amount in excess of one-half of one percent (0.5%) of its total bid, in accordance with Section 4100 to 4114, inclusive, of the Public Contract Code for the State of California. The Bidder shall list the Subcontractor's license number and the portion of the Work that will be done by each Subcontractor. If the Bidder fails to specify a Subcontractor for any portion of the Work, the Bidder agrees to perform that portion of the Work itself, and represents that it is qualified to perform that portion of the Work itself. The Bidder's attention is invited to other provisions of the Public Contract Code related to the imposition of penalties for a failure to observe its provisions by using unauthorized Subcontractors or by making unauthorized substitutions.

2-1.04 **CONTRACTOR'S LICENSING LAWS.** Attention is directed to the provisions of Business and Professions Code Chapter 9 of Division 3 concerning the licensing of Contractors.

All Bidders at the time of bid submittal shall be licensed as Contractors in accordance with the laws of this State. Any Bidder or Contractor not so licensed is subject to the penalties imposed by such laws. The form of Contractor's license required is stated in the Notice to Contractors, provided that the City makes no representation as to whether the State may require other or additional licenses. It is the Bidder's and Contractor's responsibility to obtain the correct Contractor's licenses. Bidders shall be skilled and regularly engaged in the general class or type of Work called for under this Contract.

All Bidders and Contractors, including Subcontractors, shall have a current City business license before undertaking any Work.

2-1.05 **NONCOLLUSION DECLARATION.** By submitting a bid, the Bidder represents and warrants that such bid is genuine and not a sham or collusive or made in the interest or on the behalf of any person therein named, and that the Bidder has not, directly or indirectly, included or solicited any other Bidder to put in a sham bid, or any other person, firm, or corporation to refrain from bidding, and that the Bidder has not in any manner sought collusion to secure the Bidder an advantage over any other Bidder.

Bidders shall submit a properly completed and executed "Noncollusion Declaration" in the form required by Public Contract Code Section 7106 and provided with the Proposal (PROP-11).

2-1.06 **DISQUALIFICATION, REMOVAL OR OTHER PREVENTION OF BIDDING.** A bid may be rejected on the basis of a Bidder, any officer of such Bidder, or any

employee of such Bidder who has a proprietary interest in such Bidder, having been disqualified, removed, or otherwise prevented from bidding on, or completing a federal, state, or local project because of a violation of law or a safety regulation.

2-1.07 **PROPOSAL GUARANTY.** All bids shall be accompanied by one of the following forms of Bidder's security: Cash, a cashier's check, a certified check, or a Bidder's bond executed by an admitted California surety insurer, made payable to the City of Roseville, or any other form of security deemed acceptable by the City Attorney. The security shall be in an amount equal to at least ten percent (10%) of the amount bid. A bid will not be considered unless one of the form of Bidder's security is enclosed with it.

A Bidder's bond shall conform to the City's bond form in the Proposal and shall be properly filled out and executed.

2-1.08 **SCHEDULE OF BID PRICES.** Bidders are directed to submit firm unit and lump sum prices for all Work set forth in the Contract Documents on the Proposal Form entitled "Schedule of Bid Prices."

Unit prices and lump sum prices, as indicated, must be entered in the appropriate spaces provided in the Schedule of Bid Prices. If applicable, unit prices shall be multiplied by the quantities shown, and the total shall be inserted in the Amount column. In the event of any error or discrepancy between the unit price and the calculated amount, the unit prices shall govern. The City may correct any mathematical errors apparent on the face of the bid.

The amounts shown in the Amount column must be added together in arriving at the Grand Total Bid Price.

Amounts for Allowance bid items must be entered in the exact amount in the Amount column.

The prices included within the Schedule of Bid Prices shall include all costs for labor, materials, tools, equipment, services, Subcontractors, suppliers, taxes, insurance, shipment, delivery, overhead, profit, and all other costs necessary to perform the Work in accordance with the Contract Documents.

The Grand Total Bid Price shall be indicated in the Summary table form included with the Schedule of Bid Prices. The Grand Total Bid Price shall be the sum of the amounts bid for each of the designated portions of the Work, as more specifically described on the Schedule of Bid Prices form itself.

Full compensation for complying with the Contract Documents, including requirements of the Standard Specifications, the Standard Construction Specifications, Supplemental Conditions, and all warranties, shall be considered included in the bid items and no additional compensation shall be allowed therefor.

Full compensation for completion of all work as shown on the plans, as specified in the Specifications, and as directed by the City, shall be considered included in the bid items and no additional compensation shall be allowed.

Bidders are strongly discouraged from submitting unbalanced bids. As used herein, the term "unbalanced bid" is defined as any bid that does not include a reasonable proportionate allocation of indirect costs and profit of each bid item indicated in the Schedule of Bid Prices. The City reserves the right to reject any unbalanced bid if the City determines that there is a reasonable doubt that an acceptance of the bid will not result in the lowest ultimate cost to the City with regard to the work or a disproportionate distribution of contract funds.

The City reserves the right to delete any bid item in its entirety and/or significantly reduce the quantity of Work under a bid item. The City makes no representation that any Work

under a bid item will be performed during the course of the Project or that the Work will be performed at the quantities included in the Schedule of Bid Prices. As provided in the Standard Construction Specifications, for any deleted Work, Contractor shall not be entitled to payment of the indirect costs and profit included for said bid item. All bid items shall be considered distinct and severable from the remaining bid items, and each Bidder acts at its peril if its bid is unbalanced.

The City shall compare bids on the basis of the Grand Total Bid Price, which includes the base bid and any alternates designated on the Schedule of Bid Prices. Alternates may or may not be awarded, or may be awarded in any combination, at the City's discretion.

2-1.09 **WITHDRAWAL OF PROPOSALS.** Any bid may be withdrawn at any time prior to the time fixed in the Notice to Contractors for the opening of bids, provided that a request in writing, executed by the Bidder or its duly authorized representative, for the withdrawal of such bid is filed with the City Clerk. Facsimile and electronic mail requests are not acceptable. The withdrawal of a bid shall not prejudice the right of a Bidder to file a new bid. The withdrawal of any bid after the time fixed in the Notice to Contractors for the opening of bids will not be permitted.

2-1.10 **ADDENDUM.** Proposals shall include all costs and account for all Addenda issued prior to opening of bids. The Bidder is responsible for verifying that all issued Addenda have been received. An Addendum acknowledgment form for each Addendum shall be included as part of the Proposal submittal.

2-1.11 **PUBLIC OPENING OF PROPOSALS.** Proposals will be publicly opened and read at the time and place indicated in the Notice to Contractors. Bidders or their authorized agents are invited to be present.

2-1.12 **TRENCHING AND EXCAVATION WORK.** In accordance with the provisions of California Labor Code Section 6707, if the Work involves construction of a pipeline, sewer, sewage disposal system, boring or jacking pits, or similar trenches or open excavations, which are five feet (5') or deeper, each bid submitted shall contain, as a bid item, adequate sheeting, shoring, and bracing, or equivalent method, for the protection of life or limb, which shall conform to all applicable safety orders.

SECTION 3: EVALUATION OF BIDS

3-1.01 **BID EVALUATION PROCESS.** Bids will be evaluated to determine the apparent low Bidder. The apparent low Bidder will be determined on the basis of the Grand Total Bid Price, as shown in the Schedule of Bid Prices. If additive or deductive alternates are used in the Schedule of Bid Prices, the apparent low Bidder will be the Bidder with the lowest total of the bid prices for base contract items plus the alternates designated by the City as those that will be used for determining the lowest bid price. However, the City reserves the right to (1) not award any alternates or (2) award any combination of alternates.

In case of discrepancy between the total of the base contract items and any specified alternates and the stated Grand Total Bid Price, the total of the base contract items plus specified alternates shall prevail. Any mathematical errors that appear on the face of the bid will be corrected by the City and the City will use the mathematically corrected addition. For example, if the mathematical total of Bidder's base contract items plus specified alternates equals $1,000,000, but the Bidder has written $1,250,000 as the Grand Total Bid Price, the City will consider $1,000,000 to be the Bidder's Grand Total Bid Price for purposes of comparison to other Bidders and actual bid award. The City reserves its rights to reject or accept bids based on discrepancies between the stated Grand Total Bid Price and the actual mathematical total of the base contract bid items, plus specified alternates.

3-1.02 **REJECTION OF IRREGULAR PROPOSALS.** Proposals may be rejected in the City's sole discretion if they show any alterations of form, additions not called for, conditional bids, incomplete bids, erasures, or irregularities of any kind. However, the City reserves the right to waive any minor irregularities and informalities in any bid or in the bid procedure for any reason.

3-1.03 **COMPETITIVE BIDDING.** If more than one proposal is offered by any individual, firm, partnership, corporation, association, or any combination thereof, under the same or different names, all such proposals may be rejected. A party who has quoted prices on materials or Work to a Bidder is not thereby disqualified from quoting prices to other Bidders, or from submitting a bid directly for the materials or Work.

All Bidders are put on notice that any collusive agreement to control or affect the awarding of this Contract is in violation of the competitive bidding requirements of the City Charter, State Contract Act and the Business and Professions Code and may render void any Contract let under such circumstances.

3-1.04 **RELIEF OF BIDDERS.** If the Bidder claims a mistake was made in its bid, the Bidder shall give the Department written notice within five (5) Days after the opening of the bids of the alleged mistake, specifying in the notice in detail how the mistake occurred. No relief from a claimed mistaken bid shall be granted unless such mistake clearly appears on the face of the bid submitted to the City. Claimed mistakes on backup worksheets, spreadsheets, computerized bidding programs, or any other similar calculative bidding mistake which is not apparent on the face of the bid shall not under any circumstance be considered as a basis for relief. The burden of proving the occurrence of a mistake entitling a Bidder to relief from its bid rests entirely on the Bidder. Relief from bids shall be in the City's sole discretion.

SECTION 4: AWARD AND EXECUTION OF CONTRACT

4-1.01 **AWARD OF CONTRACT.** The City reserves the right to reject any and all proposals and to award (or not award) any combination of bid items at its option. Any such award will be to the lowest responsible Bidder whose proposal complies with the requirements prescribed for the bid items awarded. Such award, if made, will be made within sixty (60) business days after the opening of the proposals. If the lowest responsible Bidder refuses or fails to execute the Contract, or provide an acceptable Performance Bond, Payment Bond, and insurance certificate(s), the City may award the Contract to the second lowest responsible Bidder. Such award, if made, will be made within eighty-two (82) business days after the opening of proposals. If the second lowest responsible Bidder refuses or fails to execute the Contract, or provide an acceptable Performance Bond, Payment Bond, and insurance certificate(s), the City may award the Contract to the third lowest responsible Bidder. Such award, if made, will be made within one hundred four (104) business days after the opening of the proposals. The above time periods within which the award of Contract may be made are subject to extension for such further period as may be agreed upon in writing between the City and the Bidder concerned.

4-1.02 **RETURN OF BIDDER'S SECURITIES.** Within ten (10) Days after the award of the Contract, the City Clerk will return all Bidders' securities, other than Bidders' bonds, accompanying the proposals that are not to be further considered in making the award. Retained Bidders' securities will be held until the Contract has been fully executed, after which all Bidders' securities, except Bidders' bonds and any Bidders' securities that have been forfeited, will be returned.

4-1.03 **CONTRACT BONDS.** The successful Bidder shall furnish two (2) bonds in the form contained in the section entitled Insurance Broker Information Packet and Bonds. One (1) bond shall secure the payment of the claims of laborers, mechanics or materialmen employed on the Work under the Contract, and the other bond shall guarantee the faithful performance of the Contract.

Each of the two (2) bonds shall be in a sum equal to one hundred percent (100%) of the Contract Price. If the Contract Price increases by the issuance of Change Orders, the penal amounts of the bonds required shall increase accordingly. Sureties on each of said bonds shall be satisfactory to the City.

All alterations, extensions of time, extra and additional Work, and other changes authorized by the Standard Specifications, the Standard Construction Specifications, the Supplemental Conditions or any part of the Contract may be made without securing the consent of the surety or sureties on the Contract bonds.

Furthermore, the successful Bidder shall furnish a certificate from the County Clerk as required by California Civil Code of Procedure Section 995.660(a)(3).

4-1.04 **INSURANCE.** At the time of the execution of the Contract, the Contractor shall, at its own expense, procure, and at all times during the prosecution of the Work maintain in full force and effect Worker's Compensation Insurance, and Liability Insurance as specified in the Standard Construction Specifications. The Contractor shall provide a Certificate of Insurance in the form contained in the section entitled Insurance Broker Information Packet.

4-1.05 **EXECUTION OF CONTRACT.** The Contract shall be signed by the successful Bidder and returned, together with all the required Contract bonds and insurance

certificates, within fifteen (15) Days after the Contract has been awarded, or as otherwise directed, in writing, by the City.

If the Bidder is an individual, the Contract shall be executed personally by the Bidder. If the Bidder is a partnership, it is desirable that the Contract be executed by all of the partners, but it may be executed by one of them. If the Bidder is a corporation, it must be executed by two officers of the corporation consisting of (1) the chairman of the board, president or vice president; and (2) the secretary, assistant secretary, chief financial officer, treasurer or assistant treasurer, or by a person authorized by the corporation to execute written contracts on its behalf, and the corporate seal affixed thereto. In the alternative, a person other than an officer may sign the Contract, provided evidence satisfactory to the City is provided indicating the individual's authority to bind the corporation. If the corporate seal is not affixed to the Contract, or if it is executed by a person other than officers, or only by one officer, there must be attached to the Contract a certified copy of a resolution of the corporation authorizing such officer or person to execute written contracts for and on behalf of the corporation. If the Bidder is a joint venture, the Contract must be executed on behalf of each participating firm by officers or other individuals who have the full and proper authorization to do so.

4-1.06 **FAILURE TO EXECUTE CONTRACT.** Failure of the lowest responsible Bidder, the second lowest responsible Bidder, or the third lowest responsible Bidder to execute the Contract and file acceptable bonds and insurance as provided within fifteen (15) Days after the Contract has been awarded, or as otherwise directed, in writing, by the City, shall be just cause for annulment of the award and forfeiture of the Bidder's security. The successful Bidder may file with the City Clerk a written notice, signed by the Bidder or Bidder's authorized representative, specifying that the Bidder will refuse to execute the Contract if presented to

Bidder. The filing of such notice shall have the same force and effect as the failure of the Bidder to execute the Contract and furnish acceptable bonds within the time prescribed.

SECTION 5: BID PROTEST PROCEDURES

5-1.01 **POLICY/PROCEDURES.** It is the policy of the City to consider fully and adjudicate promptly protests filed by prospective Bidders relating to the City's bidding procedure or award of the Contract. Protests shall be filed and processed in accordance with Section 4.12.150 of the Roseville Municipal Code. A Bidder's failure to follow the bid protest procedures may result in rejection of the protest by the City.

PROPOSAL

PROPOSAL TO THE DEPARTMENT OF _____

Project:_____

Name of Bidder _____ Business Phone _____

Business Address _____

Place of Business _____

Contractor's License No. _____

License Expiration Date_____

License Classification Type _____

DIR Registration No. _____

Type of business organization: _____

*If a Corporation, incorporated under the laws of the State of: _____

The undersigned Bidder herewith submits this Proposal and binds itself on award by the City of Roseville under this bid to execute a Contract in accordance with its bid and the Contract Documents.

The Notice to Contractors, Instructions to Bidders, Form of Agreement, Standard Specifications, Standard Construction Specifications, Supplemental Conditions, Contract Drawings, and Addenda, if any, are made part of this bid and all provisions thereof are hereby accepted, and all representations and warranties are required thereby are hereby affirmed.

The work to be done is described in the Bidding Documents entitled _____ _____, City of Roseville, California. This offer shall be irrevocable for a period of sixty (60) Days after the date on which bids are opened.

The undersigned Bidder understands that any clarification made to the above or any new and different conditions or information submitted on or with its Proposal, other than that requested, may render the bid non-responsive.

The undersigned, as Bidder, declares that the only persons or parties interested in this Proposal as principals are those named herein; that this Proposal is made without collusion with any other person, firm, or corporation; that the Bidder has carefully examined the location of the proposed Work, the attached Form of Agreement, and the plans, Specifications, and other Contract Documents; and agrees if this Proposal is accepted, that it will contract with the City of Roseville, in the form of a copy of the Agreement contained in the Project Manual, to provide all necessary machinery, tools, apparatus and other means of construction, and to do all the work and furnish all the materials specified in the Contract Documents, in the manner and time therein prescribed, and according to the requirements of the Director, as therein set forth, and that the Bidder will take in full payment therefore prices indicated in the Schedule of Bid Items, including all work modified by addendum numbers _____. (IF NONE, STATE NONE).

Bids are required for all Bid Items. The amount of the Bid for comparison purposes will be the total of all items awarded.

The Bidder shall set forth for each item of work, in clearly legible figures, an item ("unit") price and a total for the item in the respective spaces provided for this purpose in the Schedule of Bid Items.

The prices included within the Schedule of Bid Items include all costs for labor, materials, tools, equipment, services, Subcontractors, suppliers, taxes, insurance, shipment,

delivery, overhead, profit, and for all other costs necessary to perform the Work in accordance with the Contract Documents.

Accompanying this Proposal is _____.

(Notice: Insert the words "Cash $_____," "Cashier's Check," "Certified Check," or "Bidder's Bond," as the case may be, in an amount equal to at least ten percent (10%) of the total of the Bid.)

NONCOLLUSION DECLARATION TO BE EXECUTED BY
BIDDER AND SUBMITTED WITH BID

The undersigned declares:

I am the _____ of _____, the party making the foregoing bid.

The bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation. The bid is genuine and not collusive or sham. The Bidder has not directly or indirectly induced or solicited any other Bidder to put in a false or sham bid. The Bidder has not directly or indirectly colluded, conspired, connived, or agreed with any Bidder or anyone else to put in a sham bid, or to refrain from bidding. The Bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price of the Bidder or any other Bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other Bidder. All statements contained in the bid are true. The Bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, to any corporation, partnership, company, association, organization, bid depository, or to any member or agent thereof, to effectuate a collusive or sham bid, and has not paid, and will not pay, any person or entity for such purpose.

Any person executing this declaration on behalf of a Bidder that is a corporation, partnership, joint venture, limited liability company, limited liability partnership, or any other entity, hereby represents that he or she has full power to execute, and does execute, this declaration on behalf of the Bidder.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this declaration is executed on _____ [date], at _____ [city], _____ [state].

END OF PROPOSAL

AGREEMENT

A G R E E M E N T

THIS AGREEMENT, is made and entered into this _____day of _____, 20_____, by and between the City of Roseville, a municipal corporation, ("CITY"), and _____, a _____, ("CONTRACTOR"); and

W I T N E S S E T H:

WHEREAS, the City Council of the CITY, at a meeting held on the _____day of _____, 20_____, approved plans and specifications for the _____ _____

and directed the City Clerk to advertise for sealed proposals for doing said work and providing that bids be submitted on the _____ day of _____, 20_____; and

WHEREAS, the City Clerk, thereafter duly and regularly caused a notice to be published in the manner and for the time prescribed by law; and

WHEREAS, CONTRACTOR, pursuant to the provisions of said notice duly filed a bid with the City Clerk, a true copy of which bid is now on file in the office of the City Clerk, and is hereby referred to and by this reference made a part hereof as fully as if set forth at length herein; and

WHEREAS, all bids received pursuant to said notice were opened and examined and publicly declared at the time specified in said advertisement for bids and at a meeting of the City Council held on the _____ day of _____, 20_____, the Council found and

declared the bid of CONTRACTOR to be the lowest responsible bid and thereupon awarded a contract to CONTRACTOR to do the work referred to in the aforementioned specifications.

NOW, THEREFORE, the parties agree as follows:

1. THE WORK. CONTRACTOR agrees:

a. To do the work and furnish all the labor, materials, tools, supplies, equipment, superintendence, insurance, and bonds required for the _____

_____

in accordance with the Contract Documents (the Work).

b. To do and perform the Work contemplated hereby in a good and workmanlike manner under the direction of and to the satisfaction of the Director of Public Works of the City of Roseville.

2. PAYMENT. CITY shall pay CONTRACTOR _____

_____ dollars ($_____) for the Work to be done under this Agreement in accordance with the Contract Documents.

3. CONTRACT DOCUMENTS. The complete Agreement between the parties hereto consists of the following documents:

a. The advertisement for bids (including the notice to bidders, instructions to bidders and proposals);

b. The accepted bid;

c. Plans and specifications (including standard construction specifications, special provisions and construction details);

d. Bonds and insurance required by the specifications; and

e. This contract.

All documents specified above are intended to operate so that any work called for in any one and not mentioned in the other, or vice versa, is to be executed the same as if mentioned in all said documents.

4. LIQUIDATED DAMAGES. In the event CONTRACTOR does not complete the Work within the time specified, CONTRACTOR agrees that CITY will suffer damages. Inasmuch as the actual damages which would result from such breach by CONTRACTOR under this Agreement are uncertain, and would be impractical or extremely difficult to fix, CONTRACTOR agrees that it shall pay, or CITY shall deduct from CONTRACTOR's fee, the amount of $_____ per day as liquidated damages, in the event of such delay.

5. TIME OF COMPLETION. Time is of the essence of this Agreement. CONTRACTOR shall complete all Work under the Contract Documents within _____ Days of the date of this Contract. CONTRACTOR shall begin work by the date specified in the "Notice to Proceed" letter and shall diligently prosecute all of the Work under this Contract in all parts and requirements as defined in the Contract Documents.

6. SERVICE OF NOTICE. Any notice required or permitted to be given under this Agreement shall be deemed given when (a) personally delivered to the recipient identified below; (b) mailed by registered or certified mail, return receipt requested, postage pre-paid, to the address specified below; or (c) sent by facsimile, with confirmation of receipt, to the facsimile number identified below.

CITY OF ROSEVILLE	CONTRACTOR
_____	_____
_____	_____
_____	_____
_____	_____

CITY may also act through either its architect or construction manager if CITY expressly gives notice to CONTRACTOR, in writing, that CITY's designee has authority to act for CITY in a specific capacity.

7. DISPUTES. Disputes arising from this Agreement will be determined in accordance with the Contract Documents and Public Contract Code Sections 10240-10240.13.

8. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

9. INDEPENDENT CONTRACTOR. CONTRACTOR shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

10. SUCCESSORS IN INTEREST. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

11. MODIFICATION. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

12. SEVERABILITY. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

13. INTEGRATED AGREEMENT. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

14. CONTRACTORS LICENSE LAW. CONTRACTORS ARE REQUIRED BY LAW TO BE LICENSED AND REGULATED BY THE CONTRACTORS' STATE LICENSE

BOARD WHICH HAS JURISDICTION TO INVESTIGATE COMPLAINTS AGAINST CONTRACTORS IF A COMPLAINT REGARDING A PATENT ACT OR OMISSION IS FILED WITHIN FOUR (4) YEARS OF THE DATE OF THE ALLEGED VIOLATION. A COMPLAINT REGARDING A LATENT ACT OR OMISISON PERTAINING TO STRUCUTRAL DEFECTS MUST BE FILED WITHIN TEN (10) YEARS OF THE DATE OF THE ALLEGED VIOLATION. ANY QUESTIONS CONCERNING A CONTRACTOR MAY BE REFERRED TO THE REGISTRAR, CONTRACTORS' STATE LICENSE BOARD, P.O. BOX 26000, SACRAMENTO, CALIFORNIA 95826.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attestation by its City Clerk under authority of Resolution No. _____, adopted by the Council of the City of Roseville on the _____day of _____, 20_____, and CONTRACTOR has caused this Agreement to be duly executed.

INSURANCE BROKER INFORMATION PACKET

INSURANCE BROKER INFORMATION PACKET

Project:_____

NOTICE TO CONTRACTOR:

For your convenience, this package contains the Requirements for Insurance and Bonds for this project, including the necessary City forms. You are required to return these forms in addition to the executed Contract within fifteen (15) calendar days after the award of the Bid, unless otherwise directed by City in writing. (See the Instructions to Bidders.)

Please insert the dollar amount of your accepted Bid into the blank on page INS-1 and present this entire package to your insurance broker if you are awarded the Bid.

NOTICE TO INSURANCE BROKER

Your client has been awarded a bid by the City Council of the City of Roseville to perform a public works project known as _____. The Contract Conditions for that project require your client ("the Contractor") to return certain evidence of insurance and bonds to the City Attorney of the City within fifteen (15) days after the Bid award, unless otherwise directed by the City in writing, or else the Bid award may be terminated and awarded to another company.

This package contains the information you will need as an insurance broker to provide the appropriate insurance and bonds to the City. The insurance coverages the Contractor needs are specified in the section entitled "Insurance Requirements." Please note that, in addition to the insurance certificate itself, copies of several endorsements must be actually furnished.

Please refer to Special Provisions for modifications of the Standard Construction Specifications, if any, and the requirements of this insurance packet.

Please use the standard City of Roseville Bond Forms provided in this package.

The Bonds required must each be in the penal amount of: $_____.

Bonds must be sent to the following staff person:

_____

_____

_____

Insurance documents must be provided using one of the following methods:

a. By email to roseville@ebix.com and riskmanagement@roseville.ca.us

b. By fax to (770) 335-5727 and (916) 774-5461

After using one of these methods, please **DO NOT** send the insurance certificate(s) by mail.

When forwarding the documents, please refer to the project name so that the documents can be matched with the Contract for which they are submitted.

Thank you.

INSURANCE REQUIREMENTS

The following sections are quoted from the Standard Construction Specifications:

7-1.06 **INSURANCE COVERAGE.**

A. Evidence of Maintenance Required. The Contractor shall, at its expense, procure and at all times maintain in full force and effect at a minimum the insurance required by this section on all of its operations; and the Contractor shall not allow any Subcontractor to commence work until similar insurance required of the Subcontractor has been obtained and filed. An original Certificate of Insurance, and copies of all required endorsements, all in a form approved by the Risk Manager, evidencing all required coverage or policies shall be filed after the award of the bid and prior to approval of the Contract by the City Council. Contractor shall provide ten (10) days prior written notice to the City of any reduction of coverage limits or cancellation of the coverage or policies shall be given to the City of Roseville as Certificate holder.

B. Qualifying Insurers. With the exception of the State Compensation Insurance Fund, all required insurance policies shall be issued by companies acceptable to the City and licensed to do business in the State of California and who hold a current policy holders alphabetic and financial size category rating of not less than AVII according to the most recent issue of Best's Insurance Reports.

C. Insurance Required.

1. **Commercial General Liability (CGL):** Insurance Services Office Form CG 00 01 covering CGL on an "occurrence" basis, including products and completed operations with limits of no less than Two Million Dollars ($2,000,000) per occurrence for bodily injury, personal injury and property damage for projects under One Million Dollars ($1,000,000) and

limits of no less than Five Million Dollars ($5,000,000) per occurrence for bodily injury, personal injury and property damage for projects over One Million Dollars ($1,000,000). If a general aggregate limit applies, either the aggregate limit shall apply separately to this project or the general aggregate limit shall be twice the required occurrence limit.

The Commercial General Liability insurance shall include the following, copies of which shall be provided:

a. Inclusion of the City of Roseville, and its officers, agents, employees, and volunteers, as additional insureds (except for workers' compensation) as respects services or operations under the Contract. The additional insured endorsement for the general liability policy shall be at least as broad as the ISO CG 2010 10 01 combined with ISO CGL Endorsement CG 2037 10 01. Any other endorsement must be approved in writing by the City. Endorsements must include coverage for on-going and completed operations, which coverage shall be maintained for four (4) years following completion of the Project. Endorsements shall cover the City of Roseville, its officers, agents, employees, and volunteers.

b. The insurance shall provide coverage for claims by one insured against another insured and the policies shall not contain any cross-suits exclusions, cross-liability exclusions, or insured versus insured exclusions. The policies shall not contain any classification exclusions purporting to deny coverage for any work to be performed by Contractor or any of its Subcontractors.

c. Stipulation that the insurance is primary and noncontributory, as evidenced by a separate endorsement (CG 20 01 04 13 or an equivalent) or section of the policy, and that neither the City nor its insurers will be called upon to contribute to a loss.

d. Such insurance shall specifically cover the contractual liability of the Contractor.

e. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

f. Waiver of subrogation endorsement.

g. The Contractor shall furnish a certificate for the period covered.

2. **Automobile Liability:** Insurance Services Office Form Number CA 0001 covering Code 1 (any auto), or if Contractor has no owned autos, Code 8 (hired) and Code 9 (non-owned), with limits of no less than One Million Dollars ($1,000,000) per accident for bodily injury and property damage.

3. **Workers' Compensation:** In accordance with the provisions of the California Labor Code, Contractor is required to be insured against liability for Workers' Compensation or to undertake self-insurance. Statutory Workers' Compensation and Employers' Liability of at least One Million Dollars ($1,000,000) shall cover all Contractors staff while performing any work incidental to the performance or this Agreement.

4. **Professional Liability:** Professional Liability (Errors and Omission) Insurance appropriate to Contractor's profession, with a limit of liability not less than One Million Dollars ($1,000,000) per occurrence or claim and Two Million Dollars ($2,000,000) aggregate to cover all design and engineering services rendered by Contractor pursuant to the

Agreement. Coverage must commence from the first day that Contractor or any of its Subcontractors provided any design or engineering services in connection with the Project.

5. **Builder's Risk/Course of Construction Insurance Is ____ OR Is Not ____ Required by Risk Management:** The Contractor shall be responsible for all loss, damage or destruction whatsoever to the work called for by this Contract until the approval of a Notice of Completion or acceptance of the Work if no Notice of Completion is to be recorded.

The Contractor shall secure "All Risk" type of builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the work performed under this Contract (the value is presumed to be the Contract amount unless otherwise stated in Supplemental Conditions) and all materials, equipment, or other items to be incorporated therein while the same are located at the construction site, a bonded warehouse, or its place of manufacture. At any time, the policy shall cover the value of the work completed. The policy shall cover hazards including the losses due to fire, explosion, hail, rain, lightning, flood (separate insurance as needed), vandalism, malicious mischief, wind, collapse, aircraft, and smoke.

The policies providing such insurance shall name the City as a loss payee as its respective interests may appear, and certified copies of such policies shall be filed with the City. The maximum deductible allowable under the Builder's All Risk policy shall be five percent (5%) of the Contract amount.

Builder's Risk Insurance is not required for coverage of losses in excess of five percent (5%) of the Contract amount for damages resulting from earthquake in excess of a magnitude of 3.5 on the Richter scale, or tidal waves. Coverage in the amount of five percent (5%) of the Contract amount for such losses is required.

6. **Pollution Coverage:** Contractor shall procure pollution liability coverage or other insurance covering claims for bodily injury or property damage arising out of the abatement, removal, storage, transportation, or other exposure to hazardous materials or pollutants, in limits not less than Two Million Dollars ($2,000,000). Contractor shall add the City and all parties required to be indemnified by Contractor as additional insured on all pollution liability policies.

7. **Higher Coverage Limits:** If Contractor maintains higher coverage limits than the amounts shown above, then the City requires and shall be entitled to coverage for the higher coverage limits maintained by Contractor. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

8. **Claims Made Coverage:** Liability insurance coverage may not be written on a "claims made" or modified occurrence basis. The Certificate of Insurance must clearly provide that the coverage is on an "occurrence" basis.

7-1.06A **OTHER INSURANCE PROVISIONS.**

A. The requirements of the Standard Specifications as to types and limits of insurance coverage to be maintained by the Contractor, and any approval of insurance by the City, are not intended to, and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Contractor pursuant to the Contract, including, but not limited to, the provisions concerning indemnification, nor preclude the City from taking any other action available to it under any other provision of the Contract or law.

B. The City acknowledges that some insurance requirements contained in these Standard Specifications may be fulfilled by self-insurance on the part of the Contractor. However, this shall not in any way limit liabilities assumed by Contractor under the Contract.

Any self-insurance must be approved in writing by the City, in its sole discretion and shall not reduce the limits of liability. Any deductibles or self-insured retentions ("SIR") must be declared on the certificate of insurance and approved by City in writing. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

C. The Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Contract, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, the Contractor shall require its subcontractors to agree to be bound to the Contractor and the City in the same manner and to the same extent as the Contractor is bound to the City under this Contract. Additionally, the Contractor shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of the City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request. Alternatively, the Contractor may insure subcontractor(s) under its own policy.

D. The City, its officers, agents, employees, and volunteers are to be covered as insureds with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the Contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. Coverage shall not extend to any indemnity coverage

for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under California Insurance Code Section 11580.04.

E. The limits of insurance required in this Contract may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of the City (if agreed to in a written contract) before the City's own insurance shall be called upon to protect it as a named insured.

F. The insurance procured by Contractor shall be subject to the approval of the City, but any acceptance of insurance certificates by the City shall in no way limit or relieve Contractor of its duties and responsibilities under the Agreement.

G. Contractor shall be responsible for all premiums, deductibles, and self-insured retention applicable to the insurance it is required to procure under the Contract. All deductibles or self-insured retentions over five hundred thousand dollars ($500,000) must be approved by the City, in writing. Contractor shall be responsible for all deductibles, self-insured retention payments, and/or increased premiums incurred if the City's policies of insurance are forced to cover damages or respond to claims for which Contractor or its Subcontractors were obligated to provide insurance under the Contract.

H. Failure of the City to enforce in a timely manner any of the requirements of these insurance provisions shall not act as a waiver to enforcement of any of these provisions at a later date.

I. Contractor's indemnity obligations shall not be limited by these insurance provisions and shall survive the expiration of the Contract and the insurance provisions of the Contract shall likewise not be limited by the indemnity provisions of the Contract.

J. THE CITY RESERVES THE RIGHT TO WITHHOLD ANY PROGRESS PAYMENTS TO THE CONTRACTOR IN THE EVENT OF NONCOMPLIANCE WITH ANY INSURANCE REQUIREMENTS.

Bond No. _____
Premium $_____

PUBLIC WORKS
FAITHFUL PERFORMANCE BOND

(Project: _____)

WHEREAS, the City of Roseville ("CITY") has awarded a bid and contract to _____ as contractor ("PRINCIPAL") for the public work described as _____ _____ (the "WORK"). The contract ("AGREEMENT"), for the public work described above, and all of its terms and conditions are incorporated by reference and made a part hereof; and

WHEREAS, the PRINCIPAL is required to furnish a bond in connection with the AGREEMENT guaranteeing its faithful performance; and

NOW, THEREFORE, we the undersigned PRINCIPAL and _____ _____, a _____, admitted and duly authorized to transact business under the laws of the State of California, as SURETY ("SURETY"), are held and firmly bound unto the CITY or its successors and assigns in the sum of _____ dollars ($_____) (which amount is not less than 100% of the AGREEMENT price) to be paid to the CITY or its successors and assigns; and for which payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors or assigns jointly and severally, firmly by these presents.

The condition of this obligation is such that if the PRINCIPAL, or its heirs, executors, administrators, successors or assigns, shall abide by, and in all respects promptly and faithfully perform the covenants, conditions and provisions in said AGREEMENT and any alteration thereof made as therein provided, notice of which alterations to Surety being hereby waived, on its part to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless CITY, its officers, agents, employees, volunteers as therein stipulated, then this obligation shall be null and void; otherwise, this obligation shall be and remain in full force and effect.

As condition precedent to the satisfactory completion of the contract, the obligation of the PRINCIPAL and SURETY under this Bond shall remain in effect for a period of one (1) year after the completion and acceptance of the WORK. During that time, if the PRINCIPAL, its heirs, executors, administrators, successors or assigns fails to make full, complete and satisfactory repair and replacement or totally protect the CITY from any loss or damage made evident during that year which results from or is caused by either defective materials or faulty workmanship in the prosecution of the WORK, then the obligation shall remain in full force and effect. However, anything in

this paragraph to the contrary notwithstanding, the obligation of the SURETY shall continue so long as any obligation of the PRINCIPAL remains.

No prepayment or delay in payments, and no change, extension, addition or alteration of any provision of the AGREEMENT or in the specifications agreed to between the PRINCIPAL and the CITY, or any forbearance on the part of the CITY shall operate to relieve the SURETY. The SURETY hereby waives the provisions of Section 2819 of the California Civil Code. The SURETY waives all rights of subrogation against the CITY or any person employed by the CITY. If the contract price increases by the issuance of change orders, the amount specified in this bond shall increase by the same amount.

Whenever PRINCIPAL shall be and declared by CITY to be in default under the AGREEMENT, SURETY shall promptly remedy the default, or shall promptly do one of the follow at CITY's election:

1. Undertake through its agents or independent contractors, reasonably acceptable to CITY, to complete the AGREEMENT in accordance with its terms and conditions and to pay and perform all obligations of PRINCIPAL under the AGREEMENT, including without limitation, all obligations with respect to warranties, guarantees, and the payment of liquidated damages.

2. Reimburse CITY for all costs CITY incurs in completing the AGREEMENT, and in correcting, repairing or replacing defects in materials or workmanship and/or materials and workmanship which do not conform to the specifications in the AGREEMENT.

SURETY's obligations hereunder are independent of the obligations of any other surety for the performance of the AGREEMENT, and suit may be brought against SURETY and such other sureties, jointly and severally, or against any one or more of them, or against less than all of them without impairing CITY's rights against the others.

No right of action shall accrue on this bond to or for the use of any person or corporation other than CITY or its successors or assigns.

As part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by CITY in successfully enforcing such obligation, all to be taxed as costs and included in any judgment rendered.

[SIGNATURES NEXT PAGE]

PUBLIC WORKS
LABOR AND MATERIALS PAYMENT BOND
(Project: _____)

WHEREAS, the City of Roseville ("CITY"), has awarded a bid and contract to _____ as contractor ("PRINCIPAL"), for the public work described as _____ _____ (the "WORK"). The contract ("AGREEMENT"), for the public work described above, and all of its terms and conditions are incorporated by reference and made a part hereof; and

WHEREAS, the PRINCIPAL is required to furnish a bond in connection with the AGREEMENT guaranteeing payment of persons who provide labor and material; and

NOW, THEREFORE, we the undersigned PRINCIPAL and _____ _____, a _____, admitted and duly authorized to transact business under the laws of the State of California, as SURETY ("SURETY"), are held and firmly bound unto the CITY or its successors and assigns in the sum of _____ dollars ($_____) (which amount is not less than 100% of the AGREEMENT price) to be paid to the CITY or its successors and assigns; and for which payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors or assigns jointly and severally, firmly by these presents.

The condition of the obligation is such that if the PRINCIPAL, its subcontractors, heirs, executors, administrators, successors or assigns fails to pay any of the persons named in Section 8004 or 9100 of the Civil Code of the State of California, or the amounts due under the Unemployment Insurance Code of the State of California, or any amounts required to be deducted, withheld and paid over to the Employment Development Department from the wages of employees of the PRINCIPAL and its subcontractors pursuant to Section 13020 of the Unemployment Insurance Code, with respect to work or labor performed by any such claimant, that the SURETY will pay for the same, in an amount not exceeding the sum specified in this bond, and also, in case suit is brought upon the bond, shall pay reasonable attorneys' fees, to be fixed by the Court.

This bond shall inure to the benefit of any and all persons, companies, and corporations entitled to file a Stop Payment Notice pursuant to the provisions of Section 9350 et seq. of the Civil Code of the State of California, so as to give a right of action to them or their assigns in any suit brought upon this bond.

No prepayment or delay in payments, and no change, extension, addition or alteration of any provision of the AGREEMENT or in the specifications agreed to between the PRINCIPAL and the CITY, or any forbearance on the part of the CITY shall operate to relieve the SURETY. The SURETY hereby waives the provisions of Section 2819 of the California Civil Code. The SURETY waives all rights of subrogation against the CITY or any person employed by the CITY. If the contract price increases by the issuance of change orders, the amount specified in this bond shall increase by the same amount.

As part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by CITY in successfully enforcing such obligation, all to be taxed as costs and included in any judgment rendered.

ADOPTION OF STATE SPECIFICATIONS

1. The State of California Department of Transportation ("Caltrans") Standard Specifications dated 2015, are hereby adopted as the Standard Specifications of the City of Roseville except insofar as they may be modified by these Standard Construction Specifications.

2. Except for Division 1, Section 2, numbering in these Standard Construction Specifications conforms to that in the Caltrans Standard Specifications. The existence of a section in these Standard Construction Specifications means that the corresponding section of the Standard Specifications is modified in some respect. Unless otherwise specified, the modified Standard Specification provisions are deleted entirely, and the provisions of these Standard Construction Specifications are substituted.

DIVISION 1. GENERAL PROVISIONS

SECTION 1. GENERAL

ACCEPTANCE. Shall mean the formal Acceptance by resolution of the Roseville City Council of an entire Contract which has been completed in all respects in accordance with the Plans and specifications and any modifications thereof previously approved, causing a notice of completion to be filed with the County Recorder.

ATTORNEY GENERAL. The City Attorney of the City of Roseville.

CITY ATTORNEY. The City Attorney of the City of Roseville.

CITY CLERK. Shall mean the City Clerk of the City of Roseville.

DEPARTMENT. Shall mean the Department of Public Works of the City of Roseville, also referred to as the Department of Contract Administration. References made to the Department of Transportation otherwise shall mean the State of California Department of Transportation.

DIRECTOR. Shall mean the Public Works Director of the City of Roseville or his or her duly authorized representative.

ENGINEER. Shall mean the Public Works Director of the City of Roseville or his or her duly authorized representative.

ESTIMATED COST. The estimate prepared by the Public Works Director of quantities of work to be performed.

LIQUIDATED DAMAGE. The amount to be deducted from payments due or to become due to the Contractor for delay, as set forth in the Special Provisions.

PLANS. The official Project Plans, Standard Plans, Improvement Plans, Construction Standards, profiles, typical cross sections, general cross sections, working drawings, and supplemental drawings, or reproductions thereof, approved by the Director which show the location, character, dimensions and details of the work to be performed. All such documents are to be considered as a part of the Plans whether or not reproduced in the Special Provisions.

In the above definition, the following terms are defined as follows:

a. Standard Plans - The Standard Plans of the Department of Transportation of the State of California.

b. Project Plans - The Project Plans are specific details and dimension peculiar to the Work and supplemented by the Standard Plans, insofar as the same may apply.

c. Construction Standards - The City of Roseville Design and Construction Standards.

STATE. Reference to the State or State of California shall mean City or City of Roseville unless the reference is to a law or regulation of the State, and reference to Sacramento shall mean Roseville unless otherwise noted.

SECTION 2. BIDDING

SECTION 2 SHALL BE DELETED IN ITS ENTIRETY AND REPLACED WITH THE FOLLOWING:

2-1.01 **PROPOSAL FORMS.** The Department will furnish to each Bidder a standard proposal form, which, when filled out and executed shall be submitted as its bid. Bids not presented on forms so furnished will be disregarded.

The proposal form is bound in a book together with the Notice to Contractors, special provisions, and Contract. The proposal shall set forth for each item of work, in clearly legible figures and words, an item price and a total for the item in the respective spaces provided, and shall be signed by the Bidder, who shall fill out all blanks in the proposal form as required therein.

All items shown on the schedule of bid items shall be properly filled in and shall include all costs of labor, materials, equipment, and State, Federal, or other taxes applicable to the transaction. The completed forms shall be without inter-lineations, erasures or alterations of any nature. If the proposal is made by an individual, his or her name and post office address must be shown; if made by a firm or partnership, the name and post office address of each member of the

firm or partnership must be shown; or if made by a corporation, the proposal shall show the name of the State under the laws of which the corporation was chartered and the names, titles, and business addresses of the president, secretary, and treasurer of said corporation. If the proposal is signed by an agent, a "Power of Attorney" must be filed with the proposal.

The proposal shall be submitted as directed in the "Notice to Contractors" under sealed cover plainly marked as a proposal, and identifying the project to which the proposal relates and the time and date of the bid opening therefor. Proposals which are not properly marked may be disregarded. Proposal forms shall be obtained from the Director of Public Works, City of Roseville, California. Proposal forms are not transferable.

2-1.02 **REJECTION OF PROPOSALS AND DISQUALIFICATION OF BIDDERS.** Proposals may be rejected if they show any alterations of the forms, additions not called for, conditional bids, incomplete bids, erasures or irregularities of any kind. More than one proposal from an individual, firm, partnership, corporation or association under the same or different names, will not be considered. Reasonable grounds for believing that any Bidder is interested in more than one (1) proposal for the work contemplated, will cause the rejection of all proposals in which the Bidder is interested. The City reserves the right to reject any and all proposals.

2-1.03 **PROPOSAL GUARANTY.** All bids shall be presented under sealed cover and accompanied by one (1) of the following forms of Bidder's security.

a. Cash, a cashier's check, a certified check, or a Bidder's bond executed by an admitted California surety insurer, made payable to the City.

b. The security shall be in an amount equal to at least ten percent (10%) of the bid amount. A bid will not be considered unless one (1) of the forms of Bidder's security is enclosed with it.

c. A Bidder's bond will not be accepted unless it conforms to a bond form approved by the City Attorney. Upon request "Bidder's Bond" forms may be obtained from the Department.

2-1.04 **WITHDRAWAL OF PROPOSALS.** Any bid may be withdrawn at any time prior to the time fixed in the public notice for the deadline submission of bids only by written request for the withdrawal of the bid filed with the Director. The request shall be executed by the Bidder or his or her duly authorized representative. The withdrawal of a bid does not prejudice the right of the Bidder to file a new bid. Whether or not bids are opened exactly at the time fixed in the public notice for opening bids, a bid will not be received after the deadline for submission of bids nor may any bid be withdrawn after the time fixed in the public notice for deadline for submission of bids. Immediately following the deadline for submission of bids all bids shall become the property of the City of Roseville and City is under no obligation to return the bids.

2-1.05 **RELIEF OF BIDDERS.** If the Bidder claims a mistake was made in his or her bid, the Bidder shall give the Department written notice within five (5) calendar days after the opening of the bids of the alleged mistake, specifying in the notice in detail how the mistake occurred. No relief from a claimed mistaken bid shall be granted unless such mistake clearly appears on the face of the bid submitted to the City. Claimed mistakes on backup worksheets, spreadsheets, computerized bidding programs, or any other similar calculative bidding mistake which is not apparent on the face of the bid shall not under any circumstance be considered as a

basis for relief. The burden of proving the occurrence of a mistake entitling a Bidder to relief from its bid rests entirely on the Bidder. Relief from bids shall be in the City's sole discretion.

2-1.06 **PREVIOUS DISQUALIFICATION, REMOVAL OR OTHER PREVENTION OF BIDDING.** A bid may be rejected on the basis of a Bidder, any officer of such Bidder, or any employee of such Bidder who has a proprietary interest in such Bidder, having been disqualified, removed, or otherwise prevented from bidding on, or completing a Federal, State, or local project because of a violation of law or a safety regulation.

2-1.07 **COMPETENCY OF BIDDERS.** If two (2) or more prospective Bidders desire to bid jointly as a joint venture on a single project, they must file an affidavit of joint venture with the Bid on a form approved by the City Attorney, and such affidavit of joint venture will be valid only for the specific project for which it is filed. If such affidavit of joint venture is not filed as aforesaid and approved by the City Attorney prior to the time for awarding bids on the specific project for which it is submitted, a joint bid submitted by said Bidders will be disregarded. No bid will be accepted from or a Contract awarded to any Bidder to whom a proposal form has not been issued pursuant to Section 2-1.06.

2-1.08 **GUARANTY AND WARRANTY.** The Contractor shall guarantee and warrant all materials supplied as being fit for the purpose intended. The Contractor shall guarantee and warrant all work performed as having been accomplished in a proper and workman-like manner. The guarantee and warranty required by this section shall continue for a period of one (1) year after Acceptance of the Work.

Should any failure of the work occur within a period of one (1) year, after Acceptance of the project by the City Council due to faulty materials, poor workmanship, or defective equipment, the Contractor shall promptly make the needed repairs at his or her expense.

The City is hereby authorized to make such repairs if the Contractor fails to make or undertake with due diligence the aforesaid repairs within ten (10) calendar days after being given written notice of such failure; provided, however, that in case of emergency where in the opinion of the Engineer, providing a reasonable attempt has been made to notify the Contractor, delay would cause serious loss or damages, or a serious hazard to the public, the repairs may be made or lights, signs, and barricades erected without prior notice to the Contractor, and the Contractor shall pay the entire cost thereof. At the completion of the work the faithful performance bond may be reduced at the discretion of the City Council to not less than ten percent (10%) of the Contract price to cover said guarantee.

Additional guarantees or warranties may be required by the Special Provisions.

SECTION 3. CONTRACT AWARD AND EXECUTION

3-1.04 **CONTRACT AWARD.** The right is reserved to reject any and all proposals. The award of the Contract, if it be awarded, will be to the lowest responsible Bidder whose proposal complies with all the requirements prescribed. Such award, if made, will be made within sixty (60) business days after the public opening of the proposals. If the lowest responsible Bidder refuses or fails to execute the Contract, the Roseville City Council may award the Contract to the second lowest responsible Bidder. Such award, if made, will be made within eighty-two (82) business days after the public opening of proposals. If the second lowest responsible Bidder refuses or fails to execute the Contract, the City may award the Contract to the third lowest responsible Bidder. Such award, if made, will be made within one hundred and four (104) business days after public opening of the proposals. The above time periods within

which the award of Contract may be made are subject to extension for such further period as may be agreed upon in writing between the City and the Bidder concerned.

All bids will be compared on the basis of the Director's estimate of the quantities of work to be done.

3-1.05 **CONTRACT BONDS.** The successful Bidder, simultaneously with the execution of the Contract, will be required to furnish a payment bond in an amount equal to one hundred percent (100%) of the Contract price, and a faithful performance bond in an amount equal to one hundred percent (100%) of the Contract price; said bonds shall be in a form approved by the City Attorney and shall be secured by a surety company satisfactory to the City Attorney. If the Contract price increases by the issuance of Change Orders, the penal amounts of the bonds required shall increase accordingly.

Furthermore, the successful Bidder shall furnish a certificate from the County Clerk as required by California Civil Code of Procedure Section 995.660(a)(3).

3-1.18 **CONTRACT EXECUTION.** The Contract, in form and contents satisfactory to the City, shall be executed by the successful Bidder and returned, together with the Contract bonds and certificates of insurance within fifteen (15) calendar days after written notice that the Contract has been awarded, or as otherwise directed, in writing, by the City. No proposal shall be considered binding upon the City until the execution of the Contract by the City.

3-1.20 **FAILURE TO EXECUTE CONTRACT.** Section 3-1.20, "Failure to Execute Contract" is added as follows:

"Failure of the lowest responsible Bidder, the second lowest responsible Bidder, or the third lowest responsible Bidder to execute the Contract and file acceptable bonds

and insurance as provided herein within fifteen (15) calendar days, or within a different timeframe specified by City in writing, after such Bidder has received notice that the Contract has been awarded to him or her, shall be just cause for the annulment of the award and the forfeiture of the Bidder's security to the City as Liquidated Damages. The successful Bidder may file with the Roseville City Council a written notice, signed by the Bidder or his or her authorized representative, specifying that the Bidder will refuse to execute the Contract if presented to him or her. The filing of such notice shall have the same force and effect as the failure of the Bidder to execute the Contract and furnish acceptable bonds and insurance within the time prescribed by Section 3-1.18."

SECTION 4. SCOPE OF WORK

There are no amendments to the Standard Specifications.

SECTION 5. CONTROL OF WORK

5-1.02 **CONTRACT COMPONENTS.** These Standard Construction Specifications, the Standard Specifications, the Standard Plans, the Improvement Plans, Construction Standards, Project Plans, project Special Provisions (and any addenda), the Agreement, Contract Change Orders, and all supplementary documents are all essential parts of the Contract between Contractor and the City. A requirement occurring in one (1) is as binding

as though occurring in all. They are intended to be complementary, and to describe and provide for a complete work.

In resolving inconsistencies among two (2) or more sections of the Contract Documents, precedence shall be given in the following order:

A. Special Provisions

B. City of Roseville Standard Construction Specifications

C. City of Roseville Design and Construction Standards

D. State Standard Specifications and Amendments to the State Standard Specifications, Standard Special Provisions, and Plans

E. Drawings

Should it appear that the work to be done or any of the matters relative thereto are not sufficiently detailed or explained in these specifications, the special provisions, or the Plans, the Contractor shall apply in writing to the Director for such further explanations as may be necessary and shall conform to them as part of the Contract. In the event of any doubt or question arising respecting the true meaning of these specifications, the special provisions or the Plans, reference shall be made to the Director, whose decision thereon shall be final.

In the event of any discrepancy, between any drawing and the figures written thereon, the figures shall be taken as correct. Detail drawings shall prevail over general drawings.

5-1.20B(5) **CITY OF ROSEVILLE ENCROACHMENT PERMITS.** Section 5-1.20B(5), "City of Roseville Encroachment Permits" is added as follows:

"The Contractor need not obtain a separate encroachment permit from the City prior to construction within street rights-of-way or other City rights-of-way. Execution of the Contract by the City shall be deemed an encroachment permit for work required by

the Contract within rights-of-way. All work shall conform to the rules and regulations of encroachment permits and shall be subject to the inspection and approval of the Director."

5-1.20B(6) **CITY OF ROSEVILLE BUSINESS LICENSE.** Section 5-1.20B(6), "City of Roseville Business License" is added as follows:

"The Contractor shall obtain a business license from the City prior to commencing work."

5-1.20B(7) **OTHER PERMITS.** Section 5-1.20B(7), "Other Permits" is added as follows:

"The Contractor in coordination with the Director shall procure any necessary permits which the City has not specifically mentioned as obtaining."

5-1.31 **JOB SITE APPEARANCE.** The Contractor shall maintain a neat appearance to the work. In any area visible to the public, the following shall apply:

When practicable, broken concrete and debris developed during clearing and grubbing shall be disposed of concurrently with its removal. If stockpiling is necessary, the material shall be removed or disposed of weekly.

The Contractor shall furnish trash bins for all debris from structure construction. All debris shall be placed in trash bins daily. Forms or falsework that are to be reused shall be stacked neatly concurrently with their removal. Forms and falsework that are not to be reused shall be disposed of concurrently with their removal.

Full compensation for conforming to the provisions in this section, not otherwise provided for, shall be considered as included in price paid for the various Contract items of work involved, and no additional compensation will be allowed therefore.

5-1.38 **MAINTENANCE AND PROTECTION RELIEF.** Section 5-1.38 is deleted.

5-1.43 **POTENTIAL CLAIMS AND DISPUTE RESOLUTION.** Section 5-1.43 is deleted in its entirety and replaced with the following:

5-1.43A **NOTICE OF POTENTIAL CLAIM.** The Contractor shall not be entitled to payment for any additional compensation for any act or failure to act by the City, including failure or refusal to issue a Change Order, or for the happening of any event, thing, occurrence or other cause unless he or she shall have given the City due written Notice of Potential Claim as hereinafter specified.

The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation will or may be due, the nature of the costs involved, and, insofar as possible, the amount of the potential claim. The said Notice as above required must have been given to the Director prior to the time that the Contractor shall have performed the Work giving rise to the potential claim for additional compensation, if based on an act or failure to act by the Director, or in all other cases within three (3) Days after the happening of the event, thing, occurrence or other cause giving rise to the potential claim.

If the Notice of Potential Claim does not include complete information about the claim or the parties do not execute a Contract Change Order in connection with the Notice of Potential Claim, Contractor shall submit a complete information about its claim for additional compensation and/or extension of time for performance within fifteen (15) calendar days after such work is performed. Failure to provide written notice of claim prior to undertaking such work or failure to timely submit a complete and specific information about the claim for

additional compensation and/or extension of the time for performance shall be deemed a waiver and abandonment of such claim.

If there is a dispute over any claim, the Contractor shall continue to work during the dispute resolution process in a diligent and timely manner as directed by the City, and shall be governed by all applicable provision of the Agreement.

The Contractor shall maintain cost records of all work that is the basis of any dispute. On a daily basis, Contractor shall submit to City completed daily forms, the format of which will be acceptable to the City, with respect to the Contractor's costs of performing the disputed work. These daily forms shall itemize all of Contractor's costs in performing the disputed work, including, but not limited to, all costs relating to materials, labor and equipment with respect to the disputed work. These daily forms shall provide names or identification and classification of affected workers, the hourly rate of pay and hours worked, and also the size, type, and identification number of equipment and hours operated. Said daily work forms shall be duly signed and verified by the Contractor or its authorized representative. The City's receipt of the Contractors' daily forms shall not constitute an approval of the Contractor's claim. Contractor's failure to submit the daily forms on a daily basis shall constitute a waiver of the Contractor's right to claim any additional compensation for the disputed work.

Each Contractor claim shall include full and complete information concerning the Claim. Contractor shall provide a clear, concise recital of the basis, upon which the claim is asserted, including a designation of the provisions of the Contract Documents upon which the claim is based. Contractor shall also include a statement as to the amount of time and/or compensation sought pursuant to the claim; if Contractor's claim arises from an ongoing occurrence, Contractor shall so state in its claim, including a description of the specific Work activities

affected by the claim. All costs, expenses or damages and extensions of time claimed shall be described in reasonable detail under the circumstances together with complete supporting documentation.

The City will review any timely Notice of Potential Claim and supporting information submitted by Contractor. In conducting this review, the City shall have the right to require the Contractor to submit such additional or supporting documents, data and other information as the City may require.

If an agreement can be reached which resolves the Contractor's claim, the parties will execute a Contract Change Order to document the resolution of the claim. If the parties cannot reach agreement with respect to the Contractor's claim, the Contractor shall still be obligated to comply with the claim identification provisions identified in these Standard Construction Specifications, including but not limited to Section 5-1.43B.

It is the intention of this Section 5-1.43A that differences between the parties arising under and by virtue of the Contract be brought to the attention of the Director at the earliest possible time in order that such matters may be settled, if possible, or other appropriate action promptly taken. The Contractor hereby agrees that he or she shall have no right to additional compensation for any Claim that may be based on any such act, failure to act, event, thing or occurrence for which no timely written Notice of Potential Claim as herein required was filed.

5-1.43B **CLAIMS.** Contractor must submit all Claims, for which it has previously submitted a Notice of Potential Claim, prior to Acceptance of the Work. Each such Claim must be sent to the City by registered mail or certified mail with return receipt requested and must contain reasonable documentation to support the Claim.

Upon receipt of a Claim, the City shall conduct a reasonable review of the Claim and, within a period not to exceed forty-five (45) calendar days, or such further time as mutually agreed upon or necessary pursuant to Public Contract Code Section 9204, the City shall provide the Contractor a written statement identifying what portion of the Claim is disputed and what portion is undisputed. If the City does not respond to a Claim from the Contractor within the time specified herein, such Claim shall be deemed rejected in its entirety.

Any payment due on an undisputed portion of the Claim shall be processed and made within sixty (60) calendar days after the City issues its written statement.

If the Contractor disputes the City's written response, or if the City does not respond within the time specified herein, the Contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the City shall schedule a meet and confer conference within thirty (30) calendar days for settlement of the dispute.

Within ten (10) business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the City shall provide the Contractor a written statement identifying the portion of the Claims that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the Claims shall be processed and made within sixty (60) calendar days after the public entity issues its written statement. Any disputed portion of the Claim, as identified by the Contractor in writing, shall be submitted to nonbinding mediation, with the City and the Contractor sharing the associated costs equally. The City and the Contractor shall mutually agree to a mediator within ten (10) business days after the disputed portion of the Claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a

qualified neutral third party to mediate with regard to the disputed portion of the Claim. Each party shall be responsible for the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the Claim remaining in dispute shall be resolved in accordance with Section 9-1.22.

5-1.46 **FINAL INSPECTION AND CONTRACT ACCEPTANCE.** When the Director has made the final inspection and determines that the Contract work has been completed in all respects in accordance with the Plans and specifications, the Director will recommend that the Roseville City Council formally accept the work, and immediately upon and after such Acceptance by the City, the Contractor will be responsible for the work done for a period of one (1) year.

SECTION 6. CONTROL OF MATERIALS

6-1.03 **LOCAL MATERIALS.** Local material sites used by the Contractor shall be graded so that, at the time of final inspection of the Contract, they will drain and will blend in with the surrounding terrain.

SECTION 7. LEGAL RELATIONS AND RESPONSIBILITY TO THE PUBLIC

7-1.02K(2) **WAGES.** The provisions of paragraphs 1and 2 of Section 7-1.02K(2) of the Standard Specifications are amended to read as follows:

"Pursuant to the provisions of California Labor Code Section 1773, the City has identified the source, stated below, of the general prevailing rate of wages applicable to the

work to be done, for straight time, overtime, Saturday, Sunday and holiday work. The holiday wage rate listed shall be applicable to all holidays recognized in the collective bargaining agreement of the particular craft, classification or type of workmen concerned. The wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm, and are incorporated herein as part of the Contract.

Pursuant to California Labor Code Section 1773.2, general prevailing wage rates shall be posted by the Contractor at a prominent place at the site of the work."

7-1.02K(6)(b) **EXCAVATION SAFETY.** For trenches or excavation five feet (5') or deeper, the Contractor shall obtain from the Division of Industrial Safety, a permit authorizing such construction.

7-1.02O **VEHICLE CODE.** Pursuant to the authority contained in Vehicle Code Section 591, the Department has determined that, within such areas as are within the limits of the project and are open to public traffic, the Contractor shall comply with all the requirements set forth in Vehicle Code Divisions 11, 12, 13, 14, and 15. Attention is directed to the statement in Section 591 that this section shall not relieve the Contractor nor any person from the duty of exercising due care. The Contractor shall take all necessary precautions for safe operation of equipment and the protection of the public from injury and damage from such equipment.

7-1.03 **PUBLIC CONVENIENCE.** Section 7-1.03 of the Standard Specifications is amended in part as follows:

1. Delete paragraph 10 ("Install signs, lights, flares . . .") and substitute the following:

"In order to expedite the passage of public traffic through or around the work, the Contractor shall install signs, lights, flares, temporary railing (type K), barricades, and other facilities for the sole convenience and direction of public traffic as may be required. Also, as may be required, the Contractor shall furnish competent flaggers whose sole duties shall consist of directing the movement of public traffic through or around the work. The cost of furnishing and installing such signs, lights, flares, temporary railing (type K), barricades, flaggers, and other facilities shall be included in the lump sum paid for traffic control and no additional compensation will be allowed therefor.

In addition to the requirements previously specified for furnishing facilities and flaggers to expedite the safe passage of the public through or around the work, the Contractor shall at his or her expense furnish and erect within or adjacent to the work such warning, regulatory, or guide signs, markers, or devices as are necessary."

2. Add a paragraph at the end of the section to read as follows:

"In addition to the requirements hereinbefore specified for furnishing facilities and flaggers for expediting the passage of public traffic through or around the work, the Contractor shall furnish and erect, within or adjacent to the limits of the Contract, such warning, regulatory, and guide signs as may be required. The Contractor shall furnish, install and remove all such signs. Payment for furnishing, installing and removing all such signs shall be included in the lump sum price paid for traffic control and no additional compensation will be allowed therefor."

7-1.04 **PUBLIC SAFETY.** It is the intent of the parties that the City is not an exposing, creating, controlling, or correcting employer under California Labor Code Section 6400. In accordance with generally accepted construction practices and State law, the Contractor

shall have the authority and be solely and completely responsible for conditions on the job site, including safety of all persons and property during performance of the Work. Moreover, the Contractor shall be the controlling employer and has the authority and responsibility to enforce worksite safety. The Contractor shall be responsible for conducting daily safety inspections and assuring all hazards and violations are abated. The Contractor is responsible for assuring that all subcontractors adhere to the minimum CAL/OSHA safety requirements and that each subcontractor has an effective CAL/OSHA IIP (Illness and Injury Protection Program) in place that specifically addresses all potential exposures, such as, but not limited to, fall protection, confined space, and trenching/shoring. These requirements shall apply continuously and not be limited to normal working hours. The Contractor shall be responsible for any delay costs or damages in the event the progress of Work is slowed or stopped due to a safety violation.

The services of the Director in conducting construction review of the Contractor's performance is not intended to include review of the adequacy of the Contractor's Work methods, equipment, bracing or scaffolding, or safety measures, in, on, or near the construction site. If a City employee observes a safety violation, the City employee will report the violation to the Contractor who is then responsible for assuring the violation is abated.

The Contractor is hereby informed that Work on this project could be hazardous. The Contractor shall carefully instruct all personnel working in potentially hazardous Work areas as to potential dangers and shall provide such necessary safety equipment and instructions as are necessary to prevent injury to personnel and damage to property. Special care shall be exercised relative to Work underground.

All Work and materials shall be in strict accordance with all applicable State, City, County, and Federal Rules, Regulations, and Codes, and attention is drawn to the requirements

of CAL/OSHA. The Contractor shall be solely responsible for compliance with all City, County and State blasting requirements and for any damages caused by his or her operations.

In accordance with California Labor Code Section 6705, the Contractor shall submit to the City specific plans to show details of provisions for worker protection from caving ground. This in no way relieves the Contractor from the requirement of maintaining safety in all operations performed by the Contractor or the Contractor's subcontractors. The detailed plan showing design of shoring, bracing, sloping or other provisions shall be prepared by a registered civil or structural engineer in the State of California as required. Acceptance by the City or its designated agent only constitutes acknowledgment of the submission and does not constitute review or approval of the designs, design assumptions or criteria, completeness of submissions, applicability to areas of intended use, nor implementation of the plans, which are solely the responsibility of the Contractor and his or her registered engineer.

Notwithstanding any classifications relative to the Tunnel Safety Orders, Work within confined spaces on this project is subject to the definitions and applicable provisions of California Code of Regulations Section 8400 et seq., Title 8.

The Contractor shall so perform its Work as not to expose personnel to, or to discharge into the atmosphere from any source whatever, smoke, dust, asbestos, toxic chemicals or other air contaminants in violation of the laws, rules, and regulations of the governmental entities having jurisdiction. Contractors or subcontractors removing one hundred or more square feet (100') of asbestos must be “Certified” in accordance with State law. All Work involving exposure to asbestos and all other hazardous materials shall be performed with protection of personnel in compliance with all applicable regulations and safety requirements.

Nothing in these Standard Construction Specifications is to be construed to permit Work not conforming to governing codes. When Contract Documents differ from governing codes, the Contractor shall furnish and install the higher standards called for without extra charge. All equipment furnished shall be grounded and provided with guards and protection as required by safety codes. Where vapor tight or explosion proof electrical installation is required by code, this shall be provided. In accordance with the provisions of Labor Code Section 6707, the Contractor shall provide adequate sheeting, shoring and bracing for employee protection, as provided in the proposal as separate Bid Items.

7-1.05 **INDEMNIFICATION.** The City of Roseville and its officers, agents, employees, and volunteers, including but not limited to the Director, shall not be answerable or accountable in any manner: for any loss or damage that may happen to the work or any part thereof; for any loss or damage to any of the materials or any things used or employed in performing the work; for injury to or death of any person, either workers or the public; or for damage to property from any cause which might have been prevented by the Contractor, his or her workers, or anyone employed by the Contractor or his or her subcontractors.

The Contractor shall be responsible for any liability imposed by law and for injuries to, or death of, any person including, but not limited to, workers and the public, or damage to property resulting from defects or obstructions, or from any cause whatsoever during the progress of the work or at any time before its completion and final Acceptance.

To the fullest extent allowed by law, the Contractor shall defend (through counsel acceptable to the City), indemnify, and save harmless the City of Roseville and its officers, agents, employees, and volunteers from all claims, suits, or actions of every name, kind, and description, brought forth, or on account of, injuries to or death of any person including, but not

limited to, workers and the public, or damage to property resulting from the performance of the Contract, except as otherwise provided by statute.

The duty of the Contractor to defend, indemnify, and save harmless includes, but is not limited to, the duties to defend as set forth in Civil Code Section 2778. The Contractor waives any and all rights to any type of express or implied indemnity against the City, its officers, agents, employees, or volunteers.

It is the intent of the parties that the Contractor will defend, indemnify, and hold harmless the City of Roseville, its officers, agents, employees, and volunteers from any and all claims, suits, or actions as set forth above regardless of existence or degree of fault or negligence, on the part of the City, the Contractor, the subcontractor or employee of any of these; except the duty does not apply where the injury or damage is due to the sole or active negligence or willful misconduct of the City.

The Contractor's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Contract for the full period of time allowed by law. The defense and indemnity obligations of this Contract are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Contract. The parties intend that the defense and indemnity obligations in this Contract shall be broadly construed.

In addition to any remedy authorized by law, so much of the money due the Contractor under and by virtue of the Contract as shall be considered necessary by the City may be retained by the City until disposition has been made of such suits or claims for damages.

The retention of money due the Contractor shall be subject to the following:

A. The City will give the Contractor thirty (30) calendar days' notice of its intention to retain funds from any partial payment which may become due to the Contractor prior

to Acceptance of the Contract. Retention of funds from any payment made after Acceptance of the Contract may be made without such prior notice to the Contractor.

B. No retention of additional amounts out of partial payments will be made if the amount to be retained does not exceed the amount being withheld from partial payments pursuant to Section 9-1.16F, "Retentions," of the Standard Construction Specifications.

C. If the City had retained funds and it is subsequently determined that the City is not entitled to be indemnified and saved harmless by the Contractor in connection with the matter for which such retention was made, the City shall be liable for interest on the amount retained at the legal rate of interest for the period of such retention.

7-1.06 **INSURANCE COVERAGE.** Section 7-1.06 Insurance in the Standard Specifications shall be deleted in its entirety and replaced with the following:

A. Evidence of Maintenance Required. The Contractor shall, at its expense, procure and at all times maintain in full force and effect at a minimum the insurance required by this section on all of its operations; and the Contractor shall not allow any Subcontractor to commence work until similar insurance required of the Subcontractor has been obtained and filed. An original Certificate of Insurance, and copies of all required endorsements, all in a form approved by the Risk Manager, evidencing all required coverage or policies shall be filed after the award of the bid and prior to approval of the Contract by the City Council. Contractor shall provide ten (10) days prior written notice to the City of any reduction of coverage limits or cancellation of the coverage or policies shall be given to the City of Roseville as Certificate holder.

B. Qualifying Insurers. With the exception of the State Compensation Insurance Fund, all required insurance policies shall be issued by companies acceptable to the

City and licensed to do business in the State of California and who hold a current policy holders alphabetic and financial size category rating of not less than AVII according to the most recent issue of Best's Insurance Reports.

C. Insurance Required.

1. **Commercial General Liability (CGL):** Insurance Services Office Form CG 00 01 covering CGL on an "occurrence" basis, including products and completed operations with limits of no less than Two Million Dollars ($2,000,000) per occurrence for bodily injury, personal injury and property damage for projects under One Million Dollars ($1,000,000) and limits of no less than Five Million Dollars ($5,000,000) per occurrence for bodily injury, personal injury and property damage for projects over One Million Dollars ($1,000,000). If a general aggregate limit applies, either the aggregate limit shall apply separately to this project or the general aggregate limit shall be twice the required occurrence limit.

The Commercial General Liability insurance shall include the following, copies of which shall be provided:

a. Inclusion of the City of Roseville, and its officers, agents, employees, and volunteers, as additional insureds (except for workers' compensation) as respects services or operations under the Contract. The additional insured endorsement for the general liability policy shall be at least as broad as the ISO CG 2010 10 01 combined with ISO CGL Endorsement CG 2037 10 01. Any other endorsement must be approved in writing by the City. Endorsements must include coverage for on-going and completed operations, which coverage shall be maintained for four (4) years following completion of the Project. Endorsements shall cover the City of Roseville, its officers, agents, employees, and volunteers.

b. The insurance shall provide coverage for claims by one insured against another insured and the policies shall not contain any cross-suits exclusions, cross-liability exclusions, or insured versus insured exclusions. The policies shall not contain any classification exclusions purporting to deny coverage for any work to be performed by Contractor or any of its Subcontractors.

c. Stipulation that the insurance is primary and noncontributory, as evidenced by a separate endorsement (CG 20 01 04 13 or an equivalent) or section of the policy, and that neither the City nor its insurers will be called upon to contribute to a loss.

d. Such insurance shall specifically cover the contractual liability of the Contractor.

e. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

f. Waiver of subrogation endorsement.

g. The Contractor shall furnish a certificate for the period covered.

2. **Automobile Liability:** Insurance Services Office Form Number CA 0001 covering Code 1 (any auto), or if contractor has no owned autos, Code 8 (hired) and Code 9 (non-owned), with limits of no less than One Million Dollars ($1,000,000) per accident for bodily injury and property damage.

3. **Workers' Compensation:** In accordance with the provisions of the California Labor Code, Contractor is required to be insured against liability for Workers'

Compensation or to undertake self-insurance. Statutory Workers' Compensation and Employers' Liability of at least One Million Dollars ($1,000,000) shall cover all Contractors staff while performing any work incidental to the performance or this Agreement.

4. **Professional Liability:** Professional Liability (Errors and Omission) Insurance appropriate to Contractor's profession, with a limit of liability not less than One Million Dollars ($1,000,000) per occurrence or claim and Two Million Dollars ($2,000,000) aggregate to cover all design and engineering services rendered by Contractor pursuant to the Agreement. Coverage must commence from the first day that Contractor or any of its Subcontractors provided any design or engineering services in connection with the Project.

5. **Builder's Risk/Course of Construction Insurance (If Required by Risk Management):** The Contractor shall be responsible for all loss, damage or destruction whatsoever to the work called for by this Contract until the approval of a Notice of Completion or acceptance of the Work if no Notice of Completion is to be recorded.

The Contractor shall secure "All Risk" type of builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the work performed under this Contract (the value is presumed to be the Contract amount unless otherwise stated in Supplemental Conditions) and all materials, equipment, or other items to be incorporated therein while the same are located at the construction site, a bonded warehouse, or its place of manufacture. At any time, the policy shall cover the value of the work completed. The policy shall cover hazards including the losses due to fire, explosion, hail, rain, lightning, flood (separate insurance as needed), vandalism, malicious mischief, wind, collapse, aircraft, and smoke.

The policies providing such insurance shall name the City as a loss payee as its respective interests may appear, and certified copies of such policies shall be filed with the City. The

maximum deductible allowable under the Builder's All Risk policy shall be five percent (5%) of the Contract amount.

Builder's Risk Insurance is not required for coverage of losses in excess of five percent (5%) of the Contract amount for damages resulting from earthquake in excess of a magnitude of 3.5 on the Richter scale, or tidal waves. Coverage in the amount of five percent (5%) of the Contract amount for such losses is required.

6. **Pollution Coverage:** Contractor shall procure pollution liability coverage or other insurance covering claims for bodily injury or property damage arising out of the abatement, removal, storage, transportation, or other exposure to hazardous materials or pollutants, in limits not less than Two Million Dollars ($2,000,000). Contractor shall add the City and all parties required to be indemnified by Contractor as additional insured on all pollution liability policies.

7. **Higher Coverage Limits:** If Contractor maintains higher coverage limits than the amounts shown above, then the City requires and shall be entitled to coverage for the higher coverage limits maintained by Contractor. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

8. **Claims Made Coverage:** Liability insurance coverage may not be written on a "claims made" or modified occurrence basis. The Certificate of Insurance must clearly provide that the coverage is on an "occurrence" basis.

7-1.06A **OTHER INSURANCE PROVISIONS.**

A. The requirements of the Standard Specifications as to types and limits of insurance coverage to be maintained by the Contractor, and any approval of insurance by the City, are not intended to, and shall not in any manner limit or qualify the liabilities and

obligations otherwise assumed by the Contractor pursuant to the Contract, including, but not limited to, the provisions concerning indemnification, nor preclude the City from taking any other action available to it under any other provision of the Contract or law.

B. The City acknowledges that some insurance requirements contained in these Standard Specifications may be fulfilled by self-insurance on the part of the Contractor. However, this shall not in any way limit liabilities assumed by Contractor under the Contract. Any self-insurance must be approved in writing by the City, in its sole discretion and shall not reduce the limits of liability. Any deductibles or self-insured retentions ("SIR") must be declared on the certificate of insurance and approved by City in writing. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

C. The Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Contract, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, the Contractor shall require its subcontractors to agree to be bound to the Contractor and the City in the same manner and to the same extent as the Contractor is bound to the City under this Contract. Additionally, the Contractor shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of the City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request. Alternatively, the Contractor may insure subcontractor(s) under its own policy.

D. The City, its officers, agents, employees, and volunteers are to be covered as insureds with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the Contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under California Insurance Code Section 11580.04.

E. The limits of insurance required in this Contract may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of the City (if agreed to in a written contract) before the City's own insurance shall be called upon to protect it as a named insured.

F. The insurance procured by Contractor shall be subject to the approval of the City, but any acceptance of insurance certificates by the City shall in no way limit or relieve Contractor of its duties and responsibilities under the Agreement.

G. Contractor shall be responsible for all premiums, deductibles, and self-insured retention applicable to the insurance it is required to procure under the Contract. All deductibles or self-insured retentions over five hundred thousand dollars ($500,000) must be approved by the City, in writing. Contractor shall be responsible for all deductibles, self-insured retention payments, and/or increased premiums incurred if the City's policies of insurance are forced to cover damages or respond to claims for which Contractor or its Subcontractors were obligated to provide insurance under the Contract.

H. Failure of the City to enforce in a timely manner any of the requirements of these insurance provisions shall not act as a waiver to enforcement of any of these provisions at a later date.

I. Contractor's indemnity obligations shall not be limited by these insurance provisions and shall survive the expiration of the Contract and the insurance provisions of the Contract shall likewise not be limited by the indemnity provisions of the Contract.

J. THE CITY RESERVES THE RIGHT TO WITHHOLD ANY PROGRESS PAYMENTS TO THE CONTRACTOR IN THE EVENT OF NONCOMPLIANCE WITH ANY INSURANCE REQUIREMENTS.

SECTION 8. PROSECUTION AND PROGRESS

8-1.04 **START OF JOB SITE ACTIVITIES.** The Contractor shall begin work by the date specified in the "Notice to Proceed" letter, and the Contractor shall thereafter diligently prosecute the work to completion.

The Contractor shall notify the Director, in writing, of his or her intent to commence work at least seventy-two (72) hours before work is begun. The notice shall specify the date on which the Contractor intends to begin work. If a project has more than one (1) location of work, a separate notice shall be given for each location.

Should the Contractor begin work in advance of issuance of a "Notice to Proceed," any work performed in advance of such issuance shall be considered to have been done at Contractor's own risk and as a volunteer.

SECTION 9. PAYMENT

9-1.11C **PAYMENT INCLUSIONS.** The following is added to Section 9-1.11C Payment Inclusions:

"No additional compensation will be made to the Contractor for claims of increased overhead costs occurring within the originally specified construction Contract period plus any time extensions granted by Change Order. No compensation for extended performance will be granted unless the delay exceeds more than half of the float time available at the time of the delay."

9-1.16E(4) **STOP NOTICE WITHHOLDS.** The City may, at its option and at any time, retain out of amounts due the Contractor, sums sufficient to cover claims (including costs and attorneys' fees), filed pursuant to California Civil Code Section 9350 et seq.

9-1.16F **RETENTIONS.** The Department shall retain five percent (5%) of the Contract price as part security for the fulfillment of the Contract by the Contractor.

9-1.16G **PAYMENT OF WITHHELD FUNDS.** Section 9-1.16G, "Payment of Withheld Funds" is added as follows:

"Except as otherwise prohibited by law, the Contractor may elect to receive all payments due under the Contract pursuant to without any retention. If the Contractor so elects, a deposit with the City of securities with a value equivalent to the retention that would otherwise be withheld by the City shall be made. Said security shall be as provided in California Public Contract Code Section 22300, and shall be approved by the City both as to sufficiency and form. In the alternative, the Contractor may elect to deposit such securities in an escrow account and enter into a standard form Escrow

Agreement for Security Deposits in Lieu of Retention. Blank Agreements are available from the Public Works Director and the City Attorney's Office."

9-1.17 **PAYMENT AFTER CONTRACT ACCEPTANCE.** "Final Payment" shall be made in accordance with this section. The Contractor shall, after the completion of the Contract, submit a final estimate of the amount of work done thereunder and the value of such work. Upon approval of the estimate by the Director, the City of Roseville shall pay the entire sum so found to be due after deducting therefrom all previous payments and all amounts to be kept and all amounts to be retained under the provisions of the Contract. All prior partial estimates and payments shall be subject to correction in the final estimate and payment. The final payment shall not be due and payable until the expiration of thirty five (35) calendar days from the date of Acceptance of the work by the City Council, and thirty-five (35) calendar days after filing of the Notice of Completion with the County of Placer.

No certificate given or payments made under the Contract, except the final certificate or final payment, shall be conclusive evidence of the performance of the Contract, either wholly or in part, and no payment (including the final payment) or certificate shall be construed to be an Acceptance of any defective work or improper materials. Final payment shall not release the Contractor from one (1) year guarantee of the work as provided in Section 7-1.17, "Acceptance of Contract" and Section 2-1.12 "Guarantee and Warranty" of these Specifications.

SECTION 14. ENVIRONMENTAL STEWARDSHITP

14-8.02 **NOISE CONTROL.** The provisions of Section 14-8.02 of the Standard Specifications are amended by adding the following:

"The Contractor shall additionally conform to the provisions of Roseville Municipal Code Chapter 9.24 where such provisions are more restrictive than these specifications."

14-9.01 **AIR QUALITY GENERAL.** The provisions of Section 14-9.01, "Air Quality General" of the Standard Specifications are amended by adding the following:

"Material to be disposed of shall not be burned unless the Contractor has obtained a permit to burn combustible material resulting from clearing and grubbing operations from the Placer County Air Pollution Control District and City of Roseville Fire Marshall. A copy of the permits shall be filed with the Director

before beginning any burning. All such burning shall be conducted in strict conformance with the provision stipulated in said permits and at such times and in such manner as to prevent fire from spreading to areas adjoining the right-of-way."

14-11.02A **ASBESTOS REMOVAL AND DISPOSAL.** Section 14-11.02A, "Asbestos Removal and Disposal" is added as follows:

"The Contractor shall comply with all rules, regulations, statutes and ordinances regarding asbestos removal and disposal, including but not limited to, 42 U.S.C. Sections 7401, 7412 and 7601 and 40 C.F.R. Part 61, Subpart M.

If the Contractor discovers that a building to be demolished or renovated contains asbestos containing material, the Contractor shall immediately cease work and notify the City."

END OF STANDARD SPECIFICATIONS

ASSEMBLY BILL NO. 626

TEXT OF AB 626

Assembly Bill No. 626

CHAPTER 810

An act to add and repeal Section 9204 of the Public Contract Code, relating to public contracts.

[Approved by Governor September 29, 2016. Filed with Secretary of State September 29, 2016.]

LEGISLATIVE COUNSEL'S DIGEST

AB 626, Chiu. Public contracts: claim resolution.

Existing law prescribes various requirements regarding the formation, content, and enforcement of state and local public contracts. Existing law applicable to state public contracts generally requires that the resolution of claims related to those contracts be subject to arbitration. Existing law applicable to local agency contracts prescribes a process for the resolution of claims related to those contracts of $375,000 or less.

This bill would establish, for contracts entered into on or after January 1, 2017, a claim resolution process applicable to any claim by a contractor in connection with a public works project. The bill would define a claim as a separate demand by the contractor for one or more of the following: a time extension for relief from damages or penalties for delay, payment of money or damages arising from work done pursuant to the contract for a public work, or payment of an amount disputed by the public entity, as specified.

This bill would require a public entity, defined to exclude certain state entities, upon receipt of a claim sent by registered or certified mail, to review it and, within 45 days, provide a written statement identifying the disputed and undisputed portions of the claim. The bill would authorize the 45-day period to be extended by mutual agreement. The bill would require any payment due on an undisputed portion of the claim to be processed within 60 days, as specified. The bill would require that the claim be deemed rejected in its entirety if the public entity fails to issue the written statement.

This bill would authorize, if the claimant disputes the public entity's written response or if the public entity fails to respond to a claim within the time prescribed, the claimant to demand to meet and confer for settlement of the issues in dispute. The bill would require any disputed portion of the claim that remains in dispute after the meet and confer conference to be subject to nonbinding mediation, as specified. The bill would provide that unpaid claim amounts accrue interest at 7% per annum. The bill would prescribe a procedure by which a subcontractor or lower tier contractor may make a claim through the contractor.

This bill would require the text of these provisions, or a summary, to be set forth in the plans or specifications for any public work which may give rise to a claim. The bill would specify that a waiver of these rights is void and contrary to public policy, except as specified. The bill would also specify that it does not impose liability on a public entity that makes loans or grants available through a competitive application process, for the failure of an awardee to meet its contractual obligations.

By increasing the duties of local agencies and officials, this bill would impose a state-mandated local program.

This bill would, on January 1, 2020, repeal the provision establishing the claim resolution process.

This bill would specify that these provisions constitute a matter of statewide concern.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that, if the Commission on State Mandates determines that the bill contains costs mandated by the state, reimbursement for those costs shall be made pursuant to these statutory provisions.

The people of the State of California do enact as follows:

SECTION 1. Section 9204 is added to the Public Contract Code, to read:

9204. (a) The Legislature finds and declares that it is in the best interests of the state and its citizens to ensure that all construction business performed on a public works project in the state that is complete and not in dispute is paid in full and in a timely manner.

(b) Notwithstanding any other law, including, but not limited to, Article 7.1 (commencing with Section 10240) of Chapter 1 of Part 2, Chapter 10 (commencing with Section 19100) of Part 2, and Article 1.5 (commencing with Section 20104) of Chapter 1 of Part 3, this section shall apply to any claim by a contractor in connection with a public works project.

(c) For purposes of this section:

(1) "Claim" means a separate demand by a contractor sent by registered mail or certified mail with return receipt requested, for one or more of the following:

(A) A time extension, including, without limitation, for relief from damages or penalties for delay assessed by a public entity under a contract for a public works project.

(B) Payment by the public entity of money or damages arising from work done by, or on behalf of, the contractor pursuant to the contract for a public works project and payment for which is not otherwise expressly provided or to which the claimant is not otherwise entitled.

(C) Payment of an amount that is disputed by the public entity.

(2) "Contractor" means any type of contractor within the meaning of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code who has entered into a direct contract with a public entity for a public works project.

(3) (A) "Public entity" means, without limitation, except as provided in subparagraph (B), a state agency, department, office, division, bureau, board, or commission, the California State University, the University of California, a city, including a charter city, county, including a charter county, city and county, including a charter city and county, district, special district, public authority, political subdivision, public corporation, or nonprofit transit corporation wholly owned by a public agency and formed to carry out the purposes of the public agency.

(B) "Public entity" shall not include the following:

(i) The Department of Water Resources as to any project under the jurisdiction of that department.

(ii) The Department of Transportation as to any project under the jurisdiction of that department.

(iii) The Department of Parks and Recreation as to any project under the jurisdiction of that department.

(iv) The Department of Corrections and Rehabilitation with respect to any project under its jurisdiction pursuant to Chapter 11 (commencing with Section 7000) of Title 7 of Part 3 of the Penal Code.

(v) The Military Department as to any project under the jurisdiction of that department.

(vi) The Department of General Services as to all other projects.

(vii) The High-Speed Rail Authority.

(4) ”Public works project” means the erection, construction, alteration, repair, or improvement of any public structure, building, road, or other public improvement of any kind.

(5) ”Subcontractor” means any type of contractor within the meaning of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code who either is in direct contract with a contractor or is a lower tier subcontractor.

(d) (1) (A) Upon receipt of a claim pursuant to this section, the public entity to which the claim applies shall conduct a reasonable review of the claim and, within a period not to exceed 45 days, shall provide the claimant a written statement identifying what portion of the claim is disputed and what portion is undisputed. Upon receipt of a claim, a public entity and a contractor may, by mutual agreement, extend the time period provided in this subdivision.

(B) The claimant shall furnish reasonable documentation to support the claim.

(C) If the public entity needs approval from its governing body to provide the claimant a written statement identifying the disputed portion and the undisputed portion of the claim, and the governing body does not meet within the 45 days or within the mutually agreed to extension of time following receipt of a claim sent by registered mail or certified mail, return receipt requested, the public entity shall have up to three days following the next duly publicly noticed meeting of the governing body after the 45-day period, or extension, expires to provide the claimant a written statement identifying the disputed portion and the undisputed portion.

(D) Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. If the public entity fails to issue a written statement, paragraph (3) shall apply.

(2) (A) If the claimant disputes the public entity’s written response, or if the public entity fails to respond to a claim issued pursuant to this section within the time prescribed, the claimant may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the public entity shall schedule a meet and confer conference within 30 days for settlement of the dispute.

(B) Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the public entity shall provide the claimant a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. Any disputed portion of the claim, as identified by the contractor in writing, shall be submitted to nonbinding mediation, with the public entity and the claimant sharing the associated costs equally. The public entity and claimant shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each

party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to applicable procedures outside this section.

(C) For purposes of this section, mediation includes any nonbinding process, including, but not limited to, neutral evaluation or a dispute review board, in which an independent third party or board assists the parties in dispute resolution through negotiation or by issuance of an evaluation. Any mediation utilized shall conform to the timeframes in this section.

(D) Unless otherwise agreed to by the public entity and the contractor in writing, the mediation conducted pursuant to this section shall excuse any further obligation under Section 20104.4 to mediate after litigation has been commenced.

(E) This section does not preclude a public entity from requiring arbitration of disputes under private arbitration or the Public Works Contract Arbitration Program, if mediation under this section does not resolve the parties' dispute.

(3) Failure by the public entity to respond to a claim from a contractor within the time periods described in this subdivision or to otherwise meet the time requirements of this section shall result in the claim being deemed rejected in its entirety. A claim that is denied by reason of the public entity's failure to have responded to a claim, or its failure to otherwise meet the time requirements of this section, shall not constitute an adverse finding with regard to the merits of the claim or the responsibility or qualifications of the claimant.

(4) Amounts not paid in a timely manner as required by this section shall bear interest at 7 percent per annum.

(5) If a subcontractor or a lower tier subcontractor lacks legal standing to assert a claim against a public entity because privity of contract does not exist, the contractor may present to the public entity a claim on behalf of a subcontractor or lower tier subcontractor. A subcontractor may request in writing, either on his or her own behalf or on behalf of a lower tier subcontractor, that the contractor present a claim for work which was performed by the subcontractor or by a lower tier subcontractor on behalf of the subcontractor. The subcontractor requesting that the claim be presented to the public entity shall furnish reasonable documentation to support the claim. Within 45 days of receipt of this written request, the contractor shall notify the subcontractor in writing as to whether the contractor presented the claim to the public entity and, if the original contractor did not present the claim, provide the subcontractor with a statement of the reasons for not having done so.

(e) The text of this section or a summary of it shall be set forth in the plans or specifications for any public works project that may give rise to a claim under this section.

(f) A waiver of the rights granted by this section is void and contrary to public policy, provided, however, that (1) upon receipt of a claim, the parties may mutually agree to waive, in writing, mediation and proceed directly to the commencement of a civil action or binding arbitration, as applicable; and (2) a public entity may prescribe reasonable change order, claim, and dispute resolution procedures and requirements in addition to the provisions of this section, so long as the contractual provisions do not conflict with or otherwise impair the timeframes and procedures set forth in this section.

(g) This section applies to contracts entered into on or after January 1, 2017.

(h) Nothing in this section shall impose liability upon a public entity that makes loans or grants available through a competitive application process, for the failure of an awardee to meet its contractual obligations.

(i) This section shall remain in effect only until January 1, 2020, and as of that date is repealed, unless a later enacted statute, that is enacted before January 1, 2020, deletes or extends that date.

SECTION 2.
The Legislature finds and declares that it is of statewide concern to require a charter city, charter county, or charter city and county to follow a prescribed claims resolution process to ensure there are uniform and equitable procurement practices.

SECTION 3.
If the Commission on State Mandates determines that this act contains costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code.

SPECIAL PROVISIONS

SPECIAL PROVISIONS
FOR THE
CITY OF ROSEVILLE

VERNON/ATLANTIC MULTIMODAL SAFETY IMPROVEMENT PROJECT

SCOPE

The work described in these Special Provisions must be done in conformance with the latest editions of the City of Roseville Design and Construction Standards, and 2015 State Standard Specifications and Plans, unless otherwise noted in these Special Provisions or Plans, except insofar as they may be modified by these Special Provisions

ORGANIZATION

Special provisions are under headings that correspond with the main-section headings of the *Standard Specifications*. A main-section heading is a heading shown in the table of contents of the *Standard Specifications*.

Each special provision begins with a revision clause that describes or introduces a revision to the *Standard Specifications* as revised by any revised standard specification.

Any paragraph added or deleted by a revision clause does not change the paragraph numbering of the *Standard Specifications* for any other reference to a paragraph of the *Standard Specifications*.

^^

DIVISION I GENERAL PROVISIONS

1 GENERAL

Add to section 1-1.07B:

Administrator: The Public Works Director, as created by law, also the City

Agency: Department of Public Works, City of Roseville

Bidder: Prime Contractor

Bid book: Bid Proposal

City: City of Roseville

City Council: City Council of the City of Roseville, a Charter City in the State of California

Contract Documents: Plans, Notice to Bidder and Special Provisions, and Bid Book and Contract

Department: Department of Public Works, City of Roseville

Department of Transportation: State of California Agency

Department of Industrial Relations: State of California Agency

District: The Public Works Department, City of Roseville

Division of Labor Standards Enforcement: State of California Agency

Laboratory: The laboratories authorized by the Engineer to test materials and work involved in the contract

Office Engineer: City of Roseville, Department of Public Works

Transportation Building: Department of Public Works, City of Roseville

Replace the following definitions in section 1-1.07B:

Director: Director of Public Works, City of Roseville

Engineer: The Director of Public Works/City Engineer, and agents or assistants duly authorized by the Director of the Public Works/City Engineer to act on their behalf

^^

5 CONTROL OF WORK

Add to section 5-1.01:

For the award of the "Project", the City will provide inspection and Resident Engineer (RE) on an eight-hour (8) day and a forty-hour (40) week (Monday through Friday) basis only. You must reimburse the City at a rate of $175/hr for all inspection and $200/hr for RE time in excess of those hours listed above, including designated holidays and weekends. Requests for authorization to perform work outside the hours of 7:00 a.m. to 4:00 p.m., Monday through Friday, must be made in writing at least 48 hours in advance.

Designated holidays are observed: New Year's Day, Martin Luther King Day, Presidents Day, Memorial Day, 4th of July, Labor Day, Veterans Day, Thanksgiving Day, the day after Thanksgiving and Christmas Day. When a designated holiday falls on a Saturday or Sunday, the preceding Friday or following Monday (respectively) must be a designated holiday.

Provide a competent person during normal working hours to assist the Engineer, when required, in checking lines and grades of the Contractor's layout and measuring quantities for payment purposes. Cooperate with the Engineer so that checking, and measuring may be accomplished with the least interference to your operations. No additional compensation will be made to you for fulfilling this requirement.

Replace section 5-1.04 with:

5-1.04 Order of Work

The first Order of Work shall be to place the order for the luminares, poles, rectanglar flashing beacons, electrical equipment, and any other items with long lead times for procuring the materials upon the Engineer’s approval of submittals. The Engineer shall be furnished a statement from the vendors that the order for the materials has been received and accepted by the vendor. The Contractor shall determine the integrety of the existing electrical conduits feeding the RRFB locations an provide report to the Engineer.

The Contractor shall prepare a written schedule denoting locations and times of planned activities, and other impacts. The schedule for planned activities shall be submitted to the Engineer before or at the time of the pre-construction meeting. Contractor shall note that Work shall not start unless a schedule has been submitted and accepted by the Engineer. The schedule shall be prepared and submitted using either Microsoft Project or Primavera P6, or similar software acceptable to the City.

The Contractor must field verify (USA) all existing utilities and shall submit the report to the Engineer prior to beginning any Work at each site. After the construction, the Contractor shall remove all USA markings

within the curb and sidewalk area from the residential streets. Removal shall be to a standard of what was existing prior to markings or better.

The Work shall be performed in conformance with the phases of construction shown on the Contractor's Traffic Control Plan and Stage Construction Plan as approved by the Engineer. At the discretion of the Engineer non conflicting Work in subsequent phases may proceed concurrently with Work in preceding phases.

The Contractor shall place and maintain Best Management Practices (BMP) in compliance with the Water Pollution Control Plan, the BMP's shall remain in place until Work is completed.

General order of Work shall be as follows:

1. Materials submittal and ordering of all long lead time procurement items.
2. Prepare and submit WPCP, Stage Construction Plan, and Traffic Control Plan
3. Place and maintain erosion control Best Management Practices (BMP), the BMP's shall remain in place until paving is completed.
4. Notify Underground Service Alert (USA) at (800) 642-2444 at least seventy-two (72) hours in advance of beginning Work on the Project
5. Locate all underground utilities and protect-in-place
6. Place Traffic Control plan and Changeable Message Sign (CMS)
7. Place temporary striping for all stages of Work
8. Complete Work per Contractor's stage construction plans

After paving the roadway and before the roadway is opened for use by the public, the Contractor shall place temporary pavement delineation.

Permanent pavement delineation shall be installed no later than fourteen (14) Calendar Days after paving.

Add to the end of section 5-1.09A:

The Department encourages the project team to exhaust the use of partnering in dispute resolution before you submit any potential claims.

Replace section 5-1.13E with:

5-1.13E Prompt Payment

Section 5-1.13E applies to all contracts.

Pay your subcontractors within 7 days of receipt of each progress payment under Pub Cont Code §§ 10262 and 10262.5. Pay other entities, such as material suppliers, within 30 days of receipt of each progress payment.

Each month, after the 15th and prior to 20th, submit the following payment information through the Department's prompt payment monitoring system at https://caltrans.dbesystem.com:

1. Subcontractor's or entity's business name
2. Description of work performed
   2.1. Bid item numbers or change order numbers
   2.2. Written narrative of work performed
3. Value of work performed
4. Amount paid to subcontractor or entity
5. Withhold amount, if applicable
6. Explanation of withhold reasoning, if applicable

Your subcontractors and other entities may validate payments received using the prompt payment monitoring system.

If a subcontractor's or other entity's work is in dispute, provide a written withhold notification to the subcontractor or entity and the Engineer no later than 7 days after receipt of the corresponding progress payment that includes the following:

1. Value of the disputed work
2. Amount of the withhold being taken
3. Bid item numbers or change order numbers associated with the disputed work
4. Explanation of the deficiencies of the disputed work and how the corresponding value was calculated
5. Corrective actions to be taken for release of withheld amount

The Department may request additional documentation from you to evaluate whether you applied the withhold in good faith.

If the Department determines your withhold was not applied in good faith or that you failed to submit the required withhold notification, the Department may withhold the same amount from your future progress pay estimate. The Department may also apply a 2 percent penalty on the withhold amount for every month payment is not made.

Add to the end of section 5-1.20A:

During the progress of the work under this Contract, work under the following contracts may be in progress at or near the job site of this Contract:

Coincident or Adjacent Contracts

Contract no.	County–Route–Post Mile	Location	Type of work

Coordinate lane closures and traffic handling with the Engineer and with contractors of coincident or adjacent projects. Potential conflicts may not be limited to the contracts listed above.

Replace section 5-1.26 with:

5-1.26A Summary

Section 5-1.26 includes specifications for furnishing and setting construction stakes and marks.

Conform to Chapter 12, Construction Surveys, of the Caltrans publication entitled, "Surveys Manuel," except as amended below.

5-1.26B Action Submittals

Section 5-1.26 includes specifications for furnishing and setting construction stakes and marks.

Before starting any survey work, submit for Engineer's approval the proposed procedures, methods, equipment, and typical stake markings to be used.

Upon completion of the construction staking and prior to acceptance of the contract, submit all computations, survey notes, and other data used to accomplish the work.

5-1.26C Materials

Stakes must be wooden hubs with sufficient length to assure solid embedment in the grounds. Use nails only when setting points on existing pavement.

5-1.26D Construction

You are responsible to provide all surveys at your cost to control the lines, elevations, and dimensions of the work in conformance with the plans. Any deviations from the lines, elevation, and dimensions shown on the plans must receive prior approval from the Engineer.

You are responsible for the accuracy of your own layout work and you are liable for the preservation of all established lines, grades, and layout points.

Furnish and set construction stakes and marks required for the completion of the work. Set stakes with the accuracy adequate to assure that the completed work conforms to the lines, grades, and sections shown on the plans. Remove construction stakes when no longer needed.

Set hubs using total stationing. Horizontal tolerances must be within the tolerances specified in the Caltrans Survey Manual.

Set grades stakes at even 50-foot stations and at vertical and horizontal transition points.

Only use a level to establish the elevation of all hubs and points used for setting grades. Submit the required cut-sheets to the Engineer prior to starting any work for approval.

Coordinate with the City for Vertical Control Benchmark. If you destroy any of the survey control points, replace the control points at your cost. Notify the Engineer before replacing the control points. The Engineer will verify you work.

Make all computations necessary to establish the exact position of the work from control points. Maintain neat, legible, and accurate records of all computations, survey notes, and other records necessary to accomplish the work. Submit such records prior to beginning the work that requires their use.

All delay and costs due to the correcting of survey points found to be out of tolerance will be your responsibility.

Stakes damaged or destroyed by the public or your operations will be replaced at your expense. Submit all survey records to the Engineer for the project records.

Add to section 5-1.32:

The contractor shall submit a haul route.

The haul route must be utilized by all construction traffic. Any observed deviation from this route shall result in damages in the amount of $1,000 per occurrence.

^^

6 CONTROL OF MATERIALS

Replace section 6-1.03B with:

6-1.03B Submittals

6-1.03B(1) General

Not Used

6-1.03B(2) Work Plan

For local material, such as rock, gravel, earth, structure backfill, pervious backfill, imported borrow, and culvert bedding, obtained from a (1) noncommercial source, or (2) source not regulated under California jurisdiction, submit a local material plan for each material at least 60 days before placing the material. The local material plan must include:

1. Certification signed by you and an engineer who is registered as a civil engineer in the State or a professional geologist licensed as a professional geologist by the State stating:

> I am aware local material from a noncommercial source or a source not regulated under CA jurisdiction must be sampled and analyzed for pH and lead and may require sampling and analysis under section 6-1.03B(3) for other constituents of concern based on the land use history. I am aware that local material sources must not contain ADL at concentrations greater than 80 mg/kg total lead or equal to or greater than 5 mg/L soluble lead as determined by the Waste Extraction Test (WET) Procedures, 22 CA Code of Regs § 66261.24(a)(2) App II. I am aware that a maximum quantity of material may be excavated at the site based on the minimum number of samples taken before excavating at the site under section 6-1.03B(3).

2. Land use history of the local material location and surrounding property
3. Sampling protocol
4. Number of samples per volume of local material
5. QA and QC requirements and procedures
6. Qualifications of sampling personnel
7. Stockpile history
8. Name and address of the analytical laboratory that will perform the chemical analyses
9. Analyses that will be performed for lead and pH
10. Other analyses that will be performed for possible hazardous constituents based on:
    - 10.1. Source property history
    - 10.2. Land use adjacent to source property
    - 10.3. Constituents of concern in the ground water basin where the job site is located

The plan must be sealed and signed by an engineer who is registered as a civil engineer in the State or a professional geologist licensed as a professional geologist by the State.

If the plan requires revisions, the Engineer provides comments. Submit a revised plan within 7 days of receiving comments. Allow 7 days for the review.

6-1.03B(3) Analytical Test Results

At least 15 days before placing local material, submit analytical test results for each local material obtained from a noncommercial source or a source not regulated under CA jurisdiction. The analytical test results must include:

1. Certification signed by an engineer who is registered as a civil engineer in the State or a professional geologist licensed as a professional geologist by the State stating:

> The analytical testing described in the local material plan has been performed. I performed a statistical analysis of the test results using the US EPA's ProUCL software with the applicable 95 percent upper confidence limit. I certify that the material from the local material source is suitable for unrestricted use at the job site, it has a pH above 5.0, does not contain soluble lead in concentrations equal to or greater than 5mg/l as determined by the Waste Extraction Test (WET) Procedures, 22 CA Code of Regs § 66261.24(a)(2) App II, does not contain lead in concentrations above 80 mg/kg total lead, is free from all other contaminants identified in the local material plan, and will comply with the job site's basin plan and water quality objectives of the RWQCB.

2. Chain of custody of samples
3. Analytical results no older than 1 year
4. Statistical analysis of the data using US EPA’s ProUCL software with a 95 percent upper confidence limit
5. Comparison of sample results to hazardous waste concentration thresholds and the RWQCB's basin plan requirements and water quality objectives for the job site location

6-1.03B(4) Sample and Analysis

Sample and analyze local material from a (1) noncommercial source or (2) a source not regulated under CA jurisdiction:

1. Before bringing the local material to the job site

2. As described in the local material plan
3. Under US EPA Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (SW-846)

The sample collection must be designed to generate a data set representative of the entire volume of proposed local material.

Before excavating at the (1) noncommercial material source or (2) a source not regulated under CA jurisdiction, collect the minimum number of samples and perform the minimum number of analytical tests for the corresponding maximum volume of local material as shown in the following table:

Minimum Number of Samples and Analytical Tests for Local Material

Maximum volume of imported borrow (cu yd)	Minimum number of samples and analytical tests
< 5,000	8
5,000–10,000	12 for the first 5,000 cu yd plus 1 for each additional 1,000 cu yd or portion thereof
10,000–20,000	17 for the first 10,000 cu yd plus 1 for each additional 2,500 cu yd or portion thereof
20,000-40,000	21 for the first 20,000 cu yd plus 1 for each additional 5,000 cu yd or portion thereof
40,000–80,000	25 for the first 40,000 cu yd plus 1 for each additional 10,000 cu yd or portion thereof
> 80,000	29 for the first 80,000 cu yd plus 1 for each additional 20,000 cu yd or portion thereof

Do not collect composite samples or mix individual samples to form a composite sample.

Analyze the samples using the US EPA's ProUCL software with a 95 percent upper confidence limit. All chemical analysis must be performed by a laboratory certified by the SWRCB's Environmental Laboratory Accreditation Program (ELAP).

The analytical test results must demonstrate that the local material:

1. Is not a hazardous waste
2. Has a pH above 5.0
3. Has an average total lead concentration, based upon the 95 percent upper confidence limit, at or below 80 mg/kg
4. Is free of possible contaminants identified in the local material plan
5. Complies with the RWQCB's basin plan for the job site location
6 Complies with the RWQCB's water quality objectives for the job site location

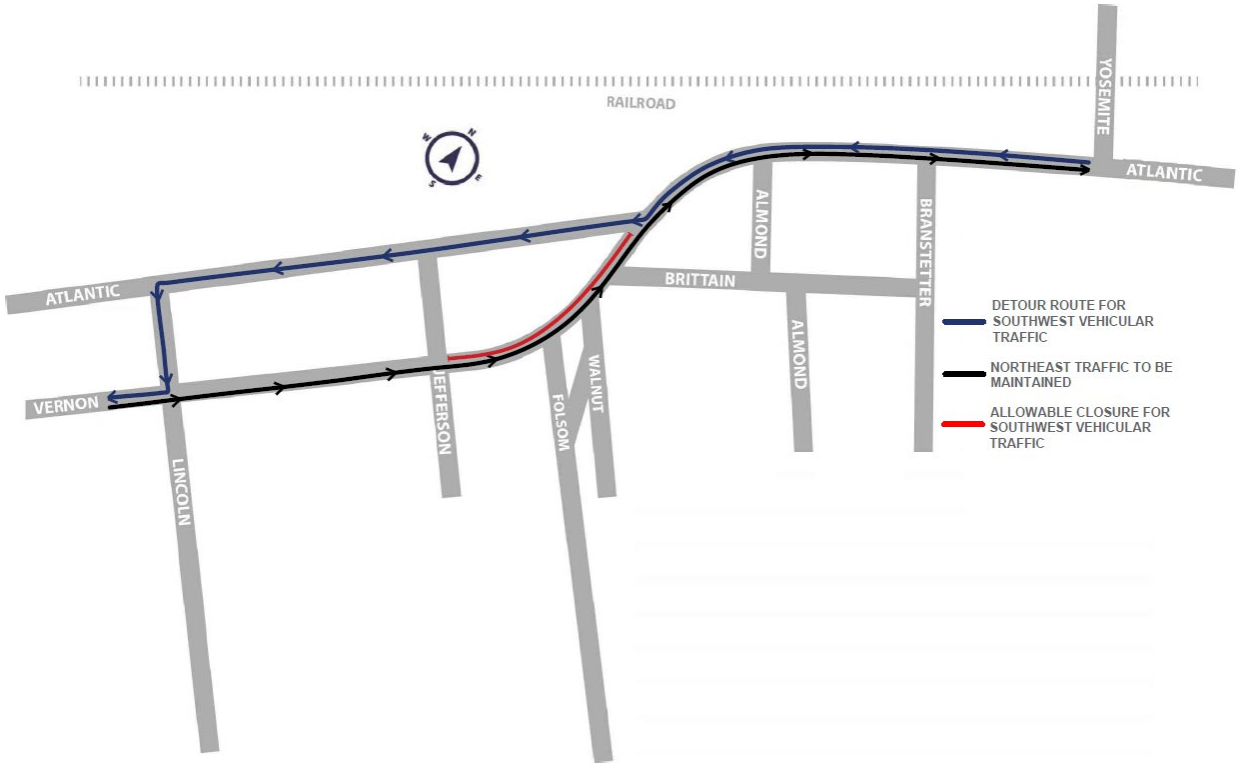
^^

7 LEGAL RELATIONS AND RESPONSIBILITY TO THE PUBLIC

Add to section 7-1.03:

The use of flaggers, barricades and construction signing shall comply with the current edition of the MUTCD and/or State of California Manual of Traffic Controls for "Construction and Maintenance Work Zones" or as required by the Engineer. All construction traffic control devices shall be in place and operational prior to beginning work or different phases throughout the contract.

Temporary lane closures will be allowed only during approved working hours. Contractor to provide at least one through lane in each direction for two-way traffic on all existing streets throughout the construction project unless otherwise identified in these Special Provisions or approved in writing by the Engineer. Refer to Chart No. 1 and exhibit below for City street closure and working hour restrictions.



Only work that does not require motorized vehicles or power equipment shall be allowed with prior written approval by the Engineer on state, federal and designated holidays and outside of the noted working hours. If work outside the times specified below becomes necessary, request authorization from the Engineer to perform work outside of these hours at least 10 working days in advance.

Chart No. 1			
Location:	*Direction:*	*Working Hours:*	*Description:*
Vernon & Atlantic Street	[1]Northeast	7:00 AM – 3:00 PM	*Hours for entire project duration.*
	[2]Southwest	9:00 AM – 5:00 PM	*Hours for entire project duration.*
	All directions (For microsurfacing)	9:00 PM – 5:00 AM	*Hours are only for two **(2)** allowable night shifts for microsurfacing work. Contractor to coordinate schedule with downtown businesses and events.*
	[3]All directions (For digouts and loops)	9:00 PM – 5:00 AM	*Hours are only for **five (5)** allowable night shifts for digout and loop operations. Contractor to coordinate schedule with downtown businesses and events.*
Intersection of Vernon and Lincoln Street		9:00 PM – 5:00 AM	*Hours are for red flash operations at intersection, with approval from the Engineer.*

[1]Northeast Direction: One (1) thru lane must be maintained at all times on Vernon/Atlantic Street, from Lincoln Street to Yosemite Street. Intersecting streets must maintain access. Refer to exhibit below.

[2]Southwest Direction: One (1) thru lane to be maintained at all times on Atlantic Street, from Yosemite Street to just north of Brittain Street. With approval from the Engineer, Vernon Street may be closed from just north of Brittain Street to Jefferson Street in southwest direction. Southwest direction to be detoured through Atlantic Street. Refer to exhibit below.

[3]All Directions: With approval from the Engineer, Vernon Street may be closed from Lincoln Street to Almond Street for a one-way reversing traffic control lane closure for microsurfacing, digout, and loop operations. One (1) thru lane to be maintained for use by both directions of traffic with flaggers in place.

Contractor shall be responsible for informing the public of the traffic conditions existing within the construction area at all times by placement of appropriate warning and advisory signs. You shall provide and maintain all traffic control and safety items. You will provide flaggers as required and you will be responsible for the entire cost of flaggers. You will assume the sole and complete responsibility for job and site conditions during the course of construction, including safety of all persons and property. This requirement shall apply continuously 24 hours/day and shall not be limited to normal working hours.

The Contractor shall cooperate, keep current and notify the local police, City public information, public works and fire departments, ambulance services, post office, and trash collectors of his/her construction operation and traffic control changes at least three (3) working days before work is to begin or traffic changes are made. The Contractor shall cooperate with local authorities relative to handling traffic through the area and shall make his own arrangements in keeping the working area clear of parked vehicles.

Unless otherwise approved by the Engineer, or as described in Chart No. 1, a minimum of one through lane in each direction, not less than 11' wide, shall be maintained at all times on all roads within the construction limits. You shall submit a traffic control plan to the Engineer for acceptance. The traffic control plan shall include the anticipated limits and time required if City street closures are necessary as described in Chart No. 1. The City requires a minimum review period of seven (7) days for Traffic Control Plans. The Contractor cannot begin any work until the Traffic Control Plan has been accepted by the City and the Contractor has notified adjacent businesses of the work and anticipated road closure and impacts. Portable changeable message signs shall be used for prior notifications of road/parking area closures.

The minimum traveled way described above shall be open for use by public traffic on Saturdays, Sundays, designated holidays, after 4:00 p.m. on Fridays and the day preceding designated holidays, and when construction operations are not actively in progress. Designated holidays are listed in Section 5-1.01 of these Special Provisions.

Whenever vehicles or equipment are parked within a traffic lane, the shoulder area shall be closed with fluorescent traffic cones or portable delineators; placed on a taper in advance of the parked vehicles or equipment and along the edge of the pavement at 25-foot intervals to a point not less than 25 feet past the last vehicle or piece of equipment. A minimum of 9 cones or portable delineators shall be used for the

taper. A C23 (Road Work Ahead) or a C24 (Shoulder Work Ahead) sign shall be mounted on a telescoping flag tree with flags. The flag tree shall be placed in a location approved by the Engineer.

Minor deviations from the requirements of this section and these Special Provisions concerning hours of work which do not significantly change the cost of the work may be permitted upon your written request, if in the opinion of the Engineer public traffic will be better served and the work expedited. Such deviations shall not be adopted until the Engineer has indicated his written approval. All other modifications will be made by contract change order.

You shall notify local residents and businesses 72 hours prior to cutting off their access for periods in excess of 2 hours. Notice must be given in writing two days prior to cutting off access and verbally the evening prior to cutting of access. For businesses that only have one primary driveway for access, you will coordinate the work to always maintain access to their driveway or develop an alternative access point for them. You will need to get in writing an approval from the business to modify their driveway location and provide that to the Engineer 72 hours prior to modifying the driveway. If two driveways access a single business, one of those driveways shall always remain accessible.

Personal vehicles of your employees shall not be parked on the traveled way or shoulders, including any section closed to public traffic. No equipment will be allowed to be parked within any traffic lane or median after work hours.

You shall notify the Engineer of your intent to begin work at least 3 working days before work begins. You shall cooperate with local authorities relative to handling traffic through the work area and shall make your own arrangements to keep the working area clear of parked vehicles.

Three days prior to implementing any City approved road or lane closures, the Contractor shall notify the Engineer. The Contractor shall notify the Engineer at a minimum of seventy-two (72) hours in advance of any revisions to the road or lane closure schedules.

Portable Changeable Message Signs (PCMS) shall be placed at the locations identified below, as approved by the Engineer, and required by your Traffic Control Plans:

1. Vernon Street in the Eastbound direction
2. Atlantic Street in the Westbound direction
3. Folsom Road in the Northbound direction

Actual locations for the PCMS shall be placed as directed by the Engineer in the field.

PCMSs shall be placed at least fourteen (14) days prior to the start of construction and shall remain in place for the duration of the project. PCMSs shall not be removed without approval from the Engineer.

Payment for Portable Changeable Message Signs is to be included in the payment item for Traffic Control and no additional payments will be made to you for Portable Changeable Message Signs.

^^

8 PROSECUTION AND PROGRESS

Replace paragraphs of section 8-1.04B with:

The Contractor shall begin work no later than 15 calendar days after receiving the "Notice to Proceed" letter executed by the Director of Public Works or authorized staff representing the City of Roseville.

This work shall be diligently prosecuted to completion before the expiration of **100 Working Days** beginning on the fifteenth calendar day after receiving the "Notice to Proceed" letter. Completion of Punch List items is included in the 100 Working Days.

A preconstruction meeting shall be held between you and the Engineer for the purpose of discussing the scope of work, contract drawings, specifications, existing conditions, materials to be tested, equipment to

be used, and all essential matters pertaining to the prosecution and the satisfactory completion of the project as required. Your representative at this conference shall include all major superintendents for the work and may include major subcontractors and material suppliers.

You shall be responsible to coordinate utilities relocations within the project area. Coordination of utilities within the project limits, including relocations and maintenance of existing facilities shall be confirmed in writing by utility representatives and you prior to the preconstruction meeting or within five (5) working days after the preconstruction meeting.

Add to section 8-1.05:

Contract time of **100 Working Days** does not include the plant establishment period.

Add to section 8-1.10:

The Contractor shall pay to the City of Roseville the sum of $4.000.00 per day, each and every calendar day's delay in finishing the work (regardless of weather conditions) in excess of the number of working days to complete the entire project. Any payment made after the completion date shall not be construed as a waiver of liquidated damages.

^^

9 PAYMENT

Add to the beginning of section 9-1.00:

The Contractor shall furnish to the Engineer a cost break-down and schedule of values as specified in these Special Provisions and the State Standard Specifications.

Add to the end of section 9-1.02:

Payment for all work bid at a price per unit of measurement will be based upon actual quantities of work as measured upon completion unless otherwise noted. The City does not expressly or by implication agree that the actual amount of work or materials of any class will correspond to the estimated quantities given in the proposal.

The Contractor shall make no claim for anticipated profits, or loss of profit, for damages, or for any extra payment whatever because of any difference between the amount of work actually done or materials furnished and the estimated amount.

Replace the 1st paragraph of section 9-1.16A with:

Submit all requests for progress payments using the forms included in Appendix A:

1. Form CC 1: Progress Payment Request - This form is to be completed and signed by you and attached as a cover sheet to each request for payment. This form will be mandatory on all contract payment requests.
2. Form CC2: Progress Payment Request (Detail) - This form may be used by you to provide the detail required to verify the payment quantities. (City will accept your form if it provides the required information.)
3. Form CC3: Quantity Changes Verification Form - This form is required before any payment can be made based on actual quantities exceeding estimated quantities. At the conclusion of the project, the City will issue a "Balancing Change Order" incorporating all quantity increases and decreases in the contract item of work.

Add to section 9-1.17D(1):

The Contractor shall submit Form CC4: Final Release Form (see Appendix A). This form must accompany all requests for final payment.

^^

DIVISION II GENERAL CONSTRUCTION

10 GENERAL

Add to the end of section 10-1.02C(2):

You must protect all irrigation component or systems not identified on the plans to be removed or relocated. Irrigation components/systems to be relocated shall be done before performing any other construction activity in the area.

If you damage any irrigation component or system you will replace it to an equal or better condition at your cost.

Replace section 10-1.02C(3) with:

You must protect all existing landscaping, including trees, not identified on the plans to be removed.

If you damage any landscaping not identified to be removed, you will replace it at your cost.

Add section 10-1.02F:

10-1.02F Potholing for Utilities

It is recognized by you and the City that the locations of existing utilities as shown on the plans are approximate, their actual location is unknown. Recognition is given to the fact there may be additional existing utilities unknown to either party to the contract. Location of utilities, as shown on the drawings, represents the best information obtainable from utility maps and information furnished by the various agencies and companies involved. The City warrants neither the accuracy nor the extent of the actual utilities involved.

All existing utilities are to remain in service and operational during construction. All required relocation of existing facilities which interfere with the work shall be made by the owning agencies or as identified in these Special Provisions and plans.

Perform all operations necessary to excavate, expose, and verify the location of existing utility mains and laterals that may cross or be in conflict with the proposed facilities and at tie-in locations.

Notify Underground Service Alert (USA) at 1-800-642-2444 and all utility companies which have underground facilities within the limits of work 72 hours before beginning any excavation work.

Where a possible at-grade conflict with existing underground utilities appears on the plans, determine its location a minimum of 100 feet ahead of the work prior to trenching unless prior pothole information is shown. Grade and alignment changes must be made only if approved by the Engineer.

The horizontal and vertical locations shown for the existing underground utilities are approximate. It is your responsibility to locate all utility lines in the construction area prior to excavation. Any damage to existing utility, structure, or service, whether or not indicated on the plans must be repaired at your expense in a manner approved by the Engineer.

Submit a report for each pothole. The report must be typed and clearly drawn to show all necessary details, including:

1. Sketch showing the location, date, depth, conditions encountered, person in charge of potholing, and any other information requested by the Engineer
2. Utility and City Public Work person(s) notified

Do not proceed with excavation operations where underground utilities lie as shown on the plans or marked by USA until related potholing work has been completed to the satisfaction of the Engineer. Notify the Engineer of any potential conflicts with underground utilities.

Hand dig as necessary to protect existing utilities.

Notify the Engineer of conflicts in which there is less than two foot of separation between the existing and proposed utility.

Payment for potholing utilities is included in the payment for the various items of work involved.

Replace the paragraph in section 10-1.04 with:

10-1.04A General

Not Used

10-1.04B Preconstruction Conference

As requested by the Engineer, the Contractor and representatives of sub-contractors may be requested to attend a preconstruction meeting. Agenda and preparation and distribution of the meeting minutes must be per the requirements set forth by the Engineer.

10-1.04C Progress Meetings

Schedule appropriately throughout progress of work at weekly intervals, or at intervals determined by the Engineer.

Make arrangements for attendance of appropriate participants, including Subcontractors.

Progress Meeting Agenda must be determined by the Engineer and may include:

1. Review minutes of previous meetings
2. Review of Work in progress
3. Field observations, problems, and decisions
4. Identification of problems which impede progress
5. Review: Submittal schedule; status of submittals; off-site fabrication; delivery schedules; and progress schedule
6. Corrective measures to regain projected schedules, if any
7. Planned progress during succeeding work period; Contractor to provide a three-week “look-ahead” schedule at each meeting; coordination of projected progress; effect of proposed changes on progress schedule and coordination
8. Maintenance of quality and work standards
9. Other business relating to Work

10-1.04D Safety Meetings

Run weekly meetings and require attendance of construction crew and Subcontractors. Record minutes and distribute copies within two calendar days after meeting to participants, the Engineer, and those affected by decisions made.

^^

12 TEMPORARY TRAFFIC CONTROL

Add to the beginning of section 12-1.01A:

Nothing in these Special Provisions shall be construed as relieving the Contractor from the responsibilities specified in Section 7-1.03.

The Contractor shall be responsible for informing the public of the traffic conditions existing within the construction area at all times by placement of appropriate warning and advisory signs. The Contractor shall provide and maintain all traffic control and safety items. The Contractor assumes sole and complete responsibility for job and site conditions during the course of construction, including safety of all persons

and property. This requirement shall apply continuously 24 hours/day and shall not be limited to normal working hours.

Replace the section 12-1.04 with:

The payment for furnishing flaggers is included in the payment for Traffic Control System.

Add to the end of section 12-1.05:

At the pre-construction meeting, the Contractor shall submit a traffic control plan showing traffic control measures and/or, if approved, detours for vehicles and pedestrians affected by the construction work. A minimum of five (5) working days will be required to review and provide the Contractor with comments on the plan. The Contractor shall revise the plan per the City's comments until the plan is accepted by the Engineer. The Contractor will not be allowed to begin work until the Engineer has accepted the traffic control plan.

The Traffic Control Plan shall cover all stages of work, per site, and include (but not limited to) the following information and detail: (1) Street closures and detours including pedestrian access and detours; (2) construction, warning, detour and restriction signs, including "No Parking", “Loose Gravel”, “Construction Area Speed limit Signs,” and “Bump Ahead” signs; (3) temporary striping and pavement markers; (4) barricades; (5) flashing arrow signs; (6) lighted message boards; (7) portable delineators; (8) traffic barrels/channelizers; (9) lights, flares, flaggers, spacings, and taper lengths; (10) temporary railing (Type K) and crash cushions; (11) temporary pavement.

A copy of the accepted Traffic Control Plan must be kept at the job site at all times, including Sub-Contractors.

The Contractor will be responsible for notifying residents and businesses of the proposed construction. Notifications shall be distributed to residents and businesses within a 300 foot radius of the job limits, including residents and businesses located on streets adjacent to the construction.

Notifications to affected residents and businesses within the Project area shall consist of two (2) phases.

The first phase notifies the affected residents and businesses of the upcoming construction through the use of “door hanger” type formatted notifications. The notification shall state the street name, the working hours, and the anticipated begin and completion dates for each street. The Contractor shall distribute the door hanger notifications a minimum of 5 (five) working days in advance of the work. The City will provide a digital copy of “door hanger” for use by the Contractor.

Notifications shall be tucked neatly in doorjambs, handles, or partially under mats. Notifications shall not be glued, stapled, tacked, or otherwise attached to property. The Contractor shall take care to stay on designated walkways during delivery of notifications and be polite to citizens encountered.

The second phase consists of the Contractor posting “No Parking” signs on barricades 72 hours prior to the work. The “No Parking” signs shall also include the exact working day that the resurfacing and/or other work requiring "No Parking" signs will take place. A warning indicating that vehicles will be towed away at the owner’s expense shall also be included on the “No Parking” signs. In addition, the Contractor shall make available a 24-hour telephone number in case of emergencies and/or problems and shall post the telephone number on the “No Parking” signs. At the pre-construction meeting, Contractor shall submit to the Engineer a sample “No Parking” sign for acceptance. The Contractor shall be responsible for placing temporary “No Parking” signs in advance of any construction activity. Barricades shall be placed a maximum of 100 feet apart, on both sides of the affected street. (Not required for streets already marked “No Parking”).

The Contractor shall be responsible for placing “Construction Speed Limit” signs on both sides of the affected street one (1) hour prior to the Street being opened to traffic. The speed limit for the “Construction Speed Limit” signs cannot be reduced more than 10 mph below the posted speed. At the pre-construction meeting, Contractor shall submit to the Engineer a sample “Construction Speed Limit”

sign for acceptance. Signs shall be placed a maximum of 500 feet apart, on both sides of the affected street.

Emergency access to driveways, intersections, and residential streets shall be maintained at all times. If vehicles are parked in the working area, the Contractor shall not attempt to move the vehicle. The Contractor shall notify the Engineer immediately, and the Engineer shall make proper arrangements to remove the vehicle.

Lane and street closure shall not be allowed without proper advance warning devices and signing in conformance with the State Standard Specifications and these Special Provisions.

Full compensation for complying with the above requirements shall be considered as included in the contract lump sum price paid for Traffic Control System and no additional compensation will be allowed.

Replace section 12-3.11D with:

Payment for construction area signs is included in the payment for Traffic Control System.

Add to the end of section 12-3.32B:

The PCMSs must be controlled either locally or remotely by a dedicated controller or computer.

Authorized users must be able to both locally and remotely override motorist information messages.

The general system functions of the PCMSs must be capable of:

1. Preventing any unauthorized users or systems from gaining access to the PCMSs through an industry authentication and encryption standard level of security.
2. Providing current operational status locally and remotely. Operational status must include current messages, communications system, and power status.
3. Delivering notifications either by telephone, voice, or text messages to alert support staff of trouble conditions.
4. Generating trouble alerts for conditions such as (1) low roadside equipment power or voltage, (2) system communications failure.
5. Measuring periodically and automatically the power levels of all equipment. Alert support staff, locally and remotely via a telephone message, in time to provide supplemental power before the system ceases to operate.
6. Displaying preprogrammed messages based on the time of day and day of week.

Add to the beginning of the RSS for section 12-3.32C:

Place PCMSs as dictated in Section 7 of these Special Provisions and as authorized by the Engineer.

Replace Not Used in section 12-3.32D with:

Payment for portable changeable message signs is included in the payment for Traffic Control System.

Add to section 12-4.01A:

When work is performed within 200’ of an intersection, the Contractor shall request that the traffic signal be placed in red flash. This shall apply to all intersections with the exception of the intersection at Atlantic Street and Yosemite Street, which will not be permitted to be placed in red flash at any time. The Contractor shall submit a Red Flash Request form at minimum 72 hours in advance of the date of work to the Resident Engineer and the City Traffic Engineering Team. Requests placed after 4:30pm shall be considered as placed 8:00am the following business day. The Red Flash Request Form is included in the City of Roseville Construction Standards. If no work is being performed with an intersection, the Contractor shall inform a City representative so the signal will be restored to normal operations. The

intent is that the traffic signal is placed in Red Flash when lanes will be taken approaching and at the intersection and when work will occur within the limit lines.

At all intersections, the Contractor shall provide a minimum of 2 flaggers per intersection while the intersections are in red flash, or as determined by the Engineer.

The Contractor shall diligently progress with operations within signalized intersections and communicate with the Engineer for restoring signalized intersections to normal operations once the Contractor's operations are complete within the limits of signalized intersections.

Replace section 12-4.02C(3)(d) with:

12-4.02C(3)(d) City Street Closure Requirements

With approval from the Engineer, the Contractor may close portions of Vernon Street as described and shown on Chart No. 1 and exhibit below.

Replace section 12-4.02C(3)(m) with:

12-4.02C(3)(m) City Street Closure Hour Charts and City Street Lane Requirement Charts

Comply with the requirements for a City Street Closure and Working Hours shown in the following chart:

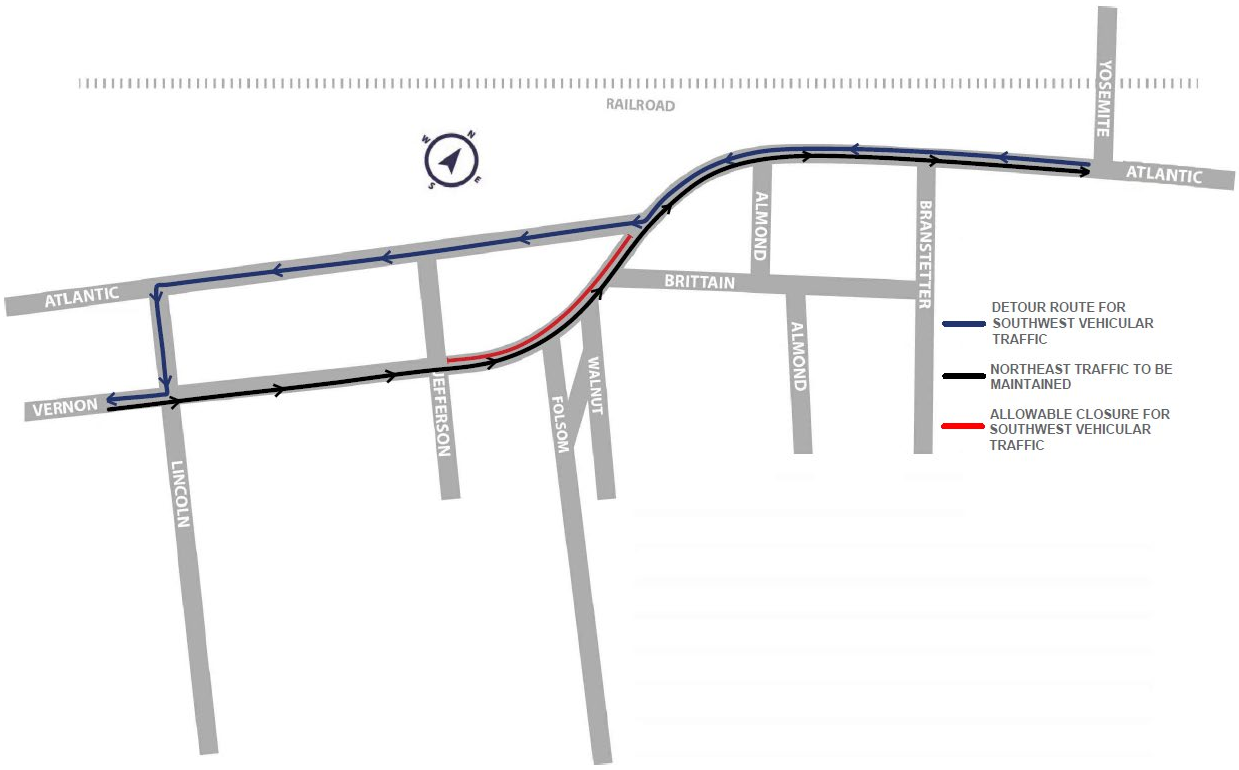


Chart No. 1

Location:	*Direction:*	*Working Hours:*	*Description:*
Vernon & Atlantic Street	[1]Northeast	7:00 AM – 3:00 PM	*Hours for entire project duration.*
	[2]Southwest	9:00 AM – 5:00 PM	*Hours for entire project duration.*
	All directions (For microsurfacing)	9:00 PM – 5:00 AM	*Hours are only for two **(2)** allowable night shifts for microsurfacing work. Contractor to coordinate schedule with downtown businesses and events.*
	[3]All directions (For digouts and loops)	9:00 PM – 5:00 AM	*Hours are only for **five (5)** allowable night shifts for digout and loop operations. Contractor to coordinate schedule with downtown businesses and events.*
Intersection of Vernon and Lincoln Street		9:00 PM – 5:00 AM	*Hours are for red flash operations at intersection, with approval from the Engineer.*

[1]Northeast Direction: One (1) thru lane must be maintained at all times on Vernon/Atlantic Street, from Lincoln Street to Yosemite Street. Intersecting streets must maintain access. Refer to exhibit below.

[2]Southwest Direction: One (1) thru lane to be maintained at all times on Atlantic Street, from Yosemite Street to just north of Brittain Street. With approval from the Engineer, Vernon Street may be closed from just north of Brittain Street to Jefferson Street in southwest direction. Southwest direction to be detoured through Atlantic Street. Refer to exhibit below.

[3]All Directions: With approval from the Engineer, Vernon Street may be closed from Lincoln Street to Almond Street for a one-way reversing traffic control lane closure for microsurfacing, digout, and loop operations. One (1) thru lane to be maintained for use by both directions of traffic with flaggers in place.

Add between the 1st and 2nd paragraphs of section 12-4.04C:

A pedestrian facility closure on the same side of the roadway is limited to no more than 1 block. When working on one side of the roadway, the pedestrian facility on opposite side of the roadway within the same block must be open for a sufficient pedestrian detour.

^^

13 WATER POLLUTION CONTROL

Add to section 13-1.04:

Submit a Water Pollution Control Lump Sum Cost Break-Down which itemizes the contract lump sum for water pollution control work. Use the Water Pollution Control Lump Sum Cost Break-Down provided in this section as the basis for the cost break-down. Use the Water Pollution Control Lump Sum Cost Break-Down to identify items, quantities and values for water pollution control work, including Temporary Water Pollution Control Practices. You are responsible for the accuracy of the quantities and values used in the cost break-down submitted. Partial payment for the item of water pollution control will not be made until the Water Pollution Control Cost Break-Down is approved by the Engineer.

Line items indicated in the Water Pollution Control Lump Sum Cost Break-Down in this section with a specified Estimated Quantity must be considered "Project-Specific Minimum Requirements." Incorporate Project-Specific Minimum Requirements with Contractor-designated quantities and values into the Water Pollution Control Lump Sum Cost Break-Down.

Line items indicated in the Water Pollution Control Lump Sum Cost Break-Down in this section without a specified Estimated Quantity must be considered by the Contractor for selection to meet the applicable "Minimum Requirements" as defined in the Manuals, or for other water pollution control work as identified in the "Construction Site BMPs Consideration Checklist" presented in the Preparation Manual. Refer to

the Downtown Roseville Specific Plan Mitigation Monitoring Program in Appendix D for the applicable measures for the project. In the Water Pollution Control Cost Break-Down, list only those water pollution control practices selected for the project, including quantities and values required to complete the work for those items.

The sum of the amounts for the items of work listed in the Water Pollution Control Cost Break-Down must be equal to the contract lump sum price bid for water pollution control. Overhead and profit must be included in the individual items listed in the cost break-down.

Adjustments in the items of work and quantities listed in the approved cost break-down must be made when required to address amendments to the WPCP, except when the adjusted items are paid for as extra work.

No adjustment in compensation will be made to the contract lump sum price paid for water pollution control due to differences between the quantities shown in the approved cost break-down and the quantities required to complete the work as shown on the approved WPCP. No adjustment in compensation will be made for ordered changes to correct WPCP work resulting from your own operations or from your negligence.

At the Engineer's discretion, the approved cost break-down may be used to determine partial payments during the progress of the work and as the basis of calculating the adjustment in compensation for the item or items of work due to changes ordered by the Engineer. When an ordered change increases or decreases the quantities of an approved cost break-down, the adjustment in compensation may be determined, at the Engineer's discretion, in the same manner specified for increases and decreases in the quantity of a contract item of work in section 9-1.06.

At your request and approved by the Engineer, changes to the water pollution control practices listed in the approved cost break-down, including addition of new water pollution control practices, will be allowed. Changes must be included in the approved amendment of the WPCP. If the requested changes result in a net cost increase to the lump sum price for water pollution control, an adjustment in compensation will be made without change to the water pollution control item. The net cost increase to the water pollution control item will be paid for as extra work as provided in section 4-1.05.

Payment for maintaining, removing and disposing construction site best management practices is included in the payment for water pollution control.

WATER POLLUTION CONTROL LUMP SUM COST BREAK-DOWN

ITEM	ITEM DESCRIPTION	UNIT	ESTIMATED QUANTITY	VALUE	AMOUNT
Soil Stabilization					
SS-1	Scheduling				
SS-2	Preservation of Property/Preservation of Existing Vegetation

^^

15 EXISTING FACILITIES

Replace the first paragraph of section 15-1.03B with:

Where concrete is described to be removed, remove the concrete to the bottom of the proposed improvements.

Add to section 15-1.03B:

Section 15-1.03B includes specifications for removing concrete curb, curb and gutter, sidewalk, curb ramp, and pedestrian ramps. Additionally, follow Section 73-10 for the removal of curbs and sidewalks.

Delete the 7th and 8th paragraph of section 15-1.03B

Replace section 15-1.03D with:

15-1.03D ABANDON PIPE

Abandon pipes in place as shown on the plans. Pipes to be abandoned shall be plugged with concrete on either end and filled with controlled low-strength material or slurry cement that comply with City Construction Standard 101-8A.

^^

DIVISION III EARTHWORK AND LANDSCAPE

17 GENERAL

Add to the end of section 17-2.03D:

Surplus materials resulting from clearing and grubbing not to be reused in the project or salvaged to the City shall become the property of the Contractor unless otherwise specified, and he or she shall dispose of surplus materials off the City rights-of-way and easements. The disposal of such materials shall conform to all local ordinances and regulations of the City of Roseville. All costs, charges and fees associated with such disposal shall be borne by the Contractor. Surplus materials are not to be confused with salvaged materials, which shall remain the property of the City and shall be delivered to the City at no extra charge.

Replace the section 17-2.04 with:

All tree removal and root ball removal is considered clearing and grubbing and is included in the payment for "Clearing and Grubbing".

^^

19 EARTHWORK

Add to end of section 19-1.01A

The Contractor shall perform all excavation required for the complete project, to the lines and grades as shown on the Project Plans, as described in these Special Provisions, and as directed by the Engineer.

Replace section 19-1.03B with:

Should unsuitable material be encountered which, in the opinion of the Engineer, cannot be stabilized, the Contractor shall remove the unsuitable material to the dimensions and limits directed by the Engineer. The Contractor shall use extra care in excavating unsuitable materials so as not to aggravate the conditions. If, in the opinion of the Engineer, the Contractor's methods and equipment are increasing the amount of unsuitable materials to be excavated, the Engineer will require the Contractor to take necessary steps to correct the situation. Should the problem continue, the Contractor shall pay all costs beginning from the time correction steps were last implemented.

Excavate and dispose of unsuitable material encountered below the natural ground surface in embankment areas or below the grading plane in excavation areas as ordered.

When unsuitable material is removed and disposed of, the resulting space shall be filled with material suitable for the planned use. Place and compact suitable material under section 19-5 of the State Standard Specifications. Unsuitable materials shall be removed from the job site and not incorporated into embankments.

Typical treatment for unsuitable base will include excavation of 12 inches of material, placement of Tensar BX1200 Geogrid or equal, and placement of Class II Aggregate Base.

The estimated quantity for "Unsuitable Material" is for bidding purposes only and an estimated 50 cubic yards has been included. The quantity can be extended, reduced, or deleted at the discretion of the Engineer, with no change in the unit bid price. If unsuitable material is discovered, the Contractor will notify the Engineer for approval of excavation and backfill. If the Engineer does not approve that the material is unsuitable prior to excavation and backfill, the Contractor will be responsible for the cost of excavation and backfill.

Payment for Unsuitable Material shall include full compensation for furnishing all labor, materials, tools, equipment, excavation, backfill, geogrid, aggregate base, compaction, removal and incidentals, and for doing all work involved in removing and replacing Unsuitable Material, complete in place, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Add the end of section 19-2.03A:

Excavated material not reused shall be disposed of in accordance with the provisions of Section 7-1.13, "Disposal of Material Outside the Highway Right of Way" and 16-1.04 "Removal and disposal of Materials", of the State Standard Specifications.

The Contractor shall do all excavation of whatever substance is encountered to the lines and grades shown on the plans. All material suitable for use as backfill shall be piled in an orderly manner a sufficient distance from the side of the excavation to avoid overloading and to prevent sliding into the excavation. The Contractor shall do such grading as is necessary to prevent surface water from entering the excavation.

Excavations adjacent to the existing roadway shall be closed at the end of each day's work. At the option of the Contractor, steel cover plates may be used at the end of each workday to cover excavations not backfilled adjacent to the roadway.

Excess excavated material suitable for use elsewhere in the construction may be reused therein. All surplus or unsuitable material shall become the property of the Contractor and shall be removed from the job site to a predetermined disposal site at the Contractor's expense.

The Contractor shall remove and dispose of all water entering excavations. Disposal of water shall be done in a manner to prevent damage or nuisance to adjacent properties.

Existing asphalt concrete pavement that is to remain intact shall be saw cut in a neat, straight, parallel line. All pavements damaged during the work shall be cut out in a rectangular pattern and removed and paved.

The maximum lift of backfill material shall depend upon the type of backfill material, relative compaction required, and proposed compaction method to be used, but in no case shall the loose lift thickness of any material exceed 8 inches.

Add section 19-2.03I:

19-2.03I Hazardous Material Disposition

During the course of trenching, grading, grinding, or other excavation, should potentially hazardous materials or other questionable materials be encountered, the Engineer shall be contacted immediately. The Contractor shall mark the site. The City will respond within 24 hours to investigate the site and render an opinion on the questionable materials regarding future action at the site. The intent is to minimize schedule delays to the construction.

The City will be responsible for delineating any required exclusions zones, removing and containerizing questionable material, as well as monitoring the work site for compliance with applicable health and safety compliance.

Removed material will be contained in drums, or drop boxes, depending on the volume, and temporarily staged within the fenced area behind the existing building located at the west side of the parking lot. The staging duration will only be long enough to obtain analytical laboratory results and confirm disposition instructions on the material. For each discovery, it is anticipated the material will be staged for less than 30 days.

^^

20 LANDSCAPE

Add to section 20-1.01A:

Landscape work must comply with provisions in the latest version of City of Roseville's Parks Construction Standards and Supplement.

Notify the Engineer not less than 72 hours prior to requiring initial access to the existing irrigation controllers. When the Engineer determines that access to the controllers is required at other times, arrangements will be made to provide this access.

Add to section 20-1.01C:

Submit a cost break-down for the contract lump sum items of planting and irrigation system. Cost break-down tables must be submitted to the Engineer for approval within 10 working days after the contract has been approved. Cost break-down tables will be approved, in writing, by the Engineer before any partial payment will be made for the applicable items of planting and irrigation system involved.

Cost break-downs must be completed and furnished in the format shown in the samples of the cost break-downs included in this section. Line item descriptions of work shown in the samples are the minimum to be submitted. You may designate additional line item descriptions of work. If you designate additional line item descriptions of work, the quantity, value and amount for those line items must be completed in the same manner as for the unit descriptions shown in the samples. The line items and quantities given in the samples are to show the manner of preparing the cost break-downs.

Determine the quantities required to complete the work shown on the plans. The quantities and their values must be included in the cost break-downs submitted to the Engineer for approval. You are responsible for the accuracy of the quantities and values used in the cost break-downs submitted for approval.

The sum of the amounts for the line items of work listed in each cost break-down table for planting and for irrigation system work must be equal to the contract lump sum price bid for Planting and Irrigation System, respectively. Overhead and profit must be included in each individual line item of work listed in a cost break-down table.

No adjustment in compensation will be made in the contract lump sum prices paid for planting and irrigation system due to differences between the quantities shown in the cost break-downs you submit and the quantities required to complete the work as shown on the plans and as specified in these special provisions.

Individual line item values in the approved cost break-down tables will be used to determine partial payments during the progress of the work and as the basis for calculating an adjustment in compensation for the contract lump sum items of planting and irrigation system due to changes in line items of work ordered by the Engineer. When the total of ordered changes to line items of work increases or decreases the lump sum price bid for Planting and Irrigation System by more than 25 percent, the adjustment in compensation for the applicable lump sum item will be determined in the same manner specified for increases and decreases in the total pay quantity of an item of work in Section 4-1.05.

Add to section 20-1.01D(1):

Do not apply pesticides before approval from the Engineer. **Delete edits to section 20-1.01D(2) in the RSS and replace the 1st paragraph of section 20-1.01D(2) with:**

The Engineer performs a progress inspection at:

1. During pressure testing of the pipelines on the supply side of control valves.
2. Before planting begins and after completion of the work specified for planting in Section 20-3.02C(2).
3. Before plant establishment work begins and after completion of the work specified for planting in Section 20-3.
4. At intervals of one month during the plant establishment period.

Add to section 20-1.02C:

Pesticide used must be limited to the following materials:

1. Aminopyralid
2. Diquat
3. Dithiopyr
4. Clopyralid MEA
5. Fluazifop-P-Butyl
6. Flumioxazin
7. Glyphosate
8. Imazapyr
9. Isoxaben (Preemergent)
10. Oryzalin (Preemergent)
11. Oxyfluorfen (Non-odor type)
12. Pendimethalin (Preemergent)
13. Prodiamine (Preemergent)
14. Sethoxydim
15. Melfluidide (Growth regulator)

Add to section 20-1.03B:

Granular preemergent shall be limited to the following material:

1. Oxadiazon

A minimum of 100 days must elapse between applications of preemergent.

Granular preemergent must be applied prior to the application of mulch. Mulch applications must be completed in these areas on the same working day.

Glyphosate must be used to kill stolon type weeds.

Add to section 20-2.01A(3)(a)5:

5. City Standards: Install irrigation per the most current Standards including but not limited to:
   5.1. City of Roseville Park Construction Standards
   5.2 City of Roseville Design and Construction Standards
   5.3 City of Roseville Electric Department Standard Specifications
   5.4 Local, state and federal electrical codes, manuals and guidelines, and
   5.5 Local, state and federal plumbing codes, manuals and guidelines

Add to section 20-2.01A(4)(d):

Tests must demonstrate to the Engineer, through one complete cycle of the irrigation controllers in the automatic mode, that the associated automatic components of the irrigation systems operate properly. If automatic components of the irrigation systems fail a functional test, these components must be repaired at your expense and the testing repeated until satisfactory operation is obtained.

Associated automatic components must include, but not be limited to, remote control valve actuator systems and remote control valves.

Upon completion of work on an irrigation system, including correction of deficiencies and satisfactory functional tests for the systems involved, the plants to be planted in the area watered by the irrigation system may be planted provided the planting areas have been prepared as specified in these special provisions.

Add section 20-2.01A(4)(e)

Irrigation System Audit

Contractor shall coordinate and provide assistance of a certified irrigation auditor to complete the irrigation audit per City of Roseville Specifications. The Contractor shall schedule the audits once the irrigation system is 100% complete, including functionality of the irrigation controller. Provide a two week (14 day) notice for scheduling the audit. Contractor shall anticipate providing staff to assist auditor during the process, allow up to two (2) days at site.

Add section 20-2.01A(4)(f)

Establishment

A. Full automated utilization of the irrigation system shall be included as part of the maintenance of the project. See Section 329000: Planting for additional information.

B. Program and utilize the establishment schedule as submitted with the turn-in items.

C. Contractor to run the system in “quantity” mode or “time plus flow” for a minimum of one (1) week.

D. Check the irrigation system weekly to ensure proper operations. Make all necessary adjustments, including watering schedule to ensure proper and healthy plant growth. At no time shall pools of water be present within any part of the project. Conversely, at no point shall dry or under-watered spots be visible upon inspection. Improper irrigation management resulting in flooding or dry conditions to the detriment of plant material may constitute an extension of the establishment period, at no additional cost to the City.

Final Review

A. The Contractor shall demonstrate to the City, valve by valve, the entire irrigation system to be operable. All heads shall be adjusted/flushed and all drip zones shall be flushed prior to the on-site review. Any item requiring adjustments shall be completed immediately and to the satisfaction of the City.

B. Provide necessary training to City staff in the proper operations and maintenance of the booster pump.

C. The date of final acceptance by the City Council or the recordation of the property transfer shall signify the start date of the warranty period. Final acceptance shall include the project in total and will not segregate any specific item or trade included in the construction of the project.

Add Section 20-2.01A(4)(g):

Record Drawing

A. Contractor shall regularly update a print of the system and any changes made to the system throughout the project. Features below ground shall be indicated with at least two measurements from surface features such as walks, building, or sprinkler heads. All changes shall be recorded on this plan before trenches are backfilled. The record drawing shall be completed and submitted to the City before final payment shall be made for work installed.

B. The contractor shall furnish two complete color coded irrigation charts. Charts shall identify individual RCV sections with a different color for each RCV. Charts are to be presented on fully laminated 11”X17” As-Built plans.

Replace the section 20-2.01B(7) with:

Valve boxes shall be per City Standards.

Valve boxes must be precast concrete within paved areas and reinforced plastic in all other areas.

Covers for concrete valve boxes shall be concrete.

Covers for plastic valve boxes must be glass fiber reinforced plastic.

Valve boxes shall be labeled per City Standards.

Add to section 20-2.04A(1):

Low voltage, as used in in this section mean 36 V or less.

Allowance in bid for new irrigation control wires, 2- wire communication wire, and trenching shall be as indicated on the plans.

Add to section 20-2.04B:

Low voltage control and neutral conductors in pull boxes and valve boxes, at irrigation controller terminals, and at splices must be marked with adhesive cloth wrap-around markers.

Low voltage control and neutral conductors in pull boxes and valve boxes, at irrigation controller terminals, and at splices must be marked as follows:

1. Conductor terminations and splices must be marked with adhesive backed paper markers or adhesive cloth wrap-around markers, with clear, heat-shrinkable sleeves sealed over the markers.
2. Non-spliced conductors in pull boxes and valve boxes shall be marked with clip-on, "C" shaped, white extruded polyvinyl chloride sleeves. Marker sleeves shall have black, indented legends of uniform depth with transparent overlays over the legends and "chevron" cuts for alignment of 2 or more sleeves

Markers for the control conductors must be identified with the appropriate number or letter designations of irrigation controllers and station numbers. Markers for neutral conductors must be identified with the appropriate number or letter designations of the irrigation controllers.

New control and neutral conductors that are to replace existing control and neutral conductors must be the same size and color as the existing control and neutral conductors being connected to.

The color of low voltage neutral and control conductor insulation, except for the striped portions, must be homogeneous throughout the entire thickness of the insulation.

Insulation for conductors may be UL listed polyethylene conforming to UL44 test standards with a minimum insulation thickness of 41 mils for wire sizes 10AWG and smaller.

Add to section 20-2.08C(1)

Sleeves must extend 6 inches beyond paving. The ends of the sleeve must be capped until use.

Replace the section 20-2.10B(2) with:

Ball valves must be per City Standards.

Ball valves must be of the same size as the pipeline which the valves serve, unless otherwise noted on the plans.

Add to section 20-2.10C(2):

Section 20-2.10C(2) includes specifications for constructing electric remote control valves.

Electric remote control valves must be outfitted with adjustable pressure regulators as shown. Adjust the pressure regulators to provide proper operation of the irrigation system downstream of the electric remote control valves.

Fittings for irrigation sleeve must be per City of Roseville Parks Construction Standards.

Add to section 20-3.01A(3)(c):

Submit certificate stating quantity, type, and composition, weight and origin for all amendments and chemicals must be delivered to the City's Representative before the material is used on the site.

Add to section 20-3.01A(4):

Request at least two working days in advance the following reviews prior to progressing with the work:

1. Completion of rough grading
2. Verification of amendment incorporation depths
3. Finish grade

Provide one-quart sample of proposed amendment to an approved agriculture-based lab. Do not deliver materials to the site until the City's Representative approves the samples. Contractor is responsible for the testing costs.

Add to section 20-3.01B(3):

Organic Amendment must be nitrogen-treated fir bark conforming to:

1. Physical Properties: 95% - 100% passing, sieve size 6.35 mm (1/4 inch), 80%-100% passing, sieve size 2.38mm (No. 8, 8 mesh), and 0%-30% passing, sieve size 500 micron (no. 35, 32 mesh).
2. Chemical Properties: Nitrogen Content (dry weight basis), 0.4%-0.6% iron content, minimum 0.08% dilute acid soluble Fe on dry weight basis, soluble salts, maximum 3.5 millimhos/centime @ 25 degree C. as determined by saturation extract method; ash – 6.0%.

Add to section 20-3.01B(4)(a):

Fertilizer must be determined from soils analysis results. For purposes of bidding only, assume the use of 6-20-20 commercial fertilizer, 20-10-5 planting tablets by Agriform International Chemicals, Inc., and iron sulfate.

Add to section 20-3.01C(1):

Organic amendment and fertilizer incorporation: Materials determined from the soils test must be uniformly distributed throughout all irrigated planting areas and incorporated to a homogeneously blended soil depth of six inches. Assume per 1000 square feet:

6 cubic yards nitrogen stabilized organic amendment
30 pounds commercial fertilizer (6-20-20)
10 pounds iron sulfate

Apply iron sulfate cautiously, and avoid contact with concrete, since permanent staining may result. Any such stained concrete must be replaced at your expense.

Plant pits must have their sides and bottoms loosened or otherwise broken to prevent glazed or compacted surfaces, and must be as shown on the planting detail.

Only un-amended soil must be used beneath the root ball; cultivate bottom of plant pit to improve porosity. Backfill around sides of rootball must be the amended soil taken from adjacent prepared areas. Spread material excavated from plant pits onto adjacent areas as replacement. If additional back fill be necessary, a mixture of one-third organic amendment/fertilizer mix and two-thirds topsoil may be used.

All container plants shall receive plant tablets as follows:

One-gallon plants	Two 21-gram tablets
Five-gallon plants	Five 21-gram tablets
Fifteen-gallon plants	Twelve 21-gram tablets
24 inch box trees	Eighteen 21-gram tablets

Space the tablets evenly around the root ball halfway up backfill touching side of root ball. City's Representative may require excavation of up to 5 percent of all plants selected at random for conformance review.

Finish grade all irrigated planting areas unless otherwise noted, and remove all rocks and clods over one cubic inch to a depth of one inch below finish grade. All areas must be smooth and uniformly graded. Repair all erosion damage during the construction period.

Unless otherwise noted, all soil finish grades must be one inch below finish grade of walks, pavements, and curbs.

Add to section 20-3.02A:

Request the following reviews prior to progressing with the work:

1. Plant material approval
2. Plant layout
3. Finish grade
4. Substantial completion
5. Final completion

Replace *Not Used* in section 20-3.02B with:

Plant botanical names must conform to "Standardized Plant Names", second edition, and secondly, "A Checklist of Woody Ornamental Plants of California", Manual 32, University of California. All plants of each clone, species, and cultivar must be delivered to the site labeled with their full botanical names. Every plant species must be labeled with no less than one label for every ten plants of a species.

Minimum quality of all plant material must conform to prevailing published specifications of the California Association of Nurserymen and the American Association of Nurserymen's American Standard for Nursery Stock unless otherwise indicated. Additional specifications must be indicated on the drawings.

The quantities shown on the plant list and in labels are for the City's Representative's use and are not to be construed as the complete and accurate limits of the contract. Furnish and install all plants shown schematically on the drawings. Any unlabeled plants must be considered as the smaller size shown for that type on the drawings.

All container-grown stock must be grown in its container for at least six months prior to its planting. Inspect all root systems on plant materials. Inspection must include, but not be limited to, checking for rootbound stock, encircling roots at the perimeter of the container, girdling roots at the top surface of the rootball, and other defective root conditions. Such inspections must include the complete removal of soil from one percent of plant material containers, or at least one plant from each nursery and each plant type. Cut defective or potentially defective girdling, rootbound, and encircling roots and spread the root system into the surrounding backfill. Any plant material, within one year following the final acceptance of the project, determined by the City's Representative to be defective, restricted, declining or otherwise deficient due to abnormal root growth, must be replaced to the equal condition of adjacent plants at the time of replacement. Reject plants with excessively defective root systems.

All trees must have straight trunks of uniform taper, larger at the bottom. Trunks must be free of damaged bark, with all minor abrasions and cuts showing healing tissue. Sucker basal growth and sucker lateral growth must be removed and treated to eliminate re-sprouting. Normal lower side branching must remain. Reject trees unable to stand upright without support.

Foliage roots and stems of all plants must be of vigorous health and normal habit of growth for its species. All plants must be free of all diseases, insect stages, burns, or disfiguring characteristics.

All plant material, within two years following the final acceptance of the project, determined by the City's Representative to be untrue to the species, clone, and/or variety specified, must be replaced, to the equal condition of adjacent plants at the time of replacement.

Before planting operations commence all or a representative sampling of plant material will be reviewed at the site by the City's Representative. Remove defective plants installed without such review from the site upon request by the City's Representative and substitute acceptable plant in its place.

Add to section 20-3.02C(1):

Only those plants to be planted in any single day must be laid out. Locations of all plants must be reviewed prior to planting. Plants installed without this review will be transplanted as directed by the City's Representative.

Maintain all plant material in a healthy growing condition prior to and during planting operations. You are responsible for vandalism, theft and damage to plant material until the commencement of the maintenance period.

Do not perform pruning without the specific approval of the City's Representative. Plants pruned without approval must be replaced, if required.

Construct basins as necessary to water plants. Remove basins from all plants under a permanent irrigation system prior to final inspection and finish grade the planting area. Basins for plants to be hand-watered must remain in place. Basin bottoms must drain to berm away from plant stem.

All trees must be staked as drawn with stakes driven securely into existing soil aligned with the trunk and perpendicular to the direction of the prevailing winds. A minimum of two figure-eight wire and rubber tree ties required per stake.

Remove all trash, excess soil and other debris after completion of all operations. All walks and pavement must be swept and washed clean, leaving the entire area in a neat, orderly condition.

Replace paragraphs 1 and 2 of section 20-4.01B:

Section 20-4 includes specifications for performing plant establishment work. The plant establishment period must not be less than 90 working days commencing from the date of substantial completion.

Substantial completion is deemed as the time all major plantings, including groundcover, are installed, and when all other work is satisfactorily completed (with the exception of minor items to be completed as noted upon a checklist compiled by the City's Representative). The maintenance period will not commence until work is deemed substantially complete by the City's Representative.

Add to section 20-4.02A:

Establishment Period

A. Active maintenance is required throughout the entire establishment period:
   1. Immediately replace all dead plants.
   2. As necessary, raise all trees and shrubs which have sunk within the plant pit beyond the levels indicated in the Standard details.
   3. Keep all areas free of weeds, pests and disease.
   4. For trees located in turf areas, maintain a circle free of turf at a distance described in the Standard details
B. Prior to the start of the final thirty (30) days of establishment:
   1. All plant replacements shall be completed.
   2. All plantings and turf shall be thriving and in a healthy condition.
   3. The lack of active maintenance prior to the final thirty (30) days may constitute a delay in the start of the final thirty (30) days of the establishment period.

Final Review

A. The Inspector shall review the site for completion of items noted, but not limited to, "B" below. All corrective action is required to enter into the final thirty (30) days of establishment.
B. The site shall be prepared for review, by ensuring that:
   1. All spray heads have been properly adjusted,
   2. Dead plants have been replaced,
   3. Planting areas have been weeded,
   4. Walkways and paved areas have been swept and washed
C. Failure to complete any one or all of the above items may constitute non- performance of the final review and will require re-scheduling. In this case, the cost of the extended establishment period shall be at no additional cost to the City.

Add to section 20-10.02A(1):

Maintain existing irrigation facilities throughout the life of the contract. Before the start of maintaining existing irrigation facilities work, the facilities must be checked for proper operation, and repaired in conformance. Document the condition of existing irrigation facilities. Repair work ordered by the Engineer will be paid for as extra work per section 4-1.05.

Add to the end of 5th paragraph of section 20-10.02C(3):

During winter season, irrigation systems must be operated automatically a minimum of 2 minutes every 2 weeks.

Add to section 20-10.03A(1):

Maintain existing planted areas throughout the life of the contract.

Water existing plants per section 20-4.03G.

^^

DIVISION V SURFACINGS AND PAVEMENTS

^^

37 SEAL COATS

Add to section 37-3.01B(2):

Aggregate for micro-surfacing must be Type II.

Replace section 37-3.03 with:

37-3.03 MICRO-SURFACINGS

37-3.03A General

37-3.03A(1) Summary

Section 37-3.03 includes specifications for applying micro-surfacings.

Applying a micro-surfacing shall consist of mixing a polymer modified, cationic micro-surfacing emulsion (MSE), aggregate, mineral filler, set-control additives, and water and spreading the mixture on a pavement surface where shown on the plans, in conformance with the provisions in these Special Provisions and State Revised Standard Specifications, and as directed by the Engineer.

37-3.03B Material

37-3.03B(1) Micro-surfacing Emulsion (MSE)

Micro-surfacing emulsion (MSE) shall be homogenous and shall conform to the provisions of these Special Provisions. The polymer shall be milled or blended into the asphalt or blended into the emulsifier solution prior to the emulsification process.

The MSE shall conform to the following requirements when tested in conformance with the following test methods:

Polymer Modified, Cationic Micro-Surfacing Emulsion (MSE)

Specific Designation	Test Method	Requirement
Viscosity SSF @ 25°C	AASHTO T59	15 – 90 seconds
Sieve, max	AASHTO T59	0.30 percent
Settlement, 5 days, max	ASTM D6930 or AASHTO T59	5 percent
Storage Stability, 1 day, max	AASHTO T59	1 percent
Residue by Evaporation, min	California Test 331	64 percent
Specification Designation for Residue		
Specific Designation	Test Method	Requirement
Penetration @ 25°C, 100g, 5s, 0.1 mm	AASHTO T49	40 – 90
Softening Point, min	AASHTO T53	61°C
G*, @ 20°C, 10 rad/sec[a]	AASHTO T315	Report Only
Phase angle @ 50°C, 10 rad/sec, PA (max) – PA base[b]	AASHTO T315	Report Only
Stiffness, @ -12°C, MPa and M-value	AASHTO T315	Report Only
Torsional Recovery, %	California Test 332	>21%
Polymer Content, % (by weight)	California Test 402	>3.5%
25mm plates for the 50°C test. 8mm plates for the 20°C test.		

37-3.03B(2) Water and Additives

Water shall be of such quality that the asphalt will not separate from the MSE before the micro-surfacing is placed on the pavement. If necessary for workability, a set-control agent that will not adversely affect the micro-surfacing product may be used.

37-3.03B(3) Mineral Filler

Mineral filler shall be Portland cement or hydrated lime that is free of lumps. Portland cement shall be either Type I, Type II, or combination thereof. The type of mineral filler shall be determined by the Contractor based on laboratory mix designs. The mineral filler will be considered part of the aggregate gradation requirement.

37-3.03B(4) Aggregate

The aggregate used for micro-surfacing shall be Type II. The material shall be free from vegetation matter and other deleterious substances. Aggregate shall be free of lumps and oversize particles. The aggregate shall be 100% crushed with no rounded particles, volcanic in origin and black in color. The use of gray or light-colored aggregate shall not be allowed. The Contractor shall specify in the bid proposal the name and location of the black rock aggregate quarry and shall provide certification at the preconstruction conference that the rock was crushed a minimum of 90 days prior. The Contractor shall submit samples of the black rock aggregate to the Engineer for review and acceptance.

Aggregate, prior to the addition of the MSE, shall conform to the provisions of these Special Provisions. If aggregates are blended, each component aggregate shall conform to the Sand Equivalent and Durability Index requirements of these Special Provisions when tested in conformance with the respective California Tests.

The percentage composition by mass of the aggregate (including mineral filler) shall conform to the following grading requirements when tested in conformance with California Test 202:

Type II

Sieve Size	Percent Passing
3/8 inch (9.5 mm)	100
#4 (4.75 mm)	94 – 100
#8 (2.36 mm)	65 – 90
#16 (1.18 mm)	40 – 70
#30 (600 µm)	25 – 50
#200 (75 µm)	5 – 15

The aggregate (excluding mineral filler) shall conform to the following quality requirements:

Type II

Test	California Test	Requirement
Sand Equivalent (min)	217	70
Durability Index (min)	229	75
Percentage of Crushed Particles (min)[1]	205	100%
Los Angeles Rattler Loss at 500 Rev. (max)[2]	211	35%

[1] CT205, Section D, is amended to read: "Any particle having 2 or more freshly, mechanically fractured faces shall be considered a crushed particle."

[2] Los Angeles Rattler shall be performed on the parent aggregate before crushing.

If the results of the aggregate grading do not meet the specified gradation, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a percentage passing (PP) range value +/- 1 in any of the Sieve sizes, but not greater than +/-4, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

Sieve Sizes	Percentage Passing	Allowable Tolerances	Allowable Tolerances	Allowable Tolerances	Allowable Tolerances
3/8 inch (9.5 mm)	100	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#4 (4.75 mm)	94 – 100	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#8 (2.36 mm)	65 – 90	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#16 (1.18 mm)	40 – 70	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#30 (600 µm)	25 – 50	PP +/- 1	PP +/- 1	PP +/- 1	PP +/- 1
#200 (75 µm)	5 – 15	PP +/- 1	PP +/- 1	PP +/- 1	PP +/- 1
PAYMENT TO CITY		$5.00 per ton	$7.50 per ton	$10.00 per ton	$15.00 per ton

If the results of the Sand Equivalent test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the Micro-surfacing represented by the tests containing a sand equivalent Value below 70, but not less than 65, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

Sand Equivalent	Payment to City
70 or over	NONE
68 – 69	$5.00 per ton
66 – 67	$7.50 per ton
65	$10.00 per ton

If the results of the Durability Index test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a durability index value below 75, but not less than 70, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

Durability Index	Payment to City
75 or over	NONE
73 – 74	$5.00 per ton
71 – 72	$7.50 per ton
70	$10.00 per ton

When the results of 2 or all 3 of the aggregate grading, the Sand Equivalent, and Durability Index tests do not conform to the specified requirements, both or all three payments to the City shall apply. The City shall deduct these amounts from any moneys due or to become due to the Contractor.

Any progress payment made after the completion date shall not be construed as a waiver of material deductions.

No single aggregate grading, durability index or Sand Equivalent test shall represent more than 300 tons or one day's production, whichever is smaller.

37-3.03B(4)(a) Aggregate for Rut filling

Micro-surfacing (Type III) shall be used for rut filling and shall conform to these Special Provisions.

The aggregate used for Type III shall be grey rock aggregate. The grey rock aggregate shall be 100% crushed with no rounded particles. The material shall be free from vegetation and other deleterious substances. The Contractor shall submit samples and test results of the grey rock aggregate to the Engineer for review and acceptance.

Aggregate, prior to the addition of the MSE, shall conform to the provisions of these Special Provisions. If aggregates are blended, each component aggregate shall conform to the Sand Equivalent and Durability Index requirements of these Special Provisions when tested in conformance with the respective California Tests.

The percentage composition by mass of the aggregate (including mineral filler) shall conform to the following grading requirements when tested in conformance with California Test 202:

Type III

Sieve Size	Percent Passing
3/8 inch (9.5 mm)	100
#4 (4.75 mm)	70 – 90
#8 (2.36 mm)	45 – 70
#16 (1.18 mm)	28 – 50
#30 (600 µm)	19 – 34
#200 (75 µm)	5 – 15

The aggregate (excluding mineral filler) shall conform to the following quality requirements:

Type III

Test	California Test	Requirement
Sand Equivalent (min)	217	70
Durability Index (min)	229	70
Percentage of Crushed Particles (min)[1]	205	100%
Los Angeles Rattler Loss at 500 Rev. (max)[2]	211	35%
[1] CT205, Section D, is amended to read: “Any particle having 2 or more freshly, mechanically fractured faces shall be considered a crushed particle.” [2] Los Angeles Rattler shall be performed on the parent aggregate before crushing.		

If the results of the aggregate grading do not meet the specified gradation, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer’s written notice. However,

if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a percentage passing (PP) range value +/- 1 in any of the Sieve sizes, but not greater than +/-4, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

Sieve Sizes	Percentage Passing	Allowable Tolerances	Allowable Tolerances	Allowable Tolerances	Allowable Tolerances
3/8 inch (9.5 mm)	100	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#4 (4.75 mm)	70 – 90	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#8 (2.36 mm)	45 – 70	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#16 (1.18 mm)	28 – 50	PP +/- 1	PP +/- 2	PP +/- 3	PP +/- 4
#30 (600 µm)	19 – 34	PP +/- 1	PP +/- 1	PP +/- 1	PP +/- 1
#200 (75 µm)	5 – 15	PP +/- 1	PP +/- 1	PP +/- 1	PP +/- 1
PAYMENT TO CITY		$5.00 per ton	$7.50 per ton	$10.00 per ton	$15.00 per ton

If the results of the Sand Equivalent test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a sand equivalent Value below 70, but not less than 65, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

Sand Equivalent	Payment to City
70 or over	NONE
68 – 69	$5.00 per ton
66 – 67	$7.50 per ton
65	$10.00 per ton

If the results of the Durability Index test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a durability index value below 70, but not less than 65, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

Durability Index	Payment to City
75 or over	NONE
73 – 74	$5.00 per ton
71 – 72	$7.50 per ton
70	$10.00 per ton

When the results of 2 or all 3 of the aggregate grading, the Sand Equivalent, and Durability Index tests do not conform to the specified requirements, both or all three payments to the City shall apply. The City shall deduct these amounts from any moneys due or to become due to the Contractor.

Any progress payment made after the completion date shall not be construed as a waiver of material deductions.

No single aggregate grading, durability index, or Sand Equivalent test shall represent more than 300 tons or one day's production, whichever is smaller.

37-3.03B(5) Mix Design

At least 7 working days before the micro-surfacing placement commences, the Contractor shall submit for approval of the Engineer a laboratory report of tests and a proposed mix design covering the specific materials proposed for use on the project.

The percentages of each individual material proposed in the mix design shall be shown in the laboratory report. Individual materials shall be within the following limits:

Micro-surfacing Mix Design

Material	Proportion Limits
Residual Asphalt	7.5% to 10.5% by dry mass of aggregate
Mineral Filler	0% to 3% by dry mass of aggregate
Additive	As needed
Water	As needed

Adjustments may be required during construction based on field conditions.

The mix design and aggregate tests shall be performed by a laboratory capable of performing the applicable International Slurry Surfacing Association (ISSA) tests. The proposed micro-surfacing mixture shall conform to the specified requirements when tested in conformance with the following tests:

Test	ISSA Test Method	Requirements
Wet Cohesion	TB* 139	
@ 30 minute (Set) (min)		12 kg-cm
@ 60 minute (Traffic) (min)		20 kg-cm
Excess Asphalt	TB* 109	540 g/m2
Wet Stripping (min)	TB* 114	90%

TB* = Technical Bulletin

Test	ISSA Test Method	Requirements
Wet Track Abrasion 6-day soak loss (max) 1-hour soak	TB* 100	 810 g/m2 538 g/m2
Displacement Lateral (max) Specific Gravity after 1000 cycles of 56.8 kg (max)	TB* 147A	 5% 2.10
Classification Compatibility	TB* 144	(AAA, BAA) 11 Grade Points
Mix Time @ 25°C	TB* 113	Controllable to 120 seconds

TB* = Technical Bulletin

The laboratory that performed the tests and designed the mixture shall sign the laboratory report. The report shall show the results of the tests on individual materials and shall compare their values to those required by these Special Provisions. The report shall clearly show the proportions of aggregate, filler (minimum and maximum), water (minimum and maximum), set control additive, and MSE solids content (minimum and maximum) based on the dry mass of aggregate. The laboratory shall report the quantitative effects of moisture content on the unit mass of the aggregate (bulking effect) in conformance with the requirements of ASTM Designation C 29M. Previous laboratory reports covering the same materials may be accepted provided the material test reports were completed within the previous 12 months. The mix design shall further show the recommended changes in mineral filler, water, and additive proportions for high temperature weather conditions by reporting proportions of materials required for 60 seconds of mix time with materials heated to 100°F. This 100°F mixing report will not be required for projects requiring nighttime application.

The component materials used in the mix design shall be representative of the micro-surfacing materials proposed by the Contractor for use on the project.

Once the mix design is approved by the Engineer, no substitution of other material will be permitted unless the materials proposed for substitution are first tested and a laboratory report is submitted for the substituted design in conformance with the provisions of these Special Provisions. Substituted materials shall not be used until the mix design for those materials has been approved by the Engineer.

The completed mixture, after addition of water and set control agent, if used, shall be such that the micro-surfacing mixture has proper workability. At the expiration of the road closure hours, in conformance with the provisions in these Special Provisions, the micro-surfacing mixture shall be sufficiently cured to support unrestricted traffic.

37-3.03C Construction

37-3.03C(1) Surface Preparation

Before placing the micro-surfacing, the pavement surface shall be cleaned by sweeping, flushing or by other means necessary to remove loose particles of paving, dirt, vegetation, and other extraneous material. When required, the roadway surface may be fogged with water ahead of the spreader box. The application of the fog spray may be adjusted to suit temperatures, surface texture, humidity and dryness of pavement.

37-3.03C(2) Weather Conditions

The micro-surfacing mixture shall not be placed when the ambient temperature is below 55°F or during unsuitable weather. Micro-surfacing shall not be placed if rain is imminent or if there is the possibility that there will be freezing temperatures within 24 hours.

37-3.03C(3) Equipment

37-3.03C(3)(a) General

The equipment used by the Contractor for pavement cleaning and excess aggregate removal shall include a self-propelled rotary power broom, mobile pick-up broom or top dumping mobile pick-up broom.

37-3.03C(3)(b) Mixing and Spreading Equipment

The micro-surfacing shall be mixed in continuous pugmill mixers of adequate size and power for the type of micro-surfacing to be placed. All indicators shall be in conformance with the provisions of these Special Provisions and shall be in working order prior to commencing mixing and spreading operations.

Mixer-spreader trucks shall be equipped to proportion the MSE, water, aggregate, mineral filler, and set-control additives by volume. Rotating and reciprocating equipment on mixer-spreader trucks shall be covered with metal guards.

The mixer-spreader truck shall not be operated unless low-flow and no-flow devices and revolution counters are in good working condition and functioning and metal guards are in place. Indicators required by these Special Provisions shall be visible while walking alongside the mixer-spreader truck.

Aggregate feeders shall be connected directly to the drive on the emulsion pump. The drive shaft of the aggregate feeder shall be equipped with a revolution counter reading to the nearest one-tenth of a revolution.

In addition to the requirements of the fourth paragraph of section 5-1.33, “Equipment,” of the State Standard Specifications, the identifying number of mixer-spreader trucks shall be at least 3 inches in height, located on the front and rear of the vehicle.

The micro-surfacing mixture shall be spread by means of a spreader box conforming to sections 37-3.03C(3)(b)(i) and 37-3.03C(3)(b)(ii).

37-3.03C(3)(b)(i) Spreader Box

The mixture shall be agitated and spread uniformly in the surfacing box by means of motor driven twin-shafted paddles or spiral augers fixed in the spreader box. A front seal shall be provided to insure no loss of the mixture at the road contact point. The rear seal shall act as a final strike-off and shall be adjustable. The spreader box and rear strike-off shall be so designed and operated that a uniform consistency is achieved to produce a free flow of material to the rear strike-off. The spreader box shall have suitable means provided to side shift the box to compensate for variations in the pavement geometry, the box shall be adjustable. Spreader box skids shall be maintained in such manner as to prevent chatter (wash boarding) in the finished mat. The spreader box in use shall be clean and free of micro-surfacing and MSE at the start of each work shift.

The spreader box shall have a series of strike-off devices at the rear of the box. The leading strike-off device shall be fabricated of steel, stiff rubber or other suitable material. The number of strike-off devices shall be determined by the Contractor. The first strike-off device shall be designed to maintain close contact with the pavement during the spreading operations, shall obtain the thickness required, and shall be capable of being adjusted to the various pavement cross sections for application of a uniform micro-surfacing finished surface. The final strike-off device shall be fabricated of flexible material suitable for the intended use and shall be designed and operated to ensure a uniform texture is achieved in the

finished surface of the micro-surfacing. The final strike-off device shall be cleaned or changed daily if problems with longitudinal scouring occur.

Flexible fabric drags attached to the rear of the spreader box shall not be used.

37-3.03C(3)(b)(ii) Wheel Path Depression (Rut) Box

The wheel path depression (rut) box shall be designed to have adjustable strike-off devices to regulate the depth and shall have a width of between 5 feet and 6 feet. Hydraulic augers, or similar devices, shall be installed and shall be capable of moving the mixed material from the rear to the front of the filling chamber. These devices shall also be capable of guiding the larger aggregate into the center, deeper section of the wheel path depression, and forcing the finer material toward the outer edges of the spreader box.

The micro-surfacing mixture, to be spread in areas inaccessible to the controlled spreader box, may be spread by other methods upon approval of the Engineer.

Flexible fabric drags attached to the rear of the wheel path depression (rut) box shall not be used.

37-3.03C(3)(c) Mixer and Spreader Truck Calibration

Each mixer/spreader truck used on the project shall be calibrated in accordance with California Test 109. The trucks shall be calibrated for rock, emulsion, cement, additives, and any mineral filler used. Calibrations shall take place a maximum of 10 days prior to application of micro-surfacing. The Contractor shall notify the Engineer a minimum of 3 working days prior to calibration so that City representatives may make arrangements to observe.

For all material calibrated, 3 consecutive runs per gate setting shall be completed and these 3 test runs must not deviate from their combined mathematical average by more than 2.0%.

Calibrations will take place at most once a week or as required by the Engineer and no machine will be allowed to work on the project until the calibration has been completed and/or accepted 3 working days before the start of work. Weigh back tickets shall be submitted at the end of each work day that micro-surfacing is placed.

With approval from the Engineer, Contractor may provide verified calibrations from other work performed within the previous 3 months from start of work, utilizing the same mix design proposed in this project, in-lieu of the calibration requirements set forth in this section.

37-3.03C(4) Proportioning

Aggregate, mineral filler, MSE, water, and additives, including the set-control agent, if used, shall be proportioned by volume utilizing the mix design approved by the Engineer. If more than 1 kind of aggregate is used, the correct amount of each kind of aggregate to produce the required grading shall be proportioned separately, prior to adding the other materials of the mixture, in a manner that will result in a uniform and homogeneous blend.

The aggregate shall be proportioned using a belt feeder operated with an adjustable cutoff gate. The height of the gate opening shall be determinable. The MSE shall be proportioned by a positive displacement pump. Variable rate emulsion pumps, if used, shall be calibrated and sealed in the pump's calibrated condition in conformance with California Test 109 prior to usage.

The delivery rate of aggregate and MSE per revolution of the aggregate feeder shall be calibrated at the appropriate gate settings for each mixer-spreader truck used on the project in conformance with California Test 109 and in conformance with the provisions of these Special Provisions.

The aggregate belt feeder shall deliver aggregate to the pugmill with such volumetric consistency that the deviation for any individual aggregate delivery rate check-run shall not exceed 2.0 percent of the mathematical average of 3 runs of at least 3 tons each. The emulsion pump shall deliver MSE to the pugmill with such volumetric consistency that the deviation for any individual delivery rate check-run shall

be within 2.0 percent of the mathematical average of 3 runs of at least 300 gallons each. The water pump shall deliver water to the pugmill with such volumetric consistency that the deviation for any individual delivery rate check-run shall be within 2.0 percent of the mathematical average of 3 runs of at least 300 gallons each.

The MSE storage tank shall be located immediately before the emulsion pump and shall be equipped with a device which will automatically shut down the power to the emulsion pump and aggregate belt feeder when the MSE level is lowered to a point where the pump suction line is exposed.

A temperature-indicating device shall be installed in the emulsion storage tank at the pump suction level. The device shall indicate the temperature of the MSE and shall be accurate to within 10°F.

The belt delivering the aggregate to the pugmill shall be equipped with a device to monitor the depth of aggregate being delivered to the pugmill. The device for monitoring the depth of aggregate shall automatically shut down the power to the aggregate belt feeder whenever the depth of aggregate is less than the target depth of flow. A second device shall be located where the device will monitor the movement of the aggregate belt by detecting revolutions of the belt feeder. The devices for monitoring no flow or belt movement shall automatically shut down the power to the aggregate belt when the aggregate belt movement is interrupted. The device to detect revolutions of the belt feeder will not be required where the aggregate delivery belt is an integral part of the drive chain. To avoid erroneous shutdown by normal fluctuation, a delay of 3 seconds will be permitted between sensing and shutdown of the operation.

37-3.03C(5) Application Rate of Aggregate

Micro-surfacing spread rates must be within the ranges shown on the following table:

Micro-surfacing Type	Application Range (lb of dry aggregate/sqyd)
Type II	15 – 18
Type III	20 – 30

The micro-surfacing mixture shall be uniformly spread on the existing surfacing within the rate specified without spotting, re-handling, or otherwise shifting of the mixture.

37-3.03C(6) Repair Wheel Path Depressions

When wheel path depressions have a cross section that is deformed 1/2 inch or more, the individual wheel paths shall first be filled utilizing a wheel path depression (rut) box. The depth of the wheel path depression shall be determined after the adjacent ridges have been removed, when applicable. The maximum single application for wheel path depressions shall be 1 inch. Wheel path depressions of depths greater than 1 inch shall require multiple applications in each depression. A pneumatic tired roller shall be used after all rut filling operations. The roller shall make 2 passes at slow speed no more than 7 mph. Wheel path depressions having a cross section greater than 1/2 inch and less than 1 inch shall be paid for under the contract bid item “Micro-surfacing (Type III)”.

Wheel path depression repair shall be constructed with a slight crown to allow for initial compaction by traffic on the micro-surfacing.

Freshly filled wheel path depressions shall be compacted by traffic for a minimum of 12 hours before additional lifts of micro-surfacing material are placed for rut filling purposes or as surface courses.

37-3.03C(7) Placement

Micro-surfacing shall be placed no earlier than 7 calendar days after Chip Seal operation on roads to receive the Roseville Cape Seal as shown on the plans.

Longitudinal joints shall correspond with the edges of the traffic lanes. The Engineer may permit other patterns of longitudinal joints if the patterns will not adversely affect the quality of the finished product, this shall be required for approval in writing 5 working days prior to the start of work.

Through traffic lanes shall be spread in full lane widths only. Longitudinal joints common to 2 traffic lanes shall be butt joints with overlaps not to exceed 3 inches. Building paper shall be placed at the transverse joints to avoid double placement of the micro-surfacing. Other suitable methods to avoid double placement of the micro-surfacing will be allowed. Hand tools shall be available to remove spillage.

The mixture shall be uniform and homogeneous after placing on the surfacing and shall not show separation of the MSE and aggregate after setting. The completed surface shall be of uniform texture and free from ruts, humps, depressions, or irregularities.

Adequate means shall be provided to protect the micro-surfacing from damage by traffic until such time that the mixture has cured sufficiently so that the micro-surfacing will not adhere to or be picked up by the tires of vehicles.

If the micro-surfacing is not capable of supporting unrestricted traffic at the expiration of the road closure hours, the Contractor shall pay the liquidated damaged per the provisions of these Special Provisions. Placement of the micro-surfacing shall cease before the expiration of road closure hours as specified in these Special Provisions.

37-3.03C(8) Sweeping

Initial sweeping shall begin 1 day after the micro-surfacing placement. Care shall be taken to avoid unraveling the micro-surfacing. Excessive sweeping will not be allowed.

Seven sweepings shall be considered as included in the contract price paid for micro-surfacing. The first sweeping shall be performed the day after the application is applied. The second sweeping shall be performed 3 days after the micro-surfacing application is applied. The third sweeping shall be performed 5 days after the micro-surfacing application is applied. The fourth sweeping shall be performed 7 days after the micro-surfacing is applied. The fifth sweeping shall be performed 10 days after the micro-surfacing is applied. The sixth sweeping shall be performed 15 days after the micro-surfacing is applied. The seventh sweeping shall be performed during the punch list process.

Prior to each sweeping, the Contractor shall contact the Engineer with the street's sweeping schedule. After sweeping takes place, the Contractor shall contact the Engineer for acceptance of the street sweeping.

If the sweeping is not done to the schedule listed above, the Contractor shall pay the liquidated damaged per the provisions of these Special Provisions.

The Contractor shall remove all loose aggregate from the curbs, gutters, driveways, and sidewalks prior to sweeping the roadway surface. The Contractor will be responsible to sweep abutting adjacent areas and haul routes. The Contractor shall have 1 working day to sweep the adjacent areas and haul route when requested in writing by the Engineer.

The Contractor shall sweep the micro-surfaced streets and adjacent areas with a self-propelled vacuum or regenerative air sweeper. Any additional sweepings required to remove excess material shall be performed as directed by the Engineer at no additional expense to the City.

37-3.03C(9) Test Strip

The Contractor shall construct a test strip for evaluation by the Engineer 10 working days prior to the micro-surfacing application. The test strip shall be 500 feet to 1000 feet long and shall consist of the application courses specified. The test strip shall be constructed at the same time of day or night that the full production of micro-surfacing will be placed and may be constructed in 2 days or nights when multiple course applications are specified. The location of the test strip shall be specified by the City.

The micro-surfacing test strip shall have a break time and shall be able to be open to cross traffic no greater than 1 hour after the micro-surfacing is placed. This time will be reflected on the global projects break time and capability of being open to cross traffic. The global project shall have this break time and shall be able to be open to cross traffic no greater than 1 hour after placement of the micro-surfacing. If the test strip does not meet this requirement the test strip will be rejected and shall be removed at the Contractors expense.

The Engineer will evaluate the completed test strip after 12 hours of traffic on the completed test strip to determine if the mix design and placement procedure are acceptable. If the mix design or the placement procedure is determined by the Engineer to be unacceptable, the test strip will be rejected, the Contractor shall make modifications, and a new test strip shall be constructed and evaluated by the Engineer. The cost of materials and placement of the test strips, which have been rejected, shall be borne by the Contractor and will not be considered as part of the contract work. If ordered by the Engineer, rejected test strips shall be removed at the Contractors expense.

37-3.03C(10) Repair of Early Distress

If bleeding, raveling, delamination, rutting, or washboarding occurs within 60 days after placing the micro-surfacing, the Contractor shall diligently pursue repairs by any method approved by the Engineer. The Contractor shall not be relieved from maintenance until repairs have been completed.

37-3.03D Payment

The contract price paid per square yard for Microsurfacing Type 2 shall include full compensation for providing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved in the test strip and installing microsurfacing, complete in place, including cleaning the existing surface as needed, as shown on the plans, as specified in Section 37, "Bituminous Seals" of these Technical Specifications, and as directed by the Engineer.

No payment shall be made for any area requiring re-application of slurry seal.

^^

39 ASPHALT CONCRETE

Add to section 39-2.01:

Produce and place HMA Type A under the section 39-3, method construction process.

Hot Mix Asphalt shall be placed back by within the same shift after the existing asphalt has been removed.

Add to section 39-2.01A with:

Asphalt concrete pavement shall be Hot Mix Asphalt (Type A, 1/2" Maximum Medium Gradation) and conform to the applicable provisions in Section 71, “Streets” of the City of Roseville’s Construction Standards and Section 39 of the State Standard Specifications.

In addition to the requirements specified in this section of the State Standard Specifications, the following shall apply:

The cost for grading and compaction of existing aggregate base material, where shown on the plans, profiles, and cross sections, shall be included within the price paid for placement of Hot Mix Asphalt (Type A).

Add to section 39-2.02A(2):

processed RAP: RAP that has been fractionated.

substitution rate: Amount of RAP aggregate substituted for virgin aggregate in percent.

binder replacement: Amount of RAP binder in OBC in percent.

surface course: Upper 0.2 feet of HMA exclusive of OGFC.

Add to section 39-2.02B(3):

Asphalt binder used in HMA Type A must be PG 64-10.

Add to section 39-2.02B(4)(a):

Aggregate used in HMA Type A must comply with the 1/2-inch HMA Types A.

Add the following to Section 39-3.04A with:

The contractor shall Cold Plane areas identified as digouts to a depth of 4 inches with the exception of areas where vehicle detection will be impacted by digouts. These areas shall be Cold Planed to a depth of 5 inches.

Replace *Not Used* in Section 39-3.04D with:

The contract price paid per square yard for Cold Plane Asphalt Concrete shall include full compensation for providing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved in cold planing the asphalt concrete, complete in place, including cleaning the existing surface as needed, and disposal of materials, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

^^

DIVISION VI STRUCTURES

47 EARTH RETAINING SYSTEMS

Replace section 47-5 with:

47-5 RETAINING WALLS

47-5.01 GENERAL

Section 47-5 includes specifications for constructing retaining walls.

Reinforced concrete footings and stems must comply with Section 51 of these Specifications and the State Standard Specifications.

Reinforcement must comply with Section 52 of these Specifications and the State Standard Specifications.

Tubular handrailing must comply with Section 83 of these Specifications and the State Standard Specifications.

47-5.02 MATERIALS

Caulking for sealing expansion joints must be a non-sag polysulfide or polyurethane type complying with ASTM C920.

Grout must comply with Section 58-2.02D of the State Standard Specifications and contain at least 590 lb/cu yd of cementitious material.

47-5.03 CONSTRUCTION

Construct wall stems of reinforced concrete.

47-5.04 PAYMENT

Pay quantities of retaining walls will be determined by the linear foot of completed wall, measured along the horizontal length.

The contract price paid per linear foot for Retaining Wall (all types) shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved in constructing the wall, complete in place, including excavation, backfill, pervious backfill, drainage pipes, tubular railings, concrete, reinforcement, geotextile fabric, application of anti-graffiti coating, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

**^^^

included in the contract unit price paid for the adjacent inlet type and no additional compensation is allowed.

Add to section 51-7.01D:

The contract price paid per each for Drainage Inlet (Type C) and (Type F) shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved in furnishing and installing concrete inlet structures and other miscellaneous concrete structures, complete in place, including removal of existing drainage facilities, connection to existing pipes, saw cutting, structure excavation and structure backfill, frames, grates, racks, covers, miscellaneous hardware, and adjustment of frame and grate to grade, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

52 REINFORCEMENT

Add to section 52-1.04:

Payment for steel reinforcement used for trench drains, drainage inlets, and retaining walls is included in the payment for various items of work.

^^

DIVISION VII DRAINAGE FACILITIES

Replace section 63 with:

63 TRENCH DRAIN GRATE

63-1.01 GENERAL

63-1.01A Summary

This work shall consist of furnishing and installing ornamental trench grates where shown on the drawings.

63-1.01B Definitions

Reserved

63-1.01C Submittals

Grates shall be independently tested to AASHTO M-306.

Contractor shall submit the following submittals:

A. Product Data: manufacturer's written recommendations for installation, mounting details, and catalog cut sheets.
B. Provide shop drawings illustrating length and number of grates required to accommodate each separate installation along the street.; shop drawings shall detail the installation of the frame in the concrete opening and the fitting of the grate.
C. Powder coating submittals. Powder coating submittals shall include:
    1. Manufacture’s descriptive data and applications instructions
    2. Your name, address, telephone and fax numbers
    3. Page numbers in the lower right hand corner

63-1.01D Quality Assurance

Reserved

63-1.02 MATERIALS

63-1.02A Ornamental Trench Grates

Trench grate material shall be Class 35 Cast iron per ASTM A48 - latest edition. All trench grate castings shall be manufactured true to pattern and component parts and shall fit together in a satisfactory manner. The castings shall be of uniform pattern and quality, free from blowholes, hard spots, shrinkage, distortion or other defects. Castings shall be cleaned by sand blasting.

Grates are to be for pedestrian use only.

Ornamental trench grates shall be 12" wide.

Grate sections shall be 24" minimum.

Cast with 1/4" maximum slot openings for increased pedestrian safety and compliance with ADA guidelines.

Pattern: Openings shall run in stripped pattern across the tree grate; the length of the stripes shall vary to create an edge pattern which of pair circular edges.

See plan drawings for quantity and location of trench grates.

63-1.02B Trench Grate Frames

Trench grate frame material shall be raw cast iron or steel.

Frame to be installed per details on drawings.

63-1.02C Manufacturer

Trench drain grates and frames shall be supplied by Ironsmith Architectural Products or approved equal.

Model shall be "Thistle", Trench Grate #M9047 or approved equal.

63-1.02D Powder Coating

Furnish a certificate of compliance for powder coating.

Powder coating is a TGIC polyester powder, electrostatically adhered to metal surfaces and baked to a uniform, durable surface.

Powder coating conforms to the following table:

Property	Reference	Value
Adhesion	ASTM D3359B	≥ 4B
Pencil Hardness	ASTM D3363	H-2H
Impact Resistance	ASTM D2794 Modified	Pass, 80 inch-pounds

Finish of the powder coating must match color number 30166 of FED-STD-595.

63-1.03 CONSTRUCTION

Construction of trench drains and joints must comply with the manufacturer's instructions.

Construct trench drains to the lines and grades with sections closely jointed and secured such that no separation of the forms occur during backfilling.

The frame or grate must not extend above the level of the surrounding concrete.

Connect trench drains to new or existing drainage facilities as shown.

Secure frames or line drain wall to the surrounding concrete backfill with steel anchoring rods per the manufacturer's instructions. Alternative securing methods must provide a minimum pullout resistance of 685 lb/ft of length of grated line drain frame.

Contractor to use the manufacturer's supports, anchors and accessories: Standard and integral with site furnishings, as recommended by manufacturer.

Contractor to verify bolts are the number, size and type recommended by manufacturer for anchoring. Contractor to verify anchor bolt mounting locations with factory prior to mounting, installation or preparation.

Contractor shall protect surrounding and finished surfaces from damage during installation.

63-1.03A Powder Coating

Clean and prepare all surfaces to be powder coated per the manufacturer's instructions.

Apply a minimum thickness of 3 mils of powder coating. Form a durable skid-resistant surface.

63-1.03B Field Quality Control

Formwork is to be fully removed, without exception, to allow for inspection and if needed repair of any voids and or concrete consolidation issues below the frame, trench walls and invert. Grate and grate retainer inspection shall be performed to ensure that all grates and retainers are installed and are properly seated in place.

63-1.04 PAYMENT

Payment for Trench Drain Grate and Frame must include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for doing all the work involved in installing the trench drains, complete in place, including all the grates and hardware, and reinforcement, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

^^

DIVISION VIII MISCELLANEOUS CONSTRUCTION

73 CONCRETE CURBS AND SIDEWALKS

Add to section 73-1.01:

Portland Cement Concrete curbs, gutters, sidewalks, curb ramps, valley gutters and driveways shall conform to the provisions in Section 73, "Concrete Curbs and Sidewalks," of the State Standard Specifications and these special provisions.

Prefabricated detectable warning surface shall be in conformance with the requirements established by the Department of General Services, Division of State Architect and be attached in conformance with the manufacturer's recommendations. A sample of the detectable warning surface shall be provided to the Engineer and the City of Roseville for approval.

The manufacturer shall provide a written 5 year warranty for prefabricated detectable warning surfaces, guaranteeing replacement when there is defect in the dome shape, color fastness, sound on cane acoustic quality, resilience, or attachment. The warranty period shall begin upon acceptance of the contract.

All concrete shall be Class A, six sack mix unless otherwise specified. For all driveway locations, where early opening to traffic is required, concrete shall be rapid setting concrete.

All newly placed concrete shall be cured in accordance with the provisions in Section 90-1.03B(3)(b) of the State Standard Specifications, the City Standard Construction Specifications, and these Special Provisions. Concrete curing compound shall be clear with fugitive red dye (Street, Section 71-5 Materials, I: Concrete Curing Compound)).

Minor Concrete shall be constructed as shown on the plans and shall conform to the City of Roseville Standard Plans.

Pedestrian ramps shall conform to the City of Roseville Standard Plans ST-26 and ST-27 and shall meet all requirements outlined in the City of Roseville ADA transition plan.

Pedestrian ramp detectable warning surface shall consist of raised truncated domes constructed or installed on curb ramps. Detectable warning surface shall be a prefabricated surface installed on the curb ramp, in accordance with the approved materials within the City of Roseville.

Steel dowel bars connecting curb to existing or previously poured concrete pavement must be epoxy coated complying with section 40-1.02C(3). The dowel bar must be installed complying with section 40-1.03D except exposed portion must not be lubricated.

Apply a bonding agent between curb placed on existing or previously poured concrete pavement in accordance with section 41-1.02D.

Salvage the existing cobble between Folsom Road and Walnut Street in the area of the ramp. Clean cobbles of dirt and other loose material. Place cobbles randomly in at least 6” of wet concrete, with approximately 1/3 of cobble exposed above the concrete surface, spacing between cobbles not to exceed 2 inches.

Add to section 73-1.02A:

Concrete must be minor concrete complying with section 90-2 and may contain returned plastic concrete complying with section 90-9, except as follows:

1. For all miscellaneous concrete work except valley gutters, cementitious material content of concrete must be at least 505 lb/cu yd.
2. For valley gutters, cementitious material content of concrete must be at least 590 lb/cu yd.
3. The maximum size of aggregate used for miscellaneous concrete construction shall be 1 inch.

Add to section 73-1.03A:

Construct new sidewalk and new curb monolithically.

Do not deviate the shape and design of curb ramps and driveways with sidewalk from the standard plans unless noted on the project plans or approved by the Engineer. Do not free form these facilities.

Clean all sawcuts by abrasive blasting or other methods approved by the Engineer.

If new curb, sidewalk or driveway is constructed adjacent to existing curb, sidewalk or driveway, dowel the existing concrete to the new concrete with #4 reinforcing bars as shown.

For new curb ramps, detectable warning surfaces shall be prefabricated tiles set directly in newly poured concrete; surface applied tiles or stamped into surface detectable warning surfaces will not be allowed.

Reference out and restore any curb markings (S-indicating sanitary sewer lateral; W-indicating water service lateral; arrows and Roman Numerals-indicating ties to water main valves; high-pressure gas main) that may be destroyed by its work. In the case of construction of curb ramps where the vertical curb is eliminated new ties to water valves shall be made on the closest available vertical curb with proper direction of arrows and proper distances from water valve to tie indicated in three-inch (3") high Roman Numerals.

<u>WATER TEST – FLAT GUTTERS</u>

Prior to final acceptance, or as part of the preliminary final inspection, the Contractor, as directed by the Engineer, shall water test curbs with gutters on slopes of 0.75% or flatter and paved surfaces to verify proper drainage. Any ponding of water greater than ¼ inch depth will be considered as evidence of poor work techniques and shall be corrected by removing and replacing those portions of curb and gutter as necessary to comply with the requirements of this special provision, at no additional expense to the Agency.

Add to section 73-3.01C:

Within 2 business days of completing the surveys, submit preconstruction and post-construction surveys sealed and signed by one of the following:

1. Land surveyor licensed in the State
2. Engineer who is registered as a civil engineer in the State

Replace *Reserved* in section 73-3.01D(3) with:

For locations shown, perform a preconstruction survey to ensure forms and job site constraints will allow for compliance with required design dimensions and slopes shown. Upon completing the work, perform a post-construction survey to verify design dimensions and slopes requirements are met. The post-construction survey must include a minimum of 3 measurements for each dimension and slope requirement shown. Individual measurements must be equally distributed across the specified slope or dimensional surface. Document and submit these measurements on the Americans with Disabilities Act Compliance Inspection Report form for the facility type shown. Include the equipment and control used to conduct the survey.

Add to the beginning of section 73-3.03:

Before placing concrete, verify that forms and job site constraints allow the required dimensioning and slopes shown. Immediately notify the Engineer if you encounter job site conditions that will not accommodate the design details. Ordered modifications are change order work.

Add to section 73-3.03:

Excavation and backfill must comply with section 19-3.

Trench drains must be constructed in trenches excavated to the lines and grades established by the Engineer. Grade and prepare the bottom of the trench to provide a firm and uniform bearing throughout the entire length of the trench drain.

Immediately remove foreign material that falls into the trench before or during concrete placement.

Where necessary, construct and compact earth plugs at the ends of the concrete backfill to contain the concrete within the trench.

Concrete backfill must be finished flush with the adjacent surfacing.

The surface of the concrete must be textured with a broom or burlap drag to produce a durable skid-resistant surface.

Replace *Not Used* in section 73-3.04 with:

Payment for Minor Concrete (Curb Ramp) (all types) shall include full compensation for all labor, materials, tools, aggregate base and placement, complying with ADA requirements, placing concrete, compaction, raising existing facilities to grade, incidentals and equipment required to complete these items of the work, including adjacent retaining curb and tooled joints, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Minor Concrete (Curb Ramp Modification) shall include a total area of 600 square feet, consisting of concrete sidewalk paving, concrete curb ramp paving, asphalt concrete paving, curb and gutter, and retaining curbs required. The cost to complete work beyond the aforementioned limit shall be paid at the rate of the bid unit prices submitted. Under this item of the proposal, the Contractor shall include the cost for demolishing, furnishing, placing, finishing and curing, of the concrete curb and gutter, concrete curb,

asphalt paving, and concrete paving in the unit price of the Minor Concrete (Curb Ramp Modification) bid item.

Payment for Minor Concrete (Curb Ramp Modification) shall include full compensation for all labor, materials, tools, aggregate base and placement, complying with ADA requirements, placing concrete, compaction, raising existing facilities to grade, incidentals and equipment required to complete these items of the work, including adjacent retaining curb and tooled joints, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Payment for Detectable Warning Surface shall include full compensation for all labor, materials, tools, complying with ADA requirements, incidentals and equipment required to complete these items of the work, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Payment for Minor Concrete (Driveway) (all types) shall include full compensation for all labor, materials, tools, aggregate base and placement, complying with ADA requirements, placing concrete, compaction, raising existing facilities to grade, incidentals and equipment required to complete these items of the work, including tooled joints, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Payment for Minor Concrete (Sidewalk) shall include full compensation for all labor, materials, tools, aggregate base and placement, complying with ADA requirements, placing concrete, compaction, raising existing facilities to grade, incidentals and equipment required to complete these items of the work, including tooled joints and under sidewalk drains, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Payment for Minor Concrete (Curb) (all types) shall include full compensation for all labor, materials, tools, aggregate base and placement, complying with ADA requirements, placing concrete, compaction, raising existing facilities to grade, incidentals and equipment required to complete these items of the work, including tooled joints, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Payment for Minor Concrete (Valley Gutter) (all types) shall include full compensation for all labor, materials, tools, aggregate base and placement, complying with ADA requirements, placing concrete, compaction, raising existing facilities to grade, incidentals and equipment required to complete these items of the work, including tooled joints, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Payment for Minor Concrete (Trench Drain) shall include full compensation for all labor, materials, tools, aggregate base and placement, complying with ADA requirements, placing concrete, compaction, incidentals and equipment required to complete these items of the work, including tooled joints, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer. The frame and grate are paid for as specified in Section 63.

Payment for Minor Concrete (Stairs) shall include full compensation for all labor, materials, tools, aggregate base and placement, pedestrian handrailings, complying with ADA requirements, placing concrete, compaction, raising existing facilities to grade, incidentals and equipment required to complete these items of the work, including tooled joints, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Payment for Minor Concrete (Wet Set Cobble) shall include full compensation for all labor, materials, tools, aggregate base and placement, salvaging and cleaning cobbles, complying with ADA requirements, placing concrete, compaction, incidentals and equipment required to complete these items of the work, including tooled joints, as shown on the plans, as specified in the City of Roseville Design and

Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Replace section 75-9 with:

75-9 BOLLARDS

75-9.01 GENERAL

Section 75-9 includes specifications for constructing bollards.

75-9.02 MATERIALS

Pipe for bollards shall be black steel pipe, 6" outside diameter, ¼" wall thickness.

Bollards shall be painted with two coats of zinc chromate primer and two coats of exterior enamel paint in Safety Yellow Gloss.

Concrete shall be minor concrete and conform to section 71-5B of the City Standard Specifications.

75-9.03 CONSTRUCTION

Install bollards per City Standard detail for Fixed Bollard.

75-9.04 PAYMENT

Payment for Fixed Bollard shall include full compensation for all labor, materials, tools, steel pipe, primer, paint, reflective tape, minor concrete, concrete finishing, hot mix asphalt, aggregate base aggregate base and placement, excavation, backfill, compaction, incidentals and equipment required to complete these items of the work, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

^^

77 LOCAL INFRASTRUCTURE

Replace *Reserved* in section 77 with:

77-1 GENERAL

77-1.01 GENERAL

Section 77-1 includes general specifications for constructing electrical systems.

77-1.02 MATERIALS

The electrical equipment and materials must comply with section 86 of the City's Construction Standard and section 86 of the Caltrans Standard Specifications.

77-1.03 CONSTRUCTION

Install electrical equipment under section 86 of the City's Construction Standard and section 87 of the Caltrans Standard Specifications.

77-2 RECTANGULAR RAPID FLASHING BEACON SYSTEM

77-2.01 GENERAL

77-2.01A Summary

Section 77-2 includes specifications for constructing rectangular rapid flashing beacon (RRFB) system.

Rapid flashing beacon system includes removing, adjusting, or adding:

1. Foundations
2. Pull boxes
3. Conduit
4. Conductors
5. Decorative street light post
6. Luminaires
7. Fuse splice connectors
8. Light indicators
9. Signs
10. Control module
11. Audible information device

Rectangular rapid flashing beacon system must conform to the latest applicable provisions of the California MUTCD, Caltrans Standard Plans and Specifications, the City of Roseville Standard Design and Construction Specifications and Details, and these Special Provisions. The components of the rectangular rapid flashing beacon system are shown on the project plans.

RRFB system must be AC powered Carmanah R920-MX series or approved equal.

77-2.01A Submittal

Submit 2 copies of:

1. 5-year limited warranty documents.
2. Shop drawings or installation manual.

77-2.02 MATERIALS

77-2.02A Decorative Street Light Post

Contractor shall furnish and install decorative street light post as indicated on the plans. Decorative Street Light Post shall be Visco model: VI-A7-F/13'-0", Roseville Standard Fluted Steel Pole with Visco B17 Cast Iron Base. The pole shall be factory powder coated to match "RAL #6004".

77-2.02B Luminaires

Contractor shall furnish and install luminaires as indicated on the plans. Luminaires shall be Sternberg Old Town model: PT-A850SRLED-5P-12L-30-T3-MDL014-A-SRR7-CM-RAL6004, having 3,000K CCT, Type 3 light distribution, post top base, twist-lock photo control, fuse and holder, 120 V led driver, and color matched finish to "RAL #6004".

For decorative street light posts without luminaires, they shall have decorative pole cap to be Visco 22D and powder coated to match "RAL #6004".

77-2.02C Light Indicators

Each RRFB unit shall consist of two rapidly flashing rectangular-shaped yellow indicator lights that shall be a minimum size of at least 5" wide x 3" high and shall be horizontally aligned and separated by 7" on the same bar.

The light intensity of the yellow indications during daytime conditions shall meet the minimum specifications for Class 1 yellow peak luminous intensity in the publication "Directional Flashing Optical Warning Devices for Authorized Emergency, Maintenance, and Service Vehicles J595," 2005 Society of Automotive Engineers (SAE).

77-2.02D Signs

All sign panels must be supplied and installed as part of this bid item. RRFB system shall include W11-2 and W16-7P signs as shown on the plans and shall be fluorescent yellow and must conform to the Caltrans Standard Specifications, and these Special Provisions.

77-2.02E Control Module

Control module must include:

1. On-board user interface
2. Enclosure

77-2.02E(1) On-Board User interface

On-Board User Interface must include:

1. System status
2. Flash patterns: RFB1 (WW+S), RFB2 (WSDOT), 0.5 sec alternating (MUTCD), 0.5 sec unison (MUTCD), 0.1 sec. unison, 0.25 sec. unison, 0.1 sec x3 quick flashes unison, 0.1 sec, x3 quick flashes alternating
3. Input type: momentary for push button activation, normally open switch, normally closed switch
4. Flash duration: 5 sec. to 1 hr.
5. Intensity setting: 20 to 1400 mA for multiple RRFBs, circular beacons, or LED enhanced signs
6. Nighttime dimming: 10 to 100% of daytime intensity
7. Ambient auto-adjust increases intensity during bright daytime
8. Automatic Light Control: reduces intensity if the battery is extremely low
9. LED temperature correction: yellow or red beacons
10. Internal time clock function
11. Radio settings: enable/disable, selectable channel from 1 to 14
12. Digital output: activation counts and data reporting

77-2.02E(2) Enclosure

Control module enclosure must be:

1. NEMA 3R weatherproof enclosure.
2. Lockable with hinged lid for access to on-board user interface.
3. Corrosion -resistant aluminum with stainless steel hardware.
4. Prewired to minimize installation time.
5. High efficiency optics and EMS.
6. 39 lbs or less including on-board user interface and any batteries.

77-2.02F Audible Information Device (AID)

The audible information device (AID) must conform to the latest applicable provisions of the California MUTCD, and these special provisions. The AID must be supplied by the same manufacturer of RRFB and must be furnished and installed as one package. A R10-25 sign shall be furnished and installed with the AID and must conform to the Caltrans Standard Specifications, and these Special Provisions.

The AID shall be Polara iNX or approved equal. Audible message shall be: “Warning lights are flashing.”

77-2.03 CONSTRUCTION

77-2.03A Foundations

Contractor shall install foundations for decorative street light posts as indicated on the project plans. For foundation size and details see Roseville Electric Standard Construction Drawings.

77-2.03B Pull Boxes

For pull boxes see City of Roseville Construction Standards Section 86 Traffic Signals, Lighting and Electrical Systems. All pull boxes and lids shall be Fiberlyte FL36 unless otherwise directed by the Engineer. Pull box lids shall be labeled “ELECTRICAL”

77-2.03C Light Indicators

A minimum of two RRFB units shall be facing each direction of vehicular traffic at the pedestrian crossing. The two indications must be aligned horizontally, with the longer dimension of the indication horizontal, and a minimum space between the two indications of approximately 7” measured from inside edge of one indication to inside edge of second indication.

A single indicator must be installed on an assembly facing in the direction of approaching pedestrian traffic to serve as a confirmation for the pedestrian that the system has been activated.

The outside edges of the two indications, including any housing, must not protrude beyond the outside edges of the integral signage of the assembly.

Each indication must be located between the bottom of the crossing warning sign and the top of the supplemental downward diagonal arrow plaque.

77.2.03D RRFB Assembly Mounting

The RRFB assembly shall be installed using strap and saddle mounting bracket method. Contractor shall drill holes in the decorative street light post to run wiring for the light indicators and the AID system.

77-2.03E Underground Construction

For underground construction, see City of Roseville Construction Standards Section 86 Traffic Signals, Lighting and Electrical Systems.

All conduits installed in existing roadways shall be buried at a minimum depth of 18 inches below finished grade.

All trenches shall be constructed per Section 31-2 of City Construction Standards; see City Standard Detail TS-13.

77-2.04 PAYMENT

The contract lump sum price paid for rectangular rapid flashing beacon system shall include full compensation for furnishing all labor, materials, tools, equipment, and incidentals, and for all the work involved in installing AC powered rectangular rapid flashing beacon (RRFB) system, complete in-place, including, but not limited to, all items included in rectangular rapid flashing beacon system assemblies, decorative street light posts, foundations, luminaires, pull boxes, conduit, wiring, and power equipment considered, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

77-3 MODIFYING SIGNAL AND LIGHTING SYSTEMS (CITY)

77-3.01 GENERAL

77-3.01A Summary

Section 77-3 includes general specifications for constructing electrical systems.

Modifying signal and lighting system (City) includes removing, adjusting, or adding:

1. Loop detectors
2. Pull boxes
3. Conduit
4. Conductors
5. Cables

The components of modifying signal and lighting systems (City) are shown on the project plans.

77-3.02 MATERIALS

The electrical equipment and materials must comply with section 86 of the City’s Construction Standard and section 86 of the Caltrans Standard Specifications.

77-3.03 CONSTRUCTION

Install electrical equipment under section 86 of the City's Construction Standard and section 87 of the Caltrans Standard Specifications.

Vehicle detection that is impacted by digout operations shall be replaced by the Contractor per the latest City Standards, not limited to but including loop layout. Reference to existing vehicle detection as-builts are included in Appendix B.

Obliteration of loops outside the Contractors' work will be replaced in kind between the new lifts of HMA at the cost of the Contractor.

77-3.04 PAYMENT

The contract lump sum price paid for modifying signal and lighting systems (City) shall include full compensation for furnishing all labor, materials, scheduling, tools, equipment, and incidentals and for doing all the work, complete in place, including layout work, coordination with Hot Mix Asphalt placement, installation of vehicle detector loops, pulling wire, moving existing DLC wire, splicing and incidentals for all the work involved in installing loop detectors, complete in-place, including, but not limited to, loop wire, sawcutting, sealants, conduit, wiring, splicing, pull boxes, and detector hand holes as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

The contract price paid for modifying signal and lighting systems (City) shall also include abandoning traffic signal detector loops, and no additional compensation shall be allowed therefore. Traffic loops may be Type A, Type D, Type E preformed, or bike loops as shown on the as-built plans and as required by the latest City Standards. No unit price adjustment shall be made for adding or deleting any type of traffic loop.

^^

DIVISION IX TRAFFIC CONTROL DEVICES

82 SIGNS AND MARKERS

Add to section 82-1.01:

Signs must be constructed in accordance with the section 56 of City of Roseville Construction Standards.

Add to section 82-3.02A:

Roadside sign must comply with section 56-2.02 of City of Roseville Construction Standards.

Replace paragraphs of section 82-3.02B with:

Metal posts must comply with City of Roseville Standard Drawing TS-17A and must conform to section 56-2.02A of City of Roseville Construction Standards.

Replace paragraphs of section 82-3.02C with:

Not Used

Replace paragraphs of section 82-3.02D with:

Not Used

Replace paragraphs of section 82-3.02E with:

Sign panel fastening hardware must comply with section 56-2.02D of City of Roseville Construction Standards.

Replace paragraphs of section 82-3.03A with:

Sign panel installation must comply with section 56-2.04 of City of Roseville Construction Standards.

Replace paragraphs of section 82-3.03B with:

Not Used

Replace paragraphs of section 82-3.04 with:

Payment for furnishing sign panels is included in the payment for roadside sign.

^^

83 RAILINGS AND BARRIERS

Replace section 83-2.10 with:

83-2.10 PEDESTRIAN HANDRAILING

83-2.10A General

83-2.10A(1) Summary

Section 83-2.10 includes specifications for constructing pedestrian handrailings.

83-2.10A(2) Definitions

Not Used

83-2.10A(3) Submittals

83-2.01A(3)(a) General

Not used

83-2.10(A)(3)(b) Shop Drawings

Submit shop drawings for the pedestrian handrailing. Shop drawings must include:

1. Pedestrian handrailing.
2. Details for venting and pickup holes in posts, rails and pickets.
4. Complete details for the construction of work, including construction methods, sequence of shop and field assembly, and installation sequence and procedures for the pedestrian handrailing.

Submit 7 copies of the shop drawings. Allow 25 days for review. Upon authorization, the Engineer returns 2 copies to you for use during construction.

83-2.01A(3)(c) Certificate of Compliance

Submit a certificate of compliance signed by the supplier's QC representative for the pedestrian handrailing.

83-2.10A(4) Quality Assurance

Not used

83-2.10B Materials

The materials for pedestrian handrailing must comply with section 83-2.08 of the State Standard Specifications.

83-2.10C Construction

Construction of pedestrian handrailing must comply with 83-2.08C of the State Standard Specifications.

Powder coating of the ornamental railing must use the following procedure.

1. All surfaces to be sandblasted to a while metal surfaces to achieve a 1 MIL surface profile.
2. Apply epoxy powder coat primer at 1-1.5" MIL thickness.
3. Apply Tiger Series38 super durable topcoat or approved equal.

Powder coating product must be certified for a 3000-hour salt spray test per ASTM B117.

Follow all manufacturer's instructions for surface preparation, primer application, and topcoat application.

Color to match streetlights on Vernon Avenue.

83-2.10D Payment

The payment for pedestrian handrailing, included powder coating, is included in the payment for Retaining Walls and Minor Concrete (Stairs).

^^

84 MARKINGS

Add to section 84-1.01:

Traffic stripes, pavement markings, and pavement markers shall conform to the provisions in Section 84 TRAFFIC STRIPES AND PAVEMENT MARKINGS and Section 85 MARKERS of the City of Roseville Construction Standards and the Standard Construction Specifications, and these special provisions.

The Contractor shall install temporary pavement striping and markings as necessary during construction. All temporary pavement striping and marking shall be refreshed as needed or when directed by the Engineer, at the Contractor's expense, until permanent pavement striping and marking is installed.

Add to section 84-1.04:

The contract unit price paid per linear foot for Thermoplastic Traffic Stripe shall include full compensation for all labor, materials, tools, incidentals and equipment required to complete these items of the work, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

The contract unit price paid per square foot for Thermoplastic Pavement Marking shall include full compensation for all labor, materials, tools, incidentals and equipment required to complete these items of the work, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

The contract unit price paid per each for Pavement Markers shall include full compensation for all labor, materials, tools, incidentals and equipment required to complete these items of the work, as shown on the plans, as specified in the City of Roseville Design and Construction Standards, the State Standard Specifications and these special provisions and as directed by the Engineer.

Add to section 84-2.03C(3):

All striping or pavement markings damaged during construction must be repaired at your expense. Repairs must consist of complete replacement of striping or markings as directed by the Engineer.

When you are unable to place traffic stripes and marking due to unsuitable weather conditions, the Engineer can temporarily suspend work per section 8-1.06. When the work is suspended for greater than 14 days, install temporary traffic stripe and pavement markings. Placement of temporary traffic strip and temporary pavement marking is considered extra work per section 4-1.05.

Replace *Reserved* in section 84-9.03C with:

Residue from the removal of painted or thermoplastic traffic stripes and pavement markings contains lead from the paint or thermoplastic. The average lead concentrations are less than 1,000 mg/kg total lead and 5 mg/L soluble lead. This residue:

1. Is a nonhazardous waste
2. Does not contain heavy metals in concentrations exceeding the thresholds established by the Health and Safety Code and 22 CA Code of Regs

3. Is not regulated under the Federal Resource Conservation and Recovery Act (RCRA), 42 USC § 6901 et seq.

Management of this material exposes workers to health hazards that must be addressed in your lead compliance plan.

^^

DIVISION X ELECTRICAL WORK

87 ELECTRICAL SYSTEMS

Replace paragraphs of section 87-2.01B with:

Lighting systems must comply with these Special Provisions and the Roseville Electric Construction Standard Specifications, unless otherwise directed by specific comments or details in the electrical plans.

Appendix C:
Red Flash Approval Form

Public Works
Engineering
311 Vernon Street
Roseville, California 95678-2649

INTERSECTION RED FLASH APPROVAL

With stamped approval of this letter by the Traffic Section, Red Flash/Dark Signal is approved for the following intersection as specified below:

LOCATION: _____

PROJECT ACCOUNT NUMBER: _____

DATE: _____

TIME/DURATION: _____

☐ RED FLASH APPROVED:

1. Contractor shall submit the completed Intersection Red Flash Approval Form to the City Inspector and to TRedFlashRequests@roseville.ca.us 72 hours prior to needing the intersection in red flash. Signal shutdown shall be performed only by City personnel, unless otherwise directed by the Engineer.
2. During normal working hours (M-F, 7am-5pm) the contractor shall contact the Traffic Signal Technician either by telephone at **(916) 746-1760** or by email or text message at pagesignaltechnicians@roseville.ca.us one hour prior to needing the traffic signal placed into or removed from red flash. Outside of normal working hours - no phone call required.
3. The traffic signal will not be permitted to be placed in red flash during rain, lightning, or inclement weather conditions (including wet pavement conditions).
4. The Contractor shall reimburse the City for the actual cost of all inspection, including City Traffic Signal Technician time as required.
5. "Road Work Ahead" Signs required at all approaches to intersection when in red flash.
6. The Contractor shall furnish and place 36" "Stop" signs on arterial roadway approaches. Signs shall be mounted at a height of 84".

☐ DARK SIGNAL APPROVED – ADDITIONAL REQUIREMENTS

1. The Contractor shall place "Stop Ahead" C-W17 and "Stop" R-1 signs to direct vehicle and pedestrian traffic through the intersection during traffic signal system shutdown. Temporary "Stop Ahead" and "Stop" signs shall be removed when the system is turned on.
2. "Stop Ahead" and "Stop" signs shall be furnished by the Contractor. Minimum size of "Stop" signs shall be 36" for single sign placements and 24" for dual sign placements. Signs shall be mounted at a **height of 84"**.
3. One "Stop Ahead" sign and one "Stop" sign shall be placed for each direction of traffic. For approaches with two or more through or left turn lanes, two "Stop" signs shall be placed. Typical sign placement should be between the left turn and through lanes. Additional "Stop" signs should be placed on the shoulder. No "Stop" signs shall be placed in a manner that blocks bike lanes.
4. "Stop Ahead" and "Stop" signs shall be in place in each direction immediately prior to the intersection going dark and removed immediately after the intersection is placed back into red flash.
5. **Red flashing beacons or flares shall** be placed and maintained at each "Stop" sign during nighttime (dark) hours.
6. Traffic control must be verified by the Public Works Construction Inspector prior to the signal being deactivated.

☐ **I have read the above Intersection Red Flash Approval requirements.**

MITIGATION MONITORING PROGRAM FOR DOWNTOWN ROSEVILLE SPECIFIC PLAN PROJECT

INTRODUCTION

Sections 15091(d) and 15097 of the State Guidelines for the California Environmental Quality Act (CEQA) require public agencies "to adopt a reporting and monitoring program for changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment." A Mitigation Monitoring Program (MMP) is required by the City of Roseville (City) for the Downtown Roseville Specific Plan project because the Final Environmental Impact Report (EIR) for the project identified potentially significant adverse impacts related to construction and implementation activities, and mitigation measures have been identified to mitigate those impacts.

The MMP contained herein is intended to satisfy the requirements of CEQA as it relates to the Downtown Roseville Specific Plan Project EIR. This MMP is intended to be used by City staff and mitigation monitoring personnel to ensure compliance with mitigation measures during implementation of the project. Mitigation measures presented in this MMP were developed during the preparation of the Draft EIR (December 23, 2008) and Final EIR (March 2009) for the project.

The intent of this MMP is to ensure the effective implementation and enforcement of all adopted mitigation measures. The MMP will provide for monitoring of construction activities and in-the-field identification and resolution of environmental concerns that may arise during project implementation. The MMP may be modified by the City during project implementation, as necessary, in response to changing conditions or other refinements.

MITIGATION MONITORING PROGRAM DESCRIPTION

COMPLIANCE

The City will coordinate all monitoring activities and document the implementation of mitigation measures. Unless otherwise specified herein, the City is responsible for taking all actions necessary to implement the mitigation measures according to the specifications provided for each measure, and for demonstrating that the action has been successfully completed. The City, at its discretion, may delegate implementation responsibility or portions thereof to the developer, a licensed contractor, or other designated agent.

The City will coordinate the overall administration of the MMP and will verify that City staff members and/or the construction contractor and other responsible parties have completed the necessary actions for each measure. The table below identifies the mitigation measures adopted in the Final EIR, additional information on the monitoring actions and specific implementing entities, including the responsible parties for monitoring actions, and timing of each mitigation action. In cases where the implementing responsibility is shared between the City and construction contractors, the City will be responsible for ensuring that mitigation requirements are implemented.

FIELD MONITORING OF MITIGATION MEASURES

Prior to the issuance of City-approved construction contracts and applicant-sponsored grading and building permits, and during such time as development plans are being prepared for approval by City staff, the City will be responsible for ensuring compliance with mitigation monitoring applicable to the project design phase.

During construction, the City's Public Works Department will assign inspectors to be responsible for monitoring the implementation of mitigation measures. These inspectors will report to the City's Public Works Department and will be thoroughly familiar with mitigation measures in the MMP. In addition, the inspectors will be familiar

with construction contract requirements, schedules, standard construction practices, and mitigation techniques. The City will be responsible for onsite, day-to-day monitoring of construction activities, reviewing construction plans, and reviewing equipment staging/access plans to ensure conformance with adopted mitigation measures. The City will also have the authority to enforce mitigation measures by suspending specific construction activities.

Once construction has been completed, the City will monitor the project, as necessary.

If any mitigation measures are not being implemented, the City may pursue corrective action. Penalties may include, but are not limited to, the following:

1. Written notification and request for compliance,
2. Withholding of permits,
3. Administrative fines,
4. Stop-work orders,
5. Criminal prosecution and/or administrative fines,
6. Forfeiture of security bonds or other guarantees, and/or
7. Revocation of permits or other entitlements.

Mitigation measures applicable to construction contracts issued by the City (e.g., for parking garages) will be conveyed in contract documents. Failure to comply with these requirements by the construction contractor may also necessitate contract-based penalties.

CHANGES TO MITIGATION MEASURES

Any substantive change to the MMP made by City staff shall be reported in writing to the Planning Department. Modification to any mitigation measures may be made by City staff subject to one of the following findings, documented by evidence included in the record:

a) The mitigation measure included in the Final EIR and the adopted MMP is no longer required because the significant environmental impact identified in the Final EIR has been found to not exist, or to occur at a level which makes the impact less than significant as a result of changes in the project, changes in conditions of the environment, or other factors.

OR

b) The modified or substitute mitigation measure to be included in the MMP provides a level of environmental protection equal to or greater than that afforded by the mitigation measure included in the Final EIR and the adopted MMP; and the modified or substitute mitigation measures do not have significant adverse effects on the environment in addition to or greater than those which were considered by the responsible hearing bodies in their decisions on the Final EIR and the proposed project; and the modified or substitute mitigation measures are feasible, and the City, through measures included in the MMP or other City procedures, can ensure their implementation.

Findings and related documentation supporting the findings involving modifications to mitigation measures shall be maintained in the project file with the MMP and shall be made available to the public upon request.

MITIGATION MONITORING PROGRAM

The table presented on the following pages provides the MMP for the Downtown Roseville Specific Plan project. The MMP identifies the following.

Mitigation Measure – This provides the text of the mitigation measure identified in the Final EIR and identifies the mitigation measure according to the number in the Final EIR. The mitigation measures are presented by topic (e.g., air quality) in the same sequence as that presented in the Final EIR.

Implementation – This identifies the entity responsible for complying with the requirements of the mitigation measure and identifies the method and/or process by which the mitigation measure will be implemented.

Timing – This identifies the time frame in which the mitigation will take place.

Reviewing Party – This identifies the party responsible for reviewing and ensuring implementation of each mitigation measure.

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
Public Services			
4.3-4: Increased Demand for Public School Facilities and Services. The proposed project would generate approximately 23 high school students. To ensure adequate funding is available for high school facilities necessary to accommodate the increase in student population caused by the proposed project, landowners and developers shall pay school mitigation fees in accordance with the City of Roseville Ordinance 2434 before issuance of building permits for construction in the Plan area. Development projects in the Plan area that include only residential land uses shall enter into a Mutual Benefit Agreement (MBA) with school districts serving that area. Implementation of Mitigation Measure 4.3-4 would ensure adequate funding is made available to school districts to pay for construction and operation of new school facilities as needed to serve development. School impact fees are typically an insufficient amount to fund 100% of new school facility construction. However, the California Legislature has declared that the school impact fee is deemed to be full and adequate mitigation under CEQA (Government Code Section 65996). With payment of the state-mandate fees, impacts on school services and facilities would be reduced to a less-than-significant level.	The applicant shall pay school mitigation fees in accordance with the City of Roseville Ordinance 2434	Prior to issuance of building permits	PRD
Geology and Soils			
4.4-3: Seismically-Induced Risks to People and Structures Caused by Landsides. To minimize potential damage from unstable soil (landslides) along Dry Creek, the project applicant shall hire a qualified, licensed geotechnical engineer to map the Dry Creek corridor for clay-rich, weak soils, and high groundwater conditions prior to any construction or grading activities occurring in Dry Creek. Any unstable or hazardous slopes identified during the geotechnical investigation shall be identified by the geotechnical engineer and the geotechnical engineer shall provide recommendations for preventing landslides during project design and/or construction. These measures shall be included in grading permits prior to approval by the City.	The applicant shall hire a qualified, licensed geotechnical engineer to map the Dry Creek corridor for clay-rich, weak soils, and high groundwater conditions The project contractor shall Implement standard engineering requirements The project contractor shall implement all recommendations of the geotechnical investigation	Prior to issuance of grading permit; prior to ground-disturbing construction activities associated with bridges During ground-disturbing construction activities During ground-disturbing construction activities	PWD PWD PWD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
Aesthetics			
4.5-3: Impacts from Lighting and Reflective Surfaces. Operation of the golf course at nighttime would require the use of high-powered floodlights mounted on poles approximately 25 to 30 feet high that would be placed near or adjacent to existing residences. Prior to installation of nighttime lighting at the golf course, the City shall coordinate with a company specializing in or expertise with exterior lighting systems for golf courses (e.g., Abacus). Floodlighting used shall consist of a double asymmetric beam distribution that ensures minimum upward light and tight control of light overspill into adjacent areas. The golf course shall be designed to incorporate a line of trees located along the outermost boundary between the golf course and all adjacent residences.	The applicant shall coordinate with a company specializing in or expertise with exterior lighting systems for golf courses The applicant shall design the golf course with double asymmetric beam distribution floodlights The applicant shall design the golf course with a line of trees located along the outermost boundary between the golf course and all adjacent residences	Prior to installation of nighttime lighting at the golf course Prior to operation of the golf course Prior to operation of the golf course	PRD PRD PRD
Traffic and Circulation			
4.6-1: Unacceptable Peak Hour LOS at Signalized Intersections under Existing Plus Project Conditions. The Specific Plan would establish a Pedestrian Overlay District within the Plan area. The Pedestrian Overlay District is would construct physical improvements at intersections in the Plan area to encourage pedestrian activity and increase pedestrian safety. Although three signalized intersections in the study area would operate below LOS C, they would be located in the Pedestrian Overlay District which would make the intersections exempt from the City's LOS C policy. Therefore, the project would result in a less-than-significant impact.	No actions necessary		
4.6-2: Unacceptable p.m. Peak Hour LOS at Signalized Intersections under Cumulative (2020) Plus Project Conditions. The Specific Plan would establish a Pedestrian Overlay District within the Plan area. The Pedestrian Overlay District is would construct physical improvements at intersections in the Plan area to encourage pedestrian activity and increase pedestrian safety. Establishment of a Pedestrian Overlay District would reduce impacts to the Judah Street/Vernon Street and Washington Boulevard/Main Street intersections because it would these intersections exempt from the City's LOS C policy such that the intersections would operate at an acceptable LOS. The following mitigation measures are identified for the significant impacts under the Cumulative (2020) Plus Project scenario at signalized study intersections:			

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
► LOS D at Yosemite Street/Atlantic Street. The addition of project traffic at this intersection under cumulative 2020 conditions would deteriorate operations from LOS C to LOS D. To mitigate project impacts, the southbound right-turn lane could be restriped as a shared left/right-turn lane. With this restriping, the intersection would operate at an acceptable LOS C. The project would be responsible to pay their fair share toward this improvement. This intersection improvement shall be incorporated into the City of Roseville Capital Improvement Program. Incorporating this intersection improvement into the City's Capital Improvement Program would establish a funding mechanism to collect the remaining funds for this improvement (beyond the project's fair share). Therefore, implementation of the ultimate improvement would be guaranteed and the impact is considered less than significant.	The City of Roseville shall incorporate into the City of Roseville Capital Improvement Program the restriping of the southbound right-turn lane at the Yosemite Street/Atlantic Street intersection as a shared left/right-turn lane	As part of approval of the Specific Plan	PRD
► LOS D at Orlando Avenue/Marlin Drive/Cirby Way. The addition of project traffic at this intersection under cumulative 2020 conditions would deteriorate operations from LOS C to LOS D. To mitigate project impacts, the northbound and southbound approaches should be widened to provide one dedicated left-turn lane, one through lane, and one right-turn lane. With these improvements, the intersection phasing could be modified to provide protected left-turn movements, and would operate at an acceptable LOS C. Please note that, given the curvature of Marlin Drive and Orlando Avenue, the creek just north of the intersection, and right-of-way constraints, the identified mitigation may not be feasible. Therefore, this impact is considered significant and unavoidable.	No actions necessary		
► LOS D at Harding Drive/Estates Drive. The addition of project traffic at this intersection under cumulative 2020 conditions would deteriorate operations from LOS C to LOS D. To mitigate project impacts, a dedicated southbound right-turn lane would be needed. With this improvement, the intersection would operate at an acceptable LOS C. The project would be responsible to pay a fair share toward this improvement. Please note that existing development is present on all four quadrants of the intersection, limiting the available right-of-way to implement the improvement which may make the identified mitigation infeasible. Therefore, this impact is considered significant and unavoidable.	No actions necessary		
► LOS E at Sunrise Avenue/Eureka Road. The addition of project traffic at this intersection under cumulative 2020 conditions would deteriorate operations from LOS D to LOS E. To mitigate project impacts, a third eastbound left-turn lane could be added to the intersection. With the	No actions necessary		

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
improvement, the intersection would operate at LOS D, consistent with the No Project Condition. However, there are potential right-of-way constraints and inherent design complexities of implementing triple left-turn lanes. Therefore, this impact is considered significant and unavoidable.			
4.6-5: Parking. To mitigate parking impacts for the Plan area, the project shall provide an additional 580 parking spaces. This shall be accommodated by providing extra spaces within the three planned parking structures, providing additional public parking spaces (as part of developing and implementing the Parking Management Plan), or require development to provide additional parking (e.g., in-lieu fees).	The City of Roseville shall provide an additional 580 parking spaces in the Plan area	As part of approval of the Specific Plan	PRD
Cultural Resources			
4.7-1: Disturbance of Architectural Resources. Two of the historic-era resources located within the Plan area to appear to be eligible for CRHR listing. These resources include: 316 Vernon Street and 419-425 Vernon Street. The Old Town Roseville area is designated as a historic district at the local level by the City of Roseville. Consequently, it is recommended that any alterations made to these eligible resources be conducted in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties, and the Design Guidelines for Central Roseville. Generally, under CEQA, a project that complies with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of Interior's Standards for Rehabilitation is considered to have mitigated impacts to a historical resource to a less-than-significant level (State CEQA Guidelines Section 15064.5).	The applicant shall ensure alterations made to buildings at 316 Vernon Street and 419-425 Vernon Street be conducted in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties, and the Design Guidelines for Central Roseville	Prior to issuance of demolition or building permit	PRD
Development within the Plan area could result in new land uses, infill development, and streetscape improvements. Over the 20-year build-out period for the Specific Plan, future developments within the Plan area could result in impacts to 25 buildings built between 1963 and 1983. These buildings and their locations are listed in Table 4.7-2. Prior to the approval of demolition or building permits that would result in substantial alteration of any of the 15 buildings that will reach 45 years in age by the build-out date, the City shall ensure that an evaluation of significance according to CRHR criteria shall be performed. If the evaluation indicates the property is not eligible for listing in the CRHR, no further action is necessary. If any of these buildings are found to be eligible for listing in the CRHR in conjunction with future evaluations, the	The applicant shall ensure alterations made to 25 buildings built between 1963 and 1983 are evaluated for significance according to CRHR criteria.	Prior to issuance of demolition or building permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
City shall ensure that the proposed development is consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties or develop other methods to avoid significant impacts to these properties in consultation with the State Office of Historic Preservation (OHP). This measure would reduce potentially significant impacts to Architectural Resources to a less-than-significant level.			
If it is not feasible to retain an eligible historic resource, prior to demolition, documentation similar to the standards of the Historic American Building Survey (HABS) shall be conducted. A HABS -like recordation would document the site history, construction history, and current appearance of the eligible resource in the context of Roseville's history. The HABS-like recordation shall be completed by an architectural historian who meets the Secretary of the Interior's professional qualifications standards, and an experienced HABS photographer. The final document shall be filed in a local library / repository. Although this type of documentation eliminates one adverse impact of demolition (i.e., loss of historical information) it does not prevent the physical loss of a historically significant resource.	If an evaluation determines any of the 25 buildings built between 1963 and 1983 are found to be eligible for listing in the CRHR, the applicant shall ensure development consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties or develop other methods to avoid significant impacts to these properties in consultation with the State Office of Historic Preservation (OHP)	Prior to issuance of demolition or building permit	PRD
Implementation of the above mitigation measure would reduce impacts related to disturbance of architectural resources. However, the potential loss of a historically significant resource could occur. While implementation of mitigation measure 4.7-1 would lessen project impacts, demolition of a historical resource would be a significant adverse change and, therefore, considered a significant and unavoidable impact.	If retention of an eligible historic resource is considered infeasible, the applicant shall conduct documentation similar to the standards of the Historic American Building Survey (HABS)	Prior to issuance of demolition or building permit	PRD
4.7-2: Disturbance of Potential Subsurface Cultural Deposits. In the event that unrecorded cultural materials are identified during construction-related ground disturbing activities, potentially destructive work in the vicinity of the find shall cease until a qualified archaeologist can determine the significance of the find and, if appropriate, provide recommendations for treatment to the City. Treatment approved by the City shall be implemented prior to resuming ground disturbing activities.	The project contractor shall Suspend construction work if unrecorded cultural materials are identified	During construction-related ground disturbing activities	PRD
4.7-3: Undiscovered / Unrecorded Human Remains. If human remains are discovered at any project construction site during any phase of construction, work within 50 feet of the remains shall be suspended immediately, and the	The project contractor suspend construction work, if human remains are discovered, and	During construction-related ground disturbing activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
City of Roseville, the project applicant, and the county coroner shall be notified immediately. If the remains are determined by the county coroner to be Native American, the Native American Heritage Commission (NAHC) shall be notified within 24 hours, and the guidelines of the NAHC shall be adhered to in the treatment and disposition of the remains. The City or the project applicant shall also retain a professional archaeologist with Native American burial experience who shall conduct a field investigation of the specific site and consult with the Most Likely Descendant (MLD) identified by the NAHC. As necessary, the archaeologist may provide professional assistance to the MLD including the excavation and removal of the human remains. The City or the project applicant shall implement any mitigation before the resumption of activities at the site where the remains were discovered.	notify City of Roseville The City of Roseville shall notify County Coroner if human remains are discovered The City of Roseville shall notify Native American Heritage Commission if human remains are discovered	 During construction-related ground disturbing activities During construction-related ground disturbing activities	 PRD PRD
Hazards and Hazardous Materials			
4.8-1: Exposure of Construction Workers, Residents, and Others to Hazardous Materials. A Health and Safety Plan (HASP) prepared for the construction process, consistent with general industry standards and Occupational Safety and Health Administration (OSHA) requirements, would address the risks to construction personnel and public safety, such that these health and safety risks would be mitigated to an acceptable level. A qualified professional, such as a Certified Industrial Hygienist (CIH), would prepare the HASP to provide guidance for personnel involved in trenching and other excavation work where there is evidence of hydrocarbons or other hazardous materials. The HASP utilized for each construction phase would describe in detail the health and safety guidelines, procedures, and work practices that must be adhered to and the work to be performed, and would also include special details governing certain work, such as working in confined spaces. Should contaminants be found, appropriate measures would be taken to mitigate potential effects related to construction/implementation of the proposed project. This may include excavation of contaminated soils and disposal at an appropriate facility. The potential contaminants of concern are petroleum hydrocarbons and associated chemicals, such as oxygenates and fuel scavengers, and volatile organic carbons (e.g., PCE, TCE).	The project contractor shall prepare site-specific Health and Safety Plan	Prior to grading or construction	PWD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
The HASP would address appropriate personal protective equipment (PPE), monitoring to protect on-site workers; and the appropriate level of worker training (e.g., Hazardous Waste Operations and Emergency Response training). Monitoring may include visual and olfactory observation (e.g., soil staining or unusual odors), or air monitoring with hand-held devices (e.g., photo-ionization detector) to detect volatile hydrocarbons. Health-risk based action levels should be identified for various contaminants that would trigger modifications to work practices. Work practice modifications may include the cessation of construction activities until soil or groundwater sampling is performed, or an increase in the level of PPE or worker training. A Sampling and Analysis Plan (SAP) would accompany the HASP to determine if contaminants of concern are present and at what concentrations. The HASP would also address procedures to follow if unknown objects (e.g., USTs, underground piping) are encountered during construction activities. Specialized contractors would be hired to decommission and remove such USTs and perform confirmation sampling as necessary. The implementation of an adequate site-specific HASP would reduce the health risk to construction personnel by these recognized environmental conditions to a less-than-significant level. In addition, the following measures shall apply to construction activities, as appropriate.			
1) The construction contractor shall notify the Roseville Fire Department if evidence of soil or groundwater contamination (e.g., stained soil, unusual odor in groundwater) is encountered during construction activities. Any contaminated areas shall be remediated in accordance with recommendations made by the Fire Department, RWQCB, DTSC, or other appropriate federal, state, or local regulatory agencies.	The project contractor shall notify the Roseville Fire Department if evidence of soil or groundwater contamination is encountered	During construction-related ground disturbing	PRD
	The applicant shall remediate contaminated areas in accordance with recommendations made by the Fire Department, RWQCB, DTSC, or other appropriate federal, state, or local regulatory agencies	Prior to construction-related ground disturbing activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
2) Prior to demolition of any buildings constructed before 1977, the project applicant shall hire a qualified consultant to investigate whether any of these buildings contain lead and/or asbestos-containing materials and lead that could become friable or mobile during demolition activities. If found, the lead and/or asbestos-containing materials shall be removed by an accredited contractor in accordance with EPA and California OSHA standards. In addition, all activities (construction or demolition) in the vicinity of these materials shall comply with California OSHA lead and asbestos worker construction standards. The lead and asbestos-containing materials shall be disposed of properly at an appropriate off-site disposal facility.	The applicant or project contractor shall investigate whether any building constructed before 1977 contain lead and/or asbestos-containing materials and lead that could become friable or mobile during demolition activities	Prior to approval of building or demolition permit	PRD
The City would require contractors to prepare a site-specific HASP for individual projects within the Plan area to address current or historic RECs identified in the Phase I to verify that contractors are aware of site-specific RECs. As an alternative, the City could prepare a Plan-wide programmatic HASP to address all RECs identified in the Plan area, although preparation of the HASP is the ultimate responsibility of the contractor.	The applicant or project contractor shall remove lead and/or asbestos-containing materials by an accredited contractor in accordance with EPA and California OSHA standards	Prior to approval of building or demolition permit	PRD
Biological Resources			
Effects on Special-status Fish Species. The following measures shall be implemented to mitigate adverse effects to special-status fish species potentially resulting from the proposed project. To the extent feasible, the project shall be designed and constructed to avoid and minimize adverse effects to special-status fish species and aquatic habitats within the Specific Plan area. ► Project construction activities within the aquatic habitat of the active creek channel shall be conducted between June 15 and October 15, during the season that migrating chinook salmon and steelhead are not likely to be present. Construction within the riparian habitat along the upper banks of the creek need not be restricted to this timeframe, provided that the following measures (and those described in Section 4.12, Hydrology and Water Quality") are implemented to avoid or minimize sediment runoff into the creek.	The project contractor shall restrict construction activities within the aquatic habitat of the active creek channel to between June 15 and October 15	During construction-related activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
► Silt fencing shall be placed around the construction areas within the aquatic habitat of the active creek channel. Silt fencing shall protect upstream and downstream areas from any construction related impacts. All construction activities within the aquatic habitat of the active creek channel shall be conducted within the silt fence area. Cofferdams shall be used if construction in a live channel is necessary. To the extent feasible, they shall be designed to maintain an open channel to allow continued movement of aquatic species. If dewatering of a construction area is needed, it shall occur according to a Fish Translocation and Salvage Plan prepared by a qualified biologist.	The project contractor shall place silt fencing around the construction areas within the aquatic habitat of the active creek channel	During construction-related activities	PRD
	The project contractor shall conduct construction activities inside the silt fence area	During construction-related activities	PRD
	The project contractor shall design silt fence to maintain an open channel to allow continued movement of aquatic species	During construction-related activities	PRD
► All outflow from any project-related dewatering that may be necessary when excavating the outfall installation areas shall be filtered and pumped downstream of the construction area.	The project contractor shall filter and pump all outflows downstream of the construction area	During construction-related activities	PRD
► After completion of construction within the aquatic habitat of the active creek channel, all remaining side cast shall be removed from the work area and silt fencing shall be removed.	The project contractor shall remove all remaining side cast and silt fencing	After completion of construction-related activities	PRD
► Revegetation of disturbed areas within the riparian habitat of the active creek channel with native riparian plants shall be accomplished prior to the onset of the winter rains in the year of construction.	The project contractor shall revegetate disturbed areas within the riparian habitat of the active creek channel with native riparian plants	After completion of construction-related activities; Prior to onset of winter rains in the year of construction	PRD
4.9-2: Effects on Valley Elderberry Longhorn Beetles. The following measures shall be implemented to mitigate adverse effects to valley elderberry longhorn beetles potentially resulting from the proposed project. If valley elderberry longhorn beetles are delisted in the future, as has recently been proposed by USFWS (USFWS 2006a), these measures may be amended to conform to any revised USFWS guidelines regarding this species.	The applicant shall design and construct project components to avoid and minimize adverse effects to elderberry shrubs	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► To the extent feasible, implementation of the project shall be designed and constructed to avoid and minimize adverse effects to elderberry shrubs.			
► Before project construction within the riparian habitat of the active creek channel would begin, focused surveys for elderberry shrubs shall be conducted within the Dry Creek riparian corridor and adjacent municipal parks in and within 100 feet of proposed construction-sites. Such surveys will not be required within areas lacking suitable habitat for elderberry	The applicant shall conduct focused surveys for elderberry shrubs shall be conducted within the Dry Creek riparian corridor and adjacent municipal parks in	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
shrubs (i.e., areas already in residential development).	and within 100 feet of proposed construction-sites		
► Where elderberry shrubs with 1.0 inch or greater stem diameter are found, USFWS conservation guidelines for valley elderberry longhorn beetles shall be followed by establishing a 100-foot buffer around the dripline of such shrubs wherever feasible to completely avoid potential impacts to valley elderberry longhorn beetles (USFWS 1999). All buffers shall be marked with brightly colored flags or fencing and shall be maintained until project construction is complete. Earthmoving activities, herbicide use, and other construction and maintenance activities with potential to impact valley elderberry longhorn beetles and/or their host shrubs would be avoided within these buffer zones. A qualified biologist will provide project contractors and construction crews working in the vicinity of an elderberry shrub buffer zone with a worker-awareness program before such work begins. This program will be used to describe the species, its habits and habitats, its legal status and required protection, and all applicable mitigation measures.	The project contractor shall establish a 100-foot buffer around the dripline of elderberry shrubs wherever feasible with brightly colored flags or fencing The project contractor shall restrict earthmoving activities, herbicide use, and other construction and maintenance activities within the 100-foot buffer zone The project contractor shall hire qualified biologist to provide a worker-awareness program	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel During construction-related ground disturbing activities within the riparian habitat of the active creek channel Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD PRD PRD
► If complete avoidance of shrub buffer zones is not feasible, USFWS shall be consulted. It is anticipated that either a new buffer width would be agreed upon along with additional protections for the safety of the beetles and shrubs, or that shrubs that could not be adequately protected would be transplanted to a protected location before construction would begin, in accordance with established USFWS guidelines (USFWS 1999) and a USFWS-approved mitigation and monitoring plan. Shrubs shall be transplanted to an area protected in perpetuity as habitat for valley elderberry longhorn beetles through a conservation easement or similar mechanism. Replacement mitigation plantings shall also be provided based on USFWS guidelines, which require replacement ratios ranging from 1:1 to 8:1 for lost stems at least 1 inch in diameter, depending on the size of the affected stems. Associated native species will be planted at ratios ranging from 1:1 to 2:1 for each elderberry planting. Transplants and mitigation plantings shall be monitored to ensure that USFWS success criteria are met (i.e., 60 percent survival of elderberry plants and associated riparian plantings). The proponent may elect either 10 years of monitoring, with surveys and reports to USFWS every year; or 15 years of monitoring, with surveys and reports on years 1, 2, 3, 5, 7, 10, and 15. The mitigation and monitoring plan shall describe both short- and long-term maintenance and management of the mitigation site; and specify remedial measures to be	The applicant shall consult with USFWS If complete avoidance of elderberry shrub buffer zones is not feasible The applicant shall implement measures as determined through consultation with USFWS	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
undertaken if mitigation success criteria are not met. Long-term management of mitigation lands shall be ensured by establishing a management endowment or other suitable funding source. The mitigation shall be implemented in a preserved portion of the project site in Dry Creek's riparian corridor, elsewhere within the Dry Creek watershed, or in suitable habitat elsewhere in Placer County or an adjacent county. If mitigation occurs off-site, it shall be at a location that would provide at least equal-quality habitat for valley elderberry beetles as the project site after implementation of the mitigation.			
4.9-3: Effects on Raptors and Special-status Birds. The following measures shall be implemented to mitigate adverse effects to raptors and special-status birds potentially resulting from the proposed project.	The project contractor shall restrict vegetation removal and grading activities to between September 1 to February 28	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► Potential disturbance of nesting special-status birds and raptors shall be reduced by limiting vegetation removal and grading to the non-breeding season (generally September 1 to February 28) to the extent feasible.			
► To avoid nest disturbance and a potential reduction in fledging success resulting from construction activities within the riparian habitat of the active creek channel and during the breeding season (March 1 to August 31), focused surveys for raptors and special-status birds would be conducted by a qualified biologist no more than 15 days prior to the beginning of construction. Surveys for raptors and special-status birds would include suitable nesting habitat within 500 feet of construction areas. If no active nests are found, no further measures would be needed.	The project contractor shall conduct focused surveys for raptors and special-status birds would be conducted by a qualified biologist during the breeding season	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► If active raptor or special-status bird nests are found, impacts would be avoided by the establishment of appropriate buffers and/or nest monitoring by a qualified biologist. The size of the buffer would be determined by a qualified biologist and may vary, depending on the species biology, location, nest stage, and specific construction activities to be performed while the nest is active. A qualified biologist shall monitor active nests to determine when the young have fledged and are feeding on their own, or the nest has failed. No construction activities would occur within a buffer zone until a qualified biologist confirms that the nest is no longer active.	If focused surveys find active raptor or special-status bird nests, the project contractor shall establish appropriate buffers as determined by a qualified biologist and/or conduct nest monitoring by a qualified biologist	During construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
	The project contractor shall restrict construction activities inside buffer zone until a qualified biologist confirms that the nest is no longer active	During construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
4.9-6: Jurisdictional Waters and Sensitive Natural Communities. The following measures shall be implemented to mitigate adverse effects to jurisdictional waters and sensitive habitats potentially resulting from the proposed project. ► To the extent feasible, the project shall be designed and constructed to avoid and minimize adverse effects to jurisdictional waters of the United States and riparian habitat within the Specific Plan area. Bioengineering bank stabilization techniques shall be used to the extent feasible and the installation of hardscape within jurisdictional waters of the United States shall be minimized to the greatest extent feasible to achieve the overall project objectives.	The applicant shall design and construct project components to avoid and minimize adverse effects to jurisdictional waters of the United States and riparian habitat	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► Wherever possible, riparian woodland habitat shall be avoided and preserved; the connectivity of the Dry Creek riparian corridor shall be maintained and enhanced. Areas of riparian woodland to remain undisturbed shall be clearly marked for avoidance during construction by methods such as fencing of flagging and construction personnel shall be educated about the need to avoid adverse effects on this resource.	The applicant shall avoid and preserve riparian woodland habitat The applicant shall maintain and enhance the connectivity of the Dry Creek riparian corridor The project contractor shall mark areas of riparian woodland with fencing or flagging The project contractor shall avoid construction activities inside areas of riparian woodland	During construction-related ground disturbing activities within the riparian habitat of the active creek channel During construction-related ground disturbing activities within the riparian habitat of the active creek channel During construction-related ground disturbing activities within the riparian habitat of the active creek channel During construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD PRD PRD PRD
► The project shall incorporate restoration and enhancement of the riparian corridor into the final design plans and construction specifications. Loose rock and concrete debris along the creek banks shall be removed as appropriate. The riparian corridor along the creek channel shall be enhanced by the planting of native shrub, tree, and understory species to	The applicant shall design and construct project components to incorporate restoration and enhancement of the riparian corridor	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
	The project contractor shall remove Loose rock and concrete debris along the creek banks	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
	The project contractor shall enhance the riparian corridor along the creek channel by planting of native shrub, tree, and understory species	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► Before any ground disturbing activities begin within the aquatic or riparian habitat of the active creek channel, a qualified biologist shall map potential waters of the United States as part of a formal delineation of waters of the United States and shall identify all riparian habitat that could be affected by the project. The findings shall be documented in a detailed report and submitted to the USACE for verification as part of the formal Section 404 wetland delineation process. If there would be unavoidable effects under USACE jurisdiction, the Section 404 process shall be completed and the acreage of affected jurisdictional habitat shall be replaced and/or rehabilitated. The acreage of jurisdictional wetland affected shall be replaced on a "no-net-loss" basis is accordance with USACE regulations. Habitat restoration, rehabilitation, and/or replacement shall be at a location and by feasible methods agreeable to USACE. All minimization and compensation measures adopted through the permitting process shall be implemented.	The applicant shall prepare formal delineation map of potential waters of the United States and identify all riparian habitat that could be affected by a qualified biologist	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
	The applicant shall submit findings to USACE for verification as part of the formal Section 404 wetland delineation process	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► Approval by the RWQCB, as determined during the Section 401 and Section 404 permitting processes, shall be required. All mitigation requirements determined through this process shall be implemented before any ground disturbing activities begin.	The applicant shall acquire approval from the RWQCB and implement all requirements of approval	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► If there would be unavoidable effects to habitats under DFG jurisdiction, a streambed alteration agreement shall be obtained and affected habitat shall be replaced and/or rehabilitated. Because project implementation could result change to the natural flow and/or bed and bank of Dry Creek, the project could require a Section 1602 streambed alteration agreement from DFG. If complete avoidance of indentified riparian habitat is not feasible, the acreage of riparian habitat that would be removed shall be replaced or rehabilitated on a "no-net-loss" basis in accordance with DFG regulations	The applicant shall obtain streambed alteration agreement, if there would be unavoidable effects to habitats under DFG jurisdiction.	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1

Mitigation Measure	Implementation	Timing	Reviewing Party
and as specified in the streambed alteration agreement, if needed. Habitat restoration, rehabilitation, and/or replacement shall be at a location and by feasible methods agreeable to DFG. All minimization and compensation measures adopted through the permitting process shall be implemented.	The applicant shall replace or rehabilitate affected habitat on a "no-net-loss" basis in accordance with DFG regulations and as specified in the streambed alteration agreement	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
4.9-8: Protected Trees. The following measures shall be implemented to mitigate adverse effects to protected trees potentially resulting from the proposed project. Tree removal shall be avoided unless 1) necessary for project construction, 2) identified as safety hazards in a Certified Arborist Tree Survey and located in existing or planned public access areas (e.g., streets, trails), or 3) if exotic invasive species (e.g., tree of heaven). In the Dry Creek riparian corridor, snags, dead wood and branches on live trees, and fallen branches shall be retained to the maximum extent possible due to the important habitat functions that they provide for wildlife.	The applicant shall avoid tree removal to the maximum extent possible	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► Based on final approved project plans, the project applicant shall determine where protected trees are present within areas proposed for construction and shall identify trees for avoidance or removal.	The applicant shall determine where protected trees are present within areas proposed for construction and shall identify trees for avoidance or removal	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
► A Tree Preservation Plan shall be prepared for the protected trees within the Plan area that shall be avoided by the project to ensure that they are adequately protected during construction activities. A Certified Arborist shall prepare a Tree Preservation Plan in accordance with the Title 19 Article IV of the Roseville Municipal Code, which shall contain detailed recommendations for tree preservation and removal based on construction and grading plans. The Tree Preservation Plan shall address each tree potentially affected by construction and recommend preservation or removal based on its suitability for preservation, proximity to construction activities, and ability to tolerate impacts. The Tree Preservation Plan shall also include general preservation and construction guidelines to assist in the protection of trees within or near the grading limits or near construction zones. The Tree Preservation Plan shall include recommendations for specific protective measures for trees before, during, and after construction to reduce impacts to trees from development and maintain their health throughout the construction process. The Tree Preservation Plan shall be prepared using information in a Tree Survey and Assessment or similar report including information on each tree's species, size, location,	The applicant shall prepare a Tree Preservation Plan, by a Certified Arborist and in accordance with the Title 19 Article IV of the Roseville Municipal Code The applicant shall submit the Tree Preservation Plan to the City of Roseville for review and approval	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
condition, and suitability for preservation.			
► Where the removal of protected oaks is deemed necessary, the loss shall be mitigated according to Section 19.66.070 of the Roseville Municipal Code which requires that the replacement be calculated based upon an inch-for-inch replacement of the diameter at breast height of the tree removed. Mitigation trees shall be planted at appropriate sites and with appropriate maintenance to ensure their long-term self-sustaining survival. Where possible, mitigation oaks will be planted in canopy gaps along Dry Creek's riparian corridor within the Plan area, or elsewhere within the City of Roseville. A performance standard of 80 percent of the established mitigation trees shall be met after 5 years. The mitigation trees shall not be dependent upon significant maintenance measures within the last 2 years of monitoring, including supplemental irrigation and staking. Alternatively, an in-lieu fee payment can be made to the City of Roseville Native Oak Tree Propagation Fund, which is calculated per inch based on the diameter at breast height of the tree removed.	The applicant shall mitigate loss of protected trees according to Section 19.66.070 of the Roseville Municipal Code	Prior to construction-related ground disturbing activities within the riparian habitat of the active creek channel	PRD
Air Quality			
4.10-1: Generation of Short-term Construction-Related Emissions of Criteria Air Pollutants and Precursors. In accordance with the PCAPCD, the applicant shall comply with all applicable rules and regulations as listed above (e.g., Rule 202, 218 and 228). In addition, the following mitigation measures shall be implemented to reduce short-term construction-related air quality impacts. In addition, dust control measures are required to be implemented by all projects in accordance with the City of Roseville Grading Ordinance, and the PCAPCD Fugitive Dust Rule 228. 1. The applicant shall submit to PCAPCD a Construction Emission / Dust Control Plan within 30 days prior to groundbreaking. If the PCAPCD does not respond within 20 days, the plan shall be considered approved. The plan must address the minimum requirements found in section 300 and 400 of District Rule 228, Fugitive Dust (www.placer.ca.gov/airpollution/airpolut.htm). The applicant shall keep a hard or electronic copy of Rule 228, Fugitive Dust on-site for reference.	The project contractor shall submit a Construction Emission / Dust Control Plan to PCAPCD for review and approval	30 days prior to construction-related ground disturbing activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
2. The Construction Emission/Dust Control Plan shall include a comprehensive inventory (i.e. make, model, year, emission rating) of all heavy-duty off-road equipment (50 horsepower (HP) of greater) that will be used an aggregate of 40 or more hours for the construction project. The project representative shall provide PCAPCD with the anticipated construction timeline including start date, and name and phone number of the project manager and on-site foreman. The plan shall demonstrate that the heavy-duty (> 50 HP) off-road vehicles to be used in the construction project, including owned, leased and subcontractor vehicles, will achieve a project wide fleet-average 20% NOX reduction and 45% particulate reduction compared to the most recent ARB fleet average. PCAPCD shall be contacted for average fleet emission data. Acceptable options for reducing emissions may include use of late model engines, low-emission diesel products, alternative fuels, engine retrofit technology, after-treatment products, and/or other options as they become available. Contractors can access the Sacramento Metropolitan Air Quality Management District's web site to determine if their off-road fleet meets the requirements listed in this measure (http://www.airquality.org/ceqa/Construction_Mitigation_Calculator.xls).	The project contractor shall prepare a Construction Emission/ Dust Control Plan that includes a comprehensive inventory list of f all heavy-duty off-road equipment that will be used an aggregate of 40 or more hours for the construction project The project contractor shall prepare a Construction Emission/ Dust Control Plan that includes anticipated construction timeline including start date, and name and phone number of the project manager and on-site foreman The project contractor shall prepare a Construction Emission / Dust Control Plan that demonstrates that the heavy-duty (> 50 HP) off-road vehicles to be used in the construction project, including owned, leased and subcontractor vehicles, will achieve a project wide fleet-average 20% NOX reduction and 45% particulate reduction compared to the most recent ARB fleet average	30 days prior to construction-related ground disturbing activities 30 days prior to construction-related ground disturbing activities 30 days prior to construction-related ground disturbing activities	PRD PRD PRD
3. Clean earth moving construction equipment with water or sweep clean, once per day, or as necessary (e.g., when moving onsite), consistent with National Pollutant Discharge Elimination System Best Management Practices, local ordinances, and municipal codes. Water shall be applied to control dust as needed to prevent dust impacts offsite. Operational water truck(s), shall be on-site, as required, to control fugitive dust. Construction vehicles leaving the site shall be cleaned, as needed, to prevent dust, silt, mud, and dirt from being released or tracked off-site.	The project contractor shall clean earth moving construction equipment with water or sweep clean, once per day, or as necessary (e.g., when moving onsite), consistent with National Pollutant Discharge Elimination System Best Management Practices, local ordinances, and municipal codes	During construction-related ground disturbing activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
	The project contractor shall apply water to control dust as needed to prevent dust impacts offsite	During construction-related ground disturbing activities	PRD
4. Spread soil binders on unpaved roads and employee/equipment parking areas. Soil binders shall be non-toxic in accordance with state and local regulations. Apply approved chemical soil stabilizers, or vegetated mats, etc. according to manufacturers' specifications, to all-inactive construction areas (previously graded areas which remain inactive for 96 hours).	The project contractor shall spread soil binders on unpaved roads and employee/equipment parking areas	During construction-related ground disturbing activities	PRD
5. Minimize diesel idling time to a maximum of 10 minutes.	The project contractor shall minimize diesel idling time to a maximum of 10 minutes	During construction-related ground disturbing activities	PRD
6. Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary diesel power generators, if feasible.	The project contractor shall utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary diesel power generators, if feasible	During construction-related ground disturbing activities	PRD
7. Measures specific to 20+ acre project sites:	The project contractor shall hold a pre-construction meeting to review the construction emission/dust control plan	Prior to construction-related ground disturbing activities	PRD
► A pre-construction meeting shall be held to review the construction emission/dust control plan for projects requiring grading of 20+ acres. PCAPCD shall be notified and may attend.			
► The applicant shall comply with PCAPCD Fugitive Dust Rule 228; including suspending grading operations when conditions exceed designated wind speeds, and executing proper control of lime or other drying agents.	The project contractor shall comply with PCAPCD Fugitive Dust Rule 228	During construction-related ground disturbing activities	PRD
	The project contractor shall perform a Visible Emissions Evaluations, by an ARB-certified representative, routinely (i.e., once per week) to evaluate project related off-road and heavy-duty on-road equipment emissions for compliance with this requirement	During construction-related ground disturbing activities	PRD
► An applicant representative, ARB-certified to perform Visible Emissions Evaluations (VEE), shall routinely (i.e., once per week) evaluate project related off-road and heavy-duty on-road equipment emissions for compliance with this requirement for projects grading	The project contractor shall comply with PCAPCD Visible Emissions Rule 202	During construction-related ground disturbing activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
more than 20 acres in size, regardless of how many acres are to be disturbed daily.			
► Construction equipment exhaust emissions shall not exceed the PCAPCD Visible Emissions Rule 202. Fugitive dust is not to exceed 40% opacity and not go beyond property boundary at any time. Operators of vehicles and equipment found to exceed opacity limits are to be immediately notified and the equipment must be repaired within 72 hours.	The project contractor shall notify PCAPCD if Operators of vehicles and equipment found to exceed opacity limits	During construction-related ground disturbing activities	PRD
4.10-2: Generation of Long-Term Operation-Related (Regional) Emissions of Criteria Air Pollutants and Ozone Precursors. The following is a list of mitigation measures developed by PCAPCD to reduce long-term operational impacts to local and regional air quality. Due to the severe nonattainment designation in western Placer County for federal standards, all projects should implement those measures that are logical and feasible.	The applicant shall design projects to exceed California Title 24 energy requirements	Prior to issuance of building permit	PRD
1. Exceed California Title 24 2008 energy efficiency standards by a minimum of 10%. Areas of Title 24 to be exceeded (e.g., insulation, appliances, and fixtures) shall be determined by the applicant and the City.			
2. All truck loading and unloading docks shall be equipped with one 110/208-volt power outlet for every two-dock door. Diesel trucks shall be prohibited from idling more than five minutes and must be required to connect to the 110/208-volt power to run any auxiliary equipment. Signage shall be provided.	The applicant shall equip all truck loading and unloading docks with one 110/208-volt power outlet for every two-dock door	During project operation	PRD
	The applicant shall prohibit diesel trucks from idling more than five minutes and require diesel trucks to connect to the 110/208-volt power to run any auxiliary equipment	Prior to issuance of building permit	PRD
3. Install a gas outlet in all outdoor recreational fire pits, and permanently installed cooking appliances.	The applicant shall install a gas outlet in all outdoor recreational fire pits, and permanently installed cooking appliances	Prior to issuance of building permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
4. Only natural gas fireplace appliances are permitted. Where propane or natural gas service is not available, only EPA Phase II certified wood-burning devices shall be allowed in single-family residences. The emission potential from each residence shall not exceed 7.5 grams per hour. Wood-burning or Pellet appliances shall not be permitted in multi-family developments.	The applicant shall allow only natural gas fireplace appliances	Prior to issuance of building permit	PRD
	Where propane or natural gas service is not available, the applicant shall allow only EPA Phase II certified wood-burning devices	Prior to issuance of building permit	PRD
	The applicant shall prohibit wood-burning or pellet appliances in multi-family developments.	Prior to issuance of building permit	PRD
5. Where feasible, install solar electric generation systems. Recommend participation in Roseville Electric incentive programs for energy-efficient development.	The applicant shall install solar electric generation systems, where feasible	Prior to issuance of building permit	PRD
4.10-3: Exposure of Sensitive Receptors to Toxic Air Contaminant Emissions. The following mitigation measures shall be implemented to reduce the exposure of sensitive receptors to TACs: ► All proposed homes in the Plan area shall be equipped with filter systems with high Minimum Efficiency Reporting Value (MERV) for removal of small particles (such as 0.3 micron) at all air intake points to the home. All proposed dwelling units shall be constructed with mechanical ventilation systems which would allow occupants to keep windows and doors closed and allow for the introduction of fresh outside air, without the requirement of open windows.	The applicant shall equip homes with filter systems with high Minimum Efficiency Reporting Value (MERV) for removal of small particles (such as 0.3 micron) at all air intake points to the home	Prior to issuance of building permit	PRD
► Proposed commercial uses that have the potential to emit TACs (e.g., diesel-fueled engines) shall be located as far away as possible from existing and proposed receptors.	The applicant shall locate commercial uses that have the potential to emit TACs (e.g., diesel-fueled engines) as far away as possible from existing and proposed receptors	Prior to approval of use permit	PRD
► Proponents of projects with a residential component shall provide disclosure to future residents advising them of the proximity to the JR Davis Rail Yard and associated health risk impacts.	The applicant shall disclose future residents advising them of the proximity to the JR Davis Rail Yard and associated health risk impacts	Prior to issuance of building permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
► When determining the exact type of facility that would occupy the proposed commercial space, the project shall take into consideration its toxic-producing potential.	The applicant shall take into consideration its toxic-producing potential of proposed commercial space	Prior to approval of use permit	PRD
► Proposed facilities that would require the long-term use of diesel equipment and heavy-duty trucks shall develop a plan to reduce emissions, which may include such measures as scheduling such activities when the residential uses are the least occupied, and requiring such equipment to be shut off when not in use and prohibiting heavy-trucks from idling.	The applicant shall prepare and submit plan to reduce emissions to the City of Roseville for review and approval	Prior to issuance of building permit	PRD
► To the extent feasible, sensitive receptors shall be located as far away from the UPRR maintenance facility as possible.	The applicant shall locate sensitive receptors as far away from the UPRR maintenance facility as possible	Prior to approval of use permit	PRD
► Implement Mitigation Measure 4.10-2-2, described above, with respect to electrification of commercial loading dock areas to reduce emissions associated with truck idling.	The applicant shall equip all truck loading and unloading docks with one 110/208-volt power outlet for every two-dock door	Prior to issuance of building permit	PRD
4.10-5: Exposure of Sensitive Receptors to Odors. Implementation of Mitigation Measure 4.10-3 to reduce indoor exposure to TACs would also result in a reduction in the intensity of offensive odors from the surrounding odor sources. In addition, the applicant shall require all businesses that occupy the property to install odor-controls as necessary to prevent a substantial dispersion of odors to adjacent residential areas.	The applicant shall install odor-controls as necessary to prevent a substantial dispersion of odors to adjacent residential areas	During project operation	PRD
Noise			
4.11-1: Short-Term Construction-Generated Noise Levels. Although impacts related to short-term construction-generated noise were considered to be less than significant with implementation of the project, the following mitigation is provided to ensure impacts remain at a less-than-significant level. Construction contractors shall implement the following measures during construction activities.	The project contractor shall maintain construction equipment per manufacturers' specifications and fitted with the best available noise suppression devices (i.e., mufflers, silencers, wraps, etc)	During construction activities	PRD
► Construction equipment shall be properly maintained per manufacturers' specifications and fitted with the best available noise suppression devices (i.e., mufflers, silencers, wraps, etc). Shroud or shield all impact tools, and muffle or shield all intake and exhaust ports on power equipment.	The project contractor shall Shroud or shield all impact tools, and muffle or shield all intake and exhaust ports on power equipment	During construction activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
► Construction operations and related activities associated with the proposed project shall comply with the operational hours outlined in the City of Roseville Municipal Code Noise Ordinance; construction operations shall be limited to between the hours of 7 a.m. and 7 p.m. Monday through Friday and between 8 a.m. and 8 p.m. Saturday and Sunday.	The project contractor shall comply with the operational hours outlined in the City of Roseville Municipal Code Noise Ordinance	During construction activities	PRD
	The project contractor shall restrict construction activities to between the hours of 7 a.m. and 7 p.m. Monday through Friday and between 8 a.m. and 8 p.m. Saturday and Sunday	During construction activities	PRD
► Construction equipment should not be idled for extended periods of time in the vicinity of noise-sensitive receptors.	The project contractor shall restrict construction equipment from idling for extended periods of time in the vicinity of noise-sensitive receptors	During construction activities	PRD
► Locate fixed and/or stationary equipment as far as possible from noise sensitive receptors (e.g., generators, compressors, rock crushers, cement mixers). Shroud or shield all impact tools, and muffle or shield all intake and exhaust ports on powered construction equipment.	The project contractor shall locate fixed and/or stationary equipment as far as possible from noise sensitive receptors (e.g., generators, compressors, rock crushers, cement mixers).	During construction activities	PRD
	The project contractor shall shroud or shield all impact tools, and muffle or shield all intake and exhaust ports on powered construction equipment.	During construction activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
► Where feasible, temporary barriers shall be placed as close to the noise source or as close to the receptor as possible and break the line of sight between the source and receptor where modeled levels exceed applicable standards. Acoustical barriers shall be constructed material having a minimum surface weight of 2 pounds per square foot or greater, and a demonstrated Sound Transmission Class (STC) rating of 25 or greater as defined by American Society for Testing and Materials (ASTM) Test Method E90. Placement, orientation, size, and density of acoustical barriers shall be specified by a qualified acoustical consultant.	The project contractor shall place temporary barriers as close to the noise source or as close to the receptor as possible and break the line of sight between the source and receptor where modeled levels exceed applicable standards	During construction activities	PRD
	The project contractor shall construct acoustical barriers, as needed, with material having a minimum surface weight of 2 pounds per square foot or greater, and a demonstrated Sound Transmission Class (STC) rating of 25 or greater as defined by American Society for Testing and Materials (ASTM) Test Method E90	During construction activities	PRD
	The project contractor shall acquire expertise of qualified acoustical consultant for placement, orientation, size, and density of acoustical barriers, as needed	During construction activities	PRD
4.11-3: Long-Term Operational Stationary Source Noise Levels. Project applicant(s) for industrial and commercial/office land uses shall implement the following measures to reduce exposure of sensitive receptors to excessive noise levels from future stationary sources.	The applicant shall determine if the proposed use would likely generate noise levels adversely affecting the adjacent noise-sensitive uses	Prior to issuance of use permit	PRD
1. Industrial and Commercial/Office Land Uses. Where these land uses adjoin common property lines with noise-sensitive uses, the following mitigation measures shall be incorporated into the project design to reduce noise exposure from future stationary sources. a. During project review the City's Planning Department shall determine if the proposed use would likely generate noise levels adversely affecting the adjacent noise-sensitive uses. If a proposed project has the potential to generate or expose noise-sensitive uses to noise levels	The applicant shall prepare a site-specific acoustical analysis, If a proposed project has the potential to generate or expose noise-sensitive uses to noise levels exceeding the City of Roseville noise standards or result in a substantial (3 dB or greater)	Prior to issuance of use permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
exceeding the City of Roseville noise standards (Tables 4.11-4 through 4.11-6) or result in a substantial (3 dB or greater) permanent increase in ambient noise levels, the project applicant shall prepare a site-specific acoustical analysis. The acoustical analysis shall be conducted in accordance with the City of Roseville General Plan requirements shown in Table 4.11-5.	permanent increase in ambient noise levels		
b. Loading and unloading areas shall be located so that commercial buildings shield nearby residential land uses from noise generated by loading dock and delivery activities. If necessary, additional sound barriers shall be constructed on the commercial sites to protect nearby noise-sensitive uses.	The applicant shall locate loading and unloading areas so that commercial buildings shield nearby residential land uses from noise generated by loading dock and delivery activities	Prior to issuance of use permit	PRD
c. Loading dock activity and delivery truck activity at the commercial uses developed on the project site shall only occur during the daytime hours of 7 a.m. to 10 p.m., in order to prevent evening and nighttime sleep disturbance at nearby residential land uses.	The applicant shall restrict loading dock activity and delivery truck activity at the commercial uses to only occur during the daytime hours of 7 a.m. to 10 p.m.	During project operation	PRD
d. All commercial HVAC machinery shall be located within mechanical equipment rooms wherever possible. Equipment manufacturer's specifications for venting and access to outside air shall be maintained.	The applicant shall locate all commercial HVAC machinery within mechanical equipment rooms wherever possible	Prior to issuance of use permit	PRD
	The applicant shall maintain equipment manufacturer's specifications for venting and access to outside air	During project operation	PRD
e. Localized noise barriers or rooftop parapets shall be constructed around the HVAC, cooling towers, and mechanical equipment so that line-of-site to the noise source from the property line of the noise-sensitive receptors is blocked. Equipment manufacturer's specifications for venting and access to outside air shall be maintained.	The applicant shall construct localized noise barriers or rooftop parapets around the HVAC, cooling towers, and mechanical equipment	Prior to issuance of use permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
f. Property maintenance activities at commercial and office uses shall be restricted to daytime hours between 8 a.m. and 9 p.m.	The applicant shall restrict maintenance activities at commercial and office uses to daytime hours between 8 a.m. and 9 p.m.	During project operation	PRD
g. The owner or developer of any mixed-use building containing residential units shall provide written notice to all future residents, occupants, and users that the surrounding area may be subject to levels of noise associated with commercial uses at higher levels than would be expected in residential areas.	The applicant shall provide notice to all future residents, occupants, and users that the surrounding area	Prior to issuance of occupancy permit	PRD
Project applicant(s) for parking structures shall implement the following measures to reduce exposure of sensitive receptors to excessive noise levels from future stationary sources.	The applicant shall orientate parking structures so that nearby noise-sensitive receptors would be shielded from all on-site circulation routes	Prior to issuance of use permit	PRD
2. Parking Structures. Parking structures located in the immediate vicinity of noise-sensitive land uses shall include the following mitigation measures.			
a. Orientate parking structures so that nearby noise-sensitive receptors would be shielded from all on-site circulation routes (entrances, exits, and internal routes). If maintaining visibility is required transparent acoustical screens shall be installed on openings with direct line-of-sight to noise-sensitive receptors.			
b. Parking structures driveways and entrances shall be located so that the structure serves as a barrier to nearby noise-sensitive receptors.	The applicant shall locate parking structures driveways and entrances to act as a barrier to nearby noise-sensitive receptors	Prior to issuance of use permit	PRD
c. Interior reflective surfaces (i.e., ceilings), exposing nearby noise-sensitive receptors to elevated noise levels shall have an acoustically absorptive treatment, such as spray-in cellulose applied.	The applicant shall apply acoustically absorptive treatment to interior reflective surfaces	Prior to issuance of building permit	PRD
d. Parking structure capacity shall be limited during more sensitive evening and nighttime hours (7 p.m. to 7 a.m.). (i.e., 50% capacity from 7 p.m. to 10 p.m., 30% capacity from 10 p.m. to 7 a.m.).	The City of Roseville shall limit parking structure capacity during more sensitive evening and nighttime hours	During project operation	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
e. To ensure compliance, further analysis of on-site noise generation from the proposed parking structures shall be conducted when tentative maps become available.	The City of Roseville shall conduct noise analysis of on-site noise generation from the proposed parking structures	During project operation	PRD
4.11-4: Land Use Compatibility of On-site Sensitive Receptors with Future Traffic Noise Levels. Project applicant(s) shall implement the following measures to substantially reduce the exposure of sensitive receptors to excessive roadway traffic noise levels.	The applicant shall determine if the proposed land use would potentially be exposed to noise levels exceeding the City's noise level standards	Prior to issuance of use permit	PRD
► During project review, the City's planning staff shall determine if the proposed land use would potentially be exposed to noise levels exceeding the City's noise level standards. If a proposed project has the potential to generate or be exposed to noise levels exceeding the City of Roseville noise standards (refer to Tables 4.11-4 through 4.11-6) or result in a substantial permanent increase in ambient noise levels (3 dB or greater), the project applicant shall prepare a site-specific acoustical analysis. The acoustical analysis shall be conducted in accordance with the City of Roseville General Plan requirements shown in Table 4.11-5.	The applicant shall prepare a site-specific acoustical analysis, if a proposed project has the potential to generate or expose noise-sensitive uses to noise levels exceeding the City of Roseville noise standards or result in a substantial (3 dB or greater) permanent increase in ambient noise levels	Prior to issuance of use permit	PRD
► Disclose all transportation noise (i.e., roadway, railway, race track), vibration levels, and their meanings to purchasers and/or renters prior to contract or title transfer for residential property within the Plan area.	The applicant shall disclose all transportation noise (i.e., roadway, railway, race track), vibration levels, and their meanings to purchasers and/or renters prior to contract or title transfer for residential property	Prior to issuance of use permit	PRD
► Incorporate site specific design considerations to reduce exterior noise exposure levels. Site design shall include the following measures as applicable to the project-specific site and when feasible: • Common outdoor activity areas, such as play structures, swimming pools, or other outdoor congregation areas included in multi-family residential and/or mixed-use developments shall be located such that the building(s) serve as a sound barrier to the nearest predominant noise source. • Distances between noise sources and noise-sensitive uses shall be maximized through the use of noise buffers/setbacks. Setback areas can	The applicant shall incorporate site specific design considerations to reduce exterior noise exposure levels	Prior to issuance of use permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
take the form of open space, frontage roads, recreational areas, storage yards, or other City approved setback. • Noise barriers shall be constructed to provide shielding of noise-sensitive uses and outdoor activity areas. Barriers may include manmade walls, earthen berms, a combination of walls and berms, and other structures breaking line of sight from noise source to receptor. Barriers shall be located in close proximity to either the noise source or the sensitive receptor. • A site specific acoustical analysis shall be performed consistent with Table 4.11-5, and determine effectiveness of various site design measures based on specific construction plans.	The applicant shall conduct site-specific acoustical analysis to determine effectiveness of various site design measures based on specific construction plans	Prior to issuance of use permit	PRD
4.11-5: Land Use Compatibility of On-site Sensitive Receptors with Future Railroad Noise Levels. Implement mitigation measure 4.11-4 to reduce the exposure of sensitive receptors (i.e., residential, mixed-use development) to significant noise associated with future railroad and rail yard operations.	The applicant shall conduct actions listed above for 4.11-4: Land Use Compatibility of On-site Sensitive Receptors with Future Traffic Noise Levels	Prior to issuance of use permit	PRD
4.11-6: Future Interior Noise Levels at On-site Sensitive Receptors. Project applicant(s) shall implement the following measures for all noise-sensitive land uses with direct exposure to roadways, parking areas, and railways and exterior noise levels greater than 70 dB Ldn: ► All residential uses shall be constructed with air conditioning and mechanical ventilation systems that allow for windows and doors to remain closed and achieve acoustical isolation from traffic and railroad noise. The systems shall allow for the introduction of fresh outside air, without the requirement of open windows. Access to outside air shall be automatically controlled to prevent unintentionally flowing seasonally hot or cold into conditioned space.	The applicant shall construct residential uses with air conditioning and mechanical ventilation systems that allow for windows and doors to remain closed and achieve acoustical isolation from traffic and railroad noise	Prior to issuance of building permit	PRD
► Attic vents direct exposure to elevated noise levels shall be acoustically baffled, containing at least one 90 degree obstruction to the flow of air. The baffle shall be fitted with an acoustically absorbent liner.	The applicant shall acoustically baffle attic vents	Prior to issuance of building permit	PRD
► Exterior walls shall be constructed of a three-coat stucco or wood siding with an exterior underlayment or sound board.	The applicant shall construct exterior walls shall be constructed of a three-coat stucco	Prior to issuance of building permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
	or wood siding with an exterior underlayment or sound board		
► All residential windows and doors with direct exposure to elevated noise levels shall be required to meet a minimum STC rating of 34.	The applicant shall design residential windows and doors with direct exposure to elevated noise levels to meet a minimum STC rating of 34	Prior to issuance of building permit	PRD
► Windows and sliding glass doors shall be mounted in low infiltration rate frames (0.5 cubic feet per minute or less, per ANSI specifications).	The applicant shall mount windows and sliding glass doors in low infiltration rate frames (0.5 cubic feet per minute or less, per ANSI specifications)	Prior to issuance of building permit	PRD
► Exterior doors shall be solid core with perimeter weather-stripping and threshold seals.	The applicant shall design exterior doors to be solid core with perimeter weather-stripping and threshold seals	Prior to issuance of building permit	PRD
► The City shall require project applicants to submit an acoustical analysis which verifies compliance with the City of Roseville interior noise level standard of 45 dB L_{dn}. The analysis shall be based on detailed construction plans and site configuration details, and be conducted by a qualified acoustical consultant.	The applicant shall prepare and submit an acoustical analysis which verifies compliance with the City of Roseville interior noise level standard of 45 dB L_{dn}.	Prior to issuance of building permit	PRD
Ground-Borne Noise and Vibration Levels at Sensitive Receptors. Project applicant(s) shall implement the following measures to reduce the potential for human annoyance and architectural/structural damage resulting from elevated ground-borne noise and vibration levels.	The applicant shall utilize alternative installation methods were possible for pile driving required within a 50-foot radius of historic structures	During construction activities	PRD
► Construction-Induced Vibration: • Pile driving required within a 50-foot radius of historic structures should utilize alternative installation methods were possible (e.g., pile cushioning, jetting, pre-drilling, cast-in-place systems, resonance-free vibratory pile drivers). Specifically, geo pier style cast in place systems shall be used where feasible as an alternative to pile driving to reduce the number and amplitude of impacts required for seating the pile.	The project contractor shall record the pre-existing condition of all buildings within a 50-foot radius, and historical buildings within the immediate vicinity of proposed construction activities	Prior to construction activities	PRD
• The pre-existing condition of all buildings within a 50-foot radius, and historical buildings within the immediate vicinity of proposed construction activities shall be recorded in the form of a preconstruction	The project contractor shall document fixtures and finishes within a 50-foot radius of construction activities susceptible to damage	Prior to construction activities	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
survey. The preconstruction survey shall determine conditions that exist			
before construction begins for use in evaluating damage caused by construction activities. Fixtures and finishes within a 50-foot radius of construction activities susceptible to damage shall be documented (photographically and in writing) prior to construction. All damage will be repaired back to its pre-existing condition.	The project contractor shall repair all damage back to its pre-existing condition	Within 30 days after completion of construction activities	PRD
• Vibration monitoring shall be conducted prior to and during pile driving operations occurring within 100 feet of the historic structures. Every attempt shall be made to limit construction generated vibration levels in accordance with Caltrans recommendations during pile driving and impact activities in the vicinity of the historic structures.	The project contractor shall conduct vibration monitoring prior to and during pile driving operations occurring within 100 feet of the historic structures	Prior to and during construction activities	PRD
• Provide protective coverings or temporary shoring of on-site or adjacent historic features as necessary, in consultation with the Preservation Director.	The project contractor shall provide protective coverings or temporary shoring of on-site or adjacent historic features	During construction activities	PRD
► Railroad Induced Vibration: • Vibration sensitive uses shall be located a minimum of 100 feet from the UPRR centerline. To ensure compliance with FTA and Caltrans recommended guidelines, and site specific ground-borne noise and vibration assessment should be conducted.	The applicant shall locate vibration sensitive uses a minimum of 100 feet from the UPRR centerline	Prior to issuance of use permit	PRD
• A ground-borne vibration assessment shall be conducted at proposed building pad locations within 200 feet of UPRR right of ways, prior to project approval. Vibration monitoring and assessment shall be conducted by a qualified noise and vibration control engineer.	The applicant shall conduct ground-borne vibration assessment, by a qualified noise and vibration control engineer, at proposed building pad locations within 200 feet of UPRR right of ways	Prior to issuance of use permit	PRD
Hydrology and Water Quality			
4.12-5: Expose People or Structures to a Significant Risk of Flooding. All habitable structures constructed in the Plan area shall be located outside the adjusted 100-year flood plain as identified in the *Downtown Specific Plan Hydraulic Study* (RBF 2008) prepared for the Downtown Roseville Specific Plan. Additional encroachment into areas within the adjusted 100-year flood plain shall require site specific hydraulic modeling. Specific structures identified in the Downtown Roseville Specific Plan shall be prohibited from being constructed inside the adjusted 100-year flood plain unless evaluated and	The applicant shall locate all habitable structures constructed in the Plan area outside the adjusted 100-year flood plain as identified in the *Downtown Specific Plan Hydraulic Study* (RBF 2008) prepared for the Downtown Roseville Specific	Prior to issuance of use permit	PRD

PRD = Planning and Redevelopment Department PWD = Public Works Department

Table 1
Downtown Roseville Specific Plan Project Mitigation Monitoring Program

Mitigation Measure	Implementation	Timing	Reviewing Party
	Plan		
approved through project specific hydraulic modeling including structures associated with mixed-use development and high-density residential.	The applicant shall conduct site specific hydraulic modeling when additional encroachment into areas within the adjusted 100-year flood plain is required	Prior to issuance of use permit	PRD
4.12-6: Proposed Project Structures within the 100-year Flood Zone Could Impede or Redirect Flood Flows. To prevent impeding or redirecting storm water flows in Dry Creek, the following actions shall be implemented for design and construction of improvements identified in the Downtown Roseville Specific Plan adjacent to Dry Creek.	The applicant shall construct Creek Walk at the existing top of bank elevation for Dry Creek and make the area south of the new library bridge inaccessible during major storm events	Prior to construction activities	PWD
1. The Creek Walk identified in the Downtown Roseville Specific Plan shall be constructed at the existing top of bank elevation for Dry Creek and the area south of the new library bridge shall be made inaccessible during major storm events.	The applicant shall align all pedestrian bridges and the grand staircase to prevent increased 100-year flood water surface elevations in Dry Creek	Prior to construction activities	PWD
2. All pedestrian bridges in the Specific Plan area and the grand staircase shall be aligned to prevent increased 100-year flood water surface elevations in Dry Creek. Additional hydraulic analyses shall be conducted for the new pedestrian bridge alignments that are inconsistent with the RBF hydraulic analysis.	The applicant shall conduct hydraulic analyses for new pedestrian bridge alignments if inconsistent with the RBF hydraulic analysis	Prior to construction activities	PWD
3. Prior to any golf course related development activities in Saugstad Park, a site-specific hydraulic analysis or other acceptable analysis shall be conducted for a more specific golf course development plan to ensure that there is no risk of impeding or redirecting flood flows. This future analysis shall be reviewed and approved by the City's Public Works Department.	The applicant shall conduct hydraulic analyses for a more specific golf course development plan to ensure that there is no risk of impeding or redirecting flood flows	Prior to construction activities	PWD
	The applicant shall submit the hydraulic analyses for a more specific golf course development plan to PWD for review and approval	Prior to construction activities	PWD
4.12-7: Inundation by Seiche, Tsunami, or Mudflow. Implement Mitigation Measure 4.4-3.	The applicant shall hire a qualified, licensed geotechnical engineer to map the Dry Creek corridor for clay-rich, weak soils,	Prior to any construction or grading activities occurring in Dry Creek	PWD

COUNCIL COMMUNICATION

CC #: 3843
File #: 0800-02 & 0201-01

Title:	Aquifer Storage and Recovery Wells 13 (Campus Oaks) and 19 (Misty Wood) – Approve Plans and Specifications, Design-Assist Construction Agreement, and Budget Adjustment
Contact:	Keith Schmidt 916-746-1194 kjschmidt@roseville.ca.us

Meeting Date: 4/16/2025
Item #: 7.5.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council:

1. Approve the construction plans and specifications for the Aquifer Storage and Recovery Wells 13 (Campus Oaks) and 19 (Misty Wood) ("Project");
2. Approve the Design-Assist Construction Agreement for the Project with Auburn Constructors in the amount of $13,883,300 and adopt a resolution authorizing the City Manager to execute it on behalf of the City of Roseville;
3. Authorize the City Manager or his designee to approve and pay for contract change orders for this project that could increase the contract amount by no more than 10 percent ($1,388,330), for a not-to-exceed total contract amount of $15,271,630; and
4. Adopt an ordinance to approve a budget adjustment of $2,950,000 from available resources in the Water Construction Fund to fully fund the project.

BACKGROUND

The City is actively implementing the Aquifer Storage and Recovery (ASR) Program, which involves construction of ASR wells capable of both water recharge and groundwater extraction. The next two wells for construction are the Campus Oaks (Well 13) and Misty Wood (Well 19) ASR wells. The City drilled the wells in 2023 and completed design of the remaining above-ground facilities including pumping system, buildings, and site grading and paving in 2024.

On December 17, 2024, staff published Request for Proposals (RFP) No. 08-135 for Design-Assist construction services. On February 5, 2025, four (4) firms proposed on the Project. The proposals were evaluated by a panel including Environmental Utilities Department engineering and operations staff, a Public Works engineering staff member, the project Construction Manager from the consulting firm Brown and Caldwell, and a member of the City Attorney's Office. The panel ranked each firm based on the criteria specified in the RFP. The panel determined the Auburn Constructors proposal provided the best value based on the evaluation criteria of the RFP. Staff successfully negotiated the attached Design-Assist Construction Agreement (Exhibit

A). The project is scheduled to complete the majority of the sitework and materials procurement in 2025 and complete all construction in the summer of 2026.

FISCAL IMPACT

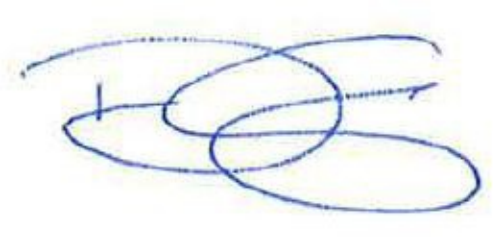
The Campus Oaks and Misty Wood ASR well project is funded by the Water Construction Fund and grant funding from the state's Natural Resources Agency and Department of Water Resources. City participation in the grant funding agreement was approved by Council on September 20, 2023. The grant is administered by the Regional Water Authority (RWA), a joint powers authority the City is a member of, as part of a larger American River Terms for Ecosystem Support and Infrastructure Assistance Needs (ARTESIAN) Project.

The ARTESIAN grant provides this project with $8,010,000 in grant funding to be utilized by December 31, 2025. This project will utilize grant money first for both Construction and Construction Management until those funds are expended, then will utilize funds available in the City's Water Construction Fund.

An additional $2,950,000 of funding is requested to fully fund the project, including $2,704,000 for capital outlay and $246,000 for internal secondary labor. This budget adjustment will bring the current project budget of $16,625,865 to a new total project cost of $19,575,865, using available funds in the Water Construction Fund.

ENVIRONMENTAL REVIEW

Project level CEQA compliance for the Campus Oaks ASR well project was accomplished with the preparation of the Hewlett Packard Master Plan EIR and subsequent CEQA addendums for the Campus Oaks Master Plan (SCH No.1995112022). Additionally, both proposed well sites were evaluated in the Aquifer Storage and Recovery (ASR) Program Draft and Final EIR certified in 2012 (SCH 2009072018), and the Supplement to the ASR Final EIR (certified December 17, 2020). Because the action is consistent with the projects evaluated in the previously certified and adopted CEQA documents, no new affects would be expected to occur and all applicable mitigation measures from the CEQA documents will be implemented. As such, no additional CEQA action is required at this time.



CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal F – Invest in well-planned infrastructure and growth

Respectfully Submitted,

Keith Schmidt, Senior Engineer

Sean Bigley, Environmental Utilities Director

Dominick Casey, City Manager

@	AT (MEASUREMENT)	
△	DEFLECTION ANGLE, CENTRAL ANGLE	
#	NUMBER (REBAR Ø)	

A

AB	ANCHOR BOLT
ABC	AGGREGATE BASE COURSE
ABS	ACRYLONITRILE BUTADIENE STYRENE
AC	ASPHALTIC CONCRETE
ACB	AIR CIRCUIT BREAKER
ACI	AMERICAN CONCRETE INSTITUTE
ACP	ASBESTOS CEMENT PIPE
ACU	AIR CONDITIONING UNIT
AD	AREA DRAIN
ADDL	ADDITIONAL
ADJ	ADJACENT, ADJUST, ADJUSTABLE
ADMIN	ADMINISTRATION
ADR	ACCESS DOOR
AED	AREA EQUIPMENT DRAIN
AER	AERAT(ION)(OR)
AFC	AFTERCOOLER
AF	AQUIFER FLUSH
AFF	ABOVE FINISHED FLOOR
AFM	AIR FLOW MONITOR
AHU	AIR HANDLING UNIT
AIC	AIR COMPRESSOR
AIL	AIR INTAKE LOUVER
ALT	ALTERNATE
AL	ALUMINUM
ANCH	ANCHOR
ANV	ANGLE VALVE
APPROX	APPROXIMATE, APPROXIMATELY
ARCH	ARCHITECTURAL
ARV	AIR RELEASE VALVE
ASSY	ASSEMBLY
ASTM	AMERICAN SOCIETY FOR TESTING AND MATERIALS
AV	ACID VENT
AVG	AVERAGE
AVV	AIR AND VACUUM VALVE
AW	ACID WASTE

B

BC	BEGIN CURVE, BRASS CAP, BACK OF CURB, BOLT CIRCLE
BCKR	BACKER BOARD
BCM	BATCHMETER
BD	BOARD
BDD	BACKDRAFT DAMPER
BDR	BASIN DRAIN LINE
BF	BLIND FLANGE
BFG	BELOW FINISHED GRADE
BFP	BELT FILTER PRESS
BFV	BUTTERFLY VALVE
BG	BREAK GLASS HAND SWITCH
BKW	BACKWASH
BLDG	BUILDING
BLK	BLOCK
BLKHD	BULKHEAD
BLR	PROCESS BLOWER
BM	BEAM, BENCH MARK
BOTT	BOTTOM
BOTTS	BOTTOM SLUDGE
BPV	BACK PRESSURE VALVE
BRG	BEARING
BSP	BLACK STEEL PIPE
BTU	BRITISH THERMAL UNITS
BTWN	BETWEEN
BV	BALL VALVE
BWCCP	BAR-WRAPPED CONCRETE CYLINDER PIPE

C

C	CLOSE, CONDUIT CHANNEL (STRUCTURAL)
CA	CONCRETE ANCHOR
CAUSTIC	CAUSTIC SOLUTION (CONCENTRATED OR DILUTE)
CB	CATCH BASIN
CC	CENTER OF CURVATURE, CENTER TO CENTER
CCB	CHLORINE CONTACT BASIN
CD	CEILING DIFFUSER, CONDENSATE DRAIN
CDL	CHEMICAL DRAIN LINE
CDT	CONDUIT
CEF	CEILING EXHAUST FAN
CF	CUBIC FEET
CFM	CUBIC FEET PER MINUTE
CFS	CUBIC FEET PER SECOND
CHEMD	CHEMICAL DRAIN
CHF	CHEMICAL FEEDER
CHKD PL	CHECKERED PLATE
CI	CAST IRON
CIP	CAST IRON PIPE
CIRC	CIRCUMFERENTIAL/CIRCUMFERENCE
CJ	CONSTRUCTION JOINT
CKA	CHECK VALVE, ANGLE
CKB	CHECK VALVE, BALL
CKF	CHECK VALVE, FLAP
CKS	CHECK VALVE, SWING
CL	CENTER LINE
CLK	CHAIN LINK
CLD	CHLORINE LEAK DETECTOR
CLL	CHLORINE LIQUID
CLP	CHLORINE GAS (PRESSURE)
CLR	CLEAR
CLS	CHLORINE SOLUTION
CLSM	CONTROLLED LOW STRENGTH MATERIAL
CLV	CHLORINE GAS (VACUUM)
CML	CEMENT MORTAR LINED
CMLC	CEMENT MORTAR LINED AND COATED
CMP	CORRUGATED METAL PIPE
CMU	CONCRETE MASONRY UNIT
CNV	CONVEYOR
CO	CLEANOUT
COL(S)	COLUMN(S)
CONC	CONCRETE
CONN	CONNECT, CONNECTION
CONST	CONSTRUCTION
CONT	CONTINUOUS OR CONTINUATION OR (D) (OUS)
CORR	CORRUGATE(D), CORROSION
CP	CONTROL POINT
CPLG	COUPLING
CPT	CARPET
CPTS	CATHODIC PROTECTION TEST STATION
CPVC	CHLORINATED POLYVINYL CHLORIDE
CS	CARBON STEEL, CIRCULATING SLUDGE
CSP	CHEMICAL SUMP PUMP, CORRUGATED STEEL PIPE
CT	CURRENT TRANSFORMER, CERAMIC TILE
CTJ	CONTROL JOINT
CTL	CONTROL
CTR	CENTER, CENTERED
CTSK	COUNTERSUNK
CU	CUBIC
CUP	COPPER PIPE
CV	CHECK VALVE
CW	COLD WATER
CWV	COMBINATION WASTE AND VENT
CY	CUBIC YARD

D

D	DEPTH, DIGITAL OR DISCRETE, DRAIN
D/W	DRIVEWAY
DBL	DOUBLE
DDR	DESICCANT DRYER
DEG or °	DEGREE
DEMO	DEMOLISH, DEMOLITION
DET	DETAIL
DFL	DECANT/FILTRATE
DG	DOOR GRILLE
DIA or Ø	DIAMETER
DIAG	DIAGONAL
DIF	DIFFUSER
DIG	DIGESTER
DIM	DIMENSION
DIP	DUCTILE IRON PIPE
DISCH	DISCHARGE
DIW	DEIONIZED WATER
DL	DEAD LOAD, DRAIN LINE
DLV	DOOR LOUVER
DMP	DAMPER
DMS	DIAPHRAGM SEAL
DN	DOWN
do	DITTO
DO	DOOR OPENING
DP	DEEP (OR DEPTH)
DPV	DIAPHRAGM VALVE
DR	DOOR, DRAIN
DRT	DRIP TRAP
DRV	DRAIN VALVE
DS	DIGESTED SLUDGE, DOWN SPOUT
DSW	DISTILLED WATER, DOOR SWITCH
DUC	DUST COLLECTOR
DUH	DUCT HEATER UNIT
DW	DISTILLED WATER
DWD	DEWATERING DRAIN
DWG(S)	DRAWING(S)
DWL(S)	DOWEL(S)

E

E	EAST
EA	EACH
EC	END OF CURVE
ECC RED	ECCENTRIC REDUCER
ECU	EVAPORATOR COOLING UNIT
ED	EQUIPMENT DRAIN
EF	EXHAUST FAN, EACH FACE
EFF	EFFLUENT
EG	EXHAUST GRILLE
EIFS	EXTERIOR INSULATION AND FINISH SYSTEM
EJ	EXPANSION JOINT
EJR	INJECTOR/EDUCTOR
EL	ELEVATION
ELEC	ELECTRICAL
ELL	ELBOW
EMBED	EMBEDMENT
EMH	ELECTRICAL MANHOLE
EP	EDGE OF PAVEMENT
EPS	EXPANDED POLYSTYRENE
EPV	ECCENTRIC PLUG VALVE
EQ	EQUAL
EQUIP	EQUIPMENT
ER	EXHAUST REGISTER
ES	EACH SIDE
ESEW	EMERGENCY SHOWER AND EYE WASH
ESS	EMERGENCY HAND SWITCH
ET	ELECTRICALLY HEAT TRACED
EUH	ELECTRIC UNIT HEATER
EVR	EVAPORATOR
EW	EACH WAY
EWC	ELECTRIC WATER COOLER
EWEF	EACH WAY EACH FACE
EWH	ELECTRIC WATER HEATER, EXHAUST
EX	EXISTING
EXIST	EXISTING
EXP	EXPANSION, EXPANSION TANK
EXPO	EXPOSED
EXT	EXTERIOR

F

FACT	FACTORY
FAD	FOUL AIR DUCT
FB	FLAT BAR
FBW	FILTER BACKWASH
FC	FACE OF CURB, FLEXIBLE COUPLING
FCA	FLANGE COUPLING ADAPTER
FCO	FLOOR CLEANOUT
FCU	FAN COIL UNIT
FD	FIRE DAMPER, FLOOR DRAIN, FOUND
FDC	FIRE DEPARTMENT CONNECTION
FDL	FLOOR DRAIN LINE
FDR	FEEDER
FG	FLAP GATE, FINISHED GRADE
FH	FIRE HYDRANT
FILT	FILTRATE
FIN	FINISH
FIN FL	FINISHED FLOOR
FIN GR	FINISHED GRADE
FL	FLOOR, FLOW LINE
FLA	FOUL AIR
FLD	FILTER DRAIN
FLEX	FLEXIBLE
FLG	FLANGE, OR FLANGED
FLR	FILTER
FM	FORCE MAIN
FND	FOUNDATION
FO	FUEL OIL
FOB	FLAT ON BOTTOM
FOT	FLAT ON TOP
FPM	FEET PER MINUTE
FPP	FLEXIBLE PLASTIC PIPE
FPW	FIRE PROTECTION WATER
FRP	FIBERGLASS REINFORCED PLASTIC
FRPP	FIBERGLASS REINFORCED PLASTIC PIPE
FRS	FROTH SPRAY
FS	FAR SIDE
FSTN	FASTEN(ED)
FT or '	FOOT, FEET
FTG	FOOTING
FUP	FUEL DISPENSER
FV	FLAP VALVE
FW	FLUSHING WATER
FX	FIRE EXTINGUISHER
FXC	FIRE EXTINGUISHER CABINET
FXE	FIRE EXTINGUISHER - ELECTRICAL

G

G	GAS, GROUND, GUTTER
GA	GAUGE or GAGE
GAL	GALLONS
GALV	GALVANIZE(D)
GAV	GRAVITY VENTILATOR
GB	GRADE BREAK
GBT	GRAVITY BELT THICKENER
GC	GROOVED COUPLING
GEL	GRAVITY EXHAUST LOUVER
GEN	GENERAL, GENERATOR
GL	GLASS
GLV	GLOBE VALVE
GM	GAS METER
GND	GROUND
GPD	GALLONS PER DAY
GPM	GALLONS PER MINUTE
GR	GRADE
GRTG	GRATING
GRV	GRAVITY VENTILATOR
GSP	GALVANIZED STEEL PIPE
GV	GATE VALVE
GYP	GYPSUM

H

H	EXPLOSION-PROOF, HIGH, HORIZONTAL
H1E	HOOK ONE END
H2E	HOOK TWO ENDS
HAS	HEADED ANCHOR STUD
HB	HOSE BIBB
HDPE	HIGH DENSITY POLYETHYLENE
HDW	HARDWARE
HDWL	HEADWALL
HEF	HOOD EXHAUST FAN
HGT	HEIGHT
HH	HAND HOLE, ELECTRICAL PULL BOX
HORIZ	HORIZONTAL
HP	HEAT PUMP, HORSEPOWER, HIGH PRESSURE
HPA	HIGH PRESSURE AIR
HPT	HIGH POINT
HPU	HEAT PUMP UNIT AIR
HR	HANDRAIL, HOSE REEL, HOUR
HSF	HOOD SUPPLY FAN
HSS	HOLLOW STRUCTURAL SECTION (STEEL)
HTX	HEAT EXCHANGER
HV	HOSE VALVE
HW	HOT WATER
HWL	HIGH WATER LEVEL
HWR	HOT WATER RETURN
HWS	HOT WATER SUPPLY
HxW	HEIGHT BY WIDTH
HYD	HYDRANT

I

IA	INSTRUMENT AIR
ID	INSIDE DIAMETER, INSIDE DIMENSION, IDENTIFICATION
I.F.	INSIDE FACE
IN or "	INCHES
INCL	INCLUDE, INCLUDING
INF	INFLUENT
INJ	INJECTOR
INSTR	INSTRUMENTATION
INSUL	INSULAT(E)(ED)(ING)(ION)
INT	INTERIOR
INV	INVERT
IP	IRON PIPE
ISR	INTRINSICALLY SAFE RELAY

J

JST	JOIST
JT	JOINT

K

KGV	KNIFE GATE VALVE

L

L	ANGLE (STRUCTURAL), LENGTH, LOUVER
LAB	LABORATORY
LAV	LAVATORY
LB(S)	POUND(S)
LDF	LIQUID DIESEL FUEL
LDFR	LIQUID DIESEL FUEL RETURN
LF	LINEAL FEET
LG	LONG
LH	LEFT HAND
LHR	LEFT HAND REVERSE
LHRA	LEFT HAND REVERSE ACTIVE
LHRB	LEFT HAND REVERSE BEVEL
LL	LIVE LOAD
LLH	LONG LEG HORIZONTAL
LLV	LONG LEG VERTICAL
LP	LOW PRESSURE
LPA	LOW PRESSURE AIR
LPG	LIQUIFIED PROPANE GAS
LPT	LOW POINT
LR	LONG RADIUS
LS	LAB SINK
LT	LEFT
LWL	LOW WATER LEVEL

M

M	MOTOR
MAINT	MAINTENANCE
MAN	MANUAL
MASY	MASONRY
MATL	MATERIAL
MAU	MAKE-UP AIR UNIT
MAX	MAXIMUM
MB	MACHINE BOLT
MC	MECHANICAL COUPLING
MCJ	MASONRY CONTROL JOINT
MD	MOTORIZED DAMPER
MECH	MECHANICAL
MET	METAL
MFR	MANUFACTURER
MG/L	MILLIGRAMS PER LITER
MGD	MILLION GALLONS PER DAY
MH	MANHOLE
MIN	MINIMUM
MISC	MISCELLANEOUS
MIX	MIXER
MJ	MECHANICAL JOINT
MK	MARK
ML	MIXED LIQUOR
MO	MASONRY OPENING
MOD	MODIFIED
MOIST	MOISTURE
MON	MONUMENT
MOS	MOISTURE SEPARATOR
MPM	METERING PUMP
MS	MOP SINK
MTD	MOUNTED

N

N	NORTH, NEUTRAL
NA	NOT APPLICABLE
NC	NORMALLY CLOSED
NEV	VALVE, NEEDLE
NG	NATURAL GRADE, NATURAL OR LP GAS
NIC	NOT IN CONTRACT
NO., #	NUMBER
NOM	NOMINAL
NPT	NATIONAL PIPE THREAD
NPW	NON-POTABLE WATER
NS	NEAR SIDE
NTS	NOT TO SCALE

O

O	OPEN
OBD	OPPOSED BLADE DAMPER
OC	ON CENTER
OD	OUTSIDE DIAMETER, OUTSIDE DIMENSION
OED	OPEN EQUIPMENT DRAIN
O.F.	OUTSIDE FACE
OFL	OVERFLOW
OPNG	OPENING
OPP	OPPOSITE
OPP HND	OPPOSITE HAND
OZ	OUNCE

P

P	POLE
PBL	POLYMER BLENDER
PC	POINT OF CURVATURE
PCC	PLANT CONTROL CENTER
PCCP	PRESTRESSED CONCRETE CYLINDER PIPE
PCP	PROGRESSIVE CAVITY PUMP
PD	POSITIVE DISPLACEMENT, PLANT DRAIN
PD, PLD	PULSATION DAMPENER
PDP	POSITIVE DISPLACEMENT PUMP
PE	PLAIN END
PERP	PERPENDICULAR
PG	PRESSURE GAUGE
PH	PHASE, PHYSICALLY HANDICAPPED
PI	POINT OF INTERSECTION
PIV	POST INDICATOR VALVE
PL	PLATE, PROPERTY LINE
PLAS	PLASTIC
PLCS	PLACES
PLS	POLYMER SOLUTION
PLWD	PLYWOOD
PMP	PUMP
PNL(S)	PANEL(S)
POL	POLYMER
POLY	POLYETHYLENE
POS	POSITION
PP	POWER POLE
PPMV	PARTS PER MILLION (VOLUME)
PRC	POINT OF REVERSE CURVATURE
PREFAB	PREFABRICATED
PRG	PRESSURE REGULATOR
PRI	PRIMARY
PROJ	PROJECTION
PRR	PRESSURE OR VACUUM RELIEF VALVE
PRV	PRESSURE REDUCING VALVE, PRESSURE REGULATION VALVE, PRESSURE RELIEF VALVE
PS	PUMP STATION, PIPE SUPPORT
PSF	POUNDS PER SQUARE FOOT
PSG	PRESSURE GAUGE
PSI	POUNDS PER SQUARE INCH
PSIG	POUNDS PER SQUARE INCH GAUGE
PT	POINT, POINT OF TANGENCY
PV	PLUG VALVE
PVC	POINT OF VERTICAL CURVATURE, POLYVINYL CHLORIDE
PVDF	POLYVINYLIDENE FLUORIDE
PVI	POINT OF VERTICAL INTERSECTION
PVMT	PAVEMENT
PVT	POINT OF VERTICAL TANGENCY
PW	POTABLE WATER

Q

QTY	QUANTITY

R

R/W	RIGHT OF WAY
RAD	RADIUS, RADIAL
RAS	RETURN ACTIVATED SLUDGE
RCP	REINFORCED CONCRETE PIPE
RCCP	REINFORCED CONCRETE CYLINDER PIPE
RD	ROOF DRAIN
RDL	ROOF DRAIN LINE
RDOF	ROOF DRAIN OVERFLOW
RECIRC	RECIRCULATING
RED	REDUCER, ROOF EQUIPMENT DRAIN
REF	REFERENCE
REG	REGULATOR, REGULATING
REINF	REINFORCE(D)(ING)(MENT)
REJ	RUBBER EXPANSION JOINT
REQD	REQUIRED
RER	REACTOR
RES	RESERVOIR
REV	REVISION, REVERSE
RF	RETURN FAN
RG	RETURN GRILLE RUBBER GASKET
RH	RIGHT HAND
RHR	RIGHT HAND REVERSE
RHRA	RIGHT HAND REVERSE ACTIVE
RHRB	RIGHT HAND REVERSE BEVEL
RLS	REGISTERED LAND SURVEYOR
RM	ROOM
RO	ROUGH OPENING
ROT	ROTAMETER
RP	RADIUS POINT
RPM	REVOLUTIONS PER MINUTE
RPMP	REINFORCED PLASTIC MORTAR PIPE
RR	RETURN REGISTER
RSR	RISER
RT	RIGHT
RTF	ROTARY FEEDER
RTU	ROOF TOP UNIT
RUD	RUPTURE DISK
RW	RECLAIMED WATER, REUSE WATER
RWR	RECLAIMED WATER RETURN

S

S/W	SIDEWALK
S	SOUTH, SWITCH, SLOPE
SC	SECONDARY CLARIFIER
SCB	SCRUBBER
SCD	SMOKE CONTROL DAMPER
SCFM	STANDARD CUBIC FEET PER MINUTE
SCH	SCHEDULE
SCO	SURFACE CLEANOUT
SCR	BAR SCREEN
SCR	SILICON CONTROL RECTIFIER
SD	SMOKE DETECTOR, SPLITTER DAMPER, STORM DRAIN
SDL	SUMP DISCHARGE DRAIN LINE
SDO	SLUDGE DRAWOFF
SE	SECONDARY EFFLUENT
SEC	SECONDARY, SECOND
SECT	SECTION
SED	SEDIMENTATION
SEP	SEPTAGE
SF	SUPPLY FAN
SFW	SOFTENED WATER
SG	SUPPLY GRILLE
SGS	STORE FRONT GLAZING SYSTEM
SHD	SHOWER DRAIN
SHDR	SOLIDS HANDLING-RECYCLE
SHR	SHOWER
SHT	SHEET
SIM	SIMILAR
SK	SKIMMINGS
SL	SLOPE, SLUDGE
SLC	SLUDGE COLLECTOR DRIVE
SLG	SLIDE GATE
SLV	SLEEVE VALVE
SMP	SAMPLER, SUMP PUMP
SN	SUPERNATANT OR SUBNATANT
SOL	SOLUTION
SP	STATIC PRESSURE, SET POINT
SPD	SUMP PUMP DRAIN
SPDT	SINGLE POLE DOUBLE THROW
SPEC(S)	SPECIFICATION(S)
SPL	SPLITTER BOX
SPR	SPARE
SPS	SAMPLE SINK
SPW	SAMPLE WATER
SQ	SQUARE
SQ FT	SQUARE FEET
SQ IN(S)	SQUARE INCH(ES)
SR	SHORT RADIUS, SUPPLY REGISTER
SRL	SCRUBBER RECIRCULATION LIQUID (CAUSTIC)
SS	SANITARY SEWER, SELECTOR SWITCH
SSK	SERVICE SINK
SSL	SECONDARY SLUDGE
SST	STAINLESS STEEL
ST	SLUDGE TRANSFER
STA	STATION
STB	STABILIZER
STD(S)	STANDARDS(S)
STIFF	STIFFENER
STIR	STIRRUPS
STL	STEEL
STM	STEAM
STP	STEEL PIPE
STR	STRAINER
STRUCT	STRUCTURAL
SUG	SLUICE GATE
SUPT	PIPE SUPPORT, SUPPORT
SV	SERVICE VALVE, SHUTOFF VALVE, SOLENOID VALVE
SWR	SEAL WATER
SYM	SYMMETRICAL
SYN	SYNTHETIC

T

T	TANGENT LENGTH, THERMOSTAT, TIMER
T&B	TOP AND BOTTOM
TAS	THREADED ANCHOR STUD
TBM	TEMPORARY BENCHMARK
TC	TOP OF CURB
TCV	TEMPERATURE CONTROL VALVE

GENERAL NOTES

1. FOLLOWING NOTES ARE GENERAL AND APPLY TO ALL SHEETS OF THESE CONTRACT DOCUMENTS AS IF THEY WERE WRITTEN IN THEIR ENTIRETY ON EACH SHEET.
2. CONTRACTOR SHALL VERIFY ALL DIMENSIONS BEFORE STARTING WORK AND SHALL IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES. CONTRACTOR SHALL BE RESPONSIBLE FOR FIELD VERIFYING ALL EXISTING CONDITIONS INCLUDING LOCATION AND DIMENSIONS OF ALL EXISTING CONSTRUCTION AND UTILITIES. CONTRACTOR SHALL NOTIFY ENGINEER IF THERE IS A CONFLICT BETWEEN THE CONTRACT DOCUMENTS AND EXISTING CONSTRUCTION BEFORE PROCEEDING WITH WORK. ALL CONSTRUCTION AND MATERIALS SHALL CONFORM TO THESE PLANS AND THE LATEST EDITION AND AMENDMENTS OF THE CITY OF ROSEVILLE DESIGN AND CONSTRUCTION STANDARDS.
3. UNLESS DETAILED, SPECIFIED, OR OTHERWISE INDICATED ON THE DRAWINGS, CONSTRUCTION SHALL BE AS INDICATED IN THE APPLICABLE TYPICAL DETAILS AND GENERAL NOTES. TYPICAL DETAILS SHALL APPLY EVEN THOUGH NOT REFERENCED AT SPECIFIC LOCATIONS ON DRAWINGS.
4. WHERE NO CONSTRUCTION DETAILS ARE SHOWN OR NOTED FOR ANY PART OF WORK. DETAILS SHALL BE IN THE SAME AS FOR OTHER SIMILAR WORK.
5. CONTRACTOR SHALL COMPLY WITH LOCAL CONSTRUCTION STORM WATER DISCHARGE REGULATIONS AND REQUIREMENTS.
6. PRIOR TO EXCAVATION FOR NEW STRUCTURES, ELECTRICAL CONDUIT, FABRICATION OF NEW PIPING AND/OR OTHER PROPOSED UTILITIES, CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE LOCATION OF ALL EXISTING PIPING AND UTILITIES IN THE CONSTRUCTION AREA. THE CONTRACTOR SHALL TEMPORARILY RELOCATE CONFLICTING EXISTING UTILITIES AT TIE-IN/CONNECTION LOCATIONS AND REINSTALL THEM AS REQUIRED TO ELIMINATE THE CONFLICT AT NO ADDITIONAL COST TO THE OWNER.
7. ALL PIPELINES 12" AND LARGER SHALL HAVE A MINIMUM COVER OF 36" UNLESS THE COVER DEPTH IS SPECIFICALLY INDICATED ON THE DRAWINGS. PIPE SMALLER THAN 12" SHALL HAVE A MINIMUM COVER OF 30" UNLESS NOTED OTHERWISE. PIPES SHALL BE ROUTED AS SHOWN UNLESS MINOR REVISIONS ARE NECESSARY TO MISS EXISTING PIPES, STRUCTURES, ETC. CONTRACTOR SHALL BE RESPONSIBLE FOR FURNISHING ALL FITTINGS AND ADAPTERS REQUIRED TO MAKE THE ROUTING CHANGES AT NO ADDITIONAL COST TO THE OWNER. CONTRACTOR SHALL INCLUDE COST FOR THIS IN THE BID.
8. EXISTING FACILITY AND UTILITY INFORMATION SHOWN ON THE DRAWINGS WAS OBTAINED FROM AVAILABLE RECORDS OR ELECTRONIC FILES. NEITHER THE OWNER NOR ENGINEER ASSUMES ANY RESPONSIBILITY FOR FACILITIES AND UTILITIES NOT SHOWN OR NOT IN THE LOCATION SHOWN. THE CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS, SIZES, MATERIAL TYPES, AND ELEVATIONS SHOWN AROUND OR NEAR AREAS OF NEW CONSTRUCTION PRIOR TO START OF CONSTRUCTION.
9. THE CONTRACTOR SHALL TAKE ALL PRECAUTIONARY MEASURES NECESSARY TO PROTECT FROM DAMAGE EXISTING FACILITIES AND UTILITIES SHOWN OR NOT SHOWN THAT ARE TO REMAIN IN PLACE. ALL FACILITIES DAMAGED BY THE CONTRACTOR'S OPERATIONS SHALL BE EXPEDITIOUSLY REPAIRED OR RECONSTRUCTED TO THE ORIGINAL OR BETTER CONDITION AT THE CONTRACTOR'S EXPENSE WITHOUT ADDITIONAL COMPENSATION.
10. CONTRACTOR SHALL MAKE CONNECTIONS TO EXISTING PIPE, EQUIPMENT, ETC. AS REQUIRED AND SHALL PROVIDE ALL FITTINGS, ADAPTERS, AND APPURTENANCES REQUIRED TO MAKE THE CONNECTIONS. PROVIDE ALL SUPPORTS REQUIRED FOR A RIGIDLY SUPPORTED COMPLETE AND WORKING SYSTEM.
11. ADJUST ALL VALVE BOXES, VAULTS, PULL BOXES, AND MANHOLES TO FINISHED GRADE UNLESS OTHERWISE SHOWN OR DIRECTED. MANHOLES IN OPEN FIELDS SHALL BE SET TWELVE INCHES ABOVE FINISHED GRADE AND VAULTS SHALL BE SIX INCHES ABOVE FINISHED GRADE.
12. THE CONTRACTOR SHALL CONTACT THE PROPER UTILITY REPRESENTATIVE AS FOLLOWS FOR QUESTIONS OR COORDINATION OF CONSTRUCTION RELATED TO EXISTING UTILITIES.
13. CONTRACTOR SHALL VERIFY THAT PIPING SHOWN TO BE ABANDONED OR AS ABANDONED PREVIOUSLY IS NO LONGER IN SERVICE. LINES IN SERVICE SHALL BE MAINTAINED UNTIL NO LONGER REQUIRED BY THE CITY.
14. ALL EXISTING PIPES THAT ARE TO BE ABANDONED IN PLACE OR REMOVED MAY NOT BE SHOWN. WHERE PIPING IS TO BE ABANDONED AND MUST REMAIN IN SERVICE UNTIL COMPLETION OF OTHER PHASES OF WORK, AND IT CONFLICTS WITH NEW PIPING, TEMPORARILY RELOCATE PIPING AS REQUIRED TO MAINTAIN SERVICE BY THE CITY.
15. CONTRACTOR SHALL REROUTE THE EXISTING PIPING IF REQUIRED TO MISS THE PROPOSED STRUCTURES. THE EXISTING PIPE SHALL REMAIN IN SERVICE UNTIL NEW PIPING IS READY TO BE PLACED INTO SERVICE. DOWNTIME SHALL BE A MAXIMUM OF 2 HOURS, UNLESS SPECIFIED OR SHOWN OTHERWISE.
16. ALL SIDEWALKS WILL BE 3'-0" WIDE OR AT A MINIMUM MATCH THE EXISTING SIDEWALK. THERE ARE UTILITIES RUNNING ACROSS AND PARALLEL TO THE EXISTING SIDEWALKS. NOTIFY DIG ALERT PRIOR TO REMOVING SIDEWALK.
17. THE CONTRACTOR SHALL TAKE SPECIAL PRECAUTIONS IN THE VICINITY OF ANY OVERHEAD ELECTRIC LINES. CONTRACTOR SHALL ABIDE BY THE NATIONAL ELECTRIC CODE AND ANY REQUIREMENT BY THE OWNER OF THE ELECTRIC LINES.
18. PROVIDE ALL SHEETING/SHORING REQUIRED TO PROTECT EXISTING STRUCTURES, PIPES AND FACILITIES.
19. CONTRACTOR SHALL VERIFY LOCATION OF ALL ARCHITECTURAL, MECHANICAL, AND ELECTRICAL ITEMS BEFORE PLACING ANY STRUCTURAL STEEL OR CONCRETE. ALSO, STRUCTURAL DIMENSIONS AND OPENINGS CONTROLLED BY ARCHITECTURAL, MECHANICAL, OR ELECTRICAL EQUIPMENT SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO CONSTRUCTION.
20. MECHANICAL AND ELECTRICAL EQUIPMENT SUPPORTS, ANCHORAGES, OPENINGS, RECESSES, AND REVEALS NOT SHOWN ON THE STRUCTURAL DRAWINGS, THAT ARE REQUIRED BY OTHER CONTRACT DRAWINGS, SHALL BE PROVIDED PRIOR TO CASTING CONCRETE.
21. WATER DISTRIBUTION SYSTEM VALVES ARE ONLY TO BE OPERATED BY CITY STAFF.
22. WASTEWATER COLLECTION SYSTEM OPERATOR MUST BE ON SITE WHEN CORE DRILLING INTO SEWER MANHOLES.
23. NOTIFY THE CITY OF ROSEVILLE UNDERGROUND SERVICE ALERT (U.S.A.) ONE-CALL SYSTEM. THE CONTRACTOR SHALL NOTIFY THE U.S.A. CENTER 48 HOURS IN ADVANCE OF PERFORMING ANY EXCAVATION WORK BY CALLING 1-800-227-2600.

HORIZONTAL/VERTICAL DATUM

THE HORIZONTAL DATUM FOR THIS SURVEY IS THE CALIFORNIA COORDINATE SYSTEM, NAD83, ZONE II AND IS BASED UPON GPS OBSERVATIONS TO NGS STATIONS "NEWFIDDY" (PID DL9185) AND "HPGN CA 03 09" (PID JS4669)

THE VERTICAL DATUM FOR THIS SURVEY IS NAVD88 AND IS BASED UPON CITY OF ROSEVILLE BENCHMARKS BM-10 (3 1/4" BRASS DISK STAMPED 2018 PLS 8278 AT WEST OF D.I. AT SOUTHEAST CORNER OF CIRBY WAY AND SUNRISE BLVD, ELEV. 158.13) AND BM-96 (3 1/4" BRASS DISK STAMPED PLS 8278, AT TOP OF THE CURB 1 FOOT SOUTH OF D.I. AT THE SOUTHWEST CORNER OF THE INTERSECTION OF BLUE OAKS BLVD. AND WOODCREEK OAKS BLVD., ELEV. 114.97)

PROPERTY LINE INFORMATION

THE PROPERTY LINES FOR THE SUBJECT PARCEL ARE BASED ON THE LARGE LOT FINAL MAP OF "CAMPUS OAKS" FILED IN BOOK "DD" OF MAPS, PAGE 47. ADJACENT PROPERTY LINES SHOWN HEREON WERE TAKEN FROM THE CITY OF ROSEVILLE G.I.S. SHAPEFILE ON JUNE 10, 2020 AND ADJUSTED TO FIT THE MONUMENTATION FOUND IN THE COURSE OF THIS SURVEY.

THIS SURVEY WAS PREPARED BY ME OR UNDER MY DIRECT SUPERVISION.

NOTES

GENERAL PIPELINE NOTES:

1. DIMENSIONS TO STRUCTURES, REFERENCED PIPING, PAVING, AND OTHER IMPROVEMENTS IS APPROXIMATE. THE CONTRACTOR SHALL FIELD VERIFY ALL DIMENSIONS AND CONDITIONS 14 DAYS IN ADVANCE OF THE CONSTRUCTION PROGRESS. THE CONTRACTOR SHALL REPORT ANY DISCREPANCIES TO THE ENGINEER.
2. CONTRACTOR SHALL MAINTAIN A MINIMUM CLEARANCE OF 10 FEET HORIZONTAL AND 3 FEET VERTICAL BETWEEN THE SEWER LINES AND EXISTING WATER LINES.
3. REFER TO THE GEOTECHNICAL REPORT LOCATED IN THE APPENDIX OF THE SPECIFICATIONS FOR ADDITIONAL INFORMATION ON THE GEOTECHNICAL CONDITIONS AND BORING INFORMATION.
4. IN ALL LOCATIONS WHERE TRENCH PLATE IS USED FOR VEHICULAR OR PEDESTRIAN TRAFFIC, THE CONTRACTOR SHALL APPLY SKID RESISTANT COATING ON THE TRENCH PLATES AND COLD MIX ASPHALT CONCRETE AT THE EDGES. THE TRENCH PLATES SHALL BE NOTCHED INTO THE ASPHALT, CONCRETE, OR TRAVELED SURFACE TO PREVENT SLIPPAGE AND ROCKING UNDER TRAFFIC.
5. THE CONTRACTOR SHALL MAINTAIN ACCESS TO ALL PROPERTIES ADJACENT TO THE WORK, THROUGHOUT THE CONSTRUCTION PERIOD.
6. ALL OPEN TRENCHES, WORK AREAS AND SHAFTS SHALL HAVE A SHORING SYSTEM IN ACCORDANCE WITH OSHA, STATE AND LOCAL REQUIREMENTS.
7. THE CONTRACTOR SHALL COMPLY WITH ALL FEDERAL, STATE, COUNTY, AND LOCAL LAWS AND ORDINANCES RELATING TO THE SAFETY AND CHARACTER OF WORK, EQUIPMENT AND PERSONNEL. THIS INCLUDES BUT IS NOT LIMITED TO SHEETING, SHORING, BRACING, VENTILATION, CONFORMANCE WITH TRAFFIC CONTROL AND MAINTENANCE OF BARRICADES AND WARNING DEVICES.
8. LAYOUT DRAWINGS ARE REQUIRED FOR PIPING INSTALLED.
9. CONTRACTOR SHALL TAKE ALL PRACTICAL PRECAUTIONS TO MINIMIZE DISTURBANCES TO STREAMS, VEGETATION, TREES AND CROP LANDS. WHEREVER PRACTICAL LEAVE EXISTING TREES AND VEGETATED AREAS UNDISTURBED.

UTILITY NOTES:

1. EXISTING UTILITIES IN THE PROJECT MAY BE IN A FRAGILE CONDITION. THE CONTRACTOR SHALL EXERCISE NECESSARY CAUTION WHEN WORKING NEAR EXISTING UTILITIES.
2. PLAN LOCATIONS AND ELEVATIONS OF EXISTING UTILITIES ARE BASED ON RECORD DRAWINGS, POTHOLING AND SURVEY INFORMATION AND ARE CONSIDERED APPROXIMATE ONLY. WHERE NO ELEVATIONS ARE SHOWN, NO INFORMATION WAS AVAILABLE DURING THE DESIGN PERIOD.
3. SOME UTILITY SERVICES MAY NOT BE SHOWN ON THESE DRAWINGS. THE CONTRACTOR SHALL TAKE NECESSARY MEASURES TO LOCATE AND PROTECT SERVICE DURING CONSTRUCTION.
4. CONTRACTOR SHALL CALL THE LOCAL UTILITY LOCATOR PRIOR TO ANY EXCAVATION ACTIVITIES.
5. NOTIFY THE CITY OF ROSEVILLE UNDERGROUND SERVICE ALERT (U.S.A.) ONE-CALL SYSTEM. THE CONTRACTOR SHALL NOTIFY THE U.S.A. CENTER 48 HOURS IN ADVANCE OF PERFORMING ANY EXCAVATION WORK BY CALLING 1-800-227-2600.
6. THE LOCATION, SIZE, AND MATERIALS OF EXISTING UNDERGROUND UTILITIES SHOWN ON THESE DRAWINGS ARE APPROXIMATE AND IS SHOWN FOR BIDDING PURPOSES. THE CONTRACTOR SHALL BE RESPONSIBLE TO CONTACT THE UTILITY OWNERS SO THAT THOSE UTILITIES MAY MARK THE LOCATION OF THEIR UTILITIES PRIOR TO ANY EXCAVATION ACTIVITIES. THE CONTRACTOR SHALL BE RESPONSIBLE TO LOCATE AND PROTECT EXISTING UTILITIES.

EARTHWORK NOTES:

1. CLEAR THE CONSTRUCTION AREA OF NATURAL OBSTRUCTIONS EXISTING FOUNDATIONS, BUILDINGS, FENCES, LUMBER, WALLS, STUMPS, BRUSH, WEEDS, RUBBISH, TREES, BOULDERS, AND ANY OTHER ITEMS WHICH INTERFERES WITH CONSTRUCTION OPERATIONS OR ARE DESIGNATED FOR REMOVAL.
2. GRUB OUT AND DISPOSE OF TREE TRUNKS AND ROOT MATERIAL BELOW THE GROUND SURFACE REMAINING AFTER CLEARING.
3. DISPOSE OF THE UNACCEPTABLE BACKFILL MATERIAL FROM THE CLEARING AND GRUBBING OPERATIONS AT NO ADDITIONAL COST TO THE OWNER.
4. STRIP AND STOCKPILE THE TOPSOIL. THE DEPTH OF STRIPPING SHALL BE ESTIMATED TO BE 12-INCHES BUT WILL BE DETERMINED IN THE FIELD AS SOIL CONDITIONS DICTATE.
5. REPLACE STOCKPILED SOIL AND RESTORE SITE AS SPECIFIED.
6. ROCK AND AGGREGATE STORAGE AREAS SHALL BE RESTORED BY EXCAVATING ANY SOILS CONTAINING ROCK OR AGGREGATE AND BACKFILLING WITH TOPSOIL. SOIL REMOVED MAY BE USED FOR TRENCH BACKFILL ABOVE THE PIPE ZONE AND 3 FEET BELOW FINISHED GRADE.

STAGING AREAS:

1. THE CITY SHALL PROVIDE STAGING AREAS ON AND/OR NEAR TO THE SITES FOR THE TEMPORARY STORAGE OF MATERIALS AND EQUIPMENT. THE CITY IS NOT RESPONSIBLE FOR SECURITY AND THEFT. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PUBLIC SAFETY. REFER TO TECHNICAL SPECIFICATIONS.

1 DETAIL

SCALE: 1" =10'-0"
FILE: 11843A1013C001

GENERAL NOTES:

1. THE PLANS HAVE BEEN PREPARED IN PART BASED ON AVAILABLE RECORD INFORMATION. CONTRACTOR IS RESPONSIBLE FOR VERIFYING ALL EXISTING CONDITIONS PRIOR TO BEGINNING THE WORK.
2. SURFACE RESTORATION REQUIRED AT TRENCHES AND EXCAVATION IS NOT SHOWN ON THESE PLANS.
3. SEE DETAIL 2/13C05 FOR TYPICAL PAVEMENT SECTION.

X KEY NOTES:

1. FUTURE WATER TREATMENT FILTER VESSELS, IF REQUIRED. NOT PART OF THIS CONTRACT.
2. FUTURE FILTER BACKWASH TANK AND SEWER AIR-GAP, IF REQUIRED. NOT PART OF THIS CONTRACT.
3. ELECTRICAL TRANSFORMER, SEE 13E01.
4. 2" BACKFLOW PREVENTER INSTALL SIMILAR TO CITY OF ROSEVILLE STANDARD DETAIL W-7.
5. FIBER OPTIC HANDHOLE, SEE 13E01.
6. AUTOMATIC GATE OPENER PER SECTION 02820.
7. AUTOMATIC ROLLING GATE PER SECTION 02820.
8. GATE KEY PAD PER SECTION 02820.
9. AIR-GAP STRUCTURE TO STORM DRAIN. SEE DETAIL 1/13C05 FOR DETAILS.
10. EXISTING MONITORING WELL.
11. CMU WALL (REFER TO 13C04 FOR COORDINATE POINTS).
12. PAVED DRIVE. REMOVE AND REPLACE CURB AND GUTTER TO MEET CITY STANDARD DETAIL ST-21. INSTALL DETACHED SIDEWALK PER CITY DETAIL ST-7.
13. FUTURE LOCATION FOR FIRE PROTECTION BACKFLOW AND FDC ASSEMBLY PER CITY OF ROSEVILLE STANDARD DETAIL W-2.
14. FLOW METER INSTALL SIMILAR TO CITY OF ROSEVILLE STANDARD DETAIL W-7.
15. CONDENSING UNIT, SEE MECHANICAL DRAWINGS.
16. CONCRETE LANDING, SLOPED AT 1/4" PER FOOT AWAY FROM THE BUILDING FOR DRAINAGE PER CR306/TYP.
17. PEDESTRIAN ACCESS GATE.
18. INSTALL 20 FT WIDE IRRIGATED LANDSCAPED STRIP WITH CITY APPROVED SHRUBS AND GROUND COVER.
19. IRRIGATION CONTROL PANEL AND CONDUIT. POST MOUNT OR SURFACE MOUNT ON PERIMETER WALL.
20. EXISTING FIRE HYDRANT.
21. EXISTING STREET LIGHT.
22. INSTALL TYPE 2 VERTICAL CURB AND GUTTER PER CITY OF ROSEVILLE STANDARD DETAIL ST-17. START AND STOP AT EXISTING SCORE MARKS OR JOINTS. REMOVE AND REPLACE BARRICADES AS REQUIRED.
23. INSTALL TYPE D DRIVEWAY APRON PER CITY OF ROSEVILLE STANDARD DETAIL ST-21.
24. ELECTRICAL PULL BOX, SEE 13E01.
25. EXISTING FIBER OPTIC STUB UP AND ELECTRICAL UTILITY VAULT. CONTRACTOR TO DEMOLISH AND ROUTE NEW FO CABLE AND ELEC CONDUIT TO THE NEW FIBER OPTIC HANDHOLE AND TRANSFORMER. SEE ELECTRICAL DRAWINGS..
26. STORM DRAIN MANHOLE PER CITY OF ROSEVILLE STANDARD DETAIL DR-4 WITH DETAIL DR-8 GRATE COVER.
27. POLE FOR LICENSE PLATE READER CAMERAS, SEE ELECTRICAL DRAWINGS.

1 **DETAIL**
SCALE: 1" =10'-0"
FILE: 11843A1013C002

GENERAL NOTES:

1. SEE GENERAL NOTES ON SHEET 00G04 AND CIVIL NOTES ON 00GC01.
2. OFFSITE UTILITIES EXTENDED TO SITE BY OTHERS. CONNECT TO SERVICES PROVIDED IN FIELD.
3. REFER TO PIPE PROFILES FOR INVERT ELEVATIONS NOT CALLED OUT ON THE PLANS. MAINTAIN MINIMUM 36" COVER WHERE ANY INVERT ELEVATION IS NOT IDENTIFIED.
4. PIPE TRENCHING AND SURFACE RESTORATION SHALL BE PER THE CITY OF ROSEVILLE STANDARD DETAILS AND CY111/TYP.
5. THE CONTRACTOR SHALL RESTORE ALL LANDSCAPING AND IRRIGATION COMPONENTS PER THE CITY OF ROSEVILLE STANDARDS WHERE DISTURBED AS A RESULT OF THIS WORK. PLANTS SHALL BE REPLACED IN KIND AND SIZE BY THE CONTRACTOR.
6. REFER TO DRAWING 00GM05 FOR PIPE SCHEDULE AND SECTION 15052 FOR GENERAL PIPING REQUIREMENTS.
7. THESE PLANS HAVE BEEN PREPARED IN PART BASED ON AVAILABLE RECORD INFORMATION. CONTRACTOR IS RESPONSIBLE FOR VERIFYING ALL EXISTING CONDITIONS PRIOR TO BEGINNING OF THE WORK.
8. EXISTING INVERT ELEVATIONS ARE BASED ON AVAILABLE RECORD INFORMATION. CONTRACTOR SHALL FIELD VERIFY INVERT ELEVATIONS PRIOR TO BEGINNING THE WORK.
9. SEE DWG 13C06 FOR COORDINATE POINTS.
10. BURIED DI PIPE SHALL BE PROTECTED WITH A CATHODIC PROTECTION SYSTEM OR WAX TAPE PER SPECIFICATION 15320. ANODE AND TEST STATION SPACING/PLACEMENT ARE APPROXIMATE BASED ON OBSTACLES IN AREA AND MAY BE MOVED. ALL ISOLATION FLANGES MUST HAVE ISOLATION JOINT FLANGE KIT TEST STATION INSTALLED AT THE LOCATION. ISOLATE ALL DISSIMILAR PIPE, VALVES, ETC. ADD JOINT BONDING TO DIP, REFER TO CP150 FOR JOINT BOND DETAILS.

KEY NOTES:

1. NOT USED
2. PROVIDE HAND HOLE PER ROSEVILLE ELECTRIC REQUIREMENTS.
3. STORM DRAIN MANHOLE PER CITY OF ROSEVILLE STANDARD DETAIL DR-4 WITH DETAIL DR-8 GRATE COVER.
4. STUB OUT FOR FUTURE CONNECTION.
5. PROVIDE 4" DIP WITH BLIND FLANGE AND BLOW OFF 24" ABOVE FINISHED GRADE. TYPICAL OF THREE LOCATIONS.
6. ROUTE EACH 1" SAMPLE LINE FROM EXISTING MONITORING WELL TO INSIDE THE BUILDING (TWO TOTAL). ROUTE SAMPLE LINE TO AVOID OTHER UTILITIES. WORK INCLUDES ALL FITTINGS, WALL PENETRATIONS, AT-GRADE HANDHOLES, AND PIPE SUPPORTS AS REQUIRED.
7. ROUTE EACH 1" SAMPLE LINE FROM EXISTING MONITORING WELL TO THE SD AIR GAP STRUCTURE (TWO TOTAL). ROUTE SAMPLE LINE TO AVOID OTHER UTILITIES, WORK INCLUDES ALL FITTINGS, WALL PENETRATIONS AT-GRADE HANDHOLES, AND PIPE SUPPORTS AS REQUIRED.
8. NOT USED.
9. CONNECT TO EXISTING 18" STORM DRAIN STUB OUT.
10. EXISTING 16" STUB UP. INSTALL BUTTERFLY ISOLATION VALVE AND 4" BLOW OFF SIMILAR TO TYP/CY733.
11. BACKFLOW PREVENTER, FLOW METER AND CORP STOP PER CITY OF ROSEVILLE STANDARD DETAIL W-7.
12. CONTRACTOR TO DEMOLISH EXISTING SEWER LATERAL PIPE AND ROUTE NEW SEWER PIPE FROM EXISTING SSMH-0 TO THE FACILITY.
13. CONTRACTOR TO DEMOLISH EXISTING FIBER OPTIC STUB UP AND ELECTRICAL UTILITY VAULT AND ROUTE NEW FO CABLE AND ELEC CONDUIT TO THE NEW FIBER OPTIC HANDHOLE AND TRANSFORMER. SEE ELECTRICAL DRAWINGS.

GENERAL NOTES:

1. THE PLANS HAVE BEEN PREPARED IN PART BASED ON AVAILABLE RECORD INFORMATION. CONTRACTOR IS RESPONSIBLE FOR VERIFYING ALL EXISTING CONDITIONS PRIOR TO BEGINNING THE WORK.
2. SURFACE RESTORATION REQUIRED AT TRENCHES AND EXCAVATION IS NOT SHOWN ON THESE PLANS.
3. SEE DETAIL 2/19C05 FOR TYPICAL PAVEMENT SECTION.
4. CONTRACTOR SHALL FOLLOW TREE PERMIT REQUIREMENTS, SEE SPECIFICATION 01562.
5. SEE CITY STANDARD CONSTRUCTION SPECIFICATIONS FOR ADDITIONAL REQUIREMENTS.
6. SLOPE ALL FINISHED PAVEMENT WITHIN 4 FEET AT A MINIMUM OF 2% SLOPE AWAY FROM STRUCTURE.

KEY NOTES CONT'D:

18. REMOVE AND REPLACE EXISTING CONCRETE SQUARE CURB AND GUTTER WITH DEPRESSED CURB PER CITY STANDARD DETAIL ST-21. START AND STOP AT EXISTING SCORE MARKS OR JOINTS.
19. REMOVE AND REPLACE EXISTING 8 FT WIDE CONCRETE SIDEWALK. MATCH EXISTING CONCRETE COLOR AND FINISH. START AND STOP AT EXISTING SCORE MARKS OR JOINTS.
20. THE CONTRACTOR SHALL PROVIDE A TEMPORARY SAFE, SMOOTH, AND FIRM PEDESTRIAN ACCESS ALONG THE EXISTING SIDEWALK PATHWAY.
21. ESTABLISH NEW 2'-6" POST AND CABLE FENCE TO MATCH EXISTING.
22. FIRE HYDRANT AND 6" GATE VALVE PER CITY OF ROSEVILLE STANDARD DETAIL W-13 AND W-16.
23. IRRIGATION CONTROL PANEL AND CONDUIT. POST MOUNT OR SURFACE MOUNT ON PERIMETER WALL.
24. REMOVE EXISTING SMALL TREES, (LESS THAN 6" DIAMETER) AND CUT LIMBS TO PROVIDE 10' CLEARANCE. COORDINATE WITH CITY ARBORIST.
25. INSTALL 10 FT WIDE IRRIGATED LANDSCAPED STRIP WITH CITY APPROVED SCREENING BUSHES OR TREES.
26. LIMITS OF DISTURBANCE/CONTRACTOR WORK AREA.
27. ALLOWANCE ITEM #1 REPLACE EXISTING RESIDENTIAL WROUGHT IRON FENCE.
28. KEYSTONE STYLE BLOCK WALL.
29. CONCRETE LANDING PAD, MIN 2% SLOPE TO DRAIN.
30. POLE FOR LICENSE PLATE READER CAMERAS, SEE ELECTRICAL DRAWINGS.
31. INSTALL "NO PARKING" SIGN.
32. HAND PLACE 4"-6" RIP RAP AT BOTH ENDS OF THE CROSS GUTTER, WITH FILTER FABRIC UNDERLAYMENT.
33. ELECTRICAL PULL BOX, SEE 19E01.
34. NOT USED

KEY NOTES:

1. FUTURE WATER TREATMENT FILTER VESSELS AND BACKWASH TANK.
2. FUTURE FILTER BACKWASH TANK.
3. ELECTRICAL TRANSFORMER, SEE 19E01.
4. 2" BACKFLOW PREVENTER INSTALL SIMILAR TO CITY OF ROSEVILLE STANDARD DETAIL W-7.
5. FIBER OPTIC HANDHOLE, SEE 19E01.
6. AUTOMATIC GATE OPENER PER SECTION 02820.
7. AUTOMATIC ROLLING GATE PER SECTION 02820.
8. GATE KEY PAD PER SECTION 02820.
9. AIR-GAP STRUCTURE TO STORM DRAIN. SEE 19C05 FOR DETAILS.
10. FUTURE AIR GAP STRUCTURE TO SEWER.
11. CMU WALL (REFER TO 13C04 FOR COORDINATE POINTS).
12. PAVED DRIVE WAY.
13. FUTURE LOCATION FOR FIRE PROTECTION BACKFLOW AND FDC ASSEMBLY PER CITY OF ROSEVILLE STANDARD DETAIL W-2.
14. FLOWMETER INSTALL SIMILAR TO CITY OF ROSEVILLE STANDARD DETAIL W-7.
15. CONDENSING UNIT, SEE MECHANICAL DRAWINGS.
16. CONCRETE LANDING, SLOPED AT 1/4" PER FOOT FOR DRAINAGE PER CR306/TYP.
17. PEDESTRIAN ACCESS GATE.

8. PROVIDE 4" DIP WITH BLIND FLANGE AND BLOW OFF 24" ABOVE FINISHED GRADE. TYPICAL OF THREE LOCATIONS.
9. ROUTE EACH 1" SAMPLE LINE FROM EXISTING MONITORING WELL TO INSIDE THE BUILDING (TWO TOTAL). ROUTE SAMPLE LINE TO AVOID OTHER UTILITIES. WORK INCLUDES ALL FITTINGS, WALL PENETRATIONS, AT-GRADE HANDHOLES, AND PIPE SUPPORTS AS REQUIRED.
10. ROUTE EACH 1" SAMPLE LINE FROM EXISTING MONITORING WELL TO THE SD AIR GAP STRUCTURE (TWO TOTAL).
11. ENCASE 4" DRAIN IN CONCRETE FROM THE BUILDING TO THE MANHOLE INSTALL TWO FLEXIBLE COUPLINGS (FLEX-SEAL ARC SHIELDED ADJUSTABLE SEWER REPAIR COUPLING MR56 ARC SERIES OR EQUAL) TO ALLOW FOR DEFLECTION BETWEEN THE BUILDING AND MANHOLE.
12. BACKFLOW PREVENTER AND FLOWMETER PER CITY OF ROSEVILLE STANDARD DETAIL W-7.
13. FIRE HYDRANT AND 6" GATE VALVE PER CITY OF ROSEVILLE STANDARD DETAIL W-13 AND W-16.
14. SPECIAL TRENCH: CUT PAVEMENT RESTORATION SECTION PER CITY STANDARD TB-6, 3' BEHIND THE BACK OF CURB, TYP OF ALL WORK IN PAVED AREA.
15. CONTRACTOR SHALL POTHOLE TO IDENTIFY EXISTING UTILITY CROSSINGS ALONG THE PROPOSED SEWER FORCE MAIN. SUBMIT A CONSTRUCTION PLAN TO THE ENGINEER FOR REVIEW AND APPROVAL.
16. STORM DRAIN MANHOLE PER CITY OF ROSEVILLE STANDARD DETAIL DR-4 WITH DETAIL DR-8 GRATE COVER.

GENERAL NOTES:

1. EXTERIOR FACE OF ALL CONCRETE MASONRY UNITS SHALL BE FINISHED WITH WATER REPELLANT, REFERENCE SPECIFICATION SECTION 07190.
2. FOR DOOR SCHEDULES AND ROOF FINISHES, REFERENCE SHEET 19GA01.
3. FOR EXTERIOR ENTRANCE PADS, REFERENCE CIVIL DRAWINGS.
4. COORDINATE WITH STRUCTURAL DRAWINGS SLOPE OF WOOD TRUSSES AND PLYWOOD DECKING REQUIREMENTS.

KEY NOTES:

1. 12" X 8" X 16" INTEGRALLY COLORED SMOOTH-FACE CONCRETE MASONRY UNITS, COLOR AS SELECTED BY OWNER
2. 12" X 8" X 16" INTEGRALLY COLORED SPLIT-FACE CONCRETE MASONRY UNITS, COLOR AS SELECTED BY OWNER
3. OVERHEAD COILING DOOR, REFERENCE SPECIFICATION SECTION 08332
4. GUARD POST AT EACH SIDE OF COILING DOOR, REFERENCE CIVIL DRAWINGS
5. STANDING SEAM METAL ROOF SYSTEM, REFERENCE SPECIFICATION SECTION 07415
6. FOR GUTTER AND DOWNSPOUT, REFERENCE TYPICAL DETAIL AG227/TYP
7. FOR CONCRETE SPLASH BLOCK, REFERENCE TYPICAL DETAIL AG229/TYP
8. ROOF HATCH AND PREFABRICATED CURB, REFERENCE SPECIFICATION SECTION 07722
9. ALUMINUM FASCIA, REFERENCE SPECIFICATION SECTION 07415
10. ALUMINUM SOFFIT, REFERENCE SPECIFICATION SECTION 07415
11. FOR HVAC UNIT, LOUVERS, AND EQUIPMENT, REFERENCE MECHANICAL DRAWINGS
12. MASONRY CONTROL JOINT, REFERENCE STRUCTURAL DRAWINGS

GENERAL NOTES:

1. USE STRUCTURAL DRAWINGS IN CONJUNCTION WITH PROJECT DRAWINGS BY OTHER DISCIPLINES AND WITH THE SPECIFICATIONS.
2. UNLESS DETAILED, SPECIFIED, OR INDICATED OTHERWISE, CONSTRUCTION SHALL BE AS INDICATED IN THE GENERAL NOTES AND TYPICAL DETAILS.
3. PRESENTATION CONVENTIONS FOR STRUCTURAL DRAWINGS:
   A. SCREENED LINE WORK INDICATES EXISTING CONDITIONS.
   B. WRITTEN DIMENSIONS TAKE PRECEDENCE OVER SCALED SIZES.
   C. PLANS ARE TREATED AS HORIZONTAL SECTIONS. (I.E.: "PLAN AT ELEVATION 110" SHOWS CONSTRUCTION AT AND BELOW ELEVATION 110.)
4. VERIFY DIMENSIONS AND CONDITIONS BEFORE BEGINNING WORK. ADVISE ENGINEER IMMEDIATELY OF DISCREPANCIES BETWEEN EXISTING CONDITIONS AND DIMENSIONS, AND INFORMATION SHOWN ON THESE DRAWINGS. CONFIRM THE FOLLOWING BEFORE PREPARATION AND SUBMITTAL OF SHOP DRAWINGS:
   A. DIMENSIONS AND WEIGHTS FOR EQUIPMENT SELECTED.
   B. SIZES AND LOCATIONS OF EQUIPMENT PADS FOR EQUIPMENT SELECTED.
5. TYPICAL DETAILS ARE INCLUDED ON THE "TS" DRAWINGS.
   A. TYPICAL DETAILS ARE INTENDED TO APPLY AT LOCATIONS DESCRIBED BY THEIR TITLES, EVEN WHEN NOT SPECIFICALLY REFERENCED ON THE DRAWINGS.
   B. IN STRUCTURAL TYPICAL DETAILS, ORIENTATION OF BARS IN EACH MAT OF REINFORCEMENT (WHETHER "LINES" OR "DOTS"ARE CLOSER TO THE FACE OF THE CONCRETE) IS GENERALLY ARBITRARY. SEE DRAWINGS OF EACH STRUCTURE FOR ORIENTATION REQUIRED AT THAT STRUCTURE.
6. SEE CIVIL DRAWINGS FOR STRUCTURE COORDINATES. POINTS ON THE STRUCTURES TO WHICH SITE COORDINATES REFER ARE SHOWN ON THE STRUCTURAL PLANS.
7. DRAWINGS PREPARED BY OTHER DISCIPLINES INCLUDE OPENINGS, ANCHORS, PIPES, CONDUITS, AND OTHER ITEMS THAT ARE EMBEDDED INTO OR PASS THROUGH STRUCTURES.
   A. CONFIRM SIZE AND LOCATIONS OF OPENINGS, PENETRATIONS AND EMBEDMENT FOR ITEMS AND EQUIPMENT FURNISHED.
   B. IN GENERAL, OPENINGS, EMBEDMENTS, AND PENETRATIONS LESS THAN 12 INCHES IN DIAMETER ARE NOT SHOWN ON THE STRUCTURAL DRAWINGS.
   C. SEE MECHANICAL DRAWINGS FOR DETAILS OF PIPE PENETRATIONS, PIPE SUPPORTS, AND ASSOCIATED STRUCTURAL REQUIREMENTS.
   D. SEE MECHANICAL DRAWINGS FOR EQUIPMENT PADS AND PIPE SUPPORTS.
8. SEE ARCHITECTURAL DRAWINGS FOR LOCATIONS AND SIZES OF DOOR AND WINDOW OPENINGS.

STRUCTURAL DESIGN CRITERIA - GENERAL:

SEE DRAWINGS OF INDIVIDUAL STRUCTURES FOR SPECIFIC DESIGN CRITERIA BASED ON THESE OVERALL CRITERIA FOR THE SITE.

1. BUILDING CODE:
   A. 2022 CALIFORNIA BUILDING CODE ("CBC 2022") WITH ASCE 7-16.
   B. LOCAL AMENDMENTS: CITY OF ROSEVILLE.
2. STRUCTURE RISK CATEGORY: SEE PLANS FOR EACH STRUCTURE.
3. DEAD LOADS: CALCULATED FOR STRUCTURE SELF-WEIGHT.
4. LIVE LOADS: (REDUCTIONS NOT USED)
   A. FLOOR LIVE LOAD: SEE PLANS.
   B. GRATING AND CHECKERED PLATE: 100 PSF (UNO).
   C. ROOF LIVE LOAD: SEE PLANS (25 PSF MINIMUM).
   D. EQUIPMENT LOADS: SEE PLANS.
5. FLUID PRESSURE LOADS: 63 PSF/FT (UNO).
6. WIND DESIGN DATA FOR MISTY WOODS AND CAMPUS OAKS:
   A. SPECIAL WIND REGION: NO
   B. WIND-BORNE DEBRIS REGION: NO
   C. BASIC WIND SPEED (3 SEC GUST, 33 FEET ABOVE GROUND): 105 MPH.
7. MISTY WOODS EARTHQUAKE DESIGN DATA:

		0.2 SECOND	*1.0 SECOND
A.	SITE CLASS: D.		
B.	MAPPED SPECTRAL RESPONSE ACCELERATIONS:	Ss = 0.447 g	S1 = 0.223 g
C.	SITE COEFFICIENTS:	Fa = 1.443	Fv = 2.154
D.	MAXIMUM CONSIDERED ACCELERATIONS:*	Sms =0.645 g	Sm1 = 0.48
E.	DESIGN SPECTRAL RESPONSE ACCELERATIONS:* (* 5% DAMPED)	Sds = 0.43 g	Sd1 = 0.32

8. CAMPUS OAKS EARTHQUAKE DESIGN DATA:

		0.2 SECOND	*1.0 SECOND
A.	SITE CLASS: D.		
B.	MAPPED SPECTRAL RESPONSE ACCELERATIONS:	Ss = 0.447 g	S1 = 0.224 g
C.	SITE COEFFICIENTS:	Fa = 1.443	Fv = NULL
D.	MAXIMUM CONSIDERED ACCELERATIONS:*	Sms =0.645 g	Sm1 = NULL
E.	DESIGN SPECTRAL RESPONSE ACCELERATIONS:* (* 5% DAMPED)	Sds = 0.43 g	Sd1 = NULL

9. CONSTRUCTION LOADS:
   STRUCTURES HAVE BEEN DESIGNED FOR OPERATING LOADS ON COMPLETED FACILITIES. UNTIL CONSTRUCTION IS COMPLETE AND MEMBERS HAVE ACHIEVED THEIR DESIGN STRENGTH, PROTECT STRUCTURES AS REQUIRED BY SHORING, BRACING, AND BALANCING.

GEOTECHNICAL REPORT / FOUNDATION DESIGN CRITERIA FOR MISTY WOODS:

1. GEOTECHNICAL INVESTIGATION REPORT:
   TITLE: AQUIFER STORAGE RECOVERY WELL AND PUMP STATION MISTY WOODS ASR WELL (WELL 19).
   PREPARED BY: ENGEO.
   REPORT NO: 17340.000.000 DATED: FEBRUARY 27, 2023.
2. FOUNDATION DESIGNS ARE BASED ON RECOMMENDATIONS IN THE GEOTECHNICAL INVESTIGATION REPORT.
   A. NET ALLOWABLE BEARING PRESSURE SEE PLANS.
   B. FROST DEPTH: 0
   C. LATERAL EARTH PRESSURE (UNO):
      SURCHARGE: EQUIVALENT TO 2 FEET OF SOIL ABOVE FINISHED GRADE.

	STATIC	SEISMIC
ACTIVE (PSF/FT):	40	53
AT REST (PSF/FT):	60	80
PASSIVE (PSF/FT):	300	450
SLIDING COEFFICIENT OF FRICTION:	0.30	0.45

   D. GROUNDWATER EL 0.00'.

GEOTECHNICAL REPORT / FOUNDATION DESIGN CRITERIA FOR CAMPUS OAKS:

1. GEOTECHNICAL INVESTIGATION REPORT:
   TITLE: AQUIFER STORAGE RECOVERY WELL AND PUMP STATION CAMPUS OAKS WELL.
   PREPARED BY: ENGEO.
   REPORT NO: 17340.000.000 DATED: AUGUST 30, 2021.
2. FOUNDATION DESIGNS ARE BASED ON RECOMMENDATIONS IN THE GEOTECHNICAL INVESTIGATION REPORT.
   A. NET ALLOWABLE BEARING PRESSURE SEE PLANS.
   B. FROST DEPTH: 0
   C. LATERAL EARTH PRESSURE (UNO):
      SURCHARGE: EQUIVALENT TO 2 FEET OF SOIL ABOVE FINISHED GRADE.

	STATIC	SEISMIC
ACTIVE (PSF/FT):	40	53
AT REST (PSF/FT):	60	80
PASSIVE (PSF/FT):	300	450
SLIDING COEFFICIENT OF FRICTION:	0.30	0.45

   D. GROUNDWATER EL 19.00'.

TYPICAL STRUCTURAL MATERIALS:

1. MATERIALS SHALL CONFORM TO THE FOLLOWING REQUIREMENTS UNLESS OTHERWISE INDICATED ON THE DRAWINGS.
2. SEE PROJECT SPECIFICATIONS AND NOTES ON DRAWINGS OF SPECIFIC STRUCTURES FOR DETAILED AND LOCATION-SPECIFIC REQUIREMENTS.

REINFORCING STEEL (FOR CONCRETE AND MASONRY):

1. DEFORMED BARS:
   A. TYPICAL: ASTM A 615, GRADE 60.
   B. WHERE INDICATED ON THE DRAWINGS: ASTM A 706.
2. WELDED WIRE FABRIC: ASTM A 1064.

CONCRETE:

1. NORMAL DENSITY.
2. MINIMUM SPECIFIED CONCRETE COMPRESSIVE STRENGTH, f'c (AT 28 DAYS UNO).
   A. STRUCTURES: "CLASS A"OR "CLASS B" f'c = 4000 PSI.
   B. FILL AND THRUST BLOCKS: "CLASS C" f'c = 2500 PSI.
   C. PIPE ENCASEMENT: "CLASS CE" f'c = 2500 PSI.
   D. ELECTRICAL DUCT ENCASEMENT: "CLASS CE" f'c = 2500 PSI.

MASONRY:

1. CONCRETE MASONRY
   A. UNITS: ASTM C 90, NORMAL WEIGHT.
   B. MORTAR: ASTM C 270, MINIMUM 28-DAY COMPRESSIVE STRENGTH = 1800 PSI.
   C. GROUT: ASTM C 476. MINIMUM 28-DAY COMPRESSIVE STRENGTH = 2000 PSI.
   D. MINIMUM SPECIFIED COMPRESSIVE STRENGTH, f'm (AT 28 DAYS).
      1) SOLID GROUTED: f'm = 1500 PSI.

STRUCTURAL STEEL:

1. SECTIONS
   A. SHAPES W, WT: ASTM A 992 (Fy = 50 KSI)
   B. SHAPES S, ST, M, MT, HP, C, MC, L: ASTM A 36 (Fy = 36 KSI)
   C. PLATES AND BARS: ASTM A 36 (Fy = 36 KSI)
   D. PIPES: ASTM A 53, GRADE B (Fy = 35 KSI)
   E. HOLLOW STRUCTURAL SECTIONS:
      ROUND: ASTM A 500, GRADE B (Fy = 42 KSI)
      SQUARE AND RECTANGULAR: ASTM A 500, GRADE B (Fy = 46 KSI)
2. CONNECTIONS:
   A. BOLTS - STEEL TO-STEEL:
      ASTM F 3125 GRADE A325 HIGH-STRENGTH BOLTS, WITH LOAD INDICATOR WASHERS.
   B. BOLTS - STEEL TO CONCRETE OR MASONRY:
      ANCHOR BOLTS WITH HEX FORGED HEAD.
      ASTM F 593, STAINLESS TYPE 316 (304)
      ASTM F 1554, GRADE 36 GALVANIZED.
   C. WELDS - SHIELDED METAL ARC PROCESS USING E70-XX ELECTRODES.

STAINLESS STEEL:

1. ANSI TYPE 316/316L EXCEPT WHERE TYPE 304/304L IS INDICATED ON THE DRAWINGS.
2. SECTIONS: SHAPES AND BARS: ASTM A 276.
3. BOLTED CONNECTIONS - BOLTS AND ANCHOR BOLTS:
   A. MATCH ALLOY OF THE STRUCTURAL MEMBERS CONNECTED.
   B. TYPE 316/316L: ASTM F 593, GRADE B8M, CLASS 1, HEAVY HEX.
   C. TYPE 304/304L: ASTM F 593, GRADE B8, CLASS 1, HEAVY HEX.
4. WELDED CONNECTIONS:
   A. TYPE 316L: E316L-15 ELECTRODES.
   B. TYPE 304L: E304L-15 ELECTRODES.

CONSTRUCTION:

CONFORM TO THE FOLLOWING REQUIREMENTS UNLESS OTHERWISE INDICATED ON THE DRAWINGS.

EXCAVATION AND BACKFILLING:

1. EXPOSE AND PREPARE SUBGRADE AS SHOWN ON THE DRAWINGS AND SPECIFIED. OBTAIN ENGINEER'S OBSERVATION OF SUBGRADE SURFACES, AS EXPOSED AND AS PREPARED, BEFORE PROCEEDING WITH FOUNDATION CONSTRUCTION.
2. DO NOT PLACE BACKFILL AGAINST WALLS UNTIL STRUCTURES SUPPORTING THE TOP OF THE WALL ARE IN PLACE, ARE COMPLETE, AND (IN THE CASE OF CONCRETE) HAVE CURED TO THEIR MINIMUM SPECIFIED 28-DAY COMPRESSIVE STRENGTH.
3. WHERE BACKFILL MUST BE PLACED AGAINST WALLS BEFORE STRUCTURES ABOVE ARE COMPLETE, PROVIDE BRACING FOR WALLS. KEEP BRACING IN PLACE UNTIL THE STRUCTURE ABOVE IS COMPLETE AND (IN THE CASE OF CONCRETE) HAS CURED TO ITS MINIMUM SPECIFIED 28-DAY COMPRESSIVE STRENGTH.

CONCRETE:

1. SEE SC001/TYP FOR CONCRETE NOTES, INCLUDING CLEAR COVER AND LAP SPLICE LENGTH REQUIREMENTS FOR REINFORCING.
2. SUBMIT LOCATIONS OF CONSTRUCTION JOINTS NOT SHOWN ON THE DRAWINGS FOR ACCEPTANCE BY THE ENGINEER BEFORE FORM LAYOUT.
3. PROVIDE CHAMFER AT EXPOSED EDGES OF CAST-IN-PLACE CONCRETE. SEE SPECIFICATION 03102 FOR CHAMFERS.
4. PROVIDE REINFORCING:
   A. AT OPENINGS - AS INDICATED IN SC012/TYP.
5. WELDING OF REINFORCING IS NOT PERMITTED UNLESS DETAILED ON THE DRAWINGS OR ACCEPTED IN ADVANCE BY THE ENGINEER.
6. MAINTAIN MINIMUM 3 INCHES CLEAR CONCRETE COVER BETWEEN REINFORCING AND EMBEDMENTS.
7. FINISH CONCRETE AS SPECIFIED IN SECTION 03366.
8. CONCRETE PADS
   A. (E) EQUIPMENT PAD SEE SD512/TYP.
   B. (H) HOUSEKEEPING PAD FOR ELECTRICAL EQUIPMENT SEE SD702/TYP.

MASONRY:

1. SEE SF002/TYP FOR MASONRY NOTES, INCLUDING LAP SPLICE LENGTHS.
2. PROVIDE REINFORCING:
   A. AT CORNERS AND JUNCTIONS AS INDICATED IN SF230/TYP.
   B. AT OPENINGS AS INDICATED IN SF220/TYP.
3. WELDING OF REINFORCING IS NOT PERMITTED UNLESS DETAILED ON THE DRAWINGS OR ACCEPTED IN ADVANCE BY THE ENGINEER.
4. GROUTING:
   A. FULLY GROUTED.

STEEL, STAINLESS STEEL, AND ALUMINUM - CONNECTIONS:

1. BOLTED:
   A. MADE USING 3/4-INCH DIAMETER BOLTS.
   B. HAVING A MINIMUM OF 2 BOLTS, SPACED NOT CLOSER THAN 3 INCHES ON CENTER.
   C. WITH A DISTANCE OF AT LEAST 1 1/2 INCHES FROM CENTER OF BOLT TO ANY EDGE OF A PLATE OR STRUCTURAL ELEMENT.
2. WELDED:
   A. FILLET WELDS: PER AWS CODE BASED ON THE THICKNESS OF THE MATERIALS BEING JOINED, AND FULL LENGTH OF THE JOINT.
3. INTERFACE BETWEEN MATERIALS:
   A. AT BOLTED CONNECTIONS THAT INCLUDE DIFFERENT METALS (E.G.: STEEL AND STAINLESS STEEL, OR ALUMINUM AND STEEL) PROVIDE ISOLATING SLEEVES AND WASHERS AS SPECIFIED IN SECTION 05190.
   B. WHERE ALUMINUM IS IN CONTACT WITH MASONRY OR CONCRETE, COAT ALUMINUM SURFACES AS SPECIFIED IN SECTION 09960.
4. POST-INSTALLED ANCHORS IN CONCRETE AND MASONRY:
   A. INSTALL IN FULL COMPLIANCE WITH ACCEPTED BUILDING CODE EVALUATION REPORT AND MANUFACTURER'S INSTRUCTIONS.
   B. DO NOT CUT, DAMAGE, OR INTERRUPT EXISTING REINFORCEMENT TO INSTALL ANCHORS. USE NON-DESTRUCTIVE TESTING EQUIPMENT TO IDENTIFY LOCATIONS OF REINFORCEMENT IN MEMBERS BEFORE DRILLING HOLES FOR ANCHORS.

METAL FABRICATIONS:

1. GRATING:
   A. ALUMINUM WITH TYPE 316 STAINLESS STEEL FASTENERS, UNLESS OTHERWISE NOTED.
   B. GRATING AND ITS SEATS OR SUPPORTS SHALL BE OF THE SAME MATERIAL.
   C. UNLESS INDICATED ON THE DRAWINGS AS "REMOVABLE GRATING", SECURELY FASTEN GRATING TO SUPPORTS AS INDICATED IN SR601/TYP.
2. COVER PLATES:
   A. ALUMINUM WITH TYPE 316 STAINLESS STEEL FASTENERS, UNLESS OTHERWISE NOTED.
   B. COVER PLATE AND ITS SEATS OR SUPPORTS SHALL BE OF THE SAME MATERIAL.

SPECIAL INSPECTION:

1. SPECIAL INSPECTION IS REQUIRED FOR THE FOLLOWING STRUCTURAL MATERIALS AND CONSTRUCTION. SEE SPECIFICATION SECTION 01455 FOR DETAILS.
2. DIVISION 2 SITE CONSTRUCTION (EARTHWORK)
   A. EXCAVATION DEPTH.
   B. ADEQUACY OF EXPOSED SURFACE TO PROVIDE REQUIRED SUPPORT.
   C. PREPARATION OF SOILS/SURFACES SUPPORTING CONSTRUCTION.
   D. FILL AND BACKFILL.
3. DIVISION 3 CONCRETE:
   A. LOCATIONS.
   B. FORMWORK AND MEMBER SIZES.
   C. REINFORCING STEEL.
   D. ANCHORS: CAST-IN AND POST-INSTALLED.
   E. CONCRETE MIX AND PLACEMENT.
   F. PROTECTION AND CURING PROCEDURES.
   G. PRECAST CONCRETE.
4. DIVISION 4 MASONRY
   A. LOCATIONS.
   B. MEMBER SIZES.
   C. REINFORCING STEEL.
   D. ANCHORS: BUILT-IN AND POST-INSTALLED.
   E. MORTAR AND JOINTS.
   F. GROUT AND GROUTING.
   G. PROTECTION AND CURING PROCEDURES.
5. DIVISION 5 METALS
   A. GENERAL ALL METALS:
      1) MEMBER LOCATIONS.
      2) MEMBER SIZES/TYPES.
      3) ANCHORS - CAST-IN AND BUILT-IN ANCHOR BOLTS.
      4) ANCHORS - POST-INSTALLED MECHANICAL AND ADHESIVE.
   B. STEEL DECKING.
      1) CONNECTIONS TO SUPPORTS.
      2) SIDE CONNECTIONS BETWEEN ADJACENT SHEETS.
   C. COLD-FORMED STEEL LIGHT-FRAME CONSTRUCTION.
6. DIVISION 6 WOOD, PLASTICS AND COMPOSITES.

STRUCTURAL OBSERVATION:

1. STRUCTURAL OBSERVATION IS REQUIRED DURING AND AT SPECIFIC STAGES OF CONSTRUCTION. SEE SPECIFICATION SECTION 01455 FOR DETAILS.

STRUCTURAL SYMBOLS:

1. SEE DRAWING G03 FOR KEY TO DRAWING TITLES AND SECTION CUTS, AND FOR DEFINITION OF MATERIALS SHADING PATTERNS.
2. WELDING: SYMBOLS: IN ACCORDANCE WITH AMERICAN WELDING SOCIETY (AWS) A2.4.

STRUCTURAL ABBREVIATIONS:

1. SEE DRAWING G02 FOR GENERAL LIST OF ABBREVIATIONS USED ON DRAWINGS.
2. ABBREVIATIONS FOR NAMES OF TECHNICAL GROUPS MAY BE FOUND IN THE PROJECT SPECIFICATIONS.
3. STRUCTURAL MEMBERS:
   A. STEEL: ABBREVIATIONS AND DESIGNATIONS ARE IN ACCORDANCE WITH THE AMERICAN INSTITUTE OF STEEL CONSTRUCTION'S STEEL CONSTRUCTION MANUAL, CURRENT EDITION.
   B. ALUMINUM: ABBREVIATIONS AND DESIGNATIONS ARE IN ACCORDANCE WITH THE ALUMINUM ASSOCIATION'S ALUMINUM DESIGN MANUAL, CURRENT EDITION.
4. ABBREVIATIONS FOR STRUCTURAL DRAWINGS:
   WHEN USED ON THE STRUCTURAL DRAWINGS, THE FOLLOWING ABBREVIATIONS HAVE THE MEANINGS LISTED.

REINFORCEMENT:		OTHER:	
BO	BOTTOM OF	L	ANGLE
EF	EACH FACE	PL	PLATE
I.F.	INSIDE FACE		
O.F.	OUTSIDE FACE		
T.O.	TOP OF		
#	NUMBER (REINFORCING BAR SIZE)		

DEFERRED DESIGN SUBMITTALS

AS DEFINED IN THE BUILDING CODE, DEFERRED DESIGN SUBMITTALS ARE PORTIONS OF THE DESIGN THAT ARE NOT SUBMITTED AT THE TIME OF PERMIT APPLICATION, AND THAT ARE TO BE REVIEWED BY THE REGISTERED DESIGN PROFESSIONAL AND SUBSEQUENTLY SUBMITTED TO THE BUILDING OFFICIAL.

DEFERRED DESIGN SUBMITTALS FOR THIS PROJECT INCLUDE:

1. DIVISION 6 WOOD AND PLASTICS.
   A. 06174 SHOP-FABRICATED WOOD TRUSSES.

GENERAL NOTES:

1. SEE DRAWING 00GS01 FOR GENERAL STRUCTURAL NOTES.
2. STRUCTURAL DESIGN CRITERIA.
   1. DESIGN LIVE LOAD:
      A. ROOF: 20 PSF.
      B. GRATING: 100 PSF.
      C. FLOOR: 200 PSF DISTRIBUTED LOAD, 8,000 LBS SINGLE WHEEL POINT LOAD.
   2. DESIGN DEAD LOAD:
      A. ROOF: 25 PSF.
      B. WALL: NORMAL WEIGHT 12" CMU, SOLID GROUTED: 133 PSF.
      C. SLAB AND EQUIPMENT: SELF WEIGHT.
   3. SEISMIC DESIGN CRITERIA:
      A. BASIC SEISMIC FORCE RESISTING SYSTEM: SPECIAL REINFORCED MASONRY SHEAR WALL, R: 5.
      B. ANALYSIS PROCEDURE: ASCE 7-16 § 12.8.1.
      C. IMPORTANCE FACTOR: 1.5.
      D. RISK CATEGORY: IV.
      E. SEISMIC RESPONSE COEFFICIENT, Cs: 0.1335.
   4. WIND DESIGN CRITERIA:
      A. EXPOSURE FACTOR: C.
      B. IMPORTANCE FACTOR, Iw: 1.0.
3. SEE MECHANICAL AND ELECTRICAL DRAWINGS FOR PENETRATION SIZE AND LOCATION.
4. ROOF UNDERLAYMENT AND STANDING SEAM ROOFING NOT SHOWN FOR CLARITY.
5. (2) 2x10 TOP PLATE FOR 12x8x16 CMU. TOP PLATES SHALL BE PRESSURE TREATED. STAGGER STITCH NAIL TOP PLATES TOGETHER WITH 10d NAILS @6".
6. PROVIDE SIMPSON STRONG-TIE MSTA 21 STRAP AT EACH SIDE OF TOP PLATE AT SPLICE LOCATIONS.

I ROOF SHEATHING: 15/32" STRUCTURAL 1 C-D SHEATHING:

1. NAILING SCHEDULE:
   A. EAST AND WEST DIAPHRAGM BOUNDARIES: 10d NAILS AT 6" SPACING.
   B. NORTH AND SOUTH DIAPHRAGM BOUNDARIES: 10d NAILS AT 4" SPACING.
   C. INTERIOR PANEL: 10d NAILS AT 6" SPACING.
2. STAGGER NAILS AT ADJOINING PANEL EDGES.

II FRAMING NOTES:

1. PROVIDE 2X FULL DEPTH BLOCKING BETWEEN TRUSS TOP.
2. ALL EDGES OF PLYWOOD SHEATHING SHALL BE BLOCKED WITH FULL DEPTH BLOCKING.

III TRUSS NOTES:

1. ALL ROOF TRUSSES SHALL HAVE DUAL 1.5" NOMINAL WIDTH CHORD AND WEB MEMBERS.
2. TRUSS LOADING SEE SR620 / TYP.
3. ALL TRUSSES SHALL BE LATERALLY BRACED FOR STABILITY PER PRE-ENGINEERED TRUSS MANUFACTURER'S RECOMMENDATIONS DURING TRUSS ERECTION. LATERAL BRACING SHALL NOT BE REMOVED AND SHALL REMAIN PERMANENTLY A PART OF TRUSS SYSTEM.

KEY NOTES:

1. PROVIDE SIMPSON STRONG-TIE CS16 COIL STRAP AT OPENING.

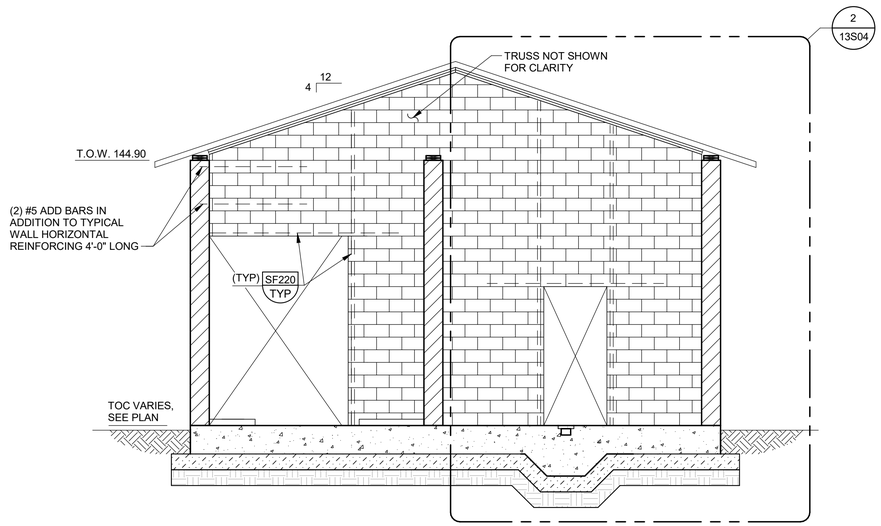
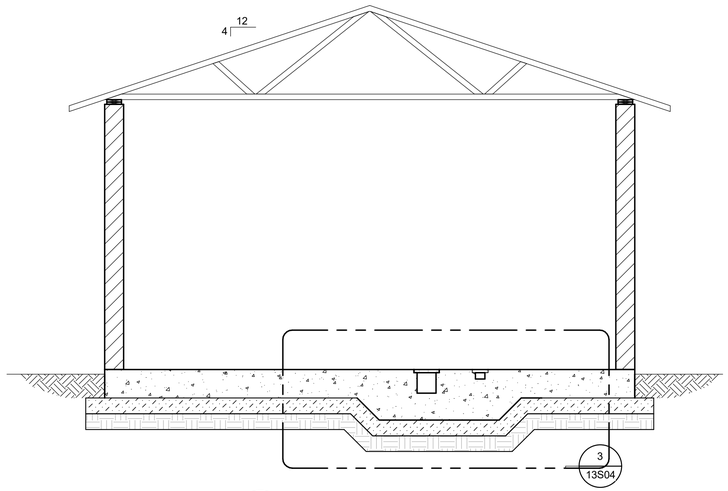
GENERAL NOTES:



1. SEE DRAWING 00GS01 FOR GENERAL STRUCTURAL NOTES.
2. NET ALLOWABLE BEARING PRESSURES:
   A. DEAD LOAD ONLY: 2,500 PSF.
   B. DEAD + LIVE LOAD: 2,500 PSF.
   C. TOTAL (INCLUDING WIND OR SEISMIC): 3,333 PSF.

KEY NOTES:



1. AGGREGATE BASE PER SPECIFICATION 02050 AND 02300.
2. SUBGRADE PREP:
   A. SCARIFY TO A DEPTH OF AT LEAST 10 INCHES.
   B. MOISTURE CONDITION SOIL TO AT LEAST 3 PERCENT ABOVE OPTIMUM MOISTURE CONTENT.
   C. COMPACT SUBGRADE TO AT LEAST 90 PERCENT RELATIVE COMPACTION.

ROOF SHEATHING PLAN

C PLAN

SCALE: 3/16" = 1'-0"
FILE: 11843A1019S101

GENERAL NOTES:

1. SEE DRAWING 00GS01 FOR GENERAL STRUCTURAL NOTES.
2. STRUCTURAL DESIGN CRITERIA.
   1. DESIGN LIVE LOAD:
      A. ROOF: 20 PSF.
      B. GRATING: 100 PSF.
      C. FLOOR: 200 PSF DISTRIBUTED LOAD, 8,000 LBS SINGLE WHEEL POINT LOAD.
   2. DESIGN DEAD LOAD:
      A. ROOF: 25 PSF.
      B. WALL: NORMAL WEIGHT 12" CMU, SOLID GROUTED: 133 PSF.
      C. SLAB AND EQUIPMENT: SELF WEIGHT.
   3. SEISMIC DESIGN CRITERIA:
      A. BASIC SEISMIC FORCE RESISTING SYSTEM: SPECIAL REINFORCED MASONRY SHEAR WALL, R: 5.
      B. ANALYSIS PROCEDURE: ASCE 7-16 § 12.8.1.
      C. IMPORTANCE FACTOR: 1.5.
      D. RISK CATEGORY: IV.
      E. SEISMIC RESPONSE COEFFICIENT, Cs: 0.1335.
   4. WIND DESIGN CRITERIA:
      A. EXPOSURE FACTOR: C.
      B. IMPORTANCE FACTOR, Iw: 1.0.
3. SEE MECHANICAL AND ELECTRICAL DRAWINGS FOR PENETRATION SIZE AND LOCATION.
4. ROOF UNDERLAYMENT AND STANDING SEAM ROOFING NOT SHOWN FOR CLARITY.
5. (2) 2x10 TOP PLATE FOR 12x8x16 CMU. TOP PLATES SHALL BE PRESSURE TREATED. STAGGER STITCH NAIL TOP PLATES TOGETHER WITH 10d NAILS @6".
6. PROVIDE SIMPSON STRONG-TIE MSTA 21 STRAP AT EACH SIDE OF TOP PLATE AT SPLICE LOCATIONS.

I ROOF SHEATHING: 15/32" STRUCTURAL 1 C-D SHEATHING:

1. NAILING SCHEDULE:
   A. EAST AND WEST DIAPHRAGM BOUNDARIES: 10d NAILS AT 6" SPACING.
   B. NORTH AND SOUTH DIAPHRAGM BOUNDARIES: 10d NAILS AT 4" SPACING.
   C. INTERIOR PANEL: 10d NAILS AT 6" SPACING.
2. STAGGER NAILS AT ADJOINING PANEL EDGES.

II FRAMING NOTES:

1. PROVIDE 2X FULL DEPTH BLOCKING BETWEEN TRUSS TOP.
2. ALL EDGES OF PLYWOOD SHEATHING SHALL BE BLOCKED WITH FULL DEPTH BLOCKING.

III TRUSS NOTES:

1. ALL ROOF TRUSSES SHALL HAVE DUAL 1.5" NOMINAL WIDTH CHORD AND WEB MEMBERS.
2. TRUSS LOADING SEE SR620 / TYP.
3. ALL TRUSSES SHALL BE LATERALLY BRACED FOR STABILITY PER PRE-ENGINEERED TRUSS MANUFACTURER'S RECOMMENDATIONS DURING TRUSS ERECTION. LATERAL BRACING SHALL NOT BE REMOVED AND SHALL REMAIN PERMANENTLY A PART OF TRUSS SYSTEM.

KEY NOTES:

1. PROVIDE SIMPSON STRONG-TIE CS16 COIL STRAP AT OPENING.

NOTES

1. SIZES OF EQUIPMENT PADS INDICATED ON THE DRAWINGS ARE APPROXIMATE. EXACT DIMENSIONS SHALL BE DETERMINED BY THE CONTRACTOR FOR THE EQUIPMENT FURNISHED. ALL FLOOR MOUNTED EQUIPMENT SHALL BE SET ON CONCRETE PADS CONFORMING TO DETAILS SHOWN ON THE TYPICAL STRUCTURAL DRAWINGS.
2. DIELECTRIC COUPLINGS, FLANGES OR UNIONS SHALL BE INSTALLED AT ALL CONNECTIONS OF COPPER PIPE TO OTHER TYPES OF METALLIC PIPING.
3. HVAC PIPING AND DUCTWORK DRAWINGS DO NOT SHOW ALL DRAINS, VENTS, OFFSETS AND FITTINGS ETC. REQUIRED FOR THE COMPLETE SYSTEM. SMALL PIPING IS SHOWN APPROXIMATELY TO SCALE BUT NOT EVERY FITTING AND OFFSET IS SHOWN. THE CONTRACTOR SHALL FURNISH, INSTALL AND TEST ALL HVAC SYSTEMS TO PROVIDE THE COMPLETE SYSTEM.
4. UNLESS OTHERWISE SHOWN ON THE DRAWINGS ALL FLOOR SLAB AND WALL PENETRATIONS SHALL BE AS SHOWN ON THE TYPICAL DETAILS.
5. NOT ALL AND ONLY CERTAIN TYPES OF SUPPORTS ARE SHOWN ON THE HVAC DRAWINGS. UNLESS OTHERWISE DETAILED ON THE DRAWINGS ALL PIPE AND DUCT SUPPORTS SHALL BE DESIGNED, FURNISHED AND INSTALLED BY THE CONTRACTOR AS SPECIFIED.
6. THIS IS A GENERAL LIST OF SYMBOLS. NOT ALL ITEMS SHOWN HERE APPEAR ON CONTRACT DRAWINGS.
7. TYPICAL DETAILS SHALL BE USED FOR ALL PERMANENT WORK EVEN THOUGH THEY ARE NOT CALLED OUT AT ALL LOCATIONS WHERE THEY APPLY.
8. COORDINATE FINAL LOUVER SIZE AND LOCATION WITH ARCHITECTURAL AND STRUCTURAL DRAWINGS.
9. PROVIDE TURNING VANES IN ALL ELBOWS. (SHOWN OR NOT)

Abbreviations:

Type:
- BFV = Butterfly Valve
- BV = Ball Valve
- PV = Plug Valve
- SG = Slide Gate

Duty:
- MD = Modulating duty (~1,200 starts/hr)
- STD = Standard service (0-60 starts/hr) duty

Service:
- MOD = Modulating
- O/C - Open/Close

NEMA Rating:
- 4X for general locations
- 6P for vaults and possible submergence
- XP for Class I, Division 1 and Division 2 locations

Controls:
- A = Analog (4-20mA) control, modulating
- D JOD = Position control using discrete jumps
- D O/C - Discrete open/close
- DN = DeviceNet
- DP = Profibus DP
- E-IP = Ethernet/IP

A PLAN
SCALE: 1/4" = 1'-0"

GENERAL NOTES:

1. SEE CIVIL FOR PIPING CONTINUATIONS
2. NOT ALL REQUIRED PIPE SUPPORTS ARE SHOWN.
3. DRAWINGS ARE DIAGRAMMATICAL AND NOT EVERY PIPING OFFSET, SIZE, MATERIAL, FITTING, VALVE, INSTRUMENT, OR DIELECTRIC IS SHOWN, PROVIDE AS REQUIRED. PROVIDE MINOR MODIFICATIONS TO PIPING AND SUPPORTS AS REQUIRED. SEE THE PROCESS AND INSTRUMENTATION DIAGRAMS AND SPECIFICATION SECTION 15052-COMMON WORK RESULTS FOR GENERAL PIPING.

KEY NOTES:

1. ASR WELL PUMP
2. WELL ANNULUS RECHARGE VALVE
3. 2" AIR RELEASE VALVE (TYP)
4. RESTRAINED FLANGE COUPLING ADAPTER (TYP)
5. BI-DIRECTIONAL FLOW METER
6. 1" SPARE NIPPLE AND FULL-PORT BALL VALVE FROM CENTERLINE SIDE OF PIPE
7. AQUIFER & WELL FLUSH TO WASTE VALVE.
8. PRESSURE REDUCING VALVE.
9. MODULATING RECHARGE CONTROL VALVE.
10. AQUIFER RECOVERY PRODUCTION VALVE.
11. FLUORIDE INJECTION SIM TO TYP DETAIL MC777/TYP. ROUTE TO THE CHEMICAL TRENCH DRAIN.
12. SODIUM HYPOCHLORITE INJECTION SIM TO TYP DETAIL MC777/TYP. ROUTE TO THE CHEMICAL TRENCH DRAIN.
13. RESTRAINED FLEXIBLE COUPLING PER TYP DETAIL MP310/TYP.
14. 1/2" AIR RELEASE VALVE, SEE DETAIL 2/13M03.
15. INSTALL DIELECTRIC ISOLATION FLANGE AT INTERFACE BETWEEN SST WELLHEAD AND DOWNHOLE WELL PIPING FROM DISTRIBUTION PIPING.
16. INSTALL 1" SAMPLE TAP AND BALL VALVE, 1/2" TUBING, POOL/HOUSE WATER FILTER CARTRIDGE WITH CLEAR CASING, AND PREFORMED CHANNEL PIPE SUPPORTS AS REQUIRED FOR VISUAL INSPECTION AND HAND TURBIDITY TESTING. WASTE TO DRAIN. REFER TO P&ID DRAWINGS FOR LAYOUT AND VALVES.
17. FLUORIDE ANALYZER, SEE DETAIL 4/13M03.
18. CHLORINE ANALYZER, SEE DETAIL 4/13M03.
19. NOT USED
20. ROUTE 1/2" CHEMICAL FLUORIDE AND CHLORINE TUBING FROM THE CHEMICAL PUMPS IN THE CHEMICAL ROOM THROUGH THE CHEMICAL TRENCH DRAIN TO THE INJECTION POINTS. 3/4" PIPE SHALL BE USED AT THE INJECTION POINTS.
21. PUMP COLUMN RECHARGE CONTROL VALVE.
22. LOCATE BURIED SAMPLE TAP OUTSIDE OF CONCRETE ENCASEMENT. INSTALL CORPORATION STOP. SEE SITE CIVIL YARD PIPING PLAN.
23. NITROGEN PNEUMATIC HOSES TO DOWNHOLE CONTROL VALVE (SEE WELLHEAD DETAIL).
24. AQUIFER FLUSH SWING CHECK VALVE.
25. ROUTE 1" SAMPLE LINE FROM EXISTING MONITORING WELL TO INSIDE BUILDING. ROUTE SAMPLE LINE TO AVOID OTHER ABOVE PEDESTAL OR WALL MOUNTED ENCLOSURES, AT-GRADE HANDHOLES, AND PIPE SUPPORTS AS REQUIRED.
26. MOUNT CABLE TO MAXIMIZE ACCESS TO WELLHEAD. COORDINATE LOCATION WITH OPERATION STAFF DURING CONSTRUCTION.
27. INSTALL SHELF, COORDINATE LOCATION WITH OPERATIONS STAFF.
28. SWING CHECK VALVE WITH WEIGHTED ARM.

PROVIDE MINOR MODIFICATIONS TO PIPING AND SUPPORTS AS REQUIRED. SEE THE PROCESS AND INSTRUMENTATION DIAGRAMS AND SPECIFICATION SECTION 15052-COMMON WORK RESULTS FOR GENERAL PIPING.

KEY NOTES:

1. FLUORIDE ANALYZER, ROUTE SAMPLE DRAIN AND OVERFLOW TUBES TO DRAIN FUNNEL WITH 2 DIAMETER AIR GAP.
2. 1" PVC BACKER BOARD MOUNTED ON MASONRY WALL WITH 1/2" ANCHORS.
3. BALL VALVE (TYP).
4. DIAPHRAGM VALVE.
5. 0-40 GPM ROTAMETER.
6. AIR RELEASE VALVE.
7. PRESSURE GAUGE.
8. PRESSURE REDUCING VALVE.
9. 10" FILTER, 50 MICRON.
10. NEEDLE VALVE.
11. CHLORINE RESIDUAL ANALYZER, ROUTE SAMPLE DRAIN AND OVERFLOW TUBES TO DRAIN FUNNEL WITH 2 DIAMETER AIR GAP.
12. pH SENSOR.
13. THREE "K" SIZE NITROGEN CYLINDERS, 1 DUTY + 2 SPARE, (228 SCF 9" DIA. x 51" TALL). SECURE TO WALL WITH PREFORMED CHANNEL CHAIN, OR OTHER ACCEPTABLE MEANS.
14. BASKI VENDOR CONTROL PANEL FOR DOWNHOLE FLOW CONTROL VALVE. ONLY A SCHEMATIC LAYOUT IS SHOWN. REFER TO MANUFACTURER'S INSTALLATION MANUAL FOR LAYOUT, PIPE SIZES, AND MATERIALS.
15. NOT USED.
16. INSTALL UNIONS OR VALVES WITH UNION CONNECTIONS AS REQUIRED THROUGHOUT THE SAMPLE AND ANALYZER ASSEMBLIES TO AID IN THE REMOVAL AND RE-ASSEMBLY OF VALVES AND EQUIPMENT FOR MAINTENANCE.

E PLAN

SCALE: 1/4" = 1'-0"

GENERAL NOTES:

1. PIPING SHALL BE FIELD ROUTED TO AVOID EQUIPMENT, PROCESS PIPING, AND OTHER ITEMS AS NECESSARY.
2. SLOPE ALL DRAIN LINES 2-1/2'' AND BELOW AT A MINIMUM OF 1/4'' PER FOOT IN THE DIRECTION OF FLOW.
3. SLOPE ALL DRAIN LINES 3'' AND ABOVE AT A MINIMUM OF 1/8'' PER FOOT IN THE DIRECTION OF FLOW.
4. ALL PIPING SHALL BE CONSTRUCTED FROM MATERIALS DEFINED IN SPECIFICATION 15052.
5. ALL DRAINS CONNECTED TO THE SANITARY SEWER SYSTEM TO CONTAIN P-TRAPS PER DETAILS HP220/TYP AND MA201/TYP.
6. DRAWINGS ARE DIAGRAMMATICAL AND NOT EVERY PIPING OFFSET, SIZE, MATERIAL, FITTING, VALVE, INSTRUMENT, OR DIELECTRIC IS SHOWN, PROVIDE AS REQUIRED. PROVIDE MINOR MODIFICATIONS TO PIPING AND SUPPORTS AS REQUIRED. SEE THE PROCESS AND INSTRUMENTATION DIAGRAMS AND SPECIFICATION SECTION 15052-COMMON WORK RESULTS FOR GENERAL PIPING.
7. REFER TO STRUCTURAL AND MECHANICAL FOR TRENCH DETAILS, SLOPING, AND PIPING. TRENCHES SHOWN ON THIS SHEET FRO REFERENCE ONLY.

KEY NOTES:

1. SURFACE MOUNTED MECHANICAL TRAP PRIMER. PRIMER TO SERVE ALL DRAINS WITH P-TRAPS.
2. MAINTAIN 32'' CLEARANCE AROUND EMERGENCY SHOWERHEAD.
3. MINIMUM 1.5% SLOPE BACK TO CHEMICAL SUMP WITHIN DEEPENED SLAB SECTION. REFER TO STRUCTURAL NOTES FOR MINIMUM CLEARANCE AND OTHER REQUIREMENTS.
4. LEVEL SWITCH IN CHEMICAL SUMP.

WELLHEAD (TYP A & B)

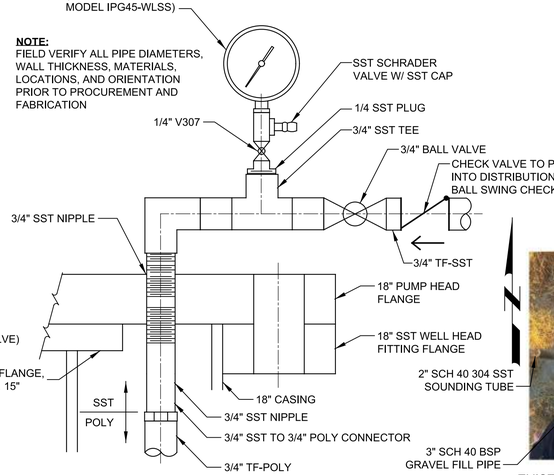
P - SECTION

SCALE: 1" = 1'-0"
FILE: 11843A1013M400

GENERAL NOTES:



1. THE EXISTING WELL WAS CONSTRUCTED BY OTHERS. FOR EXISTING WELL CONSTRUCTION SEE "CAMPUS OAKS WELL AS-BUILTS, BY LUHDORFF & SCALMANINI CONSULTING ENGINEERS, JANUARY 2024
2. THE EXISTING STAINLESS STEEL WELL CASING, SOUNDING TUBE, AND GRAVEL FILL TUBE EXTENDS ABOVE EXISTING GRADE. THE EXISTING CARBON STEEL CONDUCTOR CASING AND CONCRETE SEAL AND ENCASEMENT EXTEND TO APPROXIMATELY EXISTING GRADE. EXPOSE AND DEMOLISH EXISTING CONDUCTOR CASING AND CONCRETE ENCASEMENT ENOUGH TO INSTALL CONCRETE BUILDING SLAB AND WELLHEAD. CUT EXISTING SST CASING TO ELEVATION WITH A CLEAN LEVEL/PLUMB EDGE. THE FABRICATED WELLHEAD SHALL BE WELDED PLUMB AND TRUE. THE SIZE DIMENSIONS AND PLACEMENT OF THE TOP FLANGE AND THE BOLT HOLES SHALL BE COORDINATED WITH THE PUMP MOUNTING AND PIPING ORIENTATION REQUIREMENTS. MATCH NEW SST SIZE, THICKNESS, AND MATERIAL TO EXISTING SST CASING. CUT EXISTING SOUNDING TUBE AND GRAVEL FILL PIPE AND FIELD WELD ON NEW FABRICATED TUBES TO BEND OUTWARD FROM THE CENTER OF THE WELL HEAD AND OUT FROM UNDER THE CASING FLANGE AS TO ENABLE THE EASY REMOVAL OF THE FLANGED FITTINGS, BOLTS, VALVES, AND LEVEL INSTRUMENT. MATCH NEW PIPE THICKNESS, AND MATERIAL TO EXISTING SOUNDING TUBE AND GRAVEL FILL PIPE. INSTALL REINFORCED CONCRETE ENCASEMENT AROUND NEW WELLHEAD. PROVIDE MINIMUM COVER OVER BAR AND CHAMFER EDGE.
3. THE FIELD WELDING TO THE EXISTING WELLHEAD AND THE NEW FABRICATED WELLHEAD SHALL BE CONSIDERED TO BE STRUCTURAL STEEL, SHALL BE PERFORMED BY A CERTIFIED WELDER AND IS SUBJECT TO FIELD WELDING AND SHOP WELDING PROCEDURES AND INSPECTIONS PER THE CONTRACT SCOPE OF WORK AND TECHNICAL SPECIFICATIONS. THE CONTRACTOR IS RESPONSIBLE TO REMOVE, REPAIR, AND REPLACE ANY UNSATISFACTORY WELDS OR DAMAGED MATERIALS AND COMPONENTS.
4. THE WELL SHALL BE PROTECTED FROM THE ENTRY OF FOREIGN MATERIALS AT ALL TIMES DURING CONSTRUCTION BY THE USE OF A TEMPORARY INFLATABLE PLUG NEAR THE SURFACE WHEN OPEN TO ATMOSPHERE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ENTRY OF FOREIGN MATERIALS DURING THE CONSTRUCTION PROCESS. PROMPTLY REMOVE ANY MATERIALS THAT FALL IN ABOVE THE PLUG.
5. INSTALL THE VERTICAL TURBINE PUMP AS PER THE MANUFACTURER'S RECOMMENDATIONS. PROVIDE ALL SPECIAL CONNECTIONS AND APPURTENANCES AS SHOWN AND AS SPECIFIED ON THESE DRAWINGS.
6. PROVIDE 0.75-INCH DIAMETER SEMI-RIGID POLYETHYLENE TUBING STRAPPED TO THE PUMP COLUMN WITH SST HOSE CLAMPS AT 10 FT SPACING TO A DEPTH OF 1 FOOT ABOVE THE BOWL ASSEMBLY. THE TUBING SHALL SERVE A DUAL PURPOSE OF DIRECTING CHLORINATED WATER VIA TRICKLE FLOW (TF) CONNECTION INTO THE WELL, AND SHALL SERVE AS A BACKUP MEANS OF MEASURING WATER LEVEL VIA A MANUAL TAPE THAT CAN BE DROPPED THROUGH THE TOP OF THE TEE ON THE PUMP BASE. OR AS A BUBBLER TYPE INDICATOR WHEN AIR IS CHARGED THROUGH THE SCHRADER VALVE. ALL MATERIALS SHALL BE NSF APPROVED FOR POTABLE WATER USE.
7. THE CONTRACTOR SHALL PROVIDE THE REINFORCED CONCRETE ENCASEMENT. AROUND THE FINISHED WELLHEAD ASSEMBLY AS SHOWN, SHALL BE FULLY SEATED TO THE TOP OF THE SURFACE CASING AND SUPPORTED BY THE GROUT AROUND THE CASING. PROVIDE 0.5-INCH MINIMUM CHAMFER ALL EXPOSED EDGES OF THE CONCRETE. THE CONCRETE AND REINFORCING SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS DESCRIBED ON THE DRAWINGS.

THE FABRICATED WELLHEAD SHALL BE WELDED PLUMB AND TRUE. THE SIZE DIMENSIONS AND PLACEMENT OF THE TOP FLANGE AND THE BOLT HOLES SHALL BE COORDINATED WITH THE PUMP MOUNTING AND PIPING ORIENTATION REQUIREMENTS. FIELD VERIFY AND MATCH NEW SST SIZE, THICKNESS, AND MATERIAL TO EXISTING SST CASING. CUT EXISTING SOUNDING TUBE AND GRAVEL FILL PIPES AND FIELD WELD ON NEW FABRICATED TUBES TO BEND OUTWARD FROM THE CENTER OF THE WELL HEAD AND OUT FROM UNDER THE CASING FLANGE AS TO ENABLE THE EASY REMOVAL OF THE FLANGED FITTINGS, BOLTS, VALVES, AND LEVEL INSTRUMENT. MATCH NEW PIPE, THICKNESS, AND MATERIAL TO EXISTING SOUNDING TUBE AND GRAVEL FILL PIPE. INSTALL REINFORCED CONCRETE ENCASEMENT AROUND NEW WELLHEAD. PROVIDE MINIMUM COVER OVER BAR AND CHAMFER EDGE.
3. THE FIELD WELDING TO THE EXISTING WELLHEAD AND THE NEW FABRICATED WELLHEAD SHALL BE CONSIDERED TO BE STRUCTURAL STEEL, SHALL BE PERFORMED BY A CERTIFIED WELDER AND IS SUBJECT TO FIELD WELDING AND SHOP WELDING PROCEDURES AND INSPECTIONS PER THE CONTRACT SCOPE OF WORK AND TECHNICAL SPECIFICATIONS. THE CONTRACTOR IS RESPONSIBLE TO REMOVE, REPAIR, AND REPLACE ANY UNSATISFACTORY WELDS OR DAMAGED MATERIALS AND COMPONENTS.
4. THE WELL SHALL BE PROTECTED FROM THE ENTRY OF FOREIGN MATERIALS AT ALL TIMES DURING CONSTRUCTION BY THE USE OF A TEMPORARY INFLATABLE PLUG NEAR THE SURFACE WHEN OPEN TO ATMOSPHERE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ENTRY OF FOREIGN MATERIALS DURING THE CONSTRUCTION PROCESS. PROMPTLY REMOVE ANY MATERIALS THAT FALL IN ABOVE THE PLUG.
5. INSTALL THE VERTICAL TURBINE PUMP AS PER THE MANUFACTURER'S RECOMMENDATIONS. PROVIDE ALL SPECIAL CONNECTIONS AND APPURTENANCES AS SHOWN AND AS SPECIFIED ON THESE DRAWINGS.
6. PROVIDE 0.75-INCH DIAMETER SEMI-RIGID POLYETHYLENE TUBING STRAPPED TO THE PUMP COLUMN WITH SST HOSE CLAMPS AT 10 FT SPACING TO A DEPTH OF 1 FOOT ABOVE THE BOWL ASSEMBLY. THE TUBING SHALL SERVE A DUAL PURPOSE OF DIRECTING CHLORINATED WATER VIA TRICKLE FLOW (TF) CONNECTION INTO THE WELL, AND SHALL SERVE AS A BACKUP MEANS OF MEASURING WATER LEVEL VIA A MANUAL TAPE THAT CAN BE DROPPED THROUGH THE TOP OF THE TEE ON THE PUMP BASE. OR AS A BUBBLER TYPE INDICATOR WHEN AIR IS CHARGED THROUGH THE SCHRADER VALVE. ALL MATERIALS SHALL BE NSF APPROVED FOR POTABLE WATER USE.
7. THE CONTRACTOR SHALL PROVIDE THE REINFORCED CONCRETE ENCASEMENT, AROUND THE FINISHED WELLHEAD ASSEMBLY AS SHOWN, SHALL BE FULLY SEATED TO THE TOP OF THE SURFACE CASING AND SUPPORTED BY THE GROUT AROUND THE CASING. PROVIDE 0.5-INCH MINIMUM CHAMFER ALL EXPOSED EDGES OF THE CONCRETE. THE CONCRETE AND REINFORCING SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS DESCRIBED ON THE DRAWINGS.

FILE: 11843A1013M603

GENERAL NOTES:

1. A LOCKABLE, FABRICATED ALUMINUM, HINGED CLAM-SHELL OPENING ENCLOSURE AS SHOWN ON DRAWING M18. MOUNT THE ENCLOSURE TO THE CONCRETE SLAB USING 1#2" X 4" EXPANSION ANCHORS WITH SECURITY PATTERN TO INHIBIT TAMPERING AND REMOVAL. ALL FASTENERS SHALL BE TYPE 316 SST. .
2. THE MONITOR WELL CASING TUBES WERE INSTALLED BY OTHERS, AND WERE EXTENDED APPROXIMATELY 6-INCHES ABOVE THE EXISTING GRADE WITH NPT THREADED ENDS. EXTEND THE PVC CASING TUBES AND TERMINATE ABOVE CONCRETE SLAB AND INSTALL A 316 SST TOP FLANGE FOR EACH TUBE IN THE STAGGERED HEIGHT PATTERN AS SHOWN. (ALL CONNECTIONS SHALL BE THREADED, DO NOT USE SOLVENT WELDED PVC ON MONITOR WELL.) PROVIDE A MATCHING 316 SST BLIND FLANGE AS PER THE DETAILS ON THIS DRAWING WITH HOLES AND TAPS AS SHOWN. TUBE C SHALL INCLUDE THE FOLLOWING: A) 1" SST CONNECTION BETWEEN BORELINE HOSE FROM THE SAMPLE PUMP AND THE 1" SAM-PVC DISCHARGE PIPING, B) PRESSURE SEALED CABLE OPENING FOR PUMP POWER CABLE, C) PRESSURE SEALED CABLE OPENING FOR WATER LEVEL PROBE, D) 1/2 " NPT THREADED CONNECTION FOR AIR RELEASE VALVE ASSEMBLY WHICH SHALL ALSO BE EASILY REMOVABLE TO FACILITATE A DROP TAPE FOR MANUALLY MEASURING THE WATER LEVEL IN THE WELL. THE WELLHEAD ASSEMBLY WILL BE UNDER PRESSURE DURING ASR RECHARGE OPERATIONS AND SHALL BE CAPABLE OF A WELLHEAD PRESSURE OF 20 PSI.
3. FOR STORAGE ZONE MONITOR WELL TUBE C - INSTALL THE SUBMERSIBLE WATER LEVEL TRANSDUCER LT-55 AS PROVIDED WITH THE INSTRUMENTATION AND CONTROL SYSTEM PACKAGE. PROVIDE A PRESSURE-TIGHT CABLE FITTING RATED FOR 20 PSI WELLHEAD PRESSURE.
4. FOR MONITOR WELL TUBES A & B - PROVIDE A SST FLANGE WITH NPT THREADED NIPPLE CONNECTION TO AIR RELEASE VALVE AND A NPT THREADED AND PLUGGED HOLE AS SHOWN. (THE PLUG CAN BE REMOVED TO PROVIDE ACCESS FOR PERIODIC WATER LEVEL MEASUREMENTS.)
5. PROVIDE A 3/4 HP SST SUBMERSIBLE SAMPLE PUMP, TO BE SET AT A DEPTH OF 150 FT BLS USING 1" BORELINE HOSE. THE PUMP SHALL BE RATED AT 8 GPM AT 140 FT TDH, AND SHALL BE PROVIDED COMPLETE WITH 200 FT OF SUBMERSIBLE POWER CABLE AND 150 FT OF BORELINE HOSE AS MANUFACTURED BY HOSE SOLUTIONS, INC. THE PUMP SHALL BE GRUNDFOS MODEL 22SQE07-120, 208V/1-P/60Hz, OR EQUAL.

A PLAN
SCALE: 1/4" = 1'-0"

GENERAL NOTES:

1. SEE CIVIL FOR PIPING CONTINUATIONS
2. NOT ALL REQUIRED PIPE SUPPORTS ARE SHOWN.
3. DRAWINGS ARE DIAGRAMMATICAL AND NOT EVERY PIPING OFFSET, SIZE, MATERIAL, FITTING, VALVE, INSTRUMENT, OR DIELECTRIC IS SHOWN, PROVIDE AS REQUIRED. PROVIDE MINOR MODIFICATIONS TO PIPING AND SUPPORTS AS REQUIRED. SEE THE PROCESS AND INSTRUMENTATION DIAGRAMS AND SPECIFICATION SECTION 15052-COMMON WORK RESULTS FOR GENERAL PIPING.

KEY NOTES:

1. ASR WELL PUMP
2. WELL ANNULUS RECHARGE VALVE
3. 2" AIR RELEASE VALVE (TYP)
4. RESTRAINED FLANGE COUPLING ADAPTER (TYP)
5. BI-DIRECTIONAL FLOW METER
6. 1" SPARE NIPPLE AND FULL-PORT BALL VALVE FROM CENTERLINE SIDE OF PIPE
7. AQUIFER & WELL FLUSH TO WASTE VALVE.
8. PRESSURE REDUCING VALVE.
9. MODULATING RECHARGE CONTROL VALVE.
10. AQUIFER RECOVERY PRODUCTION VALVE.
11. FLUORIDE INJECTION SIM TO TYP DETAIL MC777/TYP.
12. SODIUM HYPOCHLORITE INJECTION SIM TO TYP DETAIL MC777/TYP.
13. RESTRAINED FLEXIBLE COUPLING PER TYP DETAIL MP310/TYP.
14. 1/2" AIR RELEASE VALVE, SEE DETAIL 2/19M03.
15. INSTALL DIELECTRIC ISOLATION FLANGE AT INTERFACE BETWEEN SST WELLHEAD AND DOWNHOLE WELL PIPING FROM DISTRIBUTION PIPING.
16. INSTALL 1" SAMPLE TAP AND BALL VALVE, 1/2" TUBING, POOL/HOUSE WATER FILTER CARTRIDGE WITH CLEAR CASING, AND PREFORMED CHANNEL PIPE SUPPORTS AS REQUIRED FOR VISUAL INSPECTION AND HAND TURBIDITY TESTING. WASTE TO DRAIN. REFER TO P&ID DRAWINGS FOR LAYOUT AND VALVES.
17. FLUORIDE ANALYZER, SEE DETAIL 4/19M03
18. CHLORINE ANALYZER, SEE DETAIL 4/19M03
19. NOT USED.
20. ROUTE 1/2" CHEMICAL FLUORIDE AND CHLORINE TUBING FROM THE CHEMICAL PUMPS IN THE CHEMICAL ROOM THROUGH THE CHEMICAL TRENCH DRAIN TO THE INJECTION POINTS. ABOVE GRADE TUBING WILL BE 3/4".
21. PUMP COLUMN RECHARGE CONTROL VALVE.
22. LOCATE BURIED SAMPLE TAP OUTSIDE OF CONCRETE ENCASEMENT. INSTALL CORPORATION STOP. SEE SITE CIVIL YARD PIPING PLAN.
23. NITROGEN PNEUMATIC HOSES TO DOWNHOLE CONTROL VALVE (SEE WELLHEAD DETAIL)
24. AQUIFER FLUSH SWING CHECK VALVE
25. ROUTE 1" SAMPLE LINE FROM EXISTING MONITORING WELL TO INSIDE BUILDING. ROUTE SAMPLE LINE TO AVOID OTHER ABOVE PEDESTAL OR WALL MOUNTED ENCLOSURES, AT-GRADE HANDHOLES, AND PIPE SUPPORTS AS REQUIRED.
26. MOUNT CABLE TO MAXIMIZE ACCESS TO WELLHEAD. COORDINATE LOCATION WITH OPERATION STAFF DURING CONSTRUCTION.
27. INSTALL SHELF, COORDINATE LOCATION WITH OPERATIONS STAFF.
28. SWING CHECK VALVE WITH WEIGHTED ARM.

GENERAL NOTES:

1. MOUNT THERMOSTATS AT 48" AFF AND LABEL WITH ITS CONTROLLING DEVICE. THERMOSTAT LOCKBOXES TO BE PROVIDED BY MECHANICAL CONTRACTOR.
2. DUCTWORK SERVING ELECTRICAL ROOM TO BE ALUMINUM PER SECTION 16133. DO NOT ROUTE ABOVE ELECTRICAL EQUIPMENT.
3. ALL DUCTWORK AND SUPPORTS SHALL BE CONSTRUCTED PER SMACNA. REFER TO SPECIFICATION SECTION 16133 FOR ADDITIONAL REQUIREMENTS.
4. DRAWINGS ARE DIAGRAMMATICAL AND NOT EVERY PIPING OFFSET, SIZE, MATERIAL, FITTING, VALVE, INSTRUMENT, OR DIELECTRIC IS SHOWN. PROVIDE AS REQUIRED. PROVIDE MINOR MODIFICATIONS TO PIPING AND SUPPORTS AS REQUIRED. SEE THE PROCESS AND INSTRUMENTATION DIAGRAMS AND SPECIFICATION SECTION 15052-COMMON WORK RESULTS FOR GENERAL PIPING.

KEY NOTES:

1. 32''x24'' INTAKE LOUVER TYPE L-3 TO BE MOUNTED AT 8'-0'' AFF.
2. BACKDRAFT DAMPER (BDD-3).
3. MANUFACTURER REQUIRED CLEARANCE. DO NOT BLOCK.
4. REFRIGERANT LINES. LINES WILL ENTER THE PUMP ROOM DOWN LOW THEN RISE TO BE ROUTED UNDER THE HARD CEILING. FIELD ROUTE TO FAN COIL UNITS IN ELECTRICAL ROOM. AVOID RUNNING LIQUID SIDE PIPE OVER ELECTRICAL EQUIPMENT. INSULATE ALL PIPING PER SPECIFICATIONS.
5. HEAT PUMP TYPE CONDENSING UNIT SERVING VRF. CONTRACTOR TO SUBMIT ANCHORAGE CALCULATIONS PER SPECIFICATION 01850.
6. 16"x8" EXHAUST BRICK VENT TO BE MOUNTED AT 9'-4'' AFF.
7. INDOOR VRF FAN COIL UNIT TO BE MOUNTED UNDER CEILING PER MANUFACTURER STANDARDS. SUBMIT SHOP DRAWINGS AND CALCULATIONS FOR INDOOR UNIT SUPPORTS PER SPECIFICATION 01850. CONTRACTOR TO COORDINATE WITH TRUSS MANUFACTURER FOR ADDITIONAL LOADING. DO NOT PLACE ABOVE ELECTRICAL EQUIPMENT.
8. WALL MOUNTED EXHAUST FAN AND CORRESPONDING ACOUSTICAL LOUVER TYPE L-3 TO BE MOUNTED IN WALL AT 2'-0" AFF PROVIDE FAN WITH GUARD.
9. ROUTE CONDENSATE PIPING OUT OF BUILDING AND INTO DRY WELL. SLOPE CONDENSATE DRAIN AT 1/8" PER FOOT IN THE DIRECTION OF FLOW.
10. 1" SCH 40 PVC CONDENSATE DRAIN PIPE. INSULATE PER SPECIFICATIONS.
11. WALL MOUNTED EXHAUST FAN AND CORRESPONDING ACOUSTICAL LOUVER TYPE L-3 TO BE MOUNTED IN WALL AT 7'-4" AFF PROVIDE FAN WITH GUARD.
12. 32"x24" INTAKE LOUVER TYPE L-3 TO BE MOUNTED AT 2'-0" AFF.
13. WALL MOUNTED ELECTRIC UNIT HEATER. MOUNT HEATER AT 8'-0'' AFF.

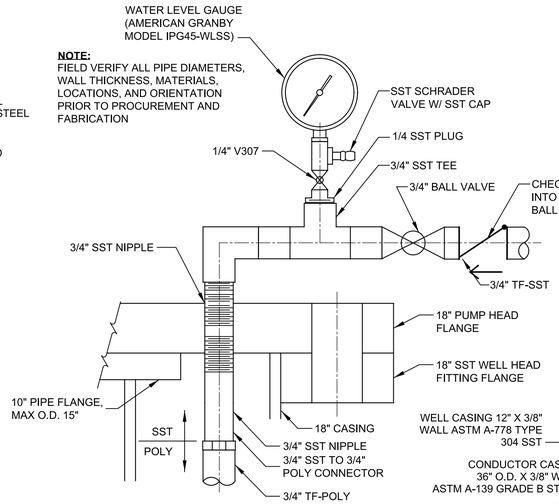
GENERAL NOTES:



1. THE EXISTING WELL WAS CONSTRUCTED BY OTHERS. FOR EXISTING WELL CONSTRUCTION SEE "MISTY WOOD WELL AS-BUILTS, BY LUHDORFF & SCALMANINI CONSULTING ENGINEERS, JANUARY 2024
2. THE EXISTING STAINLESS STEEL WELL CASING, SOUNDING TUBE, AND GRAVEL FILL TUBE EXTENDS ABOVE EXISTING GRADE. THE EXISTING CARBON STEEL CONDUCTOR CASING AND CONCRETE SEAL AND ENCASEMENT EXTEND TO APPROXIMATELY EXISTING GRADE. EXPOSE AND DEMOLISH EXISTING CONDUCTOR CASING AND CONCRETE ENCASEMENT ENOUGH TO INSTALL CONCRETE BUILDING SLAB AND WELLHEAD. CUT EXISTING SST CASING TO ELEVATION WITH A CLEAN LEVEL/PLUMB EDGE. THE FABRICATED WELLHEAD SHALL BE WELDED PLUMB AND TRUE. THE SIZE DIMENSIONS AND PLACEMENT OF THE TOP FLANGE AND THE BOLT HOLES SHALL BE COORDINATED WITH THE PUMP MOUNTING AND PIPING ORIENTATION REQUIREMENTS. MATCH NEW SST SIZE, THICKNESS, AND MATERIAL TO EXISTING SST CASING. CUT EXISTING SOUNDING TUBE AND GRAVEL FILL PIPES AND FIELD WELD ON NEW FABRICATED TUBES TO BEND OUTWARD FROM THE CENTER OF THE WELL HEAD AND OUT FROM UNDER THE CASING FLANGE AS TO ENABLE THE EASY REMOVAL OF THE FLANGED FITTINGS, BOLTS, VALVES, AND LEVEL INSTRUMENT. MATCH NEW PIPE THICKNESS, AND MATERIAL TO EXISTING SOUNDING TUBE AND GRAVEL FILL PIPES. INSTALL REINFORCED CONCRETE ENCASEMENT AROUND NEW WELLHEAD. PROVIDE MINIMUM COVER OVER BAR AND CHAMFER EDGE.
3. THE FIELD WELDING TO THE EXISTING WELLHEAD AND THE NEW FABRICATED WELLHEAD SHALL BE CONSIDERED TO BE STRUCTURAL STEEL, SHALL BE PERFORMED BY A CERTIFIED WELDER AND IS SUBJECT TO FIELD WELDING AND SHOP WELDING PROCEDURES AND INSPECTIONS PER THE CONTRACT SCOPE OF WORK AND TECHNICAL SPECIFICATIONS. THE CONTRACTOR IS RESPONSIBLE TO REMOVE, REPAIR, AND REPLACE ANY UNSATISFACTORY WELDS OR DAMAGED MATERIALS AND COMPONENTS.
4. THE WELL SHALL BE PROTECTED FROM THE ENTRY OF FOREIGN MATERIALS AT ALL TIMES DURING CONSTRUCTION BY THE USE OF A TEMPORARY INFLATABLE PLUG NEAR THE SURFACE WHEN OPEN TO ATMOSPHERE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ENTRY OF FOREIGN MATERIALS DURING THE CONSTRUCTION PROCESS. PROMPTLY REMOVE ANY MATERIALS THAT FALL IN ABOVE THE PLUG.
5. INSTALL THE VERTICAL TURBINE PUMP AS PER THE MANUFACTURER'S RECOMMENDATIONS. PROVIDE ALL SPECIAL CONNECTIONS AND APPURTENANCES AS SHOWN AND AS SPECIFIED ON THESE DRAWINGS.
6. PROVIDE 0.75-INCH DIAMETER SEMI-RIGID POLYETHYLENE TUBING STRAPPED TO THE PUMP COLUMN WITH SST HOSE CLAMPS AT 10 FT SPACING TO A DEPTH OF 1 FOOT ABOVE THE BOWL ASSEMBLY. THE TUBING SHALL SERVE A DUAL PURPOSE OF DIRECTING CHLORINATED WATER VIA TRICKLE FLOW (TF) CONNECTION INTO THE WELL, AND SHALL SERVE AS A BACKUP MEANS OF MEASURING WATER LEVEL VIA A MANUAL TAPE THAT CAN BE DROPPED THROUGH THE TOP OF THE TEE ON THE PUMP BASE, OR AS A BUBBLER TYPE INDICATOR WHEN AIR IS CHARGED THROUGH THE SCHRADER VALVE. ALL MATERIALS SHALL BE NSF APPROVED FOR POTABLE WATER USE.
7. THE CONTRACTOR SHALL PROVIDE THE REINFORCED CONCRETE ENCASEMENT. AROUND THE FINISHED WELLHEAD ASSEMBLY AS SHOWN, SHALL BE FULLY SEATED TO THE TOP OF THE SURFACE CASING AND SUPPORTED BY THE GROUT AROUND THE CASING. PROVIDE 0.5-INCH MINIMUM CHAMFER ALL EXPOSED EDGES OF THE CONCRETE. THE CONCRETE AND REINFORCING SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS DESCRIBED ON THE DRAWINGS.

GENERAL NOTES:

1. SEE CIVIL FOR PIPING CONTINUATIONS
2. NOT ALL REQUIRED PIPE SUPPORTS ARE SHOWN.
3. ALL PIPE SUPPORTS WITHIN THE CHEMICAL ROOM SHALL BE FRP, UNLESS OTHERWISE NOTED. WALL PIPE SUPPORTS PER MP218/TYP, FLOOR PIPE SUPPORTS PER MP034/TYP, AND VERTICAL PIPE SUPPORTS PER MP042/TYP.
4. ALL PIPE SUPPORTS USED FOR CHEMICAL SERVICE TO USE CUSHION STRIPS BY ANVIL #AS 3792 OR EQUAL.
5. ALL BALL VALVES USED FOR SODIUM HYPOCHLORITE SERVICE SHALL BE VENTED BALL TYPE.

KEY NOTES:

1. 1,000 GALLON DOUBLE CONTAINED SODIUM HYPOCHLORITE TANK PER SPEC 13208
2. EMERGENCY SHOWER & EYEWASH STATION PER HP640/TYP SEE PLUMBING PLAN, DWG 19M05.
3. TANK VENT ROUTED THROUGH WALL PER P302/TYP, TERMINATE AT A 45 DEGREE ANGLE WITH BIRD SCREEN
4. LEVEL INSTRUMENT
5. SODIUM HYPOCHLORITE DUAL PUMP SKID PER SPEC 11242
6. 2" VENTED BALL VALVE
7. 2" BALL CHECK VALVE
8. BACKFLOW PREVENTER, DIRECT DRAIN TO FLOOR DRAIN BELOW
9. TANK FILL 2" QUICK DISCONNECT HOSE COUPLING WITH CAP ANGLED DOWNWARD 22 DEGREES, VENTED BALL VALVE, AND BALL CHECK VALVE SUPPORTED FROM FLOOR
10. 3" OVERFLOW, ROUTE PIPING TO SUMP
11. FLEXIBLE FITTING PER TANK MANUFACTURER
12. WATER SOFTENER PER KINETICO, MODEL S650XP AND BRINE TANK MODEL 7202
13. PACKAGED FLUORIDE DOSING SKID PER SPEC 11249
14. INSTANT WATER HEATER. SEE PLUMBING PLAN, DWG 19M05.
15. UTILITY SINK
16. ZURN 6" WIDE TRENCH DRAIN #ZF806-HDS-BDE WITH STAINLESS STEEL TOP FRAME AND GRATING COVER. TRANSITION FROM PVC PIPE TO PFA TUBING IN TRENCH
17. REVERSE LEVEL FLOAT GAUGE
18. FRP GRATING COVER FOR SUMP, TRAFFIC RATED.
19. TANK DRAIN TO BE LOCATED AT THE BOTTOM OF THE TANK TO ALLOW FULL DRAINAGE. CUT NOTCH OUT OF CONCRETE PAD AND ADJUST REBAR TO AVOID CONFLICTS.
20. PRIOR TO INSTALLING CONCRETE TANK PAD, VERIFY WITH PUMP CHEMICAL PUMP MANUFACTURER AND SUPPLIER THAT MINIMUM LIQUID LEVEL OF TANK MEETS MINIMUM NET POSITIVE SUCTION HEAD REQUIRED FOR CHEMICAL FEED PUMPS. RAISE TANK PAD IF REQUIRED.

S - **SECTION**
SCALE: 1' = 1 1/2"
FILE: 11843A1009M402

GENERAL NOTES:

1. A LOCKABLE, FABRICATED ALUMINUM, HINGED CLAM-SHELL OPENING ENCLOSURE AS SHOWN ON DRAWING M18. MOUNT THE ENCLOSURE TO THE CONCRETE SLAB USING 1#2" X 4" EXPANSION ANCHORS WITH SECURITY PATTERN TO INHIBIT TAMPERING AND REMOVAL. ALL FASTENERS SHALL BE TYPE 316 SST. .
2. THE MONITOR WELL CASING TUBES WERE INSTALLED BY OTHERS, AND WERE EXTENDED APPROXIMATELY 6-INCHES ABOVE THE EXISTING GRADE WITH NPT THREADED ENDS. EXTEND THE PVC CASING TUBES AND TERMINATE ABOVE CONCRETE SLAB AND INSTALL A 316 SST TOP FLANGE FOR EACH TUBE IN THE STAGGERED HEIGHT PATTERN AS SHOWN. (ALL CONNECTIONS SHALL BE THREADED, DO NOT USE SOLVENT WELDED PVC ON MONITOR WELL.) PROVIDE A MATCHING 316 SST BLIND FLANGE AS PER THE DETAILS ON THIS DRAWING WITH HOLES AND TAPS AS SHOWN. TUBE C SHALL INCLUDE THE FOLLOWING: A) 1" SST CONNECTION BETWEEN BORELINE HOSE FROM THE SAMPLE PUMP AND THE 1" SAM-PVC DISCHARGE PIPING, B) PRESSURE SEALED CABLE OPENING FOR PUMP POWER CABLE, C) PRESSURE SEALED CABLE OPENING FOR WATER LEVEL PROBE, D) 1/2 " NPT THREADED CONNECTION FOR AIR RELEASE VALVE ASSEMBLY WHICH SHALL ALSO BE EASILY REMOVABLE TO FACILITATE A DROP TAPE FOR MANUALLY MEASURING THE WATER LEVEL IN THE WELL. THE WELLHEAD ASSEMBLY WILL BE UNDER PRESSURE DURING ASR RECHARGE OPERATIONS AND SHALL BE CAPABLE OF A WELLHEAD PRESSURE OF 20 PSI.
3. FOR STORAGE ZONE MONITOR WELL TUBE C - INSTALL THE SUBMERSIBLE WATER LEVEL TRANSDUCER LT~55 AS PROVIDED WITH THE INSTRUMENTATION AND CONTROL SYSTEM PACKAGE. PROVIDE A PRESSURE-TIGHT CABLE FITTING RATED FOR 20 PSI WELLHEAD PRESSURE.
4. FOR MONITOR WELL TUBES A & B - PROVIDE A SST FLANGE WITH NPT THREADED NIPPLE CONNECTION TO AIR RELEASE VALVE AND A NPT THREADED AND PLUGGED HOLE AS SHOWN. (THE PLUG CAN BE REMOVED TO PROVIDE ACCESS FOR PERIODIC WATER LEVEL MEASUREMENTS.)
5. PROVIDE A 3/4 HP SST SUBMERSIBLE SAMPLE PUMP, TO BE SET AT A DEPTH OF 150 FT BLS USING 1" BORELINE HOSE. THE PUMP SHALL BE RATED AT 8 GPM AT 140 FT TDH, AND SHALL BE PROVIDED COMPLETE WITH 200 FT OF SUBMERSIBLE POWER CABLE AND 150 FT OF BORELINE HOSE AS MANUFACTURED BY HOSE SOLUTIONS, INC. THE PUMP SHALL BE GRUNDFOS MODEL 22SQE07-120, 208V/1-P/60Hz, OR EQUAL.

ABBREVIATIONS

A	AMP
ABS	ABSOLUTE
AC	ALTERNATING CURRENT
ACK	ACKNOWLEDGE
ACTR	ACTUATOR
AF	AMP FRAME
AFC	AUTOMATIC FREQUENCY CONTROL
AIC	AMP INTERRUPTING CAPACITY
AM	AMMETER
ANN	ANNUNCIATOR
ANT	ANTENNA
APU	AUXILIARY POWER UNIT
ARM	ARMORED CABLE
AS	AMMETER SWITCH
ASYM	ASYMMETRICAL
AT	AMP TRIP
ATO	AUTOMATIC THROW OVER
ATP	AMMETER TEST POINT
ATS	AUTOMATIC TRANSFER SWITCH
AUTO XFMR	AUTOMATIC TRANSFORMER
AUX	AUXILIARY
AWG	AMERICAN WIRE GAGE
B	BELL
BAT	BATTERY
BFG	BELOW FINISHED GRADE
BHP	BRAKE HORSEPOWER
BKR	BREAKER
BRF	BELOW RAISED FLOOR
C	CONDUIT / CONTINUOUS LOAD
CB	CIRCUIT BREAKER
CCTV	CLOSED CIRCUIT TELEVISION
CCW	COUNTER CLOCKWISE
CKT	CIRCUIT
COAX	COAXIAL CABLE
COM	COMMON
COMM	COMMUNICATION
CPT	CONTROL POWER TRANSFORMER
CR	CONTROLLED RECEPTACLE
CS	CONTROL SWITCH
CT	CURRENT TRANSFORMER
CV	CONTROL VALVE
CW	CLOCKWISE / COOL WHITE
DC	DIRECT CURRENT
DCS	DISTRIBUTED CONTROL SYSTEM
DCU - X	DISTRIBUTED CONTROL UNIT NO. X
DEMO	DEMOLITION
DISC	DISCONNECT SWITCH
DM	DEMAND METER
DPDT	DOUBLE POLE DOUBLE THROW
DPST	DOUBLE POLE SINGLE THROW
DS	DOOR SWITCH
E/G	EMERGENCY GENERATOR
EM	EMERGENCY
EMT	ELECTRICAL METALLIC TUBING
ENCL	ENCLOSURE
ENG	ENGINE
ENT	ELECTRICAL NON-METALLIC TUBING
EP	EXPLOSION PROOF
ETM	ELAPSED TIME METER
F	SUB-FED
FA	FIRE ALARM
FACP	FIRE ALARM CONTROL PANEL
FDR	FEEDER
FLA	FULL LOAD AMPS
FLX	FLEXIBLE CONDUIT
FO	FIBER OPTIC
FRC	FIBERGLASS RIGID CONDUIT
FREQ	FREQUENCY
FU	FUSE
FU	SW FUSED SWITCH
FVNR	FULL VOLTAGE NON-REVERSING
FVR	FULL VOLTAGE REVERSING
FWD	FORWARD
G	GROUND / EQUIPMENT GROUND / GROUND FAULT
GEN	GENERATOR
GRC	GALVANIZED STEEL RIGID CONDUIT
GFCI	GROUND FAULT CIRCUIT INTERRUPTER (RECEPTACLE)
GFI	GROUND FAULT INTERRUPTER (BREAKER)
GFR	GROUND FAULT RELAY
H	HOT-LEG
HF	HIGH FREQUENCY
HP	HORSEPOWER
HPS	HIGH PRESSURE SODIUM
HR	HOUR
HSTAT	HUMIDISTAT
HV	HIGH VOLTAGE
HVAC	HEATING/VENTILATION/AIR CONDITIONING
HZ	HERTZ
I	INSTANTANEOUS / INTERMITTENT LOAD
IC	INTERRUPTING CAPACITY
IJB	INSTRUMENT JUNCTION BOX
IMC	INTERMEDIATE METAL CONDUIT
INST	INSTANTANEOUS
INT	INTERLOCK
INTERCOM	INTERCOMMUNICATION
J	JUNCTION BOX
K	KEY INTERLOCK
KA	KILOAMP
KV	KILOVOLT
KVA	KILOVOLT AMPERE
KVAR	KILOVAR (REACTANCE)
KW	KILOWATT
KWD	KILOWATT DEMAND
KWH	KILOWATT HOUR
L	LONG-TIME
L-B	LINE-BUS
L-G	LINE-GROUND
LA	LIGHTNING ARRESTOR
LBL	LABEL
LC	LIGHTING CONTACTOR
LCP- X	LOCAL CONTROL PANEL NO. X
LL	LEAD-LAG LOAD REACTOR
LP	LIGHT POLE
LP - X	LIGHTING PANEL NO. X
LTG	LIGHTING
LV	LOW VOLTAGE
LVL	LEVEL
M-X	MOTOR CONTROLLER NO. X
MA	MILLIAMPERE
MCA	MOTOR CIRCUIT AMPS
MCC - X	MOTOR CONTROL CENTER NO. X
MCP	MOTOR CIRCUIT PROTECTOR
MH	MANHOLE / MOUNTING HEIGHT
MLO	MAIN LUGS ONLY
MOD	MOTOR OPERATED DAMPER
MOV	METAL OXIDE VARISTOR
MPR	MOTOR PROTECTION RELAY
MS-X	MOTOR STARTER NO. X
MSP	MOTOR STARTING PANEL
MTO	MANUAL THROW OVER
MTR-X	MOTOR NO. X
MTS	MANUAL TRANSFER SWITCH
MV	MEGAVOLT
MVA	MEGAVOLT-AMPERES
MVS	MEDIUM VOLTAGE SWITCH
MW	MEGAWATT
N	NEUTRAL
NC	NORMALLY CLOSED
NEC	NATIONAL ELECTRICAL CODE
NFC	NONMETALLIC FLEXIBLE CONDUIT
NL	NIGHT LIGHT
NO	NORMALLY OPEN
NP	NAMEPLATE
O	OPEN OR OPENED
OH	OVERHEAD
OL	OVERLOAD RELAY
P	POLE
PA	PUBLIC ADDRESS
PB	PUSHBUTTON / PULL BOX
PCS	PVC COATED GALVANIZED STEEL CONDUIT
PCM	PROCESS CONTROL MODULE
PE	PHOTOCELL
PF	POWER FACTOR
PFCC	POWER FACTOR CORRECTION CAPACITOR
PFR	PHASE FAILURE RELAY
PH	PHASE
PNL	PANEL
PPX	POWER PANEL NO. X
PRI	PRIMARY
PT	POTENTIAL TRANSFORMER
PVC	POLYVINYL CHLORIDE RIGID PLASTIC CONDUIT
PWR	POWER
RAC	RIGID ALUMINUM CONDUIT
RECPT	RECEPTACLE
REV	REVERSE
RF	RADIO FREQUENCY
RMS	ROOT MEAN SQUARED
RVAT	REDUCED VOLTAGE AUTO TRANSFORMER
RVNR	REDUCED VOLTAGE NON-REVERSING
RVSS	REDUCED VOLTAGE SOLID STATE
S	SHIELD / SHORT-TIME
SA	SURGE ARRESTER
SC	SHORT CIRCUIT
SDBC	SOFT DRAWN BARE COPPER
SFL	SUB FEED LUGS
SLT	SEALTIGHT LIQUIDTIGHT FLEXIBLE CONDUIT
SM	SURFACE MOUNTED
SP	SINGLE POLE
SPD	SURGE PROTECTIVE DEVICE
SPDT	SINGLE POLE DOUBLE THROW
SPST	SINGLE POLE SINGLE THROW
SPKR	SPEAKER
SS	SOLID STATE
STB	SHORTING TERMINAL BLOCK
SW	SWITCH
SWBD	SWITCHBOARD
SWGR	SWITCHGEAR
SYM	SYMMETRICAL
TACH	TACHOMETER
TB - X	TERMINAL BLOCK - UNIT X
TC	THERMOCOUPLE / TIME CLOCK / TRAY CABLE
TD	TEMPERATURE DETECTOR RELAY
TE	TOTALLY ENCLOSED
TEFC	TOTALLY ENCLOSED FAN COOLED
TENV	TOTALLY ENCLOSED NON-VENTILATED
TERM	TERMINAL
TJB	TERMINAL JUNCTION BOX
TM	THERMAL MAGNETIC
TP	TWISTED PAIR
TS	TEMPERATURE SWITCH
TS1W	TWO SPEED CONSEQUENT POLE, ONE WINDING
TS2W	TWO SPEED SEPARATE WINDING
TSTAT	THERMOSTAT
UHF	ULTRA HIGH FREQUENCY
UNG	UNGROUNDED
UPS	UNINTERRUPTIBLE POWER SUPPLY
UVR	UNDER VOLTAGE RELAY
V	VOLT
VA	VOLT AMPERE
VAR	VARMETER
VCP	VENDOR CONTROL PANEL
VFD	VARIABLE FREQUENCY DRIVE
VHF	VERY HIGH FREQUENCY
VM	VOLTMETER
VP	VAPORPROOF
VR	VOLTAGE REGULATOR
VS	VOLTAGE SWITCH
VT	VOLTAGE TRANSFORMER
VTP	VOLTAGE TEST POINT
W	WATT / WEST
WT	WATER TIGHT
WP	WEATHER PROOF
XFMR	TRANSFORMER

NOTES:

1. REFER TO SPECIFICATIONS AND OTHER DRAWINGS FOR ADDITIONAL ABBREVIATIONS.

POWER DEVICE FUNCTION NUMBERS

1	MASTER ELEMENT
2	TIME-DELAY STARTING OR CLOSING RELAY
3	CHECKING OR INTERLOCKING RELAY
4	MASTER CONTACTOR
5	STOPPING DEVICE
6	STARTING CIRCUIT BREAKER
7	ANODE CIRCUIT BREAKER
8	CONTROL POWER DISCONNECTING DEVICE
9	REVERSING DEVICE
10	UNIT SEQUENCE SWITCH
11	MULTIFUNCTION DEVICE
12	OVER-SPEED DEVICE
13	SYNCHRONOUS-SPEED DEVICE
14	UNDER-SPEED DEVICE
15	SPEED OR FREQUENCY MATCHING DEVICE
16	DATA COMMUNICATIONS DEVICE
17	SHUNTING OR DISCHARGE SWITCH
18	ACCELERATING OR DECELERATING DEVICE
19	STARTING-TO-RUNNING TRANSITION CONTACTOR
20	ELECTRICALLY OPERATED VALVE
21	DISTANCE RELAY
22	EQUALIZER CIRCUIT BREAKER
23	TEMPERATURE CONTROL DEVICE
24	VOLTS PER HERTZ RELAY
25	SYNCHRONIZING OR SYNCHRONISM-CHECK DEVICE
26	APPARATUS THERMAL DEVICE
27	UNDERVOLTAGE RELAY
27N	GROUND FAULT UNDERVOLTAGE RELAY
28	FLAME DETECTOR
29	ISOLATING CONTACTOR
30	ANNUNCIATOR RELAY
31	SEPARATE EXCITATION DEVICE
32	DIRECTIONAL POWER RELAY
33	POSITION SWITCH
34	MASTER SEQUENCE DEVICE
35	BRUSH-OPERATING OR SLIP-RING SHORT-CIRCUITING DEVICE
36	POLARITY DEVICE
37	UNDERCURRENT OR UNDERPOWER RELAY
38	BEARING PROTECTIVE DEVICE
39	MECHANICAL CONDITION MONITOR
40	FIELD RELAY
41	FIELD CIRCUIT BREAKER
42	RUNNING CIRCUIT BREAKER
43	MANUAL TRANSFER OR SELECTOR DEVICE
44	UNIT SEQUENCE STARTING RELAY
45	ABNORMAL ATMOSPHERIC CONDITION MONITOR
46	REVERSE-PHASE OR BALANCE CURRENT RELAY
47	PHASE-BALANCE OR PHASE-SEQUENCE VOLTAGE RELAY
48	INCOMPLETE SEQUENCE RELAY
49	MACHINE OR TRANSFORMER THERMAL RELAY
50	INSTANTANEOUS OVERCURRENT RELAY
51	AC TIME OVERCURRENT RELAY
52	AC CIRCUIT BREAKER
53	FIELD EXCITATION RELAY
54	TURNING GEAR ENGAGING DEVICE
55	POWER FACTOR RELAY
56	FIELD APPLICATION RELAY
57	SHORT-CIRCUITING OR GROUNDING DEVICE
58	RECTIFICATION FAILURE RELAY
59	OVERVOLTAGE RELAY
60	VOLTAGE OR CURRENT BALANCE RELAY
61	DENSITY SWITCH OR SENSOR
62	TIME-DELAY STOPPING OR OPENING RELAY
63	PRESSURE SWITCH
64	GROUND DETECTOR RELAY
65	GOVERNOR
66	NOTCHING OR JOGGING DEVICE
67	AC DIRECTIONAL OVERCURRENT RELAY
68	BLOCKING OR OUT OF STEP RELAY
69	PERMISSIVE CONTROL DEVICE
70	RHEOSTAT
71	LIQUID LEVEL SWITCH
72	DC CIRCUIT BREAKER
73	LOAD-RESISTOR CONTACTOR
74	ALARM RELAY
75	POSITION CHANGING MECHANISM
76	DC OVERCURRENT RELAY
77	TELEMETERING DEVICE
78	PHASE-ANGLE MEASURING RELAY
79	AC RECLOSING RELAY
80	FLOW SWITCH
81	FREQUENCY RELAY
82	DC LOAD MEASURING RECLOSING RELAY
83	AUTOMATIC SELECTIVE CONTROL OR TRANSFER RELAY
84	OPERATING MECHANISM
85	PILOT COMMUNICATIONS, CARRIER OR PILOT-WIRE RELAY
86	LOCKOUT RELAY
87	DIFFERENTIAL PROTECTIVE RELAY
88	AUXILIARY MOTOR OR MOTOR GENERATOR
89	LINE SWITCH
90	REGULATING DEVICE
91	VOLTAGE DIRECTIONAL RELAY
92	VOLTAGE AND POWER DIRECTIONAL RELAY
93	FIELD-CHANGING CONTACTOR
94	TRIPPING OR TRIP-FREE RELAY

COMMONLY USED SUFFIX LETTERS APPLIED TO POWER DEVICE FUNCTION NUMBERS

A	ALARM ONLY
B	BUS PROTECTION
G	GROUND FAULT PROTECTION (RELAY CT IN A SYSTEM NEUTRAL CIRCUIT OR GENERATOR PROTECTION)
GS	GROUND FAULT PROTECTION (RELAY CT IN TOROIDAL OR GROUND SENSOR TYPE)
L	LINE PROTECTION
M	MOTOR PROTECTION
N	GROUND FAULT PROTECTION (RELAY COIL CONNECTED IN RESIDUAL CT CIRCUIT)
T	TRANSFORMER PROTECTION
V	VOLTAGE
P	PHASE PROTECTION

ABBREVIATIONS

AFD	- ARC FLASH DETECTOR
CLK	- CLOCK OR TIMING SOURCE
DDR	- DYNAMIC DISTURBANCE RECORDER
DFR	- DIGITAL FAULT RECORDER
ENV	- ENVIRONMENTAL DATA
HIZ	- HIGH IMPEDANCE FAULT DETECTOR
HMI	- HUMAN MACHINE INTERFACE
HST	- HISTORIAN
LGC	- SCHEME LOGIC
MET	- SUBSTATION METERING
PDC	- PHASOR DATA CONCENTRATOR
PMU	- PHASOR MEASUREMENT UNIT
PQM	- POWER QUALITY MONITOR
RIO	- REMOTE I/O DEVICE
RTU	- REMOTE TELEMETRY UNIT/REMOTE TERMINAL UNIT
SER	- SEQUENCE OF EVENTS RECORDER
TCM	- TRIP CIRCUIT MONITOR

PROCESS SWITCHES

- FLOAT SWITCH — CLOSE ON RISING LEVEL
- FLOAT SWITCH — OPEN ON RISING LEVEL
- PRESSURE SWITCH — CLOSE ON RISING PRESSURE
- PRESSURE SWITCH — OPEN ON RISING PRESSURE
- TEMPERATURE SWITCH — CLOSE ON RISING TEMPERATURE
- TEMPERATURE SWITCH — OPEN ON RISING TEMPERATURE
- FLOW SWITCH — CLOSE ON INCREASE IN FLOW
- FLOW SWITCH — OPEN ON INCREASE IN FLOW
- VIBRATION SWITCH — OPEN ON RISING VIBRATION
- VIBRATION SWITCH — CLOSE ON RISING VIBRATION
- TORQUE SWITCH — OPEN ON HIGH TORQUE
- TORQUE SWITCH — CLOSE ON HIGH TORQUE
- NORMALLY CLOSED — LIMIT SWITCH
- NORMALLY CLOSED — HELD OPEN LIMIT SWITCH
- NORMALLY OPEN — LIMIT SWITCH
- NORMALLY OPEN — HELD CLOSED LIMIT SWITCH

HAND SWITCHES

- NORMALLY OPEN — MOMENTARY PUSHBUTTON
- NORMALLY CLOSED — MOMENTARY PUSHBUTTON
- THREE POSITION SELECTOR SWITCH (xoo) — x - DENOTES POSITION CONTACTS CLOSED IN
- TWO POSITION SELECTOR SWITCH (xo) — x - DENOTES POSITION CONTACTS CLOSED IN
- MUSHROOM HEAD PUSHBUTTON
- PUSH-PULL PUSHBUTTON — MAINTAINED CONTACT
- PADLOCK SWITCH (xox) — x - DENOTES POSITION CONTACTS CLOSED IN
- PULL CORD SWITCH
- STOP-LOCKOUT PUSHBUTTON
- SPRING-RETURN (xoo) — x - DENOTES POSITION CONTACTS CLOSED IN

INDICATORS

- PILOT LIGHT — a = LENS COLOR: R = RED, G = GREEN, W = WHITE, A = AMBER, B = BLUE, Y = YELLOW, C = CLEAR
- BEACON — a = LENS COLOR: R = RED, G = GREEN, W = WHITE, A = AMBER, B = BLUE, M = MAGENTA, C = CLEAR
- HORN

RELAYS

RELAY COIL (a, b, c, d)
- a = TYPE: CR - CONTROL RELAY; TD - TIME DELAY RELAY; M - MOTOR STARTER COIL; L - MOTOR STARTER COIL - LOW SPEED; H - MOTOR STARTER COIL - HIGH SPEED; F - MOTOR STARTER COIL - FORWARD; R - MOTOR STARTER COIL - REVERSE
- b = TDON - TIME DELAY ON ENERGIZATION; TDOFF - TIME DELAY ON DEENERGIZATION
- c = TIMING RANGE/SETTING
- d = DESCRIPTION

- NORMALLY OPEN — CONTROL CONTACT
- NORMALLY CLOSED — CONTROL CONTACT
- NOTC — TIME DELAY CONTACT, NORMALLY OPEN, TIMED CLOSING
- NCTO — TIME DELAY CONTACT, NORMALLY CLOSED, TIMED OPENING
- NOTO — TIME DELAY CONTACT, NORMALLY OPEN, TIMED OPENING
- NCTC — TIME DELAY CONTACT, NORMALLY CLOSED, TIMED CLOSING

TERMINAL BLOCKS

- TERMINAL — IN PLC/PCM PANEL
- TERMINAL — IN MOTOR CONTROL CENTER
- TERMINAL — IN LOCAL STARTER CONTROL PANEL
- TERMINAL — AT FIELD DEVICE
- TERMINAL — IN RTU
- TERMINAL — IN FIELD PANEL
- TERMINAL — IN (USER CHOICE)
- DIGITAL BUS CONNECTOR — * = D - DEVICENET; * = PA - PROFIBUS PA; * = DP - PROFIBUS DP; * = H1 - FOUNDATION FIELDBUS H1; * = H2 - FOUNDATION FIELDBUS H2; * = E - ETHERNET

I/O

- PLC DISCRETE (a) — a = INPUT OR OUTPUT AS INDICATED
- PLC ANALOG (ANALOG / a) — a = INPUT OR OUTPUT AS INDICATED
- DIGITAL BUS (DIGITAL / BUS)

MISC

- SOLENOID
- METER UNIT (M) — M = TYPE
- MOTOR (HP)
- CIRCUIT BREAKER
- DISCONNECT
- FUSE
- TRANSIENT SURGE PROTECTION
- MOTOR WINDING HEATER (MWH-*) — * - MOTOR TAG I.D.
- SPACE HEATER
- VARISTOR
- CAPACITOR
- RESISTOR
- BATTERY
- DIODE
- MOTOR OVERLOAD HEATERS
- OVERLOAD CONTACT
- DRAWOUT CONNECTION
- GROUND
- LIGHTNING ARRESTOR
- CONTROL POWER TRANSFORMER (H1, H3, H2, H4, X1, X2)
- ELAPSED TIME METER (KI-* / ETM)

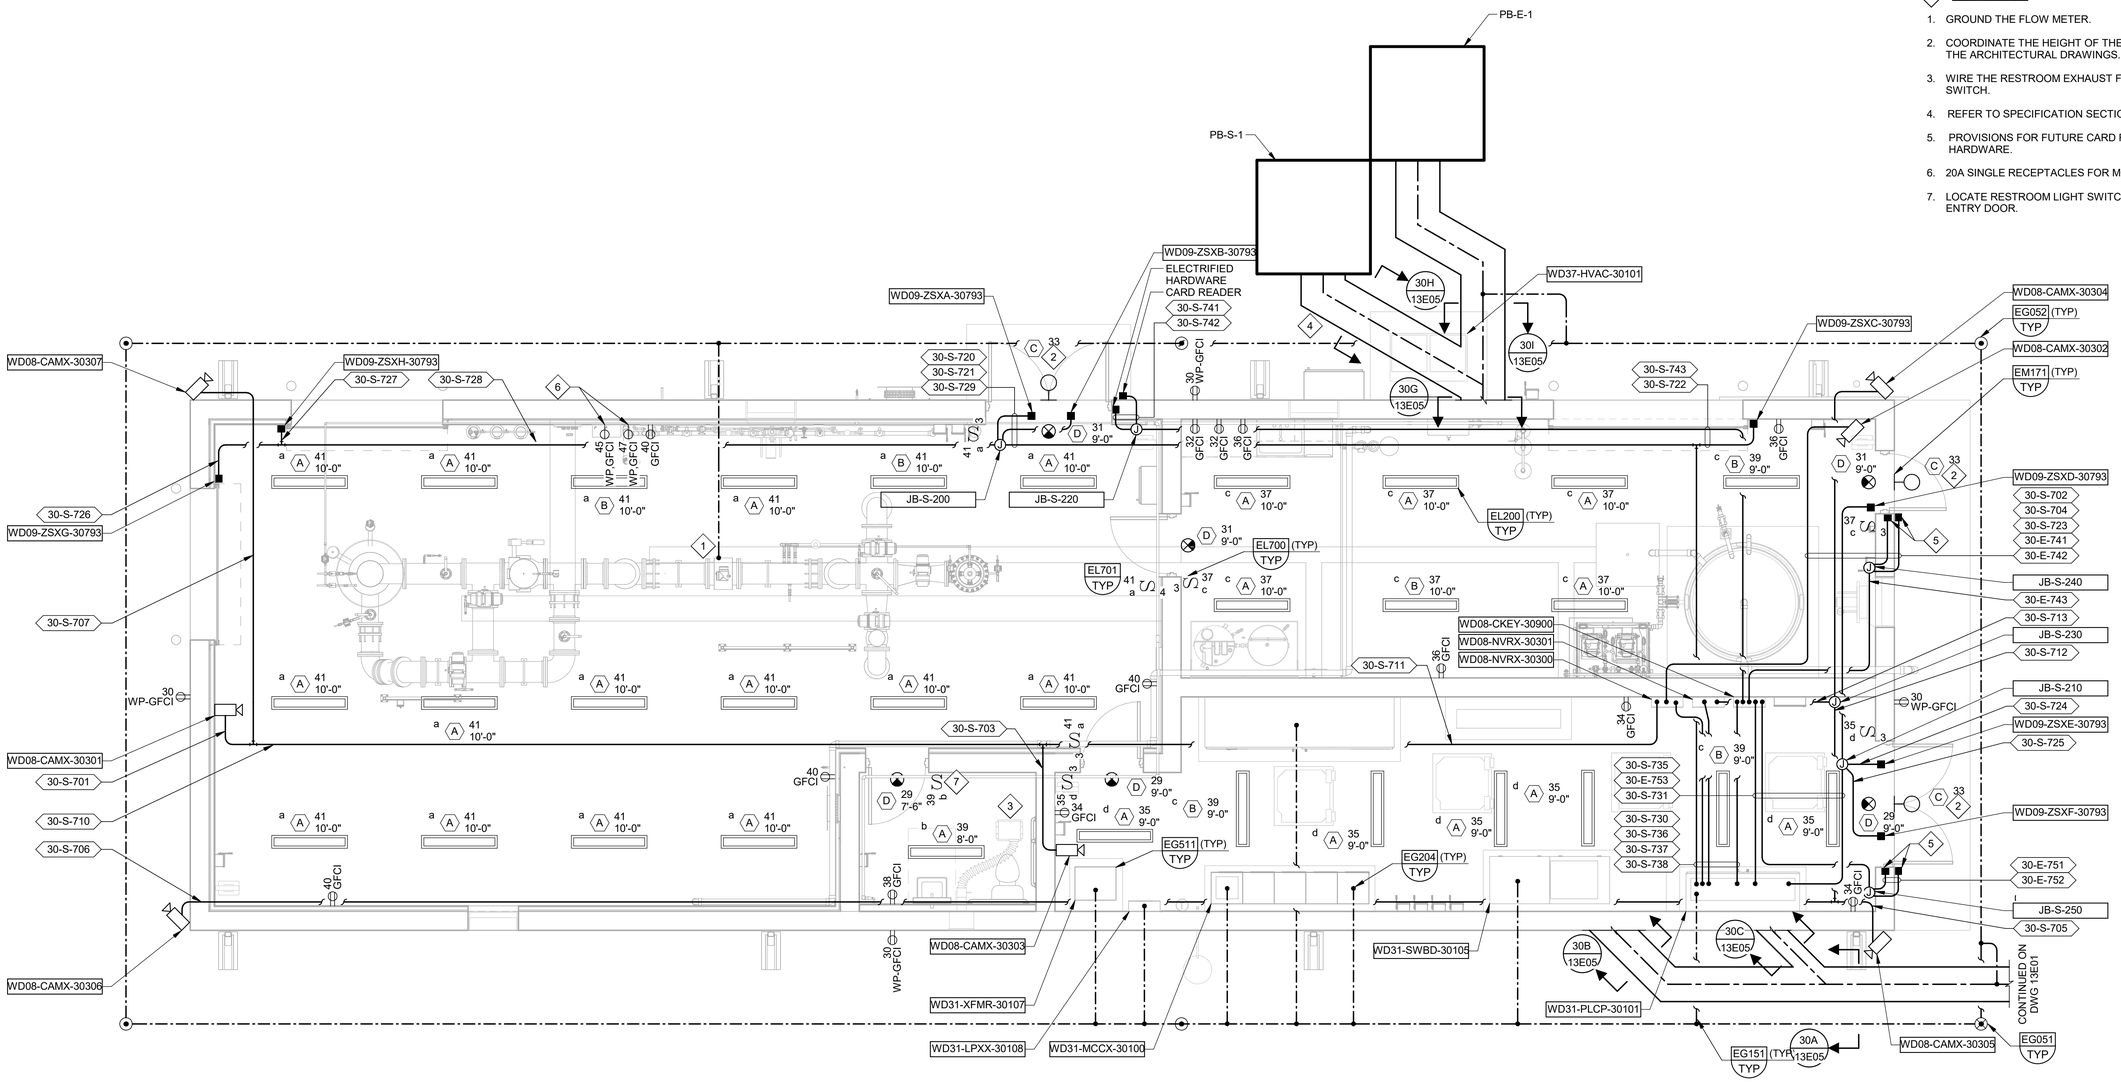
SHEET NO. 88 OF 178

PLOT DATE: 12/13/2024 11:36:58 AM



FILE NAME: R:\d1341482\11843A1013E801.rvt

GENERAL NOTES:

1. SEE DRAWING 13E01 FOR LOCATION OF FACILITY ON SITE PLAN.
2. ALL CIRCUIT DESIGNATIONS REFER TO PANELBOARD WD31-LPXX-30108.
3. BOND DUCT BANK GROUND CONDUCTORS TO THE GROUND RING.

KEY NOTES:

1. GROUND THE FLOW METER.
2. COORDINATE THE HEIGHT OF THE FIXTURES OVER THE DOORS WITH THE ARCHITECTURAL DRAWINGS.
3. WIRE THE RESTROOM EXHAUST FAN TO THE RESTROOM LIGHT SWITCH.
4. REFER TO SPECIFICATION SECTION 08710 FOR DEVICE DETAILS.
5. PROVISIONS FOR FUTURE CARD READER AND ELECTRIFIED HARDWARE.
6. 20A SINGLE RECEPTACLES FOR MONITORING WELL PUMP VFDS.
7. LOCATE RESTROOM LIGHT SWITCH AS CLOSE AS POSSIBLE TO ENTRY DOOR.

GENERAL NOTES:

1. ALL WORK ON THE INCOMING SERVICE SHALL CONFORM TO ROSEVILLE ELECTRIC STANDARDS.
2. REFER TO THE MCC ELEVATION DRAWING FOR REQUIRED SPACE COMPARTMENTS.

KEY NOTES:

1. PROVIDE THE MAIN BREAKER WITH A MOTOR OPERATOR ALLOWING FOR REMOTE OPEN, CLOSE AND RESET.
2. THE SOLID STATE CIRCUIT BREAKER TRIP UNITS SHALL INCLUDE MAINTENANCE MODE SETTINGS.
3. ACTIVE FRONT-END VFD WITH FULL VOLTAGE, NON-REVERSING BYPASS STARTER.
4. PROVIDE A 4" CONDUIT FROM THE UTILITY TRANSFORMER TO THE ROSEVILLE ELECTRIC VAULT AT THE LOCATION SHOWN ON THE ELECTRICAL SITE PLAN. THE PRIMARY CONDUCTORS ARE PROVIDED BY ROSEVILLE ELECTRIC
5. PROVIDE TRANSFORMER PAD PER ROSEVILLE ELECTRIC STANDARDS. THE TRANSFORMER IS PROVIDED BY ROSEVILLE ELECTRIC.
6. PROVIDE SECONDARY CONDUIT AND CONDUCTORS AS SHOWN ON THE ELECTRICAL PLANS AND THE CONDUIT SCHEDULE
7. THE INSTRUMENT TRANSFORMERS AND METER ARE PROVIDED BY ROSEVILLE ELECTRIC. THE METER SOCKET AND SWITCHBOARD ARE PROVIDED BY THE CONTRACTOR.

GENERAL NOTES:

1. SEE DRAWING 19E01 FOR LOCATION OF FACILITY ON SITE PLAN.
2. ALL CIRCUIT DESIGNATIONS REFER TO PANELBOARD WD31-LPXX-36108.

KEY NOTES:

1. GROUND THE FLOW METER.
2. COORDINATE THE HEIGHT OF THE FIXTURES OVER THE DOORS WITH THE ARCHITECTURAL DRAWINGS.
3. WIRE THE RESTROOM EXHAUST FAN TO THE RESTROOM LIGHT SWITCH.

PROJECT NO.
FILE NAME: 11843A1019E06.dwg

GENERAL NOTES:

1. ALL WORK ON THE INCOMING SERVICE SHALL CONFORM TO ROSEVILLE ELECTRIC STANDARDS.
2. REFER TO THE MCC ELEVATION DRAWING FOR REQUIRED SPACE COMPARTMENTS.

KEY NOTES:

1. PROVIDE THE MAIN BREAKER WITH A MOTOR OPERATOR ALLOWING FOR REMOTE OPEN, CLOSE AND RESET.
2. THE SOLID STATE CIRCUIT BREAKER TRIP UNITS SHALL INCLUDE MAINTENANCE MODE SETTINGS.
3. ACTIVE FRONT-END VFD WITH FULL VOLTAGE, NON-REVERSING BYPASS STARTER.
4. PROVIDE A 4" CONDUIT FROM THE UTILITY TRANSFORMER TO THE ROSEVILLE ELECTRIC VAULT AT THE LOCATION SHOWN ON THE ELECTRICAL SITE PLAN. THE PRIMARY CONDUCTORS ARE PROVIDED BY ROSEVILLE ELECTRIC
5. PROVIDE TRANSFORMER PAD PER ROSEVILLE ELECTRIC STANDARDS. THE TRANSFORMER IS PROVIDED BY ROSEVILLE ELECTRIC.
6. PROVIDE SECONDARY CONDUIT AND CONDUCTORS AS SHOWN ON THE ELECTRICAL PLANS AND THE CONDUIT SCHEDULE
7. THE INSTRUMENT TRANSFORMERS AND METER ARE PROVIDED BY ROSEVILLE ELECTRIC. THE METER SOCKET AND SWITCHBOARD ARE PROVIDED BY THE CONTRACTOR.
8. NOT USED.
9. REFER TO THE CONDUIT SCHEDULE FOR TRANSFORMER SECONDARY CONDUCTORS.

ACRONYM	DESCRIPTION
ADFF	DIFFUSER, AERATION
AERD	AERATOR, DISC
AERS	AERATOR, SURFACE
AFHx	ACTIVE HARMONIC FILTER
AGIT	AGITATOR
AITx	ANALYZER INDICATING TRANSMITTER
ATSx	AUTOMATIC TRANSFER SWITCH (USE MTSx FOR MANUAL TRANSFER SWITCH)
BASN	BASIN: SED BASIN, AERATION BASIN, U.V. CONTACT BASIN
BATT	BATTERIES
BCHG	BATTERY CHARGER
BFPx	PRESS, BELT FILTER
BIOA	BIO-ASSAY
BOIL	BOILER
BLDG	BUILDING
BLWR	BLOWERS: CENTRIFUGAL, ROTARY LOBE
BKRx	BREAKER, ELECTRICAL
BRNR	BURNERS
BSCR	BAR SCREEN
BCKT	BUCKET (CONTROLS COMPARTMENT LOCATED IN SWGR OR
CAMx	CAMERA
CAPx	CAPACITOR, POWER FACTOR CORRECTION
CENT	CENTRIFUGE
CHAN	CHANNEL, PROCESS FLOW
CLAR	CLARIFIER: PRIMARY, SECONDARY
CLAS	CLASSIFIER, GRIT
CNVR	CONVEYOR
COLL	COLLECTOR, SLUDGE
COMP	COMPRESSORS - ALL TYPES
CTFN	COOLING TOWER FAN
CTWR	COOLING TOWERS
DAMP	VENTILATION AIR DAMPER
DISP	DISPENSER (CNG)
DITx	DENSITY INDICATING TRANMITTER
DRVc	CENTRIFUGE DRIVE
DRYR	GAS DRYER / DESICANT
EDUC	EDUCTOR (VENTURI NOZZLE)
EGEN	EMERGENCY GENERATOR
ENGN	ENGINE: DIESEL BACK-UP, INTERNAL COMBUSTION
EVAP	EVAPORATORATIVE COOLER
EXCH	EXCHANGERS, HEATED SLUDGE
FANx	FAN, COOLING OR VENTILATING
EWSS	EYEWASH – SAFETY SHOWER STATIONS
FALL	FALL RESTAINT, FALL PROTECTION
FGSD	FIXED GAS DETECTOR
FIRE	FIRE SYSTEMS
FITx	FLOW INDICATING TRANSMITTER
FLAS	FLASH PROTECTION EQUIPMENT (FACE SHIELDS, SUITS)
FSCR	FINE SCREENS
FLTR	FILTER: EFFLUENT FILTER AND MECHANICAL FILTERS
FQxx	FLOW TOTALIZER (MECHANICAL COMPOUND OR TURBO
GAGE	GAUGES: PRESSURE, TEMPERATURE, VACUUM - ALL TYPES, CALIBRATION COLUMNS
GATE	ENTRY/EXIT VEHICLE, PERSONNEL
GCND	GAS CONDITIONING EQUIPMENT
GENx	GENERATOR
GRBT	GRAVITY BELT THICKENER
GRBX	GEAR BOX: INCREASER, REDUCER - ALL TYPES
GRND	GRINDER
HEAT	HEATER: BLOCK, PIPE, STRIP
HPGN	SODIUM HYPOCHLORITE GENERATOR
HPRx	HOPPER
HSTS	HOISTS / CRANES
HVAC	HEATING, VENTILATION, AIR CONDITIONING: CLIMATE
HXGR	HEAT EXCHANGER, DEMAND HEATERS, HOT WATER TANKS
HYDc	HYDRAULIC UNIT, CENTRIFUGE
HYDu	HYDRAULIC POWER UNIT (ULTRAVIOLET)
HYDx	HYDRAULIC POWER UNIT
IJBx	INSTRUMENT JUNCTION BOX

ACRONYM	DESCRIPTION
INJR	INJECTOR - CL2 / SO2
LCPx	LOCAL CONTROL PANEL
LDBK	LOAD BANK
LITx	LEVEL INDICATING TRANSMITTER
LPxx	LIGHTING PANEL
LSPx	LOAD SHED RELAY PANEL
LUBE	LUBRICATING OIL SYSTEM
MCCx	MOTOR CONTROL CENTER
MIXR	MIXER
MODL	LAMP MODULE
MONT	MONITOR (WATER CANNON)
MODx	MOTOR OPERATED DOOR
MOGx	MOTOR OPERATED GATE VALVE
MOVx	MOTOR OPERATED VALVE (SLIDE, BALL, GLOBE…)
MSTR	MOTOR STARTER
MTRB	MICROTURBINE
MTRx	MOTOR
MTSx	MANUAL TRANSFER SWITCH
MVFD	MOTOR V.F.D.
ODOR	ODOR SCRUBBING SYSTEM
PCxx	PERSONAL COMPUTERS
PDCu	POWER DISTRIBUTION CENTER (ULTRA-VIOLET)
PEDx	METERING PEDESTAL
PITx	PRESSURE INDICATING TRANSMITTER
PMIX	POLYMER MIXING UNIT
POND	TREATMENT PLANT EMERGENCY OR PROCESS STORAGE
POVx	PNEUMATICALLY OPERATED VALVE
PPxx	POWER DISTRIBUTION PANEL, PANELBOARD
PLCx	PROGRAMMED LOGIC CONTROLLERS
PLCP	PLC PANEL
PQMx	POWER QUALITY MONITOR
PUMP	PUMPS - ALL TYPES
PWRS	POWER SUPPLY (USE UPSx FOR UNINTERRUPTIBLE POWER
RADx	RADIO SYSTEMS
RADI	RADIATORS
RDTx	ROTARY DRUM THICKENER
RELx	RELAY, MULTI-FUNCTION ELECTRICAL PROTECTIVE
RESP	RESPIRATORS (FULL & HALF FACE, AIR SUPPLIED, AIR
RVSS	REDUCED VOLTAGE SOFT STARTER
SAMP	SAMPLER UNIT
SECR	SECURITY SYSTEMS
SRVR	SERVER, SCADA / CONTROL
SBFP	SLUDGE BELT FILTER PRESS
SGAT	GATE: SLIDE, SLUICE, KNIFE
SKMR	SKIMMERS: SLUDGE, SCUM
SOVx	SOLENOID OPERATED VALVE
SPDx	SURGE PROTECTIVE DEVICE (TVSS & SPD)
STAT	STATION (PUMPING, PRESSURE REDUCING…)
STNR	STRAINERS
SWBD	SWITCHBOARD
SWGR	SWITCHGEAR
TANK	TANKS, STORAGE VESSELS, PRESSURE ACCUMULATORS
TCOM	TELECOMMUNICATIONS SYSTEMS
TCPx	TEMPERATURE CONTROL PANEL
TITx	TEMPERATURE INDICATING TRANSMITTER
TOOL	TOOLS, LATHES, MILLS, SHEARS, PRESS
TRAP	TRAPS: DRIP, CONDENSATE
UPSx	POWER SUPPLY, UNINTERRUPTIBLE
UVRx	ULTRAVIOLET BANK
VALV	VALVES: BALL, GATE, GLOBE, BUTTERFLY - ALL TYPES
VFDx	DRIVE, VARIABLE FREQUENCY
VGLV	VOLTAGE GLOVES
VSCD	VISCOUS, HYDRAULIC DRIVE / TORQUE CONVERTER
WEIR	FLOW REGULATION WEIR
WASH	WASHER / COMPACTOR
WITx	WEIGHT INDICATING TRANSMITTER
WKST	WORKSTATION, SCADA / CONTROL
XFMR	TRANSFORMER

GENERAL NOTES:

1. ALL ETHERNET CABLE SHALL BE CAT6.
2. FIBER OPTIC CONNECTORS SHALL BE LC TYPE.
3. FIBER OPTIC CABLE SHALL BE SINGLE MODE.
4. THE NETWORK SPEED IS 1GB.
5. THE NETWORK IS ALL UNDER THE SAME SUBNET.
6. NETWORK PROTOCOL IS MODBUS TCP.
7. CORNING ALTOS IS THE END USER'S PREFERRED FIBER OPTIC CABLE.
8. CORNING SPH-01P-DIN IS THE END USER'S PREFERRED TERMINATION PANEL.

◇# KEY NOTES:

1. SHALL BE IN A WALL MOUNTED CABINET WITH A PULLOUT SHELF FOR THE MOUSE AND KEYBOARD.
2. ETHERNET SWITCH PROVIDED BY THE CITY.
3. FIREWALL PROVIDED BY THE CONTRACTOR BUT CONFIGURED BY THE CITY.
4. THE THIN CLIENTS SHALL HAVE PENTIUM SILVER PROCESSOR WITH UBUNTU OPERATING SYSTEM.
5. SHALL HAVE A DI CARD AND CONNECT ALL DOOR CONTACTS AND ALARM RELATED SENSORS FROM PLC PANEL RELAYS.
6. RS-485

GENERAL NOTES:

1. PROVIDE LABEL INDICATING INTEGRATOR'S LOGO WITH COMPANY NAME AND ADDRESS MOUNTED ON THE FRONT OF THE ENCLOSURE.
2. FOLLOW ALL UL 508 AND 508A SUPPLEMENT SB TO DETERMINE SHORT CIRCUIT RATINGS.
3. REFER TO ELECTRICAL PLANS FOR LOCATION OF ALL ENCLOSURES.
4. SECURE ENCLOSURE TO FLOOR FOLLOWING MANUFACTURER'S RECOMMENDATIONS. ADHERE TO ALL SEISMIC INSTALLATION REQUIREMENTS FOR THE APPROPRIATE LOCATIONS.
5. ALL ENCLOSURES SHALL BE MOUNTED ON A HOUSEKEEPING PAD.

INTERNAL ELEVATION

SCALE: NO SCALE
FILE: 11843A1002N601

GENERAL NOTES:

1. ENCLOSURE DRAWING REPRESENTS DESIGN INTENT. CONTRACTOR TO SUPPLY AS-BUILT DRAWINGS SHOWING FINAL ENCLOSURE LAYOUT WITH ALL EQUIPMENT, MANUFACTURERS, AND PART NUMBERS.
2. REFER TO ELECTRICAL PLANS FOR LOCATION OF ALL ENCLOSURES. CONSTRUCT PANEL TO MEET THE FULL INTENT OF ARTICLE 409 OF THE NATIONAL ELECTRIC CODE.
3. FOLLOW ALL UL 508 AND 508A SUPPLEMENT SB TO DETERMINE SHORT CIRCUIT RATINGS.
4. CIRCUIT BREAKERS SHALL BE COORDINATED TO TRIP BRANCH CIRCUIT BREAKER PRIOR TO THE MAIN PANEL CIRCUIT BREAKER.
5. ALL TIE WRAPS SHALL BE LOCATED OUTSIDE OF THE WIRE DUCTS. INSTALLATION OF ALL NYLON TIE WRAPS SHALL BE TENSIONED AND TRIMMED FLUSH.
6. ELEVATE ALL TERMINAL BLOCK DIN RAIL A MINIMUM OF 2 INCHES OFF OF BACK PANEL.
7. NO 480VAC CIRCUITS SHALL TERMINATE IN OR PASS THROUGH CONTROL CABINETS.
8. NO CAMERA OR TELEPHONE CABLES SHALL TERMINATE IN OR PASS THROUGH CONTROL CABINETS.
9. ALL CONDUIT PENETRATIONS SHALL BE LOCATED AT THE TOP OR BOTTOM OF THE ENCLOSURE. NO SIDE, FRONT, OR REAR PENETRATIONS ALLOWED.
10. QUANTITY OF COMPONENTS VARY AS REQUIRED FOR EACH CABINET.
11. REFER TO INSTRUMENTATION TYPICAL DETAILS FOR PANEL CONSTRUCTION AND WIRING REQUIREMENTS.
12. PROVIDE PANEL SURGE PROTECTION FOR ALL ANALOG/DIGITAL INSTRUMENTS LOCATED OUTDOORS OR OTHERWISE INDICATED IN THE DRAWING OR SPECIFICATIONS.
13. REFER TO TYPICAL DETAILS NE101, NE102, NE103, NE104, NE105, NE304, NE305, NE306, NE307, NE308, NE310, NE311, NE312, NE313, NE314, NE315, NE350, NE351, NE352, NE353, NE354.

GENERAL NOTES:

1. SCHEMATIC ILLUSTRATES DESIGN INTENT ONLY. PROVIDE ALL NECESSARY COMPONENTS TO MEET PROJECT REQUIREMENTS.

KEY NOTES:

1. SIZE UPS AND BATTERY BASED ON UPS SPECIFICATION REQUIREMENTS.
2. SIZE BASED ON PROTECTION NEEDS.
3. VERIFY LOADS BASED ON TEMPERATURE CALCULATIONS. PROVIDE ADDITIONAL CIRCUIT IF REQUIRED.
4. INSTALL SWITCH ON OUTERMOST DOOR OF OVERLAPPING DOORS. PROVIDE ADDITIONAL SWITCHES. WIRED IN SERIES, FOR NON-OVERLAPPING DOORS.
5. SIZE BASED ON LOAD REQUIREMENT.
6. PROVIDE QUANTITY REQUIRED PER SPECIFICATIONS. SIZE RECEPTACLE FOR LAPTOP.
7. PROVIDE HARDWIRED CONNECTIONS OR RECEPTACLE/PLUG AS REQUIRED BY MAINTENANCE BYPASS SWITCH.
8. SIZE BASED ON PROTECTION NEEDS. PROVIDE SEPARATE CIRCUIT BREAKERS FOR EACH INSTRUMENT POWERED FROM THE PCM CABINET.
9. PROVIDE QUANTITY REQUIRED PER SPECIFICATIONS.
10. CITY IT SWITCH.

KEY NOTES:

1. CHEMICAL LEAKAGE DRAINS TO THE CHEMICAL DRAIN TRENCH.
2. THIS PRESSURE SUSTAINING VALVE IS SHOWN IN THE WESTBROOK AND SOLAIRE P&IDS HERE. HOWEVER FOR CAMPUS OAKS AND MISTY WOOD WELLS THIS VALVE WILL BE PLACES IN ANOTHER LOCATION; PERHAPS LOCATED ON THE INJECTOR QUILL. AT THIS TIME THE LOCATION IS TO BE DETERMINED.

GENERAL NOTES:

1. ALL ETHERNET CABLE SHALL BE CAT6.
2. FIBER OPTIC CONNECTORS SHALL BE LC TYPE.
3. FIBER OPTIC CABLE SHALL BE SINGLE MODE.
4. THE NETWORK SPEED IS 1GB.
5. THE NETWORK IS ALL UNDER THE SAME SUBNET.
6. NETWORK PROTOCOL IS MODBUS TCP.
7. CORNING ALTOS IS THE END USER'S PREFERRED FIBER OPTIC CABLE.
8. CORNING SPH-01P-DIN IS THE END USER'S PREFERRED TERMINATION PANEL.

KEY NOTES:

1. SHALL BE IN A WALL MOUNTED CABINET WITH A PULLOUT SHELF FOR THE MOUSE AND KEYBOARD.
2. ETHERNET SWITCH PROVIDED BY THE CITY.
3. FIREWALL PROVIDED BY THE CONTRACTOR BUT CONFIGURED BY THE CITY.
4. THE THIN CLIENTS SHALL HAVE PENTIUM SILVER PROCESSOR WITH UBUNTU OPERATING SYSTEM.
5. SHALL HAVE A DI CARD AND CONNECT ALL DOOR CONTACTS AND ALARM RELATED SENSORS FROM PLC PANEL RELAYS.
6. RS-485

FILE: 11843A1002N602

GENERAL NOTES:

1. ENCLOSURE DRAWING REPRESENTS DESIGN INTENT. CONTRACTOR TO SUPPLY AS-BUILT DRAWINGS SHOWING FINAL ENCLOSURE LAYOUT WITH ALL EQUIPMENT, MANUFACTURERS, AND PART NUMBERS.
2. REFER TO ELECTRICAL PLANS FOR LOCATION OF ALL ENCLOSURES. CONSTRUCT PANEL TO MEET THE FULL INTENT OF ARTICLE 409 OF THE NATIONAL ELECTRIC CODE.
3. FOLLOW ALL UL 508 AND 508A SUPPLEMENT SB TO DETERMINE SHORT CIRCUIT RATINGS.
4. CIRCUIT BREAKERS SHALL BE COORDINATED TO TRIP BRANCH CIRCUIT BREAKER PRIOR TO THE MAIN PANEL CIRCUIT BREAKER.
5. ALL TIE WRAPS SHALL BE LOCATED OUTSIDE OF THE WIRE DUCTS. INSTALLATION OF ALL NYLON TIE WRAPS SHALL BE TENSIONED AND TRIMMED FLUSH.
6. ELEVATE ALL TERMINAL BLOCK DIN RAIL A MINIMUM OF 2 INCHES OFF OF BACK PANEL.
7. NO 480VAC CIRCUITS SHALL TERMINATE IN OR PASS THROUGH CONTROL CABINETS.
8. NO CAMERA OR TELEPHONE CABLES SHALL TERMINATE IN OR PASS THROUGH CONTROL CABINETS.
9. ALL CONDUIT PENETRATIONS SHALL BE LOCATED AT THE TOP OR BOTTOM OF THE ENCLOSURE. NO SIDE, FRONT, OR REAR PENETRATIONS ALLOWED.
10. QUANTITY OF COMPONENTS VARY AS REQUIRED FOR EACH CABINET.
11. REFER TO INSTRUMENTATION TYPICAL DETAILS FOR PANEL CONSTRUCTION AND WIRING REQUIREMENTS.
12. PROVIDE PANEL SURGE PROTECTION FOR ALL ANALOG/DIGITAL INSTRUMENTS LOCATED OUTDOORS OR OTHERWISE INDICATED IN THE DRAWING OR SPECIFICATIONS.
13. REFER TO TYPICAL DETAILS NE101, NE102, NE103, NE104, NE105, NE304, NE305, NE306, NE307, NE308, NE310, NE311, NE312, NE313, NE314, NE315, NE350, NE351, NE352, NE353, NE354.

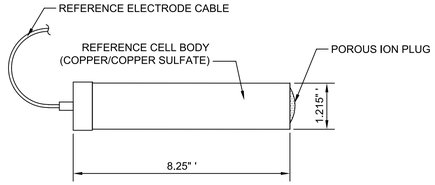
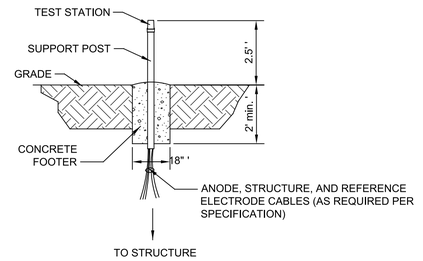
TOP VIEW ISOLATION JOINT FLANGE KIT



SIDE VIEW ISOLATION JOINT FLANGE KIT

NOTES:

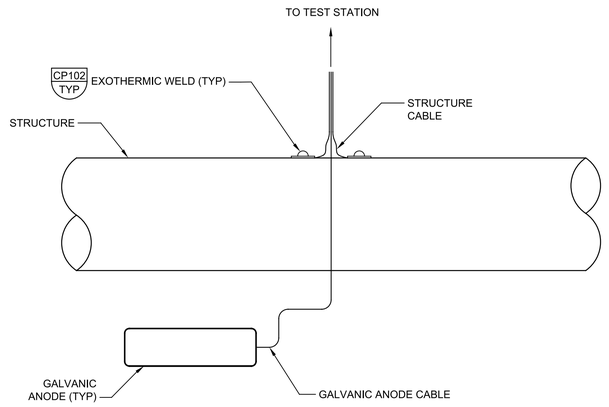
1. TYPICAL FOR NON-WELDED PIPING OR WELDED PIPING WITH MECHANICAL COUPLINGS.
2. FULL LENGTH ISOLATING SLEEVES REQUIRED FOR ALL THRU-FLANGE BOLTS OR STUDS.
3. ISOLATION IS TO BE TESTED AFTER INSTALLATION.
4. DO NOT INCLUDE ISOLATION WASHER FROM STAINLESS STEEL SIDE OF FLANGE.
5. FOR NOMINAL PIPE DIAMETERS UP TO 36", PROVIDE ONE ISOLATING AND ONE STEEL WASHER ON EITHER SIDE OF FLANGE BOLT. FOR PIPE DIAMETERS GREATER THAN 36", ISOLATING WASHERS SHALL BE INSTALLED SANDWICHED BETWEEN A PAIR OF MATCHING STEEL WASHERS AT BOTH SIDES OF FLANGE BOLT.



CP175 TYP J — ISOLATION JOINT FLANGE KIT DETAILS

NOTES:

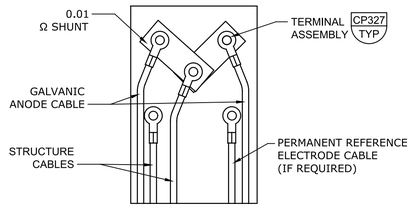
1. REFERENCE ELECTRODE SHALL BE DESIGNED FOR PERMANENT BURIAL OR IMMERSION, BASED ON ELECTROLYTE.
2. REMOVE PROTECTIVE END CAP FROM POROUS ION PLUG WITHIN 24 HOURS PRIOR TO BURIAL OR IMMERSION.



CP201 TYP S — BURIED OR IMMERSED REFERENCE ELECTRODE

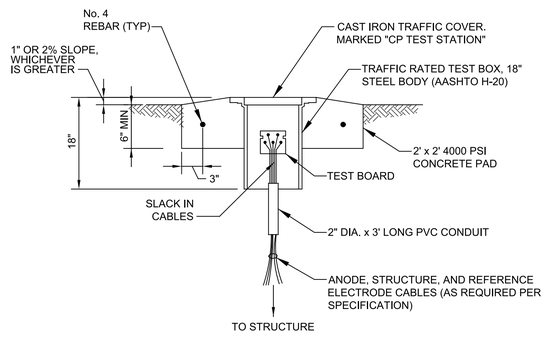
NOTES:

1. EXTEND DEPTH OF CONCRETE FOOTER TO MIN REQUIRED FOR CLIMATES WITH HIGHER FREEZE/THAW DEPTH REQUIREMENTS.
2. IF ABOVE GROUND TEST STATION IS NOT ALLOWED AND A TRAFFIC RATED TEST STATION IS REQUIRED, REFER TO CP306.



CP303 TYP S — TEST STATION MOUNTING - PE SUPPORT POST ABOVE GROUND

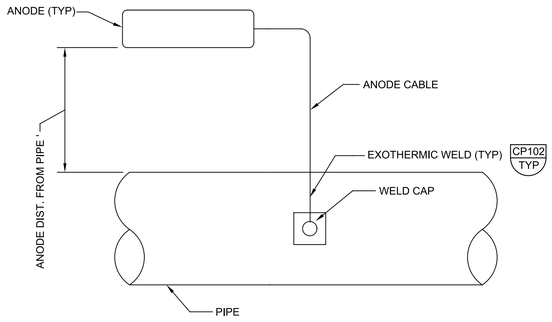
NOTES:



1. PROVIDE 18" SLACK IN CABLES TO ALLOW FOR STRUCTURE SETTLEMENT AND MOVEMENT.
2. ROUTE ALL WIRES THROUGH RIGID PVC UNDERGROUND AND GRS ABOVE GROUND TO TEST STATION.
3. TYPE, NUMBER, AND PLACEMENT OF ANODES PER SPECIFICATION REQUIREMENTS.
4. REFERENCE ELECTRODE AND COUPON (IF REQUIRED) NOT SHOWN, FOR CLARITY.
5. REFER TO THE SPECIFICATIONS FOR CABLE SIZES AND COLOR.
6. REFER TO CP100 FOR CABLE LABEL INSTRUCTIONS.

CP311 TYP R — CATHODIC PROTECTION TEST STATION

CATHODIC PROTECTION TEST STATION TERMINAL BOARD LAYOUT



NOTE:
COUPON AND REFERENCE ELECTRODES NOT SHOWN FOR CLARITY. REFER TO DETAIL CP328/TYP FOR COUPON AND REFERENCE ELECTRODE DETAILS.

NOTES:

1. PROVIDE 18" SLACK IN CABLES TO ALLOW TEST BOARD TO BE LIFTED 2' OUT OF THE FLUSH SERVICE BOX.
2. BOTTOM OF TEST BOX SHALL BE NATIVE SOIL. DO NOT PLACE ROCK, SAND, OR GRAVEL IN TEST BOX.
3. TEST BOX TO BE FIELD LOCATED +/- 5' FROM STATIONING GIVEN ON DRAWINGS. DO NOT INSTALL TEST STATION IN TRAFFIC LANES OR PARKING STALLS.
4. WRAP ENTIRE TEST BOX BODY WITH POLYETHYLENE TAPE PRIOR TO CASTING CONCRETE PAD.
5. PROVIDE ENOUGH SLOPE AWAY FROM TEST STATION TO PROVIDE DRAINAGE AWAY FROM TEST BOX.
6. EXTEND DEPTH OF CONCRETE PAD TO MIN REQUIRED FOR CLIMATES WITH HIGHER FREEZE/THAW DEPTH REQUIREMENTS.
7. CONCRETE PAD SHALL BE RATED TO 4500 PSI IN CLIMATES WITH FREEZE/THAW CONDITIONS (I.E. MOUNTAIN REGIONS, COLD NORTHERN CLIMATES).

CP306 TYP S — AT GRADE TRAFFIC RATED TEST STATION

NOTES:

1. PROVIDE SLACK IN CABLES TO ALLOW FOR STRUCTURE SETTLEMENT AND MOVEMENT.
2. TYPE, NUMBER, AND PLACEMENT OF ANODES PER SPECIFICATION REQUIREMENTS.
3. REFER TO THE SPECIFICATIONS FOR CABLE SIZES AND COLOR.
4. ANODE TO BE INSTALLED IN NATIVE SOIL ALONG WITH CLOTH BAG OF ANODE BACKFILL. BACKFILL TO 6" ABOVE ANODE WITH THE NATIVE SOIL.
5. ANODE MAY BE PLACED BESIDE OR BELOW PIPE, PER SPECIFICATION REQUIREMENTS..

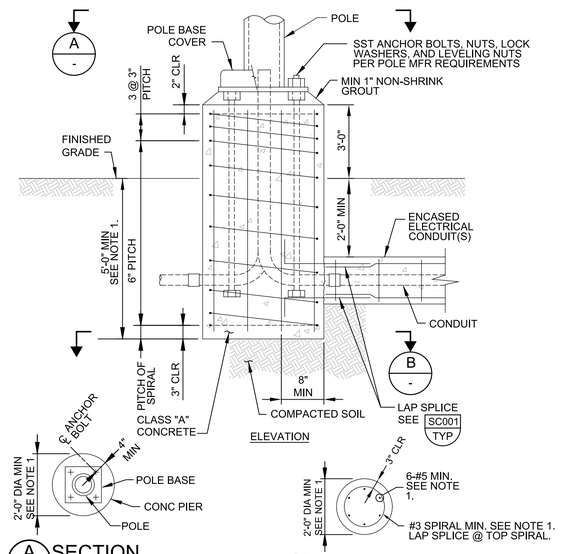
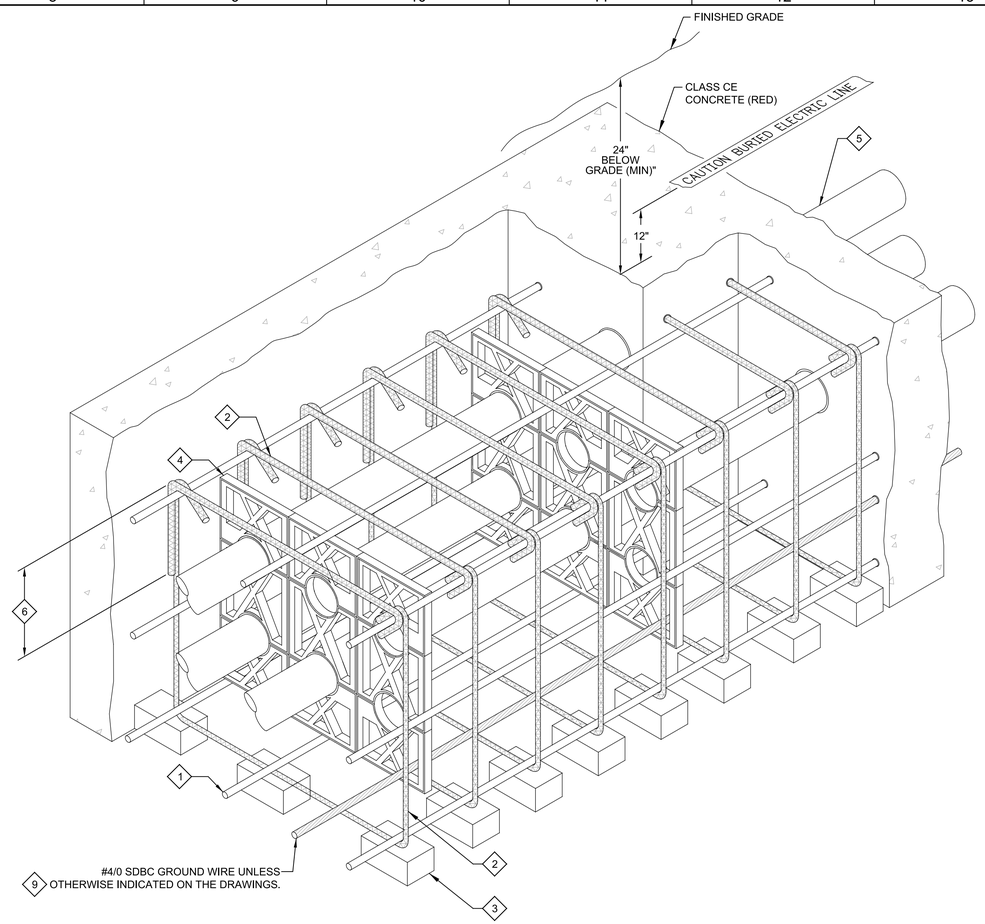
FLUSH MOUNTED



SUSPENDED

KEY NOTES:

1. USE MEYERS HUB IN WET AND/OR CORROSIVE AREAS.
2. LENGTH AS REQUIRED FOR INDICATED MOUNTING HEIGHT.
3. CAP END CONDUIT AS REQUIRED.

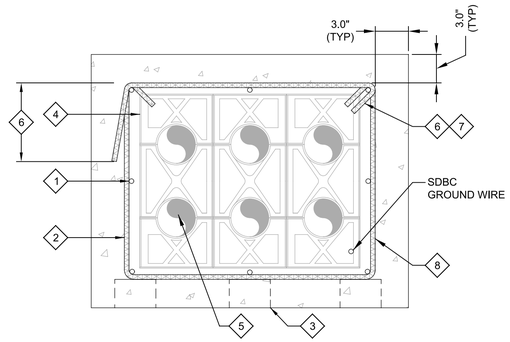


EL200 TYP S — LINEAR LUMINAIRE MOUNTING

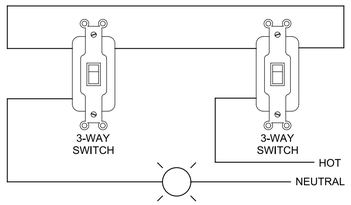
GENERAL NOTES:

1. USE MINIMUM DIMENSIONS AND REINFORCEMENT SHOWN UNLESS OTHERWISE NOTED. PROVIDE WIND LOAD CALCULATIONS AND INCREASE DIMENSIONS AS REQUIRED.

EL506 TYP S — POLE FOUNDATION TRAFFIC AREAS

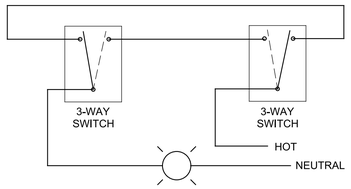


NOTES:



1. DIMENSIONS SHOWN ARE MINIMUM.
2. ADJUST SIZE OF DUCT BANK BASED UPON THESE GUIDELINES AND THE DUCT BANK SPECIFICATION TO ACCOMMODATE ACTUAL NUMBER OF CONDUITS WITHIN DUCT BANK. REFER TO DUCT BANK SECTIONS, AND CONDUIT SCHEDULE FOR NUMBER AND SIZE OF CONDUITS.
3. MAKE PROVISIONS TO PREVENT CONDUIT FLOTATION DURING CONCRETE PLACEMENT & CURING.

KEY NOTES:



1. #4 REINFORCING STEEL 12" MAXIMUM ON CENTER AROUND ENTIRE PERIMETER OF DUCT BANK.
2. #4 REINFORCING STEEL TIES MAXIMUM 24" ON CENTER ALONG LENGTH OF DUCT BANK.
3. MINIMUM OF TWO PRECAST CONCRETE BAR SUPPORTS PLACED UNDER A TIE AT EACH PVC CONDUIT SPACER ALONG LENGTH OF DUCT BANK. PROVIDE PRECAST BAR SUPPORTS AT INTERVALS OF 24" TO REDUCE DEFLECTION.
4. PVC CONDUIT SPACERS ON 8'-0" CENTERS (MAXIMUM). LOCATE 12" FROM TIES.
5. REFER TO DUCT BANK SECTIONS AND SPECIFICATIONS FOR CONDUIT REQUIREMENTS.
6. 1'-4" OR 135 DEGREE HOOK FOR SHALLOW DUCT BANKS SHALLOWER THAN 21"
7. CONTRACTOR'S OPTION TO PROVIDE 1'-4" LAP LENGTH EACH SIDE OF HORIZONTAL TIE.
8. LOWER PORTION OF TIES COULD BE U-BARS IF UPPER PORTIONS PROVIDES 1'-4" VERTICAL LEGS EACH SIDE.
9. BOND THE DUCT BANK GROUND WIRE TO THE GROUNDING SYSTEM AT BOTH ENDS OF THE DUCT BANK.

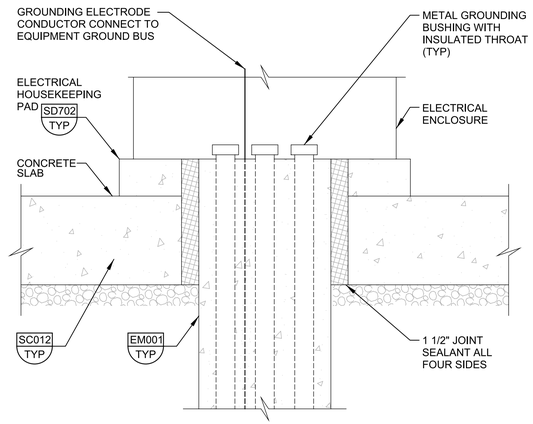
NOTES:

1. ALL DIMENSIONS ARE MINIMUM UNLESS OTHERWISE INDICATED ON THE DRAWINGS.
2. REFER TO THE SPECIFICATIONS FOR TRENCH BACKFILL REQUIREMENTS.

EM015 TYP S — DIRECT BURIED CONDUIT OR CABLE

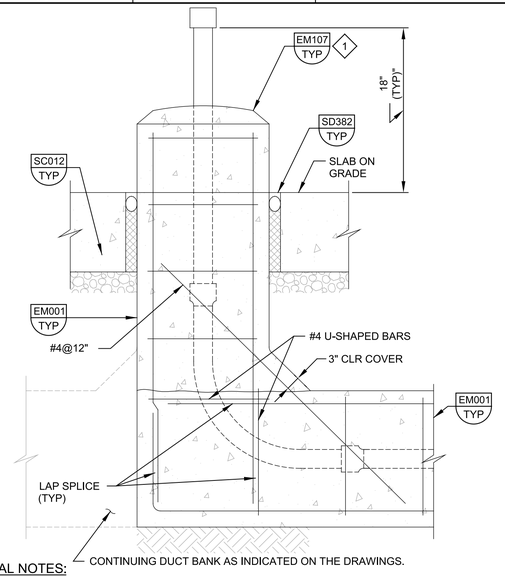


GENERAL NOTES:

1. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.

KEY NOTES:

1. ADJUST DUCT SPACING TO FIT OPENING IN THE SLAB AND EQUIPMENT ABOVE.

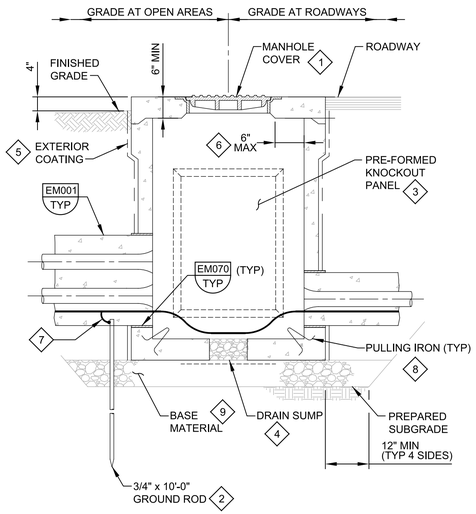


EM020 TYP S — DUCT BANK RISER

NOTES:

1. OPENING SIZE IN CONCRETE HOUSE KEEPING PAD IS SET BY CONDUIT SIZE AND NUMBER OF CONDUITS. CONDUITS AT TOP OF HOUSE KEEPING PAD MUST FIT IN MANUFACTURER PROVIDED WINDOW IN BOTTOM OF ELECTRICAL ENCLOSURE.

EM022 TYP S — DUCT BANK ENTRY INTO ELECTRICAL EQUIPMENT



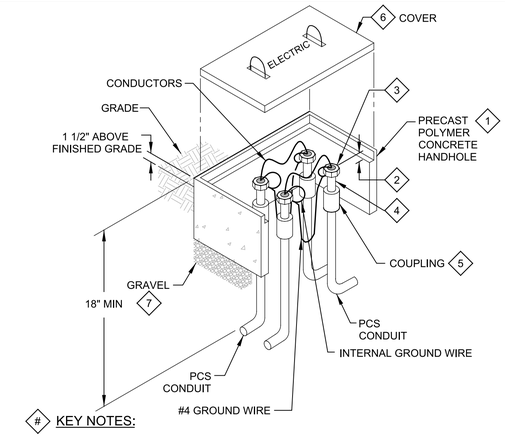
GENERAL NOTES:

1. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.

KEY NOTES:

1. PROVIDE CONDUIT HOUSE KEEPING CURB AT ALL LOCATIONS WHERE THE CONDUIT IS NOT PROTECTED BY AN EQUIPMENT PAD.

EM032 TYP S — RISER FROM DUCT BANK SLAB ON GRADE



NOTES:

1. PROVIDE MINIMUM INTERIOR DIMENSIONS AS SHOWN IN THE ELECTRICAL HANDHOLE AND MANHOLE SCHEDULE (MAXIMUM INTERIOR DIMENSIONS: 48"WIDE x 48"LONG x 48"DEEP)
2. BOND ALL METALLIC ITEMS INSIDE HANDHOLE TO GROUND ROD USING #4 AWG BARE COPPER CABLE.
3. SEE DRAWINGS FOR ORIENTATION, NUMBER, AND SIZE OF DUCT BANKS AT EACH HANDHOLE.

KEY NOTES:

1. PROVIDE 36"Ø EMBEDDED TOP FLANGE FRAME AND MANHOLE COVER.
2. BOND DUCT BANK AND INTERIOR GROUND CABLE TO GROUND ROD LOCATED OUTSIDE OF DUCT BANK. REFER TO THE SPECIFICATIONS FOR CONNECTION REQUIREMENTS.
3. INSTALL DUCT BANKS ONLY THROUGH CAST-IN OPENINGS OR PREFORMED KNOCKOUT PANELS. PROVIDE KNOCKOUTS ON EACH WALL AROUND HANDHOLE.
4. PROVIDE MINIMUM 4 INCH DIAMETER, GRAVEL FILLED PENETRATION THROUGH FLOOR OF HANDHOLE. SET SUMP OPENING OVER MINIMUM 18" SQUARE FILTER FABRIC TO ISOLATE GRAVEL FROM BASE MATERIAL BELOW.
5. COAT EXTERIOR WALLS BELOW GRADE WITH BITUMINOUS DAMP PROOFING.
6. MAXIMUM TOP SLAB OVERHANG IS TYPICAL AROUND 4 SIDES OF HANDHOLE.
7. GROUNDING CABLE CONNECTION. REFER TO THE SPECIFICATIONS FOR CONNECTION REQUIREMENTS.
8. PROVIDE ONE PULLING IRON ON EACH WALL OF HANDHOLE.
9. BASE MATERIAL: PROVIDE MIN 12" COMPACTED AGGREGATE BASE COURSE.

EM058 TYP S — ELECTRICAL HANDHOLE: PRECAST CONCRETE W/ MANHOLE COVER

KEY NOTES:

1. PRECAST POLYMER CONCRETE HANDHOLE WITH OPEN BOTTOM FOR DRAINAGE. DO NOT INSTALL POLYMER CONCRETE HANDHOLES IN ROADWAYS.
2. ALLOW SUFFICIENT SPACE BETWEEN THE CONDUIT AND HANDHOLE LID FOR BENDING RADIUS OF WIRES AND CABLES.
3. INSULATED GROUNDING BUSHINGS. BOND BUSHINGS TO EACH OTHER WITH #4 WIRE AND TO GROUND CONDUCTORS IN EACH CONDUIT.
4. NIPPLE (USED TO COMPACT DUCT SEAL IN COUPLING).
5. PACK COUPLING AREA WITH DUCT SEAL BY MANVILLE OR APPROVED EQUAL.
6. PROVIDE "TIER"-RATED COVER PER MANHOLE AND HANDHOLE SCHEDULE.
7. GRAVEL BED FOR LEVELING & DRAINAGE. MINIMUM 12" DEEP & EXTENDING AT LEAST 6" EACH WAY PAST OUTSIDE LIMITS OF HANDHOLE.

EM052 TYP S — ELECTRICAL HANDHOLE: PRECAST POLYMER CONCRETE

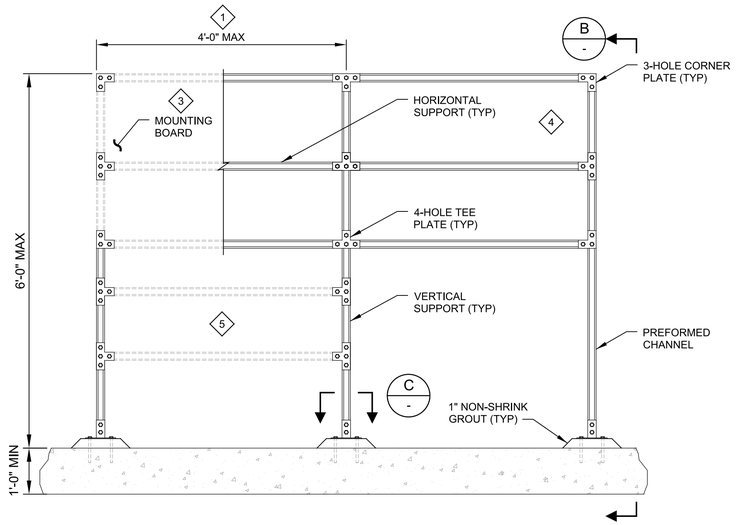
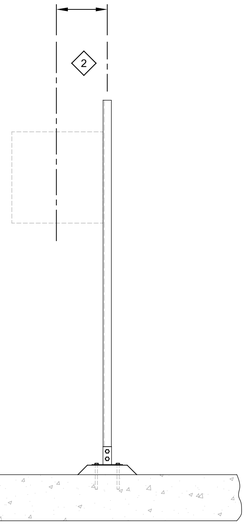
A - ELEVATION

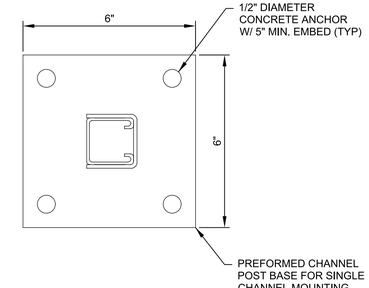
B - ELEVATION





C - SECTION

GENERAL NOTES:



1. USE ELEVATION B WHERE A SEPARATE FOUNDATION IS REQUIRED.
2. COAT ALUMINUM SURFACES IN CONTACT W/ CONCRETE PER SPECIFICATIONS.
3. USE STAINLESS STEEL FASTENERS FOR MOUNTING DEVICES.
4. WEIGHT OF DEVICE(S) SHALL NOT EXCEED 300 POUNDS.

EM202 TYP S — DEVICE SUPPORT AND MOUNTING

B - SECTION

C - POST BASE

NOTES:

1. AS SHOWN, THE MOUNTING STAND IS SUITABLE FOR THE FOLLOWING DESIGN CRITERIA.
   - STAINLESS STEEL OR HOT-DIPPED GALVANIZED PREFORMED CHANNEL
   - SEISMIC DESIGN CATEGORY: A THROUGH D
   - RISK CATEGORY: III AND IV
   - MAXIMUM EQUIPMENT LOAD OF 100 LBS PER VERTICAL SUPPORT

   SUBMIT DESIGN CALCULATIONS FOR EACH INSTALLATION THAT EXCEEDS THE SPECIFIED DESIGN CRITERIA OR DIMENSIONAL LIMITATIONS IN THIS DETAIL. REFER TO THE SPECIFICATIONS FOR DESIGN CALCULATION SUBMITTAL REQUIREMENTS
2. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.
3. WHERE CONCRETE ANCHORS COME IN CONTACT WITH DISSIMILAR METALS, ISOLATE DISSIMILAR METALS AS SPECIFIED IN THE SPECIFICATIONS.
4. HORIZONTAL AND VERTICAL SUPPORTS SHALL CONSIST OF PREFORMED SINGLE CHANNELS.

KEY NOTES:

1. FOR MOUNTING STANDS WIDER THAN 4 FEET PROVIDE EQUALLY SPACED VERTICAL SUPPORTS AT 4 FOOT MAXIMUM SPACING.
2. MAXIMUM OFFSET TO THE CENTERLINE OF EQUIPMENT OR ENCLOSURES IS 1'-6".
3. PROVIDE A MOUNTING BOARD FOR INSTRUMENTS AND DEVICES WEIGHING LESS THAN 20 POUNDS THAT CANNOT BE MOUNTED DIRECTLY TO PREFORMED CHANNEL. EQUIPMENT ANCHORAGE TO THE MOUNTING BOARD SHALL BE DESIGNED BY THE CONTRACTOR.
4. PROVIDE ADDITIONAL PREFORMED CHANNEL SUPPORTS FOR ENCLOSURES THAT CAN BE MOUNTED DIRECTLY TO THE PREFORMED CHANNEL.
5. OPTIONAL HORIZONTAL SUPPORTS AND AVAILABLE SPACE FOR JUNCTION BOXES.

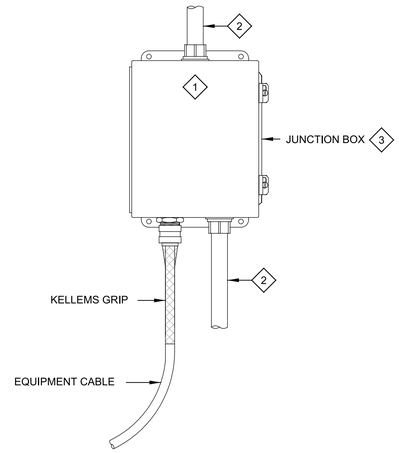
B SECTION

C POST BASE

NOTES:

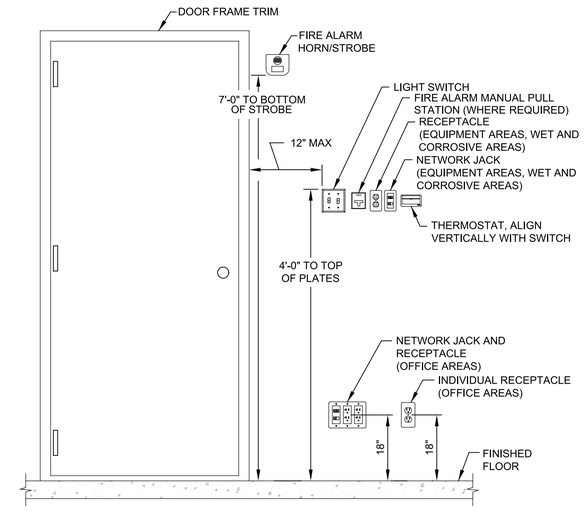


1. AS SHOWN, THE MOUNTING STAND IS SUITABLE FOR THE FOLLOWING DESIGN CRITERIA.
   - STAINLESS STEEL OR HOT-DIPPED GALVANIZED PREFORMED CHANNEL
   - BASIC WIND SPEED (3 SECOND GUST, 33 FEET ABOVE GROUND) : 120 MPH
   - WIND EXPOSURE CATEGORY: C
   - NON -SPECIAL WIND REGIONS
   - SEISMIC DESIGN CATEGORY: A THROUGH D
   - RISK CATEGORY: III AND IV
   - MAXIMUM EQUIPMENT LOAD OF 100 LBS PER VERTICAL SUPPORT

   SUBMIT DESIGN CALCULATIONS FOR EACH INSTALLATION THAT EXCEEDS THE SPECIFIED DESIGN CRITERIA OR DIMENSIONAL LIMITATIONS IN THIS DETAIL. REFER TO THE SPECIFICATIONS FOR DESIGN CALCULATION SUBMITTAL REQUIREMENTS.
2. THE TOTAL SURFACE AREA OF ALL EQUIPMENT AND MOUNTING BOARDS SHALL NOT EXCEED 12 SQUARE FEET PER VERTICAL SUPPORT.
3. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.
4. WHERE CONCRETE ANCHORS COME IN CONTACT WITH DISSIMILAR METALS, ISOLATE DISSIMILAR METALS AS SPECIFIED IN THE SPECIFICATIONS.
5. VERTICAL SUPPORTS SHALL CONSIST OF PREFORMED DOUBLE CHANNELS. HORIZONTAL SUPPORTS SHALL CONSIST OF PREFORMED SINGLE CHANNELS.

KEY NOTES:

1. FOR MOUNTING STANDS WIDER THAN 4 FEET PROVIDE EQUALLY SPACED VERTICAL SUPPORTS AT 4 FOOT MAXIMUM SPACING.
2. MAXIMUM OFFSET TO THE CENTERLINE OF EQUIPMENT OR ENCLOSURES IS 1'-6".
3. PROVIDE A MOUNTING BOARD FOR INSTRUMENTS AND DEVICES WEIGHING LESS THAN 20 POUNDS THAT CANNOT BE MOUNTED DIRECTLY TO PREFORMED CHANNEL. EQUIPMENT ANCHORAGE TO THE MOUNTING BOARD SHALL BE DESIGNED BY THE CONTRACTOR.
4. PROVIDE ADDITIONAL PREFORMED CHANNEL SUPPORTS FOR ENCLOSURES THAT CAN BE MOUNTED DIRECTLY TO THE PREFORMED CHANNEL.
5. OPTIONAL HORIZONTAL SUPPORTS AND AVAILABLE SPACE FOR JUNCTION BOXES.



EM211 TYP S OUTDOOR EQUIPMENT MOUNTING STAND

KEY NOTES:

1. PROVIDE TERMINAL STRIPS OR POWER DISTRIBUTION BLOCKS TO TRANSITION FROM THE EQUIPMENT CABLE TO FIELD WIRING. PROVIDE CIRCUIT BREAKERS OR FUSES, AS REQUIRED, TO MEET THE AVAILABLE FAULT CURRENT REQUIREMENTS.
2. POWER AND CONTROL CONDUITS. REFER TO THE ELECTRICAL DRAWINGS, CONDUIT AND CABLE SCHEDULE FOR DETAILS.
3. REFER TO SPECIFICATIONS AND PLANS FOR NEMA TYPE.

EM315 TYP S SUBMERSIBLE EQUIPMENT CABLE CONNECTION DETAIL

GENERAL NOTES:

1. ALL SWITCHES AND RECEPTACLES SHALL BE EMBEDDED IN THE WALL UNLESS OTHERWISE INDICATED ON THE DRAWINGS.

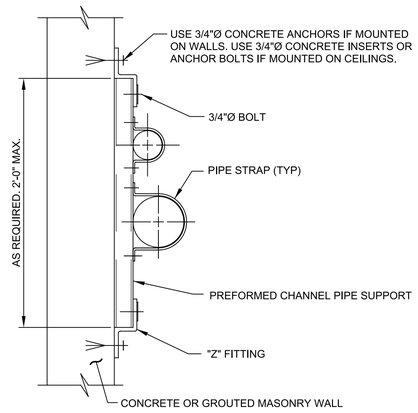
PROJECT NO. FILE NAME: 11843A1000TM03.dgn

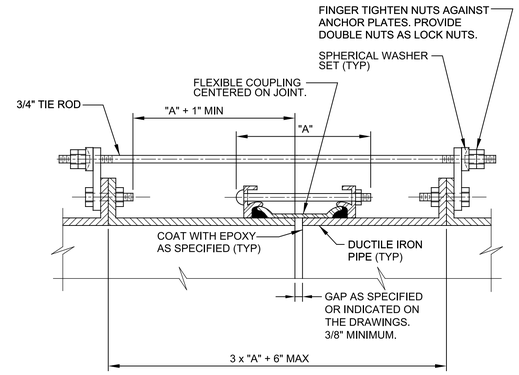


NOTES:

1. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.

MP185 TYP — PIPE SUPPORT - OVERHEAD CONNECTIONS TO STEEL FRAMING

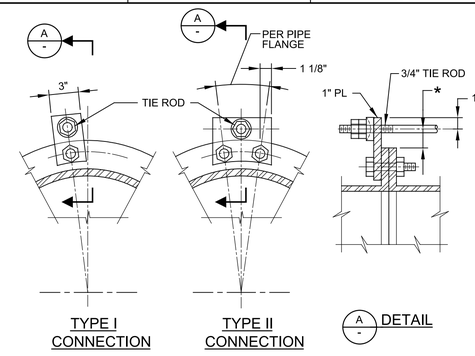
10/05/23



NOTES:

1. REFER TO THE SPECIFICATIONS FOR MATERIAL REQUIREMENTS.
2. SPACE PREFORMED CHANNEL PIPE SUPPORTS AT MAXIMUM 5'-0" O.C.

MP218 TYP N — PIPE SUPPORT - WALL - PREFORMED CHANNEL W/ PIPE CLIPS

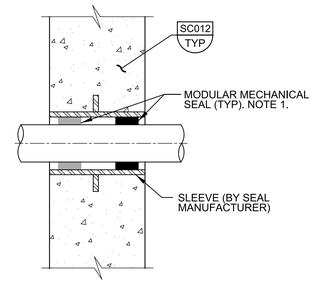


10/05/23

ROD SCHEDULE		
PIPE THRUST. SEE NOTE 2.	TYPE OF CONNECTION	NO. OF RODS
0-6,000#	I	2
6,001 - 12,000#	II	2
12,001 - 18,000#	II	3
18,001 - 24,000#	II	4
24,001 - 30,000#	II	5

MP310 TYP N — PIPE JOINT - DIP - FLEXIBLE COUPLING - RESTRAINED

SHEET 1 OF 2 9/05/23

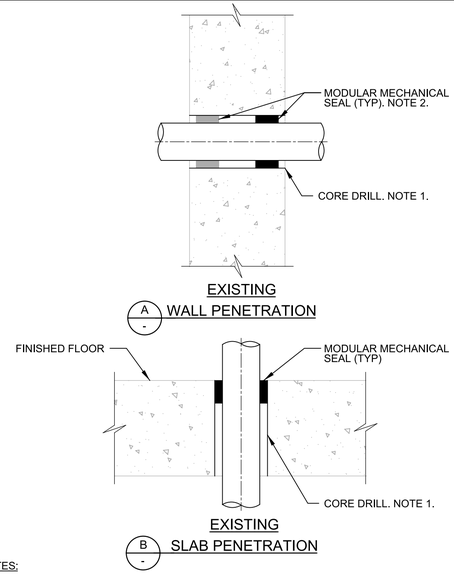


NOTES:

1. ALL EXPOSED FLEXIBLE COUPLINGS SHALL HAVE TIE RODS UNLESS SPECIFICALLY INDICATED OTHERWISE ON THE DRAWINGS.
2. PIPE THRUST SHALL BE BASED ON TEST PRESSURE.
3. PIPE THRUST = 0.7854 x D^2 x TEST PRESSURE, WHERE "D" IS PIPE OD.
4. MINIMUM TIE ROD YIELD = 48,000 PSI.
5. FOR THRUSTS GREATER THAN 30,000 POUNDS, ADD ONE 3/4 INCH DIAMETER TIE ROD FOR EVERY 6,000 POUNDS INCREASE IN THRUST.
6. ALL ROD CONNECTIONS SHALL BE TYPE II FOR THRUSTS GREATER THAN 30,000 POUNDS.
7. GRIND ALL CORNERS SMOOTH.
8. *= AS REQUIRED TO CLEAR FLEXIBLE COUPLING. 3/4" MINIMUM AND 1 1/2" MAXIMUM.

MP310 TYP N — PIPE JOINT - DIP - FLEXIBLE COUPLING - RESTRAINED

SHEET 2 OF 2 09/05/23



NOTES:

1. WALLS THICKER THAN 12" INSTALL MODULAR MECHANICAL SEAL AT BOTH ENDS OF WALL SLEEVE.

MP544 TYP NS — WALL PENETRATION - CAST-IN SLEEVE W/ BARRIER SEALS

SHEET 1 OF 2 09/06/23

NOTES:

1. CORE DRILL DIAMETER, PROCEDURES, AND POST -DRILLING SURFACE PREPARATION PER MODULAR MECHANICAL SEAL MANUFACTURER'S RECOMMENDATIONS FOR SPECIFIC PIPE OD.
2. WALLS 12" OR THICKER INSTALL MODULAR MECHANICAL SEAL AT BOTH ENDS OF PENETRATION.

MP544 TYP NS — WALL PENETRATION - CAST-IN SLEEVE W/ BARRIER SEALS

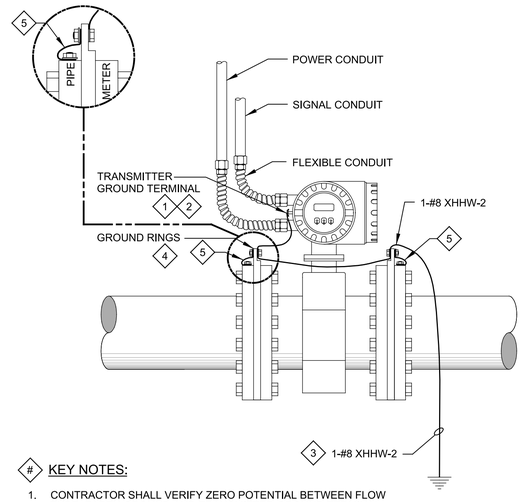
NE354 TYP S — TYPICAL SURGE PROTECTION WIRING
4-WIRE ANALOG TRANSMITTER
120VAC POWER SUPPLY

NF111 TYP S — THERMAL FLOW SWITCH MOUNTING DETAIL

NL113 TYP S — AREA FLOODED ALARM



GENERAL NOTES:

1. FOLLOW MANUFACTURER'S RECOMMENDED MAXIMUM TORQUE SETTINGS. DO NOT OVER-TORQUE FLANGE BOLTS. OVERTIGHTENING THE FASTENERS WILL DEFORM SEALING FACES OR DAMAGE THE LINE.
2. ALWAYS TIGHTEN FLANGE BOLTS UNIFORMLY AND IN DIAGONALLY OPPOSITE SEQUENCE.
3. MOUNT METER SO THAT IT REMAINS FULLY FLOODED.
4. FOR METERS SPECIFIED WITH ZERO DIAMETER FEATURE, REFER TO THE MECHANICAL DRAWINGS FOR INSTALLATION.

KEY NOTES:

1. PIPE SUPPORTS BY MECHANICAL CONTRACTOR. NO SUPPORTS SHALL BE INSTALLED AT THE METER HOUSING.
2. INSTALL METER SUCH THAT THERE ARE NO PIPE BENDS FOR 5 PIPE DIAMETERS UPSTREAM AND 3 PIPE DIAMETERS DOWNSTREAM OF THE METER.

NF130 TYP S — MAGNETIC FLOWMETER MOUNTING DETAIL

KEY NOTES:

1. CONTRACTOR SHALL VERIFY ZERO POTENTIAL BETWEEN FLOW TUBE, EARTH GROUND AND TRANSMITTER GROUND TERMINAL.
2. CONNECT TRANSMITTER GROUND TERMINAL TO GROUND RINGS.
3. CONNECT METER BODY TO EARTH GROUND POTENTIAL.
4. EQUALIZE POTENTIAL VIA GROUND RINGS BETWEEN FLUID AND MAGMETER.
5. PROVIDE BONDING JUMPER ON CONDUCTIVE PIPES.

NOTES:

1. SEE SPECIFICATIONS FOR ACCEPTABLE BACKFILL MATERIALS.

SB110 STRUCTURAL EXCAVATION & BACKFILL

TYP S — 12/18/2023

1. SEE DIVISION 03 SPECIFICATION FOR REQUIREMENTS FOR CONCRETE CONSTRUCTION.
2. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, MINIMUM REINFORCEMENT OF CONCRETE WALLS OR SLABS SHALL BE AS FOLLOWS. CONTACT ENGINEER FOR LOCATIONS INSIDE CONCRETE.
   10" THICK OR LESS: .....#5 @ 12" EACH WAY.
   MORE THAN 10" THICK: .....#5 @ 12" EACH WAY, EACH FACE.
3. WALL REINFORCEMENT AT CORNERS OR JUNCTIONS OF WALLS SHALL BE CONTINUOUS, LAP SPLICED, OR TERMINATED IN AN ACI STANDARD 90 DEGREE HOOK. SEE DETAIL SC310/TYP.
4. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, DOWELS BETWEEN ADJACENT CONCRETE PLACEMENTS SHALL BE THE SAME SIZE AND SPACING AS THE REINFORCEMENT WHICH IS SPLICED TO THE DOWELS.
5. SLAB, BEAM AND COLUMN REINFORCING BARS SHALL HAVE A MINIMUM EXTENSION OR ANCHORAGE INTO SUPPORTS IN ACCORDANCE WITH ACI 318 AND ACI 350.
6. PROVIDE STIRRUP SUPPORT BARS SHALL BE TO SECURE TOP BARS AGAINST DISPLACEMENT AS REQUIRED.
7. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, CONCRETE COVER OVER #11 AND SMALLER REINFORCING BARS SHALL BE AS FOLLOWS:
   A. SLABS AND JOISTS:
      FORMED CONCRETE SURFACES AND UNFORMED TOP SURFACES FOR DRY CONDITIONS
      #7 BARS AND SMALLER.....1"
      #8 BARS AND LARGER.....1 1/2"
      FORMED CONCRETE SURFACES AND UNFORMED TOP SURFACES EXPOSED TO WEATHER, IN CONTACT WITH SOIL OR FLUIDS, OR LOCATED OVER FLUIDS.....2"
   B. BEAMS AND COLUMNS:
      FORMED CONCRETE SURFACES FOR DRY CONDITIONS:
      STIRRUPS, SPIRALS, AND TIES.....1 1/2"
      PRINCIPAL REINFORCEMENT.....2"
      FORMED CONCRETE SURFACES EXPOSED TO WEATHER, IN CONTACT WITH SOIL OR FLUIDS, OR IN BEAMS LOCATED OVER FLUIDS:
      STIRRUPS AND TIES.....2"
      PRINCIPAL REINFORCEMENT.....2 1/2"
   C. WALLS:
      FORMED CONCRETE SURFACES FOR DRY CONDITIONS:
      #7 BARS AND SMALLER.....1"
      #8 BARS AND LARGER.....1 1/2"
      FORMED CONCRETE SURFACES EXPOSED TO WEATHER, OR IN CONTACT WITH SOIL OR FLUIDS.....2"

SC001 REINFORCED CONCRETE - NOTES

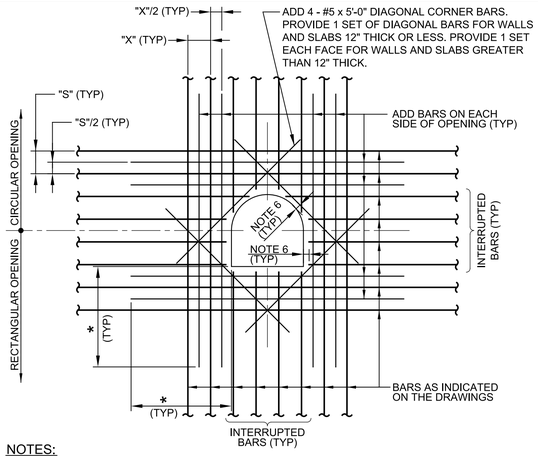
TYP S — SHEET 1 OF 3 — 12/18/2023

   D. FOOTINGS AND SLABS ON GRADE:
      FORMED VERTICAL CONCRETE SURFACES.....2"
      AT UNFORMED CONCRETE SURFACES CAST AGAINST SOIL, ROCK, OR CONCRETE WORK MATS.....3"
      TOP SURFACE OF FOOTINGS AND SLABS.....SAME AS SLABS
8. WATERSTOPS:
   A. PROVIDE WATERSTOPS AT JOINTS IN SLABS AND WALLS OF LIQUID-CONTAINING STRUCTURES, AND PORTIONS OF STRUCTURES BELOW THE DESIGN GROUNDWATER LEVEL. MAKE WATERSTOPS CONTINUOUS THROUGH STRUCTURE, SPLICING WATERSTOPS IN SLABS WITH WATERSTOPS IN WALLS.
   B. END WATERSTOPS 3" BELOW TOP OF WALLS. WHERE TOP OF WALL IS COVERED BY A SLAB WITHOUT WATERSTOPS, CONTINUE WATERSTOP TO WALL/SLAB JOINT. WHERE TOP OF WALL IS COVERED BY A SLAB WITH WATERSTOPS, MAKE WATERSTOPS CONTINUOUS, SPLICING WATERSTOPS IN WALLS WITH WATERSTOPS IN SLAB.
9. CURE CONCRETE IN ACCORDANCE WITH THE CONTRACT DOCUMENTS. WHERE WATER CURING IS SPECIFIED, MEMBRANE CURING IS NOT ALLOWED.
   A. THE CONTRACTOR IS WARNED THAT WATER CURING IS DIFFICULT AT TIMES DUE TO WIND AND DRY CONDITIONS. STUDY SPECIFICATION REQUIREMENTS AND FURNISH ADEQUATE SYSTEMS TO PROVIDE WATER CURING WHERE REQUIRED.
   B. KEEP WATER CURED SURFACES VISIBLY MOIST AT ALL TIMES. FLOOD TOPS OF WALLS NOT LESS THEN 3 TIMES DAILY.
10. DO NOT PLACE BACKFILL AGAINST WALLS UNTIL:
   A. WALLS HAVE BEEN CAST TO FULL HEIGHT OF STRUCTURE AND CONCRETE HAS REACHED THE MINIMUM SPECIFIED COMPRESSIVE STRENGTH (f'c).
   B. CONNECTING SLABS AND BEAMS HAVE BEEN CAST AND CONCRETE IN THOSE ELEMENTS HAS REACHED THE MINIMUM SPECIFIED COMPRESSIVE STRENGTH (f'c).
11. LAP SPLICES:
   A. SEE TABLE 1 OF THIS DETAIL FOR LAP SPLICE LENGTHS.
   B. WHEN MULTIPLE BARS ARE SPLICED AT THE SAME SECTION, THE "CLEAR BAR SPACING" IS DEFINED AS THE MINIMUM CLEAR DISTANCE BETWEEN THE BARS OUTSIDE THE SPLICE LENGTH MINUS ONE BAR DIAMETER.
   C. UNLESS OTHERWISE INDICATED ON THE DRAWINGS, BARS AT A LAP SPLICE SHALL BE IN CONTACT WITH EACH OTHER.
   D. "TOP BARS" ARE HORIZONTAL REINFORCEMENT AT LOCATIONS WHERE MORE THAN 12 INCHES OF FRESH CONCRETE IS CAST IN THE MEMBER BELOW THE BAR.
12. FORM EXPOSED CONCRETE CORNERS AND EDGES WITH 3/4" CHAMFER UNLESS OTHERWISE INDICATED ON THE DRAWINGS.

SC001 REINFORCED CONCRETE - NOTES

TYP S — SHEET 2 OF 3 — 12/18/2023

TABLE 1: REINFORCING BAR LAP SPLICES: f'c = 4000 PSI, Fy = 60,000 PSI



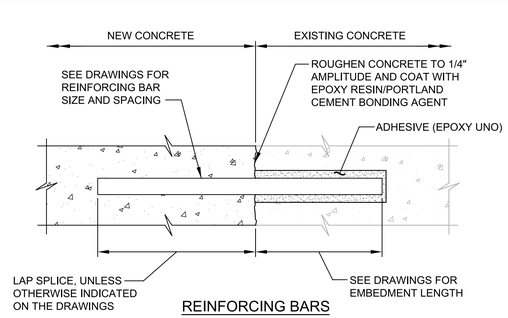
BAR SIZE	MINIMUM COVER (BAR DIA)	MINIMUM CLEAR BAR SPACING (BAR DIA)	LAP SPLICE LENGTH (INCHES)	
			TOP BARS	OTHER BARS
#4	MORE THAN 1	MORE THAN 2	32 ★	25 ★
	MORE THAN 2	MORE THAN 4	20	16
#5	MORE THAN 1	MORE THAN 2	40 ★	31 ★
	MORE THAN 2	MORE THAN 4	26	20
#6	MORE THAN 1	MORE THAN 2	48 ★	37 ★
	MORE THAN 2	MORE THAN 4	30	24
#7	MORE THAN 1	MORE THAN 2	70 ★	54 ★
	MORE THAN 2	MORE THAN 4	43	33
#8	MORE THAN 1	MORE THAN 2	81 ★	62 ★
	MORE THAN 2	MORE THAN 4	50	38
#9	MORE THAN 1	MORE THAN 2	90 ★	70 ★
	MORE THAN 2	MORE THAN 4	56	42
#10	MORE THAN 1	MORE THAN 2	104 ★	81 ★
	MORE THAN 2	MORE THAN 4	62	48
#11	MORE THAN 1	MORE THAN 2	114 ★	88 ★
	MORE THAN 2	MORE THAN 4	69	54

REINFORCING BAR LAP SPLICE TABLE NOTES:

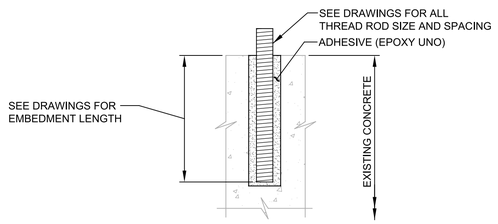
1. TABULATED SPLICE LENGTHS ARE APPLICABLE ONLY WHEN BOTH REQUIREMENTS FOR MINIMUM COVER AND FOR MINIMUM CLEAR BAR SPACING ARE SATISFIED.
2. ★= IF THE CLEAR BAR SPACING IS LESS THAN OR EQUAL TO TWO BAR DIAMETERS, OR THE COVER IS LESS THAN OR EQUAL TO ONE BAR DIAMETER, THE LAP SPLICE LENGTH SHALL BE INCREASED BY 50 PERCENT.

SC001 REINFORCED CONCRETE - NOTES

TYP S — SHEET 3 OF 3 — 12/18/2023



NOTES:

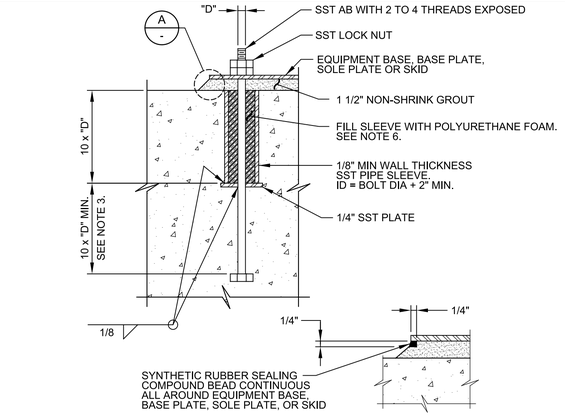


1. AREA OF ADD BARS AT EACH EDGE OF OPENING IN EACH DIRECTION SHALL BE EQUAL TO OR GREATER THAN 1/2 THE CROSS SECTIONAL AREA OF THE INTERRUPTED BARS.
2. PROVIDE STANDARD ACI HOOKS ON BARS IF STRAIGHT EXTENSION PAST THE OPENING, CANNOT BE ACHIEVED.
3. PLACE ADD BARS IN SAME PLANES AS INTERRUPTED REINFORCING.
4. PLACE #5 DIAGONAL BARS ON INSIDE OF INTERRUPTED REINFORCING.
5. * DIMENSION EQUALS OPENING DIMENSION MEASURED PERPENDICULAR TO ADD BARS PLUS LAP SPLICE LENGTH.
6. 2" CLEAR TO CONCRETE OPENINGS OR OUTSIDE FACE OF PIPES AND PIPE SLEEVES. DO NOT OVERCUT REINFORCEMENT FOR EASIER PLACEMENT OF WEEP RINGS AND FLANGES.
7. ADD BARS ARE NOT REQUIRED AT SIDES OF OPENINGS PARALLEL TO AND WITHIN 6" OF A WALL OR BEAM.

SC012 CONCRETE - REINFORCEMENT - ADDITIONAL REINF AT OPENINGS - SLABS AND WALLS

TYP S, N — 12/18/2023

REINFORCING BARS



ALL-THREAD RODS

NOTE:

1. INSTALLATION OF REINFORCING BARS AND ALL THREAD RODS AS INDICATED IN THE SPECIFICATIONS.

SC040 CONCRETE REINFORCEMENT - ADHESIVE - BONDED BARS AND ALL-THREAD RODS

TYP N — 12/18/2023

A - DETAIL

NOTES:

1. "D" = DIAMETER OF ANCHOR BOLT.
2. ANCHOR BOLT DIAMETER AS INDICATED ON THE DRAWINGS. IF NOT INDICATED ON THE DRAWINGS, THE ANCHOR BOLT SIZE SHALL BE AS RECOMMENDED BY THE EQUIPMENT MANUFACTURER.
3. WHERE CONCRETE SLAB OR BEAM THICKNESS WILL NOT ACCOMMODATE THE ANCHOR BOLT, PROVIDE EXTRA THICKNESS OF SLAB OR BEAM.
4. PREFABRICATED PLASTIC ANCHOR BOLT SLEEVE OPTIONAL.
5. DO NOT USE ALL THREAD RODS AS A SUBSTITUTE FOR BOLTS WITH A BOLT HEAD. SMOOTH RODS THREADED AT THE ENDS MAY BE USED IF ACCEPTABLE TO THE ENGINEER. DO NOT WELD NUTS TO THE THREADED RODS.
6. COMPLETELY REMOVE ANY POLYURETHANE FOAM FROM CONCRETE, EQUIPMENT BASE, BASE PLATE, SOLE PLATE, OR SKID, AND ANCHOR BOLTS ABOVE TOP OF CONCRETE.
7. DO NOT USE LEVELING NUTS TO SUPPORT AND LEVEL EQUIPMENT BASE, BASE PLATE, SOLE PLATE, OR SKID.

NOTES:

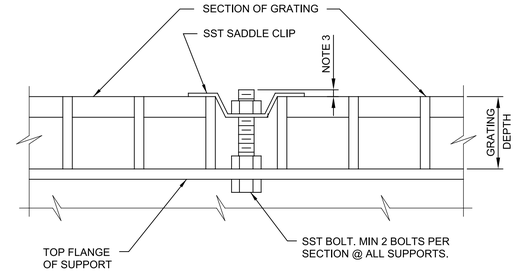
1. FIRST ANCHOR BOLT AT EACH END OF SECTION OF ANGLE SHALL BE 6" OR LESS FROM END OF ANGLE.
2. ANGLE SHALL STOP AT EACH SIDE OF CONTROL AND EXPANSION JOINTS. GAP BETWEEN ENDS OF ANGLES SHALL EQUAL WIDTH OF JOINT.

SN550 TYP N — STEEL DECK - ROOF AT CMU WALL - DECK 1 SIDE - ANGLE BEARING

12/18/2023

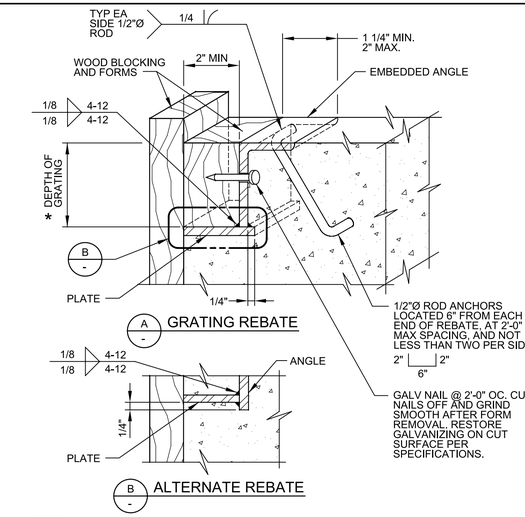


NOTES:

1. GAUGE OF MAKE-UP SECTION SHALL BE THE SAME AS THE ROOF DECK SECTION GAUGE AS INDICATED ON THE DRAWINGS. IF "C" IS GREATER THAN 2/3 "A", THE MAKE-UP SECTION SHALL CONSIST OF THREE HAT SECTIONS. TWO HAT SECTIONS ARE REQUIRED WHEN "C" IS GREATER THAN "A"/3, AND ONE HAT SECTION IS REQUIRED WHEN "C" IS LESS THAN "A"/3.
2. SEE ROOF FRAMING PLAN FOR DECK WELDING.
3. ROOFING AND INSULATION NOT SHOWN FOR CLARITY.

SN610 TYP N — STEEL DECK - ROOF DECK - MAKE-UP SECTION

12/18/2023



NOTES:

1. GRATING FASTENERS SHALL BE INSTALLED WHERE INDICATED ON THE DRAWINGS.
2. GRATING FASTENERS SHALL BE INSTALLED AT EACH CORNER OF EACH PANEL AND AT SPACING NOT TO EXCEED 8'-0".
3. RECESS THE GRATING CLIP WITHIN THE DEPTH OF THE GRATING TO AVOID A TRIPPING HAZARD.

SR601 TYP — GRATING - FASTENERS

12/18/2023

NOTES:

1. SEE SPECIFICATIONS FOR H-20 HEAVY DUTY HOT-DIP GALVANIZED STEEL GRATING.
2. MAKE REBATE AND/OR SEAT CONTINUOUS AROUND OPENING.
3. EMBEDDED REBATE ANGLE AND PLATE SHALL BE 1/4" MINIMUM THICKNESS.
4. HOT-DIP GALVANIZED AFTER FABRICATION.
5. * = DIMENSION AS REQUIRED BY GRATING MANUFACTURER. SEE SPECIFICATIONS.

17950 COMMISSIONING FOR INSTRUMENTATION AND CONTROLS

SECTION 01140

WORK RESTRICTIONS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for sequencing and scheduling the Work affected by existing site and facility, work restrictions, and coordination between construction operations and plant operations.

B. Water projects:
   1. Conduct Work such that the Owner's ability to meet its customer's demands for treated drinking water shall not be impaired or reduced in terms of the required quantity or quality of treated water. Do not impair the operational capabilities of essential elements of the treatment process or reduce treatment capacity below levels sufficient to meet demands for water throughout the contract time. The quantities of and quality of treated water required are described in this Section.
   2. Conduct commissioning activities as specified in Section 01756 - Commissioning in a manner that will not impair capabilities of essential elements of the treatment process or reduce treatment capacity below levels sufficient to meet demands for water throughout the contract time. The quantities of and quality of treated water required are described in this Section.
   3. PCIS Optimization and Fine-Tuning as specified in Section 01756 - Commissioning.
   4. The status of the treatment plant shall be defined as "operational" when the plant is capable of meeting the Owner's customer's demands for treated drinking water in terms of the required quantity or quality of treated water as defined in this Section.

1.02 LIMIT OF CONSTRUCTION ACTIVITIES ON WORK SITE

A. Traffic Control:
   1. During non-work hours, unless permitted otherwise by the City in coordination with Public Works, the CONTRACTOR shall keep all lanes of traffic open and clear. All trenches shall be backfilled or covered with suitable steel plates and open to traffic.

B. No equipment, construction material, or excavated material that will interfere with traffic shall be stored on streets, sidewalks, trails, swales, drainages, or roadways at any time.

1.03 SEQUENCE OF WORK

A. The CONTRACTOR shall schedule and sequence their work to complete the Work by the specified completion date.

B. The OWNER's water distribution, recycled water, sewer collection and storm drain systems must remain accessible and operational and Contractor shall provide temporary facilities required to keep the existing plant continuously operational at all times, with scheduled shutdowns as necessary to complete the Work and with prior approval of Owner, as described herein.

C. Re-vegetation of disturbed areas shall take place as quickly as possible as work completion and weather permit, or temporary measures shall be installed and maintained at the Contractors sole expense.
   1. Revegetation at the Misty Woods well shall be in accordance with the City's Open Space Preserve Overarching Management Plan available online at https://www.roseville.ca.us/government/departments/development_services/planning/citywide_planning_documents/open_space_preserve_overarching_management_plan or as directed by the City Parks Department.
   2. Revegetation at the Campus Oaks site shall be according to a seed mix designed by the Contractor/Contractor's supplier and approved by the City.

1.04 PROJECT CONSTRAINTS

A. Maintenance of OWNER's Operations:
   1. Constraints listed herein involve limits on activities during construction. These limits relate to the critical nature of the existing water system and all other services provided by the City and its franchisees.
   2. Continuous operation of OWNER's facilities is of critical importance. Schedule and conduct activities to enable existing facilities to operate continuously, unless otherwise specified.
   3. Work Plan:
      a. The CONTRACTOR shall submit a detailed Work Plan and time schedule for all construction activities that will make it necessary to remove a tank, pipeline, electrical circuit, equipment, structure, road or other are replaced by temporary, new, or upgraded facilities from service, including the critical outages identified herein.
      b. The Work Plan shall, at a minimum, identify:
         1) The date and time when each activity will occur.
         2) What equipment will be present including standby equipment.
         3) What assistance will be required by OWNER's operating personnel.
         4) An emergency backup plan identifying what action will be taken if Work cannot be completed within the allotted time.
         5) What individual will be in charge of the activity.
      c. Submit Work Plan 10 working days prior to the scheduled activity.
   4. Perform Work continuously during critical connections and changeovers, and as required to prevent interruption of OWNER's operations.
   5. Shutdowns:
      a. Coordinate proposed Work with OWNER and facility operations personnel before affecting unit shutdowns. The CONTRACTOR shall provide written confirmation of the shutdown date and time five working days prior to the actual shutdown.
      b. Under no circumstances shall the CONTRACTOR cease Work at the end of a normal working day or at the end of a working week if such actions may inadvertently cause a cessation of any facility operating process, in which case, remain onsite until necessary repairs are complete.

6. Do not close lines, open valves or gates, shut down equipment, or take other action which would affect the operation of existing systems, except as specifically required by the Contract Documents and approved by the OWNER. After approval, CONTRACTOR shall proceed in the manner, action, and timing as submitted and approved.
7. Do not proceed with Work affecting a facility's operation without obtaining OWNER's advance approval of the need for and duration of such Work.

B. Relocation of Existing Facilities:
   1. During construction, it is expected that minor relocations of Work will be necessary.
   2. Provide complete relocation of existing structures and Underground Facilities, including piping, utilities, equipment, structures, electrical conduit wiring, electrical duct bank, and other necessary items.
   3. Use only new materials for relocated facility. Match materials of existing facility, unless otherwise shown or specified.
   4. Perform relocations to minimize downtime of existing facilities.
   5. Install new portions of existing facilities in their relocated position prior to removal of existing facilities, unless otherwise accepted by OWNER.

C. Hours of Work and Overtime:
   1. Normal working hours at the Construction Site shall be 7 a.m. to 5 p.m., weekdays, no work during the weekend nor during City observed holidays.
      a. Conduct Work outside normal working hours only after obtaining prior written consent and approval from the OWNER.
         1) Contractor shall request work-hour variations in writing, a minimum of 10 days prior to the start of the proposed work period.
         2) Contractor shall not rely on approval of work outside of normal working hours without prior consent of the OWNER. Approval shall be at the sole discretion of the OWNER.
      b. Contractor will develop Project Schedule assuming work during normal working hours only.
   2. All overtime Work by the CONTRACTOR necessary to conform to the requirements of this Section and related Sections shall be performed by the CONTRACTOR, at no additional cost to the OWNER and shall be performed in accordance with the Agreement. The CONTRACTOR shall make no claims for extra compensation as a result thereof.
   3. Contractor shall reimburse the City for its demonstrable additional internal and external labor and direct costs for supervising, inspecting, and providing any other City services during work conducted outside the normal working hours listed in C.1., above. In determining what effort and services are required, it will be the City’s sole determination what is required to accommodate the Contractor’s operation outside the normal working hours.

D. Site Area:
   1. See also Agreement section 5.5.1 Designated Areas.
   2. Contractor shall avoid disturbing ground and minimize disturbance to area residents whenever possible.
   3. The construction plans outline the extent of land Contractor is allowed to occupy for staging, storage, officing, parking, etc., unless otherwise approved by the City in writing.

1.05 CONSTRUCTION SEQUENCING CONSTRAINTS

A. Shutdown activities:
   1. Scheduling:
      a. Perform during normal working hours and for only specific construction sequencing constraints annotated in the project schedule and as agreed upon during Final Design.

B. Construction sequencing constraints will be developed by Design-Assist Team as necessary.

1.06 PROJECT STAFFING

A. Project superintendent (Job Superintendent, serving as resident Superintendent and Contractor's authorized representative), employed by the Contractor, shall be on-site five days per week for eight hours a day whenever construction activities are taking place.

B. When the Owner has turned the process unit over to the Contractor for construction, modification or temporary use, the Contractor is responsible for costs and procedures required to dewater and dispose of liquid, solids, etc. as required until the City has accepted the improvements for routine operation. Contractor shall provide adequate time in schedules for draining and cleanup.

1.07 METHOD OF PROCEDURE (MOP)

A. Comply with the Qualified Storm Water Pollution Prevention Plan (SWPPP) Practitioner (QSP), employed by Contractor, who must be on call to come to the site when a Rain Event Action Plan (REAP) needs to be prepared.

1.08 STORMWATER MANAGEMENT

A. CONTRACTOR responsible for stormwater management from the time the Contractor physically mobilizes to the site until the time the final stormwater BMPs are installed and the Notice of Termination is accepted by the Water Board.Submittals:
   1. Submit Baseline Schedule, as specified in Section 01321 - Schedules and with proposed MOPs.
   2. Submit the following for each shutdown:
      a. Attachment B - Method of Procedure (MOP) Form.
      b. Attachment C - Readiness Checklist.
      c. Attachment D - Safety Checklist.

1.09 OPERATIONS AND MAINTENANCE ACCESS

A. Provide safe, continuous access to process control equipment for plant operations personnel.

B. Provide access on one-hour advance notice to process control equipment for plant maintenance personnel and associated maintenance equipment.

1.10 ENVIRONMENTAL WORK RESTRICTIONS

A. Refer to Attachment F for Mitigation Monitoring and Reporting Plan (MMRP) and related requirements.

B. Misty Wood Site: Work Near Creeks, Trees, Vernal Pools:
   1. The City of Roseville has a Streambed Alteration Agreement for the Routine Maintenance Agreement for Streams and Drainage Facilities (hereinafter "RMA"), a copy of which is included as Attachment G.
   2. The RMA allows the City to conduct limited repairs, modifications or other work in environmentally sensitive areas and stipulates the requirements for notification and limitations on activities.
   3. The Contractor shall familiarize itself with the terms of the RMA and plan its work accordingly. Generally speaking, the RMA requires:
      a. Work within the stream zone (such as the drainages near the Misty Woods Well site) is restricted to periods of low stream flow and dry weather in the period of May 1 to October 15.
      b. Work near (500 feet) of certain animal habitats (such as the trees at Misty Woods well site) requires the City to retain the services of a qualified biologist to verify the presence/absence of certain species a maximum of approximately two weeks prior to the physical start of work, and that the biologist provide training to project staff prior to beginning work.
      c. The City is required to submit a Verification Request Form (VRF) documenting the biologist field work and training to the Contractor immediately prior to construction starting. Coordinate with the City project manager for a timely construction start.
      d. Contractor is encouraged to coordinate this work early; encountering species requiring special treatment could delay the work.

C. See Section 01562 - Temporary Tree and Plant Protection for tree preservation requirements.

D. See Section 01573 - Erosion and Sediment Control for related requirements.

1.11 UTILITIES

A. Provide advance notice to and utilize services of Underground Services Alert (U.S.A.) and appropriate local organizations for location and marking of underground utilities operated by utility agencies including the Owner.

B. New yard utilities were designed using existing drawings.
   1. Field verification of utilities locations was not performed during design.
   2. Services crossed or located nearby by new yard utilities may require relocation and possible shutdowns.
   3. Pipe alignments as indicated on the Drawings.

1.12 WORK BY OTHERS

A. Where proper execution of the Work depends upon work by others, inspect and promptly report discrepancies and defects.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

ATTACHMENT A - METHOD OF PROCEDURE (MOP)

“METHOD OF PROCEDURE” (MOP)
Instructions and Forms

Definition and Purpose

“Method of Procedure” (MOP) is a detailed document submitted by the Contractor to request process shutdown(s), utility tie-in(s), work in areas that may risk unanticipated outages, or flow diversions to accommodate site construction activities during a project. Such activities may include (but are not limited to) new tie-ins to utilities or structures, mechanical modifications to process piping or equipment, demolition, bulkhead installation, and cleaning processes.

The MOP provides a detailed plan to the Owner and Engineer that describes specific aspects of the work including purpose, time of execution, and anticipated impacts on treatment processes. The MOP also includes contingency measures and provisions for rapid closure in the event that shutdown or work progress difficulties are encountered. Information from relevant trades associated with the requested shutdown, diversion, or tie-in is also included.

The Owner should use the information within the MOP to define operational procedures and methods to safely and successfully assist the Contractor.

MOP Process Summary

WHO	STEP	TIMING
Contractor	1. Identify MOPs needed on MOP Log and Baseline Schedule.	No later than 7 days prior to Preconstruction Scheduling Meeting
Contractor, Owner, Engineer	2. Pre-MOP Meeting.	More than 28 days prior to work
Contractor	3. Submits MOP.	No later than 28 days prior to work
Owner	4. Reviews MOP.	
Owner	5. MOP finalized.	No later than 7 days prior to work

Contractor	8. Complete Work.	
Contractor	9. Update MOP Log and Progress Schedules.	Monthly

MOP Process Detail

STEP 1. Identifies MOPs needed on MOP Log and Baseline Schedule.

Contractor submits a preliminary list of anticipated project MOPs on MOP Log. MOPs identified but not limited to those shutdowns, diversions, or tie-ins described in the Contract Documents. Incorporate MOPs as tasks in Baseline Schedule. Date scheduled MOPs to coincide with the appropriate construction activities.

STEP 2. Pre-MOP Meeting.

Contractor requests a Pre-MOP Meeting with the Owner and Engineer to discuss the nature of the shutdown, diversion, or tie-in, and to gather the information necessary to complete the MOP Form. The pre-MOP meeting may be waived by the Owner or Engineer if the work is deemed to be minor.

STEP 3. Submits MOP.

Contractor completes the MOP Form and submits 3 copies for approval to the Owner's Project Manager (OPM).

STEP 4. Reviews MOP.

OPM distributes MOP Form for review by the Owner's Construction Coordinator, O&M Representative, and Engineer's Project Representative. Review MOP Form for completeness, accuracy, compliance with both the construction schedule, constraints defined in Contract Documents, and to ensure that the requested work does not negatively impact plant operations or other concurrent project activities. Additional information may be requested to better understand the nature of and method for completing the Work.

STEP 5. MOP finalized.

Once the MOP is agreed to by all parties, the MOP will be finalized by signature. Copies are distributed to the Owner, Engineer, and Contractor.

STEP 6. Complete Readiness Checklist.

Contractor verifies everything is ready for the Work.

STEP 7. Complete Safety Checklist.

Contractor ensures safety.

STEP 8. Complete Work.

Contractor completes Work.

STEP 9. Update MOP Log and Progress Schedules.

Contractor updates MOP Log (Attachment E) weekly and distributes at the regularly scheduled construction progress meetings.

READINESS CHECKLIST

(5 days prior to work)

Checklist provided as a guide but is not all inclusive.

1. Confirm all parts and materials are on site: _____

2. Review work plan: _____

3. Review contingency plan: _____

ATTACHMENT D - SAFETY CHECKLIST

SAFETY CHECKLIST

(Just prior to commencing work)

Checklist provided as a guide but is not all inclusive.

1. Location awareness:
   a. Emergency exits: _____
   b. Emergency shower and eyewash: _____
   c. Telephones and phone numbers: _____
   d. Shut-off valve: _____
   e. Electrical disconnects: _____
2. Inspect work area:
   a. Take time to survey the area you are working in. Ensure that what you want to do will work. Do you have enough clearance? Is your footing secure? Do you have adequate lighting and ventilation? Are surrounding utilities out of the way for you to perform your work?
3. SDS (Safety Data Sheets):
   a. Understand the chemicals and substances in the area you are working in by reading the SDS.
4. Lockout/Tagout Procedure:
   a. Lockout/tagout energy sources before beginning work.
   b. Make sure all valves associated with the work are locked out and tagged out on each side of the penetration.
   c. Make sure the lines are depressurized.
5. Overhead work:
   a. Use appropriate personal protective equipment; i.e., safety harness, lifeline, etc.
   b. Select appropriate tie-off points; i.e., structurally adequate, not a pipe or conduit, etc.
   c. Spotter assigned and in position.
   d. Pipe rack access; i.e., check design capacity, protective decking or scaffolding in place, exposed valves or electrical switches identified and protected.
6. Safety equipment:
   a. Shepherd's hook.
   b. ARC flash protection.
   c. Fire extinguisher.
   d. Other: _____
7. Accidents:
   a. Should accidents occur, do not shut off and do not attempt to correct the situation unless you are absolutely positive that your action will correct the problem and not adversely affect other people or equipment.
8. Review process start-up documents:
   a. In the event the system is shutdown, the Control Center should have a working knowledge of the process start-up procedures in order to deal effectively with unforeseen events.
9. Evacuation procedures:
   a. Do not obstruct evacuation routes.
   b. Take time to survey the area for evacuation routes.

ATTACHMENT F - MITIGATION MONITORING AND REPORTING PLAN

Appendix A
Mitigation Monitoring and Reporting Program

MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure	Implementing Responsibility	Monitoring Responsibility	Timing	Verification of Compliance (Initials and Date)
Air Quality				
Mitigation Measure AQ-1: 1. Clean earth moving construction equipment with water, or sweep clean, once per day, or as necessary (e.g., when moving onsite), consistent with NPDES BMP's, local ordinances and municipal codes. Water shall be applied to control dust as needed to prevent dust impacts offsite. Operational water truck(s), shall be onsite, as required, to control fugitive dust. Construction vehicles leaving the site shall be cleaned, as needed, to prevent dust, silt, mud, and dirt from being released or tracked off-site. 2. Spread soil binders on unpaved roads and employee/equipment parking areas. Soil binders shall be non-toxic in accordance with state and local regulations. Apply approved chemical soil stabilizers, or vegetated mats, etc. according to manufacturer's specifications, to al/- Inactive construction areas (previously graded areas which remain inactive for 96 hours). 3. Minimize diesel idling time to a maximum of 10 minutes. 4. Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary diesel power generators, if feasible.	City of Roseville	City of Roseville	Prior to construction activities	
Biological Resources				
Mitigation Measure 3.6-1: If construction (including equipment staging) occurs during the breeding season for nesting birds and raptors (between February 15 and September 15), a qualified biologist shall conduct a preconstruction nesting bird and raptor survey before the onset of construction activities. The preconstruction nesting bird and raptor surveys shall be conducted within 14 days before the start of construction activities between February 15 and September 15. Surveys for raptor nests (excluding Swainson's hawk) shall extend 500 feet from the ASR well sites. In addition, a 0.25-mile windshield-level survey shall be conducted to determine whether Swainson's hawk nests occur in the vicinity. If no active nests are detected, a letter report documenting the results of the survey shall be submitted to the City and no additional mitigation is recommended as long as construction begins within 14 days of the survey and does not halt for more than 14 days.	City of Roseville	City of Roseville	Prior to construction activities	

MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure	Implementing Responsibility	Monitoring Responsibility	Timing	Verification of Compliance (Initials and Date)
Mitigation Measure 3.6-2: If Migratory Bird Treaty Act-protected birds or raptors are found to be nesting on or adjacent to the ASR well sites, a no-disturbance buffer shall be established around the nest to avoid disturbance of the nest area and to avoid take. The buffer shall be maintained around the nest area and monitored until the end of the breeding season, or until the biological monitor determines that the young have fledged and are foraging on their own or the nest is no longer active. The extent of these buffers shall be determined by the qualified biologist and shall depend on the species identified, the level of noise or construction disturbance, the line of sight between the nest and the disturbance, ambient levels of noise and other disturbances, and other topographical or artificial barriers. Generally accepted avoidance buffers are 100 feet for nesting birds and 250–500 feet for nesting raptors. A letter report documenting the rationale for the established buffer and the results of monitoring shall be submitted to the City within 14 days of the date the biologist determines that the nest is no longer active and the avoidance buffer is no longer required.	City of Roseville	City of Roseville	Prior to construction activities	
Mitigation Measure 3.6-3: Following the results of the wetland verification or determination from USACE, and before the start of construction, silt fencing followed by straw wattles or other erosion control measures shall be placed around the edge of potentially occurring seasonal wetlands on the Vencil Brown ASR well site. In addition, silt fencing shall be placed at the edge of the well footprint between the well's work area and the potentially occurring seasonal wetlands, ephemeral drainage, and riparian area on the Vencil Brown well site. Silt fencing followed by straw wattles or other erosion control measures shall be placed at the edges of the Pleasant Grove, Campus Oaks, and Misty Woods ASR well sites to prohibit construction activities in waterways and riparian areas. Trucks and other vehicles shall not be allowed to park beyond the fencing, nor shall equipment be stored beyond the fencing. No vegetation removal or ground-disturbing activities shall be permitted beyond the fencing. The fencing shall remain intact for the duration of the construction activities.	City of Roseville	City of Roseville	Prior to construction activities	

MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure	Implementing Responsibility	Monitoring Responsibility	Timing	Verification of Compliance (Initials and Date)
Hazards and Hazardous Materials				
Mitigation Measure Hazard-1: Prior to initiating ground-disturbing activities, the City shall evaluate areas where drilling would occur to evaluate the potential for historical or existing hazardous materials. This evaluation shall include visual inspections of the site for evidence of hazardous materials releases (i.e., dumping) or evidence of nearby land uses, which may indicate the use of hazardous materials or hazardous waste generation (i.e., aboveground storage tanks, placarding). ff such evidence is observed, the City shall retain a qualified consultant to evaluate the potential for hazardous materials releases at the site prior to initiating construction to determine whether these releases may constitute a potential recognized environmental condition. If such a condition is determined to exist, the City shall prepare and implement a remediation plan prepared in accordance with the applicable regulatory agency (i.e., Department of Toxic Substances Control or Regional Water Quality Control Board) prior to proceeding with construction.	City of Roseville	City of Roseville	During construction activities	
Noise				
Mitigation Measure 4.3-1: Use of Sound Attenuation Measures during Well Drilling Operations. One such method to reduce noise levels is to erect a temporary sound barrier on the sides facing residences. An example would be barriers such as noise blanket panels mounted to steel framing. Noise blanket panels can be mounted horizontally or vertically and attached to vertical steel I-beam supports. Such barriers can reduce overall noise levels by approximately 17 dB [decibels].	Construction Contractor	City of Roseville	During construction activities	
Mitigation Measure 4.3-4[1]: Prior to Well Drilling the City Will Provide Notice to All Residents Subject to Potential Noise Impacts. The notice will include information about the need for 24-hour construction during a portion of the drilling phase, and related noise, and information to contact the City with concerns. The City will work with individual residents on an as-needed basis in the event that the drilling construction causes extenuating circumstances.	Construction Contractor	City of Roseville	During construction activities	

[1] There is no Mitigation Measure 4.2-2 in the 2012 ASR Program Final EIR. Therefore, the numbering for the Noise Mitigation Measures in this Draft SEIR is reflective of those in the 2012 ASR Program Final EIR.

MITIGATION MONITORING AND REPORTING PROGRAM

Mitigation Measure	Implementing Responsibility	Monitoring Responsibility	Timing	Verification of Compliance (Initials and Date)
Mitigation Measure 4.2-3: Reduce Well Pump (Operational) Noise Levels. Reduce noise levels associated with the well pump by providing a full or partial enclosure. The enclosure can take the form of a blockhouse or surrounding barrier designed to accommodate a pump motor 5-feet in height, and elevated off the ground by 18 inches. • A full enclosure with a roof would sufficiently reduce noise levels; however, ventilation openings should be located on the side of the building opposite the nearest residences. If a traditional barrier is constructed around the well site, it would need to be a minimum of 8 feet in height. • A variety of suitable sound attenuation options would be available. In order to ensure that sound levels are adequately mitigated, a qualified acoustical expert shall be consulted regarding placement, orientation, size, and density of acoustical barriers.	City of Roseville	City of Roseville	During construction activities

Subject: Final Streambed Alteration Agreement
Notification No. 1600-2016-0099-R2
City of Roseville Routine Maintenance of Streams and Drainage Facilities

Dear Mr. Jensen:

Enclosed is the final Streambed Alteration Agreement (Agreement) for the City of Roseville Routine Maintenance of Streams and Drainage Facilities Project (Project). Before the California Department of Fish and Wildlife (Department) may issue an Agreement, it must comply with the California Environmental Quality Act (CEQA). In this case, the Department, acting as a responsible agency, filed a Notice of Determination (NOD) within five working days of signing the Agreement. The NOD was based on information contained in the Initial Study/Mitigated Negative Declaration prepared by the lead agency.

Under CEQA, the filing of an NOD triggers a 30-day statute of limitations period during which an interested party may challenge the filing agency's approval of the Project. You may begin the Project before the statute of limitations expires if you have obtained all necessary local, state, and federal permits or other authorizations. However, if you elect to do so, it will be at your own risk.

If you have any questions regarding this matter, please contact Angela Calderaro, Senior Environmental Scientist (Specialist) at 916-358-2920 or Angela.Calderaro@wildlife.ca.gov.

Sincerely,

Tina Bartlett
Regional Manager

STREAMBED ALTERATION AGREEMENT
FOR ROUTINE MAINTENANCE ACTIVITIES
NOTIFICATION NO. 1600-2016-0099-R2
CREEKS WITHIN THE CITY OF ROSEVILLE

CITY OF ROSEVILLE
ROUTINE MAINTENANCE OF STREAMS AND DRAINAGE FACILITIES PROJECT

This Streambed Alteration Agreement (Agreement) is entered into between the California Department of Fish and Wildlife (Department) and City of Roseville (Permittee) as represented by Rob Jensen.

RECITALS

WHEREAS, pursuant to Fish and Game Code (FGC) Section 1602, Permittee notified the Department on 02 May 2016, that Permittee intends to complete the project described herein.

WHEREAS, pursuant to FGC Section 1603, the Department has determined that the project activities could substantially adversely affect existing fish or wildlife resources and has included measures in the Agreement necessary to protect those resources.

WHEREAS, Permittee has reviewed the Agreement and accepts its terms and conditions, including the measures to protect fish and wildlife resources.

NOW THEREFORE, Permittee agrees to complete the project activities in accordance with the Agreement.

PROJECT LOCATION

The project is located within the City of Roseville (City) boundaries, covering approximately 32 square miles as well as the Amoruso Rancho Specific Plan (ARSP) area (an approved specific plan subject to annexation), collectively known as the project area.

Routine maintenance activities would take place within creeks, improved and unimproved drainage channels, detention basins and constructed water quality swales, associated riparian vegetation, and low floodplains throughout the project area (Figure 1 Project Vicinity, Figure 2 Project Location – **See Exhibit A**).

The watercourses included within this Agreement are the following creeks and their tributaries: Dry Creek, Cirby Creek, Linda Creek, Miners Ravine, Secret Ravine, False

Ravine, Antelope Creek, Pleasant Grove Creek, South Branch Pleasant Grove Creek, Pleasant Grove Creek North Branch, Pleasant Grove Creek Blue Oaks Tributary, Pleasant Grove Creek Placer Tributary, Kaseburg Creek, Kaseburg Creek Sun City Tributary One, Kaseburg Creek Sun City Tributary Two, Kaseburg Creek East Branch, Kaseburg Creek South Branch, Coyote Creek, and Highland Ravine (Figure 3 Project Area – **See Exhibit A**). In addition multiple unnamed drainage ditches, canals, drainage swales, detention basins and overland relief within the project area would undergo routine maintenance. The Permittee would also maintain the City's flood warning system and Cirby-Linda-Dry Creek flood control facilities (including flood walls, berms, bypass channels, pumps, and berms).

For the purposes of this Agreement, the limits of Department jurisdiction were developed based on aerial photography and City floodplain mapping and generally extends from the center of channel to the outer edge of riparian zones, wetland vegetation or low floodplains (whichever is larger). Jurisdictional areas included in the project area are generally mapped with green, blue or purple shading in Figure 3 Project Area **(Exhibit A)**. In specific circumstances, the boundary of Department jurisdiction may differ from mapped limits. Exact limits of Department jurisdiction will be determined on a case-by-case basis in consultation with Department during submittal of each Verification Request Form (VRF).

PROJECT DESCRIPTION

"Agreement for routine maintenance" means an Agreement that: (1) covers only multiple routine maintenance projects that the entity will complete at different time periods during the term of the Agreement; and (2) describes a procedure the entity must follow for any maintenance projects the Agreement covers.

"*Routine Maintenance Work*" means (project) work performed regularly by Permittee, within those Project Locations identified above, to maintain the functional and structural integrity of its facilities.

"Project" means one activity, or two or more interrelated activities that could or will affect similar fish and wildlife resources. Unless approved in writing by the Department, a project will occur within the same watercourse and/or its immediate tributaries and it will not exceed 30 days of duration since maintenance activities start.

"Baseline Conditions" means the ecological condition of a site at the time the Agreement was finalized. Routine maintenance work conducted once every year or two that maintains current ecological conditions (i.e., annual vegetation trimming and thinning consistent with the City's flood model) is not considered a Temporary or Permanent Impact because the vegetation typically returns within one year and therefore does not alter the habitat function from Baseline Conditions.

"Temporary Impact" means all ecological effects that change Baseline Conditions and persist for one year. Projects with temporary effects generally involve vegetation removal followed by habitat restoration or non-disturbance to allow for natural re-growth. For vegetation control, the frequency of pruning, thinning, cutting, mowing, or similar

activity is less than once every three years.

“Permanent Impact” means all effects that displace existing habitat or change Baseline Conditions that persist for greater than one year. For vegetation control, the frequency of pruning, thinning, cutting, mowing, or similar activity occurs at the same location more than once every 3 years. Removal of individual hazard trees within larger riparian communities generally shall not be considered an impact requiring mitigation as the ecological function of the community will not be significantly reduced.

MAINTENANCE WORK

The Permittee may perform the maintenance work described below without obtaining a separate Agreement from the Department, provided that the Permittee: 1) limits the work to within those areas identified in the Project Location; 2) submits a Verification Request Form (VRF) and receives Department approval prior to commencing any activity; and 3) completes the work in accordance with the terms and conditions specified herein. The City’s routine maintenance work program includes the following activities:

a. *Trail Maintenance.* The Permittee may maintain access roads and existing trails along creek corridors and at trail creek crossings. There are approximately 34 miles of paved trails in the City. In general, the existing paved trail network is used as maintenance access. Vegetation control equipment is expected to largely be comprised of herbicides, mowers, chainsaws and other hand tools, with the occasional use of a backhoe. The Permittee would remove debris, woody and herbaceous vegetation, trees which are in clear danger of falling in or across a trail/creek crossing, trim obstructing branches and downed trees, selective trimming for public safety and visibility and perform general maintenance on trail facilities such as benches, signage, pedestrian bridges, culverts, slope stabilization, erosion control, etc. Vegetation would be maintained to ensure a minimum clearance of five (*5)* feet from the edge of an improved access road, trail, and associated facilities to maintain trail safety and public access.

b. *Goat Grazing.* The Permittee may contract for goat grazing services to aid in thatch management, fuel reduction and invasive species removal tasks. This would involve a herd of approximately 500 goats and temporary low voltage electric fencing to contain the herd to a defined paddock. Herds would be left in a paddock for a period of 12 to 36 hours depending on vegetation density and the desired amount of vegetation removal and would then be moved onto the next area. In this fashion, large swaths of open space preserve within the City would be “flash grazed” once every 1 or 2 years. Approximately 1,400 acres of open space preserve would be flash grazed annually. A portion of this grazed area would be within riparian areas under Department jurisdiction. Goat grazing is typically conducted on steep slopes and other areas where access is limited. Goat grazing practices will be focused on maintaining Baseline Conditions but in in certain circumstances, areas grazed by the goats with a high risk of erosion

may be reseeded with native plants or stabilized with general storm water best management practices to manage soil erosion in critical areas such as outfalls. Goats will generally not be permitted within the bed, bank or channel of stream channels under Department jurisdiction; however, goats may be allowed to drink from streams on a case-by-case basis if approved by the Department during the VRF process. Goat grazing is necessary to maintain storm flow capacity, reduce thatch level/fire load, and control invasive species in areas where worker/equipment access would be difficult.

c. *Channel Alignment Maintenance.* At locations where improved City property and facilities are at risk, the Permittee may maintain existing channel alignments to prevent creeks and drainages from altering course during large storm events. Activities may include the strategic addition of rock slope protection armoring along the outside edge of stream meanders and in other locations where hydraulic forces are concentrated. In non-urgent locations, the channel may be densely planted with native plants in order to stabilize banks and maintain the current creek alignment. Work may also entail removal of deposited sediment within the wetted channel to prevent the bed of the channel from elevating and causing the channel to braid. Maintaining existing channel alignments may be necessary to prevent channels from undermining and destabilizing bridges, public utilities, roadways, or bike trails. Temporary and Permanent Impacts shall not exceed an area of 100 linear feet or 0.2 acres. Individual project sites with Permanent Impacts must be separated by a distance of at least 1,500 feet.

d. *Debris or Obstruction Removal.* The Permittee may remove debris, trash, rubbish, flood-deposited woody and herbaceous vegetation, downed trees, branches, and associated debris that substantially obstruct (or could obstruct) water flow, reduce channel capacity, accelerate erosion, damage concrete box culverts, metal culverts, or bridge structures. Debris removal may occur in creeks, channels, detention basins, dams, boat ramps, docks, and trails. Debris or obstruction removal may be followed by re-vegetation efforts.

e. Beaver dam removal. The Permittee may remove beaver dams and associated debris that substantially obstructs (or could obstruct) water flow, reduce channel capacity, accelerate erosion, damage concrete box culverts, metal culverts, or bridge structures. Beaver dam removal may occur by use of hand tools and heavier equipment if needed. For beaver dam removal purposes a “project” is defined as the removal of beaver dams within the same watercourse within 30 days. This does not include the installation of beaver deterrent structures that may substantially alter the bed, bank or channel within the project area.

f. *Removal, Replacement, or Repair of Facilities.* Permittee may remove or replace culverts, inlets, manholes, above and below ground utilities, or other facilities within areas of Department jurisdiction. Removal or replacement of facilities may require the trimming or removal of vegetation, displacement of sediments and/or placement of materials within creeks, channels and basins, man hole lining, flushing, vactoring (pneumatic sewer line cleaning with a vacuum truck), Closed

Circuit Television (CCTV) inspections, horizontal directional drilling, jack & bore, electric pole removal/replacement, and open trenching.

g. *Silt, Sand or Sediment Removal.* The Permittee may displace or remove (under dewatered or dry conditions) silt, sand, gravel, or sediment in the immediate vicinity (within 50 feet of natural channels and within 250 feet of un-vegetated altered channels) of natural or man-made structures and facilities, both lined and unlined, that could substantially obstruct water flow, reduce channel capacity, accelerate erosion, damage concrete box culverts, metal culverts, bridge structures or other facilities. Silt, sand and sediment removal efforts may extend further from structures if approved by the Department during the VRF process. Such structures or facilities may include outfalls, bridges, culverts, beaver dams, basins, and the invert of creeks and channels. Removal of silt, sand, or other sediments may be followed by re-vegetation efforts.

h. *Vegetation Control in Channels.* The Permittee may cut, mow, disc, or bulldoze grasses, shrubs, and woody growth to maintain the designed capacity of floodways. The Permittee may cut, trim, or remove the lower branches of large trees to facilitate site inspections and maintain channel capacity. The Permittee may remove dead trees, dying trees, and new trees less than 4-inches diameter at breast height (dbh) to maintain channel capacity and prevent erosion. Where native trees or woody riparian vegetation split into several trunks close to ground level, the dbh shall be measured for each trunk and calculated as one tree. The Permittee anticipates vegetation control equipment to largely be comprised of chainsaws, other hand tools and herbicides, with the occasional use of a backhoe. The Permittee would cut, or mow weeds, grasses, shrubs, and woody growth to the extent necessary to conduct safety inspections. The Permittee would cut, trim, or remove the lower branches of large trees to facilitate site inspections and maintain channel capacity per the City's flood model. The Permittee would remove dead or dying trees at risk of falling across a channel and impairing channel capacity. The Permittee may remove non-native vegetation to maintain channel capacity and improve native habitat. The Permittee shall not remove sensitive plant populations without Department approval. In addition, maintenance work near elderberry shrubs will be consistent with the *Biological Opinion on Service Approval of the City of Roseville Open Space Preserve Overarching Management Plan* (BO # 81420-2008-F-1958-3).

i. *Tree and Vegetation Control for Overhead Electric Infrastructure.* The Permittee may cut, trim and potentially remove trees and vegetation as necessary to maintain the safety and regulatory clearance setbacks from overhead electric lines and related infrastructure. This work is typically conducted by tree trimming crews using bucket lift trucks, chain saws other hand tools and chippers.

j. *Repair of Previous Erosion Control Work.* The Permittee may repair previous erosion control work, including, but not limited to, failed rock slope protection, sacked concrete, or gabion sections. Such work would not extend beyond 100 linear feet of the existing revetted area. In some areas these activities and other

routine maintenance activities may require fill near outfalls, bridges, culverts, basins, and the invert of creeks and channels. Types of fill materials could include riprap, soil, gravel material, or aggregate base and would come from commercial sources in the local area. The Permittee may also employ bioengineering methods where feasible to repair or enhance previously installed erosion control work. Materials would be placed with equipment such as an excavator, backhoe, dump truck, bobcat, skip loader, front loader or other small construction equipment. Exact methods, locations and volumes of erosion repair activities would be submitted to Department for final approval through the VRFs.

k. *Temporary Water Diversions.* To minimize sedimentary effects to the channels and waterways, temporary water diversions may be utilized as necessary to prevent surface water from entering maintenance work areas. Dewatering is anticipated to be necessary for work within the wetted channel of perennial stream channels during the summer low flow period. Diversion and dewatering plans specific to the individual routine maintenance activity would be submitted to Department for final approval through the VRFs.

l. *Minor Erosion Control Work.* The Permittee may slope, place earthen fill, install rocks and gabions, apply gunite, or take other necessary measures to control erosion on previously unrevetted areas. Temporary and Permanent Impacts would not exceed 100 linear feet in length or 0.2 acres (which ever area is smaller). The Permittee may use bioengineering methods where feasible to reduce creek bank erosion. Bioengineering slope stabilization areas may be larger than 100 linear feet in length or 0.2 acres if approved by the Department. Containment measures would be used to prevent deleterious material from entering state waters and avoid adverse impacts to fish and wildlife resources. For purposes of placement of rock slope protection or shot-crete application as bank erosion control, individual project sites must be separated by a distance of at least 1,500 feet.

m. *Bridge Washing, Graffiti Removal and Painting.* Permittee may clean, wash, and paint structures such as bridges within the Department's jurisdiction. Bridge washing will involve power washing the bridge to remove non-original materials such as dirt, spider webs and stains. Graffiti removal may involve power washing, applying chemical solvents, or rolling on paint over the graffiti. Bridge painting will involve power washing following by applying paint with either a roller or pneumatic spray gun. Containment measures including drop cloths and spill containment measures will be used to prevent deleterious material from entering State waters and avoid adverse impacts to fish and wildlife resources.

n. *Geotechnical Sampling and Subsurface Cultural Resource Sensitivity Testing.* Permittee may obtain core samples and conduct other minor geotechnical and/or cultural resources investigations in support of these maintenance activities, provided such work does not adversely affect fish and wildlife resources. Geotechnical investigations would involve a truck or track mounted drill rig and a crew of two or three drill operators and one geologist. The drill rig would be used

to obtain 3 or 4 inch diameter core samples in order to determine the nature of underlying sediments and bedrock to a depth determined by the onsite geologist during drilling (typically 20-80 feet). After drilling is complete, the hole will be filled with either bentonite clay (weathered volcanic ash) or mortar (low aggregate concrete) to prevent groundwater contamination. Positioning of the drill rig may require vegetation trimming to access the site. Impacts associated with site access and vegetation trimming will be quantified and included in the VRF submitted for the work. Drill rigs would be positioned over secondary containment to prevent fuel or hydraulic leaks from contaminating soils. Secondary containment will consist of visqueen or similar plastic sheeting. The edges of secondary containment will be elevated to prevent leaks from running off the plastic sheeting. Geotechnical sampling and subsurface cultural resource sensitivity testing is only included as an activity if it is directly related to routine maintenance activities covered under this Agreement.

o. *Flood Alert System.* The City's Flood Alert System is comprised of remote sensor and transmitter locations along various streams within the City that are prone to flooding. The Permittee may access and maintain the remote sensor and transmitter installations currently in operation. The Permittee may install new stream gauge equipment for monitoring stream levels and precipitation within the stream zone.

Potential Mitigation Alternatives for Permanent Impacts

The following tasks may be implemented as compensatory mitigation for Permanent Impacts associated with routine maintenance tasks. Implementation of mitigation is not subject to the VRF process but would occur consistent with the Habitat Management and Monitoring Program (HMMP) as outlined in Measure 3.2 and requires implementation of the protective measures in this Agreement.

a. *Adopt-a-Creek Program.* The Permittee may partner with nonprofits, businesses and residents to perform creek/drainage trash and invasive species removals and restoration activities through the City's Adopt-a-Creek program. Creek restoration activities may consist of trash abatement, invasive plant removal, and plantings of local native species to improve fish and wildlife habitat, protect water quality and stabilize bank erosion. Program activities may include group "volunteer cleanup/work days" or small scale individual restoration or enhancement projects (for example, "Eagle Scout" projects). Through the Adopt-a-Creek program, the Permittee will establish long-term creek adoption commitments from non-profits such as Dry Creek Conservancy, Trout Unlimited, Granite Bay Flycasters, businesses, and citizen's groups.

b. *Creek Restoration and Erosion Repair Projects.* The Permittee may restore locations with existing bank erosion or scour problems to improve riparian habitat value and water quality. Potential restoration project locations within Linda Creek, Cirby Creek, Dry Creek, Secret Ravine, and Strap Ravine are identified in **Exhibit A**. The Permittee may add new locations (with Department concurrence)

to the list of potential creek restoration and erosion repair projects. Restoration activities may involve the following steps: removal of non-native vegetation; re-grading eroded, scoured, or undercut portions of the creek to more stable and natural topography; and bio-stabilization of the restoration area to prevent future erosion. Bio-stabilization would involve installing biodegradable geotextile fabric (e.g. coconut coir erosion control blankets, fibers rolls) and native riparian vegetation to stabilize the restoration area and provide long term riparian habitat. Areas at or below the Ordinary High Water Mark (OHWM) may be stabilized with a combination of biodegradable geotextile fabric and fast growing native species. Banks and floodplains would be planted with riparian trees and shrubs typical to the region. Herbaceous understory species may be added to the restoration site above the OHWM either by installing plugs or broadcasting a seed mix. Restoration Plans will be submitted to the Department for review and approval.

c. *Invasive Species Removal.* The Permittee may remove non-native invasive vegetation to enhance existing habitats under Department jurisdiction. Invasive vegetation removal must include a maintenance and monitoring period to ensure that the site is not eroded or re-colonized by invasive species. If appropriate, sites will be revegetated by applying a native seed mix, installing container plants, or both.

d. *Conversion of Concrete-Lined Channels.* Removal of concrete lining from channels would entail removing concrete lining, restoring the channel to natural, self-sustaining topography, and revegetating the banks with site appropriate native riparian vegetation. The Permittee may undertake projects to convert existing concrete-lined channels to a more natural state to improve water quality, improve aesthetic values, or provide compensatory mitigation for Permanent Impacts associated with routine maintenance activities.

PROJECT IMPACTS

Existing fish or wildlife resources the project could substantially adversely affect include: dwarf downingia (*Downingia pusilla*), Boggs Lake hedge-hyssop (*Gratiola heterosepala*) Sanford's arrowhead (*Sagittaria sanfordii*), Legenere (*Legenere limosa*), vernal pool fairy shrimp (*Branchinecta lynchi*), vernal pool tadpole shrimp (*Lepidurus packardi*), Conservancy fairy shrimp (*Branchinecta conservatio*), valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*), western spadefoot (*Spea hammondii*), western pond turtle (*Emys marmorata*), steelhead - Central Valley DPS (*Oncorhynchus mykiss irideus*), Swainson's hawk (*Buteo swainsoni*), tricolored blackbird (*Agelaius tricolor*), white-tailed kite (*Elanus leucurus*), burrowing owl (*Athene cunicularia*), grasshopper sparrow (*Ammodramus savannarum*), purple martin (*Progne subis*), other migratory birds, bats, and other aquatic and terrestrial plant and wildlife species.

Identification and analysis of species impacts can be found in the City of Roseville California Environmental Quality Act *Routine Maintenance of Stream Channels and Drainage Facilities Project Initial Study/Mitigated Negative Declaration* (SCH#2016092050).

The adverse effects the project could have on the fish or wildlife resources identified above include: soil compaction or other disturbance to soil layer, temporary release of contaminants (i.e. incidental from maintenance), removal of riparian habitat, disruption to nesting birds, reptiles and other wildlife.

Approximately 3.3 acres of Permanent Impacts to vegetation are anticipated over the 12-year life of the RMA in the form of rip-rap, earthen fill, and repair of existing facilities. It is anticipated that 1.1 acres of Permanent Impacts will occur in riparian areas and 2.2 acres of Permanent Impacts will occur in stream channel or detention basin habitats that may have emergent vegetation. Approximately 14 acres of Temporary Impacts are anticipated over the 12-year life of the RMA. Approximately 8 acres of Temporary Impact will be in stream channels and detention basins in the form of sediment removal and may impact emergent vegetation. The remaining 6 acres will be in riparian areas in the form of temporary staging areas, access roads, and work areas. **Table 1** lists the summary of cumulative impacts to vegetation over the 12-year life of the project.

Table 1 – Summary of Cumulative Impacts to Vegetation

Type of Impact	Permanent Impact Total Area (acres)	Temporary Impact Total Area (acres)
Riparian	1.1	6.0
In-stream/wetland	2.2	8.0
Total	**3.3**	**14**

Maintenance activities may result in disturbance of approximately 0.67 acres and remove 4,117 cubic yards (CY) of debris and sediment annually and may result in approximately 0.27 acre and 1,434 cubic yards of fill annually.

MEASURES TO PROTECT FISH AND WILDLIFE RESOURCES

1. Administrative Measures

Permittee shall meet each administrative requirement described below.

1.1 Documentation at Project Site. Permittee shall make the Agreement, any extensions and amendments to the Agreement, and all related notification materials and California Environmental Quality Act (CEQA) documents, readily available at the project site at all times and shall be presented to the Department personnel, or personnel from another state, federal, or local agency upon request.

1.2 Providing Agreement to Persons at Project Site. Permittee shall provide copies of the Agreement, the approved verification request form (VRF), and any extensions and amendments to the Agreement to all persons who will be working on the project at the project site on behalf of Permittee, including but not limited to contractors, subcontractors, inspectors, and monitors.

1.3 Notification of Conflicting Provisions. Permittee shall notify the Department if Permittee determines or learns that a provision in the Agreement might conflict

with a provision imposed on the project by another local, state, or federal agency. In that event, the Department shall work with Permittee to resolve any conflict.

1.4 Project Site Entry. Permittee agrees that the Department personnel may enter the project site at any time to verify compliance with the Agreement.

1.5 Does Not Authorize "Take." This Agreement does not authorize "take" of any listed species. Take is defined as hunt, pursue, catch, capture or kill or attempt to hunt, pursue, catch, capture, or kill. If there is potential for take of any listed species to occur, the Operator shall consult with the Department as outlined in FGC Section 2081 and shall obtain the required State and federal threatened and endangered species permits.

1.6 Nesting Birds. This Agreement does not allow the Permittee, any employees, or agents to destroy or disturb any active bird nest (Section 3503 Fish and Game Code) or any raptor nest (Section 3503.5) at any time of the year.

1.7 Verification Request Form (VRF): The VRF is provided by the Department to the Permittee as an Exhibit to this Agreement (**Exhibit B**). The Permittee shall complete the VRF for all project submissions.

1.7.1 Submission of the VRF: The Permittee shall complete the VRF and submit (preferably by email) to R2LSA@wildlife.ca.gov and the current staff contact's email.

1.7.2 Content of the VRF: The VRF shall include supporting documents for the maintenance activity, including but not limited to: photos, updated surveys, drawings and/or maps, etc.

1.7.3 Changes to the VRF: The VRF may be administratively updated through the term of this Agreement, to reflect changes in contact information.

1.7.4 VRF Fees: Fees associated with the projects identified by each VRF shall be submitted annually to the Department (see "Fees" below).

1.7.5 Species: In any areas where species protected under the California Endangered Species Act (FGC 2080 et seq.), plants designated as rare under FGC 1908, or California Fully Protected Species (FGC 3511, 4700, 5050 and 5515) may be present, work may only occur after the area has been surveyed by a qualified biologist and it has been determined that the work can occur without the possibility of Take.

a. Any VRFs submitted to the Department for work in those areas must include a copy of the biological survey and/or methodology used to determine the absence of listed species.

1.8 Timing of Maintenance Work: Ten (10) days prior to commencing routine maintenance work, the Permittee shall complete and submit to the Department a VRF as described in Section 1.7 of the Agreement.

1.8.1 Project Delays: In the event that the Permittee delays the project start date specified in the VRF by more than ten (10) days, the Permittee shall submit a revised VRF before beginning the project.

1.8.2 Urgent Review Requested: In cases where the Permittee must expedite work based on the limited availability of work crews, the need for specialized equipment, anticipated weather conditions, and other limiting factors, the Permittee shall submit to the Department a VRF for the work a minimum of two (2) working days prior to beginning said work. The VRF shall be submitted as described in Section 1.6 of this Agreement and shall include a description of the reason why urgent review is needed.

1.9 Department Processing of the VRF

1.8.3 Receipt of VRF: Upon receipt of a VRF, the Department may acknowledge receipt of any VRF in the form of an email response to the Permittee contact person identified in the VRF; however, such acknowledgement shall not be deemed an approval by the Department that the Permittee may begin the work described in the VRF.

1.8.4 Consistency with the Agreement: Within ten (10) days of receipt, the Department shall determine if the routine maintenance work described in the VRF is covered by and consistent with this Agreement, and provide response to the Permittee.

1.8.5 Concurrence of Work: If the Department determines that the work described in the VRF is consistent with and covered by this Agreement the Permittee may begin the work described in the VRF, provided it does so in accordance with the terms and conditions in this Agreement. This may include a site visit by the Department for field confirmation.

a) Prior to the proposed start date in the VRF, complete the bottom portion of the submitted VRF, check the appropriate “Notice of Concurrence” box and return the approved VRF to the Permittee contact person identified in the VRF (and any Permittee employees on the distribution list) stating that the Permittee may proceed with the work described in the VRF; or,

b) Allow the agreed upon comment period to lapse by not responding to the VRF within the appropriate timeframe.

1.8.6 Non-Concurrence of Work: If the Department determines that the routine maintenance work described in the VRF is not covered by or consistent with this Agreement, the Department shall send by email a notice of non-concurrence to the Permittee contact person identified in the VRF and all the Permittee employees on the email distribution, in which case the Department must send the notice prior to the proposed start date in the VRF. If the Department submits a notice of non-concurrence, the Department shall specify the basis for its inconsistency determination and describe the actions the Permittee will need to take before it may begin the work.

1.9 Emergency work: This Agreement does not apply to emergency work by the Permittee. The Permittee shall complete any emergency work in accordance with FGC Section 1610, and comply with the Notification requirement in FGC Section 1610 by completing the Notification of Emergency Work form found on the Department's website at https://www.wildlife.ca.gov/Conservation/LSA/Forms and submitting it to the Department as instructed.

1.10 Maintenance work not covered by this Agreement: Maintenance work not covered by or consistent with this Agreement shall include any routine maintenance work not identified in the Project Description and outside of the Project Location as specified in this Agreement, regardless of whether the work is otherwise consistent with this Agreement. For routine maintenance work not covered by this Agreement and subject to FGC Section 1602, the Permittee shall notify the Department in accordance with that section before beginning the work. See the Department website https://www.wildlife.ca.gov/Conservation/LSA for instructions and forms for providing notification of Lake or Streambed Alteration to the Department.

2. Avoidance and Minimization Measures

To avoid or minimize adverse impacts to fish and wildlife resources identified above, Permittee shall implement each measure listed below.

2.1 Work Period. The time period for completing earthmoving work within stream zone shall be restricted to periods of low stream flow and dry weather and shall be confined to the period of May 1 to October 15. Maintenance activities shall be timed with awareness of precipitation forecasts and likely increases in stream flow. Maintenance activities that involve earthmoving within the stream zone shall cease until all reasonable erosion control measures, inside and outside of the stream zone, have been implemented prior to all storm events. Revegetation, restoration and erosion control work is not confined to this time period.

2.2 Dry Weather Only. The work period within Department jurisdictional area shall be restricted to periods of dry weather (with less than a 30% chance of rain). All erosion control measures shall be initiated prior to all storm events. Revegetation, restoration and erosion control work is not confined to this work period. Permittee shall monitor the National Weather Service (NWS) 72-hour forecast for the project area.

2.3 Work Period Extensions. The work period may be extended based on the extent of the work remaining, on site conditions and reasonably anticipated future conditions. If the Permittee finds more time is needed to complete the authorized activity, the Permittee shall submit a written request for a work period time extension to the Department. The work period extension request shall provide the following information: 1) Describe the extent of work already completed; 2) Provide

specific detail of the activities that remain to be completed within the stream zone; and 3) Detail the actual time required to complete each of the remaining activities within the stream zone. The work period extension request should consider the effects of increased stream conditions, rain delays, increased erosion control measures, limited access due to saturated soil conditions, and limited growth of erosion control grasses due to cool weather. Photographs of the work completed and the proposed work areas are helpful in assisting the Department in its evaluation. Time extensions are issued at the discretion of the Department. The Department will have ten calendar days to approve the proposed work period extension. The Department reserves the right to require additional measures designed to protect natural resources.

Biological Resources

2.4 Designated Biologist. At **least thirty (30) days before training or pre-maintenance activity surveys are conducted**, Permittee shall submit to the Department in writing the name, qualifications, business address, and contact information for a biological monitor (Designated Biologist). Permittee shall obtain the Department's written approval of the Designated Biologist prior to the commencement of project activities. The Designated Biologist shall be knowledgeable and experienced in the biology and natural history of local fish and wildlife resources present in the project area.

2.5 Designated Biologist On-site with Stop work Authorization. In any areas where suitable habitat for special-status species may be present, the Permittee shall have a Designated Biologist on site during initial soil disturbing activities and shall be on call daily to ensure that Agreement conditions are being met and implemented to minimize impacts to fish and wildlife species and habitat. The Designated Biologist shall be responsible for conducting pre-maintenance surveys within the project area and monitoring the initiation of all ground- or vegetation-disturbing activities subject to this Agreement. The Designated Biologist shall have the authority to immediately stop any activity that is not in compliance with this Agreement, and/or to order any reasonable measure to avoid or minimize impacts to fish and wildlife resources. If any special-status species are found, maintenance activities shall cease and the Permittee shall notify the Department immediately if there is a threat of harm to any sensitive species, or other aquatic wildlife.

2.6 Annual Environmental Awareness Education. The Permittee shall conduct an education program for all persons employed or otherwise working on the project site prior to performing any work on-site and on an annual basis. The program shall consist of a presentation from the Designated Biologist or another Department-approved biologist that includes a discussion of the biology of the habitats and species identified in this Agreement and present in the project area. The biologist shall also include as part of the education program information about the distribution and habitat needs of any special-status species that may be present, legal protections for those species, penalties for violations and project-specific protective measures included in this Agreement. Interpretation shall be

provided for non-English speaking workers, and the same instruction shall be provided for any new workers prior to their performing work under this Agreement.

2.6.1 *Invasive Species Education Program*. Permittee shall conduct an Invasive Species Education Program for all persons working within the project site prior to the commencement of any project activities. The program shall consist of a presentation from a qualified biologist that includes a discussion of the invasive species currently present within the project site as well as those that may pose a threat to or have the potential to invade the project area. The discussion shall include a physical description of each species and information regarding their habitat preferences, local and statewide distribution, modes of dispersal, and impacts. The program shall also include a discussion of best management practices (BMPs) to be implemented in the project area to avoid the introduction and spread of invasive species into and out of individual project sites. The program shall be repeated annually until the end of the Agreement term. Copies of program materials shall be maintained at the project site for workers to reference as needed.

2.6.2 *Sign-in Sheets*. Upon completion of the education program, employees shall sign a form stating they attended the program and understand all protection measures. These forms shall be filed at the worksite offices and submitted with the annual reports required by Measure 4.4 of this Agreement.

2.6.3 *Fact Sheets*. The Permittee shall prepare and distribute cards or fact sheets that contain the species or sensitive resource information for workers to carry while onsite.

2.7 Pre-Maintenance Inspection. The Permittee shall visually check for wildlife under parked vehicles and equipment within the maintenance area prior to moving that equipment. If sensitive species are observed, the Designated Biologist shall be contacted. If it is determined that the work site is occupied by a sensitive species, the Permittee shall not commence activities until no signs are present that the site is being used by the species or that the species is no longer present.

2.7.1 *Special-Status Species Encountered During Work*. If the Permittee encounters a special-status species within or adjacent to the project area, work shall be suspended, the Department notified, and if needed, additional conservation measures shall be developed in consultation with the Department prior to re-initiating the activity.

2.8 Leave Wildlife Unharmed. The Permittee shall allow any fish or wildlife it encounters during the course of maintenance work authorized by this Agreement to leave the work area unharmed.

2.9 Nesting Birds. To avoid impacts to nesting birds, focused surveys for bird nests shall be conducted by the Designated Biologist or Department-approved biological monitor for maintenance activities that must take place between February 1st and August 31st. The survey shall be conducted no more than five (5) days prior to the start of maintenance activities. This will include surveys of the ground, herbaceous, shrub, or canopy vegetation and structures (i.e., bridges, old buildings, etc.). The survey shall be conducted within a minimum 500-foot radius of project activities (to the degree feasible). The results of the nest survey shall be submitted to the Department before the start of work. The results of the survey shall include the following information: name of biologist(s) conducting surveys, dates of survey, total field time of survey efforts, map of survey routes, and the type of species nesting. Take of individual raptors, their nests, and eggs is currently prohibited under FGC Sections 86, 3503, 3503.5, and 3513.

2.9.1 *Bird Management and Monitoring Plan*. Before the start of maintenance activities, if nests are found during the survey, the Permittee shall prepare and submit to the Department a Bird Management and Monitoring Plan (Plan) which includes survey results and establishes the necessary buffers to avoid take of a nest pursuant to FGC sections 3503 and 3503.5. The Plan design shall be based upon site conditions, project activities, and species present or likely to be present during all maintenance activities. For active nests, a buffer or installation of appropriate barriers shall be established between the maintenance activities and the active nest so that nesting activities are not interrupted. The buffer shall be delineated and shall be in effect throughout maintenance or until the nest is no longer active. The buffer(s) shall be determined based upon the life history of the individual species, including their sensitivity to noise, vibration, ambient levels of human activity and general disturbance, the current site conditions (screening vegetation, terrain, etc.) and the various project-related activities necessary to complete work. Nests shall be monitored to ensure the efficiency of the buffers.

2.9.2 *Removal of Trees/Shrubs During Fall/Winter Months*. To avoid potential impacts to tree nesting birds, trees and shrubs designated for trimming or removal may be cut down during the time period of September 1 to January 31st, provided the Permittee has determined that no raptor or special-status birds have established nests on the vegetation proposed for removal or use the site as a rookery.

2.9.3 *Additional Surveys*. If a lapse in project-related work of fifteen (15) calendar days or longer occurs, consultation with the Department shall be required and another focused survey may be required before project work can be reinitiated.

2.10 Burrowing Owl. If suitable habitat for burrowing owl is present on and/or adjacent to project activities, the Designated Biologist will complete surveys according to the

Staff Report on Burrowing Owl Mitigation (CDFG 2012) or updated version. Surveys will be conducted on the project site and within 150 meters of areas that will be directly or indirectly impacted by the project, where feasible. Surveys shall not be conducted during inclement weather, when burrowing owls are typically less active and visible. If burrowing owls or evidence of burrowing owls (e.g., whitewash or pellets) are not observed during surveys, no additional mitigation is necessary. If the birds are present, then the area should be avoided.

2.10.1 *Biological Monitor*. If the Permittee does not conduct the surveys as outlined above, then the Designated Biologist shall conduct pre-maintenance surveys no more than three (3) days prior to the start of the work or any site preparation activities. If sign of owls is not evident, then the Designated Biologist must also be present onsite during work activities to ensure any potential burrows or perch sites where burrowing owl may be present are avoided. If it is evident that the burrows are actively being used, the Permittee shall not commence activities, but shall consult with the Department. After consultation, the Department may determine when activities can commence or if another action must be taken to minimize impacts to the species.

2.10.2 *Exclusion Plan*. If burrowing owl is present and cannot be avoided, the Permittee shall develop a Burrowing Owl Exclusion Plan (Plan) approved by the Department. The Plan shall include mitigation for the temporary and permanent loss of habitat as outlined in the Department's current Burrowing Owl staff report to include permanent protection of mitigation land, a management plan, and endowment.

2.11 Swallow Inspection. Maintenance activities on bridges shall either occur outside of the swallow nesting period (February 1st through August 31st) or frequent inspection of the bridge for nesting activity shall begin by February 1st as outlined in the *Bird Management and Monitoring Plan*. If swallows begin colonizing the bridge prior to beginning bridge work, all nest precursors (mud placed by swallows for construction of nests) shall be washed down or scraped at least once daily until swallows cease trying to construct nests. Nests may only be removed if they are less than one-third (1/3) built. If the nest is greater than one-third (1/3) built, the Designated Biologist must inspect the nest to ensure no eggs or young are present. This activity shall not result in harm or death to swallows.

2.12 Western Spadefoot Toad. Within suitable habitat and where proposed maintenance activities may impact the toad, pre-commencement surveys shall be conducted to determine the presence of the western spadefoot toad. If the species is found in the area prior to project activities, they shall be relocated to a suitable habitat area outside of the project site by the Designated Biologist with all required permits. The results of the survey shall be sent to the Department within one week of survey completion. The Designated Biologist shall provide Permittee a list of exclusion measures that the Permittee shall use to minimize risk of take or injury to

any individual animals in the vicinity of the project site. The Permittee shall ensure that these exclusion measures are in place prior to project activities.

2.13 Rare Plant Surveys. If suitable habitat is present, survey(s) for Sanford's arrowhead or other special-status plant species with the potential to be impacted by project activities shall be conducted in accordance with the Department's "*Guidelines for Assessing the Effects of Proposed Projects on Rare, Threatened, and Endangered Plants and Natural Communities* (revised May 8, 2000)." If any special-status plant species are present and will be affected by the project, adequate avoidance measures shall be incorporated into the project. If special-status plant species cannot be avoided, suitable species-specific mitigation must be developed in consultation with Department, which may include a combination of on-site and off-site plant preservation and compensation measures.

2.13.1 *Buffer Zones*. Department recommends that a no-disturbance buffer zone should be maintained and marked to protect any special status plant populations. The no-disturbance buffer zone should be at least 25 feet wide. For any populations that cannot be avoided and a 25-foot buffer zone maintained, a mitigation plan should be submitted to and approved by Department prior to any ground disturbing activity or heavy equipment use.

2.14 Avoidance of Vernal Pools. Project activities will not be conducted within 250 feet of vernal pools unless it is determined that project activities are consistent with the Biological Opinion on Service Approval of the City of Roseville Open Space Preserve Overarching Management Plan (BO #81420-2008-F-1958-3).

2.15 Tricolored Blackbird or California Black Rail Habitat. Areas of emergent wetland vegetation (i.e., bulrush, cattails, etc.) and thickets of thorny vegetation (i.e., blackberry, thistle, etc.) will not be removed unless it is determined by the Designated Biologist that the area is not suitable habitat for tricolored blackbird or California black rail. If it is suitable habitat, project activities may only commence if the Department determines that project activities will not adversely affect these species.

2.16 Bats. The Designated Biologist will check for evidence of bats if project activities will be located in an area that has the potential to impact bat species. If bats are found, then the Department will be notified and consulted to determine if work may be conducted in that area.

2.16.1 *Bat Protection - Bridges*. Prior to work commencing at any bridge with the potential to support bat species, the bridge shall be surveyed for bats by the Designated Biologist. If bats are found, work on the bridge and other project activities in the vicinity shall cease. Bats shall not be disturbed without specific notice to and consultation with the Department. Department reserves the right provide additional provisions to this Agreement designed to protect nesting and/or roosting bats. This

would not apply to minor bridge washing, graffiti removal, or other work that would not impact bats.

2.16.2 *Bat Protection - Culverts*. Prior to project activities related to modifying culverts the site shall be surveyed for bats by the Designated Biologist. If bats are found, there shall be no further disturbance to the culvert until the Department has been consulted. The Department reserves the right to provide additional provisions to this Agreement designed to protect nesting and/or roosting bats.

Water Diversion

2.17 Water Diversion Plan. If flowing water is present or reasonably anticipated, the Permittee shall submit with the VRF for approval a detailed water diversion and/or dewatering plan to the Department. Dewatering structures may include the use of sand bag, Port-a-dams, water bladder dams, K-rails or driven sheet metal coffer dams. The Department will review the proposed water diversion method, to approve the plan or provide the requirements for that approval. The Permittee may not commence the diversion of water without the explicit approval from the Department.

2.18 Maintain Aquatic Life. When any dam or other artificial obstruction is being constructed, maintained, or placed in operation, Permittee shall allow sufficient water at all times to pass downstream to maintain aquatic life below the dam pursuant to FGC §5937.

2.19 Clean Obstruction Only. Any temporary dam or other artificial obstruction constructed by Permittee shall only be built from materials which will cause little or no siltation.

2.20 Non-Erodible Materials. Permittee shall use only clean non erodible materials in the construction of any water diversion device. All materials used for diversion of water shall be removed from the stream following completion of instream work each year.

2.21 Extra Sandbags. Permittee shall have extra sandbags readily available to provide additional freeboard to the diversion in the event it becomes evident flows may increase due to rainy conditions. The sandbag diversion may be removed completely only if the stream bank is stable and no undue erosion will occur.

2.22 Maintain Water Quality. Permittee shall divert flow in a manner that prevents turbidity, siltation, or pollution and provides flows to downstream reaches. Flows to downstream reaches shall be provided during all times that the natural flow would have supported aquatic life. Said flows shall be sufficient quality and quantity, and of appropriate temperature to support fish and other aquatic life both above and below the diversion.

2.23 Restore Normal Flows. Permittee shall restore normal flows to the effected stream immediately upon completion of work at that location.

VEGETATION

2.24 Vegetation Removal. Removal of vegetation shall not exceed the minimum necessary to complete maintenance activities. All impact acreages shall be specified in each VRF and shall be subject to Department approval. If, over the life of the Agreement, the impacts exceed the acreages stated in **Table 1**, the Department may require additional mitigation. Removal of native vegetation shall not exceed an area of 0.05 acre per VRF project (i.e. 50-feet by 50-feet). For projects located at outfalls, culverts, bridges or similar structures, vegetation removal shall not exceed a total of 0.1 acre (0.05 acre upstream and 0.05 acre downstream of the structure). If larger areas of vegetation removal are needed, the Department will provide approval on a case-by-case basis and may require additional mitigation. When mitigation is required, it shall be implemented as described in Measure 3.1, 3.2, 3.3 or 3.4 of the Agreement.

2.24.1 Unless previously approved by the Department no native vegetation shall be removed if the vegetation meets the following criteria:

a) A trunk diameter at breast height (DBH) in excess of four (4) inches.

b) Where native trees or woody riparian vegetation split into several trunks close to ground level, the DBH shall be measured for each trunk and calculated as one tree and shall not exceed six (6) inches.

c) Riparian shrubs that grow vegetatively from underground shoots or in patches, contain 1 stem per square foot, and are greater than 50 square feet (i.e., willows).

2.25 Vegetation Control in Channels or on Banks. The Permittee may remove dead trees and dying trees to maintain channel capacity and prevent erosion. The Permittee may cut, mow or remove emergent native aquatic vegetation to the minimum degree necessary to maintain channel capacity. All vegetation control methods will be specified in the specific VRF and will be subject to Department approval on a case-by-case basis. All cleared native vegetation shall be removed out of the riparian and stream channel or chipped and evenly distributed on site. Measure 2.26 must be followed for invasive species control.

2.25.1 The Permittee may prune tree branches up to 6-feet (72-inches) above the ground. Tree pruning may be higher than 6-feet when required for utility easements or public safety. Tree pruning higher than 6-feet will be approved by CDFW on a case-by-case basis during the VRF process. When feasible, branches and limbs extending over the low flow channel shall not be pruned to avoid potential impacts to shaded riverine aquatic habitat.

2.25.2 For native trees or woody riparian vegetation split into several trunks close to ground level, the Permittee may thin this vegetation leaving a minimum of 50% of the total mass of each individual plant.

2.25.3 Where riparian shrubs grow vegetatively from underground shoots or in patches (i.e. elderberry or willow), a shrub is defined as a cluster of stems growing less than 6-feet or approximately 2-meters apart from each other. Clusters that contain 1 stem per square foot and are area greater than 50-square feet shall be trimmed no closer than 3-inches above ground level.

2.26 Invasive Plant Management Plan. Permittee shall develop an Invasive Plant Management Plan focused on controlling or eradicating existing invasive plants within the project area and preventing the introduction of new nonnative and invasive plants into the project area. The Plan shall include a list of plant species targeted for control or eradication, a description of the methods that will be used for control or eradication, a list of BMPs to prevent the introduction and spread of invasive plant species into and out of the project area, and a rapid response plan in the event that a new plant species invades the project area. The Plan shall be implemented for the duration of the project. The removal and control of invasive plants may be used as mitigation for impacts associated with the Agreement per Measure 3.1, 3.2, and 3.3. In some cases, removal of non-native vegetation that provides valuable habitat may require mitigation (i.e., a nesting tree, suitable habitat for special-status species).

2.26.1 *Herbicide Use*. All herbicides, surfactants, and other pesticides utilized within or adjacent to the Department jurisdictional areas and other sensitive aquatic habitat areas shall be registered for aquatic use by the California Department of Pesticide Regulation (CDPR).

2.26.2 *Red Sesbania*. Removal of red sesbania (*Sesbania punicea*) should be done by mechanical removal from the root. Preferably removal should occur before seed pods are present. If not, seed pods must be cleaned from the site. Move all material away from the water and bundle. Dispose all material at an approved facility. Methods may be adapted at the discretion of the Department.

Avoid/Minimize Effects of Equipment

2.27 Invasive Species. The Permittee shall conduct project activities in a manner that minimizes the risk of the introduction, transfer, and spread of aquatic, riparian, and terrestrial invasive species, including plants, animals, and microbes (e.g., algae, fungi, parasites, mussels, and bacteria), from one water body to another. All equipment (i.e, tools, vehicles, boots, etc.) shall be cleaned prior to entering the work site and/or between each use in different water bodies. Permittee shall notify the Department immediately if an invasive species not previously known to occur within the work site is discovered during work activities or annual inspections by

contacting the Department's Invasive Species Program by email at Invasives@wildlife.ca.gov.

2.28 Decontamination of Project Equipment. Permittee shall decontaminate all tools, waders and boots, and other equipment that will enter the water prior to entering the work area to avoid the introduction and transfer of organisms. Permittee shall decontaminate project gear and equipment utilizing one of three methods: drying, using a hot water soak, or freezing, as appropriate to the type of gear or equipment. For all methods, Permittee shall begin the decontamination process by thoroughly scrubbing equipment, paying close attention to small crevices such as boot laces, seams, net corners, etc., with a stiff-bristled brush to remove all organisms. To decontaminate by drying, Permittee shall allow equipment to dry thoroughly (i.e., until there is a complete absence of water), preferably in the sun, for a minimum of 48 hours. To decontaminate using a hot water soak, Permittee shall immerse equipment in 140 degrees Fahrenheit or hotter water and soak for a minimum of 5 minutes. To decontaminate by freezing, Permittee shall place equipment in a freezer 32 degrees Fahrenheit or colder for a minimum of eight (8) hours. Repeat decontamination is required only if the equipment/clothing is removed from the site, used within a different waterbody, and returned to the project site.

2.29 Decontamination Sites. Permittee shall perform decontamination of vehicles, watercraft, and other project gear and equipment in a suitable location (i.e. City Corporation Yard) where runoff can be contained and not allowed to pass into Department jurisdictional areas and other sensitive habitat areas.

2.30 No Heavy Equipment in Stream. No heavy equipment shall operate in the portion of the stream bed where flowing water is present or anticipated during the term of this Agreement.

2.31 Minimize Vehicle Parking. Vehicles may enter and exit the work area as necessary for project activities, but may not be parked overnight within ten (10) feet of the drip line of any trees; nor shall vehicles be parked where mechanical fluid leaks may potentially enter the waters of the state.

2.32 Building Material Storage. Project building material and/or construction equipment shall not be placed where materials could pass into the waters of the state or where they may cover aquatic or riparian vegetation.

2.33 Spoil sites. Spoil sites shall not be located within a stream, where spoils may be washed back into a stream, or where it may cover aquatic or riparian vegetation.

2.34 Operating Equipment and Vehicle Leaks. Any equipment or vehicles driven and/or operated within or adjacent to the stream shall be checked and maintained daily to prevent leaks of materials that could be deleterious to aquatic and terrestrial life or riparian habitat.

2.35 Stationary Equipment Leaks. Stationary equipment such as motors, pumps, generators, and welders, located within or adjacent to the stream shall be positioned over drip pans or other secondary containment. Stationary heavy equipment shall have suitable containment to handle a catastrophic spill/leak.

2.36 Equipment Maintenance and Fueling. No equipment maintenance or fueling shall be done within or near any stream channel or lake margin where petroleum products or other pollutants from the equipment may enter these areas.

2.37 Cease Operations. If, in the opinion of the Department, conditions arise, or change in such a manner that the project may result in substantial adverse effects on fish or wildlife resources despite the protective measures in this Agreement, maintenance activities shall cease upon written or verbal request of the Department. Maintenance activities under this Agreement may not recommence until corrective measures identified by the Department are completed. The Department will notify the Permittee in writing within 10 business days following the cease operation order of the corrective actions that must be completed before maintenance activities under this Agreement can recommence.

Erosion Control/Stabilization

2.38 Best Management Practices. The Permittee shall actively implement BMPs to prevent erosion and the discharge of sediment in to streams and lakes during project activities. BMPs shall be monitored daily and repaired if necessary to ensure maximum erosion and sediment control. If used, all fiber rolls, straw waddles, and/or hay bales utilized within and adjacent to the project site shall be free of nonnative plant materials or sterile to avoid propagation of nonnative plants. Fiber rolls or erosion control mesh shall be made of loose-weave mesh that is not fused at the intersections of the weave, such as jute, or coconut (coir) fiber, or other products without welded weaves. Non-welded weaves reduce entanglement risks to wildlife by allowing animals to push through the weave, which expands when spread. **Products with plastic monofilament or cross joints in the netting that are bound/stitched (such as found in some straw wattles/fiber rolls and some erosion control blankets) which may cause entrapment of wildlife, shall not be allowed.**

2.39 Erosion Control Monitoring. Permittee or Designated Representative shall monitor erosion control measures during and after each storm event and repair and/or replace ineffective measures immediately.

2.40 Erosion Control Measures. Permittee shall utilize erosion control measures throughout all phases of operation where sediment runoff from exposed slopes threatens to enter a river, stream, or lake. Erosion control measures shall be pre-approved by the Department.

2.41 Mud, Silt and Other Pollutants. Permittee shall prevent water containing mud, silt or other pollutants from grading, aggregate washing, equipment washing, or other

activities to enter a lake or stream or to be place in locations that may be subjected to high storm flows.

2.42 Silt Laden Runoff. At no time shall silt laden runoff be allowed to enter the stream or directed to where it may enter the stream. Erosion control measures, such as, silt fences, straw hay bales, gravel or rock lined ditches, water check bars, and broadcasted straw shall be used where ever silt laden water has the potential to leave the work site and enter the creek.

2.43 Maintain Sediment Barriers. Permittee shall maintain the sediment barrier(s) in good operating condition throughout the construction period and the following rainy season. Maintenance includes, but is not limited to, removal of accumulated silt and/or replacement of damaged silt fencing, coir logs, coir rolls, and/or straw bale dikes. If the sediment barrier fails to retain sediment, Permittee shall employ corrective measures, and the Department notified, immediately. Materials used in the sediment barriers shall not pose an entanglement risk to fish/wildlife.

2.44 Removal of Silt from Barriers. Permittee shall remove silt collected around the silt barriers on an as needed basis to prevent silty/turbid water from flowing around the silt barriers during storm events. Silt barriers which trap sediment shall be removed upon completion of maintenance activities and after all flowing water is cleared of turbidity in a manner that will not introduce silt to the stream. The stream shall then be restored to a clean and natural condition.

2.44.1 Removal of Barriers. The Permittee is responsible for the removal of non-biodegradable silt barriers (such as plastic silt fencing) after the disturbed areas have been stabilized with erosion control vegetation (usually after the first growing season).

2.45 Stream Materials. Rock, gravel, and/or other materials shall not be imported to, taken from or moved within the bed or banks of the stream except as otherwise addressed in this Agreement.

2.46 Seeding Requirement. Permittee shall restore all exposed/disturbed areas and access points within the work area by seeding with a mix of native regionally appropriate grasses and forbs and, if necessary, a sterile grass cover crop unless otherwise agreed upon with the Department. Seed mix shall be pre-approved by the Department.

2.47 Bank Stabilization. Permittee shall construct bank stabilization with suitable non-erodible materials that will withstand wash out. The bank stabilization material shall extend above the normal high-water mark. Only clean material such as, rock riprap that is free of trash, debris and deleterious material shall be used as bank stabilization. Asphalt shall not be considered an acceptable material.

2.48 Stabilize Exposed Areas. Permittee shall stabilize all exposed/disturbed areas within the project site to the greatest extent possible. Techniques used for

stabilization shall be pre-approved by the Department or by seeding as described in **Condition 2.46 to 2.47**. Products with plastic monofilament or cross joints in the netting that are bound/stitched (such as found in some straw wattles/fiber rolls and some erosion control blankets) which may cause entrapment of wildlife, shall not be allowed.

2.49 Minimize Turbidity and Siltation. Permittee shall take precautions to minimize turbidity/siltation during construction and post-construction periods. Precautions shall include, but are not limited to: pre-construction planning to identify site specific turbidity and siltation minimization measures and best management erosion control practices; best management erosion control practices during project activity; and settling, filtering, or otherwise treating silty and turbid water prior to discharge into a stream or storm drain.

2.50 Return Low-Flow Channel to Pre-project Conditions. If a stream channel has been altered during the operations, Permittee shall return its low-flow channel, as nearly as possible, to pre project conditions without creating a possible future bank erosion problem or a flat wide channel or sluice like area. Permittee shall return the gradient of the streambed margin to pre project grade unless such operation is part of a restoration project, in which case, the change in grade shall be approved by the Department prior to project commencement.

Debris Materials and Waste

2.51 Hazardous Materials. Debris, soil, silt, bark, rubbish, creosote-treated wood, raw cement/concrete or washings thereof, asphalt, paint or other coating material, oil or other petroleum products, or any other substances which could be hazardous to aquatic life, shall not be stored where it could be washed back into the channel or where it will cover aquatic or riparian vegetation. Equipment shall be stored in areas where any possible contamination from the equipment would not flow or be washed back into the channel. All debris shall be disposed of properly. BMPs shall be employed to accomplish these requirements.

2.52 Pollution and Litter. Permittee shall comply with all litter and pollution laws. All contractors, subcontractors, and employees shall also obey these laws and it shall be the responsibility of Permittee to ensure compliance.

2.52.1 Permittee shall not allow water containing mud, silt, or other pollutants from grading, aggregate washing, or other activities to enter a lake, streambed, or flowing stream or be placed in locations that may be subjected to high storm flows.

2.52.2 The Permittee or its contractors shall not dump any litter or construction debris within the riparian/stream zone. All such debris and waste shall be removed from the worksite daily and properly disposed of at an appropriate disposal site.

2.52.3 Spoil sites shall not be located within a lake, streambed, or flowing stream or locations that may be subjected to high storm flows, where spoil shall be washed back into a lake, streambed, or flowing stream where it will impact streambed habitat and aquatic or riparian vegetation.

2.52.4 Raw cement/concrete or washings thereof, asphalt, paint, or other coating material, oil or other petroleum products, or any other substances which could be hazardous to fish and wildlife resources resulting from project related activities shall be prevented from contaminating the soil and/or entering the waters of the State. These materials, placed within or where they may enter a lake, streambed, or flowing stream by Permittee or any party working under contract or with the permission of Permittee, shall be removed immediately.

2.52.5 No broken concrete, cement, debris, soil, silt, sand, bark, slash, sawdust, rubbish, or washings thereof, oil or petroleum products, or other organic or earthen material from any construction or associated activity of whatever nature shall be allowed to enter into or be placed where it may be washed by rainfall or runoff into waters of the State. When operations are completed, any excess materials or debris shall be removed from the work area. No rubbish shall be deposited within 100 feet of the high water mark of any lake, streambed, or flowing stream.

2.52.6 No equipment maintenance or fueling shall be done within or near any lake, streambed, or flowing stream where petroleum products or other pollutants from the equipment may enter these areas under any flow.

3. Compensatory Measures

To compensate for adverse impacts to fish and wildlife resources identified above that cannot be avoided or minimized, Permittee shall implement each measure listed below.

3.1 Compensatory Mitigation. Permittee shall mitigate for temporary and Permanent Impacts as described below following the methodologies described in the HMMP listed in Measure 3.2 of this Agreement.

3.1.1 Temporary impacts to habitat under Department jurisdiction will be mitigated at a 0.5:1 ratio for habitat creation/restoration or 1:1 for habitat enhancements. This is in addition to onsite regeneration or restoration.

3.1.2 Permanent impacts to previously disturbed and/or armored watercourses under Department jurisdiction will be mitigated at a 1:1 ratio for habitat creation and 2:1 for habitat enhancements or purchase of mitigation credits in a Department-approved mitigation bank. Previously disturbed and/or armored watercourses include those with no woody vegetation and may either be man-made or manipulated (i.e., gunnited, rip-rap, etc.).

3.1.3 Permanent impacts to vegetated channels or undisturbed watercourses (i.e., intermittent or ephemeral drainages) will be mitigated at a 2:1 ratio for habitat creation and 3:1 for habitat enhancements or purchase of mitigation credits in a Department-approved mitigation bank.

3.1.4 Permanent impacts to riparian forest (i.e., stream with trees and/or shrubs, typically has multiple canopy layers) will be mitigated at a 6:1 ratio for habitat creation and 10:1 for habitat enhancements or purchase of mitigation credits in a Department-approved mitigation bank.

3.2 Habitat Mitigation and Monitoring Plan (HMMP). **No later than 180 days after the execution of this Agreement**, the Permittee shall submit to the Department for review and approval an HMMP that identifies potential mitigation options to be implemented if determined that mitigation will be required per **Measure 3.1** of this Agreement. At a minimum, the HMMP shall include habitat creation and/or habitat enhancements activities; and/or mitigation bank credits purchase information. The proposed mitigation should be sufficient to fully offset the permanent and Temporary Impacts specified in **Table 1**. If impacts exceed those listed in Table 1, additional mitigation should be provided. Habitat enhancement may include removal of invasive species and replacement with native riparian plantings. Habitat creation or restoration must include the expansion of riparian, wetland, or stream channel habitat.

The HMMP shall also include the following information if applicable to the mitigation option selected by the Permittee:

a. A description of the existing physical conditions of the proposed creation and/or restoration site, including water resources and habitat types, and a map that identifies the location of the site;

b. Information pertaining to the ownership and current use of the proposed site including any easements or other restrictions;

c. A plan for the preparation of the restoration site, including the removal of nonnative plant species, non-wetland/riparian plant species;

d. A local regional California native plant palette;

e. A planting plan which includes use of a local California native plant palette and describes monitoring and maintenance measures;

f. A timeline for implementation;

g. A description of how and how long the replanted vegetation will be watered;

h. A monitoring and management plan, that includes procedures to ensure that non-native plants are not introduced or allowed to sustain within the site. Monitoring and management of the restoration site shall be conducted for a

minimum of three years, or until the Department determines the success criteria have been met;

i. Overall success criteria; and

j. Contingency measures for replanting and plan re-design, in case the success criteria are not met.

3.3 Invasive Species Removal Plan. The Permittee shall develop an invasive species removal plan that will include 1) a description of the existing physical conditions of the site 2) methods of removal, and 3) monitoring and management plan that includes procedures to ensure successful removal of targeted invasive species. The Invasive Species Removal Plan may be a component of the HMMP or it may be developed for a specific project site under a VRF.

3.4 Onsite Re-vegetation and Restoration. In areas where Temporary Impacts resulting from project activities occur, Permittee shall submit a site Restoration Plan, prepared by a qualified engineer, geologist, or stream restoration specialist, to the Department for review and written approval. The Restoration Plan shall ensure recovery or enhancement of stream form, and fish and wildlife resource values. The re-vegetation plan shall include a plant palette of species to be used in re-vegetation, Re-vegetation success criteria, performance standards, monitoring and reporting programs, and corrective actions to be taken when mitigation measures do not meet the proposed targets. At least thirty (30) days prior to the commencement of the restoration activities, the Permittee shall submit the Restoration Plan to the Department for review and written approval. The Restoration Plan shall include performance standards, monitoring and reporting programs, and corrective actions to be taken when mitigation measures do not meet the proposed targets.

a. *Native Plant Materials Required*. Revegetation shall include only local plant materials native to the project area, unless otherwise approved by the Department in writing.

b. *Native Genotype*. Disturbed areas shall be revegetated with regionally appropriate native species. Species list composition should match habitat surrounding the restoration area and should be approved by CDFW prior to restoration. The preference is for disturbed areas to be revegetated only with propagules (seeds, cuttings, divisions) of locally-collected native plants. Disturbed areas shall be protected with correctly installed erosion control materials (jute, native straw, coconut fiber erosion control fabric, coir logs, or seed-free straw).

c. *Prohibited Plant Species*. Permittee shall not plant, seed or otherwise introduce invasive exotic plant species. Prohibited exotic plant species include those identified in the California Exotic Pest Plant Council's database, which is accessible at: http://www.cal-ipc.org.

d. *Revegetation Success Criteria*. Permittee shall monitor and maintain, as necessary, all plants for three (3) years or until success criteria are met (whichever is longer) to ensure successful revegetation. Success criteria and performance standards will be included in the HMMP.

e. *Revegetation Remediation*. If revegetation survival and/or cover requirements do not meet established goals, Permittee is responsible for replacement planting, additional watering, weeding, invasive exotic eradication, or any other practice, to achieve these requirements. Replacement plants shall be monitored with the same survival and growth requirements for three (3) years after planting.

4. Reporting Measures

Permittee shall meet each reporting requirement described below. When submitting each reporting requirement, refer to Notification No. 1600-2016-0099-R2. Submit each report as instructed in Contact Information section, e-mail submittal is preferred. If the Permittee fails to provide timely status reports as required by this Agreement, the Department may suspend or revoke the Agreement.

4.1 Pre-work Notification. The Permittee shall notify the Department within two (2) working days of beginning work as approved by each VRF.

4.2 Annual Report. For each year this Agreement is valid, the Permittee shall submit to the Department by March 1st of the following year, an annual report detailing the status of the work authorized by this Agreement. The annual report shall include:

a) An accounting of the total number of routine maintenance projects undertaken by the Permittee during the prior calendar year (which should equal the total number of VRF's submitted to the Department).
b) A summary of the work completed during the previous calendar year, including the status of any required restoration (survival, percent cover, and height of both tree and shrub species, number by species of plants replaced, an overview of the re-vegetation effort, and the method used to assess these parameters shall also be included), compensatory mitigation and/or monitoring.
c) Prior to starting and upon completion of project activities as approved by each VRF, the project area shall be digitally photographed. Photographs shall be submitted to the Department as an attachment to each annual report with proper labels detailing the location, project, and whether pre- or post- maintenance activity.

The Department shall review the annual report, and may conduct onsite inspections to confirm Permittee is in compliance with the Agreement and that the measures in the Agreement continue to protect fish and wildlife resources. Annual reports will include the total area temporarily and

permanently impacted during routine maintenance for the purpose of calculating mitigation requirements and will also specify which of the mitigation alternatives has been selected to mitigate for those impacts.

4.3 Restoration Annual Monitoring. Permittee shall submit an annual monitoring report to the Department by January 1st of each year for three (3) years after completion of the restoration project. The report shall discuss the mitigation performance as it relates to the success criteria established for the restoration project. The report shall include the success of natural revegetation establishment, survival, percent cover, and height of both tree and shrub species. The number by species of plants replaced (if applicable), an overview of the revegetation effort, and the method used to assess these parameters shall also be included. The report shall include photos from designated photo stations and other relevant information including: a summary of invasive species control, methods used to remove non-native plants, and a list of wildlife observed on site. All revegetation efforts that fail within the three-year monitoring period shall be replaced by October 1st of the year it was determined to have failed.

4.4 Status Report. The Permittee shall provide a status report to the Department every four (4) years from the effective date of this Agreement, as required in FGC section 1605(g)(2). **The status report shall be delivered to the Department no later than ninety (90) days prior to the end of each four-year period** and shall include all of the following information:

a. The status of the activities covered by this Agreement, including whether the activities remain the same or have been altered by an amendment.

b. A status report with all the mitigation and restoration activities performed pursuant to conditions 3.1 and 3.3 of this Agreement.

c. An evaluation of the success or failure of the measures in the Agreement to protect fish and wildlife resources that the activity may substantially adversely affect.

d. A discussion of any factors that could increase the predicted adverse impacts on fish and wildlife resources, and a description of the resources that may be adversely affected.

e. A copy of the original Agreement.

The Department shall review the four-year status report, and may conduct onsite inspections to confirm Permittee is in compliance with the Agreement and that the measures in the Agreement continue to protect fish and wildlife resources. If the Department determines that the measures in the Agreement no longer protect the fish and wildlife resources, the Department, in consultation with the Permittee, and within 60 days of receipt of the report, shall impose one or more new measures to protect fish and wildlife resources affected by the activity. If requested to do so by the Permittee, the Department shall make available the

information upon which it determined the Agreement no longer protects the affected fish and wildlife resources.

If the Permittee disagrees with one or more of the measures, within thirty (30) days of receiving the new measures, it shall notify the Department, in writing, of the disagreement. The Permittee and the Department shall consult regarding the disagreement. The consultation shall be completed within thirty (30) days after the Department receives the Permittee's notice of disagreement. If the Department and Permittee fail to reach agreement, the Permittee may request, in writing, the appointment of a panel of arbitrators to resolve the disagreement. Per the provisions of FGC section 1603 (b), the panel of arbitrators shall be established and appointed within fourteen days of the completed consultation. The panel of arbitrators shall issue a decision within fourteen days of the date it was established.

5. FEES

The per-project fee associated with each VRF submitted to the Department under this Agreement is identified in the Department's current LSA fee schedule as a "project fee" for a Routine Maintenance Agreement. See the Department's website for a current fee schedule: https://www.wildlife.ca.gov/Conservation/LSA/Forms.

The billing cycle for routine maintenance projects associated with this Agreement, shall be based on the calendar year and will be due to the Department as follows:

5.1 For each year this Agreement is valid, the Permittee shall provide to the Department by March 1st of the following year, a lump sum payment equal to the sum of all individual per project fees for each VRF submitted to the Department during the prior year (January 1 – December 31).

5.2 If the Permittee is unable to provide a lump sum payment as described in Section 4.1 of this Agreement, the Permittee may provide ongoing payment to the Department upon completing the work as described in each VRF.

CONTACT INFORMATION

Any communication that Permittee or the Department submits to the other shall be in writing and any communication or documentation shall be delivered to the address below by U.S. mail, fax, or email, or to such other address as Permittee or the Department specifies by written notice to the other.

The Permittee shall send all VRF submittals to the person(s) specified by the Department, electronic submission is preferred. The Department and the Permittee shall update the distribution list as needed, modify the revision date accordingly, and provide each other with a copy of the most current list. All correspondence shall include the Notification tracking number.

LIABILITY

Permittee shall be solely liable for any violations of the Agreement, whether committed by Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents or contractors and subcontractors, to complete the project or any activity related to it that the Agreement authorizes.

This Agreement does not constitute the Department's endorsement of, or require Permittee to proceed with the project. The decision to proceed with the project is the Permittee's alone.

SUSPENSION AND REVOCATION

The Department may suspend or revoke in its entirety the Agreement if it determines that Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, is not in compliance with the Agreement.

Before the Department suspends or revokes the Agreement, it shall provide Permittee written notice by certified or registered mail that it intends to suspend or revoke. The notice shall state the reason(s) for the proposed suspension or revocation, provide Permittee an opportunity to correct any deficiency before the Department suspends or revokes the Agreement, and include instructions to Permittee, if necessary, including but not limited to a directive to immediately cease the specific activity or activities that caused the Department to issue the notice.

ENFORCEMENT

Nothing in the Agreement precludes the Department from pursuing an enforcement action against Permittee instead of, or in addition to, suspending or revoking the Agreement.

Nothing in the Agreement limits or otherwise affects the Department's enforcement authority or that of its enforcement personnel.

OTHER LEGAL OBLIGATIONS

This Agreement does not relieve Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, from obtaining any other permits or authorizations that might be required under other federal, State, or local laws or regulations before beginning the project or an activity related to it.

This Agreement does not relieve Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, from complying with other applicable statutes in the FGC including, but not limited to, FGC Sections 2050 et seq. (threatened and endangered species), 3503 (bird nests and eggs), 3503.5 (birds of prey), 5650 (water pollution), 5652 (refuse disposal into water), 5901 (fish passage), 5937 (sufficient water for fish), and 5948 (obstruction of stream).

Nothing in the Agreement authorizes Permittee or any person acting on behalf of Permittee, including its officers, employees, representatives, agents, or contractors and subcontractors, to trespass.

AMENDMENT

The Department may amend the Agreement at any time during its term if the Department determines the amendment is necessary to protect an existing fish or wildlife resource.

Permittee may amend the Agreement at any time during its term, provided the amendment is mutually agreed to in writing by the Department and Permittee. To request an amendment, Permittee shall submit to the Department a completed "Request to Amend Lake or Streambed Alteration" form and include with the completed form payment of the corresponding amendment fee identified in the Department's current fee schedule (see California Code of Regulations, Title 14, Section 699.5).

TRANSFER AND ASSIGNMENT

This Agreement may not be transferred or assigned to another entity, and any purported transfer or assignment of the Agreement to another entity shall not be valid or effective, unless the transfer or assignment is requested by Permittee in writing, as specified below, and thereafter the Department approves the transfer or assignment in writing.

The transfer or assignment of the Agreement to another entity shall constitute a minor amendment, and therefore to request a transfer or assignment, Permittee shall submit to the Department a completed "Request to Amend Lake or Streambed Alteration" form and include with the completed form payment of the minor amendment fee identified in the Department's current fee schedule (see California Code of Regulations, Title 14, Section 699.5).

EXTENSIONS

In accordance with FGC Section 1605(b), Permittee may request one extension of the Agreement, provided the request is made prior to the expiration of the Agreement's term. To request an extension, Permittee shall submit to the Department a completed "Request to Extend Lake or Streambed Alteration" form and include with the completed form payment of the extension fee identified in the Department's current fee schedule (see California Code of Regulations, Title 14, Section 699.5). The Department shall process the extension request in accordance with FGC Section 1605(b) through (e).

If Permittee fails to submit a request to extend the Agreement prior to its expiration, Permittee must submit a new notification and notification fee before beginning or continuing the project the Agreement covers per FGC Section 1605(f).

EFFECTIVE DATE

The Agreement becomes effective on the date of the Department's signature, which shall be: 1) after Permittee's signature; 2) after the Department complies with all applicable requirements under the California Environmental Quality Act (CEQA); and 3) after payment of the applicable FGC Section 711.4 filing fee listed at http://www.wildife.ca.gov/habcon/ceqa/ceqa_changes.html.

TERM

This Agreement shall expire **twelve (12) years from the date signed by the Department**, unless it is terminated or extended before then. All provisions in the Agreement shall remain in force throughout its term. Permittee shall remain responsible for implementing any provisions specified herein to protect fish and wildlife resources after the Agreement expires or is terminated, as FGC Section 1605(a) (2) requires.

EXHIBITS

The documents listed below are included as exhibits to the Agreement and incorporated herein by reference.

Exhibit B Verification Request Form (VRF) for this Agreement

AUTHORITY

If the person signing the Agreement (signatory) is doing so as a representative of Permittee, the signatory hereby acknowledges that he or she is doing so on Permittee's behalf and represents and warrants that he or she has the authority to legally bind Permittee to the provisions herein.

AUTHORIZATION

This Agreement authorizes only the project described herein. If Permittee begins or completes a project different from the project the Agreement authorizes, Permittee may be subject to civil or criminal prosecution for failing to notify the Department in accordance with FGC Section 1602.

CONCURRENCE

The undersigned accepts and agrees to comply with all provisions contained herein.

Exhibit B - Verification Request Form (VRF)

VERIFICATION REQUEST FORM (VRF)

City of Roseville LAKE OR STREAMBED ALTERATION (LSA) AGREEMENT FOR ROUTINE MAINTENANCE #1600-2016-0099-R2	**Date of Request**: ☐ **ORIGINAL REQUEST** ☐ **REVISION NO.**

SECTION 1: INFORMATION PROVIDED BY PERMITTEE (*to be filled in by Permittee*)

Reference the LSA Agreement for processing this VRF

Contact Person: **Phone Number:**	**Cell Number:** **Email:**

☐ Routine Work 10 Day Notice
☐ Urgent – minimum 2 day notice (describe urgency below)

Comments:

Name of Watercourse:

Location or other identifier:

Project Start Date: **Project End Date:**

Authorized Maintenance Activities *(see Agreement for activity descriptions)*:

Type of Work	**Equipment**
☐ Mowing	☐ Mower
☐ Clearing Debris / Fallen Trees	☐ Masticator
☐ Beaver Dam Removal	☐ Dozer
☐ Brush/Debris Pile Burning	☐ Backhoe
☐ Selective Hand Removal of Vegetation	☐ Excavator with Blade
☐ Removal of Small Trees & Brush	☐ Tractor
☐ Spraying herbicide	☐ Boom Truck
☐ Other:	☐ Hand Tools
	☐ Other:
Routine Work Requiring Variance	
☐ Request to Work Outside RMA Dates	
☐ Other:	

Description of Proposed Maintenance Work:

Known environmental issues or other concerns:

SECTION 2: DEPARTMENT APPROVAL (*to be filled in by Department staff*)

In accordance with Conditions set forth in the LSA Agreement between the California Department of Fish and Wildlife (Department) and the Department of Water Resources (Permittee) for Routine Maintenance of the Western Pacific Interceptor Canal for the purposes of maintaining channel capacity to design criteria and to facilitate site inspections, the Permittee hereby notifies the Department of its intent to perform routine maintenance work within the channel.

Department Contact Information	**Date the Department Responded to the Permittee:**
Name:	**Phone Number:** **email:** **VRF#** **Year**

☐ **Notice of concurrence**
- ☐ Work can begin as scheduled
- ☐ Work can begin immediately

☐ **Notice of non-concurrence with comments (See Department comments below)**

Comments:

SECTION 01312

PROJECT MEETINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for conducting conferences and meetings for the purposes of addressing issues related to the Work, reviewing and coordinating progress of the Work and other matters of common interest, and includes the following:
      a. Qualifications of Meeting Participants.
      b. Basic Meeting Requirements.
      c. Pre-construction Conference.
      d. Pre-construction Safety Conference.
      e. Pre-submittal Conference.
      f. Web Based Construction Document Management Software Training.
      g. Progress Meetings.
      h. Schedule Update Meetings.
      i. Quality Control Meetings.
      j. Pre-Installation Meetings.
      k. Maintenance of Plant Operations (MOPO) Meetings.
      l. Commissioning Coordination Meetings.
      m. Instrumentation and Control Coordination Meetings.
      n. Close-out Meeting.
      o. Post Construction Meeting.

1.02 QUALIFICATIONS OF MEETING PARTICIPANTS

A. Representatives of entities participating in meetings shall be qualified and authorized to act on behalf of entity each represents.

1.03 BASIC MEETING REQUIREMENTS

A. Attendees:
   1. Meeting leader shall require attendance of parties directly affecting, or affected by, Work being discussed at the meeting.

B. Location:
   1. In location convenient for most invitees.

C. Notification:
   1. Meeting leader shall notify attendees of meeting, including an agenda, a minimum of 7 days prior to meeting.

D. Agenda:
   1. Meeting leader shall prepare copies of the agenda for participants and distribute at the meeting.

2. Minimum requirements:
    a. Meeting purpose.
    b. Review minutes of previous meeting.
    c. Safety and security.
    d. Discuss issues.
    e. Action items.
    f. Next meeting.

E. Meeting minutes:
    1. Meeting leader shall prepare draft minutes and send to attendees for comment within 7 days.
    2. Meeting leader shall incorporate comments from attendees and submit final meeting minutes to attendees within 7 days of receipt of comments.

1.04 PRE-CONSTRUCTION CONFERENCE

A. Construction manager leads the meeting.

B. Timing:
    1. Upon issuance of Notice to Proceed, or earlier when mutually agreeable.

C. Required attendees:
    1. Contractor's project manager and superintendent, Owner, Engineer, representatives of utilities, major subcontractors and others involved in performance of the Work, and others necessary to the agenda.

D. Agenda minimum requirements:
    1. Meeting purpose:
        a. To establish working understanding between parties and to discuss Construction Schedule, Shop Drawings and other Submittals, cost breakdown of major lump sum items, processing of Submittals and applications for payment, and other subjects pertinent to execution of the Work.
    2. Adequacy of distribution of Contract Documents.
    3. Distribution and discussion of list of major subcontractors and suppliers.
    4. Proposed progress schedules and critical construction sequencing.
    5. Major equipment deliveries and priorities.
    6. Project coordination.
    7. Designation of responsible personnel.
    8. Procedures and processing of:
        a. Field decisions.
        b. Proposal requests.
        c. Submittals - separate meeting.
        d. Change Orders.
        e. Request for Information/Interpretations.
        f. Applications for Payment.
        g. Record documents.
    9. Use of premises:
        a. Office, construction, and storage areas.
        b. Owner's requirements.
    10. Construction facilities, controls, and construction aids.

11. Temporary utilities.
12. Safety and first aid procedures.
13. Security procedures.
14. Housekeeping procedures.
15. Safety and security.
16. Review proposed photographer Submittal.
17. Action items.
18. Next meeting.

1.05 PRE-CONSTRUCTION SCHEDULING MEETING

A. Construction manager leads the meeting.

B. Timing:
   1. Within 7 days of Notice to Proceed, or earlier when mutually agreeable.

C. Required attendees:
   1. Contractor's project manager, superintendent, scheduler, Owner, Engineer, and others necessary to the agenda.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. To establish the format and features of the Construction Schedule.
   2. Schedule preparation.
   3. Reporting requirements.
   4. Updates and revision procedures.
   5. Schedule delay analysis procedures.
   6. Schedule methodology.
   7. Planned sequence of operations.
   8. Cost and labor loading methodology.
   9. Proposed activity coding structure as specified in Section 01321 - Schedules and Reports.
   10. Naming convention: Name schedule files with the year, month and day of the data date, revision identifier, and a description of the schedule.
      a. Example 1: 2021_07_30 rev 1 draft baseline schedule.xer.
      b. Example 2: 2021_09_30 rev 2 sep final update.xer.
   11. Action items.
   12. Next meeting.

1.06 PRE-CONSTRUCTION SAFETY CONFERENCE

A. Construction manager leads the meeting.

B. Timing:
   1. Upon issuance of Notice to Proceed, or earlier when mutually agreeable.

C. Required attendees:
   1. Contractor's project manager, safety representative, and superintendent; Owner, Engineer, representatives of utilities, major subcontractors and others involved in performance of the Work, and others necessary to the agenda.

D. Agenda minimum requirements:
    1. Meeting purpose:
        a. To establish safety procedures and identify lead participants.
    2. Review minutes of previous meeting.
    3. Safety and first aid procedures.
    4. Review of Experience Modification Rating for Contractor and each Subcontractor.
    5. Security procedures.
    6. Housekeeping procedures.
    7. Safety and security.
    8. Action items.
    9. Next meeting.

1.07 PRE-SUBMITTAL CONFERENCE

A. Construction manager leads the meeting.

B. Timing:
    1. Prior to producing any Submittals.

C. Required attendees:
    1. Contractor's project manager and superintendent, Owner, Engineer, representatives of utilities, major subcontractors, individual equipment manufacturers furnishing major pieces of equipment, and others involved in performance of the Work, and others necessary to the agenda.

D. Agenda minimum requirements:
    1. Meeting purpose:
        a. Review the entire Project, equipment, control philosophy, schedules, and Submittal requirements.
        b. Awareness of requirements by major subcontractors, major suppliers, and major equipment manufacturers.
        c. Format and procedures for Submittals.
        d. Review of the master Submittal schedule.
    2. Review equipment list.
    3. Review Submittal schedule.
    4. Format of Submittals.
    5. Procedures and processing of Submittals.
        a. Review turn-around time.
    6. Discuss specific electrical and instrumentation and controls Submittal requirements.
    7. Safety and security.
    8. Action items.
    9. Next meeting.

1.08 WEB BASED CONSTRUCTION DOCUMENT MANAGEMENT SOFTWARE TRAINING

A. Contractor can submit a written request to the Engineer to waive the training based on staff having sufficient familiarity with the software and its complete usage. Construction manager will lead the meeting.

B. Timing:
   1. Upon issuance of Notice to Proceed, or earlier when mutually agreeable.
   2. Duration minimum: 2 hours.

C. Required attendees:
   1. Mandatory attendance.
      a. Contractor's project manager.
      b. Contractor's field superintendent.
      c. Contractor's project engineer.
   2. Other attendees:
      a. Owner, Engineer, Contractor's quality control manager, Contractor's project scheduler and any other persons involved with preparing and transmitting documents.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Train construction team on the use of the web based document management system software.
   2. Safety.
   3. General Items.
   4. Contractor functions.
   5. Owner functions.
   6. Engineer functions.
   7. Action items.

1.09 PROGRESS MEETINGS

A. Construction manager will lead the meeting.

B. Timing:
   1. Hold meetings throughout progress of the Work at maximum weekly intervals.

C. Required attendees:
   1. Owner, Engineer, Contractor, Contractor's project manager, superintendent, quality control manager, project scheduler, major subcontractors and suppliers as appropriate to the agenda topics for each meeting.
   2. Additional invitees:
      a. Owner utility companies when the Work affects their interests, and others necessary to the agenda.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Provide the status of the Work.
   2. Review minutes of previous meeting.
   3. Safety and security.
   4. Construction schedule summary.
   5. Review of 6 weeks schedule.
      a. Contractor shall provide printed hard copies for each attendee.
   6. Review of off-site fabrication and delivery schedules.
   7. Review of Submittals schedule and status of Submittals.
   8. Request for information (RFI's) status.

9. MOP's/shutdown coordination.
10. Change order management status.
11. Maintenance of quality standards (QA/QC).
12. Field observations, problems, and conflicts.
13. Commissioning.
14. Partnering recognition status (optional).
15. General items.
16. Action items.
17. Next meeting.

1.10 SCHEDULE UPDATE MEETINGS

A. Contractor leads the meeting.

B. Timing:
   1. Hold meetings throughout progress of the Work at maximum monthly intervals.

C. Required attendees:
   1. Owner, Engineer, Contractor, Contractor's project manager, general superintendent, project scheduler, major subcontractors and suppliers as appropriate to the agenda topics for each meeting.
   2. Additional invitees:
      a. Owner utility companies when the Work affects their interests and others necessary to the agenda.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Identify and troubleshoot scheduling issues in a collaborative environment.
      b. Provide further detail on Work status.
   2. Review minutes of previous meeting.
   3. Review Monthly Schedule, (Actual Progress and Variance).
      a. "Activities Started/Completed" this period.
      b. "Activities Started/Completed" "Variance" Baseline vs. current.
      c. "Added/Deleted Activities".
      d. "Revised Activity Descriptions".
      e. Any significant Proposed Logic Changes.
   4. Review milestone "Substantial Completion" Schedule:
      a. "Critical" Activities - "Critical Area, Float and Vital Statistics".
   5. Review "Cumulative and Monthly Costs" graph.
   6. Review "Budgeted Cost" indicating the Current Project Budgeted Cost.
   7. Safety and security.
   8. Action items.
   9. Next meeting.

1.11 PRE-INSTALLATION MEETINGS

A. Contractor leads the meeting.

B. Timing:
   1. When specified in Technical Sections or requested by Engineer, before commencing Work of specific section.

C. Required attendees:
   1. Owner, Engineer, Contractor, Contractor's project manager, general superintendent, project scheduler, major subcontractors including electrical instrumentation, and suppliers as appropriate to the agenda topics for each meeting.
   2. Additional invitees:
      a. Owner utility companies when the Work affects their interests and others necessary to the agenda.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Review conditions of installation, preparation, and installation procedures.
      b. Review coordination with related work.
   2. Review minutes of previous meeting.
   3. Safety and security.
   4. Action items.
   5. Next meeting.

1.12 PRE-SHUTDOWN MEETINGS

A. Contractor leads the meeting.

B. Timing:
   1. Short-term and longer-term shutdowns and other tie-ins that require an Owner approved MOP require a pre-shutdown meeting at Project site at least 3 working days prior to commencing shutdown for tie-in or modification of specific plant systems.

C. Required attendees:
   1. Require attendance of parties directly affecting, or affected by shutdown, including Engineer, specific work crews, Owner's construction, operations, and maintenance staff.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Review conditions of installation, preparation, and installation procedures.
      b. Review coordination with related work.
   2. Review minutes of previous meeting.
   3. Review accepted Construction Method of Procedure (MOP), as specified in Attachment A of Section 01140 - Work Restrictions, including conditions of shutdown, preparation, and installation procedures.
   4. Review timelines and sequences.
   5. Review responsibilities.
   6. Review dry run plan and schedule, as necessary.
   7. Review coordination with related work.
   8. Safety and security.
   9. Action items.
   10. Next meeting.

1.13 QUALITY CONTROL MEETINGS

A. Contractor leads the meeting.

B. Timing:
   1. Hold meetings throughout progress of the Work at maximum weekly intervals.

C. Required attendees:
   1. Engineer, Construction manager and staff, Contractor's quality control manager, and staff.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Update Contractor's efforts to comply with quality requirements in the Contract Documents.
   2. Review minutes of previous meeting.
   3. Review of Work progress and schedule.
   4. Review of out-of-compliance inspection or test results.
   5. Field observations, problems, and decisions.
   6. Review of offsite fabrication and delivery schedules.
   7. Planned progress during succeeding work period.
   8. Coordination of required inspections and tests.
   9. Review 6-week schedule report with upcoming inspections and special tests.
   10. Maintenance of quality and work standards.
   11. Other business relating to Work.
   12. Safety and security.
   13. Action items.
   14. Next meeting.

1.14 COMMISSIONING COORDINATION MEETINGS

A. Contractor leads the meeting.

B. Timing:
   1. Separate commissioning coordination meetings will be scheduled as required by the Engineer.

C. Required attendees:
   1. Require attendance of parties directly affecting, or affected by process start-up and testing, including Engineer, Commissioning Coordinator, specific work crews, Owner's operations, and maintenance staff.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Coordinate commissioning activities.
   2. Review minutes of previous meeting.
   3. Review Commissioning schedule.
   4. Review Owner Training schedule.
   5. Review test plans.
   6. Review accepted Construction Method of Procedure (MOP), as specified in Attachment A of Section 01140 - Work Restrictions.

7. Owner makes final decision for commissioning GO or NO GO.
8. Safety and security.
9. Action items.
10. Next meeting.

1.15 INSTRUMENTATION AND CONTROL COORDINATION MEETINGS

A. Meetings and conferences as specified in Section 17050 - Common Work Results for Process Control and Instrumentation Systems.

1.16 CLOSE-OUT MEETING

A. Construction manager leads the meeting.

B. Timing:
   1. After punch list items are completed.

C. Required attendees:
   1. Owner, Engineer, Contractor, Contractor's project manager, and superintendent.

D. Agenda minimum requirements:
   1. Meeting purpose:
      a. Coordinate close-out activities.
   2. Review minutes of previous meeting.
   3. Review punch list completion.
   4. Transfer of record documents.
   5. Finalize payment.
   6. Safety and security.
   7. Action items.
   8. Next meeting.

1.17 POST CONSTRUCTION MEETING

A. Construction manager leads the meeting.

B. Timing:
   1. About 11 months after date of Substantial Completion.

C. Location:
   1. Meet in Owner's office or other mutually agreed upon place.

D. Required attendees:
   1. Engineer, Contractor, appropriate manufacturers, and installers of major units of constructions, affected Subcontractors, and Owner's operations and maintenance staff.

E. Agenda minimum requirements:
   1. Meeting purpose:
      a. Review Project for compliance with the Contract Documents.
   2. Inspect the Work and draft list of items to be completed or corrected.

3. Review service and maintenance contracts and take appropriate corrective action when necessary.
4. Complete or correct defective work and may extend correction period.
5. Safety and security.
6. Action items.
7. Next meeting.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01321

SCHEDULES AND REPORTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Schedules and reports.

1.02 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Baseline schedule: A planned and approved timetable projection that illustrates the project execution strategy, key deliverables, planned activity dates and milestones.
   2. Critical path: The longest sequence of dependent tasks in a project.
   3. Near critical path: The longest path after the critical path.
   4. Weather day: The Contractor being prevented or inhibited from performing at least 4 hours of work on the critical path due to weather conditions.

1.03 SCHEDULING FORMAT

A. Utilize critical path method (CPM) format.

B. Provide a cost and labor loaded Schedule.

C. Engineer approval of the format is required.

1.04 SCHEDULING HARDWARE AND SOFTWARE

A. Scheduling software and hardware shall be located on-site.

B. Prepare computerized schedule utilizing the most current version of Oracle Primavera P6 or Asta Powerproject.

C. Contractor and Engineer must agree on the format.

1.05 SCHEDULE PREPARATION

A. Preparation and submittal of Progress Schedule represents Contractor’s intention to execute the Work within specified time and constraints.

B. All costs associated with Schedule requirements are included in the Contract Price.

C. During preparation of the preliminary Progress Schedule, the Engineer will facilitate Contractor’s efforts by answering questions regarding sequencing issues, scheduling constraints, interface points, and dependency relationships.

D. Prepare Schedule utilizing precedence diagramming method (PDM).

E. Prepare Schedule utilizing activity durations in terms of working days.
   1. Do not exceed a 15 working day duration on activities except concrete curing, submittal review, and equipment fabrication and deliveries.
   2. Where duration of continuous work exceeds 15 working days, subdivide activities by location, stationing, or other sub-element of the Work.
   3. Coordinate holidays to be observed with the Owner and incorporate them into the Schedule as non-working days.

F. Failure to include an activity required for execution of the Work does not excuse Contractor from completing the Work and portions thereof within specified times and at price specified in Contract.
   1. Contract requirements are not waived by failure of Contractor to include required Schedule constraints, sequences, or milestones in Schedule.
   2. Contract requirements are not waived by Owner's acceptance of the Schedule. In the event of conflict between accepted Schedule and Contract requirements, terms of Contract govern at all times, unless requirements are waived in writing by the Owner.

G. Reference Schedule to working days beginning with Notice to Proceed as Contract Time as Day "1".

H. Baseline Schedule and project completion:
   1. Should Contractor submit a Baseline Schedule showing project completion more than 20 working days prior to Contract completion date, Owner may issue Change Order, at no cost to Owner, revising time of performance of Work and Contract completion date to match Contractor's Schedule completion date.
   2. Adjust accordingly any Contract milestone dates.

I. Imposed dates and hidden logic are prohibited.

J. Interim milestone dates, operational constraints:
   1. In event there are interim milestone dates and/or operational constraints set forth in Contract, show them on Schedule.
   2. Do not use zero total float constraint or mandatory finish date on such Contract requirements.

K. Contract float is for the mutual benefit of both Owner and Contractor.
   1. Changes to the Project that can be accomplished within this available period of float may be made by Owner without extending the Contract Time by utilizing float.
   2. Time extensions will not be granted nor delay damages owed until Work extends beyond currently accepted Contract completion date.
   3. Likewise, Contractor may utilize float to offset delays other than delays caused by the Owner.
   4. Mutual use of float can continue until all available float shown by Schedule has been utilized by either Owner or Contractor, or both. At that time, extensions of the Contract Time will be granted by Owner for valid Owner-caused or third

party-caused delays which affect the planned completion date and which have been properly documented and demonstrated by Contractor.

5. Non-sequestering of float: Pursuant to float sharing requirements of Contract, Schedule submittals can be rejected for use of float suppression techniques such as preferential sequencing or logic, special lead or lag logic restraints, extended activity durations, or imposed dates.

L. Resource loading and leveling:
   1. Input labor data on each schedule activity.
   2. Manpower data consists of the man-hours estimated to perform each task, categorized by trade.
   3. Provide leveled manpower requirements.
      a. Availability of the resources drive activity duration.

M. Cost loading: All schedules:
   1. Only on-site construction activities.
   2. The sum total of all cost loaded activities equal to the current value of the Contract, including change orders, at all times.

N. Schedule logic:
   1. Assembled to show order in which Contractor proposes to carry out Work, indicate restrictions of access, availability of Work areas, and availability and use of manpower, materials, and equipment.
   2. Form basis for assembly of schedule logic on the following criteria:
      a. Which activities must be completed before subsequent activities can be started?
      b. Which activities can be performed concurrently?
      c. Which activities must be started immediately following completed activities?
      d. What major facility, equipment, or manpower restrictions are required for sequencing these activities?

O. Schedule windows for Owner-furnished, Contractor-installed equipment or materials:
   1. Immediately after Award of Contract, obtain from Engineer anticipated delivery dates of Owner furnished equipment or materials.
   2. Show these dates in the Schedule in same manner indicated by the Engineer.

1.06 SCHEDULER

A. Designate, in writing within 5 calendar days after Notice of Award, the person responsible for preparation, maintenance, updating, and revision of all schedules.

B. Scheduler shall have the authority to update Schedule on behalf of the Contractor.

C. Qualifications:
   1. A minimum of 5 years verifiable experience in preparation of construction schedules for projects of similar value, size, and complexity.
   2. Knowledge of critical path method (CPM) scheduling utilizing the specified software.

D. Scheduler:
   1. Dedicated half time to this Project.
   2. Scheduler will attend all project meetings called for as specified in Section 01312 - Project Meetings.

1.07 SUBMITTAL REQUIREMENTS

A. Preliminary and Baseline Progress Schedule.

B. Preliminary and Baseline Schedule of Values.

C. Preliminary and Baseline Schedule of Submittals.

D. On a monthly basis, updated Schedules as specified.

E. Final Schedules update as specified.

F. Revised Schedules and time impact analyses as specified.

G. Submit Schedules in the media and number of copies as follows:
   1. PDF format and in other formats specified in this Section.
   2. 2 sets of CPM Schedule data electronic files in a native backed-up file format.

1.08 GANTT CHART

A. Produce a clear, legible, and accurate calendar based, time scaled, and graphical network diagram.
   1. Group activities related to the same physical areas of the Work. Produce the network diagram based upon the early start of all activities.

B. Include for each activity, the description, activity number, estimated duration in working days, total float, and all activity relationship lines.

C. Illustrate order and interdependence of activities and sequence in which Work is planned to be accomplished.
   1. Incorporate the basic concept of the precedence diagram network method to show how the start of 1 activity is dependent upon the start or completion of preceding activities and its completion restricts the start of following activities.

D. Provide Progress Schedule showing the critical path for the Project.

E. Provide report of Near Critical Path activities for the Project, when required by the Engineer.

F. Delineate the specified Contract Times and identify the planned completion of the Work as a milestone.
   1. Show the time period between the planned and Contract completion dates, if any, as an activity identified as Project float.

G. Identify system shutdown dates, system tie-in dates, specified interim completion or milestone dates and contract completion dates as milestones.

H. Include, in addition to construction activities:
   1. Submission dates and review periods for major equipment submittals, shoring submittals, and indicator pile program:
      a. Shoring reviews: Allow 2-week review period for each shoring submittal.
   2. Any activity by the Owner or the Engineer that may affect progress or required completion dates.
   3. Equipment and long-lead material deliveries over 8 weeks.
   4. Approvals required by regulatory agencies or other third parties.

I. Produce electronic network diagram on 22-inch by 34-inch sheets with grid coordinate system on the border of all sheets utilizing alpha and numeric designations.

J. Identify the execution of the following:
   1. Mobilization.
   2. All required Submittals and Submittal review times showing 30 calendar day duration for such activities and equal amount of time for resubmittal reviews.
   3. Equipment and materials procurement/fabrication/delivery.
   4. Excavation.
   5. Shoring design and submission of detailed shoring submittals. Identify submission as a milestone.
   6. Shoring review, shoring materials procurement, shoring installation, and shoring removal.
   7. Backfill and compaction.
   8. Grading, subbase, base, paving, and curb and gutters.
   9. Fencing and landscaping.
   10. Concrete, including installation of forms and reinforcement, placement of concrete, curing, stripping, finishing, and patching.
   11. Masonry.
   12. Metal fastenings, framing, structures, and fabrications.
   13. Wood structures, finish carpentry, architectural woodwork, and plastic fabrications.
   14. Waterproofing and dampproofing, insulation, roofing and flashing, and sealants.
   15. Doors and windows, including hardware and glazing.
   16. Finishes including coating and painting, flooring, ceiling, and wall covering.
   17. Process equipment, including identification of ordering lead-time, factory testing, and installation.
   18. Pumps and drives, including identification of ordering lead time, factory testing, and installation.
   19. Conveying equipment including hoists and cranes, conveyor systems, and materials handling equipment, including identification of ordering lead-time and installation.
   20. Other mechanical equipment including fans and heating, ventilating, and air conditioning equipment.
   21. Trenching, pipe laying, and trench backfill and compaction.
   22. Piping, fittings, and appurtenances, including identification of ordering and fabrication lead time, layout, installation and testing.
   23. Valves, gates, and operators, including identification of order lead-time, installation, and testing.
   24. Plumbing specialties.

25. Electric transmission, service, and distribution equipment, including identification of ordering lead-time, and factory testing.
26. Other electrical work including lighting, heating and cooling, and special systems, including identification of ordering lead-time.
27. Instrumentation and controls, including identification of ordering lead-time.
28. Preliminary testing of equipment, instrumentation, and controls.
29. Commissioning phase:
    a. Source Testing.
    b. Owner Training.
    c. Installation Verification.
    d. Functional Testing.
    e. Start-up Phase.
    f. Start-up Period.
30. Instrumentation and Controls Performance Testing.
31. Substantial completion.
32. Punch list work.
33. Demobilization.

1.09 PRELIMINARY SCHEDULE

A. Procedure:
    1. Submit proposed Preliminary Schedule within 14 calendar days after Notice to Proceed.
    2. Meet with Engineer within 7 calendar days after receipt of Preliminary Schedule to review and make necessary adjustments.
    3. Submit revised Preliminary Schedule within 5 calendar days after meeting.
    4. Update Preliminary Schedule monthly until the Baseline Schedule is accepted.

B. Format:
    1. Simplified Gannt chart.

C. Activities:
    1. Define activities to be completed in the first 90 calendar days of Work.
    2. Actualize activities performed during the first 90 days into the first monthly Schedule update.

1.10 PRELIMINARY SCHEDULE OF VALUES

A. Preliminary Schedule of Values as specified in Volume 2 of 4 of the Contract – Schedule of Values.

B. Procedure:
    1. Submit proposed Preliminary Schedule of Values within 14 calendar days after Notice to Proceed.
    2. Meet with Engineer within 7 calendar days after receipt of Preliminary Schedule of Values to review and make necessary adjustments.
    3. Submit revised Preliminary Schedule of Values within 5 calendar days after meeting.

1.11 WORK WITHIN THE FIRST 90 DAYS

A. Proceed with Work after Preliminary Schedule and Preliminary Schedule of Values have been accepted by Owner.

B. Submittal and acceptance of Preliminary Schedule and Preliminary Schedule of Values is condition precedent to making of progress payments as specified in Schedule of Values, Volume 2 of 4 - Applications for Payment and payments for mobilization costs otherwise provided for in the Contract.

1.12 SCHEDULE OF SUBMITTALS

A. Schedule of Submittals shall include Submittals required in the Contract Documents but not limited to test plans, training plans, test procedures, operation and maintenance manuals, Shop Drawings, samples, record documents, and specifically required certificates, warranties, and service agreements.

B. Preliminary Schedule of Submittals:
   1. Due date: After Preliminary Schedule has been submitted and accepted by the Owner.
   2. Format:
      a. Include Submittals anticipated in the first 90 calendar days after award of Contract using early start dates.
      b. Indicate week and month anticipated for submittal to Engineer.
      c. Indicate “Priority” Submittals where review time can impact Contractor’s schedule.
         1) “Priority” indication will not alter review times specified in Section 01330 - Submittal Procedures.
         2) Engineer will endeavor to provide early review of “Priority” Submittals where possible.
   3. Submittal of Preliminary Schedule of Submittals shall be a condition precedent to Owner making progress payments during the first 90 calendar days after award of Contract.

C. Final Schedule of Submittals:
   1. Due date: 30 days after Baseline Schedule has been submitted and accepted by Owner.
   2. Format:
      a. Include Submittals using early start dates.
      b. Include all Submittals, including those required in the Preliminary Schedule of Submittals.
      c. Indicate week and month anticipated for submittal to Engineer.
      d. Indicate “Priority” submittals where review time can impact Contractor’s schedule.
         1) “Priority” indication will not alter review times specified in Section 01330 - Submittal Procedures.
         2) Engineer will endeavor to provide early review of “Priority” Submittals where possible.
   3. Submittal of final Schedule of Submittals shall be a condition precedent to Owner making progress payments after the first 90 calendar days after Notice to Proceed.

D. Provide updated Schedule of Submittals with updated schedules if Schedule revisions change listing and timing of Submittals.

1.13 BASELINE PROGRESS SCHEDULE AND BASELINE SCHEDULE OF VALUES

A. Due date: No more than 45 calendar days after Notice to Proceed.

B. Format:
   1. Progress Schedule: Show sequence and interdependence of all activities required for complete performance of all Work, beginning with date of Notice to Proceed and concluding with date of final completion of Contract.
   2. Schedule of Values: As specified in Volume 2 of 4 of the Contract – Schedule of Values.

C. Acceptance of the Baseline Progress Schedule and Baseline Schedule of Values by the Owner is a condition precedent to making payments as specified in Volume 2 of 4 Contract - Applications for Payment after the first 90 calendar days after Notice to Proceed.

1.14 SUMMARY SCHEDULE

A. Due date: At weekly progress meetings and after each Schedule update or Schedule revision.

B. Format:
   1. Consolidate groups of activities associated with Major Items of Work shown on Baseline Schedule.
   2. Intended to give an overall indication of the Project Schedule without a large amount of detail.

1.15 COST FLOW SUMMARY

A. Due date: After Baseline Schedule has been submitted and accepted by the Owner, submit on a monthly basis as specified in Volume 2 of 4 Contract - Applications for Payment.

B. Format:
   1. Tabular and graphic report showing anticipated earnings each month of the Contract period.
   2. Base tabulation on the summation of the cost-loaded activities each month.
   3. Show planned amounts.
   4. Show actual earned amounts and anticipated remaining earnings.
   5. Spreadsheet format of all schedule activities showing cost and percentage completion during the current month for which payment is sought.

1.16 PROGRESS SCHEDULE AND UPDATED SCHEDULE OF VALUES

A. Due date: Submit on a monthly basis as specified in Volume 2 of 4 of the Contract - Applications for Payment.

B. Format: As specified in Volume 2 of 4 of the Contract – Schedule of Values.

1.17 WEEKLY SCHEDULE

A. Due date: At every weekly progress meeting.

B. Format:
   1. Contractor and Engineer must agree on the format.
   2. 6-week Schedule showing the activities completed during the previous week and the Contractor's schedule of activities for following 5 weeks.
   3. Use the logic and conform to the status of the current Progress Schedule when producing a weekly Schedule in CPM schedule or a bar chart format.
      a. In the event that the weekly Schedule no longer conforms to the current Schedule, Contractor may be required to revise the Schedule as specified in this Section.
   4. Activity designations used in the weekly Schedule must be consistent with those used in the Baseline Schedule and the monthly Schedule updates.

1.18 LABOR HISTOGRAM

A. Due date:
   1. With progress payments after Baseline Schedule has been submitted and accepted by Owner.

B. Format:
   1. Labor histogram depicting total craft manpower and craft manpower for Contractor's own labor forces and those of each subcontractor.
   2. Submit in electronic format.

1.19 EQUIPMENT SCHEDULE

A. Due date: With any progress payment after Baseline Schedule has been submitted and accepted by Owner if it includes payment for equipment.

B. Format:
   1. Tabular report listing each major piece of construction equipment to be used in performing the Work.
   2. Include major equipment for Contractor and each subcontractor.
   3. Submit electronically in Excel format with 1 paper copy.

C. Progress payments after the first 90 calendar days after Notice to Proceed will not be made until equipment schedule is provided.

1.20 COMMISSIONING SCHEDULE

A. Commissioning activities and milestones, as specified in Section 01756 - Commissioning, shall be an integral part of the overall Progress Schedule.
   1. Commissioning activities and milestones shall be extracted from the Progress Schedule to provide a separate Commissioning schedule that is submitted each time the Progress Schedule is submitted.

B. Proposed Commissioning Schedule:
   1. Schedule requirements: As specified in Section 01756 - Commissioning.

2. Submittal due date: Within 180 days after Notice to Proceed.
3. Engineer response due within 20 calendar days of receipt.
4. Contractor responsible for updating schedule and resubmitting within 10 calendar days of receipt of Engineer and Owner comments.

C. Construction Schedule can include the Commissioning Schedule after Engineer acceptance of the Proposed Commissioning Schedule.
1. Capable of extracting a stand-alone Commissioning Schedule.
2. Capable of extracting a stand-alone Owner Training Schedule.

D. Monthly update requirements:
1. Highlight percentages of completion, actual start and finish dates, and remaining durations, as applicable.
2. Include activities not previously included in the previously accepted detail work plan Commissioning Schedule.
3. Change Order required for any change to contractual dates.
4. Reviews of these Submittals by Engineer will not be construed to constitute acceptance within the time frames, durations, or sequence of work for each added activity.

1.21 PRE-CONSTRUCTION SCHEDULING MEETING

A. As specified in Section 01312 - Project Meetings.

1.22 REVIEW AND ACCEPTANCE OF SCHEDULES

A. Engineer will review preliminary Schedules, Schedule updates, Schedule revisions, and time impact analyses to ascertain compliance with specified project constraints, compliance with milestone dates, durations and sequence, accurate inter-relationships, and completeness.

B. Engineer and Owner will issue written comments following completion of review of baseline Schedules within 21 calendar days after receipt.

C. Written comments on review of Schedule updates and Schedule revisions and time impact analyses will be returned to Contractor within 14 calendar days after receipt by Engineer.

D. Revise and resubmit Schedules in accordance with Engineer’s comments within 7 calendar days after receipt of such comments or request joint meeting to resolve objections.

E. If the Engineer requests a meeting, the Contractor and all major subcontractors shall participate.
1. Revise and resubmit Schedule within 7 calendar days after meeting.

F. Use accepted Schedules for planning, organizing, and directing the Work and for reporting progress.

G. Engineer's Submittal review response:
    1. When Schedules reflects the Owner's and Contractor's agreement of project approach and sequence, Schedules will be accepted by the Owner.
    2. Engineer's Submittal review response for Schedule Submittals will be "Receipt Acknowledged - Filed for Record".
    3. Acceptance of the Schedules by the Owner is for general conformance with the Contract Documents and for the Owner's planning information and does not relieve the Contractor of sole responsibility for planning, coordinating, and executing the Work within the Contract completion dates.
        a. Omissions and errors in the accepted Schedules shall not excuse performance less than that required by the Contract Documents.
        b. Acceptance by the Owner in no way constitutes an evaluation or validation of the Contractor's plan, sequence or means, methods, and techniques of construction.

1.23 SCHEDULE UPDATES

A. Any update:
    1. Prepare update using most recent accepted version of Schedule including:
        a. Actual start dates of activities that have been started.
        b. Actual finish dates of activities that have been completed.
        c. Percentage of completion of activities that have been started but not finished.
        d. Actual dates on which milestones were achieved.
        e. Update activities by inputting percent complete figures with actual dates.
        f. Use retained logic in preparing Schedule updates.
        g. When necessary, input remaining durations for activities whose finish dates cannot be calculated accurately with a percent complete figure only.
        h. Revisions to the Schedule may be included that have been previously approved as specified.

B. Monthly updates:
    1. Submit written narrative report in conjunction with each Schedule update, including descriptions of the following:
        a. Activities added to or deleted from the Schedule are to adhere to cost and other resource loading requirements.
            1) Identify added activities in manner distinctly different from original activity designations.
        b. Changes in sequence or estimated duration of activities.
        c. Current or anticipated problems and delays affecting progress, impact of these problems and delays and measures taken to mitigate impact.
        d. Assumptions made and activities affected by incorporating change order work into the Schedule.
        e. Include a response in writing to each of the Engineer's comments or questions from the previous month's schedule review and number responses consistent with the Engineer's numbering.
    2. Submit updated Schedule and materials specified under Submittal of Progress Schedules 5 calendar days before the monthly schedule update meeting.
    3. Since monthly Schedule update is the application for progress payment required as specified in Volume 2 of 4 Contract, submittal and acceptance of

the monthly Schedule update is a condition precedent to the making of any progress payments.

C. Weekly progress meeting:
   1. Update the Schedule prior to weekly progress meeting.
      a. Identify overall progress of each major item of work in the summary schedule.
      b. If there are significant changes to the Schedule, submit a written report at the weekly progress meeting.
   2. Should monthly Schedule update show project completion earlier than current Contract completion date, show early completion time as schedule activity, identified as “Project Float”.
   3. Should monthly Schedule update show Project completion later than current Contract completion date, prepare and submit a Schedule revision.

1.24 REVISIONS TO SCHEDULES

A. Submit revised Schedules within 5 days:
   1. When delay in completion of any activity or group of activities indicates an overrun of the Contract Time or milestone dates by 20 working days or 5 percent of the remaining duration, whichever is less.
   2. When delays in Submittals, deliveries, or work stoppages are encountered making necessary the replanning or rescheduling of activities.
   3. When the Schedule does not represent the actual progress of activities.
   4. When any change to the sequence of activities, the completion date for major portions of the Work, or when changes occur which affect the critical path.
   5. When Contract modification necessitates Schedule revision, submit schedule analysis of Change Order work with cost proposal.

B. Create a separate Submittal for Schedule revisions.
   1. Comply with Schedule updates as specified in this Section.
   2. Do not submit with Schedule updates.

C. Schedule revisions will not be reflected in the Schedule until after the revision is accepted by the Owner.
   1. This includes Schedule revisions submitted for the purpose of mitigating a Contractor-caused project delay (Recovery Schedule).

1.25 ADJUSTMENT OF CONTRACT TIME OR PRICE

A. Contract Time will be adjusted only for causes specified in Contract Documents.

B. If the Contractor believes that the Owner has impacted its work such that the Project completion date will be delayed, the Contractor must submit proof, in the form of a time impact analysis demonstrating the delay to the critical path.

C. Time impact analysis:
   1. Use the accepted Schedule update that is current relative to the time frame of the delay event (change order, third party delay, or other Owner-caused delay). Represent the delay event in the Schedule by:
      a. Inserting new activities associated with the delay event into the Schedule.

b. Revising activity logic.
c. Revising activity durations.

2. If the Progress Schedule's critical path and completion date are impacted as a result of adding this delay event to the Progress Schedule, a time extension equal to the magnitude of the impact may be warranted.
3. The time impact analysis Submittal must include the following information:
   a. A fragment of the portion of the Schedule affected by the delay event.
   b. A narrative explanation of the delay issue and how it impacted the Schedule.
   c. A schedule file used to perform the time impact analysis.

D. When a delay to the Project as a whole can be avoided by revising preferential sequencing or logic and the Contractor chooses not to implement the revisions, the Contractor will be entitled to a time extension and no compensation for extended overhead.

E. Indicate clearly that the Contractor has used, in full, all project float available for the Work involved in the request, including any float that may exist between the Contractor's planned completion date and the Contract completion date.
1. Utilize the latest version of the Schedule update accepted at the time of the alleged delay, and all other relevant information, to determine the adjustment of the Contract Time.

F. Adjustment of the Contract Times will be granted only when the Contract float has been fully utilized and only when the revised date of completion of the Work has been pushed beyond the Contract completion date.
1. Adjustment of the Contract Times will be made only for the number of days that the planned completion of the work has been extended.

G. Actual delays in activities which do not affect the Critical Path Work or which do not move the Contractor's planned completion date beyond the Contract completion date will not be the basis for an adjustment to the Contract Time.

H. If completion of the project occurs within the specified Contract Time, the Contractor is not entitled to job-site or home office overhead beyond the Contractor's originally planned occupancy of the site.

I. Notify Engineer of a request for Contract Time adjustment.
1. Submit request as specified in the Contract Documents.
2. In cases where the Contractor does not submit a request for Contract Time adjustment for a specific change order, delay, or Contractor request within the specified period of time, then it is mutually agreed that the particular change order, delay, or Contractor request has no time impact on the Contract completion date and no time extension is required.

J. Engineer will, within 30 calendar days after receipt of a Contract Time adjustment, request any supporting evidence, review the facts, and advise the Contractor in writing.
1. Include the new Progress Schedule data, if accepted by the Owner, in the next monthly Schedule update.

2. When the Owner has not yet made a final determination as to the adjustment of the Contract Time, and the parties are unable to agree as to the amount of the adjustment to be reflected in the Progress Schedule, reflect that amount of time adjustment in the Progress Schedule as the Engineer may accept as appropriate for such interim purpose.
3. It is understood and agreed that any such interim acceptance by the Engineer shall not be binding and shall be made only for the purpose of continuing to schedule the Work, until such time as a final determination as to any adjustment of the Contract Time acceptable to the Engineer has been made.
4. Revise the Progress Schedule prepared thereafter in accordance with the final decision.

1.26 WEATHER DAY ALLOWANCE

A. Allowance:
   1. Include as a separate identifiable activity on the critical path, an activity labeled “Weather Day Allowance”.

B. Actual Weather Day:
   1. Insert a weather delay activity in the critical path to reflect actual weather day occurrences when weather days are experienced and accepted by the Engineer.
   2. Reduce duration of Weather Day Allowance activity as weather delays are experienced and inserted into the Schedule. Remaining weather days in the Weather Day Allowance at completion of the Project is considered float.
   3. Provide a written notice to the Engineer of the occurrence of a weather day within 2 days after the onset of such weather and describe in reasonable detail the type of weather encountered and the Work interfered with or interrupted.
      a. A Schedule update will not suffice as a written notice.
      b. Engineer will determine if the Weather Day constitutes a use of a portion of the Weather Day Allowance.
      c. After use of all the Weather Day Allowance, the Engineer will determine if the Contractor is entitled to an extension of the Contract Time due to weather conditions.

1.27 FINAL SCHEDULE

A. The final Schedule update becomes the As-Built Schedule.
   1. The As-Built Schedule reflects the exact manner in which the project was constructed by reflecting actual start and completion dates for all activities accomplished on the project.
   2. Contractor’s Project Manager and scheduler sign and certify the As-Built Schedule as being an accurate record of the way the project was actually constructed.

B. Retainage will not be released until final Schedule update is provided.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01322

WEB BASED CONSTRUCTION DOCUMENT MANAGEMENT

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for web-based construction document management.

B. The project team will use and maintain a web-based database as the primary means of communication related to the Project's correspondence, submittals, requests for information (RFIs), advisory notices, and non-compliance issues. Correspondence from the Contractor shall be sent to the Construction Manager via the PROCORE System.

C. The Construction Manager and Contractor shall utilize PROCORE's system for electronic submittal of all data and documents (unless specified otherwise by the Construction Manager) throughout the duration of the Contract. PROCORE is a web-based electronic media site that is hosted by PROCORE LLC utilizing their PROCORE web solution. PROCORE will be made available to all Contractor's project personnel. The joint use of this system is to facilitate electronic exchange of information, automation of key processes, and overall management of the Contract. PROCORE shall be the primary means of project information submission and management. When required by the Construction Manager, paper documents will also be required. In the event of discrepancy between the electronic version and paper documents, the paper documents will govern. PROCORE is a registered trademark of PROCORE LLC:
   1. Joint use of this system is to facilitate electronic exchange of information, automation of key processes, and overall management of Contract Documentation.
   2. Web based construction management software shall be the primary means of project information submission and management.

1.02 USER ACCESS LIMITATIONS

A. The Construction Manager will control the Contractor's access to PROCORE by allowing access and assigning user profiles to accepted Contractor personnel. User profiles will define levels of access into the system; determine assigned function based authorizations (determines what can be seen) and user privileges (determines what they can do).

1.03 JOINT OWNERSHIP OF DATA

A. Data entered in a collaborative mode (entered with the intent to share as determined by permissions and workflows within the web-based construction management software system) by Engineer and Contractor will be jointly owned.

1.04 AUTOMATED SYSTEM NOTIFICATION AND AUDIT LOG TRACKING

A. Review comments made (or lack thereof) by the Construction Manager and Design Consultant on Contractor-submitted documentation shall not relieve the Contractor from compliance with requirements of the Contract Documents.

B. The Contractor is responsible for managing, tracking, and documenting the Work to comply with the requirements of the Contract Documents. The Construction Manager's acceptance via automated system notifications or audit logs extends only to the face value of the submitted documentation and does not constitute validation of the Contractor's submitted information.

1.05 COMPUTER REQUIREMENTS

A. Contractor shall use computer hardware and software that meets the requirements of the web-based construction management software system as recommended by the web-based construction management software to access and utilize the web-based construction management software.

B. As recommendations are modified by the web-based construction management software, Contractor will upgrade their system(s) to meet or exceed the recommendations.
   1. Upgrading of Contractor's computer systems will not be justification for a cost or time modification to the Contract.

C. Ensure that connectivity to the web-based construction management software system is accomplished through DSL, cable, T-1, or wireless communications systems.

1.06 CONTRACTOR RESPONSIBILITY

A. The Contractor shall be Responsible for the validity of their information placed in PROCORE and for the abilities of their personnel.

B. Entry of information exchanged and transferred between the Contractor and its subcontractors and suppliers on the web-based construction management software shall be the responsibility of the Contractor.

C. Accepted users shall be knowledgeable in the use of computers, including Internet browsers, email programs, CAD drawing applications, and Adobe Portable Document Format (PDF) document distribution program.

D. Adobe PDF documents will be created through electronic conversion rather than optically scanned whenever possible. The Contractor is responsible for the training of their personnel in the use of PROCORE (outside what is provided by the Construction Manager) and the other programs indicated above as needed.

1.07 USER ACCESS ADMINISTRATION

A. Provide a list of Contractor's key PROCORE personnel for the Construction Manager's acceptance. The Construction Manager is responsible for adding and removing users from the system. The Construction Manager reserves the right to perform a security check on all potential users.

1.08 CONNECTIVITY PROBLEMS

A. PROCORE is a web-based environment and therefore subject to the inherent speed and connectivity problems of the Internet. The Contractor is responsible for its own connectivity to the Internet. PROCORE response time is dependent on the Contractor's equipment, including processor speed, Internet access speed, etc. and current traffic on the Internet. The Owner and Construction Manager will not be liable for any delays associated from the usage of PROCORE including, but not limited to slow response time, down time periods, connectivity problems, or loss of information. The Contractor will ensure that its connectivity to the PROCORE system (whether at the home office or job site) is accomplished through some form of high-speed communications with 128 kb/s as the minimum bandwidth requirements for using the system. It is recommended a faster connection be used when uploading pictures and files into the system. Under no circumstances shall the usage of PROCORE be grounds for a time extension or cost adjustment to the Contract. If there are problems that persist with the PROCORE site for more than 24 consecutive hours that prevent the electronic submission of data by the Contractor, the Contractor may submit documents in paper form to the Construction Manager until such time that the Construction Manager notifies the Contractor that the PROCORE site is operable and available for use. Construction Manager shall likewise send documents to Contractor in paper form during such disruption of the PROCORE system.

1.09 TRAINING

A. The Construction Manager has arranged for the following training to be provided to the Contractor. The Construction Manager will provide a one-hour training class to the Contractor within 10 days of NTP at a time mutually agreeable to Contractor and Construction Manager. Thereafter the Construction Manager will provide up to one hour of additional training via telephone during the project per month of the project life.

PART 2 PRODUCTS

2.01 GENERAL

A. In order to process correspondence, submittals, and RFIs, the Contractor must provide and have in place for its own use the required basic components outlined below.
   1. Hardware:
      a. A computer with internet access and sufficient capabilities to perform all project duties; a scanner at least large enough to scan 11-inch by 17-inch sheets with sufficient resolution to maintain clarity and legibility of the

document at its native size; and a color printer of sufficient size and capacity to accept incoming correspondence as described in this section.

2. Software:
    a. Adobe Acrobat 9 or higher; Microsoft's Internet Explorer v7 or higher; Microsoft Office 2010 or higher, including but not limited to Microsoft Word and Microsoft Excel.
    b. PROCORE currently supports Mozilla's Firefox v3.5 and newer, Apple's Safari v4 and newer, Google Chrome, and Microsoft's Internet Explorer v7 and v8 web browsers for accessing the application. Certain functions may not be available when using any program other than the newest version of Microsoft's Internet Explorer.
3. Facilities:
    a. The Contractor shall make its own arrangements to provide high-speed (minimum speed: download 1Mbps/upload 256Kbps) internet connection for its own use as soon as practicable.

PART 3 EXECUTION

3.01 SUMMARY

A. Items to be uploaded to PROCORE by the Construction Manager include but are not limited to: RFI responses, Submittal comments, Clarification letters, Design Clarifications, Field Orders, et al. These items will be emailed via PROCORE as attachments in PDF file format via PROCORE. These attachments may include files that need to be viewed and/or printed in color. Formal letters, stop notices, Field Orders, Progress Payment Requests, and Contract Change Orders will always include a wet- signed hard copy.

B. Items to be uploaded to PROCORE by the Constructor include but are not limited to: RFI, Submittals, Request for Clarification letters, Request for Design Clarification letters, et al. These items will be emailed via PROCORE as attachments in PDF file format via PROCORE. These attachments may include files that need to be viewed and/or printed in color. Contractor shall provide wet-signed hard copies of documents required by Contract Documents, as well as any documents requested by the Construction Manager, including but not limited to: Formal letters, Progress Payment Requests, and Contract Change Orders, et al.

3.02 PROCURE UTILIZATION

A. All project related correspondence (RFIs, submittals, etc.) originated by the Contractor or Subcontractor, Supplier, et al. shall be directed to the Construction Manager, unless otherwise indicated in the Specifications.

3.03 WEB-BASED CONSTRUCTION MANAGEMENT SOFTWARE UTILIZATION

A. Web-based construction management software shall be utilized in connection with all document and information management required by these Contract Documents.

3.04 SUBMITTALS

A. The use of the electronic communication does not waive the requirement for the provision of hard copies of all formal correspondence and submittals. The hard copies of all documents must match the electronic copies of all correspondence and submittals.

B. Submittals shall be in accordance with Section 01330 - Submittal Procedures. The provisions of Section 01330 - Submittal Procedures shall apply both to electronic copies and hard copies of submittals.

C. In addition to above, PROCORE shall be utilized in connection with submittal preparation and information management required by but not limited to Sections:
   1. Section 01321 - Schedules and Reports.
   2. Section 01330 - Submittal Procedures.

D. PROCORE will be utilized by all other Sections not listed above and as required by the Construction Manager.

E. If a submittal package has multiple items that are not directly related, each item shall be considered a separate submittal and shall be sent separately. For example, “Concrete Mix Design,” and “Concrete Curing Compound” shall be submitted as separate items to the Construction Manager.

3.05 TERMINATION IN USE

A. The Owner may request a termination of the use of PROCORE for the electronic submission of data, and alternatively the use of paper documents submitted in accordance with the Contract Documents by providing notification in writing with 10 days’ notice that it intends to discontinue use of PROCORE.

3.06 ADOBE PDF

A. All information, comments, questions, and statements shall be scanned and/or converted to the PDF file format and attached to the email via PROCORE. Items to be sent via email via PROCORE include but are not limited to large-format plan sheets (22-inch by 34-inch or larger), small-format plan sheets, pages within tabbed binders, RFIs, transmittal sheets, et al. The PDF attachments supplied to the Construction Manager shall be in a sufficient resolution to be fully legible at its native size.

B. All separate files within a given piece of correspondence shall be combined into a single PDF document (e.g., an RFI that contains a text file and two photo files shall be combined into a single PDF document prior to delivery to the Construction Manager).

3.07 LABELING FORMAT

A. The subject line of each email via PROCORE, and the file name of any attached files, shall be in accordance with Section 01330-1.3.A.2 for submittals and as directed by Construction Manager other correspondence (RFIs, Letters, Transmittals, Proposed Change Orders, et al.).

B. Label shall include the type of correspondence (i.e., RFI, etc.), a unique number, sequentially assigned for the given piece of correspondence. The Contractor will indicate the subject at the end of the numbering scheme with a description (key words) of the item. Each piece of correspondence shall be sent in a separate email via PROCORE.

3.08 ORIGINAL DOCUMENTS

A. Where possible, the Contractor will obtain the electronic document from its original source to maintain the integrity, legibility, and searchability of the document.

3.09 ORGANIZATION

A. The information included in the attachments shall be organized in a logical and thoughtful manner. Where the information originated in a tabbed format (a binder, for example), the scanned and/or converted PDF file shall be electronically bookmarked accordingly using the “bookmark” function of Adobe Acrobat 9 Std.

3.10 PRINTING

A. Except where otherwise indicated, the Contractor will receive no hard copies of the above outlined correspondence. The Contractor will be required to print for its use, in color if necessary, any record copies, field copies, sub-Contractor copies, etc., if such copies are desired.

3.11 PROJECT FORMS

A. The Contractor may use its own correspondence forms to be attached to correspondence emails via PROCORE as long as the Contractor’s forms comply with this and all submittal sections.

END OF SECTION

SECTION 01330

SUBMITTAL PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements and procedures for Submittals to confirm compliance with Contract Documents.

1.02 GENERAL INSTRUCTIONS

A. Contractor is responsible to determine and verify field measurements, field construction criteria, materials, dimensions, catalog numbers and similar data, and check and coordinate each item with other applicable approved Shop Drawings and Contract Document requirements.

B. Provide Submittals:
   1. That are specified or reasonably required for construction, operation, and maintenance of the Work.
   2. That demonstrate compliance with the Contract Documents.

C. Where multiple Submittals are required, provide a separate Submittal for each Specification section.
   1. In order to expedite construction, the Contractor may make more than one Submittal per Specification section, but a single Submittal may not cover more than one Specification section:
      a. The only exception to this requirement is when one Specification section covers the requirements for a component of equipment specified in another section.
      b. For example, circuit breakers are a component of switchgear. The switchgear Submittal must also contain data for the associated circuit breakers, even though they are covered in a different Specification section.

D. Prepare Submittals in the English language. Do not include information in other languages.

E. Present measurements in customary American units (feet, inches, pounds, etc.).

F. Must be clear and legible, and of sufficient size for presentation of information.

G. Page size, other than drawings:
   1. Minimum: 8-1/2 inches by 11 inches.
   2. Maximum: 11 inches by 17 inches.

H. Drawing sheet size:
   1. Maximum: 22 inches by 34 inches.
      a. Minimum plan scale: 1/8 inch equals 1 foot-0 inches.
      b. Minimum font size: 1/8-inch.
   2. 11-inch by 17-inch sheet:
      a. Minimum plan scale: 1/8 inch equals 1 foot-0 inches.
      b. Minimum font size: 1/8-inch.

I. Show dimensions, construction details, wiring diagrams, controls, manufacturers, catalog numbers, and all other pertinent details.

J. Provide Submittal information from only one manufacturer for a specified product. Submittals with multiple manufacturers for one product will be rejected without review.

1.03 SUBMITTAL ORGANIZATION

A. Organize Submittals in exactly the same order as the items are referenced, listed, and/or organized in the Specification section.

B. For Submittals that cover multiple devices used in different areas under the same Specification section, the Submittal for the individual devices must list the area where the device is used.

C. Bookmarks:
   1. Bookmarks shall match the table of contents.
   2. Bookmark each section (tab) and heading.
   3. Drawings: Bookmark at a minimum, each discipline, area designation, or appropriate division.
   4. At file opening, display all levels of bookmarks as expanded.

D. Where applicable (i.e., except for Drawings, figures, etc.), Submittal content shall be electronically searchable utilizing the PDF file as submitted.

E. Thumbnails optimized for fast web viewing.

F. Sequentially number pages within the tabbed sections:
   1. Submittals that are not fully indexed and tabbed with sequentially numbered pages, or are otherwise unacceptable, will be returned without review.

G. Attachments:
   1. Include with each Submittal a copy of the relevant Specification section.
      a. Indicate in the left margin, next to each pertinent paragraph, either compliance with a check (√) or deviation with a consecutive number (1, 2, 3).
      b. Provide a list of all numbered deviations with a clear explanation and reason for the deviation.
   2. Include with each Submittal a copy of the relevant Drawing, including relevant addendum updates.
      a. Indicate either compliance with a check (√) or deviation with a consecutive number (1, 2, 3).

b. Provide a list of all numbered deviations with a clear explanation and reason for the deviation.
c. Provide field dimensions and relationship to adjacent or critical features of the Work or materials.

H. Contractor: Prepare Submittal information in sufficient detail to show compliance with specified requirements.
1. Determine and verify quantities, field dimensions, product dimensions, specified design and performance criteria, materials, catalog numbers, and similar data.
2. Coordinate Submittal with other Submittals and with the requirements of the Contract Documents.
3. Check, verify, and revise Submittals as necessary to bring them into conformance with Contract Documents and actual field conditions.

I. Contractor: Prepare “Or Equal” Submittal information.
1. Provide standard Submittal requirements.
a. In addition, provide in sufficient detail to show reason for variance from specified product and impacts.
2. Provide reason the specified product is not being provided.
3. Explain the benefits to the Owner for accepting the “Or Equal”.
4. Itemized comparison of the proposed “Or Equal” with product specified, including a list of significant variations:
a. Design features.
b. Design dimensions.
c. Installation requirements.
d. Operations and maintenance requirements.
e. Availability of maintenance services and sources of replacement materials.
5. Reference projects where the product has been successfully used:
a. Name and address of project.
b. Year of installation.
c. Year placed in operation.
d. Name of product installed.
e. Point of contact: Name and phone number.
6. Define impacts:
a. Impacts to other contracts.
b. Impacts to other work or products.
7. Contractor represents the following:
a. Contractor bears the burden of proof of the equivalency of the proposed “Or Equal”.
b. Proposed “Or Equal” is equal or superior to the specified product.
c. Contractor will provide the warranties or bonds that would be provided on the specified product on the proposed “Or Equal”, unless the Owner requires a Special Warranty.
d. Contractor will coordinate installation of accepted “Or Equal” into the Work and will be responsible for the costs to make changes as required to the Work.
e. Contractor waives rights to claim additional costs caused by proposed “Or Equal” which may subsequently become apparent.

J. Contractor: Prepare substitution Submittal information.
    1. Provide standard Submittal requirements.
        a. In addition, provide in sufficient detail to show reason for variance from specified product and impacts.
    2. Provide reason the specified product is not being provided.
    3. Explain the benefits to the Owner for accepting the substitution.
    4. Itemized comparison of the proposed substitution with product specified, including a list of significant variations:
        a. Design features.
        b. Design dimensions.
        c. Installation requirements.
        d. Operations and maintenance requirements.
        e. Availability of maintenance services and sources of replacement materials.
    5. Reference projects where the product has been successfully used:
        a. Name and address of project.
        b. Year of installation.
        c. Year placed in operation.
        d. Name of product installed.
        e. Point of contact: Name and phone number.
    6. Define impacts:
        a. Impacts to Contract Price.
            1) Required license fees or royalties.
            2) Do not include costs under separate contracts.
            3) Do not include Engineer’s costs for redesign or revision of Contract Documents.
        b. Impacts to Contract Time.
        c. Impacts to Contract Scope.
        d. Impacts to other contracts.
        e. Impacts to other work or products.
    7. Contractor represents the following:
        a. Contractor shall pay associated costs for the Engineer to evaluate the substitution.
        b. Contractor bears the burden of proof of the equivalency of the proposed substitution.
        c. Proposed substitution does not change the design intent and will have equal performance to the specified product.
        d. Proposed substitution is equal or superior to the specified product.
        e. Contractor will provide the warranties or bonds that would be provided on the specified product on the proposed substitution, unless the Owner requires a Special Warranty.
        f. Contractor will coordinate installation of accepted substitution into the Work and will be responsible for the costs to make changes as required to the Work.
        g. Contractor waives rights to claim additional costs caused by proposed substitution which may subsequently become apparent.

1.04 SUBMITTAL IDENTIFICATION NUMBERING

A. Number each Submittal using the format defined in the table below:

	Spec Section Number	Dash	Initial Submittal - Sequential Number	Decimal Point	Subsequent Submittal Revisions Sequential Number
Example 1 Description	*Cast-In-Place Concrete*		*8th initial Submittal*		
	03300	-	0008		
Example 2 Description	*Cast-In-Place Concrete*		*8th initial Submittal*		*First revision to the 8th initial Submittal*
	03300	-	0008	.	1

1.05 SUBMITTALS IN ELECTRONIC MEDIA FORMAT

A. General: Provide all information in PC-compatible format using Windows® operating system as utilized by the Owner and Engineer.

B. Text: Provide text documents and manufacturer's literature in Portable Document Format (PDF).

C. Graphics: Provide graphic Submittals (Drawings, diagrams, figures, etc.) utilizing Portable Document Format (PDF).

D. Submit in the format provided in Attachment A - Contractor Submittal Transmittal Form.

1.06 SUBMITTAL PROCEDURE

A. Engineer: Review Submittal and provide response:
   1. Review description:
      a. Engineer will be entitled to rely upon the accuracy or completeness of designs, calculations, or certifications made by licensed professionals accompanying a particular Submittal whether or not a stamp or seal is required by Contract Documents or Laws and Regulations.
      b. Engineer's review of Submittals shall not release the Contractor from the Contractor's responsibility for performance of requirements of Contract Documents. Neither shall the Engineer's review release the Contractor from fulfilling purpose of installation nor from the Contractor's liability to replace defective Work.
      c. Engineer's review of Shop Drawings, samples, or test procedures will be only for conformance with design concepts and for compliance with information given in Contract Documents.
      d. Engineer's review does not extend to:
         1) Accuracy of dimensions, quantities, or performance of equipment and systems designed by the Contractor.

2) Contractor's means, methods, techniques, sequences, or procedures, except when specified, indicated on the Drawings, or required by Contract Documents.
3) Safety precautions or programs related to safety which shall remain the sole responsibility of the Contractor.

e. Engineer can Approve or Not Approve any exception at their sole discretion.

2. Review timeframe:
   a. Except as may be provided in technical Specifications, a Submittal will be returned within 10 calendar days.
   b. When a Submittal cannot be returned within the specified period, Engineer will, within a reasonable time after receipt of the Submittal, give notice of the date by which that Submittal will be returned.
   c. Engineer's acceptance of progress schedule containing Submittal review times less than those specified or agreed to in writing by the Engineer will not constitute Engineer's acceptance of review times.
   d. Critical Submittals:
      1) Contractor will notify Engineer in writing that timely review of a Submittal is critical to the progress of Work.
3. Schedule delays:
   a. No adjustment of Contract Times or Contract Price will be allowed due to Engineer's review of Submittals unless all of the following criteria are met:
      1) Engineer has failed to review and return first submission within the agreed upon time frame.
      2) Contractor demonstrates that delay in progress of Work is directly attributable to the Engineer's failure to return Submittal within time indicated and accepted by the Engineer.
4. Review response will be returned to the Contractor with one of the following dispositions:
   a. Approved:
      1) No Exceptions:
         a) There are no notations or comments on the Submittal and the Contractor may release the equipment for production.
      2) Make Corrections Noted - See Comments:
         a) Contractor may proceed with the Work, however, all notations and comments must be incorporated into the final product.
         b) Resubmittal not required.
      3) Make Corrections Noted - Confirm:
         a) Contractor may proceed with the Work, however, all notations and comments must be incorporated into the final product.
         b) Submit confirmation specifically addressing each notation or comment to the Engineer within 15 calendar days of the date of the Engineer's transmittal requiring the confirmation.
   b. Not Approved:
      1) Correct and Resubmit:
         a) Contractor may not proceed with the Work described in the Submittal.
         b) Contractor assumes responsibility for proceeding without approval.

c) Resubmittal of complete Submittal package is required within 30 calendar days of the date of the Engineer's Submittal review response.

2) Rejected - See Remarks:
   a) Contractor may not proceed with the Work described in the Submittal.
   b) Submittal does not meet the intent of the Contract Documents. Resubmittal of complete Submittal package is required with materials, equipment, methods, etc., that meet the requirements of the Contract Documents.

c. Receipt Acknowledged:
   1) Filed for Record:
      a) This is used in acknowledging receipt of informational Submittals that address means and methods of construction such as schedules and work plans, conformance test reports, health and safety plans, etc.
   2) With Comments - Resubmit:
      a) This is used in acknowledging receipt of informational Submittals that address means and methods of construction such as schedules and work plans, conformance test reports, health and safety plans, etc. Feedback regarding missing information, conflicting information, or other information that makes it incomplete can be made with comments.

B. Contractor: Prepare resubmittal, if applicable:
   1. Clearly identify each correction or change made. Provide page references to the changed information within the resubmittal.
   2. Include a response in writing to each of the Engineer's comments or questions for Submittal packages that are resubmitted in the order that the comments or questions were presented from the first and subsequent Submittals and numbered consistent with the Engineer's numbering.
      a. Acceptable responses to the Engineer's comments are listed below:
         1) "Incorporated" - Engineer's comment or change is accepted and appropriate changes are made.
         2) "Response" - Engineer's comment not incorporated. Explain why comment is not accepted or requested change is not made. Explain how requirement will be satisfied in lieu of comment or change requested by the Engineer.
      b. Reviews and resubmittals:
         1) Contractor shall provide resubmittals which include responses to all Submittal review comments separately and at a level of detail commensurate with each comment.
         2) Contractor responses shall indicate how the Contractor resolved the issue pertaining to each review comment.
            a) Responses such as "acknowledged" or "noted" are not acceptable.
         3) Resubmittals which do not comply with this requirement may be rejected and returned without review.
         4) Contractor shall be allowed no extensions of any kind to any part of their contract due to the rejection of non-compliant Submittals.

5) Submittal review comments not addressed by the Contractor in resubmittals shall continue to apply whether restated or not in subsequent reviews until adequately addressed by the Contractor to the satisfaction of the reviewing and approving authority.

c. Any resubmittal that does not contain responses to the Engineer's previous comments shall be returned for revision and resubmittal. No further review by the Engineer will be performed until a response for previous comments has been received.

3. Resubmittal timeframe:
   a. Contractor shall provide resubmittal within 15 days.
   b. When a resubmittal cannot be returned within the specified period, Contractor shall notify the Engineer in writing.
4. Review costs:
   a. Costs incurred by the Owner as a result of additional reviews of a particular Submittal after the second time it has been reviewed shall be borne by the Contractor.
   b. Reimbursement to the Owner will be made by deducting such costs from the Contractor's subsequent progress payments.

1.07 PRODUCT DATA

A. Edit Submittals so that the Submittal specifically applies to only the product furnished.

B. Neatly cross out all extraneous text, options, models, etc., that do not apply to the product being furnished so that the information remaining is only applicable to the product being furnished.

1.08 SHOP DRAWINGS

A. Contractor to field verify elevation, coordinates, and pipe material for pipe tie-in to pipeline or structure prior to the preparation of Shop Drawings.

B. Indicate project-designated equipment tag numbers for Submittal of devices, equipment, and assemblies.

1.09 SAMPLES

A. Details:
   1. Submit labeled samples.
   2. Samples will not be returned.
   3. Provide number of sample Submittals as below:
      a. Total: 2 minimum.
         1) Owner: 1.
         2) Engineer: 1.
         3) Contractor: None.

SECTION 01340

PHOTOGRAPHIC AND VIDEOGRAPHIC DOCUMENTATION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for photographs and videos.

B. The purpose of the photographs and videos is to document the condition of the facilities prior to the Contractor beginning work at the Project site, the progress of the Work, and the Project site after Substantial Completion of the Work.

C. The scope of the photographic and videographic documentation shall be the sole responsibility of the Contractor but shall be acceptable to the Engineer.

1.02 SUBMITTALS

A. Photographer qualifications.

B. Pre-construction photographs and videos: Submit prior to beginning work at the Project site or prior to the Preconstruction Conference specified in Section 01312 - Project Meetings, whichever occurs earlier.

C. Construction photographs and videos: Submit with each application for payment.

D. Post-construction photographs and videos: Submit with project closeout documents as specified in Section 01770 - Closeout Procedures.

1.03 PHOTOGRAPHER

A. Photographer qualified and equipped to photograph either interior or exterior exposures, with lenses ranging from wide angle to telephoto.

B. Submit example work of previous photographs and video recording meeting the requirements of this Section.
   1. Provide to Engineer no later than the pre-construction conference.
   2. Provide photographs used for site examination.
   3. Provide video of site examination.
   4. Provide samples that used same camera and lighting equipment proposed for the Work.
   5. Engineer will review work examples to determine if the quality of the images is acceptable.
   6. Contractor is responsible for modifications to equipment and/or inspection procedures to achieve report material of acceptable quality.
   7. Do not commence Work prior to approval of the material by the Engineer.
   8. Once accepted, the standard report material shall serve as a standard for the remaining work.

1.04 KEY PLAN

A. Submit key plan of Project site with notation of vantage points marked for location and direction of each photograph.

B. Include the same label information as the corresponding set of photographs.

1.05 PHOTOGRAPHS

A. Provide prints of each photograph for each area of Work.

B. Provide a digital copy of each photograph for each area of Work.
   1. Monthly: Indexed digital flash drive.
   2. Project record documents:
      a. Catalog and index prints in chronological sequence.
      b. Include typed table of contents.

1.06 PRE-CONSTRUCTION PHOTOGRAPHS AND VIDEOS

A. Provide photographs and video of the condition entire site including each area of Work prior to the start of Work.
   1. Areas to be photographed and videoed shall include the site of the Work and all existing facilities, either on or adjoining the Project site, including the interior of existing structures that could be damaged as a result of the Contractor's Work.
   2. Include general condition, structures, vegetation, staging, storing, working, parking areas and excavation areas.

1.07 CONSTRUCTION PHOTOGRAPHS AND VIDEOS

A. Provide photographs and videos of construction in each area of Work throughout progress of Work including a key plan designating where each photograph was taken.

B. Take site and interior photographs and videos from differing directions of building demolition, pre-excavation, footing excavation, soil testing, utility crossings, installation of bypass piping, excavation of access pits, installation of lining system in pipes, rehabilitation of manholes, building modifications, utilities, electrical and instrumentation modifications, and other applicable activities indicating relative progress of the work.

C. Take photos a maximum of 7 calendar days prior to Submittal.

1.08 POST-CONSTRUCTION PHOTOGRAPHS AND VIDEOS

A. Provide photographs of the entire site including each area of Work at the completion of Work.
   1. Include general condition, structures, vegetation, staging, storing, working, parking areas and excavation areas.
   2. Take photos and video from same points in same direction as pre-construction examination.

B. Submittal of photos and videos is a condition of final payment.

PART 2 PRODUCTS

2.01 MEDIA

A. Paper media:
   1. Commercial grade, glossy surface, acid-free photographic paper.
   2. Submit 3 prints of each photographic view within 7 days of taking photographs.
   3. Format:
      a. Ground photos: Color, matte finish, 8-1/2-inch by 11-inch size, mounted on soft card stock.
      b. Aerial photos: Color, matte finish, 11-inch by 17-inch size, mounted on soft card stock.
      c. Mount each print in a separate, archival type, non-glare, 3-hole punched protector.
   4. Identification: On photograph, provide the following information:
      a. Name of project.
      b. Date stamp: Unless otherwise indicated, date and time stamp each photograph as it is being taken so stamp is integral to photograph.
      c. Description of vantage point, indicating location and direction by compass point.
   5. Provide a suitably sized 3-ring binder for each set of prints.
      a. Furnish binders in sufficient quantities to hold entire set of prints taken for the duration of the Contract.
      b. Label binder spine and front with project name.

B. Digital media:
   1. Flash drive compatible with current Microsoft Windows.
   2. Provide photos as individual, indexed JPG files with the following characteristics:
      a. Compression shall be set to preserve quality over file size.
      b. Highest resolution JPG images shall be submitted. Resizing to a smaller size when high resolution JPGs are available shall not be permitted.
      c. JPG image resolution shall be 5 megapixels at 2,400 by 1,800 or higher.
      d. Images shall have rectangular, clean images. Artistic borders, beveling, drop shadows, etc., are not permitted.
   3. Identification: On photograph, provide the following information:
      a. Name of project.
      b. Date stamp: Unless otherwise indicated, date and time stamp each photograph as it is being taken so stamp is integral to photograph.
      c. Description of vantage point, indicating location and direction by compass point.

C. Videos:
   1. Video quality shall be 720p HD or greater in MPG, AVCHD, AVI, or MP4 format.
   2. Digital color video format.
   3. Provide audio portion of the composite video sufficiently free from electrical interference and background noise to provide complete intelligibility of oral report.
   4. Identification: On each copy provide a label with the following information:
      a. Name of project.
      b. Date video was recorded.
   5. Submit 1 copy of each video within 7 days of recording.

6. Display continuous running time.
7. At start of each video recording, record weather conditions from local newspaper or television and the actual temperature reading at Project site.

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01357

DELEGATED DESIGN PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Delegated Design procedures.

1.02 GENERAL

A. Refer to the Contract RFP in Volume 2 for additional delegated design requirements.

B. Delegated Design - Professional design services assigned to the Contractor by express delegation in the Contract Documents. Work is “Delegated Design” where the Technical Sections require the Contractor to provide professional design services and to submit signed and sealed documents from a registered Professional Engineer.

C. Contractor’s Professional Engineer - The design professional retained by the Contractor to perform Delegated Design.

D. Owner may require Contractor to provide professional design services for a portion of the Work by express delegation in the Contract Documents.
   1. Requirements of Delegated Design component as specified in the Technical Section and as indicated on the Drawings.
   2. Such delegation will specify the performance and design criteria that such services must satisfy, and the Submittals that the Contractor must furnish to the Engineer with respect to the Delegated Design.

E. Contractor shall cause such Delegated Design services to be provided pursuant to the professional standard of care by a properly licensed design professional, whose signature and seal shall appear on Drawings, calculations, Specifications, certifications, and Submittals prepared by such design professional.
   1. Contractor shall not be responsible for the adequacy of performance or design criteria specified by the Owner or Engineer.
   2. Contractor is not required to provide professional services in violation of applicable Laws and Regulations.
   3. Such design professional shall issue certifications of design required by Laws and Regulations.
   4. If a Shop Drawing or other Submittal related to the Owner-delegated design is prepared by the Contractor, a Subcontractor, or others for submittal to the Engineer, then such Shop Drawing or other Submittal shall bear the written approval of Contractor’s design professional when submitted by the Contractor to the Engineer.

F. Owner and Engineer shall be entitled to rely upon the adequacy, accuracy, and completeness of the services, certifications, and approvals performed or provided by the design professionals retained or employed by Contractor under Delegated Design, subject to the professional standard of care and the performance and design criteria stated in the Contract Documents.

G. Engineer's review, approval, and other determinations regarding design drawings, calculations, Specifications, certifications, and other Submittals furnished by Contractor pursuant to a Delegated Design will be only for the following limited purposes:
   1. Confirming that Submittal is in conformance with the performance and design criteria specified in the Contract Documents.

1.03 CONTRACTOR'S PROFESSIONAL ENGINEER

A. Contractor or Subcontractor shall retain a licensed Professional Engineer to perform Delegated Design.

B. Qualifications:
   1. Holding a current license to perform the specified design in the same jurisdiction as the Project site.
   2. Experienced in designing similar systems of similar complexity.

C. Insurance:
   1. Provide Contractor's Professional Engineer's Professional Liability Insurance as specified in the Agreement and Contract RFP in Volumes 1 and 2.

D. Responsibilities:
   1. Review and design in accordance with system performance and design criteria stated in the Contract Documents.
      a. Prepare written requests for clarifications or interpretations of performance or design criteria for submittal to the Engineer by the Contractor.
   2. Sign and seal design reports, calculations, design drawings and specifications, and other design Submittals for the Delegated Design Work.
   3. Review and submit written approval of Submittals related to the Delegated Design Work.
   4. Design modifications to the Delegated Design Work as required.
   5. Visit the Site, as required, to verify that installation of the Delegated Design Work is in conformance with the Delegated Design Drawings and Specifications.
   6. Submit through Contractor to Engineer written, signed, and sealed certification that the installed Delegated Design Work complies with Contractor's Professional Engineer's design.

1.04 SUBMITTALS

A. Prior to the start of Delegated Design:
   1. Contractor's Professional Engineer's qualifications:
      a. Experience for the Delegated Design.
      b. Evidence of Professional Engineering license.
   2. Contractor's Professional Engineer Professional Liability Insurance certificate.

B. Delegated Design:
   1. Product data:
      a. Details related to the Delegated Design as specified in Technical Sections to completely describe the system.
   2. Design documents with signature and seal from the Contractor's Professional Engineer.
      a. Design documents include but are not limited to Drawings, calculations, Specifications, inspection reports, and certifications.
   3. Lists and schedules:
      a. Prepare and submit lists or schedules of items where Delegated Design is required by the Contract Documents.
      b. Group items by location in the Work.
         1) When "Area Numbers" are indicated on the Contract Drawings, group lists in accordance with those "areas."
         2) For work without area numbers, group using logical divisions acceptable to the Engineer.
         3) Group items within each "area" as follows:
            a) Systems.
            b) Components.
            c) Supports.
            d) Anchorage.
            e) Bracing.

C. Construction services:
   1. Contractor's Professional Engineer's comments on Submittals.
   2. Other construction documents, as required.

1.05 ENGINEER RESPONSE TO DELEGATED DESIGN SUBMITTALS

A. Engineer response will be either of the following:
   1. Approved. Make Corrections Noted - See Comments:
      a. Contractor may proceed with the Work; however, all notations and comments must be incorporated into the final product.
      b. Review was for the limited purpose of determining that the document was stamped by a Professional Engineer and that such design is generally consistent with and will not negatively affect the design concept presented in the Contract Documents.
   2. Rejected - See Remarks:
      a. Contractor may not proceed with the Work described in the Submittal.
      b. Submittal does not meet the intent of the Contract Documents.
      c. Resubmittal of complete Submittal package is required with materials, equipment, methods, etc., that meet the requirements of the Contract Documents.

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01410

REGULATORY REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Regulatory authorities and codes.

1.02 AUTHORITIES HAVING JURISDICTION (AHJ)

A. Also referred to as the permitting agency.

B. Building Department: City of Roseville.

C. Fire Department: City of Roseville.

1.03 APPLICABLE CODES

A. Products in contact with drinking water:
   1. Materials in contact with drinking waters: In accordance with NSF 61 and NSF 372.
      a. Certification by an independent ANSI accredited third party, including, but not limited to, NSF International, as being lead free.
   2. Materials in contact with drinking waters: In accordance with California Health and Safety Code, Section 116875.

B. California Code of Regulations (CCR), California Building Standards Code, CCR Title 24:
   1. Building code:
      a. California Building Code (CBC), Title 24, Part 2 – 2019.
   2. Electrical code:
      a. California Electrical Code (CEC), Title 24, Part 3 – 2019.
   3. Mechanical code:
      a. California Mechanical Code (CMC), Title 24, Part 4 – 2019.
   4. Plumbing code:
      a. California Plumbing Code (CPC), Title 24, Part 5 – 2019.
   5. Energy code:
      a. California Energy Code (CEC), Title 24, Part 6 – 2019.
   6. Historical building code:
      a. California Historical Building Code (CHBC), Title 24, Part 8 – 2019.
   7. Fire code:
      a. California Fire Code (CFC), Title 24, Part 9 – 2019.
   8. Existing building code:
      a. California Existing Building Code (CEBC), Title 24, Part 10 – 2019.
   9. Green building standards code:
      a. California Green Building Standards Code (CALGreen), Title 24, Part 11 – 2019.

SECTION 01450

QUALITY CONTROL

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Quality control and control of installation.
   2. Tolerances.
   3. References.
   4. Mock-up requirements.
   5. Authority and duties of Owner's representative or inspector.
   6. Sampling and testing.
   7. Testing and inspection services.
   8. Contractor's responsibilities.

1.02 QUALITY CONTROL AND CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce Work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. When manufacturers' instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

D. Comply with specified standards as minimum quality for the Work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Perform Work by persons qualified to produce required and specified quality.

F. Verify field measurements are as indicated on Shop Drawings or as instructed by manufacturer.

G. Secure products in place with positive anchorage devices designed and sized to withstand stresses, vibration, physical distortion, or disfigurement.

H. When specified, products will be tested and inspected either at point of origin or at Work site:
   1. Notify Engineer in writing well in advance of when products will be ready for testing and inspection at point of origin.
   2. Do not construe that satisfactory tests and inspections at point of origin is final acceptance of products. Satisfactory tests or inspections at point of origin do not preclude retesting or re-inspection at Work site.

I. Do not ship products which require testing and inspection at point of origin prior to testing and inspection.

1.03 TOLERANCES

A. Monitor fabrication and installation tolerance control of products to produce acceptable Work. Do not permit tolerances to accumulate.

B. Comply with manufacturers' tolerances. When Manufacturers' tolerances conflict with Contract Documents, request clarification from Engineer before proceeding.

C. Adjust products to appropriate dimensions; position before securing products in place.

1.04 REFERENCES

A. ASTM International (ASTM):
   1. E329 - Standard for Agencies Engaged in Construction Inspection, Testing or Special Inspection.

B. National Institute of Standards and Technology (NIST).

1.05 PRODUCT REQUIREMENTS

A. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard by date of issue current on date of Contract Documents, except where specific date is established by code.

C. Obtain copies of standards where required by product specification sections.

D. When specified reference standards conflict with Contract Documents, request clarification from Engineer before proceeding.

1.06 MOCK-UP REQUIREMENTS

A. Tests will be performed under provisions identified in this Section and identified in respective product specification sections.

B. Assemble and erect specified items with specified attachment and anchorage devices, flashings, seals, and finishes.

C. Accepted mock-ups shall be comparison standard for remaining Work.

D. Where mock-up has been accepted by Engineer and is specified in product specification sections to be removed; remove mock-up and clear area when directed to do so by Engineer.

1.07 AUTHORITY AND DUTIES OF OWNER'S REPRESENTATIVE OR INSPECTOR

A. Owner’s Project Representative employed or retained by Owner is authorized to inspect the Work.

B. Inspections may extend to entire or part of the Work and to preparation, fabrication, and manufacture of products for the Work.

C. Deficiencies or defects in the Work which have been observed will be called to Contractor's attention.

D. Inspector will not:
   1. Alter or waive provisions of Contract Documents.
   2. Inspect Contractor's means, methods, techniques, sequences, or procedures for construction.
   3. Accept portions of the Work, issue instructions contrary to intent of Contract Documents, or act as foreman for Contractor. Supervise, control, or direct Contractor's safety precautions or programs; or inspect for safety conditions on Work site, or of persons thereon, whether Contractor's employees or others.

E. Inspector will:
   1. Conduct on-site observations of the Work in progress to assist Engineer in determining when the Work is, in general, proceeding in accordance with Contract Documents.
   2. Report to Engineer whenever Inspector believes that Work is faulty, defective, does not conform to Contract Documents, or has been damaged; or whenever there is defective material or equipment; or whenever Inspector believes the Work should be uncovered for observation or requires special procedures.

1.08 SAMPLING AND TESTING

A. General:
   1. Prior to delivery and incorporation in the Work, submit listing of sources of materials, when specified in sections where materials are specified.
   2. When specified in sections where products are specified:
      a. Submit sufficient quantities of representative samples of character and quality required of materials to be used in the Work for testing or examination.
      b. Test materials in accordance with standards of national technical organizations.

B. Sampling:
   1. Furnish specimens of materials when requested.
   2. Do not use materials which are required to be tested until testing indicates satisfactory compliance with specified requirements.
   3. Specimens of materials will be taken for testing whenever necessary to determine quality of material.
   4. Assist Engineer in preparation of test specimens at site of work, such as soil samples and concrete test cylinders.

1.09 TESTING AND INSPECTION SERVICES

A. Contractor will employ and pay for specified services of an independent firm to perform Contractor quality control testing as required in the technical specifications for various work and materials.

B. Owner will employ and pay for specified services of an “Owner’s independent testing firm” certified to perform testing and inspection as required in the technical specifications for various work and materials or stipulated in Section 01455 - Regulatory Quality Assurance to confirm Contractor’s compliance with Contract Documents.

C. The Owner’s independent testing firm will perform tests, inspections and other services specified in individual specification sections and as required by Owner and requested by the Engineer.

D. The qualifications of laboratory that will perform the testing, contracted by the Owner or by the Contractor, shall be as follows:
   1. Has authorization to operate in the state where the project is located.
   2. Meets “Recommended Requirements for Independent Laboratory Qualification,” published by American Council of Independent Laboratories.
   3. Meets requirements of ASTM E329.
   4. Laboratory Staff: Maintain full time specialist on staff to review services.
   5. Testing Equipment: Calibrated at reasonable intervals with devices of accuracy traceable to NIST or accepted values of natural physical constants.
   6. Will submit copy of report of inspection of facilities made by Materials Reference Laboratory of NIST during most recent tour of inspection, with memorandum of remedies of deficiencies reported by inspection.

E. Testing, inspections, and source quality control may occur on or off project site. Perform off-site testing inspections and source quality control as required by Engineer or Owner.

F. Contractor shall cooperate with Owner’s independent testing firm, furnish samples of materials, design mix, equipment, tools, storage, safe access, and assistance by incidental labor as requested.
   1. Notify Engineer and Owner’s independent testing firm 48 hours prior to expected time for operations requiring testing.
   2. Make arrangements with Owner’s independent testing firm and pay for additional samples and tests required for Contractor’s use.

G. Limitations of authority of testing Laboratory: Owner’s independent testing firm or Laboratory is not authorized to:
   1. Agency or laboratory may not release, revoke, alter, or enlarge on requirements of Contract Documents.
   2. Agency or laboratory may not approve or accept any portion of the Work.
   3. Agency or laboratory may not assume duties of Contractor.
   4. Agency or laboratory has no authority to stop the Work.

H. Testing and employment of an Owner’s independent testing firm or laboratory shall not relieve Contractor of obligation to perform Work in accordance with requirements of Contract Documents.

I. Re-testing or re-inspection required because of non-conformance to specified requirements shall be performed by same Owner’s independent testing firm on instructions by Engineer. Payment for re-testing or re-inspection will be charged to Contractor by deducting testing charges from Contract Sum/Price.

J. The Owner's independent testing firm responsibilities will include:
   1. Test samples of mixes submitted by Contractor.
   2. Provide qualified personnel at site. Cooperate with Engineer and Contractor in performance of services.
   3. Perform specified sampling and testing of products in accordance with specified standards.
   4. Ascertain compliance of materials and mixes with requirements of Contract Documents.
   5. Promptly notify Engineer and Contractor of observed irregularities or non-conformance of Work or products.
   6. Perform additional tests required by Engineer.
   7. Attend preconstruction meetings and progress meetings when requested.

K. Owner's independent testing firm shall do the following:
   1. Test reports shall include at least the following information:
      a. Date issued.
      b. Project title and number.
      c. Name of inspector.
      d. Date and time of sampling or inspection.
      e. Identification of product and specifications section.
      f. Location in Project.
      g. Type of inspection or test.
      h. Date of test.
      i. Certified test results stamped and signed by a registered Engineer in the state where the project is located.
      j. Summary of conformance with Contract Documents.
      k. When requested by Engineer, the Owner's independent testing firm will provide interpretation of test results.

1.10 CONTRACTOR'S RESPONSIBILITIES

A. Cooperate with Owner's independent testing firm or laboratory personnel and provide access to construction and manufacturing operations.

B. Secure and deliver to Owner's independent testing firm or laboratory adequate quantities of representative samples of materials proposed to be used and which require testing.

C. Provide to Owner's independent testing firm or laboratory and Engineer preliminary mix design proposed to be used for concrete, and other materials mixes which require control by testing laboratory.

D. Submit product test reports electronically.

E. Furnish incidental labor and facilities:
   1. To provide access to construction to be tested.
   2. To obtain and handle samples at Work site or at source of product to be tested.
   3. To facilitate inspections and tests.
   4. For storage and curing of test samples.

F. Notify Owner's independent testing firm or laboratory 48 hours in advance of when observations, inspections and testing is needed for laboratory to schedule and perform in accordance with their notice of response time.

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01455

REGULATORY QUALITY ASSURANCE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Project regulatory requirements for quality assurance that includes Special Inspections, Special Certification, and Structural Observation.

B. Special Certification and Special Inspections in this Section are in addition to the requirements specified in Section 01450 - Quality Control, and in the individual Sections.

1.02 REFERENCES

A. American Concrete Institute (ACI):
   1. 318 - Building Code Requirements for Structural Concrete.
   2. 530 - Building Code Requirements for Masonry Structures.
   3. 530.1 - Specification for Masonry Structures.

B. American Institute of Steel Construction (AISC):
   1. 360 - Specification for Structural Steel Buildings.

C. American Society of Civil Engineers (ASCE):
   1. 7 - Minimum Design Loads for Buildings and Other Structures.

D. American Welding Society (AWS):
   1. D1.3 - Structural Welding Code - Sheet Steel.
   2. D1.4 - Structural Welding Code - Reinforcing Steel.

E. ASTM International (ASTM):
   1. A706 - Standard Specification for Deformed and Plain Low-Alloy Steel Bars for Concrete Reinforcement.
   2. C31 - Standard Practice for Making and Curing Concrete Test Specimens in the Field.
   3. C172 - Standard Practice for Sampling Freshly Mixed Concrete.
   4. C1611 - Standard Test Method for Slump Flow of Self-Consolidating Concrete.

F. Building Code:
   1. As specified in Section 01410 - Regulatory Requirements.

G. The Masonry Society (TMS):
   1. 402 - Building Code for Masonry Structures.
   2. 602 - Specifications for Masonry Structures.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Special Certification: Certification for designated seismic systems that demonstrates compliance with performance requirements.
   2. Special Inspection: Inspection of the materials, installation, fabrication, erection, or placement of components and connections requiring special expertise to ensure compliance with approved construction documents and referenced standards.
   3. Special Inspection, Continuous: The full-time observation of work requiring Special Inspection by an approved special inspector who is present in the area where the work is being performed.
   4. Special Inspection, Periodic: The part-time, or intermittent observation of work requiring Special Inspection by an approved special inspector who is present in the area where the work is being performed and at the completion of the work.
   5. Structural Observation: The visual observation of the structural system by a registered design professional for general conformance to the approved construction documents at significant construction stages and at completion of the structural system.

1.04 SUBMITTALS

A. Submit Special Certifications for designated seismic systems.

B. Schedule and coordinate the submittal of Special Inspection reports and test results prepared by others.

1.05 APPROVED FABRICATORS

A. Structural steel fabricators shall be approved as required herein. Shops shall be those listed by ICBO/ICC, AISC, COLA, or other nationally-recognized agencies. Approved fabricator certificates and shop inspection test results shall be submitted for approval as part of the shop drawing submittal process per CBC Section 1704.2.5.2.

1.06 SPECIAL INSPECTION

A. Owner will employ 1 or more special inspectors who will provide Special Inspections during construction.

B. Special inspector(s) shall be qualified for inspection of the particular type of materials or operations requiring Special Inspection.

C. Testing laboratory: Testing that is required to satisfy the requirements of Special Inspection will be performed by the Owner’s testing laboratory as specified in Section 01450 - Quality Control.

D. Duties of special inspector:
   1. General: Required duties of the special inspector(s) shall be as described in the Building Code.

2. Reporting: Special inspector(s) shall provide reports of each inspection to the Contractor. Contractor shall distribute copies of inspection reports to the Owner.
    a. Reports shall, at a minimum, include the following items:
        1) Date and time of inspection, and name(s) of individual(s) performing the inspection.
        2) Structures and areas of the structure where work or testing was observed.
        3) Discrepancies between the requirements of the Contract Documents and the work or testing observed.
        4) Other areas of deficiency in the Work.

E. Special Inspections shall not be construed as fulfilling the requirements for Structural Observation.

F. Owner or special inspector are responsible to select materials for Special Inspection.
    1. Contractor shall not select materials for Special Inspection.

1.07 SPECIAL CERTIFICATION

A. Provide equipment that meets the special certification requirements of the Building Code.

B. Designated seismic systems shall be subject to the testing and qualification requirements of the regulatory Building Code, and shall require Special Certification as set forth in ASCE 7:
    1. Mechanical equipment that is assigned an importance factor of 1.50 as specified in Section 01850 - Design Criteria.
    2. All electrical equipment.

C. Special certification requirements for designated seismic systems:
    1. Submittals shall include certification that the equipment is seismically qualified. Certifications are subject to review and acceptance by Owner.
    2. Certifications may be at least one of the following in accordance with ASCE 7:
        a. Analysis.
        b. Testing.
        c. Experience data.

1.08 STRUCTURAL OBSERVATION

A. Owner will employ 1 or more registered design professionals to provide Structural Observation(s) during construction.
    1. Registered design professional will be a civil or structural engineer currently licensed as such in the state where the project is located and regularly engaged in structural design equivalent to or similar to that indicated on the Drawings.

B. Structural Observations shall not be construed as fulfilling the requirements for Special Inspections.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 SPECIAL INSPECTIONS

A. Owner will provide Special Inspection of the following types of work as described in the Building Code wherever such work occurs, unless otherwise specified.
   1. Attachment A - Concrete - Special Inspection Schedule.
   2. Attachment B - Architectural, Mechanical, and Electrical Components - Special Inspection Schedule.
   3. Attachment C - Masonry Special Inspection Schedule - “Level C".
   4. Attachment D - Soils - Special Inspection Schedule.
   5. Attachment E - Structural Steel Welding - Special Inspection Schedule.

3.02 SPECIAL CERTIFICATION

A. Special inspector shall examine the designated seismic system(s) and determine whether the designated system components, including anchorage, are consistent with the evidence of compliance submitted for Special Certification.

3.03 STRUCTURAL OBSERVATION

A. The following work requires Structural Observation in accordance with the Building Code.
   1. All structures in all areas:
      a. Foundations.
      b. Elevated slabs.

3.04 SCHEDULE

A. Contractor shall allow time necessary for Special Inspections and Structural Observation specified in this Section.

B. Sufficient notice shall be given so that the Special Inspections and Structural Observations can be performed. Contractor shall Allow time for individuals performing special inspection and structural observation to travel to the site.

3.05 PROCEDURE

A. Special inspector will immediately notify the Engineer of any corrections required and follow notification with appropriate documentation.

B. Contractor shall not proceed until the work is satisfactory to the Engineer.

END OF SECTION

ATTACHMENT A - CONCRETE - SPECIAL INSPECTION SCHEDULE

CONCRETE - SPECIAL INSPECTION SCHEDULE
(Includes: Cast-in-place, precast, prestressed, precast-prestressed, and shotcrete.)

Verification and Inspection	Reference Standard	Frequency of Inspection[1] (During Task Listed)	
		Continuous	Periodic
1. Inspect reinforcement, including prestressing tendons, and verify placement.	ACI 318 Building Code		●
2. Reinforcing bar welding:			
a. Verify weldability of reinforcing bars other than ASTM A706;	AWS D1.4 ACI 318		●
b. Inspect single-pass fillet welds, maximum 5/16 inch; and	AWS D1.4 ACI 318		●
c. Inspect all other welds.	AWS D1.4 ACI 318	●	
3. Inspect anchors cast in concrete.	ACI 318		●
4. Inspect anchors post-installed in hardened concrete members:			
a. Adhesive anchors installed in horizontally or upwardly inclined orientations to resist sustained tension loads.	ACI 318	●	
b. Mechanical anchors and adhesive anchors not defined in 4.a.	ACI 318		●
5. Verify use of required design mix.	ACI 318 Building Code		●
6. Prior to concrete placement, fabricate specimens for strength tests, perform slump and air content tests, and determine the temperature of the concrete.	ASTM C172 ASTM C31 ACI 318 Building Code	●	
7. Inspect concrete and shotcrete placement for proper application techniques.	ACI 318 Building Code	●	
8. Verify maintenance of specified curing temperature and techniques.	ACI 318 Building Code		●
9. Inspect prestressed concrete for:			
a. Application of prestressing forces; and	ACI 318	●	
b. Grouting of bonded prestressing tendons.	ACI 318	●	
10. Inspect erection of precast concrete members.	ACI 318		●
11. Verify in-situ concrete strength, prior to stressing of tendons in post-tensioned concrete and prior to removal of shores and forms from beams and structural slabs.	ACI 318		●

Verification and Inspection	Reference Standard	Frequency of Inspection[1] (During Task Listed)	
		Continuous	Periodic
12. Inspect formwork for shape, location and dimensions of the concrete member being formed.	ACI 318		●

Notes:

(1) "●" represents a required inspection activity for the project where it occurs.

ATTACHMENT B - ARCHITECTURAL, MECHANICAL, AND ELECTRICAL COMPONENTS - SPECIAL INSPECTION SCHEDULE

ARCHITECTURAL, MECHANICAL, AND ELECTRICAL COMPONENTS - SPECIAL INSPECTION SCHEDULE

Verification and Inspection	Reference Standard 2022 CBC	Frequency of Inspection[1] (During Task Listed)	
		Continuous	Periodic
1. Architectural components:			
a. Cladding - exterior, weighing more than 5 psf: Erection and fastening.	Building Code		●
b. Exterior insulation and finish system (EIFS):	Building Code		
c. Non-bearing walls - exterior: Erection and fastening.	Building Code		●
d. Non-bearing walls - interior, weighing more than 15 psf.	Building Code		●
e. Veneer, exterior and interior, weighing more than 5 psf: Erection and fastening.	Building Code		●
f. Access floors: Erection and anchorage.	Building Code		●
g. Suspended ceiling system: Bracing.			●
h. Storage racks - 8 feet or greater in height: Anchorage.	Building Code		●
i. Skylight: Verification of safety compliance and labeling and installation.	Building Code		●
2. Plumbing, mechanical, and electrical components:			
a. Anchorage of electrical equipment for emergency and standby power systems.	Building Code		●
b. Anchorage of other electrical and mechanical equipment over 400 lb. on floors or roofs.	Building Code		●
c. Installation and anchorage of pipelines carrying hazardous chemicals and their associated mechanical units.	Building Code		●
d. Installation and anchorage of pipelines greater than 8 inches in diameter.			●
e. Installation and anchorage of ductwork designed to carry hazardous materials.	Building Code		●
f. Installation and anchorage of ductwork greater than 6 sf in cross section.			●
g. Installation and anchorage of vibration isolation systems where Contract Documents require nominal clearance of 1/4 inch or less between the equipment support frame and its support/restraint.	Building Code		●

Verification and Inspection	Reference Standard 2022 CBC	Frequency of Inspection[1] (During Task Listed)	
		Continuous	Periodic
h. Installation of mechanical and electrical equipment, including duct work, piping systems and their structural supports, where automatic fire sprinkler systems are installed.	Building Code		●
3. Fire-resistance elements:			
a. Sprayed fire-resistant coatings:	Building Code		
b. Mastic and intumescent coatings:	Building Code		
c. Fire-resistant penetrations and joint systems:	Building Code		
4. Smoke control systems;	Building Code		

Notes:

(1) "●" represents a required inspection activity for the project where it occurs.

ATTACHMENT C- MASONRY SPECIAL INSPECTION SCHEDULE - “LEVEL C”

MASONRY SPECIAL INSPECTION SCHEDULE - "LEVEL C"

MINIMUM TESTS

Verification of Slump flow and Visual Stability Index (VSI) as delivered to the project site as determined by ASTM C1611 for self-consolidating grout.

Verification of proportions of materials in premixed or pre-blended mortar and grout as delivered to the project site.

Verification of f'_m in accordance with Specification Section 04220 - Concrete Unit Masonry prior to construction.

MINIMUM SPECIAL INSPECTION - LEVEL C			
Verification and Inspection	**Reference Standard**	**Frequency of Inspection(1) (During Task Listed)**	
		Continuous	**Periodic**
1. Verify compliance with the approved submittals.	TMS 602/ACI 530.1		●
2. As masonry construction begins, verify that the following are in compliance:			
a. Proportions of site-prepared mortar.	TMS 602/ACI 530.1		●
b. Placement of masonry units and construction of mortar joints.	TMS 602/ACI 530.1		●
c. Placement of reinforcement, connectors, and anchors.	TMS 602/ACI 530.1 TMS 402/ACI 530	●	
a. Reinforcing bar couplers and terminators.	ICC-ES Evaluation Report	●	
3. Prior to grouting, verify that the following are in compliance:			
a. Placement of masonry units and construction of mortar joints.	TMS 602/ACI 530.1		●
b. Grout space.	TMS 602/ACI 530.1	●	
c. Grade, type, and size of reinforcement and anchor bolts.	TMS 602/ACI 530.1 TMS 402/ACI 530		●
d. Placement of reinforcement, connectors, and anchors.	TMS 602/ACI 530.1 TMS 402/ACI 530	●	
4. Verify during construction:			
a. Size and location of structural elements:	TMS 602/ACI 530.1		●
b. Type, size, and location of anchors, including details of anchorage of masonry to structural members, frames, or other construction.	TMS 402/ACI 530	●	
c. Welding of reinforcement.	TMS 402/ACI 530	●	

MINIMUM SPECIAL INSPECTION - LEVEL C			
Verification and Inspection	**Reference Standard**	**Frequency of Inspection(1) (During Task Listed)**	
		Continuous	**Periodic**
d. Preparation, construction, and protection of masonry during cold weather (temperature below 40 degrees F) or hot weather (temperature above 90 degrees F).	TMS 602/ACI 530.1		●
5. Observe preparation of grout specimens, mortar specimens, and/or prisms.	TMS 602/ACI 530.1	●	
Notes:			
(1) "●" represents a required inspection activity for the project where it occurs.			

ATTACHMENT D - SOILS - SPECIAL INSPECTION SCHEDULE

SOILS - SPECIAL INSPECTION SCHEDULE

Verification and Inspection	Reference Standard 2022 CBC	Frequency of Inspection[1] (During Task Listed)	
		Continuous	Periodic
1. Verify materials below shallow foundations are adequate to achieve the design bearing capacity.	Building Code		●
2. Verify excavations are extended to proper depth and have reached proper material.	Building Code		●
3. Perform classification and testing of fill and backfill materials.	Building Code		●
4. Verify use of proper materials, densities, and lift thicknesses during placement and compaction of fill and backfill.	Building Code	●	
5. Prior to placement of fill, observe subgrade and verify that site has been prepared properly.	Building Code		●

Notes:

(1) "●" represents a required inspection activity for the project where it occurs.

ATTACHMENT E - STRUCTURAL STEEL WELDING - SPECIAL INSPECTION SCHEDULE

STRUCTURAL STEEL WELDING - SPECIAL INSPECTION SCHEDULE

Verification and Inspection	Reference Standard	Frequency of Inspection[1] (During Task Listed)	
		Continuous	Periodic
Inspection Tasks Prior to Welding	AISC 360		
1. Welding procedure specifications (WPSs) available.		●	
2. Manufacturer certifications for welding consumables available.		●	
3. Material identification (type/grade).			●
4. Welder identification system.			●
5. Fit-up groove welds (including joint geometry): • Joint preparation. • Dimensions (alignment, root opening, root face, bevel). • Cleanliness (condition of steel surfaces). • Tacking (tack weld quality and location). • Backing type and fit (if applicable).			●
6. Configuration and finish of access holes.			●
7. Fit-up of fillet welds: • Dimensions (alignment, gaps at root). • Cleanliness (condition of steel surfaces). • Tacking (tack weld quality and location).			●
8. Check welding equipment.			●
Inspection Tasks During Welding	AISC 360		
9. Use of qualified welders.			●
10. Control and handling of welding consumables: • Packaging. • Exposure control.			●
11. No welding over cracked tack welds.			●
12. Environmental conditions: • Wind speed within limits. • Precipitation and temperature.			●
13. WPS followed: • Settings on welding equipment. • Travel speed. • Selected welding materials. • Shielding gas type/flow rate. • Preheat applied. • Interpass temperature maintained (min/max). • Proper position (F, V, H, OH).			●

Verification and Inspection	Reference Standard	Frequency of Inspection[1] (During Task Listed)	
		Continuous	Periodic
14. Welding techniques: • Interpass and final cleaning. • Each pass within profile limitations. • Each pass meets quality requirements.			●
Inspection Tasks After Welding	AISC 360		
15. Welds cleaned.			●
16. Size, length, and location of welds.		●	
17. Welds meet visual acceptance criteria: • Crack prohibition. • Weld/base-metal fusion. • Crater cross section. • Weld profiles. • Weld size. • Undercut. • Porosity.		●	
18. Arc strikes.		●	
19. k-area.		●	
20. Backing removed and weld tabs removed (if required).		●	
21. Repair activities.		●	
22. Document acceptance or rejection of welded joint or member.		●	
Notes: (1) "●" represents a required inspection activity for the project where it occurs.			

SECTION 01500

TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Furnishing, maintaining, and removing construction facilities and temporary controls, including temporary utilities, construction aids, barriers and enclosures, security, access roads, temporary controls, project sign, field offices and sheds, and removal after construction.

1.02 REFERENCE

A. American National Standards Institute (ANSI).

B. Occupational Safety and Health Administration (OSHA).

1.03 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

1.04 TEMPORARY UTILITIES

A. Temporary electrical power:
   1. Arrange with local utility to provide adequate temporary electrical service.
   2. Provide and maintain adequate jobsite power distribution facilities conforming to applicable Laws and Regulations.
   3. Provide, maintain, and pay for electric power for performance of the Work.

B. Temporary electrical lighting:
   1. In work areas, provide temporary lighting sufficient to maintain lighting levels during working hours not less than lighting levels required by OSHA and state agency which administers OSHA regulations where Project is located.
   2. When available, permanent lighting facilities may be used in lieu of temporary facilities:
      a. Prior to Substantial Completion of the Work, replace bulbs, lamps, or tubes used by Contractor for lighting.

C. Temporary heating, cooling, and ventilating:
   1. Heat and ventilate work areas to protect the Work from damage by freezing, high temperatures, weather, and to provide safe environment for workers.
   2. Permanent heating system may be utilized when sufficiently completed to allow safe operation.

D. Temporary water:
   1. Pay for and construct facilities necessary to furnish potable water for human consumption and non-potable water for use during construction.

2. Remove temporary piping and connections and restore affected portions of the facility to original condition before Substantial Completion.
3. Pay for water used for construction prior to Substantial Completion.

E. Temporary sanitary facilities:
1. Provide suitable and adequate sanitary facilities that are in compliance with applicable Laws and Regulations.
2. Existing facility use is not allowed.
3. At completion of the Work, remove sanitary facilities and leave site in neat and sanitary condition.

F. Temporary fire protection:
1. Provide sufficient number of fire extinguishers of type and capacity required to protect the Work and ancillary facilities.

G. First aid: Post first aid facilities and information posters conforming to requirements of OSHA and other applicable Laws and Regulations in readily accessible locations.

H. Utilities in existing facilities: As specified in Section 01140 - Work Restrictions.

I. Temporary piping for interim recharge:
1. Submit layout drawings showing proposed routing of piping, including proposed pipe support and pipe restraint locations.
2. Submit product data for piping, fittings, appurtenances, restraints, supports, and other components of the temporary piping system.
3. Submit information at least 28 days prior to when each temporary piping system is scheduled to be installed and allow 14 days for review and comment.

1.05 CONSTRUCTION AIDS

A. Provide railings, kick plates, enclosures, safety devices, and controls required by Laws and Regulations and as required for adequate protection of life and property.

B. Use construction hoists, elevators, scaffolds, stages, shoring, and similar temporary facilities of ample size and capacity to adequately support and move loads.

C. Design temporary supports with adequate safety factor to ensure adequate load bearing capability:
1. When requested, submit design calculations by professional registered engineer prior to application of loads.
2. Submitted design calculations are for information and record purposes only.

D. Accident prevention:
1. Exercise precautions throughout construction for protection of persons and property.
2. Observe safety provisions of applicable Laws and Regulations.
3. Guard machinery and equipment and eliminate other hazards.

4. Make reports required by authorities having jurisdiction, and permit safety inspections of the Work.
5. Before commencing construction work, take necessary action to comply with provisions for safety and accident prevention.

E. Barricades:
1. Place barriers at ends of excavations and along excavations to warn pedestrian and vehicular traffic of excavations.
2. Provide barriers with flashing lights after dark.
3. Keep barriers in place until excavations are entirely backfilled and compacted.
4. Barricade excavations to prevent persons from entering excavated areas in streets, roadways, parking lots, treatment plants, or other public or private areas.

F. Warning devices and barricades: Adequately identify and guard hazardous areas and conditions by visual warning devices and, where necessary, physical barriers:
1. Provide devices in accordance with minimum requirements of OSHA and State agency which administers OSHA regulations where Project is located.

G. Hazards in public right-of-way:
1. Comply with local jurisdiction standards and requirements for right-of-way barricades and other safety devices.
2. Mark at reasonable intervals, trenches, and other continuous excavations in public right-of-way, running parallel to general flow of traffic, with traffic cones, barricades, or other suitable visual markers during daylight hours:
   a. During hours of darkness, provide markers with torches, flashers, or other adequate lights.
3. At intersections or for pits and similar excavations, where traffic may reasonably be expected to approach head on, protect excavations by continuous barricades:
   a. During hours of darkness, provide warning lights at close intervals.

H. Hazards in protected areas: Mark or guard excavations in areas from which public is excluded, in manner appropriate for hazard.

I. Above grade protection: On multi-level structures, provide safety protection that meets requirements of OSHA and State agency which administers OSHA regulations where Project is located.

J. Protect existing structures, trees, shrubs, and other items to be preserved on Project site from injury, damage, or destruction by vehicles, equipment, worker or other agents with substantial barricades or other devices commensurate with hazards.

K. Fences:
1. Enclose site of the Work with fence adequate to protect the Work against acts of theft, violence, and vandalism.
2. When entire or part of site is to be permanently fenced, permanent fence may be built to serve for both permanent and temporary protection of the work site, provided that damaged or defaced fencing is replaced prior to Substantial Completion.

3. Protect temporary and permanent openings and close openings in existing fences to prevent intrusion by unauthorized persons.
    a. Bear responsibility for protection of plant and material on site of the Work when openings in existing fences are not closed.
4. During night hours, weekends, holidays, and other times when no work is performed at site, provide temporary closures or enlist services of security guards to protect temporary openings.
5. Fence temporary openings when openings are no longer necessary.

1.06 SECURITY

A. Make adequate provision for protection of the work area against fire, theft, and vandalism, and for protection of public against exposure to injury.

1.07 ACCESS ROADS

A. General:
    1. Build and maintain access roads to and on site of the Work to provide for delivery of material and for access to existing and operating plant facilities on site.
    2. Build and maintain dust free roads which are suitable for travel at 20 miles per hour.

B. Off-site access roads:
    1. Build and maintain graded earth roads.
    2. Build roads only in public right-of-way or easements obtained by Owner.
    3. Obtain rights-of-way or easements when electing to build along other alignment.

C. On-site access roads:
    1. Maintain access roads to storage areas and other areas to which frequent access is required.
    2. Maintain similar roads to existing facilities on site of the Work to provide access for maintenance and operation.
    3. Protect buried vulnerable utilities under temporary roads with steel plates, wood planking, or bridges.
    4. Maintain on-site access roads free of mud.
    5. Provide controls to prevent vehicles leaving the site from tracking mud off the site onto the public right-of-way.

1.08 TEMPORARY CONTROLS

A. Dust control:
    1. Prevent dust nuisance caused by operations, unpaved roads, excavation, backfilling, demolition, or other activities.
    2. Control dust by sprinkling with water, use of dust palliatives, modification of operations, or other means acceptable to agencies having jurisdiction.

B. Noise control:
    1. Comply with noise and work hours regulations by local jurisdiction.

2. In or near inhabited areas, particularly residential, perform operations in manner to minimize noise.
3. In residential areas, take special measures to suppress noise during night hours.

C. Mud control:
1. Prevent mud nuisance caused by construction operations, unpaved roads, excavation, backfilling, demolition, or other activities.

1.09 PROJECT SIGN

A. Provide and maintain Project identification sign at each well site consisting of painted 8-foot wide by 4-foot high exterior grade plywood and minimum 10-foot long, 4 by 4 lumber posts, set in ground at least 3 feet, with exhibit lettering by professional sign painter using no more than 5 sign colors:
1. List at least the title of the Project, and names of the Owner, Engineer, Construction Manager and Contractor.
2. Identify Contractor's, Engineer's, and Construction Manager's names in upper right-hand corner underneath the bid number.

B. On third and fourth lines of printing, paint appropriate dollar amounts.

C. Erect Project identification sign where directed by Engineer within 14 days after the issuance of the Notice to Proceed.

D. Replace or repair the project sign if it is damaged or covered with graffiti within 2 working days of observation or notification of damage or graffiti.

1.10 CONTRACTOR FIELD OFFICES AND SHEDS

A. Maintain on Project Site weather tight space in which to keep copies of Contract Documents, progress schedule, shop drawings, and other relevant documents.

B. Provide field office with adequate space to examine documents and provide lighting and telephone service in that space.

1.11 REMOVAL

A. Remove temporary facilities and controls before inspection for Substantial Completion or when directed.

B. Clean and repair damage caused by installation or use of temporary facilities.

C. Remove underground installations to minimum depth of 24 inches and grade to match surrounding conditions.

D. Restore existing facilities used during construction to specified or original condition.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01550

TRAFFIC CONTROL

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Traffic control requirements to keep streets and traffic ways open for the passage of vehicles and pedestrians during the construction period.

1.02 SUBMITTALS

A. Approved and signed copies of:
   1. Encroachment permit.
   2. Right-of-way occupancy permit.
   3. Traffic control plan (TCP).
   4. Notification plan.

1.03 AUTHORITIES HAVING JURISDICTION (AHJ)

A. Authorities Having Jurisdiction (AHJ) as specified in Section 01410 - Regulatory Requirements.

B. AHJ traffic control requirements supersede the requirements of this Section.

C. Comply with AHJ traffic control requirements.

1.04 MEASUREMENT AND PAYMENT

A. Contractor is responsible for costs associated with permits, plans, implementation, and maintenance as specified in the Agreement and Contract RFP in Volumes 1 and 2.

1.05 ENCROACHMENT PERMIT

A. Obtain Encroachment Permit approved by the AHJ.

1.06 RIGHTS-OF-WAY OCCUPANCY PERMIT

A. Obtain Rights-of-Way Occupancy Permit approved by the AHJ.

1.07 TRAFFIC CONTROL PLAN (TCP)

A. Approval of the TCP by the AHJ shall in no way relieve the Contractor of the responsibility for traffic and safety requirements.

B. Include labor, material, equipment, tools, and services used in the regulation of construction traffic to and from the Project Site, as well as public vehicular and pedestrian traffic within the Project limits.

C. Provide a TCP for each phase or segment of the construction meeting the requirements of the AHJ and as specified in this Section.
   1. Each TCP shall be considered separately.

D. Obtain TCP approved by the AHJ.

E. TCP constraints:
   1. Access to local streets and residences shall be maintained at all times, except as noted.
      a. Turn lanes are not considered as travel lanes.
      b. Provide 1 travel lane that is 12 feet wide in each direction at all times.
      c. The table below describes the traffic control restrictions.

Traffic Control Lane Closure Special Requirements		
Street Name	**Days/Hours**	**Minimum Lanes to Remain Open**
Pleasant Grove Blvd.	All times	two lanes in each direction shall remain open at all times (see note 1).
Painted Desert Dr.	All times	one lane shall remain open at all times (see note 1).
Notes: (1) The roadway shall be open at all times.		

F. Submit approved TCP to the Engineer within 48 hours of approval by the AHJ. Changes to the TCP:
   1. If, during the execution of the Work, the Contractor determines that the traffic control is not functioning as intended, submit revised TCP to the AHJ for approval.
   2. Submit revised approved TCP to the Engineer within 48 hours of completing a change.

G. Provide for the protection of the traveling public, pedestrians, and workers within the area covered by the limits of construction, at all times when the area is affected by construction facilities or activities, including the following:
   1. Public traffic access.
   2. Business access.
   3. Private property access.
      a. Warn, control, protect, and expedite vehicular and pedestrian traffic through the private property.
   4. Driveway access.
   5. Pedestrian access.
   6. Bus stop access.
      a. Provide bus stop closure schedule (BSCS) attached to the TCP.
      b. BSCS shall identify specific durations and times of day for proposed bus stop closures.
      c. Closures are not to exceed 2 consecutive bus stops at a time or 1,000 feet at a time.

d. During construction, coordinate with the AHJ regarding specific dates of bus stop closures.
    1) Inform the Owner of coordination details.
7. Sanitation (trash) truck access.
8. Bike access.
    a. Maintain safe bike facilities through the work zone and associated traffic control layouts.
    b. Provide alternative bike facilities or designated detour routes when necessitated by temporary removal of existing bike lanes.
9. Emergency vehicle access.
    a. Maintain access for emergency vehicles at all times.
10. School zones and safe routes to school.
    a. When a designated safe route to school is encroached upon by a construction work zone or the AHJ identifies a need for students to be assisted in the safe crossing through the work zone, provide a qualified crossing guard approved by the AHJ.
        1) Crossing guard shall be present for the full duration of time that children are likely to be present, as determined by the AHJ.
        2) Contractor is responsible for fees associated with the use of crossing guards.
11. Protection from excavations.
12. Limit access to work sites.

1.08 NOTIFICATION PLAN

A. Submit Notification Plan to the Engineer for approval.

B. Define who will notify, how they will notify, and when they will notify.
    1. Notify affected emergency agencies, residences, and businesses within the area of current work 15 days prior to start of operations.
    2. Notify the AHJ for any traffic control or work areas affecting traffic signals, public bus routes, or bus stops at a minimum of 72 hours prior to any the work.

C. Notify the Engineer 15 days prior to start of construction.

D. Notify the AHJ a minimum of 2 working days prior to the anticipated beginning of construction.
    1. Emergency services, such as police and fire.
    2. Other services, such as bus service, mail, and garbage collection.

E. Residential areas:
    1. Notify adjacent residents as applicable at least 4 days prior to restricting driveway access or starting any work, using “door knob type” notices approved by the Engineer.
        a. Describe the impending work.
        b. Identify dates and stages of work.
    2. Give special consideration to multi-family residential complexes and other high-density uses.

F. Vehicular traffic: Define placement of the following:
   1. Project signs.
      a. Locate as indicated on the Drawings.
   2. Text message boards.
      a. Locate as indicated on the Drawings.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01562

TEMPORARY TREE AND PLANT PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Tree and plant protection.

1.02 REFERENCES

A. American National Standards Institute (ANSI):
   1. A300 - For Tree Care Operations - Tree, Shrub, and Other Woody Plant Maintenance Standard Practices (Pruning).

B. American Society of Consulting Arborists (ASCA).

C. International Society of Arboriculture (ISA).

D. City of Roseville Municipal Code.

1.03 MEASUREMENT AND PAYMENT

A. Payment for tree protection, including tree pruning or tree removal, shall be paid as a lump sum basis that shall include all items specified in this Section unless payment is specified otherwise in this Section.

1.04 SUBMITTALS

A. As specified in Section 01330 - Submittal Procedures.

B. Tree Permit Application per City of Roseville Municipal Code, Chapter 19.66, which includes but is not limited to:
   1. Arborist's Report.
   2. Site Plan Map.
   3. Utility Trenching Pathway Plan.

C. Certification of a Registered Consulting Arborist (designated ASCA or ISA) to review and approve temporary protection measures for trees indicated to remain.

D. Protection Zone Exhibit indicating intended location of tree protection fencing.

E. Tree maintenance plan: Arborist recommendations for care of trees, both during construction and after work is completed.

1.05 PROJECT CONDITIONS

A. The CONTRACTOR shall acquire an approved Tree Permit from the City of Roseville for any regulated activity within the protected zone of a protected tree

where the encroachment exceeds 20 percent of the protected zone, or as required by project construction. Refer to the Attachment A - City of Roseville Municipal Code, Chapter 19.66 for details and exemptions where a Tree Permit is not needed.

B. Preserve and protect existing trees and plants to remain from foliage, branch, trunk, or root damage that could result from construction operations.

C. Prevent damage including, but not limited to, the following:
   1. Trunk damage from equipment operations, material storage, or from nailing or bolting.
   2. Trunk and branch damage caused by ropes or guy wires.
   3. Root or soil contamination from spilled solvents, gasoline, paint, lime slurry, and other noxious materials.

1.06 QUALITY ASSURANCE

A. Arborist qualifications: Certified by ISA.

B. Pre-construction conference: To establish schedule and procedures for tree protection.

C. Pre-construction documentation: To establish pre-construction condition of existing tree to remain that might be misconstrued as damage caused by construction.

PART 2 PRODUCTS

2.01 MATERIALS

A. Pruning paint: Black latex, water-based paint, free of all petroleum products.

B. Tree protection fencing: As indicated on the Drawings.
   1. Provide continuous fencing between posts, pulled taut prior to securing to posts, and firmly attached to the posts with a minimum of 4 wire ties.
   2. Orange, plastic mesh fencing:
      a. Fencing minimum height: 4 feet.
      b. “t” bar posts:
         1) Minimum height: 5 feet.
         2) Installed 7 feet on centers or as required to maintain vertical fence.
   3. Chain-link fencing:
      a. Galvanized-steel fencing fabricated from minimum 2-inch opening, 0.148-inch-diameter wire chain-link fabric.
      b. Fencing minimum height: 60-inches high.
      c. Pipe posts:
         1) Minimum outside diameter (OD) line posts: 2-3/8-inch OD.
         2) Minimum outside diameter (OD) corner and pull posts: 2-7/8-inch OD.
         3) Top tension wire minimum diameter: 0.177-inch diameter.
         4) Bottom tension wire minimum diameter: 0.177-inch-diameter.
         5) Accessories: Tie wires, hog ring ties, and other accessories for a complete fence system.

PART 3 EXECUTION

3.01 PROTECTION OF EXISTING TREES AND SHRUBS

A. Refer to Attachment A - City of Roseville Municipal Code, Chapter 19.66.

B. Site preparation work and/or construction work shall not begin in any area where tree preservation measures have not been completed and approved.

C. Tree protection zone: Install temporary fencing outside the edge of the protected zone or drip line of the tree to be protected from construction damage.
   1. Install fencing with a radius of the largest diameter of the tree's drip line plus one foot, unless otherwise indicated by Consulting Arborist.
   2. Protect tree and shrub root systems from damage due to noxious materials caused by runoff or spillage while mixing, placing, or storing construction materials.
   3. Protect root systems from flooding, eroding, or excessive wetting.
   4. Do not store construction materials, equipment, debris, or other material within the drip line of remaining trees.
   5. Do not permit vehicles or foot traffic within the drip line; prevent soil compaction over root systems.
   6. Designate limited areas as concrete washout areas away from root zones.

D. Install tree protection fencing around each tree to be preserved as indicated in the tree treatment schedule and on the tree protection plan.
   1. Each tree to be preserved shall be protected with a tree protection fence. Install tree protection fencing prior to site work or construction activity.
   2. Place signs on the fence around each individual protected tree as specified in Attachment A - City of Roseville Municipal Code, Chapter 19.66.
   3. Immediately repair damage to tree fences occurring during the progress of the work at no additional cost to Owner.
   4. Workers shall be clearly instructed to exercise caution in performance of work near trees being preserved.

E. Pruning of trees:
   1. Prune trees in accordance with the ANSI A300 for tree pruning.
      a. City shall have the first right to conduct the pruning required by the Contractor for prosecution of the Work.
      b. Otherwise, pruning shall be completed by professional arborists who have received training in proper pruning techniques.
   2. Make cuts sufficiently close to the parent limb or trunk without cutting into the branch collar or leaving a protruding stub, so that closure can readily start under normal conditions.
      a. All lateral cuts shall be made to a lateral that is least 1/3 the diameter of the parent limb.
      b. Clean cuts shall be made at all times.

3. Prune trees in a manner that will not destroy or alter the natural shape and character of the tree.
    a. Apply black latex paint to fresh wounds on Oak (Quercus) species immediately after each cut is made.
4. Crown cleaning prune designated trees shall include selective removal of dead, diseased, and/or broken limbs.

3.02 EXCAVATION

A. Refer to Attachment A - City of Roseville Municipal Code, Chapter 19.66.

B. Do not excavate within drip line of protected trees.

C. Within drip line of trees, hand clear to minimize damage to root systems.

3.03 TREE REPAIR AND REPLACEMENT

A. Refer to Attachment A - City of Roseville Municipal Code, Chapter 19.66.

B. Promptly treat damaged trunks, limbs, and roots according to written instructions of Consulting Arborist.

3.04 DISPOSAL OF FENCING MATERIALS

A. Promptly remove protective fencing upon completion of construction activities.

END OF SECTION

ATTACHMENT A - CITY OF ROSEVILLE MUNICIPAL CODE, CHAPTER 19.66

CHAPTER 19.66
TREE PRESERVATION

§ 19.66.010. Purpose.

A. Roseville's native vegetation consists of valley grasslands with scattered native oaks and oak and riparian woodlands. Trees in the City enhance the natural scenic beauty, sustain long-term potential increase in property values, maintain original ecology, provide tempering of extreme temperatures, reduce soil erosion and increase the oxygen output of the area needed to combat air pollution.

B. For these reasons, the Council finds that, in order to promote the public health, safety and general welfare of the City of Roseville while at the same time recognizing individual rights to develop private property, it is necessary to enact regulations controlling the removal of and preservation of trees within the City and to reforest our urban environment.

(Ord. 5428 § 1, 2014)

§ 19.66.020. Definitions.

Administrative tree permit. A Tree Permit issued by the Manager that is not associated with a separate discretionary entitlement.

Arborist. An individual certified as an arborist by the International Society of Arboriculture (ISA).

Arborist, city. An arborist employed by or chosen and retained by the City to review, evaluate and prepare reports and requests to remove and/or relocate protected trees. In performing the duties and responsibilities, the City arborist may conduct field inspections independently or in the company of City employees and/or other arborists.

Arborist report. A report prepared by an arborist containing specific information on the location, condition, potential impacts of development, recommended actions and mitigation measures regarding one or more trees on an individual lot or project site.

Certification letter. A concluding statement by an arborist stating that work that was performed was observed by an arborist and complies with the conditions of the discretionary project, the arborist report, the Tree Permit and this Zoning Ordinance.

Cutting. The detaching or separating of any limb, branch or root from a tree.

Dead tree. A tree that does not contain any live tissue (i.e., green leaves or live limbs).

Deadwood. Limbs or branches that contain no green leaves or live limbs.

Deadwooding. The act of removing deadwood. (Not a regulated activity when performed by or under the direct supervision of a certified arborist.)

Developer. Any person conducting any regulated activity within the protected zone of a protected tree.

Diameter at breast height (DBH). The diameter of a tree measured at four and one-half feet above ground level on the high side of the tree. The diameter may be calculated by use of the following formula: DBH = circumference at breast height/3.142.

Dripline. The outermost edge of a tree's canopy prior to any cutting. When depicted on a map, the

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

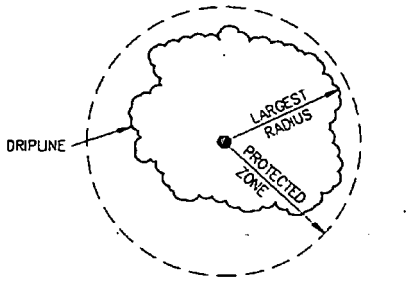
dripline will appear as an irregular shaped circle that follows the contour of the tree's branches as seen from overhead.

Encroachment. Any regulated activity conducted within the protected zone of a protected tree.

Grading. Any removal or deposit of soil or earth material.

Irrigation. Transfer of water to a site by artificial means.

Native oak tree. Any tree of the genus Quercus and species lobata (valley oak), douglasii (blue oak), wislizenii (interior live oak) or hybrids thereof.



Native ground surface fabric. The layer of topsoil, humus, and vegetation that comprises the native ground surface.

Preconstruction phase. The time between the approval of a discretionary project and the site planning meeting.

Protected Public tree. Any protected tree with one-half or more of its trunk or canopy on or above public land.

Protected tree. Native oak tree equal to or greater than six inches diameter at breast height (DBH) measured as a total of a single trunk or multiple trunks.

Protected zone. A circle equal to the largest radius of a protected tree's dripline plus one foot. The radius is measured from the trunk at the base of the tree to the greatest extent of the tree's dripline.

PROTECTED ZONE = LARGEST DRIPLINE RADIUS PLUS ONE FOOT

Regulated activities. Any activity done within the protected zone of a native oak tree, (with the exception of routine maintenance performed by or under the direct supervision of a certified arborist) which would adversely impact the health of a native oak tree, including, but not limited to, cutting, grading, irrigating and trenching.

Removal. The physical removal of a tree or substantially all of a tree.

Routine maintenance. Actions taken for the continued health of a protected tree including, but not limited to, deadwooding, mowing grass close to a tree, and application of insecticides in conformance with standards established by the International Society of Arboriculture or the National Association of Arborists.

Site planning meeting. An on-site meeting with the developer and the developer's contractors, superintendent, and engineers; utility providers; the arborist; and City representatives to delineate

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

special procedures, limits of work, lines of authority and special conditions or procedures not specifically covered by this chapter.

Tree permit. An authorization to conduct specific work or regulated activities within the protected zone of a protected tree.

Utility trenching pathway plan. A plan approved by the Planning Manager setting forth the location of utility trenches in the vicinity of protected trees.
(Ord. 5428 § 1, 2014)

§ 19.66.030. Tree Permits.

A. **Permit Required.** No person shall conduct any regulated activities within the protected zone of any protected tree; or harm, destroy, kill or remove any protected tree unless authorized by a Tree Permit or as provided in subsection C.

B. **Type of Permit.**

1. **Administrative Tree Permit.** An Administrative Tree Permit is required for any regulated activity affecting one or more protected trees, when the regulated activity is not associated with a discretionary project, does not include the removal of a protected tree, and the requested encroachment does not exceed 20 percent of the protected zone of any individual protected tree.

2. **Tree Permit.** A Tree Permit is required for any regulated activity within the protected zone of a protected tree where the encroachment exceeds 20 percent of the protected zone, or where the regulated activity is related to a discretionary project. In addition, a Tree Permit is required for the removal of any protected tree, unless otherwise exempted by this chapter.

C. **Exemptions.** A Tree Permit is not required for the removal of a protected tree under the following circumstances:

1. Trees damaged by thunderstorm, windstorm, flood, earthquake, fire or other natural cause and determined by a peace officer, fire fighter, public utility official, civil defense official or City code enforcement officer, acting in his or her official capacity, to present a danger to persons or property. Upon discovery of a condition justifying removal, the officer or official making the determination shall immediately provide written notification of the condition and action taken to the Planning Manager.

2. When removal is determined to be necessary by fire department personnel actively engaged in fighting a fire.

3. When compliance would interfere with activities of a public utility necessary to comply with applicable safety regulations and/or necessary to repair or avoid the interruptions of services provided by such a utility. Unless there is an imminent threat to the public health, safety or welfare, the Planning Manager shall be notified prior to the removal by a public utility of a protected tree.

4. The Planning Manager may allow removal of a protected tree which has been certified by an arborist to be a dead tree. An arborist-certified dead tree may be removed without

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

any replacement or mitigation requirements.

5. A protected tree located on property developed with a single-family or two-family dwelling which has been granted occupancy.

6. When a protected living tree presents a hazard to health and safety or structures due to its structural condition and location, the tree may be removed without any replacement or mitigation requirements. The hazardous condition of the tree must be determined by an arborist. The Planning Manager must review the arborist's determination and consider the location of the protected tree prior to approving removal.

(Ord. 5428 § 1, 2014)

§ 19.66.040. Tree Permit application processing.

A. **Application Filing.** Applications for Tree Permits not associated with discretionary projects shall be filed with the Planning Division. Applications for Tree Permits for regulated activities associated with a discretionary project shall be included as part of the land use permit and/or subdivision application for the discretionary project. All Tree Permit applications shall use the forms provided by the Planning Division, and shall include an arborist's report as specified by Section 19.66.050, and a site plan with information as deemed necessary by the Planning Manager. The application shall also be accompanied by any application fee required by the City Council.

B. **Site Plan Map.** The requirement for a site plan map may be waived by the Planning Manager if the permit is for removal of dead trees or hazardous trees. A site plan map shall include the following information:

1. **Physical Characteristics.** The site plan map shall accurately portray the following existing and proposed features:

a. Property lines.

b. Streets, access easements and/or public or private driveways and other paved areas.

c. Existing and proposed buildings or structures, including eaves and other architectural features.

d. Setbacks of all buildings and structures from property lines.

e. Parking and other paved areas.

f. Land uses on parcel (existing and proposed as applicable).

g. Proposed grading and construction - including utilities, if available.

h. Existing and proposed grades.

i. Location of chimney(s).

2. **Tree Locations.** All protected trees located on the property must be depicted on the site plan map. Additionally, the site plan map shall indicate the exact location of the base and dripline for all protected trees within the project areas. A survey of the exact

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

location(s) of the protected tree(s) trunks both horizontally and vertically shall be conducted by a professional engineer or a licensed land surveyor. The tree number(s) shall be shown on both the site plan and grading plan. The base elevation of each protected tree shall be shown on the grading plan.

3. **Protected Zone of Protected Tree(s).** The exact location of the protected zone of a protected tree is crucial in order to evaluate any impacts resulting from construction. Consequently, rough approximations will not be acceptable. In certain cases, it may be possible to physically stake the surveyed corner of building(s) or related improvements in the field in order to assess the potential impacts upon the trees.

C. **Application Evaluation Criteria.** The following criteria shall be used to support the finding identified in Section 19.78.060(F) for action on a Tree Permit requested to allow removal of native oak tree(s) or to encroach within the protected zone of any native oak tree(s):

1. **General.**

a. The proposed building's gross floor area in relation to the "usable" size of the site and the amount of usable space on the parcel which does not require the removal of protected trees;

b. Design features in comparison with other existing or approved building developments in the same vicinity and zone which have or had protected trees on the parcel;

c. Factors that are unique to the proposed property such as topographic constraints, lot configuration and other physical limitations;

d. The overall health and structural condition of the potentially impacted protected trees;

e. The approximate age of the protected tree compared with the average life span for that species;

f. The number of healthy protected trees that a given parcel of land will support, with and without the proposed development;

g. The effect of removal on soil stability/erosion, particularly near water courses or on steep slopes;

h. Whether or not there are any alternatives that would allow for the preservation of the protected tree; and

i. Any other information the approving body finds pertinent to the decision, including, if necessary, information obtained at a public hearing.

2. **For Removal.**

a. Age of the protected tree with regard to whether or not removal of the protected tree would encourage healthier, more vigorous growth of younger similar trees in the area;

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

b. The number of existing protected trees in the area and the effect of removal upon public health, safety and general welfare of the area;

c. The potential for the protected tree to be a public nuisance or interfere with utility service, as well as its proximity to existing structures; and

d. Present and future shade potential with regard to solar heating and cooling.

3. **For Encroachment.** Whether or not the degree of encroachment is likely to result in the subsequent decline of the affected protected tree or create a future risk to public safety or pose a hazard to adjacent structures.

D. **Discretionary Project.** Any non-ministerial development project that must be approved by either the City Council, Planning Commission, or the Design Committee. Discretionary projects include, but are not limited to, Conditional Use Permits, parcel maps, rezones, Design Review Permits, subdivision maps, or variances.

E. **Limitation on Approved Activities.** Tree Permits shall not be issued for temporary parking or storing of vehicles, trailers, equipment, construction materials or temporary structures within the protected zone of a protected tree.

F. **Permit Time Limits.** An approved Tree Permit shall be valid for a period of six months from the date of issuance. An extension of time may be granted for a period not to exceed an additional six months. Tree Permits associated with discretionary projects shall be valid only as long as the approval for the discretionary project is valid.

G. **Subsequent Permits.** After all Tree Permit conditions have been complied with and occupancy has been granted or a notice of completion filed for a project involving a Tree Permit, the Tree Permit conditions shall be deemed satisfied. Any future work around the trees is subject to a new Tree Permit and pursuant to the criteria of Section 19.66.030.

(Ord. 5428 § 1, 2014)

§ 19.66.050. Arborist’s report.

The arborist’s report required by Section 19.66.040 shall be prepared in accordance with this section.

A. **Minimum Information.** The arborist’s report shall include the following information:

1. Identification of each protected tree by number;

2. Botanical name of tree(s) by tree number;

3. Common name of tree(s) by tree number;

4. Location of tree(s) by tree number;

5. Diameter at breast height (DBH) by tree number;

6. Height by tree number (optional);

7. Dripline radius by tree number (measure longest radius);

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

8. Condition by tree number; and

9. Recommendations for each protected tree by number.

B. **Determination of a Tree's Condition.** The information on tree condition in the report shall be developed as follows:

1. **Rating System.** The condition of each tree is to be considered when determining a tree's rating according to the following categories: excellent (it is rare that a tree qualifies in this category); good; fair to good; fair; fair to poor; or poor.

2. **Factors to Be Considered.** At least the following factors shall be considered in light of a tree's life expectancy under existing and planned conditions when determining a tree's rating:

a. The condition and environment of the tree's root crown (also roots, if applicable).

b. The condition of the trunk, including decay, injury callusing or presence of fungus sporophores.

c. The condition of the limbs, including strength of crotches, amount of deadwood, hollow areas, and whether there is excessive weight borne by the limbs.

d. The condition and growth rate history of the twigs, including pest damage and diseases.

e. Leaf appearance, including abnormal size and density as well as pest and disease damage.

f. The dripline environment, including evidence of grade changes and presence of water courses or ponding.

3. **Formulation of Tree Condition.** Using an averaging of the above factors together with the arborist's best judgment, the tree shall then be described using the above rating categories. It is important to rate the tree's structural condition separately from the tree's vigor condition if they are different. Root crown, trunk and limb ratings relate most to structure, while twigs and foliage, including growth rate, relate most to vigor. The structure of the root crown-trunk area is of primary importance and takes precedence over any other factor. This information should not be considered to be a formula but simply a guideline to help describe a tree's condition.

C. **Arborist's Recommendations.** The arborist's recommendations shall be developed in compliance with the following:

1. **Recommendations by Tree Number.** Based upon the conditions and findings, recommendations should be made that logically follow the report conditions. For instance, if weak crotches are reported, cabling may be a logical recommendation to include in the report. These recommended mitigation measures should be spelled out and in some cases may even improve the tree's condition ratings.

2. **General Recommendations.** Specific and general preservation measures to be taken

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

for each tree not being removed. The specific recommendations must consider the impacts from the activities proposed.

(Ord. 5428 § 1, 2014)

§ 19.66.060. Standard policies and procedures for approved work.

Great care must be exercised when work is conducted upon or around protected trees. The purpose of this section is to define procedures necessary to protect the health of the affected protected trees. The policies and procedures described in this section apply to all encroachments into the protected zone of protected trees. All Tree Permits shall be deemed to incorporate the provisions of this chapter except as the Tree Permit may otherwise specifically provide.

A. **Trenching Procedure.** Trenching within the protected zone of a protected tree, when permitted, may only be conducted with hand tools or as otherwise directed by an arborist, in order to avoid root injury.

B. **Cutting Roots.**

1. Minor roots less than one inch in diameter may be cut, but damaged roots shall be traced back and cleanly cut behind any split, cracked or damaged area.

2. Major roots over one inch in diameter may not be cut without approval of an arborist. Depending upon the type of improvement being proposed, bridging techniques or a new site design may need to be employed to protect the root and the tree.

C. **Ground Surface Fabric.** If any native ground surface fabric within the protected zone must be removed for any reason, it shall be replaced within 48 hours.

D. **Irrigation Systems.** An independent low-flow drip irrigation system may be used for establishing drought-tolerant plants within the protected zone of a protected tree. Irrigation shall be gradually reduced and discontinued after a two-year period.

E. **Plant Materials Under Oaks.** Planting live material under native oak trees is generally discouraged, and it will not be permitted within six feet of the trunk of a native oak tree with a diameter at breast height (DBH) of 18 inches or less, or within 10 feet of the trunk of a native oak tree with a DBH of more than 18 inches. Only drought tolerant plants will be permitted within the protected zone of native oak trees.

F. **Protective Fencing.**

1. **Type of Fencing.** A minimum five-foot high chain link or substitute fence approved by the Manager shall be installed at the outermost edge of the protected zone of each protected tree or groups of protected trees. Exceptions to this policy may occur in cases where protected trees are located on slopes that will not be graded. However, approval must be obtained from the Planning Division to omit fences in any area of the project.

2. **Fence Installation.** The fences shall be installed in accordance with the approved fencing plan prior to the commencement of any grading operations or such other time as determined by the review body. The developer shall call the Planning Division for an inspection of the fencing prior to grading operations.

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

3. **Signing.** Signs shall be installed on the fence in four equidistant locations around each individual protected tree. The size of each sign must be a minimum of two feet by two feet and must contain the following language:

   "WARNING, THIS FENCE SHALL NOT BE REMOVED OR RELOCATED WITHOUT WRITTEN AUTHORIZATION FROM THE ROSEVILLE PLANNING DIVISION."

   Signs placed on fencing around a grove of protected trees shall be placed at approximately 50-foot intervals.

4. **Fence Maintenance.** Once approval has been obtained, the fences shall remain in place throughout the entire construction period and shall not be removed, relocated, taken down, or otherwise modified in whole or in part without prior written authorization from the Planning Division.

G. **Performance Guarantee.** A minimum $10,000.00 deposit (or greater, if deemed necessary by the Approving Authority) shall be posted and maintained to insure the preservation of protected trees during construction. The deposit shall be posted in a form approved by the City Attorney prior to any grading, delivery of materials, or movement of heavy equipment onto the site, or issuance of any permits. Each violation of any Tree Permit condition regarding tree preservation shall result in forfeiture of a portion or the entirety of the deposit, at the discretion of the Approving Authority, provided that such determinations may be appealed as provided by Chapter 19.80.

H. **Retaining Walls and Root Protection.** Where a Tree Permit has been approved for construction of a retaining wall(s) within the protected zone of a protected tree, the developer will be required to provide for immediate protection of exposed roots from moisture loss during the time prior to completion of the wall. The retaining wall shall be constructed within 72 hours after completion of grading.

I. **Preservation Devices.** If required, preservation devices such as aeration systems, oak tree wells, drains, special foundation systems, special paving and cabling systems must be installed per approved plans and certified by the project arborist.

J. **Grading.**

1. Every effort should be made to avoid cut and/or fill slopes within or in the vicinity of the protected zone of any protected tree.

2. No grade changes are permitted which would cause water to drain to the area within twice the longest radius of the protected zone of any protected tree.

3. No grade changes are permitted which would result in the ground being lowered on all sides of the tree.

K. **Chimney Locations.** A chimney for wood burning fireplaces or stoves shall not be located within the canopy of the tree or in such a location that sparks emitted from the chimney may damage a tree.

L. **Certification Letters.** Certification letters are required for all regulated activities within the

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

protected zone of protected trees, attesting that all work was conducted in accordance with the appropriate permits and the requirements of this chapter. The project arborist will be required to submit a certification letter to the Planning Division within five working days of completing any regulated activity.

M. **On-Site Information.** The following information must be continuously maintained on-site while any construction activity is ongoing for a project requiring a Tree Permit:

1. Arborist's report and all modifications;
2. Tree location map with a copy of the tree fencing plan;
3. Tree Permit conditions of approval and compliance verification and inspection checklist;
4. Approved, stamped construction plans;
5. Tree preservation guidelines; and
6. Approved planting and irrigation drawings.

N. **Information on Standard Policies and Procedures.** The developer shall be responsible for informing all contractors, subcontractors and persons who will be performing work around protected trees, of the standard policies and procedures for working around trees and conditions of approval for the project's Tree Permit. The developer shall provide all such information in writing.

O. **Utility Trenching Pathway Plan.** As a condition of the Tree Permit, the developer will be required to submit a utility trenching pathway plan for approval concurrent with approval of the project improvement or civil plans.

1. **Contents.** The trenching pathway plan shall depict all of the following systems: storm drains, sewers, easements, water mains, area drains, and underground utilities. The trenching pathway plan must show all lateral lines serving buildings. To be completely effective, the trenching pathway plan must include the surveyed locations of all protected trees on the project as well as an accurate plotting of the protected zone of each protected tree.
2. **Standards for Plan.** The trenching pathway plan should be developed considering the following general guidelines:
    a. The trenching pathway plan must be developed to avoid encroaching into the protected zone of any protected tree.
    b. Where it is impossible to avoid encroachment, the design must minimize the extent of such encroachment. Encroachments and mitigation measures must be addressed in a supplemental arborist's report.

P. **Final Certification of Tree Work.** All of the tree preservation measures required by the conditions of the discretionary project approval, the arborist's report and the Tree Permit, as applicable shall be completed and certified by the project arborist prior to issuance of an

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

occupancy permit.
(Ord. 5428 § 1, 2014)

§ 19.66.070. Oak tree planting and replacement program.

The Approving Authority may condition any Tree Permit involving removal of a protected tree upon the replacement of trees in kind. The replacement requirement shall be calculated based upon an inch for an inch replacement of the DBH of the removed tree(s) where a 15-gallon tree will replace one inch DBH of the removed tree; a 24-inch box tree will replace two inches, and a 36-inch box tree will replace three inches. The replacement trees shall have a combined diameter equivalent not less than the total diameter of the tree(s) removed. A minimum of 50 percent of the replacement requirement shall be met by native oaks. Up to 50 percent may be met by non-native species. The Approving Authority may approve a replacement program using one of the following four methods or any combination of the four methods. The preferred alternative is on-site replacement.

A. **Replacement Trees.** Replacement trees may be planted on-site or in other areas where maintenance and irrigation are provided to ensure survival of the trees.

B. **Relocation of Trees.** In certain cases, the City may consider the relocation of native oak trees from one area in a project to another. Credit shall be given for relocation on the same basis as replacement. The guidelines and limitations for relocation are as follows:

1. The tree(s) being recommended for relocation must be approved by the Approving Authority whose decision will be based upon factors relating to health, type, size, time of year and proposed location.

2. The relocation of a tree shall be conditioned to require a secured five-year replacement agreement for the tree with security provided by the developer in a form satisfactory to the City Attorney. If at the end of five years the tree is deemed by an arborist to be in a substantially similar condition to that prior to the transplanting, the agreement will be terminated. If the tree dies during the five-year period, it shall be replaced as required by this section.

C. **Revegetation Requirements.** The Approving Authority may, instead of requiring replacement trees, require implementation of a revegetation plan. The developer shall enter into a written agreement with the City obligating the developer to comply with the requirements of the revegetation plan. A performance security or bond for 150 percent of the cost of the revegetation plan shall be required to insure that the agreement is fulfilled. The Approving Authority shall approve the proposed plan. The revegetation program shall propagate native oak trees from seed using currently accepted methods. A revegetation program shall identify the seed source of the trees to be propagated, the location of the plots, the methods to be used to ensure success of the revegetation program, an annual reporting requirement, and the criteria to be used to measure the success of the plan. A revegetation program shall not be considered complete until the trees to be propagated have reached one-half inch in diameter or the revegetation plan demonstrates the need for alternative success criteria and achieves mitigation on an inch for inch basis as approved by the Planning Commission.

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

D. **In-Lieu Mitigation Fee.** The Approving Authority may determine that the remedies described above are not feasible or desirable and may require instead payment of a cash contribution based upon the cost of purchasing, planting, irrigating and maintaining the required number of 15-gallon trees. The cost of purchasing, planting, irrigating and maintaining a 15-gallon oak tree shall be set by City Council resolution. The cash contribution shall be deposited into one or both of the following funds as determined by the Planning Manager:

1. **Native Oak Tree Propagation Fund.** This fund shall be used to propagate, purchase, plant, protect and maintain native oak trees. Uses of the fund include, but are not limited to, purchasing property to plant or protect native oak trees, propagating native oak trees from seed or container stock and maintaining existing and replacement native oak trees.

2. **Non-Native Tree Fund.** This fund shall be used to purchase, plant, irrigate and maintain non-native trees within Roseville. Uses of the fund include, but are not limited to, purchasing and propagating non-native trees from seed or container stock and maintaining existing and replacement non-native trees.

(Ord. 5428 § 1, 2014)

§ 19.66.080. Violations and enforcement.

A. **Penalty.** Violation of this chapter shall be punishable as a misdemeanor or an infraction in the discretion of the City Attorney.

B. **Administrative Remedies.**

1. **Administrative Enforcement.**

a. In addition to any other penalties allowed by this Code, the Manager may issue a citation or citations upon finding that a violation of this Code and/or a violation of the conditions of approval of a permit issued pursuant to this Code has occurred. The citation shall be issued in accordance with Chapter 2.50 (Administrative Citations) of the Roseville Municipal Code.

b. If, upon review of a report prepared by a certified arborist and/or the City arborist, the Manager determines that damage to a native oak tree or trees has resulted due to violation of this Code, the Manager shall forward the matter to the Planning Commission for determination of the appropriate remedial action and/or restitution.

c. Whenever any construction work or other regulated activity is being performed contrary to and/or in violation of the provisions of this chapter or the conditions of a Tree Permit, the Manager may issue a written notice to the responsible party to stop work on the project on which the violation has occurred or upon the property where the native oak trees are located. The notice shall state the nature of the violation and the risk to the trees. No work shall be allowed to continue and no subsequent permits shall be issued until the violation has been rectified.

2. **Planning Commission Enforcement—Remediation and Restitution.**

Downloaded from https://ecode360.com/RO4998 on 2024-08-19

a. In addition to any other penalties allowed by this Code, in cases where a native oak tree or multiple native oak trees are damaged, killed, removed or damaged to the point where their long term survival cannot be assured, due to violation of this Code, the Planning Commission may require remediation and/or restitution. Any person or entity who commits, allows, causes, maintains or assists in any violation of any provision of this chapter or who damages, kills, or removes any tree in violation of this chapter, or assists another in doing so, may be required to provide remediation and/or restitution to the City.

b. The remediation amount for a damaged tree or trees shall be as determined by the Planning Commission and shall be the amount recommended by a certified arborist and/or the City arborist upon inspection of the tree(s) and development of a detailed course of remediation designed to repair the damage and ensure the long term survival of the tree(s), in order to assure the recovery of the tree(s).

c. The restitution amount for a removed, killed or damaged tree or trees, where the damage is to the extent that the tree's long term survival cannot be assured, shall be as determined by the Planning Commission and shall be calculated at triple the rate stated in Section 19.66.070(D).

3. A remediation or restitution requirement may be appealed to the City Council as provided in Chapter 19.80.

4. In addition to any other penalties allowed by this title, the Planning Commission may recommend revocation of a permit per the provisions of Chapter 19.88.

(Ord. 5428 § 1, 2014)

SECTION 01573

EROSION AND SEDIMENT CONTROL

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Installation of erosion and sediment control filter fabric fences.
   2. Triangular filter fabric fences.
   3. Straw bale fences and brush berms used during construction and prior to final development of site.

B. Purpose of control fences is to contain pollutants from overland flow.
   1. Control fences are not for use in channelized flow areas.

1.02 UNIT PRICES

A. Measure and pay for filter fabric fence by linear foot of completed and accepted filter fabric fence installed around construction site. Limits of construction site are indicated on the Drawings.

B. Measure and pay for triangular filter fabric fence by linear feet of completed and accepted triangular filter fabric fence between limits of beginning and ending of wooden stakes.

C. Measure and pay for straw bale barrier by linear feet of completed and accepted straw bale barrier.

D. Measure and pay for brush berm by linear feet of completed and accepted brush berm.

1.03 SUBMITTALS

A. Manufacturer's catalog sheets and other product data on geotextile fabric.

1.04 REFERENCES

A. ASTM International (ASTM):
   1. D698 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/ft^3).

9. D6525 - Standard Test Method for Measuring Nominal Thickness of Rolled Erosion Control Products.
10. D6567 - Standard Test Method for Measuring the Light Penetration of a Rolled Erosion Control Product (RECP).
11. D6818 - Standard Test Method for Ultimate Tensile Properties of Rolled Erosion Control Products.

1.05 QUALITY ASSURANCE FOR EROSION CONTROL BLANKETS

A. Product shall be manufactured in accordance to a documented Quality Control Program. At a minimum, the following procedures and documentation shall be provided:
   1. Manufacturing Quality Control Program Manual.
   2. First piece inspection of products produced to assure component materials and finished product tolerances are within manufacturer specifications.
   3. Additional inspections for product conformance shall be conducted during the run after the first piece inspection.
   4. Every roll shall be visually inspected.
   5. Moisture content of straw and coconut fibers measured upon receipt.
   6. At a minimum, every third roll shall be weighed to ensure conformance of manufacturer's specifications.
   7. Each individual erosion control blanket shall be inspected prior to packaging for conformance to manufacturing specifications.

1.06 PERFORMANCE REQUIREMENTS FOR EROSION CONTROL BLANKETS

A. Erosion control blanket shall provide a temporary, biodegradable cover material to reduce slope and enhance vegetation. Erosion control blanket performance capabilities shall be in accordance with ASTM D6459, "Determination of Erosion Control Blanket (ECB) Performance in Protecting Hillslopes from Rainfall-Induced Erosion."

PART 2 PRODUCTS

2.01 FILTER FABRIC

A. Provide woven or nonwoven geotextile filter fabric made of either polypropylene, polyethylene, ethylene, or polyamide material.

B. Geotextile fabric:
   1. Grab strength of 100 pounds per square inch in any principal direction in accordance with ASTM D4632.

2. Puncture strength exceeding 115 pounds per square inch in accordance with ASTM D4833.
3. Equivalent opening size between 50 and 140 for soils with more than 15 percent by weight passing No. 200 sieve and between 20 and 50 for soil with less than 15 percent by weight passing No. 200 sieve.
4. Maximum water flow rate of 40 gallons per minute per square feet in accordance with ASTM D4491.

C. Filter fabric material shall contain ultraviolet inhibitors and stabilizers to provide expected usable life comparable to anticipated construction period.
1. Ultraviolet stability shall exceed 70 percent after 500 hours of exposure in accordance with ASTM D4355.

D. Manufacturers: The following or equal:
1. Mirafi, Inc.

2.02 EROSION CONTROL BLANKETS

A. Manufacturers: One of the following, or equal:
1. American Excelsior Co., AEC Premier Straw/Coconut™ Blankets.
2. Proper Geotextile Systems.

B. Product requirements:
1. Furnished in rolls and wrapped with suitable material to protect against moisture intrusion and extended ultraviolet exposure prior to placement.
2. Consistent thickness with fibers distributed evenly over the entire area of the blanket.
3. Free of defects and voids that would interfere with proper installation or impair performance.

C. Materials:
1. Blend of 70 percent straw and 30 percent coconut fibers.
   a. Straw fibers shall consist of straw with 75 percent of fibers greater than 4 inches in length, and certified weed seed free.
   b. Product shall be 100 percent biodegradable.
   c. Blended fibers shall be evenly distributed throughout the entire area of the blanket.
   d. Top and bottom of each blanket is covered with biodegradable jute netting.
2. Blanket performance requirements:
   a. C factor: 0.15.
   b. Shear stress: 2.0 lb/ft^2.
   c. Velocity: 8.5 feet per second.
   d. Functional longevity: Less than 24 months.
3. Material characteristics:
   a. Width: 8.0 feet.
   b. Length: 112.5 feet.
   c. Area: 100.0 yard^2.
   d. Weight: 50.0 pounds.
   e. Mass per unit area: 0.50 lv/yd^2.
   f. Net openings: 0.5 inch by 1.0 inch.
   g. Minimum index values:

Index Property	Test Method	Value
Thickness	ASTM D6525	0.331 in (8.41 mm)
Light Penetration	ASTM D6567	5.8 percent
Mass per Unit Area	ASTM D6475	0.81 lb/yd^2 (437 g/m^2)
MD-Tensile Strength Max.	ASTM D6818	321.6 lb/ft (4.69 kN/m)
TD-Tensile Strength Max.	ASTM D6818	159.6 lb/ft (2.33 kN/m)
MD-Elongation	ASTM D6818	4.1 percent
TD-Elongation	ASTM D6818	4.8 percent
Water Absorption	ASTM D5665	382 percent

D. Staples:
   1. 100 percent biodegradable with a U-shaped top.
   2. Minimum 4 inch biodegradable staple for cohesive soils and 6 inches for non-cohesive soils.

PART 3 EXECUTION

3.01 PREPARATION AND INSTALLATION

A. Provide erosion and sediment control systems at locations as indicated on the Drawings.
   1. Construct in accordance with requirements as indicated on the Drawings and of type indicated as specified in this Section.

B. No clearing, grubbing or rough cutting permitted until erosion and sediment control systems are in place, other than site work specifically directed by Project Manager to allow soil testing and surveying.

C. Maintain existing erosion and sediment control systems located within Project site until acceptance of Project or until directed by Project Manager to remove and discard existing system.

D. Regularly inspect and repair or replace damaged components of erosion and sediment control systems as specified in this Section.
   1. Unless otherwise directed, maintain erosion and sediment control systems until Project area stabilization is accepted by the Authority.
   2. Remove erosion and sediment control systems promptly when directed by Project Manager.
   3. Discard removed materials off site.

E. Remove and dispose sediment deposits at designated spoil site for Project.
   1. If a Project spoil site is not indicated on the Drawings, dispose of sediment off site at location not in or adjacent to stream or floodplain.
   2. Assume responsibility for off-site disposal.
   3. Spread sediment evenly throughout site, compacted and stabilized.

4. Prevent sediment from flushing into a stream or drainage way.
5. If sediment has been contaminated, dispose of in accordance with existing federal, state, and local rules and regulations.

F. Unless otherwise indicated, compact embankments, excavations, and trenches by mechanically blading, tamping, and rolling soil in maximum of 8-inch layers.
1. Compaction density shall be at a minimum of 90 percent Standard Proctor ASTM D698 density.
2. Make at least 1 test per 500 cubic yards of embankment.

G. Prohibit equipment and vehicles from maneuvering on areas outside of dedicated rights-of-way and easements for construction.
1. Immediately repair damage caused by construction traffic to erosion and sediment control.

H. Conduct construction operations under this Contract in conformance with erosion control practices described in the Agreement and Contract RFP in Volumes 1 and 2.

3.02 GENERAL CONSTRUCTION METHODS

A. Provide erosion and sedimentation control systems as indicated on the Drawings.
1. Install erosion and sedimentation control systems in manner that surface runoff shall percolate through system in sheet flow fashion and allow retention and accumulation of sediment.

B. Inspect erosion and sedimentation control systems after each rainfall, daily during periods of prolonged rainfall, and at minimum once each week.
1. Repair or replace damaged sections immediately.
2. Remove sediment deposits when silt reaches depth 1/3 height of fence or 6 inches, whichever is less.

3.03 SITE PREPARATION FOR EROSION CONTROL BLANKETS

A. Before placing erosion control blanket, certify that the subgrade has been properly compacted, graded smooth, has no depressions, voids, soft or uncompacted areas, is free from obstructions such as tree roots, protruding stones or other foreign matter, and is seeded and fertilized according to Project specifications.
1. Contractor shall not proceed until unsatisfactory conditions have been remedied.
2. By beginning construction, Contractor signifies that the proceeding work is in conformance with this Section.

B. Fine grade the subgrade by hand dressing where necessary to remove local deviations.

C. No vehicular traffic shall be permitted directly on the erosion control blanket.

D. Slope installation.
1. Erosion control blanket shall be installed as directed by Owner's representative in accordance with manufacturer's Installation Guidelines,

Staple Pattern Guides, and CAD details. The extent of erosion control blanket shall be as indicated on the Drawings.

2. Erosion control blanket shall be oriented in vertical strips and anchored with staples, as identified in the Staple Pattern Guide.
    a. Adjacent strips shall be overlapped to allow for installation of a common row of staples that anchor through the nettings of both blankets.
    b. Horizontal joints between erosion control blankets shall be sufficiently overlapped with the uphill end on top for a common row of staples so that the staples anchor through the nettings of both blankets.
3. Where exposed to overland sheet flow, a trench shall be located at the uphill termination erosion control blanket shall be stapled to the bottom of the trench.
    a. Trench shall be backfilled and compacted.
    b. Where feasible, the uphill end of the blanket shall be extended 3 feet over the crest of the slope.

3.04 FILTER FABRIC FENCE CONSTRUCTION METHODS

A. Attach filter fabric to 1-inch by 2-inch wooden stakes or driven steel rods spaced a maximum of 3 feet apart and embedded minimum of 8 inches or deeper to hold fence in place.
    1. If filter fabric is factory preassembled with support netting, then maximum spacing allowable is 8 feet.
    2. Install anchoring stakes or rods at slight angle toward source of anticipated runoff.
    3. Contractor is responsible for providing adequate fence anchoring appropriate for the varying soil and rock conditions at the well sites.

B. Trench in toe of filter fabric fence with spade or mechanical trencher so that downward face of trench is flat and perpendicular to direction of flow.
    1. V-trench configuration as indicated on the Drawings may also be used.
    2. Lay filter fabric along edges of trench.
    3. Backfill and compact trench.

C. Filter fabric fence shall have a minimum height of 18 inches and a maximum height of 36 inches above natural ground.

D. Provide filter fabric in continuous rolls and cut to length of fence to minimize use of joints.
    1. When joints are necessary, splice fabric together only at support post with minimum 6-inch overlap and seal securely.

3.05 TRIANGULAR FILTER FABRIC FENCE CONSTRUCTION METHODS

A. Attach filter fabric to fence structure fashioned from 6 gauge, 6-inch by 6-inch wire mesh, 18 inches on each side as indicated on the Drawings.
    1. Fabric cover and skirt should be continuous wrapping of fabric.
    2. Skirt should form continuous extension of fabric on upstream side of fence.

B. Secure triangular fabric filter fence in place using one of the following methods:
    1. Toe-in skirt 6 inches with mechanically compacted material.

2. Weight down skirt with continuous layer of 3-inch to 5-inch graded rock.
3. Trench-in entire structure 4 inches.

C. If provided, anchor triangular fabric filter fence structure and skirt securely in place using 6-inch wire staples on 2-foot centers on both edges and on skirt, or staked using 18-inch by 3/8-inch diameter re-bar with tee ends.

D. Lap over fabric filter material by 6 inches to cover segment joints.
1. Fasten joints with galvanized shoat rings.

3.06 STRAW BALE FENCE CONSTRUCTION METHODS

A. Bound bales with either wire, nylon or polypropylene rope tied across hay bales.
1. Do not use jute or cotton bindings.

B. Place bales in row with ends tightly abutting adjacent bales.
1. Place bales with bindings parallel to ground surface.

C. Embed bale in soil a minimum of 4 inches.

D. Securely anchor bales in place by 3/8-inch rebar stakes driven through bales a minimum of 18 inches into ground.
1. Angle first stake in each bale toward previously laid bale to force bales together.

E. Fill gaps between bales with straw to prevent water from escaping between bales.
1. Wedge carefully in order not to separate bales.

F. Replace with new straw bale fence every 2 months.

3.07 BRUSH BERM CONSTRUCTION METHODS

A. Construct brush berm along contour lines by hand placing method.
1. Do not use machine placement of brush berm.

B. Use woody brush and branches having diameter less than 2 inches with 6 inches overlap.
1. Avoid incorporation of annual weeds and soil into brush berm.

C. Use minimum height of 18 inches measured from top of existing ground at upslope toe to top of berm.
1. Top width shall be 24 inches minimum and side slopes shall be 2:1 or flatter.

D. Embed brush berm into soil a minimum of 4 inches and anchor using either wire, nylon or polypropylene rope across berm with a minimum tension of 50 pounds.
1. Tie rope securely to 18-inch x 3/8-inch diameter rebar stakes driven into ground on 4-foot centers on both sides of berm.

END OF SECTION

SECTION 01601

PRODUCT REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for products.

1.02 TERMINOLOGY

A. The words and terms listed below, are not defined terms that require initial capital letters, but, when this Section is referenced in other Specifications, have the indicated meaning.
   1. Manufacturer's Certificate of Source Testing:
      a. Form used to confirm that the applicable source tests have been performed and the results conform to the Contract Documents. Form template is provided at the end of this Section.
   2. Manufacturer's instructions:
      a. Stipulations, directions, and/or recommendations issued by the manufacturer of the product addressing handling, storage, installation, protection, erection, and/or application of the product.
   3. Product data:
      a. Information about the product, typically found in the manufacturer's catalogs specifications or other resources, including data sheets, bulletins, and brochures.
   4. Source Quality Control:
      a. Testing and inspections at the location of fabrication or assembly.
         1) Includes factory acceptance testing (FAT), factory testing, and Source Testing.
      b. Test reports, including the following information:
         1) Test description.
         2) List of equipment used.
         3) Name of the person conducting the test.
         4) Date and time the test was conducted.
         5) Ambient temperature and weather conditions.
         6) Raw data collected.
         7) Calculated results.
         8) Clear statement if the test passed or failed the requirements stated in the Contract Documents.
         9) Signature of the person responsible for the test.
   5. Special tools:
      a. Special wrenches, gauges, circuit setters, and other similar devices required for the proper operation or maintenance of a system that would not normally be in the Owner's tool kit and that have been specifically made for use on a product for assembly, disassembly, repair, or maintenance.

1.03 QUALITY CONTROL

A. Manufacturer shall provide a permanent quality control department and laboratory facility capable of performing inspections and testing as required by the Contract Documents.
   1. Material testing, inspection procedures, and manufacturing process are subject to inspection by the Engineer.
   2. Notify the Engineer in writing of the manufacturing start date, not less than 14 days prior to the start, of the manufacturer of project pipe.
   3. Perform manufacturer's tests and inspections required by the referenced standards and as specified in this Section, including the following:
      a. Calibration within last 12 months for equipment such as scales, measuring devices and calibration tools used in the manufacturing of pipe as required by ISO 9001.
         1) Each device used in the manufacturer of pipe is required to have a tag recording date of last calibration.
         2) Provide calibration certificate.
         3) Devices are subject to inspection by the Engineer.
   4. Provide Manufacturer's Certificate of Source Testing.

1.04 SERVICES OF MANUFACTURER'S REPRESENTATIVES

A. Qualifications of manufacturer's representative include the following:
   1. Authorized representative of the manufacturer, factory trained and experienced in the technical applications and installation of respective products with full authority by the product manufacturer to issue the certifications required of the manufacturer.
   2. Competent, experienced technical representative of the product manufacturer for installation.
   3. Additional qualifications may be specified in the Technical Sections.
   4. No substitute representatives will be allowed until written approval by the Owner and Engineer has been obtained.

B. Completion of manufacturer on-site services: Engineer approval required.
   1. Manufacturer's representative will advise aspects of installation, including, but not limited to:
      a. Handling.
      b. Storing.
      c. Cleaning and inspecting.
      d. Coating and lining repairs.
      e. Tapping.
      f. General construction methods.

C. Manufacturer is responsible for determining the time required to perform the specified services.
   1. No additional costs associated with performing the required services will be approved.
   2. Manufacturer required to schedule services in accordance with the Contractor's Project schedule, up to and including making multiple trips to the Project Site when there are separate milestones associated with installation of each occurrence of the manufacturer's product.

D. Manufacturer's on-site services include the following:
   1. Assistance during construction.
   2. Provide 1 copy of daily manufacturer's representative's field notes and data to the Engineer.
   3. Other requirements as specified in the Contract Documents.

1.05 GENERAL TEST REQUIREMENTS

A. Testing prerequisites:
   1. Prior to testing, verify equipment protective devices and safety devices have been installed, calibrated, and tested.

B. Test Plan requirements:
   1. As specified in this Section and the Technical Sections.
   2. Prepared by the Contractor as a result of discussions and planning emerging from regularly conducted meetings for test planning.
   3. Define the following for each test:
      a. Purpose of the test.
      b. Identification of each item of equipment/system, including system designation, location, tag number, control loop identifier, etc.
      c. Description of the pass/fail criteria that will be used.
      d. Listing of pertinent reference documents (Contract Documents or industry standards applicable to the testing).
      e. Credentials of test personnel.
      f. Test equipment:
         1) Product data.
         2) Appropriate calibration records.
         3) Drawings or photographs of test stands and/or test apparatus.
      g. Duration: Determine test durations with the Owner's input.
      h. Detailed step-by-step test procedures.
         1) Setup.
         2) Level of detail shall be sufficient for any witness with a rudimentary technical aptitude to be able to follow the steps and develop confidence that the tests were being performed as planned.
         3) Include all steps in the procedures.
         4) Define temporary systems (pumps, piping, etc.), shutdown requirements for existing systems.
         5) Furnish labor, power, tools, equipment, instruments, and services required for and incidental to completing testing activities.
      i. Test forms: Include, but not limited to, the following information:
         1) Name of product to be tested.
         2) Test date.
         3) Names of persons conducting the test.
         4) Names of persons witnessing the test, where applicable.
         5) Test data.
         6) Applicable Project requirements.
         7) Check offs for each completed test or test step.
         8) Place for signature of person conducting tests and for the witnessing person, as applicable.

C. Submit Test Plan.
   1. Submit forms as specified in the Technical Sections.
   2. Submit a copy of the Test Plan at least 21 days before any scheduled test date.
   3. Engineer approval of Test Plan required prior to beginning testing.

D. Request proposed test dates.
   1. Notify the Engineer of the scheduled tests a minimum of 15 days before the date of the test.

E. Implement approved Test Plans.
   1. Demonstrate the product performance meets the requirements stated in the Contract Documents.
      a. When the product fails to meet the specified requirements, perform additional, more detailed, testing to determine the cause, correct, repair, or replace the causative components and repeat the testing that revealed the deficiency.

F. Submit Test Report.

1.06 SOURCE TESTING

A. As specified in Section 01450 - Quality Control.

B. Also referred to as factory testing or factory acceptance testing (FAT).

C. Source Test Plan:
   1. As specified in this Section and other Technical Sections.
   2. Purpose: Test products for proper performance at point of manufacture or assembly as specified in the Technical Sections.
   3. Source Testing requirements as specified in Technical Sections.
      a. Non-witnessed:
         1) Provide completed Attachment A - Manufacturer’s Certificate of Source Testing.
      b. Witnessed:
         1) 2 Owner’s representatives and 2 Engineer’s representatives present during testing, unless otherwise specified.
         2) Provide completed Attachment A - Manufacturer’s Certificate of Source Testing.
   4. Duration: Define.
   5. Contractor is responsible for providing fuel, chemicals, and other consumables needed for Source Testing.

D. Contractor is responsible for witness trip costs associated with the Owner’s and Engineer’s representatives.
   1. Include costs for at least the following:
      a. Transportation:
         1) Travel on commercial airline to and from Site, including related fees.
         2) Rental car to and from airport, hotel, and test site, including related fees.

b. Hotel/meals:
    1) Hotel costs at a facility with an American Automobile Association 4-star rating or higher equivalent for single occupancy room per person per day.
    2) Meal allowance based on government per diem guidelines per location.
c. Witness labor costs:
    1) The greater of $200 per hour or $1,600 per day.

2. If the Source Test is not ready when the witnesses arrive or if the Source Test fails, the witnesses will return home with the Contractor responsible for costs associated with the trip, including costs described above.
    a. Contractor is responsible for rescheduling the Source Test and witnesses' costs associated with the second trip, including costs described above.
    b. Contractor is responsible for witnesses' costs associated with retests, including costs described above.

1.07 INSTALLATION VERIFICATION

A. Installation Verification plan:
1. Confirm piping:
    a. Has been properly installed, adjusted, and aligned.
    b. Is free of any stresses imposed by connecting piping or anchor bolts.
    c. Is able to be operated as necessary for Functional Testing.
2. Field test backfill, welded joints, alignment and grade, and pipeline pressure as specified in the Technical Sections.
3. Duration: Define.
4. Coordinate Installation Verification with restrictions and requirements as specified in Section 01140 - Work Restrictions.

1.08 FUNCTIONAL TESTING

A. Functional Test Plan:
1. Purpose: Test piping system to verify conformance with the Contract Documents.
2. Duration: Define.
3. Perform testing in the presence of the Engineer.
4. Contractor is responsible for providing fuel, chemicals, and other consumables needed.
5. Coordinate Functional Testing with restrictions and requirements as specified in Section 01140 - Work Restrictions.

1.09 SHIPMENT

A. Prepare products for shipment by:
1. Tagging or marking to match the Shop Drawings or Contract Documents.
2. Including complete packing lists and bills of material with each shipment.
3. Packaging products to facilitate handling and protection against damage during transit, handling, and storage.
4. Securely attach special instructions for proper field handling, storage, and installation before packaging and shipment.

B. Transport products by methods that avoid product damage.

C. Deliver products in undamaged condition in the manufacturer's unopened packaging.

1.10 DELIVERY AND HANDLING

A. Handle products in accordance with the manufacturer's instructions.

B. Deliver products in undamaged condition in the manufacturer's unopened packaging.

C. Provide construction equipment and personnel to handle products by methods in accordance with the manufacturer's instructions.

D. Upon delivery, promptly inspect shipments:
   1. Verify compliance with the Contract Documents, correct quantities, and undamaged condition of products.
   2. Acceptance of shipment does not constitute final acceptance of products.

1.11 STORAGE

A. Immediately store and protect products until installed in the Work.

B. Store products with seals and legible labels intact.

C. Protect painted or coated surfaces against impact, abrasion, discoloration, and damage.

D. Storage of spare parts, maintenance products, special tools.
   1. Immediately store in accordance with the manufacturer's instructions.
   2. Store spare parts, maintenance products, and special tools in an enclosed, weather-proof, and lighted facility during the construction period.
   3. Protect parts subject to deterioration, such as ferrous metal items and electrical components with appropriate lubricants, desiccants, or hermetic sealing.
   4. Store large items individually:
      a. Weight: Greater than 50 pounds.
      b. Size: Greater than 24-inches wide by 18-inches high by 36-inches long.
      c. Clearly labeled:
         1) Equipment tag number.
         2) Equipment manufacturer.
         3) Subassembly component, if appropriate.
   5. Store smaller items in spare parts boxes:
      a. Weight: Less than 50 pounds.
      b. Size: Less than 24-inches wide by 18-inches high by 36-inches long.
      c. Clearly labeled:
         1) Equipment tag number.
         2) Equipment manufacturer.
         3) Subassembly component, if appropriate.
   6. Spare parts and special tools box:
      a. Box material: Waterproof, corrosion resistant.
      b. Hinged cover with locking hasp:
         1) Inventory list taped to underside of cover.

2) Clearly labeled:
   a) “Spare Parts and/or Special Tools”.
   b) Equipment tag number.
   c) Equipment manufacturer.
   d) Subassembly component, if appropriate.

E. Exterior storage of fabricated products:
   1. Place on aboveground supports that allow for drainage.
   2. Cover products subject to deterioration with impervious sheet covering.
   3. Provide ventilation to prevent condensation under covering.

F. Store moisture sensitive products in watertight enclosures.

G. Store loose granular materials on solid surfaces in well-drained area.
   1. Prevent materials mixing with foreign matter.
   2. Provide access for inspection.

H. When needed and approved by the Engineer, offsite storage location shall be within 10 miles of the Project Site.
   1. Provide proof of insurance coverage for products stored offsite.

I. Payment will not be made for products improperly stored or stored without providing the Engineer with the manufacturer’s instructions for storage.

PART 2 PRODUCTS

2.01 GENERAL REQUIREMENTS

A. Provide products by the same manufacturer when units are of similar nature, unless otherwise specified.

B. Provide like parts of duplicate units that are interchangeable.

C. Provide equipment or products that have not been in service prior to delivery, except as required by tests.

D. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.
   1. Conform to reference standard by date of issue current on date of Contract Documents, except where specific date is established by code.

E. Provide products produced by manufacturers regularly engaged in the production of these products.

F. Provide products that bear approvals and labels as specified such as Factory Mutual (FM), Underwriters Laboratory (UL), or National Sanitation Foundation (NSF International) that are acceptable to the Authority Having Jurisdiction.

2.02 MATERIAL

A. Dissimilar metals:
   1. Separate contacting surfaces with dielectric material.
   2. Neoprene, bituminous impregnated felt, heavy bituminous coatings, nonmetallic separators, washers, petrolatum tape, or other materials as specified.
   3. Dielectric coatings can be used to separate dissimilar metal couples from surrounding environment if isolation of metals is not possible, with approval of the Engineer.

B. Edge grinding:
   1. Sharp projections of cut or sheared edges of ferrous metals which are not to be welded shall be ground to a radius required to ensure satisfactory paint adherence and mitigate any safety hazard.
   2. A surface profile will need to be re-established for coating adherence based on coating manufacturer's profile requirements.

C. Use anti-galling compound on threads of stainless steel fasteners during factory assembly.

D. Provide anti-galling compound with stainless steel fasteners shipped for field assembly.

E. Aluminum in contact with concrete or masonry: Apply epoxy mastic as specified in Section 09960 - High-Performance Coatings, coating system EPX-M-5.

2.03 PRODUCT SELECTION

A. When products are specified without named manufacturers, provide products that meet or exceed the Specifications.

B. When products are specified with names of manufacturers but no model numbers or catalog designations, provide products by one of the named manufacturers that meet or exceed specifications.

C. When products are specified with names of manufacturers and model numbers or catalog designations, provide products with model numbers or catalog designations by one of the named manufacturers.

D. When products are specified with names of manufacturers, but with brand or trade names, model numbers, or catalog designations by one manufacturer only, provide:
   1. Products specified by brand or trade name, model number, or catalog designation.
   2. Products by another named manufacturer proven, in accordance with requirements for an "or equal", including the Engineer's approval, to meet or exceed quality, appearance and performance of specified brand or trade name, model number, or catalog designation.

E. When products are specified with only one manufacturer followed by “or equal,” provide:
   1. Products meeting or exceeding specifications by specified manufacturer.
   2. Engineer deemed “or equal” evidenced by an approved Shop Drawing or other written communication.

F. When products are specified by naming 2 or more manufacturers with 1 manufacturer as a “Basis of Design”:
   1. Any of the named manufacturers can be submitted.
   2. If the product submitted is not by the named “Basis of Design” product and requires a change in the scope (dimensions, configuration, physical properties, etc.), schedule (longer lead time), or budget, the Contractor must submit a substitution request.

PART 3 EXECUTION

3.01 INSTALLATION

A. Inspect equipment or products prior to installation.

B. Repaint or recoat damaged painted or coated surfaces after installation.

C. Use anti-galling compound on stainless steel threads used for field assembly.

3.02 PROTECTION AFTER INSTALLATION

A. Provide coverings as necessary to protect installed products from damage due to traffic and subsequent construction operations.
   1. Remove covering when no longer needed.
   2. Replace corroded, damaged, or deteriorated products before acceptance of the Project.

SECTION 01722

FIELD ENGINEERING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Field engineering to establish lines and grades for the Work.

1.02 SUBMITTALS

A. Submit as specified in Section 01330 - Submittal Procedures.

B. Qualifications of the professional land surveyor or licensed civil engineer with the authority to provide land surveying in California that will be performing the field engineering.

C. Pre-Excavation Report.

1.03 PRE-EXCAVATION REPORT

A. Prior to the start of the Work, create a report confirming the verification of the following data:
   1. Site elevation.
   2. Existing structures, including, but not limited to, buildings, manholes (sanitary, storm, electrical, and other), drainage inlets:
      a. Location coordinates.
      b. Top of wall elevation and coordinates.
      c. Floor elevations.
      d. Invert elevations.
   3. Existing utilities as specified in Section 02280 - Subsurface Utility Engineering.
   4. Proposed building corners, tank, and equipment locations.
   5. Verify existing electrical, instrumentation, and phone utilities.

B. Incorporate information from Pre-Excavation Report into the Record Drawings.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 SURVEY REFERENCE POINTS

A. Basic reference line, a beginning point on basic reference line, points with referenced coordinates, and a benchmark will be provided by the Owner.

B. From these reference points, establish other control and reference points as required to properly lay out the Work.

C. Locate and protect control points prior to starting site work, and preserve permanent reference points during construction:
   1. Make no changes or relocations without prior written notice.
   2. Replace Project control point, when lost or destroyed, in accordance with original survey control.

D. Set monuments for principal control points and protect them from being disturbed and displaced:
   1. Re-establish disturbed monuments.
   2. When disturbed, postpone parts of the Work that are governed by disturbed monuments until such monuments are re-established.

3.02 PROJECT SITE SURVEY REQUIREMENTS

A. Establish minimum of 2 permanent benchmarks on site referenced to data established by survey control points.

B. Record permanent benchmark locations with horizontal and vertical data on Project Record Documents.

C. Perform verifications and checking in accordance with industry standard surveying practice.

D. Maintain complete, accurate log of control points and survey.

E. Affix civil engineer's or professional land surveyor's signature and license number to Record Drawings to certify accuracy of information shown.

3.03 CONSTRUCTION STAKES, LINES, AND GRADES

A. Execute the Work in accordance with the lines and grades indicated.

B. Make distances and measurements on horizontal planes, except elevations and structural dimensions.

3.04 QUALITY CONTROL

A. Accuracy of stakes, alignments, and grades may be checked randomly by the Engineer:
   1. Notice of when checking will be conducted will be given.
   2. When notice of checking is given, postpone parts of the Work affected by stakes, alignments, or grades to be checked until checked.
   3. Engineer's check does not substitute or complement required field quality control procedures.

3.05 RECORD DOCUMENTS

A. Prepare and submit Record Documents as specified in Section 01770 - Closeout Procedures.

END OF SECTION

SECTION 01734

WORK WITHIN PUBLIC RIGHT-OF-WAY

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Requirements for maintenance, support, protection, relocation, reconstruction and adjusting-to-grade, restoration, construction of temporary and new facilities, and abandonment of existing utilities affected by construction work within the public right-of-way.

1.02 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Trenching:
      a. Open trench:
         1) General: Includes excavation, pipe laying, backfilling, and pavement replacement.
      b. Any excavated areas shall be considered as “open trench” until all pavement replacement has been made, or until all trenches outside of pavement replacement areas have been backfilled and compacted in accordance with these Contract Documents.
   2. Utility:
      a. For the purpose of this Section, utility means any public or private service, such as electric light and power systems; gas distribution systems; telephone, telegraph, cable television and other communication services; water distribution; storm drain and sanitary sewer services; police and fire communication systems; street lighting and traffic signs and signals; parking meters; and steam distribution systems.

1.03 SUBMITTALS

A. Traffic control plan: Submit detailed traffic control plan for acceptance by jurisdictional agency.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Trenching:
   1. Except where otherwise specified, indicated on the Drawings, or accepted in writing by the Engineer, the maximum length of open trench, where construction is in any stage of completion, shall not exceed the linear footage as set forth below. Descriptions under following area designations are general

in nature and may be amended in writing by the Engineer due to particular or peculiar field conditions:

a. Business district areas - maximum 100 linear feet: Store front areas.
b. Commercial areas - maximum 400 linear feet: Industrial, shopping centers, churches, schools, hotels, motels, markets, gas stations, government and private office buildings, hospitals, fire and police stations, and nursing homes.
c. Residential areas - maximum 1 block or 600 linear feet, whichever is the least: Single and multi-family residences, apartments, and condominiums.
d. Undeveloped areas - maximum 1,000 linear feet: Parks, golf courses, farms, undeveloped subdivided land.

2. Completely backfill trenches across streets and install temporary or permanent pavement as soon as possible after pipe laying.

B. Site conditions:

1. Use substantial steel plates with adequate trench bracing to bridge across trenches at street and alley crossings, commercial driveways, and residential driveways where trench backfill and temporary patch have not been completed during regular working hours.
2. Provide safe and convenient passage for pedestrians.
3. Maintain access to fire stations, fire hydrant, and hospitals at all times.
4. Provide traffic control devices, barricades, and signage as required by the regulating agency.

PART 3 EXECUTION (NOT USED)

END OF SECTION

ATTACHMENT B - MANUFACTURER'S CERTIFICATE OF SOURCE TESTING

ATTACHMENT C - MANUFACTURER'S CERTIFICATE OF INSTALLATION VERIFICATION

ATTACHMENT D - MANUFACTURER'S CERTIFICATE OF FUNCTIONAL COMPLIANCE

ATTACHMENT E - TRAINING EVALUATION FORM

ATTACHMENT F - COMMISSIONING ROLES AND RESPONSIBILITIES MATRIX

ATTACHMENT G - FUNCTIONAL TESTING REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Commissioning.

1.02 DEFINITIONS

A. Commissioning: The process of planning for, testing of, and start-up of systems, subsystems, equipment, components, and devices of the Work to demonstrate, through documented verification, that the Work has successfully met the Contract Documents. It includes training the Owner's staff on operation and maintenance of the installed Work.

B. Commissioning Phases: The activities of commissioning are grouped into the phases defined in the following table.
   1. Table 1 - Commissioning Phases.

TABLE 1 - COMMISSIONING PHASES		
Planning Phase	**Testing and Training Phase**	**Start-Up Phase**
Draft Test Plans	Source Testing: • Documentation	Start-Up: • Documentation • Owner Training
	Installation Verification: • Documentation • Owner Training	
	Functional Testing: • Documentation • Owner Training	

   2. Attachment A provides Commissioning Flowcharts.

C. Component: A part of a system that does not have an electrical connection or internal electronics. Examples: Piping and pressure gauges.

D. Device: A part of a system that has electrical connections or internal electronics. Examples: Level transmitter or pressure transmitter.

E. Electrical Energization Plan: A plan to manage how and when power is applied to electrical equipment.

F. Equipment: A factory or field assembled apparatus that performs an identifiable function. Examples: Pumps, motors, VFDs, MCCs.

G. Functional Testing: Testing performed on a completed subsystem or system to demonstrate that the system meets the specified requirements. Example systems: Backwash system, dewatering system.

H. Installation Verification: Testing to demonstrate that equipment or system and associated components or devices have been properly installed. Example equipment: Pumps, meters, and blowers with associated piping.

I. Manufacturer's Certificate of Functional Compliance: The form completed by the manufacturer to confirm that testing of the installed equipment or system has been performed and the results conform to the specified performance. The form is provided in Attachment D provided at the end of this Section.

J. Manufacturer's Certificate of Installation Verification: The form completed by the manufacturer to confirm that the equipment or system is installed in conformance with the Contract. The form is provided in Attachment C at the end of this Section.

K. Manufacturer's Certificate of Source Testing: The form completed by the manufacturer to confirm that the specified source tests have been performed and the results conform to the specified requirements. The form is provided in Attachment B at the end of this Section.

L. Owner Training: The Owner's staff is trained by the Contractor, with assistance from manufacturer, to operate and maintain the completed Work. This is sometimes referred to as Vendor Specific Training.

M. Process Stream: A series of liquid or solids flow processes that are designed to improve the water quality to meet regulatory permit requirements.

N. Source Testing: Test equipment or products for performance at point of manufacture or assembly for the requirements specified in the Contract Documents. Also referred to as factory testing and factory acceptance testing (FAT).

O. Start-Up: Operating the Work with process water to verify the Work meets the Contract Documents.

P. Start-Up Phase: The phase when Start-Up occurs.

Q. Subsystem: A grouping of equipment, components, and devices that is a part of a larger system and that perform a single definable function. Examples: Sand filters, filter backwash.

R. System: A grouping of equipment, components, and devices that perform a single definable function. If a system is a part of a larger system, it is referred to as a subsystem.
   1. Examples: Flocculation and sedimentation, filtration.

S. System Testing: Testing of a completed system for an extended time period. Examples: Headworks, filtration.

T. Water Management Plan: A plan to manage the test water used for commissioning from source to disposal. The test water may be clean water, potable water, non-potable water, or process water (e.g., raw water, plant water, sludge). The plan demonstrates how water will be produced, conveyed, treated, disposed of as directed by the plant manager, and/or recycled.

1.03 SUBMITTALS

A. Project Commissioning:
   1. Commissioning Coordinator's qualifications.
      a. Submit to Engineer no later than 30 days after Notice to Proceed.
      b. Describe previous similar experience on similar projects with a list of references, including phone numbers.
      c. Provide names and qualifications of commissioning assistants, if applicable.
   2. Schedules:
      a. Commissioning Schedule containing all commissioning activities.
      b. Owner Training Schedule.
   3. Test Plans:
      a. Submit draft Test Plan outlined in the Planning Phase, unless specified otherwise.
         1) Engineer approval of draft Test Plans required for successful completion of Planning Phase.
      b. Submit final Test Plan a minimum of 30 calendar days prior to testing, or as directed by the City.
      c. Engineer approval of final Test Plan required prior to start of testing.
   4. Test Reports:
      a. Submit draft Test Reports outline in the Planning Phase, unless specified otherwise.
         1) Engineer approval of draft Test Reports outline required for successful completion of Planning Phase.
      b. Submit final Test Report a maximum of 30 calendar days after testing.

B. Technical Sections Commissioning:
   1. Manufacturer's representative's qualifications.
      a. Submit to Engineer no later than 30 days in advance of required services.
      b. Representative's name, phone, and e-mail address:
         1) May use 2 representatives: 1 for field testing and 1 for Owner Training.
         2) Provide resume stating instructor's technical expertise and instructional technology skills and experience.
   2. Test Plans:
      a. Submit draft Test Plan outlined in the Planning Phase, unless specified otherwise.
         1) Engineer approval of draft Test Plans required for successful completion of Planning Phase.
      b. Submit final Test Plan a minimum of 30 calendar days prior to testing, or as directed by the City.
      c. Engineer approval of final Test Plan required prior to start of testing.
   3. Test Reports:
      a. Submit draft Test Reports outline in the Planning Phase, unless specified otherwise.
         1) Engineer approval of draft Test Reports outline required for successful completion of Planning Phase.
      b. Submit final Test Report a maximum of 30 calendar days after testing.
   4. Manufacturer's representatives field notes and data.

5. Owner Training:
    a. Prior to the training session:
        1) Training instructor qualifications.
        2) Training course materials: Due 30 calendar days prior to initial training session.
            a) If Owner requires, Continuing Education Units (CEUs), submit training materials to state regulatory agency in sufficient time to obtain approval for training prior to the training.
            b) Drafts of training agenda, lesson plan, presentation, handouts, and list of audio-visual aids.
            c) Format: 1 electronic copy in the format specified by the Owner.
    b. Post training session:
        1) Training course materials: Due 14 calendar days after class completion.
            a) Recordings.
            b) Class attendance sheet.
            c) Final version of training agenda, final lesson plan, presentation, handouts, and audio-visual aids.
            d) Format: 1 electronic copy in the format specified by the Owner.
        2) Provide materials for all sessions of the class in a single transmittal.
        3) If the Owner requires training CEUs, issue training CEU certificates approved by the state regulatory agency to Owner's staff who successfully completed the training.

1.04 COMMISSIONING COORDINATOR (CC)

A. Responsibilities include the following:
    1. Full-time dedicated person with no other project responsibilities or part-time, as approved by the City.
    2. Become thoroughly familiar with Contract Commissioning requirements.
    3. Provide the primary interface with Engineer and Owner for Commissioning efforts.
    4. Lead Commissioning efforts - all phases and tasks.
    5. Coordinate training efforts.
    6. Meetings:
        a. CC is responsible for setting Commissioning coordination meeting dates and times, as well as preparing the agendas and meeting minutes.
        b. CC shall conduct Commissioning progress meetings throughout construction, to plan, scope, coordinate, and schedule future activities, resolve problems, etc.
        c. Frequency: Monthly minimum. Increase frequency as needed based on complexity and quantity of Commissioning activities.

1.05 MANUFACTURER'S REPRESENTATIVES

A. Qualifications: As specified below and in the Technical Sections:
    1. For Installation and Functional Testing:
        a. Factory trained and experienced in the technical applications, installation, operation, and maintenance of respective equipment/system with full authority by the equipment/system manufacturer to issue the certifications required of the manufacturer.

2. Training instructor qualifications:
    a. Provide resume stating instructor's technical preparation and instructional technology skills and experience.
    b. If CEUs are required, the operator training instructors must comply with state regulatory.
    c. Knowledgeable in the equipment/system for which they are training.
    d. Experienced in conducting classes.
    e. Sales representatives are not qualified instructors unless they possess the detailed operating and maintenance knowledge required for proper class instruction.
3. Representatives to be approved by Owner and Engineer.
4. No substitute representatives without written approval by Owner and Engineer.

B. Duties:
1. Determine if additional time and/or trips (beyond those specified in the Technical Sections) is required to perform the specified services.
2. Coordinate services in accordance with the Contractor's Project schedule, up to and including making multiple trips to the Project Site when there are separate milestones associated with installation of each occurrence of manufacturer's equipment.
3. Perform on-site services as specified in the Technical Sections.
4. Provide daily copies of manufacturer's representatives field notes and data to Contractor.

1.06 PLANNING PHASE

A. Overview of Planning Phase:
1. Define approach and timing for Commissioning.
2. Obtain Engineer approval of draft Test Plans.

B. Test Plans.
1. Define approach and timing for:
    a. Testing and Training Phases.
        1) Major systems, with separate plans for each system.
    b. Start-Up Phase.
2. Centralized Commissioning database:
    a. Provide system to manage information, as approved by the City.
        1) Detailed steps.
        2) Dependencies and other relationships of steps.
    b. Update the database within 24 hours of task completion.
3. Source Test (Factory Acceptance Test) and Functional Test Plans:
    a. As specified in this Section and other Technical Sections.
    b. Based on approved Shop Drawings.
    c. Prepared by the Contractor.
    d. Include the following items for each test:
        1) Purpose of the test.
        2) Identification of each item of equipment/system to be tested, including system designation, location, tag number, control loop identifier, etc.
        3) Description of the pass/fail criteria that will be used.

4) Listing of pertinent reference documents (Contract and industry standards or sections applicable to the testing).
a) Credentials of test personnel.
5) Test equipment:
a) Include Product Data for the test equipment.
b) Appropriate calibration records.
(1) Drawings or photographs of test stands and/or test apparatus.
6) Duration: Determine test durations with Owner's input.
7) Detailed step-by-step test procedures.
a) Level of detail shall be sufficient for the witness to follow the steps.

e. Define for Functional Testing:
1) Required temporary systems (pumps, piping, etc.).
2) Shutdown requirements for existing systems.

f. Furnish labor, power, tools, equipment, instruments, and services required for and incidental to testing activities.

4. Test forms minimum requirements:
a. Name of product to be tested.
b. Test date.
c. Names of persons conducting the test.
d. Names of persons witnessing the test, where applicable.
e. Test data.
f. Applicable project requirements as specified in the Technical Sections.
g. Check offs for each completed test or test step.
h. Place for signature of person conducting tests and for the witnessing person, as applicable.

5. Owner responsibilities:
a. Owner will schedule staff within the constraints of their workloads.
1) Those who will participate in this test have existing full-time work assignments, and testing is an additional assigned work task, therefore, scheduling is imperative.
2) Treatment facilities are typically operated on an around-the-clock basis and are staffed in work shifts.
1) Maximum hours per day available for commissioning activities: 4, unless otherwise stated by the City.
2) Days available for commissioning activities: Monday to Thursday.
3) Scheduling coordination with the CC.

6. CC is responsible for the following:
a. Coordinate schedule with the Owner's personnel and manufacturer's representatives (instructors).

C. Test Reports:
1. Minimum requirements:
a. Title.
b. Abstract.
c. Equipment.
d. Procedures.
e. Results.
1) Complete disclosure of the calculation methodologies.
f. Conclusions.

g. Signature by an authorized party.
h. Appendices.
1) Completed test forms signed by witnesses.

2. Water Management Plan:
a. Requirements:
1) Demonstrate how water will be produced, conveyed, treated, recycled, and or disposed until testing verifies specified requirements.

3. Commissioning Schedule:
a. Content:
1) Comply with Attachment G - Functional Testing Requirements and provide activities organized by system and subsystem.
2) Include:
a) Source Testing when required.
b) Functional Testing.
c) Owner Training.
3) Comply with Attachment F - Commissioning Roles and Responsibilities Matrix.
b. Procedures:
1) Submit Commissioning Schedule as specified in Section 01321 - Schedules and Reports.

1.07 TESTING AND TRAINING PHASE

A. Overview of Testing and Training Phase:
1. General:
a. Contractor tests the Work to verify it meets the Contract requirements.
b. Contractor trains the Owner to operate and maintain the Work.
2. Contractor responsibilities:
a. Furnish labor, tools, equipment, instruments, and services required for and incidental to completing Commissioning activities in accordance with the approved Commissioning Plans.
3. Owner responsibilities:
a. Furnish labor, power, chemicals, and services required for and incidental to completing Commissioning activities in accordance with the approved Commissioning Plans.
b. Owner provided services, equipment, and/or materials to be as specified in the Scope of Work in the Contract RFP in Volume 2, Article 2.

B. Source Testing:
1. As specified in the Technical Section.
2. Source Test Plan:
a. Engineer approval of Source Test Plan required prior to testing.
3. Witnessed in person:
a. As specified in the Technical Section.
4. Virtual witness testing:
a. As specified in the Technical Sections.
5. If the Source Test is not ready on the scheduled date or if the Source Test fails:
a. Contractor is responsible for associated costs:
1) First test costs that are non-refundable, if applicable.
2) Repeat test costs:
a) Trip costs, if applicable.

b) Virtual witness costs, if applicable.

6. Source Testing is complete after successful testing, submittal of test report, and Manufacturer's Certificate of Source Testing.
7. Engineer approval of Source Testing Report is required.

C. Installation Verification:
   1. Overview:
      a. Verifying the installation of equipment to be in accordance with Manufacturer's Instructions.
   2. Prerequisite:
      a. Engineer approval of Source Testing Report.
   3. Perform checks:
      a. Structural anchorage check.
      b. Electrical energization check.
         1) As specified in the flowchart shown in Attachment A.
      c. Health and safety check.
   4. Submit Manufacturer's Certificate of Installation Verification.
   5. Engineer approval of Manufacturer's Certificate of Installation Verification is required.

D. Functional Testing:
   1. Overview:
      a. Testing the function of a system or subsystem.
   2. Prerequisites:
      a. Engineer approval of Manufacturer's Certificate of Installation Verification.
      b. Engineer approval of Functional Test Plan required prior to testing.
      c. Draft Operations and Maintenance Manual as specified in Section 01782 - Operations and Maintenance Manual.
      d. Completed pipe, valve, and gate labeling of system or subsystem.
         1) As specified in Section 15076 - Pipe Identification prior to the start of Functional Testing.
   3. Witnessed.
   4. Discipline checks:
      a. Verify support systems function properly, such as seal water, pipes, valves, etc.
      b. As specified in the individual Technical Sections.
   5. Consecutive Day Test:
      a. Operate the Work as specified in Attachment G - Functional Testing Requirements and as specified in the individual Technical Sections.
         1) Successful completion of subsystem testing required prior to system testing.
      b. Failure response time:
         1) Be equipped and ready to provide emergency repairs, adjustments, and corrections to comply with the "Significant Interruption Duration" requirements as specified in Attachment G - Functional Testing Requirements.
      c. Duration:
         1) As specified in Attachment G - Functional Testing Requirements.

2) Restart the consecutive day test when the system performance failures exceed the “Significant Interruption Duration” time period specified in Attachment G - Functional Testing Requirements.
a) Individual equipment/system failures that are corrected within the “Significant Interruption Duration” time specified in Attachment G - Functional Testing Requirements shall not require the consecutive day test to be restarted unless the failure recurs.
b) Engineer has the authority to reject the consecutive day test if individual equipment/system failures are repetitive.

6. Instrumentation and controls tests.
   a. Loop Validation Tests.
   b. Complete End-to-End Testing (CEET):
      1) Signal are tested from the field device through the PLC program, the network, and all the way to the operator’s HMI graphic screens.
7. Restore to condition prior to testing:
   a. Dewater and clean sumps.
   b. Dewater process units, where required by test plan.
8. Submit Manufacturer’s Certificate of Functional Compliance.
9. Engineer approval of Manufacturer’s Certificate of Functional Compliance is required.

E. Documentation:
   1. Provide records generated during Commissioning Phase of Project, including, but not limited to:
      a. Training documentation.
      b. Manufacturer’s Certificate of Source Testing.
      c. Manufacturer’s Certificate of Installation Verification.
      d. Manufacturer’s Certificate of Functionality Compliance.
      e. Daily logs of equipment/system testing identifying tests conducted and outcome.
      f. Test forms and documentation.
      g. Functional Testing results.
      h. Logs of time spent by manufacturer’s representatives performing services on the job site.
      i. Equipment lubrication records.
      j. Electrical phase, voltage, and amperage measurements.
      k. Insulation resistance measurements.
      l. Bearing temperature measurements.
      m. Data sheets of control loop testing, including testing and calibration of instrumentation devices and setpoints.
      n. Provide: 1 electronic copy in format specified by Owner.
      o. Store the data within 24 hours of the test or document creation in the project system.
      p. Due date: Within 14 calendar days of Substantial Completion.
   2. Engineer approval of documentation is required.

F. Owner Training:
   1. Train Owner’s staff on the operation and maintenance of the equipment/system.
      a. Provide Owner staff with state regulatory agency approved training CEUs.

2. Train on each topic of the approved Operation and Maintenance Manual.
    a. Include classroom instruction and field demonstration with all necessary tools and test equipment.
3. Training tailored to the skills and job classifications of the staff attending the classes (e.g., plant superintendent, treatment plant operator, maintenance technician, electrician, etc.).
4. Training outcomes:
    a. Owner's staff can safely operate, maintain, and repair the equipment/systems provided as recommended by the manufacturer.
5. Training plan:
    a. CC shall meet with Engineer and Owner's designated training coordinator to develop list of personnel to be trained and to establish expected training outcomes and objectives at least 60 calendar days prior to commissioning of equipment/system, or as specified by the City.
    b. Coordinate and arrange for manufacturer's representatives to provide both classroom-based learning and field (hands-on) training, based on training module content and stated learning objectives.
    c. Conduct classroom training at location designated by Owner.
    d. Scope and sequence:
        1) Plan and schedule training in the correct sequence to provide prerequisite knowledge and skills to trainees.
            a) Describe recommended procedures to check/test equipment/system following a corrective maintenance repair.
        2) If multiple classes are needed to meet the training objectives, they shall be included in the training plan.
6. Owner Training Schedule:
    a. Schedule Owner's staff training within the constraints of their workloads.
        1) Those who will participate in this training have existing full-time work assignments, and training is an additional assigned work task, therefore, scheduling is imperative.
        2) Owner staff work schedules regularly shift, as treatment facilities are typically operated on an around-the-clock basis.
        3) Maximum training hours per week: 25.
        4) Days available for training:
            a) Monday to Thursday.
    b. Training scheduling coordination:
        1) CC is responsible for the following:
            a) Coordinate schedule for training periods with the Owner's personnel and manufacturer's representatives (instructors).
        2) Complete Owner Training no sooner than 15 calendar days prior to Functional Testing of each system.
    c. Class logistics:
        1) Delivery time minimum: 2 hours.
        2) Delivery time maximum: 4 hours.
        3) Class agenda:
            a) Refreshment break: One 10-minute break.
            b) Meal break: One 45-minute break, unless otherwise specified.
            c) Schedule refreshment breaks and meal breaks to meet the class needs and Owner work rules.

4) Schedule specific sessions:
    a) Minimum of 30 days in advance to allow Owner staffing arrangements to take place.
    b) At the times requested by the Owner, within the period 7 a.m. to 7 p.m. Monday through Friday.
        (1) Times scheduled will be at Owner's discretion.
    c) Owner approval and confirmation required for session schedules.
    d) Provide minimum of 2 sessions for each class unless otherwise noted.
        (1) The purpose of having multiple sessions on each class is to accommodate the attendance of as many Owner personnel working different shifts as possible.
    e) A maximum of 1 session per day for each class.

d. Number of students:
    1) Estimated class size maximum: 5-10 staff.
    2) Engineer will confirm the headcount 1 week prior to the class so that the instructor can provide the correct number of training aids for students.

7. Submittals:
    a. Unless stated otherwise by the City, submit Training Plan Schedule 30 calendar days before the first scheduled training session, including, but not limited to, lesson plans, participant materials, instructor's resumes, and training delivery schedules.
    b. Submit training documentation, including the following:
        1) Training plan:
            a) Training modules.
            b) Scope and sequence statement.
            c) Contact information for manufacturer's instructors. including name, phone, and e-mail address.
            d) Instructor qualifications.
        2) Training program schedule:
            a) Format: Bar chart:
                (1) Include in the Project Progress Schedule.
            b) Contents:
                (1) Training modules and classes.
8. Lesson plans:
    a. Divide training into discrete modules appropriate for the equipment and trades.
    b. State performance-based learning objectives in terms of what the trainees will be able to do at the end of the lesson.
    c. Define student conditions of performance and criteria for evaluating instructional success.
    d. Minimum requirements:
        1) Hands-on demonstrations planned for the instructions.
        2) Cross-reference training aids.
        3) Planned training strategies such as whiteboard work, instructor questions, and discussion points or other planned classroom or field strategies.
        4) Attach handouts cross-referenced by section or topic in the lesson plan.
        5) Indicate duration of outlined training segments.

e. Provide instruction lesson plans for each trade:
    1) Detailed component description:
        a) Identify each component function and describe in detail.
        b) Identify equipment's mechanical, electrical, and electronic components and features.
        c) Where applicable, group relative components into subsystems.
        d) Identify and describe in detail equipment safety features, permissive and controls interlocks.
    2) Equipment operation:
        a) Describe equipment's operating (process) function and system theory.
        b) Describe equipment's fundamental operating principles and dynamics.
        c) Identify support equipment associated with the operation of subject equipment.
        d) Detail the relationship of each piece of equipment or component to the subsystems, systems, and process.
        e) Cite hazards associated with the operations, exposure to chemicals associated with the component, or the waste stream handled by the component.
        f) Specify appropriate safety precautions, equipment, and procedures to eliminate, reduce, or overcome hazards.
    3) Define Preventative Maintenance (PM) inspection procedures required on equipment in operation, spot potential trouble symptoms (anticipate breakdowns), and forecast maintenance requirements (predictive maintenance).
        a) Review preventive maintenance frequency and task analysis table.
    4) Define equipment Corrective Maintenance (CM) troubleshooting:
        a) Describe recommended equipment preparation requirements as they relate to specific craft problems.
        b) Identify and describe the use of any special tools required for maintenance of the equipment as they relate to specific craft problems.
        c) Provide component specific troubleshooting checklists as they relate to specific craft problems.
        d) Describe component removal/installation and disassembly/assembly procedures for specific craft repairs.
        e) Perform at least 2 hands-on demonstrations of common corrective maintenance repairs.
    5) Describe recommended measuring instruments and procedures, and provide instruction on interpreting alignment measurements, as appropriate.

9. Training instruction format:
    a. Training for operations personnel shall be provided separately from the maintenance personnel.
        1) Training for maintenance personnel shall be further subdivided into the following 4 trade groups.
            a) Mechanical maintenance.
            b) Electrical maintenance.
            c) Instrumentation and controls maintenance.

d) Process Controls Network (PCN) maintenance.

b. Instructors shall apply adult education best practices, emphasizing learner participation and activity.
c. Lecturing should be less than 30 percent of class time.
d. Training delivery may include problem solving, question/answer, hands-on instruction, practice, evaluation/feedback tools, and lecture to support training objectives.
e. Conduct hands-on instruction according to the following descriptions:
    1) Present hands-on demonstrations of at least the following tasks:
        a) Proper start-up, shutdown, and normal and alternative operating strategies.
        b) Common corrective maintenance repairs for each group.
        c) Recommended procedures to check/test equipment/system following a corrective maintenance repair.
        d) Preventative maintenance points.
        e) Calibration, if applicable.
    2) Use tools and equipment provided by manufacturer to conduct the demonstrations.
        a) Submit requests for supplemental assistance and facilities with the Contractor's proposed lesson plans.
    3) Contractor remains responsible for equipment disassembly or assembly during hands-on training situations involving equipment disassembly or assembly by Owner's personnel.
f. Training aids:
    1) Instructors shall provide needed audio-visual devices such equipment (televisions, video recorder/player, computer, projectors, screens, easels, etc.), models, charts, etc., for each class.
    2) Instructor to confirm with Engineer in advance of each class that the classroom will be appropriate for the types of audiovisual equipment to be employed.

10. Training sessions:
    a. Provide training sessions for equipment/system as specified in the individual equipment/system section.
    b. Include the following information in the agenda:
        1) Instructor name.
        2) Listing of subjects to be discussed.
        3) Time estimated for each subject.
        4) Allocation of time for Owner staff to ask questions and discuss the subject matter.
        5) List of documentation to be used or provided to support training.
    c. Owner may request that particular subjects be emphasized, and the agenda be adjusted to accommodate these requests.
    d. Digitally record audio and video of each training session.
        1) Include classroom and field instruction with question and answering periods.
        2) Engineer approval required for producer of video materials from one of the following options:
            a) Qualified, professional video production company or individual.
        3) Record in digital format and recording shall become property of the Owner with exclusive rights.
            a) No video recording agreements will be entered into by the Owner.

4) Media:
a) Video quality shall be 720p HD or greater in MPG, AVCHD, AVI, or MP4 format.
b) Digital color video format.
c) Provide audio portion of the composite CD sufficiently free from electrical interference and background noise to provide complete intelligibility of oral report.
d) Identification: On each copy provide a label with the following information:
(1) Name of training.
(2) Date video was recorded.
e) Display continuous running time.
f) At start of each video recording, record training class name, date, and instructor's name.
g) Provide audio quality that is not degraded during the recording of the field sessions due to background noise, space, distance or other factors.
5) Contractor shall provide a written release from all claims to the recorded training material produced, if required.

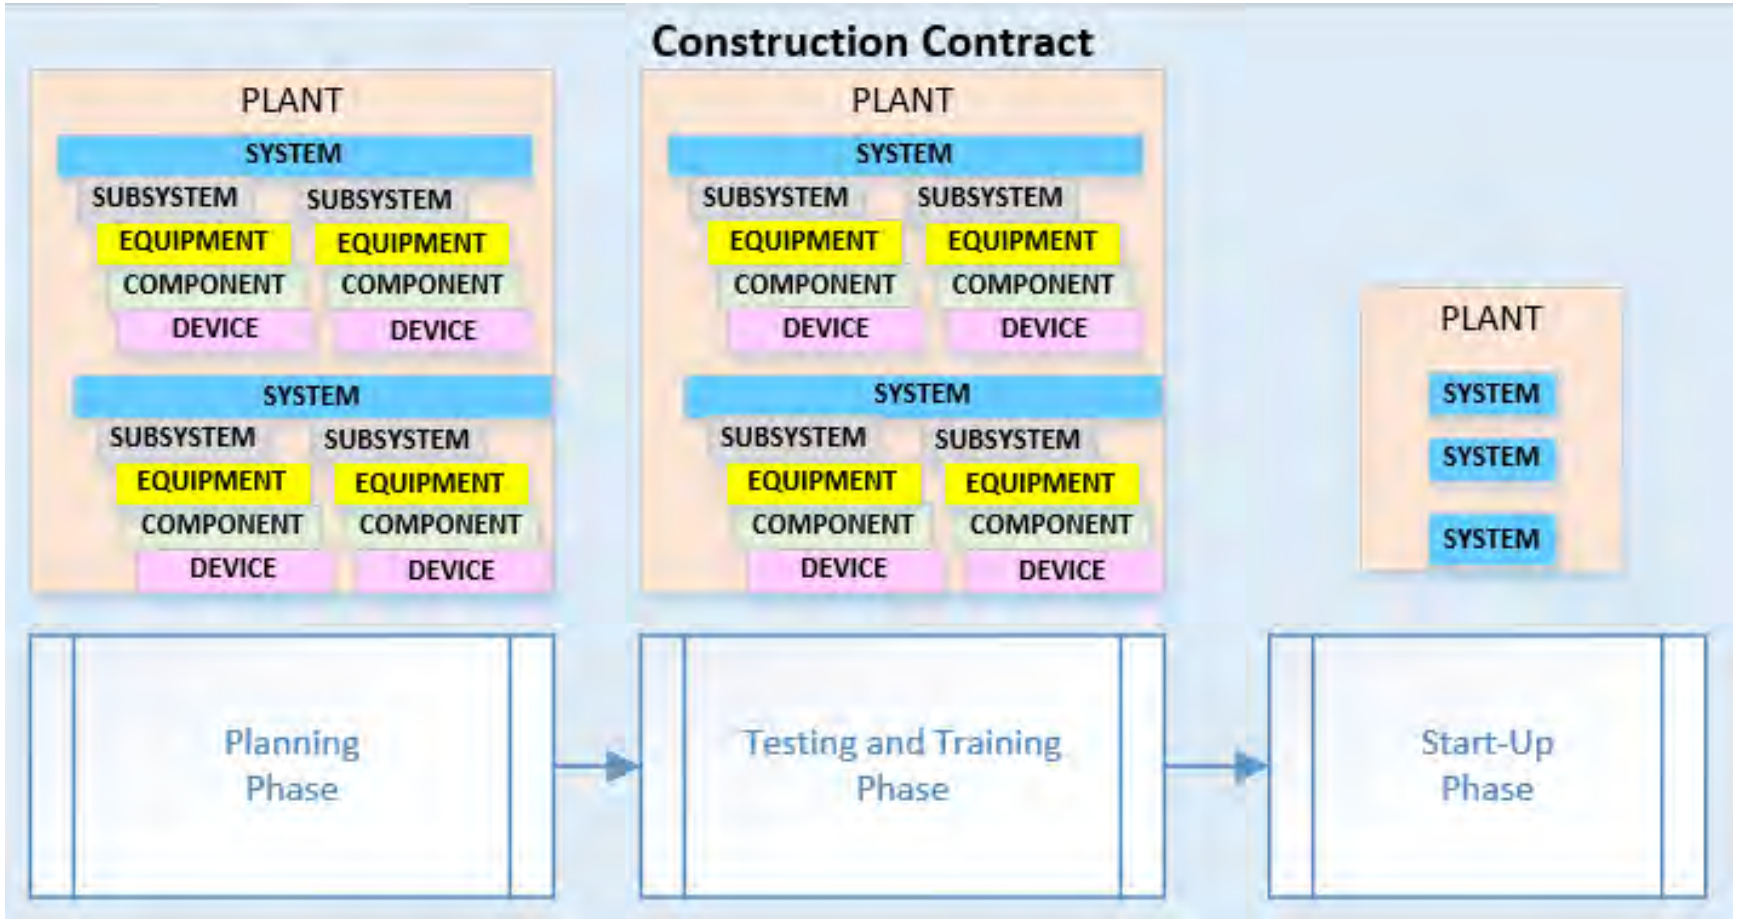
e. Distribute copies of the agenda to each student at the beginning of each training class.
f. Trainees will keep training materials and documentation after the session.
g. Distribute Training Evaluation Form following each training session.
1) Training Evaluation Form is included in this Section.
2) Return completed Training Evaluation Forms to Owner's designated training coordinator immediately after session is completed.
3) Revise training sessions judged "Unsatisfactory" by a majority of attendees.
a) Conduct training sessions again until a satisfactory rating is achieved.

11. Engineer approval of Owner Training is required.

1.08 START-UP PHASE

A. Overview of Start-Up Phase:
1. General:
a. Confirm reliability requirements.

B. Start-Up Period:
1. Contractor responsibilities:
a. Support Owner to operate the Work.
2. Owner responsibilities:
a. Owner to operate the Work.
b. Owner-provided services, equipment, and/or materials to be as specified in the Scope of Work in the Contract RFP in Volume 2, Article 2.
c. Furnish labor, power, chemicals, tools, equipment, instruments, and services required for and incidental to completing commissioning activities in accordance with the approved Commissioning Plans.
3. Prerequisites:
a. Engineer approval of Testing and Training Phase.
4. Witnessed.



5. Duration: 3 days per well site.
6. Engineer approval of Start-Up Period is required to achieve substantial completion.

	Valves				

A. Schedule delays:
   1. Changes in the dates for Source Testing less than 30 days of the date provided in the latest approved Commissioning Schedule are considered delays.
   2. Contractor is responsible for associated costs resulting from delays:
      a. In person and/or virtual witnessing.
      b. Travel costs and witness labor costs.

B. Repeat test costs:
   1. Contractor is responsible for associated costs for repeat testing:
      a. In person and/or virtual witnessing.
      b. Travel costs and witness labor costs.

SECTION 01757

DISINFECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Cleaning and disinfection requirements for new and existing facilities affected by the Work.

1.02 REFERENCES

A. American Water Works Association (AWWA):
   1. C651 - Disinfecting Water Mains.
   2. C652 - Disinfection of Water Storage Facilities.
   3. C653 - Disinfection of Water Treatment Plants.
   4. C655 - Field Dechlorination.

B. U.S. Environmental Protection Agency (EPA):
   1. Method 524.2 Measurement of Purgeable Organic Compounds in Water by Capillary Column Gas Chromatography/Mass Spectrometry.
   2. Safe Drinking Water Act (SDWA).

1.03 SUBMITTALS

A. Disinfection test plan, detailing the procedure to be utilized to disinfect the facilities, including:
   1. Method and locations of disinfectant application.
   2. Locations of sampling points.
   3. Method of flushing and location of flushing ports (as appropriate for method of chlorination).
   4. Method of dechlorination (as appropriate for method of chlorination).
   5. Disposal location for chlorinated water (as appropriate for method of chlorination).

B. Disinfection reports, including the following:
   1. Date issued.
   2. Project name and location.
   3. Treatment subcontractor’s name, address, and phone number.
   4. Type and form of disinfectant used.
   5. Time and date of disinfectant injection start.
   6. Time and date of disinfectant injection completion.
   7. Test locations.
   8. Initial and 24-hour disinfectant residuals in milligrams per liter for each outlet tested.
   9. Time and date of flushing start.

10. Time and date of flushing completion.
11. Disinfectant residual after flushing in milligrams per liter for each outlet tested.

C. Bacteriological reports, including the following:
1. Date issued.
2. Project name and location.
3. Laboratory name, certification number, address, and phone number.
4. Time and date of water sample collection.
5. Name of person collecting samples.
6. Test locations.
7. Time and date of laboratory test start.
8. Coliform bacteria test results for each outlet tested.
9. Certification that water conforms or fails to conform to bacterial standards of the SDWA.
10. Bacteriologist's signature and bacteriological laboratory's evidence of certification.

D. Required permits, including, but not limited to, permit clearance.
1. Coordinate with the Owner and Engineer to obtain any necessary signatures.

1.04 QUALITY ASSURANCE

A. Bacteriological and physical chemistry laboratory: Certified by the state in which the Project is located.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Protect chlorine and bacteriological samples against damage and contamination.

B. Maintain caution labels on hazardous materials.

C. Maintain storage room dry and with temperatures as uniform as possible between 60 degrees Fahrenheit and 80 degrees Fahrenheit.

1.06 PROTECTION

A. Provide necessary signs, barricades, and notices to prevent persons from accidentally consuming water or disturbing system being treated.

PART 2 PRODUCTS

2.01 MATERIALS

A. Disinfectant: Free chlorine in liquid, powder, tablet, or gas form in accordance with AWWA C653.

B. Dechlorination agent: Sulfur dioxide, sodium bisulfate, sodium sulfite, or sodium thiosulfate, in accordance with AWWA C655.

PART 3 EXECUTION

3.01 DISINFECTION OF WATER FACILITIES

A. Perform disinfection in accordance with AWWA C653 and as specified in this Section.

B. Complete hydrostatic/leakage tests prior to disinfection.

C. Clean newly constructed and/or modified facilities, such as pipes and channels, in accordance with AWWA C653 and the following:
   1. Remove debris and material not associated with the structure or process prior to disinfection.
   2. Clean wall, floor, ceiling, and attached surfaces by use of high-pressure water jet, sweeping, scrubbing, or equally effective means.
   3. Remove water, paint flakes, sediment, dirt, and foreign material accumulated during cleaning.
   4. Remove by flushing or other means, soil and debris from water pipes and channels in accordance with AWWA C651.
   5. Protect surfaces from adverse environmental exposure between the preliminary cleaning and the disinfection stages.

D. Prior to chlorination, clean newly constructed and/or modified facilities to be disinfected in accordance with AWWA C651, C652, or C653, as applicable.

E. Provide necessary blind flanges, hoses, sample taps, or any other appurtenances that may be required to clean and disinfect the piping and wetted surfaces.

F. System treatment:
   1. Start disinfection when conditions are satisfactory.
   2. Perform disinfection of water lines and structures in accordance with AWWA C651, C652, and C653, and as specified in this Section.
   3. Starting at the outlet closest to water source, bleed water from each outlet until water produces odor of disinfectant. Repeat process at each outlet throughout the system.
   4. Test for disinfectant residual at each of the following locations and other locations in accordance with the submitted disinfection test plan:
      a. Ends of piping runs.
      b. Remote outlets.
      c. Tanks.
      d. At least 2 outlets on each building floor where directed.
      e. Drain lines.
   5. Maintain disinfectant in system for appropriate 6-hour or 24-hour interval in accordance with AWWA C652.
   6. When disinfectant residual is less than 10 milligrams per liter after 24 hours, repeat system treatment.

7. Stainless steel piping:
    a. Modify procedures for disinfection of stainless steel piping and appurtenances as necessary to avoid causing corrosion, pitting, or attack of stainless steel materials.
        1) Take steps to eliminate chlorinated water trapped in crevices and under gaskets through the following procedures:
            a) Pressurize stainless steel piping systems so that gaskets and O-rings are seated before introducing chlorinated water into the system.
            b) Flush to displace a minimum of 3 pipe volumes at the conclusion of the disinfection procedure.
    b. Use the continuous-feed method to fill the stainless steel piping system with the minimum chlorine concentration required to provide a 10 milligrams per liter residual after 24 hours of contact time in accordance with AWWA C651.

3.02 SURFACES TO BE DISINFECTED

A. Disinfect the following:
    1. Piping systems that are used to convey water, solutions, or chemicals to potable water facilities.

3.03 REPAIRS OR CONNECTIONS TO EXISTING LINES

A. Perform disinfection in accordance with AWWA C651 and as specified in this Section.

B. Clean and sterilize the interior surfaces of new piping, fittings, equipment, and appurtenances to be installed in an existing potable water system or connected to an existing system.

C. Clean and sterilize the existing pipe or facilities for a minimum distance of 3 pipe diameters back from the ends of the pipe. Plug the ends of the line when work is not being performed on the pipe.

D. Perform sterilization by swabbing each item with a concentrated chlorine solution.
    1. Each piece is to be disinfected prior to being assembled for installation in the existing pipe.
    2. Disinfect each piece just prior to assembly to help prevent recontamination.
    3. Plug the ends of the assembly until a new item is to be added to the assembly.
    4. Store disinfected materials on blocks to prevent contact with the ground.

3.04 FLUSHING

A. Remove disinfection water from the facilities as appropriate for the type of disinfectant and method used for disinfection.

B. Flush facilities with potable water containing no more disinfectant residual than the active distribution system or 1 milligram per liter, whichever is greater, as appropriate for method of chlorination.

C. Continue flushing until water at designated flushing ports contains disinfectant residual equal to concentration specified above.

3.05 DISPOSAL OF CHLORINATED WATER

A. Dispose in accordance with AWWA C655 and as specified in this Section.

B. Dispose of chlorinated water in accordance with the submitted disinfection test plan and applicable requirements of federal, state, county, and city having jurisdiction over disposal of hazardous wastes in the location of the Project and disposal site.

C. Chlorinated water may only be disposed of in a sanitary sewer system with the written permission of the Owner. If allowed, discharge the chlorinated water at a low rate so it does not surcharge the sewer line.

3.06 BACTERIOLOGICAL TEST

A. Instruct bacteriological laboratory to collect water samples no sooner than 24 hours after start of disinfection of each facility.

B. Collect bacteriological quality samples at each of the following locations and other locations in accordance with the submitted disinfection test plan and Standard Methods for the Examination of Water and Wastewater:
   1. Where water enters system.
   2. Inlet piping.
   3. Ends of piping runs.
   4. Drain lines.
   5. Remote outlets.
   6. Tanks.
   7. At least 2 outlets on each building floor.

C. Analyze water samples in accordance with Standard Methods for Examination of Water and Wastewater.

D. When bacteriological test proves water quality to be unacceptable, repeat disinfection treatment process until water meets quality standards for disinfection.

END OF SECTION

SECTION 01770

CLOSEOUT PROCEDURES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Contract closeout requirements.

1.02 REFERENCES

A. American Water Works Association (AWWA).

1.03 FINAL CLEANING

A. Perform final cleaning prior to inspections for Substantial Completion.

B. Employ skilled workers who are experienced in cleaning operations.

C. Use cleaning materials which are recommended by manufacturers of surfaces to be cleaned.

D. Prevent scratching, discoloring, and otherwise damaging surfaces being cleaned.

E. Clean roofs, gutters, downspouts, and drainage systems.

F. Broom clean exterior paved surfaces and rake clean other surfaces of site work:
   1. Police yards and grounds to keep clean.

G. Remove dust, cobwebs, and traces of insects and dirt.

H. Clean grease, mastic, adhesives, dust, dirt, stains, fingerprints, paint, blemishes, sealants, plaster, concrete, and other foreign materials from sight-exposed surfaces, and fixtures and equipment.

I. Remove non-permanent protection and labels.

J. Polish waxed woodwork and finish hardware.

K. Wash tile.

L. Wax and buff hard floors, as applicable.

M. Wash and polish glass, inside and outside.

N. Wash and shine mirrors.

O. Polish glossy surfaces to clear shine.

P. Vacuum carpeted and soft surfaces.

Q. Clean permanent filters and replace disposable filters when heating, ventilation, and air conditioning units were operated during construction.

R. Clean ducts, blowers, and coils when units were operated without filters during construction.

S. Clean light fixtures and replace burned-out or dim lamps.

T. Probes, elements, sample lines, transmitters, tubing, and enclosures have been cleaned and are in like-new condition.

1.04 WASTE DISPOSAL

A. Arrange for and dispose of surplus materials, waste products, and debris off-site:
   1. Prior to making disposal on private property, obtain written permission from the Owner of such property.

B. Do not fill ditches, washes, or drainage ways which may create drainage problems.

C. Do not create unsightly or unsanitary nuisances during disposal operations.

D. Maintain disposal site in safe condition and good appearance.

E. Complete leveling and cleanup prior to final completion of the Work.

1.05 TOUCH-UP AND REPAIR

A. Touch-up or repair finished surfaces on structures, equipment, fixtures, and installations that have been damaged prior to inspection for Substantial Completion.

B. Refinish or replace entire surfaces which cannot be touched-up or repaired satisfactorily.

1.06 FINAL CLEANING AND DISINFECTION OF SYSTEMS OF PLANT FACILITIES

A. Clean channels, pipe, basins, reservoirs, and tanks before running of 7-day test, or before facility goes on stream when 7-day test is not required.

B. Wash, wherever practicable, or broom sweep channels, pipe, basins, reservoirs, and tanks.

C. Disinfect filter basins, reservoirs, clear wells, tanks, channels, and piping intended to carry potable water as follows or in accordance with AWWA Standards.

D. Provide ample sampling outlets in pipe for testing.

E. Fill pipe and other plant facilities with chlorine solution of sufficient strength to retain residual of not less than 10 parts per million at end of 24 hours.

F. When reservoirs and basins are too large to be economically disinfected by filling with chlorine solution, spray reservoirs and basins with solution containing 100 parts per million of chlorine.

G. After disinfection, rinse entire potable water system with potable water sufficient to reduce chlorine residual to not more than 0.6 parts per million throughout system before system is put into service.

1.07 FINAL CLEANING AND DISINFECTION OF SYSTEMS OF POTABLE WATER MAINS

A. Clean interior of pipe and fittings.

B. When pipe contains dirt that cannot be removed by flushing, swab pipe interiors with solution containing not less than 500 parts per million of chlorine until clean.

C. Flush 12-inch diameter and smaller pipe as thoroughly as available water sources will permit.

D. Fill pipe with chlorine solution of sufficient strength to provide 10 parts per million chlorine residual at end of 24 hours.

E. Flush pipes with potable water until chlorine residual is less than 0.6 parts per million before pipes are put into service.

1.08 CLOSEOUT DOCUMENTS

A. Submit the following before Substantial Completion:
   1. Punch list of items to be completed or corrected with the request for issuance of Substantial Completion.
   2. Evidence of Compliance with Requirements of Governing Authorities.
   3. Project Record Documents.
   4. Approved Operation and Maintenance Manuals.
   5. Approved Warranties and Bonds.
   6. Keys and Keying Schedule.
   7. Completed Contract requirements for Commissioning and process Start-Up.

B. Submit the following before final completion of the Work and at least 7 days prior to submitting Application for Final Payment:
   1. Punch list items have been completed and the Engineer and Owner are satisfied that all deficiencies are corrected.
   2. Evidence of Payment and Release of Liens or Stop Payment Notices as outlined in Conditions of the Contract.
   3. Release of claims as outlined in Conditions of the Contract.
   4. Submit certification of insurance for products and completed operations, as specified in the General Conditions.
   5. Final statement of accounting.
   6. Submit Final (As-Built) Schedule as specified in Section 01321 - Schedules and Reports.

1.09 PROJECT RECORD DOCUMENTS

A. Maintain at the Project Site, available to the Owner and Engineer, 1 copy of the Contract Documents, Shop Drawings, and other Submittals in good order:
   1. Mark and record field changes and detailed information contained in Submittals and Change Orders.
   2. Record actual depths, horizontal and vertical location of underground pipes, duct banks, and other buried utilities. Reference dimensions to permanent surface features.
   3. Identify specific details of pipe connections, location of existing buried features located during excavation, and the final locations of piping, equipment, electrical conduits, manholes, and pull boxes.
   4. Identify location of spare conduits including beginning, ending, and routing through pull boxes and manholes. Record spare conductors, including number and size, within spare conduits and filled conduits.
   5. Provide schedules, lists, layout drawings, and wiring diagrams.
   6. Make annotations in electronic format. in accordance with the following color code:

Additions:	Red
Deletions:	Green
Comments	Blue
Dimensions:	Graphite

B. Maintain documents separate from those used for construction:
   1. Label documents “RECORD DOCUMENTS.”

C. Keep documents current:
   1. Record required information at the time the material and equipment is installed and before permanently concealing.
   2. Engineer will review Record Documents weekly to ascertain that changes have been recorded.

D. Affix civil engineer’s or professional land surveyor’s signature and registration number to Record Drawings to certify accuracy of information shown.

E. Deliver Record Documents with transmittal letter containing date, Project title, Contractor’s name and address, list of documents, and signature of the Contractor.

F. Record Documents will be reviewed monthly to determine the percent complete for the monthly pay application.

G. Updated Record Documents are a condition for the Engineer’s recommendation for progress payment.

H. Final Schedule Submittal as specified in Section 01321 - Schedules and Reports.

1.10 MAINTENANCE SERVICE

A. As specified in Technical Specifications.

1.11 SUBSTANTIAL COMPLETION

A. Obtain Certificate of Substantial Completion.

1.12 FINAL COMPLETION

A. When Contractor considers the Work is complete, submit written certification that:
   1. Work has been completed in accordance with the Contract Documents.
   2. Punch list items have been completed or corrected.
   3. Work is ready for final inspection.

B. Engineer will make an inspection to verify the status of completion with reasonable promptness.

C. Should the Engineer consider that the Work is incomplete or defective:
   1. Engineer will promptly notify the Contractor in writing, listing the incomplete or defective Work.
   2. Contractor shall take immediate steps to remedy the stated deficiencies and send a second written certification to the Engineer that the Work is complete.
   3. Engineer shall re-inspect the Work.

1.13 FINAL ADJUSTMENT OF ACCOUNTS

A. Submit a final statement of accounting to the Engineer at least 7 days prior to final Application for Payment.

B. Statement shall reflect all adjustments to the Contract amount.
   1. The original Contract amount.
   2. Additions and deductions resulting from:
      a. Change Orders.
      b. Units installed and unit prices.
      c. Set-offs for uncorrected or incomplete Work.
      d. Set-offs for liquidated damages.
      e. Set-offs for reinspection payments.
      f. Extended engineering and/or inspection services and inspection overtime.
      g. Excessive Shop Drawings review cost by the Engineer.
      h. Other adjustments.
   3. Total Contract amount, as adjusted.
   4. Previous payments.
   5. Remaining payment due.

C. Engineer will prepare a final Change Order reflecting approved adjustments to the Contract amount which were not previously made by Change Orders.

1.14 FINAL APPLICATION FOR PAYMENT

A. Submit the final Application for Payment reflecting the agreed upon information provided in the final statement of accounting.

PART 2 PRODUCTS

2.01 SPARE PARTS

A. Owner may request advanced delivery of spare parts, maintenance products, and special tools.
   1. Deduct the delivered items from the inventory list and provide transmittal documentation.

B. Prior to Substantial Completion, arrange to deliver spare parts, maintenance products, and special tools to Owner at a location on site chosen by the Owner.
   1. Provide an itemized list of spare parts and special tools that matches the identification tag attached to each item.

C. Owner and Engineer will review the inventory and the itemized list to confirm it is complete and in good condition prior to signing for acceptance, as specified in the Agreement and Contract RFP in Volumes 1 and 2.

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01782

OPERATION AND MAINTENANCE MANUALS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Preparation and submittal of manual with requirements to operate and maintain the equipment.

1.02 PREPARATION

A. General requirements:
   1. Provide dimensions in English units.
   2. Assemble material, where possible, in the same order within each volume.
   3. Reduce drawings and diagrams to 8 1/2 by 11-inch size, if possible unless otherwise specified.
   4. Complete forms on computer, handwriting not acceptable.
   5. Delete items or options not provided in the supplied equipment or system.
   6. Provide package control system annotated ladder logic for PLC, if applicable.

B. Hard copy requirements:
   1. Binders: 3-ring with rigid covers.
      a. Break into separate binders as needed to accommodate large size.
   2. Utilize numbered tab sheets to organize information.
   3. Provide original and clear text on reproducible non-colored paper, 8 1/2 by 11-inch size, 24 pound paper.
   4. Drawings larger than 8 1/2 by 11 inch:
      a. Fold drawings separately and place in envelope bound into the manual.
      b. Label each drawing envelope on the outside regarding contents.

C. Electronic requirements:
   1. File format:
      a. Entire manual in PDF format.
         1) Include text and drawing information.
         2) Provide a single PDF file even if the hard copy version is broken into separate binders due to being large.
         3) Create PDF from the native format of the document (Microsoft Word, graphics programs, drawing programs, etc.).
            a) If material is not available in native format and only available in paper format, remove smudges, fingerprints, and other extraneous marks before scanning to PDF format.
            b) Hard copy record drawing requirements:
               (1) Provide a single multipage PDF file of each set of the scanned drawings.
               (2) Page 1 shall be the cover of the drawing set.

c) At file opening, display the entire cover.
(1) Scan drawings at 200 to 300 dots per inch (DPI), black and white, Group IV Compression, unless otherwise specified.
(2) Scan drawings with photos in the background at 400 dots per inch (DPI), black and white, Group IV Compression.
4) Pagination and appearance to match hard copy.
5) Searchable.
6) Scanned images are not acceptable.
7) Bookmarks:
a) Bookmarks shall match the table of contents.
b) Bookmark each section (tab) and heading.
c) Drawings: Bookmark at a minimum, each discipline, area designation, or appropriate division.
d) At file opening, display all levels of bookmarks as expanded.
8) Thumbnails optimized for fast web viewing.
b. Drawing requirements:
1) Provide additional copy of drawings in most current version of AutoCAD format.
2) Drawings shall have a white background.
3) Drawing shapes shall not degrade when closely zoomed.
4) Screening effects intended to de-emphasize detail in a drawing must be preserved.
5) Delete items or options not provided in the supplied equipment or system.
2. Media:
a. USB flash drive.
b. Secure File Transfer Protocol (SFTP).
3. Label media with the following information:
a. Operation and Maintenance Manual.
b. Equipment name.
c. Specification Section Number.
d. Equipment tag number.
e. Owner's name.
f. Project number and name.
g. Date.
4. If multiple submittals are made together, each submittal must have its own subdirectory that is named and numbered based on the submittal number.

1.03 CONTENTS

A. Table of Contents: General description of information provided within each tab section.

B. Complete Attachment A - Equipment Summary Form.

C. Description of system and components.

D. Description of equipment function, normal operating characteristics, and limiting conditions.

E. On-line resources.

F. Telephone resources.

G. Approved submittals.
   1. Markup with any field changes.
   2. Final programming.

H. Start-up procedures: Recommendations for installation, adjustment, calibration, and troubleshooting.

I. Operating procedures:
   1. Step-by-step instructions including but not limited to the following:
      a. Safety precautions and applicable Safety Data Sheets.
      b. Guidelines.
      c. Other information as needed for safe system operation and maintenance.

J. Preventative maintenance procedures:
   1. Recommended steps and schedules for maintaining equipment.
   2. Troubleshooting.

K. Lubrication information: Required lubricants and lubrication schedules.

L. Overhaul instructions: Directions for disassembly, inspection, repair, and reassembly of the equipment; safety precautions; and recommended tolerances, critical bolt torques, and special tools that are required.

M. Manufacturer's technical reference manuals.

SECTION 01783

WARRANTIES AND BONDS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Warranty and bonds requirements.

1.02 SUBMITTALS

A. For each item of material or equipment furnished under the Contract:
   1. Submit manufacturer's warranty prior to fabrication and shipment of the item from the manufacturer's facility.
   2. Submit manufacturer's special warranty when specified.

B. Provide consolidated warranties and bonds within 15 calendar days of Substantial Completion.
   1. Contents:
      a. Organize warranty and bond documents:
         1) Include Table of Contents organized by Specification Section number and the name of the product or work item.
      b. Include each required warranty and bond in proper form, with full information, certified by manufacturer as required, and properly executed by Contractor, or subcontractor, supplier, or manufacturer.
      c. Provide name, address, phone number, and point of contact of manufacturer, supplier, and installer, as applicable.
   2. Hardcopy format:
      a. Submit 2 copies.
      b. Assemble in 3 D-side ring binders with durable cover.
      c. Identify each binder on the front and spine with typed or printed title "Warranties and Bonds"; Project Name or Title, and the Name Address and Telephone Number of the Contractor.
   3. Electronic copy in PDF format:
      a. Submit 1 copy.

1.03 OWNER'S RIGHTS

A. Owner reserves the right to reject warranties.

B. Owner reserves the right to refuse to accept Work for the project if the required warranties have not been provided.

1.04 RELATIONSHIP TO GENERAL WARRANTY AND CORRECTION PERIOD

A. Warranties specified for materials and equipment shall be in addition to, and run concurrent with, both Contractor's general warranty and the correction period requirements.

B. Disclaimers and limitations in specific materials and equipment warranties do not limit Contractor’s general warranty, nor does such affect or limit Contractor’s performance obligations under the correction period.

1.05 MANUFACTURER’S 1 YEAR WARRANTY MINIMUM REQUIREMENTS

A. Written warranty issued by item’s manufacturer.

B. Project-specific information, properly executed by product manufacturer, and expressly states that its provisions are for the benefit of the Contractor.

C. Covers all costs associated with the correction of the defect, including, but not limited to, removal of defective parts, new parts, labor, and shipping.

D. Provides a timely response to correct the defect.
   1. Manufacturer shall provide, in a timely fashion, temporary equipment as necessary to replace warranted items requiring repair or replacement, when warranted items are in use and are critical to the treatment process, as defined by Owner.

E. Warranty commence running on the date of substantial completion.
   1. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit warranty within 10 calendar days after acceptance, listing date of acceptance as beginning of warranty period.

F. Duration of warranty: 1 year.

1.06 MANUFACTURER’S SPECIAL WARRANTY

A. Manufacturer’s special warranty is a written warranty published by the manufacturer which includes the requirements as specified in the Technical Section.
   1. Project-specific information and requirements.
   2. Properly executed by product manufacturer.
   3. Expressly states that its provisions are for the benefit of the Contractor or Owner.
   4. Manufacturer’s special warranties commence on the date that the associated item is certified by Engineer as substantially complete.

B. This equipment has been classified as critical. Provide a 2-year duration special warranty, as specified in Technical Specifications:
   1. Section 11242 - Liquid Chemical Double Diaphragm Metering Pumps.
   2. Section 11249 - Packaged Fluoride System.
   3. Section 11313 - Vertical Turbine Pumps.
   4. Section 16222 - Low Voltage Motors up to 500 Horsepower.

5. Section 16265 - Reduced Harmonic Variable Frequency Drives.
6. Section 16444 - Low Voltage Motor Control Centers.

C. This equipment has been classified as critical with a minimum 5-year warranty, as specified in Technical Specifications:
   1. Section 15739 - VRF Heat Pumps.

1.07 WARRANTY WORK

A. Contractor's responsibilities:
   1. Manufacturer's disclaimers and limitations on product warranties do not relieve the Contractor of the warranty on the work that incorporates the product, nor does it relieve suppliers, manufacturers, and subcontractors required to countersign special warranties with Contractor.

B. Replacement cost:
   1. Upon determination that work covered by warranty has failed, replace or rebuild the work to an acceptable condition complying with requirement of the Contract Documents.
      a. Contractor is responsible for the cost of replacing or rebuilding defective work regardless of whether Owner has benefited from the use of the work through a portion of its anticipated useful service life.

C. Related damages and losses:
   1. When correcting warranted work that has failed, remove and replace other work that has been damaged as a result of such failure or that must be removed and replaced to provide access for correction of warranted work.

D. Owner's recourse:
   1. Written warranties are in addition to implied warranties, and shall not limit the duties, obligations, rights, and remedies otherwise available under the law, nor shall warranty periods be interpreted as limitation on time in which Owner can enforce such other duties, obligations, rights, or remedies.

E. Reinstatement of warranty:
   1. When work covered by a warranty has failed and has been corrected by replacement or rebuilding, reinstate the warranty by written endorsement.
      a. The reinstated warranty shall be equal to the original warranty with an equitable adjustment for depreciation.

1.08 IMPLIED WARRANTIES

A. Warranty of title and intellectual rights:
   1. Except as may be otherwise indicated in the Contract Documents, implied warranty of title required by Laws and Regulations is applicable to the Work and to materials and equipment incorporated therein.
   2. Provisions on intellectual rights, including patent fees and royalties, are in the General Conditions, as may be modified by the Supplementary Conditions.

B. Implied warranties: Duration in accordance with Laws and Regulations.

1.09 BONDS

A. Equipment bond and other bond requirements as specified in the Technical Sections.

B. Bonds commence running on the date of substantial completion.
   1. For items of Work for which acceptance is delayed beyond Date of Substantial Completion, submit warranty within 10 calendar days after acceptance, listing date of acceptance as beginning of bond period.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01850

DESIGN CRITERIA

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Design criteria for use in the selection of equipment and appurtenances specified in Technical Sections of these Specifications and indicated on the Drawings.
   2. Criteria for design of systems, components and equipment fabricated off site and shipped to the Work for installation.
   3. Criteria for design of anchors to connect equipment and appurtenances to supports and structures.

B. The criteria in this Section apply throughout the Work, unless additional criteria, or more restrictive criteria, are indicated.
   1. Additional criteria and requirements relevant to specific locations, specific materials, and specific equipment are indicated on the Drawings, and in the Technical Sections.

PART 2 PRODUCTS

2.01 DESIGN CRITERIA - SITE INFORMATION

Table: Site Locations and Elevations				
	Coordinates[1]		Site Elevation[1]	Design Groundwater Elevation[1]
Site Name	Latitude	Longitude	(feet)	(feet)
Misty Wood ASR Well (Well 19)	38.7715°	-121.3185°	120 to 137	95 to 100[2]
Campus Oaks Well (Well 13)	38.7917°	-121.3219°	128 to 131	19 to 67

Notes:

(1) Approximate, NAVD88.
(2) Perched groundwater has been observed 6 feet below the ground surface, approximately at elevation 124 in January 2023.Approximate.

2.02 DESIGN CRITERIA - REGULATORY REQUIREMENTS

A. Requirements of authorities having jurisdiction over the Project are included in Section 01410 - Regulatory Requirements.

2.03 DESIGN CRITERIA - OPERATING ENVIRONMENT

A. Drawings and Technical Sections include additional criteria and requirements relevant to specific locations, materials, and equipment.

B. Outdoor conditions:
   1. IECC: Climate Zone 3B.
   2. ASHRAE site climatic data location: Sacramento McClellan, CA, USA.
   3. Temperature criteria: As specified in the following Table: Design Temperatures - Outdoor Criteria in Accordance with ASHRAE Fundamentals Handbook.

Table: Design Temperatures - Outdoor Criteria in Accordance with ASHRAE Fundamentals Handbook	
Condition	**Criteria**
Hottest Month DB Range:	114 degrees Fahrenheit.
Winter:	At or above this temperature 99.6 percent of the time: 31.7 degrees Fahrenheit dry-bulb.
Summer:	At or above this temperature 0.4 percent of the time: 101.8 degrees Fahrenheit dry-bulb.

   4. Rainfall intensity:
      a. Reference: International Plumbing Code (IPC):
         1) 1.5 inches per hour (100-year, 1-hour rainfall).

C. Indoor conditions:
   1. HVAC:
      a. As specified in Section 15936 - Instrumentation and Control Devices for HVAC.

2.04 DESIGN CRITERIA - STRUCTURAL

A. General:
   1. Criteria for structural design of:
      a. Equipment at locations subject to seismic events.
      b. Equipment exposed to outdoor environments.
      c. Equipment supports and bracing, and anchorage of such items to building and non-building structures.
      d. Structures provided for the Work through Delegated Design.
      e. Manufactured and prefabricated structures, and anchorage of such structures to foundations or other supporting elements.
   2. Structural design criteria used by the Engineer of record and required by the building code to be indicated on the Drawings are included on the Contract Drawing titled “General Structural Notes.”

B. Structure risk category:
   1. Develop design loads and provide detailing in accordance with the provisions of ASCE 7 and the building code specified in Section 01410 - Regulatory Requirements, based on the Structure Risk Category indicated in Table: Project Structures - Risk Category and Seismic Design Information.

C. Seismic loads:
   1. Structures - General:
      a. Seismic Design Category (SDC): As indicated in the following Table: Project Structures - Risk Category and Seismic Design Information.

Table: Project Structures - Risk Category and Seismic Design Information

Description: Water Treatment Facility

Area	Description	Risk Category	Site Class	S_{DS}	S_{D1}	Seismic Design Category(1)
	Misty Wood ASR Well (Well 19)	III	D	0.43	0.32	C
	Campus Oaks Well (Well 13)	III	D	0.43	0.32	C

Notes:

(1) Seismic Design Category for Delegated Design, and for seismic certification of electrical and mechanical equipment as required by ASCE 7.

      b. Structure response modification coefficient, R:
         1) In accordance with ASCE 7 and the requirements of the Technical Sections.
   2. Structures - Tanks and vessels.
      a. Includes: Tank structures, tank supports, and anchorage to structures or foundations.
      b. Liquid storage structures (e.g., basins and tanks).
         1) Include impulsive and convective (“sloshing”) effects.

2) Component response modification factor - impulsive effects, Ri: In accordance with ASCE 7, Table 15.4-2.
3) Component response modification factor - convective effects, Rc = 1.0.

c. Dry material storage structures (e.g., silos, hoppers):
1) Include effects of stored materials.
2) Component response modification factor - impulsive effects, Ri: In accordance with ASCE 7, Table 15.4-2.

3. Non-structural components - General:
a. Includes:
1) Mechanical and electrical equipment; anchorage of equipment to structures or supports; design of supports; and anchorage of supports to structures or foundations.
2) Distribution systems associated with mechanical and electrical equipment such as piping, ductwork, conduits, cable trays, raceways, bus ducts, and similar items; anchorage of such systems to supports and structures; and bracing or such systems.

b. Seismic design requirements for non-structural components are based on the Seismic Design Category (SDC) of the structure or facility where the equipment is installed.

c. Design components, component anchorage, and component connections to piping and utilities in accordance with the requirements of ASCE 7, Table 13.2-1.

d. Component amplification factor (ap), response factor (Rp), and overstrength factor for anchorage to concrete (Ωo):
1) Mechanical and electrical components and systems: In accordance with ASCE 7, Table 13.6-1, unless otherwise indicated in the Technical Sections for these items.
2) Architectural components and systems: In accordance with ASCE 7, Table 13.6-1, unless otherwise indicated in the Technical Sections for these items.

e. Component importance factor, I_p:
1) In accordance with the following Table: Component Importance Factor for Seismic Design, I_p.
2) For items not listed in Table: Component Importance Factor for Seismic Design, I_p, designate importance factor in accordance with the provisions of ASCE 7, Chapter 13, and submit to the Engineer for review prior to developing calculations and details related to that component.

Table: Component Importance Factor for Seismic Design, I_p

Structure Seismic Design Category	Components	I_p
All	Electrical: Items and distribution system components specified in Division 16 - Electrical.	1.5
All	Process Control and Instrumentation Systems: Components and distribution systems specified in Division 17 - Instrumentation and Controls.	1.5

Table: Component Importance Factor for Seismic Design, I_p		
Structure Seismic Design Category	**Components**	**I_p**
All	Fire protection: Components and distribution systems specified in Section 10520 - Fire Protection Specialties.	1.5
All	Conveyance and distribution systems and supports for toxic, highly toxic, hazardous, or explosive substances as specified in Divisions 6 through 15.	1.5
All	Equipment and components specified in Divisions 11 through 15, except HVAC and plumbing components listed below.	1.5
All	Plumbing equipment specified in the following Sections: 15400 - Plumbing Systems 15430 - Emergency Eye/Face Wash and Shower Equipment	1.0
All	HVAC equipment specified in the following Sections: 15739 - VRF Heat Pumps 15762 - Heating Units 15830 - Fans	1.0
All	Other equipment not listed above.	1.0

4. Non-structural components: HVAC ductwork.
    a. Component importance factor, I_p: Determine in accordance with ASCE 7, Section 15.4.1.1.
    b. Seismic design category:
        1) See Table: Component Importance Factor for Seismic Design, I_p (preceding).
    c. SMACNA seismic hazard level.
        1) Seismic hazard level for design of heating, ventilating, and air conditioning ductwork in accordance with SMACNA Seismic Restraint Manual:
            a) SMACNA Seismic hazard level = D.

D. Wind loads:
1. Design structures and non-structural components that are exposed to wind to withstand design wind loads.
    a. Reduction of wind loads based on shielding effects of surrounding structures or components is not allowed.
    b. Design for wind loading is not required for non-structural components and for non-building structures located inside enclosed buildings.
2. Design parameters:
    a. Basic wind speed:
        1) 100 miles per hour (33 feet, 3 second gust).
    b. Exposure category: C.
    c. Topographic factor, Kzt: 1.0.
    d. Wind pressure for design of “components and cladding”.
        1) “Components and cladding” includes doors, windows, siding panels, skylights, parapets, and similar architectural elements.

2) Minimum wind pressure for components and cladding, strength level:
   a) Wall elements: Minimum 16 pounds per square foot, pressure or vacuum.
   b) Roof elements: Minimum 16 pounds per square foot, pressure or vacuum.
   c) For “allowable stress level” pressures, multiply strength level pressures by 0.625.

E. Rainfall loads:
   1. Determine rainfall loads using rainfall intensity specified in this Section, and including effects of exposed surface slope, height above surface to discharge elevation, and deflection of ponded surfaces.

F. Operational loads:
   1. Loads may include equipment vibration, torque, thermal effects, effects of internal contents (weight and sloshing), surge or “water hammer,” and other load conditions.
   2. Design for loads indicated by the equipment manufacturer.
   3. Design for loads indicated in the Technical Sections for equipment and appurtenances.

G. Serviceability considerations: ASCE 7-16:
   1. Deflection, unless otherwise indicated on the Drawings, or specified:
      a. Beam deflection as fraction of span:
         1) Walkways and platforms: Total load = L/240; live load = L/360.
         2) Equipment supports: L/450.

PART 3 EXECUTION

3.01 GENERAL

A. Design approach and criteria in accordance with:
   1. Regulatory requirements, including but not limited to the building code specified in Section 01410 - Regulatory Requirements.
   2. Reference standards and project-specific design criteria listed in this Section.
   3. Specific requirements for individual elements and components of the Work as specified in subsequent Technical Sections.

B. In the event of conflicts between design criteria, contact Engineer for interpretation.

C. Where Owner-Delegated Design is required by the Specifications, prepare and submit designs as specified in Section 01357 - Delegated Design Procedures.

3.02 DELEGATED DESIGN

A. Where Delegated Design is required by the Technical Sections, prepare and submit designs as specified in Section 01357 - Delegated Design Procedures.

B. Calculations:
    1. Where submittal of calculations is required:
        a. Provide complete calculations, including sketches to illustrate the design concepts being evaluated, and details to fully describe proposed construction.
    2. Requirements for seismic design calculations will be waived for the following:
        a. Furniture and storage racks 6 feet in height or less.
        b. Moveable equipment.
        c. Mechanical and electrical equipment and components located in structures designated as Seismic Design Category A or B.
        d. Mechanical and electrical equipment and components located in structures designated as Seismic Design Category C and where the component importance factor, I_p, is equal to 1.0.
    3. Requirements for wind design calculations will be waived for the following:
        a. Equipment and components located inside structures, and away from the effects of wind loads.

C. Shop Drawings:
    1. Describing components and manufacturer's requirements for connections.
        a. Include details for connections of components to structures and supports.
        b. Include details for anchoring bracing to structures where required.

3.03 DESIGN - ANCHORS FOR EQUIPMENT, COMPONENTS, AND BRACING

A. General:
    1. Engineer's approval of anchor designs is required before placement of construction that supports or provides bracing for anchored equipment and components.
        a. Prepare anchor designs after Engineer's approval of the products and layout, and before placement of concrete or masonry that supports them.
    2. Adjust equipment pad sizes and add additional anchor confinement reinforcing to provide required strength at anchorage points between equipment and pad, and between pad and structure.
    3. Supports and bracing:
        a. Design and install braces and anchors to transfer forces from equipment and components to the lateral force resisting system of the surrounding structure.
        b. Anchor and brace piping, ductwork, and electrical distribution components so that lateral or vertical displacement does not result in damage to or failure of essential architectural, mechanical, or electrical equipment.
            1) Provide supplementary framing where required to transfer forces.
            2) Detail and locate braces and anchors to minimize differential movements between components and structure.

B. Preparation:
    1. Obtain manufacturer's information:
        a. Weight and dimensions of components.
        b. Layout and location of anchors that connect to equipment base plates, sole plates, skids, or pads.
        c. Sizes of holes for anchors that will be provided in equipment bases or support frames.

C. Analysis and design:
    1. Perform and submit calculations to determine anchor designs at locations where equipment and equipment supports are connected to the supporting structure.
        a. Indicate number, size, type, and material for anchors.
    2. In determining forces at locations where equipment is anchored to structures, include effects of:
        a. Equipment self-weight and operating weight.
        b. Location of equipment center of mass.
        c. Forces from equipment operation including, but not limited to:
            1) Effects of internal contents including weight and sloshing.
            2) Effects of thrust, surge, and water hammer where specified.
            3) Equipment reactions and operating torque.
            4) Equipment vibration.
            5) Thermal effects from equipment and from distribution systems connected to the equipment (piping, ducts, and electrical).
            6) Other load or displacement inducing conditions.
        d. Forces on equipment from loads specified in this Section.
            1) Include effects of wind, snow, and icing loads where applicable.
            2) Design for load combinations indicated in ASCE 7, unless otherwise specified or indicated on the Drawings.
            3) Seismic and wind loads: For equipment and tanks with weight that varies based on the volume of contained material, determine anchor forces to accommodate the full range of filled, partially filled, and empty conditions.
    3. Determine forces and overturning moments at equipment supports and at locations where supports are anchored to structures.
        a. Indicate shear force and associated axial force at each anchor.
    4. Do not use friction to resist sliding resulting from seismic or wind forces.
        a. Resist sliding only by direct application of sliding loads to fasteners as bearing, shear, tension, or compression forces.
    5. Using combined shears and axial forces at each anchor, design anchors and anchor groups for ductile failure.
        a. Ductile failure: Anchor yield before failure of base material, typically concrete or masonry, at the anchor.
    6. Anchor selection:
        a. Provide anchors type indicated on the Drawings.
        b. Where anchors are not specifically indicated on the Drawings, select in accordance with the following:
            1) Anchors that resist seismic and wind forces:
                a) Cast-in-place forged hex-head anchor bolt.
            2) Anchors loaded in sustained tension:
                a) Cast-in-place forged hex-head anchor bolt.
            3) Anchors for reciprocating, vibrating, and rotating equipment:
                a) Cast-in-place forged hex-head anchor bolt.
        c. Do not use post-installed anchors, mechanical or adhesive, unless:
            1) Post-installed anchors are indicated on the Drawings.
            2) Post-installed are approved by the Engineer prior to placement of the surrounding concrete or masonry.

d. Anchor diameter:
    1) Select diameter so that hole in base plate is not greater than 125 percent of the nominal diameter of the anchor, nor greater than the diameter of the anchor plus 1/4 inch.

7. Determine number, size, layout, and minimum effective embedment for anchors.
    a. Layout includes anchor spacing and required distance(s) from anchor to edge(s) of supporting concrete or masonry.
    b. Anchors in concrete: Design based on minimum specified 28-day compressive strength, f'c, as follows, unless otherwise indicated on the Drawings for the Work area:
        1) Concrete placed for this Work: f'c = 4,000 pounds per square inch.
    c. Anchors in masonry: Design based on minimum specified compressive strength, f'm, as follows, unless otherwise indicated on the Drawings for the Work area:
        1) Concrete masonry placed for this Work: f'm = 1,500 pounds per square inch.
8. Prepare Drawings showing construction details of anchor designs.
9. Submit design calculations and Drawings prior to placement of anchors, and of the structural elements to which they will connect.

END OF SECTION

SECTION 02050

SOILS AND AGGREGATES FOR EARTHWORK

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Material requirements for soils and aggregates.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. T 11 - Standard Method of Test for Materials Finer than 75µm (No. 200) Sieve in Mineral Aggregates by Washing.
   2. T 27 - Standard Method of Test for Sieve Analysis of Fine and Coarse Aggregates.
   3. T 89 - Standard Method of Test for Determining the Liquid Limit of Soils.
   4. T 90 - Standard Method of Test for Determining the Plastic Limit and Plasticity Index of Soils.
   5. T 96 - Standard Method of Test for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
   6. T 104 - Standard Method of Test for Soundness of Aggregate by Use of Sodium Sulfate or Magnesium Sulfate.
   7. TP 95 - Standard Method of Test for Surface.

B. ASTM International (ASTM):
   1. C117 - Standard Test Method for Materials Finer than 75-µm (No. 200) Sieve in Mineral Aggregates by Washing.
   2. C131 - Standard Test Method for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
   3. C136 - Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates.
   4. C535 - Standard Test Method for Resistance to Degradation of Larger-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.
   5. D2419 - Standard Test Method for Sand Equivalent Value of Soils and Fine Aggregate.
   6. D2844 - Standard Test Method for Resistance R-Value and Expansion Pressure of Compacted Soils.
   7. D4318 - Standard Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.
   8. D4829 - Standard Test Method for Expansion Index of Soils.
   9. D5821 - Standard Test Method for Determining the Percentage of Fractured Particles in Coarse Aggregate.

C. California State Transportation Agency, Department of Transportation (CALTRANS):
   1. (Standard Specifications).

2. California Test Methods (CTM):
    a. California Test 205 - Method of Test for Determining Crushed Particles.
    b. California Test 211 - Method of Test for Abrasion of Coarse Aggregate by Use of the Los Angeles Abrasion Testing Machine.
    c. California Test 217 - Method of Test for Sand Equivalent.
    d. California Test 229 - Method of Test for Durability Index.
    e. California Test 301 - Method of Test for Determining the Resistance "R" Value of Treated and Untreated Bases, Subbases, and Basement Soils by the Stabilometer.

1.03 SUBMITTALS

A. Product data:
    1. Material source.
    2. Gradation.
    3. Testing data.

B. Quality control for aggregate base course:
    1. Test reports: As required by Sections of Standard Specifications.
    2. Certificates of compliance: Certificates As required by Sections of Standard Specifications.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Storage and protection: Protect from segregation and excessive moisture during delivery, storage, and handling.

B. Comply with Standard Specifications storage requirements, if applicable.

PART 2 PRODUCTS

2.01 MATERIALS - GENERAL

A. Provide material having maximum particle size not exceeding 4 inches and that is free of trash, lumber, debris, leaves, grass, roots, stumps, and other organic matter.

B. Materials derived from processing demolished or removed asphalt concrete are not acceptable.

C. Comply with soil and aggregate material requirements in the Standard Specifications, unless specified otherwise.

2.02 NATIVE MATERIAL

A. Native soil-select:
    1. Sound earthen material.
    2. Sum of plasticity index when tested in accordance with ASTM D4318 and the percent of material by weight passing a No. 200 sieve shall not exceed 23 when tested in accordance with ASTM C136.
    3. Organic content not be greater than 3 percent by volume.

4. Corrosion resistance requirements:
    a. Resistivity minimum (wet aggregates): 5,000 ohm-cm.
    b. pH: 5.0 to 12.0.
    c. Chlorides maximum: 100 parts per million.
    d. Sulfates maximum: 200 parts per million.

2.03 AGGREGATE BASE COURSE

Material requirements:

1. Class 2, 3/4-inch maximum aggregate size, free from organic matter and other deleterious substances, and of such nature that aggregate can be compacted readily under watering and rolling to form a firm, stable base.
2. Aggregate base course for structures:
    a. Consist of crushed or fragmented particles.
    b. Coarse aggregate material retained in No. 4 sieve shall consist of material of which at least 25 percent by weight shall be crushed particles when tested in accordance with California Test 205.
3. Aggregate shall not be treated with lime, cement, or other chemical material.
4. Durability index: Not less than 35 when tested in accordance with California Test 229.
5. Aggregate grading and sand equivalent tests shall be performed to represent not more than 500 cubic yards or 1 day's production of material, whichever is smaller.
6. Sand equivalent: Not less than 25 when tested in accordance with California Test 217.
7. Resistance (R-value): Not less than 78 when tested in accordance with California Test 301.
8. Conforms to size and grade within the following limits when tested in accordance with ASTM C117 and ASTM C136:

Sieve Sizes (Square Openings)	**Percent by Weight Passing Sieve**
1 inch	100
3/4 inch	90 - 100
No. 4	35 - 60
No. 30	10 - 30
No. 200	2 - 9

2.04 GRAVEL

A. Material requirements:
    1. Consists of hard, durable particles of stone or gravel; or crushed to the specified sizes and gradations; and free from organic matter, lumps or balls of clay, and other deleterious matter.
    2. Crush or waste coarse material and add or waste fine material in order to meet the specified gradations.
    3. Fraction of material passing No. 40 sieve: Material having plasticity index not greater than 5 when tested in accordance with ASTM D4318.

4. Durability: Percentage of wear not greater than 40 percent when tested in accordance with California Test 211.
5. Conforms to sizes and grade within the following limits when tested in accordance with ASTM C117 and ASTM C136:

Sieve Size (Square Openings)	Percent by Weight Passing Sieve		
	Type A	Type B	Type C
2 inch	100	--	--
1-1/2 inch	95 - 100	100	--
3/4 inch	35 - 60	55 - 85	100
3/8 inch	15 - 40	35 - 65	50 - 100
No. 4	0 - 25	20 - 35	30 - 45
No. 30	--	5 - 15	10 - 20
No. 200	0 - 5	2 - 9	2 - 9

2.05 DRAIN ROCK

A. Material requirements:
   1. Durability index: Percentage of wear not greater than 40 percent when tested in accordance with California Test 229.
   2. Consists of hard, durable particles of stone or gravel; screened or crushed to specified size and gradation; and free from organic matter, lumps or balls of clay, or other deleterious matter.
   3. Crush or waste coarse material and waste fine material as required to meet gradation requirements.
   4. Conforms to size and grade within the following limits when tested in accordance with ASTM C117 and ASTM C136:

Sieve Size (Square Openings)	Percent by Weight Passing Sieve
2 inch	100
1-1/2 inch	95 - 100
3/4 inch	50 - 100
3/8 inch	15 - 55
No. 200	0 - 2

2.06 CLASS 2 PERMEABLE FILL

A. Material requirements:
   1. Durability index: Percentage of wear not greater than 40 percent when tested in accordance with California Test 229.

2.07 IMPORTED FILL

A. Material requirements: Refer to native soil-select.
   1. Free of contaminants: CONTRACTOR shall sample soil for common contaminants derived from petroleum products.

2.08 SAND

A. Clean, coarse, natural sand.

B. Non-plastic when tested in accordance with ASTM D4318.

C. Conforms to size and grade within the following limits when tested in accordance with ASTM C117 and ASTM C136:

Sieve Size (Square Openings)	Percent by Weight Passing Sieve
1/2 inch	100
No. 200	0 - 20

2.09 STABILIZATION MATERIAL

A. Durability: Percentage of wear not greater than 40 percent when tested in accordance with California Test 211.

B. Consists of clean, hard, durable particles of crushed rock or gravel; screened or crushed to the specified sizes and gradations; and free of any detrimental quantity of soft, friable, thin, elongated, or laminated pieces, disintegrated material, organic matter, oil, alkali, or other deleterious substance.

C. Shall be free of slaking or decomposition under the action of alternate wetting and drying.

D. The portion of material retained on the 3/8-inch sieve shall contain at least 50 percent of particles having 3 or more fractured faces.
   1. Not over 5 percent shall be pieces that show no such faces resulting from crushing. Of that portion which passes the 3/8-inch sieve but is retained on the No. 4 sieve, not more than 10 percent shall be pieces that show no faces resulting from crushing.

E. Conforms to size and grade within the following limits when tested in accordance with ASTM C117 and ASTM C136:

Sieve Size (Square Openings)	Percent by Weight Passing Sieve
1 inch	100
3/4 inch	90 - 100

Sieve Size (Square Openings)	Percent by Weight Passing Sieve
No. 4	0 - 10
No. 200	0 - 2

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 02084

PRECAST DRAINAGE STRUCTURES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Onsite utility structures:
      a. Precast drainage inlets.
      b. Standpipes for irrigation or drainage pipes.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. Standard Specifications for Highway Bridges.

B. ASTM International (ASTM):
   1. C361 - Standard Specification for Reinforced Concrete Low-Head Pressure Pipe.
   2. C478 - Standard Specification for Circular Precast Reinforced Concrete Manhole Sections.
   3. C857 - Standard Practice for Minimum Structural Design Loading for Underground Precast Concrete Utility Structures.
   4. C858 - Standard Specification for Underground Precast Concrete Utility Structures.

1.03 SUBMITTALS

A. Shop Drawings: Submit for precast utility structures.

PART 2 PRODUCTS

2.01 MANUFACTURED UNITS

A. Precast drainage inlets:
   1. Construct precast concrete drainage inlets in accordance with the size, shape, form, details, and at locations indicated on the Drawings and specified.
   2. Base design and manufacture to A-16 (HS 20-44) loading in accordance with ASTM C857.
   3. In accordance with ASTM C858.
   4. Construct precast drainage inlets of Class A concrete as specified in Section 03300 - Cast-in-Place Concrete to form and dimensions indicated on the Drawings.

B. Appurtenances and details for precast structures:
   1. Seal joints with precast concrete joint sealant.

2. Piping penetrations:
    a. Manufacturers: The following or equal:
        1) Kor-N-Seal, rubber gasket boots with steel clamps.
3. Piping connections to the precast structures shall be as indicated on the Drawings.

2.02 DESIGN AND PERFORMANCE CRITERIA

A. Performance requirements:
    1. Appurtenances shall be watertight and free from infiltration or exfiltration.

2.03 ACCESSORIES

A. Precast drainage inlets:
    1. Covers: As indicated on the Drawings.

PART 3 EXECUTION

3.01 INSTALLATION

A. Standpipes for irrigation or drainage pipes:
    1. Excavation and backfill: As specified in Section 02318 - Trenching.

B. Precast drainage inlets:
    1. Excavation and backfill: As specified in Section 02318 - Trenching.

END OF SECTION

SECTION 02200

SITE CLEARING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Clearing, grubbing, and stripping project site.

1.02 DEFINITIONS

A. Clearing: Consists of removal of natural obstructions and existing foundations, buildings, fences, lumber, walls, stumps, brush, weeds, rubbish, trees, boulders, utility lines, and any other items which interferes with construction operations or are designated for removal.

B. Grubbing: Consists of the removal and disposal of wood or root matter below the ground surface remaining after clearing and includes stumps, trunks, roots, or root systems greater than 1 inch in diameter or thickness to a depth of 6 inches below the ground surface.

C. Stripping: Includes the removal and disposal of all organic sod, topsoil, grass and grass roots, and other objectionable material remaining after clearing and grubbing from the areas designated to be stripped. The depth of stripping is estimated to be 6 inches, but the required depth of stripping will be determined by the Engineer.

1.03 QUALITY ASSURANCE

A. Regulatory requirements: Verify and comply with applicable regulations regarding those governing noise, dust, nuisance, drainage and runoff, fire protection, and disposal.

B. Pre-construction conference: Meet with Engineer to discuss order and method of work.

1.04 SEQUENCING AND SCHEDULING

A. Clearing and grubbing: Perform clearing and grubbing in advance of grading operations.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions: Examine site and verify existing conditions for beginning work.

3.02 PREPARATION

A. Protect existing improvements from damage by site preparation work.

3.03 INSTALLATION

A. Clearing:
   1. Clear areas where construction is to be performed and other areas as indicated on the Drawings, or specified in this Section, of fences, lumber, walls, stumps, brush, roots, weeds, trees, shrubs, rubbish, and other objectionable material of any kind which, if left in place, would interfere with proper performance or completion of the work, would impair its subsequent use, or form obstructions.
   2. Do not incorporate organic material from clearing and grubbing operations in fills and backfills.
   3. Contractor's temporary construction facilities: Fill or remove pits, fill, and other earthwork required for erection of facilities, upon completion of the work, and level to meet existing contours of adjacent ground.

B. Grubbing:
   1. From excavated areas: Grub stumps, roots, and other obstructions 3 inches or over in diameter to depth of not less than 18 inches below finish grade.
   2. Backfill and compact cavities left below subgrade elevation by removal of stumps or roots to density of adjacent undisturbed soil.

C. Stripping:
   1. Remove soil material containing sod, grass, or other vegetation to depth of 6 inches from areas to receive fill or pavement and from area within 5 feet outside foundation walls.
   2. Deposit stripped material in accordance with following requirements:
      a. At locations acceptable to Engineer and Owner.
      b. Use accepted material in top 6 inches of areas to be used for future planting.
   3. Replace topsoil where indicated on the Drawings.

D. Material reuse and recycling:
   1. 100 percent of trees, stumps, rocks and associated vegetation and soils resulting primarily from land clearing shall be reused or recycled. For a phased project, such material may be stockpiled on site until project completion.
   2. Contractor shall provide Engineer with list of local markets and salvage sites for reuse of clearing debris.

END OF SECTION

SECTION 02240

DEWATERING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Installation and maintenance of dewatering systems.
   2. Disposal of water entering excavation or other parts of the work.

1.02 REFERENCES

A. National Electrical Manufacturers Association (NEMA):
   1. 250 - Enclosures for Electrical Equipment (1,000 V Maximum).

1.03 SUBMITTALS

A. Dewatering plan:
   1. Dewatering design analysis.
   2. Required permits.
   3. Arrangement, location, and depths of dewatering system components.
   4. Type and sizes of filters.
   5. Identify proposed alignment, support, and protection for discharge pipe. Identify location of discharge and provide details for that location. For pipes discharging to manholes, provide details of pipe entry at manhole.

B. Well construction logs. Include:
   1. Descriptions of actual materials encountered, categorized in accordance with an accepted standard.
   2. Construction details.
   3. Well development procedures and results.
   4. Deviations from original design.

C. Qualifications:
   1. Dewatering contractor.
   2. Dewatering design engineer.
   3. Testing laboratory.

1.04 QUALITY ASSURANCE

A. Dewatering plan and dewatering system analysis:
   1. Prepared by a qualified Civil Engineer, licensed in the state where the Project is located.
      a. The dewatering design engineer shall have at least 8 years of experience in designing similar systems.

B. Dewatering Contractor shall have at least 8 years of experience in installing similar systems.

C. Testing laboratory shall meet discharge permit testing laboratory qualifications.

D. Regulatory requirements:
   1. Obtain required water discharge permits.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Design requirements:
   1. Keep excavations reasonably free from water. Draw down static groundwater level to minimum of 3 feet below anticipated bottom of excavations before the excavation reaches bottom elevation.
   2. Dewatering design analysis. Include the following:
      a. Evaluation of anticipated subsurface conditions.
      b. Required well spacing.
      c. Diameter of wells.
      d. Depth to screen, screen height, and mesh size.
      e. Backfill and filter pack.
      f. Pump size.
      g. Drawdown duration.
      h. Drawdown and steady state flow rates.
      i. Plans for de-silting of groundwater before discharge.
      j. Anticipated area influenced by dewatering system and potential impacts to adjacent structures, existing and proposed. Mitigation measures needed to prevent any expected settlements. Contingency plan for restoring nearby structures if settlement is observed as result of dewatering operations.
      k. Expected settlements.
   3. Include water drawdown curves in dewatering calculations.
   4. Coordinate dewatering design with excavation and shoring design. Excavation and shoring design shall consider changes in groundwater conditions and associated earth pressures.
   5. Do not place concrete or masonry foundations or concrete slabs in water. Do not allow water to rise over these elements until concrete or mortar has set for at least 24 hours.
   6. Maintain operation of dewatering system until complete structure -- including walls, slabs, beams, struts, and other structural elements -- has been constructed; concrete has attained its specified compressive strength; and backfill has been completed to finished grade.
   7. Provide standby power to ensure continuous dewatering in case of power failure.

B. Dewatering shored excavations:
   1. Dewater from within shoring.
   2. Use impermeable shoring system to minimize lowering of groundwater outside shoring.

3. Extend impermeable shoring below bottom of excavation sufficient amount to:
   a. Minimize lowering of groundwater outside shoring.
   b. Prevent unstable excavation due to piping and heave.
4. To minimize settlement outside shoring due to dewatering, do not lower groundwater outside shoring more than 1 foot. Provide groundwater recharge if required to maintain this groundwater elevation outside of shoring.
5. Provide monitoring wells located outside shoring for monitoring groundwater elevation.

C. Obtain written permission from Engineer before locating wells, well points, or drain lines for dewatering within the limits of a structure's foundation.

D. Locate dewatering facilities where they will not interfere with utilities and construction work to be performed by others.

E. Discharge:
1. Discharge water to locations as identified by the City of Roseville. Discharge to manholes or storm drain inlets will not be permitted.

PART 3 EXECUTION

3.01 INSTALLATION

A. The responsibility for conducting the dewatering operation in a manner which will protect adjacent structures and facilities rests solely with Contractor.

B. During construction, provide and maintain ample means and devices to promptly remove and properly dispose of water entering excavation or other parts of the work, whether water is surface water or underground water.

C. Keep excavations reasonably free of water.

D. Make provisions to maintain continuous dewatering:
1. Provide standby power to maintain dewatering during power outages and interruptions.
2. Provide 24-hour monitoring by personnel skilled in operation and maintenance of the system, and capable of providing or obtaining work required to maintain system operation.

E. Intercept and divert precipitation and surface water away from excavations. Use dikes, curb walls, ditches, pipes, sumps, or other means acceptable to Engineer.

F. Disposal of water:
1. Dispose of water from the work in suitable manner without damage to adjacent property.
2. Do not drain water into work built or under construction.

3. Properly dispose of discharge water in accordance with Federal, State, and local requirements and permits and in such manner that it will not be a menace to public health or safety.
4. For discharge of water into holding tanks or infiltration ponds, include a means of overflow protection that is acceptable to Engineer.

G. Wells, well points, and drain lines for dewatering:
1. Provide after receiving Engineer's written acceptance.
2. Fill dewatering wells, pipes, and French drains to be left in place within structure foundation limits with Class “C” concrete as specified in Section 03300 - Cast-in-Place Concrete or grout as specified in Section 03600 - Grouting.

3.02 CONSTRUCTION

A. Prior to release of groundwater to its static level: Confirm that:
1. All groundwater pressure relief devices for structure are fully operational.
2. Construction of structure is complete and concrete has reached its specified compressive strength.
3. Backfill of structure is complete.

B. Control release of groundwater to its static level to prevent disturbance of natural foundation soils or compacted backfills and fills and to prevent flotation or movement of structures, pipelines, or other facilities.

3.03 FIELD QUALITY CONTROL

A. Monitoring wells:
1. Record groundwater levels at least once a week. Submit readings to Engineer within 1 week.

END OF SECTION

SECTION 02260

EXCAVATION SUPPORT AND PROTECTION

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Designing, providing, maintaining, and removing excavation support and protection.

1.02 REFERENCES

A. American Society of Civil Engineers (ASCE):
   1. Guidelines of Engineering Practice for Braced and Tied-Back Excavations.

B. California Code of Regulations (CCR):
   1. Title 8 - Industrial Relations:
      a. Division 1. Department of Industrial Relations.
         1) Chapter 4. Division of Industrial Safety.
            a) Subchapter 4. Construction Safety Orders.
               (1) Article 6. Excavations.

C. Department of the Navy Naval Facilities Engineering Command (NAVFAC):
   1. Design Manual 7.2 - Foundations and Earth Structures.
   2. Design Manual 7.3 - Soil Dynamics and Special Design Aspects.

D. State of California Department of Transportation (Caltrans):
   1. Caltrans California Trenching and Shoring Manual.

E. United States Steel Corporation (USS):
   1. Steel Sheet Piling Design Manual.

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. General engineering design practice: In area of the Project, performed in accordance with recent engineering literature on subject of shoring and stability of excavations.
   2. Shoring: A temporary structural system designed to support vertical faces, or nearly vertical faces, of soil or rock for purposes of excavation. Shoring includes cantilevered sheet piling, internally braced sheet piling, slurry walls, soldier piles and lagging, and other similar shoring systems. Sloping of the soil is not shoring.
   3. Support levels: Level of tiebacks, wales, rakers, bottom of excavation, and other types of support.

1.04 SUBMITTALS

A. Shop Drawings and calculations:
   1. Calculations for different load, support, and other conditions that occur during the sequence of installation of shoring, construction of facilities protected by shoring, and sequence of removal of shoring.
   2. Sketches showing the condition at various stages of installation and removal of shoring.
   3. Show on plan shoring, structures, pipelines, and other improvements located near shoring.
   4. When utilities penetrate shoring, show location of penetrations on elevation of sides of shoring.
   5. Show details for ground support and sealing around utility penetrations.
   6. Indicate method used for installing driven shoring.

B. Detailed sequence of installation and removal of shoring:
   1. Consider effects of ground settlement in sequence of installation and removal of shoring.

C. Provide sketches showing conditions at various stages in sequence of installation and removal of shoring.

D. Furnish Submittals for excavation support and protection as complete package and include items required in this Section:
   1. Incomplete Submittals will not be reviewed and will be returned for resubmittal as a complete package.

E. Furnish dewatering Submittals as specified in Section 02240 - Dewatering with Submittals for excavation support and protection.

1.05 SEQUENCING

A. Do not begin construction of any shoring or excavation operations until:
   1. Submittals for shoring and dewatering have been accepted.
   2. Materials necessary for installation are on site.

B. Furnish Submittals a minimum of 45 days prior to scheduled date to begin excavation work.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Where general engineering design practice is specified, provide Drawings and calculations that are performed and signed by civil or structural engineer registered in the state where the Project is located:
   1. Clearly disclose assumptions made, criteria followed, and stress values used for materials being used in design calculations.
   2. Submit list of references acceptable to the Engineer that substantiate appropriateness of design assumptions, criteria, and stress values.

B. Design requirements:
    1. General:
        a. In accordance with requirements in CCR, Title 8, Chapter 4, Subchapter 4, Article 6 for trench excavations 5 feet or more in depth and for trenches less than 5 feet in depth when there is potential for cave-in.
            1) Where such designs vary from excavation support standards set forth in CCR, Title 8, Chapter 4, Subchapter 4, Article 6, submit design calculations pursuant to general engineering design practice.
            2) Provide means for safe and stable excavations that are not less effective than required in CCR, Title 8, Chapter 4, Subchapter 4, Article 6.
            3) The preceding requirements do not apply to trench excavation support in accordance with standards set forth CCR, Title 8, Chapter 4, Subchapter 4, Article 6.
        b. Dewatering:
            1) Dewater soil inside shoring as specified in Section 02240 - Dewatering.
            2) Do not lower groundwater outside of shoring more than 1 foot.
            3) Recharge groundwater outside shoring to limit groundwater draw down outside of shoring to amount specified above.
        c. When electing to design with material stresses for temporary construction higher than allowable stresses prescribed in building code as specified in Section 01410 - Regulatory Requirements, increase in such stresses shall not exceed 10 percent of value of prescribed stresses.
        d. Minimum safety factor used for design shall not be less than 1.5.
        e. Calculated minimum depth of penetration of shoring below bottom of excavation shall be increased not less than 30 percent if full value of allowable passive pressure is used in design.
        f. Maximum height of cantilever shoring above bottom of excavation shall not exceed 15 feet. Use braced shoring when height of shoring above bottom of excavation exceeds 15 feet.
        g. Location of point of fixity for shoring shall not be less than half calculated minimum embedment depth below bottom of excavation.
        h. Generally acceptable references for design of shoring and excavations are as follows:
            1) ASCE Guidelines of Engineering Practice for Braced and Tied-Back Excavations.
            2) Caltrans California Trenching and Shoring Manual.
            3) NAVFAC Design Manual 7.2.
            4) NAVFAC Design Manual 7.3.
            5) USS Steel Sheet Piling Design Manual.
    2. Set inside face of shoring back from structure not less than greater of following:
        a. 5 feet from face of wall.
        b. 2 foot-6 inches from edge of foundation.
        c. Depth of excavation below bottom of foundation.

C. Performance requirements:
    1. General:
        a. Support faces of excavations and protect structures and improvements in vicinity of excavations from damage and loss of function due to settlement

or movement of soils, alterations in ground water level caused by such excavations, and related operations.

b. Specified provisions:
    1) Complement, but do not substitute or diminish, obligations of the Contractor for furnishing of safe place of work pursuant to provisions of the Occupational Safety and Health Act of 1970 and its subsequent amendments and regulations and for protection of work, structures, and other improvements.
    2) Represent minimum requirement for:
        a) Number and types of means needed to maintain soil stability.
        b) Strength of such required means.
        c) Methods and frequency of maintenance and observation of means used for maintaining soil stability.

2. Provide safe and stable excavations by means of sheeting, shoring, bracing, sloping, and other means and procedures, such as draining and recharging groundwater and routing and disposing of surface runoff, required to maintain stability of soils and rock.
3. Provide support for trench excavations for protection of workers from hazard of caving ground.
4. Provide shoring:
    a. Where, as result of excavation work and analysis performed pursuant to general engineering design practice, as defined in this Section:
        1) Excavated face or surrounding soil mass may be subject to slides, caving, or other types of failures.
        2) Stability and integrity of structures and other improvements may be compromised by settlement or movement of soils, or changes in soil load on structures and other improvements.
    b. For trenches 5 feet and deeper.
    c. For trenches less than 5 feet in depth, when there is potential for cave-in.
5. For safe and stable excavations, use appropriate design, construction, and maintenance procedures to minimize settlement of supported ground and to prevent damage to structures and other improvements, including:
    a. Using stiff shoring systems.
    b. Following appropriate construction sequence.
    c. Using shoring system that is tight enough to prevent soil loss through the shoring.
    d. Using shoring system that extends far enough below bottom of excavation to prevent piping, heave, or flow of soil under shoring.
    e. Design for safety factor of not less than 1.50.
    f. Providing surface runoff routing and discharge away from excavations.
    g. Where dewatering inside shoring is necessary, recharge groundwater outside shoring as necessary to prevent settlement in area surrounding shored excavation.
    h. Where sheet piling is used, use interlocking type sheets:
        1) Sheet piles shall be continuous and driven in interlock.
        2) If bottom of the excavation is located below the water table, use “ball and socket” or “thumb and finger” type interlock.
    i. Not applying shoring loads to existing structures and other improvements.

j. Not changing existing soil loading on existing structures and other improvements.
k. Provide welded steel packing between soil retaining members such as sheet piles and wales and similar members when gap exceeds 1/2 inch before wales are loaded.

PART 3 EXECUTION

3.01 CONSTRUCTION

A. Installation of shoring:
1. Install means for providing safe and stable excavations as indicated in Submittals.

B. Removal of shoring:
1. Except for concrete encased soldier piles, slurry walls, and similar shoring systems, remove shoring by completion of the Work.
2. Select shoring system and method of removal, which will minimize soil that sticks to shoring from creating voids and causing settlement.
3. To prevent settlement caused by pulling shoring, fill voids with pressure injected grout:
   a. Inject grout starting at bottom of void and progressively fill void to grade.
   b. Minimize length of shoring removed ahead of grouting operation and limit time void is left ungrouted to prevent void from closing up before being grouted.
4. Pressure preservative treated wood lagging may be left in place if acceptable to the Engineer.

C. Maintenance:
1. Where loss of soil occurs, plug gap in shoring and replace lost soil with fill material acceptable to the Engineer.
2. Where measurements and observations indicate possibility of failure or excessive movement of excavation support, determined in accordance with general engineering design practice, take appropriate action immediately.

END OF SECTION

SECTION 02280

SUBSURFACE UTILITY ENGINEERING

PART 1 GENERAL

1.01 SUMMARY

A. Section Includes: Requirements for subsurface utility engineering (SUE) as part of the Work for new pipelines.

1.02 REFERENCES

A. American Society of Civil Engineers (ASCE):
   1. 38-02 Standard Guideline for the Collection and Depiction of Existing and Subsurface Utility Data.

1.03 DEFINITIONS

A. General: Definitions used in this Section are in accordance with ASCE 38-02.

1.04 REQUIREMENTS

A. Existing utilities indicated on the Drawings are approximate only and are provided based on the best information.

B. Existing utilities are shown for the convenience of Contractor only.
   1. It is the Contractor's responsibility to field verify the vertical and horizontal location of all utilities including those not indicated or incorrectly indicated on the Drawings.

C. Contractor is responsible to review all geotechnical reports, record drawings, and Contract Documents.

D. Coordinate with utility locator, such as CALL BEFORE YOU DIG, and other affected entities when they have jurisdiction over the project site.

E. Contractor is responsible for protecting all utilities encountered.
   1. Before any excavation, follow requirements of Section 01140 - Work Restrictions.
   2. If a conflict exists between what is indicated on the Drawings and what exists in the field, Contractor shall notify Engineer immediately.

F. Where scheduled, provide subsurface utility engineering services by a Civil Engineer registered in California in accordance with ASCE 38-02.

G. Requirements: The SUE shall entail the following at a minimum:
   1. Review of existing record drawings.
   2. Geophysical methods such as ground-penetrating radar.
   3. Soft excavation to locate known utilities along the proposed pipeline alignment.

4. Open trench excavation to locate unknown utilities along the proposed pipeline alignment.
5. Utilization of field survey by a Professional Land Survey licensed in for determination of vertical and horizontal locations.

1.05 QUALIFICATIONS

A. General: Contractor shall utilize the services of a qualified subconsultant for SUE services with minimum qualifications that include but are not limited to:
   1. Minimum of 5 years of SUE experience in California where providing vertical and horizontal locations of utilities in accordance with ASCE 38-02 utility quality level A was required.
   2. Completion of 5 SUE projects of equal or greater magnitude within the past 5 years.

1.06 SUBMITTALS

A. Shop drawings:
   1. Contractor shall submit all SUE information as follows:
      a. Plan drawings that clearly illustrate vertical and horizontal location of known and unknown utilities.
         1) Horizontal location shall include northing and easting coordinates.
      b. Identifies size and material and service for known utilities.
      c. Identify size and material for unknown utilities.
   2. Review of shop drawings and calculations by Engineer and Owner are for record only.
   3. Drawings shall be performed, stamped, and endorsed by a Civil Engineer registered in California.
   4. Field survey information shall be performed, stamped, and endorsed by a Surveyor registered in California.

B. Detailed sequence of SUE:
   1. Submit a schedule for all SUE events that shows start, end, and intermediate milestones.
   2. Provide sketches showing the conditions at various stages in the sequence of SUE.

C. Submit submittals for stability of excavations as a complete package and include all items required in this Section.
   1. Incomplete submittals will not be reviewed and will be returned for resubmittal as a complete package.

1.07 SEQUENCING AND SCHEDULING

A. Coordinate all Work with restrictions provided in Section 01140 - Work Restrictions.

B. Do not begin Work until submittals have been accepted by Engineer and until equipment and materials necessary for installation are on site.

C. Submit submittals a minimum of 30 days prior to the scheduled date to begin excavation work.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION

3.01 SUE SCHEDULE

A. Provide SUE services for the following pipelines and utilities at both the Campus Oaks and Misty Wood Project sites.

Description	Reference Drawings
16-inch PW	13&19C02
12 & 18-inch SD	
Recycled Water (size unknown)	
2-inch PW at meter and valve box	
8-inch SS	

END OF SECTION

SECTION 02300

EARTHWORK

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Loosening, excavating, filling, grading, borrow, hauling, preparing subgrade, compacting in final location, wetting and drying, and operations pertaining to Site grading for buildings, basins, reservoirs, boxes, roads, and other facilities.
   2. Backfilling and compacting under and around structures.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. Standard Specifications for Highway Bridges.

B. ASTM International (ASTM):
   1. D1557 - Standard Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3).
   2. D6938 - Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Backfill adjacent to structure: Backfill within volume bounded by the exterior surfaces of structure, the surface of undisturbed soil in the excavation around structure, and finish grade around structure.
   2. Embankments: Dikes, levees, berms, and similar facilities.
   3. Excavation: Consists of loosening, removing, loading, transporting, depositing, and compacting in final location, wet and dry materials, necessary to be removed for purposes of construction of structures, ditches, grading, roads, and such other purposes as are indicated on the Drawings.

1.04 SUBMITTALS

A. Copy of Property Owner’s Agreement allowing placement of surplus soil material on their property.

B. Testing lab: Submit the Contractor’s proposed testing laboratory capabilities and equipment.

C. Test reports:
   1. Submit certified test reports of tests specified to be performed by the Contractor.
   2. Sign and seal test reports by a registered Geotechnical Engineer.

1.05 QUALITY ASSURANCE

A. Initial compaction demonstration:
   1. Adequacy of compaction equipment and procedures: Demonstrate adequacy of compaction equipment and procedures before exceeding any of following amounts of earthwork quantities:
      a. 50 cubic yards of backfill adjacent to structures.
      b. 100 cubic yards of embankment work.
      c. 100 cubic yards of fill.
      d. 50 cubic yards of roadway base material.
      e. 100 cubic yards of road fill.
   2. Compaction sequence requirements: Until specified degree of compaction on previously specified amounts of earthwork is achieved, do not perform additional earthwork of the same kind.
   3. After satisfactory conclusion of initial compaction demonstration and at any time during construction, provide confirmation tests as specified under the Field Quality Control article.

B. Perform Work related to this Section in accordance with the approved Stormwater Pollution Prevention Plan (SWPPP).

1.06 SEQUENCING AND SCHEDULING

A. Schedule earthwork operations to meet requirements specified in this Section for excavation and uses of excavated material.

B. If necessary, stockpile excavated material in order to use it at specified locations.

C. Excavation, backfilling, and filling: Perform excavation, backfilling, and filling during construction in manner and sequence that provides drainage at all times.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Performance requirements:
   1. Where mud or other soft or unstable material is encountered, remove such material and refill space with stabilization material. Wrap stabilization material with stabilization fabric.
   2. Obtain acceptable import material from other sources if surplus obtained within the Project Site does not conform to specified requirements or are not sufficient in quantity.
   3. No extra compensation will be made for hauling of fill materials nor for water required for compaction.

2.02 MATERIALS

A. Water for compacting: Use water from source acceptable to the Engineer.

B. Soil and rock materials:
   1. General:
      a. Provide aggregate base course, Class 2 permeable, controlled low-strength material, drain rock, gravel, native soil-select material, sand, and stabilization material where specified or indicated on the Drawings.
      b. If suitable surplus materials are available, obtain native material and select material from cut sections or excavations or imported materials.
   2. Aggregate base course materials: As specified in Section 02050 - Soils and Aggregates for Earthwork.
   3. Class 2 permeable: As specified in Section 02050 - Soils and Aggregates for Earthwork.
   4. Drain rock: As specified in Section 02050 - Soils and Aggregates for Earthwork.
   5. Gravel: As specified in Section 02050 - Soils and Aggregates for Earthwork.
   6. Native soil-select material: As specified in Section 02050 - Soils and Aggregates for Earthwork.
   7. Sand: As specified in Section 02050 - Soils and Aggregates for Earthwork.
   8. Stabilization material: As specified in Section 02050 - Soils and Aggregates for Earthwork.

C. Controlled low-strength material: As specified in Section 02312 - Controlled Low Strength Materials (CLSM).

D. Geotextile fabrics:
   1. Filter: As specified in Section 02620 - Filter Fabric.
   2. Stabilization: As specified in Section 02621 - Stabilization Fabric.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions:
   1. Character and quantity of material:
      a. Verify character and quantity of rock, gravel, sand, silt, water, and other inorganic or organic materials to be encountered in Work to be performed.
      b. Determine gradation, shrinkage, and swelling of soil, and suitability of material for use intended in Work to be performed.
      c. Determine quantity of material, and cost thereof, required for construction of backfills, cuts, embankments, excavations, fills, and roadway fills, whether from on-site excavations or imported materials. Include in cost of Work to be performed.
      d. Include wasting of excess material, if required, in the cost of Work to be performed.

3.02 PREPARATION

A. Backfills:
   1. After clearing and excavation are completed, scarify entire areas that underlie backfills or structures to a depth of 6 inches and until surface is free of ruts, hummocks, and other features that would prevent uniform compaction by equipment to be used.
   2. Recompact scarified areas to density specified before placing backfill material or concrete.
   3. Do not place backfill against walls until:
      a. Walls have been cast full height of structure and concrete has reached the specified strength.
      b. Connecting slabs and beams have been cast, and concrete has reached the specified strength.
   4. Prior to backfilling:
      a. Remove forms.
      b. Clean trash and debris from the excavation site.
   5. After inspection of foundation, walls, and pipes, place backfill symmetrically around structures to prevent eccentric loading of structures.

B. Embankments:
   1. After clearing is completed, scarify entire areas that underlie embankments to a depth of 6 inches and until surface is free of ruts, hummocks, and other features that would prevent uniform compaction by equipment to be used.
   2. Recompact scarified areas to density specified for embankments before placing of embankment material.

C. Fills:
   1. After clearing is completed, scarify entire areas that underlie fill sections or structures to a depth of 10 inches and until surface is free of ruts, hummocks, and other features that would prevent uniform compaction by equipment to be used.
   2. Recompact scarified areas to density specified for compacted fills before placing of fill material or concrete.

D. Roadway fills:
   1. After clearing is completed, scarify entire areas that underlie roadway fills to a depth of 6 inches and until surface is free of ruts, hummocks, and other features that would prevent uniform compaction by equipment to be used.
   2. Recompact scarified areas to density specified for roadway fills before placing of roadway fill material.

E. Sloped surfaces for fill or foundations:
   1. Foundations for fill having slopes in excess of 1 vertical to 4 horizontal:
      a. Bench or terrace to adequately key existing ground and fill built thereon.
   2. Slopes of original hillsides and old fills: Bench minimum of 10 feet horizontally as fill is placed.

3. Provision of new benches:
    a. Start new bench wherever vertical cut of next lower bench intersects existing grade.
    b. Recompact material thus cut out along with new embankment material at no additional cost to the Owner.

3.03 INSTALLATION

A. General:
1. Dispose of excavated materials that are not required or are unsuitable for fill and backfill in lawful manner.
2. Dispose of surplus material on private property only when written permission agreement is furnished by the owner of the property. Submit copies of such agreements.
3. Rocks, broken concrete, or other solid materials larger than 4 inches in greatest dimension: Remove from the Project Site at no additional cost to the Owner.
4. Stabilization of subgrade: Provide materials used, or perform Work required, to stabilize subgrade so it can withstand loads that may be placed upon it by the Contractor's equipment.

B. Borrow area: There is no borrow area on the Project Site.
1. Where material is required, import material from source located off Project Site selected by the Contractor and subject to acceptance by the Engineer.
2. There will be no additional cost to the Owner for use of imported material.

C. Compaction:
1. Provide specified compaction for backfills, cuts, embankments, fills, roadway fills, and other earthwork.
2. Perform confirmation tests to verify and confirm that Work has complied, and is complying at all times, with compaction requirements specified in this Section for initial compaction demonstration and field quality control testing.
3. In-place density of compacted backfills, cuts, embankments, fills, and roadway fills determined in accordance with ASTM D6938.
4. Maximum density, laboratory compaction: Soil maximum density and optimum water content when tested in accordance with ASTM D1557.
5. To prevent damage to structures due to backfilling operations, place backfill with equipment that does not exceed AASHTO Standard Specifications for Highway Bridges, H-20 vehicle loading, within a distance from the face of the structure of not less than 1/2 the depth of backfill.
    a. Depth of backfill is the distance between the level being compacted and the bottom of the excavation. Outside this distance, heavier compaction equipment may be used.
6. Compact to percentage of maximum density as follows:
    a. Backfill adjacent to structures: 90 percent.
    b. Backfilling voids: 90 percent.
    c. Other areas: 90 percent.
    d. Under present and future structures: 95 percent.
    e. Under roadways, parking and storage areas, curbs, and sidewalks: 95 percent.
    f. Upper 6 inches of cuts: 90 percent.
    g. Fills: 90 percent.

D. Dewatering: As specified in Section 02240 - Dewatering.

E. Excavation:
   1. Blasting: Not permitted.
   2. Excavations for trenching: As specified in Section 02318 - Trenching.
   3. Excavations for structures:
      a. Provide excavations conforming to the dimensions and elevations indicated on the Drawings for each structure.
      b. After clearing is complete, excavate for the structure, down to the elevation indicated on the Drawings. Unless directed by the Engineer, do not carry excavations below elevation indicated on the Drawings.
      c. Where soil is encountered having unsuitable bearing value, the Engineer may direct in writing that excavation be carried to elevations below those indicated on the Drawings.
      d. Where excavations are made below elevations indicated on the Drawings, adjust elevations of excavations in accordance with the following requirements:
         1) Under slabs: Restore to proper elevation in accordance with procedure specified for backfill in this Section.
         2) Under footings: Restore to the proper elevation using one of the following:
            a) Aggregate base course.
            b) Controlled low-strength material.
      e. Excavation width:
         1) Extend excavations at least 2 feet clear from walls and foundations of structures to allow for placing and removal of forms, installation of services, and inspection.
         2) Do not undercut slopes.
      f. Difficulty of excavation: No extra compensation will be made for removal of rock or any other material due to difficulty of excavation.
   4. Excavation of ditches and gutters:
      a. Cut ditches and gutters accurately to cross sections and grades indicated on the Drawings.
      b. Take care not to excavate ditches and gutters below grades indicated on the Drawings.
      c. Backfill excessive ditch and gutter excavations to grade with suitable material acceptable to the Engineer.
      d. Do not deposit any material within 3 feet of edge of ditch unless otherwise indicated on the Drawings.
   5. Necessary over excavation:
      a. Where it becomes necessary to excavate beyond normal lines of excavation in order to remove boulders or other interfering objects, backfill voids remaining after removal as specified in backfilling of voids below, or as acceptable to the Engineer.
      b. Backfill voids with material acceptable to the Engineer:
         1) With acceptance of the Engineer, backfill with one of the following:
            a) Aggregate base course.
            b) Controlled low-strength material.

F. Materials for backfills, embankments, fills, and roadway fills:
   1. General:
      a. Obtain import material from other sources if surplus materials from cuts and excavations obtained from within the Project Site do not conform to specified requirements or are not sufficient in quantity for construction of Project.
   2. Backfills:
      a. Backfill adjacent to structures, slabs, or walls: Native soil-select material or imported material meeting the requirements of native soil-select unless otherwise specified or indicated on the Drawings.
      b. Backfill material under concrete structures: Aggregate base course material, except in areas where controlled low-strength material or concrete encasement are indicated on the Drawings.
      c. Extend backfill in any area under concrete structures from undisturbed soil or rock to the bottom aggregate base course material layer.
   3. Embankments:
      a. Native material or imported material meeting the requirements of native soil-select unless otherwise specified or indicated on the Drawings.
   4. Fills:
      a. Native soil-select material or imported material meeting the requirements of native soil-select unless otherwise specified or indicated on the Drawings.
      b. Extend fill in any area under concrete structures from undisturbed soil or rock to the bottom aggregate base course material layer.
   5. Roadway fills: One of the following, unless otherwise specified or indicated on the Drawings:
      a. Aggregate base course material.
      b. Native soil-select material or imported material meeting the requirements of native soil-select.

G. Placement:
   1. General:
      a. Lines and grades:
         1) Construct backfills, embankments, fills, and road fills, at locations and to lines and grades indicated on the Drawings.
         2) Overbuild permanent fill slopes by at least 1 foot and then cut to final grade to provide adequate compaction of the remaining fill.
   2. Backfills:
      a. Place loose material in successive layers that do not exceed 8 inches in depth after compaction.
      b. Bring each layer to a moisture content between optimum moisture content and 2 percent above optimum moisture content before compacting.
      c. Defective compacted backfills: Remove and recompact.
   3. Fills:
      a. Place loose material in successive layers that do not exceed 8 inches in depth after compaction.
      b. Bring each layer to a moisture content between optimum moisture content and 2 percent above optimum moisture content before compacting.
      c. Defective compacted fills: Remove and recompact.

4. Embankments:
    a. Place loose material in successive layers that do not exceed 8 inches in depth after compaction.
    b. Bring each layer to a moisture content between optimum moisture content and 3 percent above optimum moisture content before compacting.
    c. Defective compacted embankments: Remove and recompact.
5. Roadway fills:
    a. Place loose material in successive layers that do not exceed 8 inches in depth after compaction.
    b. Bring each layer to a moisture content between optimum moisture content and 3 percent above optimum moisture content before compacting.
    c. Defective compacted roadway fills: Remove and recompact.

3.04 FIELD QUALITY CONTROL

A. Confirmation tests:
    1. Contractor's responsibilities:
        a. Adequacy of compaction equipment and procedures:
            1) Demonstrate adequacy of compaction equipment and procedures.
            2) At each test location include tests for each type or class of backfill from bedding to finish grade.
        b. Compaction sequence requirements:
            1) Do not perform additional earthwork of the same kind until specified degree of compaction has been demonstrated.
        c. Cost of confirmation tests: Paid for by the Contractor.
        d. Qualifications of the Contractor's testing laboratory: Acceptable to the Engineer.
        e. Copies of confirmation test reports: Submit promptly to the Engineer.
    2. Frequency of confirmation testing:
        a. Maximum dry density versus moisture:
            1) When soil, moisture conditions, or means of compaction change. Confirmation testing to be required at the Engineer or Owner's discretion.
        b. Cost of confirmation tests:
            1) Paid for by the Contractor.
        c. Qualifications of the Contractor's testing laboratory:
            1) Perform confirmation testing by soils testing laboratory acceptable to the Engineer. Copies of confirmation test reports: Submit promptly to the Engineer.

B. Tolerances:
    1. Finish grading of backfills, cuts, embankments, fills, and roadway fills:
        a. Perform fine grading under concrete structures such that finish surfaces are never above the grade or cross section indicated on the Drawings and are never more than 0.10 feet below.
        b. Provide finish surface for areas outside of structures that are within 0.10 feet of grade or cross section indicated on the Drawings.
    2. Unlined channels and basins:
        a. In both cut and fill, and levee and access road side slopes in cut: Vertical tolerance of none above and 3 inches below grade indicated on the Drawings on bottom and side slopes.

b. On top surface of levee and access road in both cut and fill, and levee and access road side slopes in fill: Vertical tolerance of none below and 3 inches above grade indicated on the Drawings.

3. Areas which are not under structures, concrete, asphalt, roads, pavements, sidewalks, dikes, and similar facilities:
   a. Provide finish graded surfaces of either undisturbed soil, or cohesive material not less than 6 inches deep.
   b. Intent of proceeding is to avoid sandy or gravelly areas.
4. Finish grading of surfaces:
   a. Reasonably smooth, compacted, and free from irregular surface changes.
   b. Provide degree of finish that is ordinarily obtainable from blade grader operations, except as otherwise specified.
   c. Uniformly grade areas that are not under concrete.
   d. Finish ditches and gutters so that they drain readily.

C. Compliance tests:
   1. Frequency of testing: Periodic compliance tests will be made by the Engineer to verify that compaction is meeting requirements previously specified.

3.05 ADJUSTING

A. Finish grades of excavations, backfills, and fills:
   1. Repair and reestablish grades to required elevations and slopes due to any settlement or erosion that may occur from action of the elements or any other cause prior to final acceptance.

3.06 PROTECTION

A. Finish grades of backfills, cuts, excavations, and fills:
   1. Protect newly graded areas from erosion and deterioration by action of the elements.

B. Ditches and gutters:
   1. Maintain ditches and gutters free from detrimental quantities of debris that might inhibit drainage until final acceptance.

END OF SECTION

SECTION 02312

CONTROLLED LOW STRENGTH MATERIAL (CLSM)

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Controlled low strength material (CLSM), also known as "flowable fill."

1.02 REFERENCES

A. American Concrete Institute (ACI):
   1. 229R - Report on Controlled Low-Strength Materials.
   2. 301 - Specifications for Structural Concrete.

B. ASTM International (ASTM):
   1. C33 - Standard Specification for Concrete Aggregates.
   2. C94 - Standard Specification for Ready Mix Concrete.
   3. C143 - Standard Test Method for Slump of Hydraulic Cement Concrete.
   4. C150 - Standard Specification for Portland Cement.
   5. C260 - Standard Specification for Air-Entraining Admixtures for Concrete.
   6. C403 - Standard Test Method for Time of Setting of Concrete Mixtures by Penetration Resistance.
   7. C618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.
   8. D1557 - Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3(2,700 kN-m/m^3)).
   9. D4832 - Standard Test Method of Preparation and Testing of Controlled Low Strength Material (CLSM) Test Cylinders.
   10. D5971 - Standard Practice for Sampling Freshly Mixed Controlled Low Strength Material.
   11. D6023 - Standard Test Method for Density (Unit Weight), Yield, Cement Content, and Air Content (Gravimetric) of Controlled Low-Strength Material.

1.03 SUBMITTALS

A. Product data: Submit data completely describing materials in the mix and demonstrating compliance with the requirements of this Section.
   1. Cement: Mill tests. Indicate alkali content representative of each shipment.
   2. Fly ash: Identify source and type of fly ash.
   3. Water: Identify source and quality if not from a municipal treatment source.
   4. Admixtures: Manufacturer’s product data indicating suitability for use in CLSM mixes and recommended dosage rates.
   5. Aggregate:
      a. Submit source, type, and sieve analyses.
      b. Resubmit at any time there is a significant change in grading of materials.

B. Mix design:
   1. Submit full details, including mix design calculations for mix proposed for use.
   2. Trial batch test data:
      a. Submit data for each test cylinder.
      b. Submit data that identifies mix and slump for each test cylinder.

1.04 DELIVERY, STORAGE AND HANDLING

A. Store or stockpile cement, fly ash, and aggregate in accordance with ACI 301.

B. Store admixtures in accordance with the manufacturer's recommendations.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. Mixture of portland cement, water, pozzolan, fine aggregate and admixtures, proportioned in accordance with the recommendations of ACI 229 to produce a homogeneous mixture that is flowable, that will readily work into corners and angles; that will not segregate in the plastic state; and that is self-compacting at the time of placement without the use of mechanical vibration.

B. Performance requirements:
   1. Air content, total calculated in accordance with ASTM D6023: Not less than 8.0 percent, nor greater than 12.0 percent.
   2. Compressive strength, measured in accordance with ASTM D4832 at 28 days: Not less than 50 pounds per square inch, nor greater than 150 pounds per square inch.
   3. Wet density: Not greater than 132 pounds per cubic foot.
   4. Slump, measured in accordance with ASTM C143 at the point of placement: Greater than 9 inches and that allows CLSM to flow freely and to be self-compacting during placement.

2.02 MATERIALS

A. Cement:
   1. Portland cement in accordance with ASTM C150, Type I or Type II.
   2. Having total alkali content not more than 0.60 percent.

B. Fly ash: Class C or Class F fly ash in accordance with ASTM C618.

C. Water:
   1. Potable water: Clean and free from oil and deleterious amounts of alkali, acid, organic matter, or other substances.

D. Admixtures: Products of a single manufacturer, specifically manufactured or recommended by that manufacturer for use in CLSM.
   1. Air entraining admixture: In accordance with ASTM C260.

E. Aggregate:
   1. Non-expansive, non-reactive, inert natural sand conforming to the following requirements:
      a. Not more than 12 percent passing a No. 200 sieve.
      b. No plastic fines present.
      c. Including pea gravel no larger than 3/8 inch.

2.03 MIXES

A. See System Description for performance requirements of the plastic and hardened mix.

2.04 SOURCE QUALITY CONTROL

A. Trial batch:
   1. After mix design has been accepted by Engineer, have trial batch of the accepted mix design prepared by testing laboratory acceptable to Engineer.
   2. Prepare trial batches using the specific cement, fly ash, admixtures, aggregates, and water proposed for the Work.
   3. Prepare trial batch with quantity sufficient to determine slump, workability, and consistency; and to provide test cylinders as indicated in this Section.

B. Trial batch testing:
   1. Determine slump in accordance with ASTM C143, with the following modifications:
      a. Do not rod the concrete material.
      b. Place material in slump cone in one semi-continuous filling operation, slightly overfill, tap lightly, strike off, and then measure and record slump.
   2. Prepare and test trial batch specimens in accordance with ASTM D4832, with the following modifications:
      a. Provide cylindrical test specimens, each 6-inches in diameter by 12-inch high.
      b. Provide a minimum of 8 cylinders for testing of each trial batch.
      c. Fill the molds to overflowing and tap sides lightly to settle the mix.
      d. Do not rod the mix for consolidation in the cylinder.
      e. Strike off the excess material.
   3. Place test cylinders in a moist curing room. Exercise caution in moving and transporting the cylinders since they are fragile and will withstand only minimal bumping, banging, or jolting without damage.
   4. Do not remove the test cylinder from mold until that cylinder is to be capped and tested.
      a. Perform the capping carefully to prevent premature fractures.
      b. Do not perform initial compression test until the cylinders reach a minimum age of 3 days.
   5. Provide compressive strength tests:
      a. Test 4 test cylinders at 7 days after casting, and another 4 cylinders at 28 days after casting.
      b. The compression strength of the 4 test cylinders tested at 28 days shall be equal to or greater than the minimum required compression strength, but shall not exceed maximum compression strength.

C. If the trial batch tests do not meet the Specifications for strength or density, revise and re-submit the mix design, prepare additional trial batch(es), and complete additional trial batch tests. Repeat until an acceptable trial batch is that conforms to the Specifications is produced.
   1. All the trial batches and acceptability of materials shall be paid by the Contractor.
   2. After acceptance, do not change the mix design without submitting a new mix design, trail batches, and test information.

PART 3 EXECUTION

3.01 PREPARATION

A. Do not place CLSM until preparation and condition of surfaces receiving the fill have been observed and accepted by the Engineer.

B. Remove debris foreign matter, and standing or running water from excavations and areas receiving CLSM before placement.

3.02 INSTALLATION

A. Pipes and trenches.
   1. Install cellular concrete as indicated on the Drawings and specified.
   2. Where CLSM is placed around and over pipes, secure pipes in place, or place CLSM in lifts to prevent pipe flotation.
   3. Where CLSM is placed in long, open trenches, confine material using bulkheads of sandbags, earth dams, or stiffer concrete at open ends of placement.

B. Soil preparation:
   1. Prior to placement of CLSM, prepare underlying soils as follows:
      a. Scarify surface to a depth of 8 inches.
      b. Adjust moisture content to or slightly above the optimum in accordance with ASTM D1557.
      c. Re-compact scarified surface to a minimum of 95 percent relative density in accordance with ASTM D1557.

3.03 MEASURING, BATCHING, MIXING AND TRANSPORTING

A. Measure, batch, mix and transport CLSM in accordance with the requirements of ASTM C94 and this Section.

B. Mix until there is uniform distribution of materials.

C. Discharge mixer completely prior to recharging.

D. After trial batch testing and mix acceptance, maintain slump during construction within plus or minus 1 inch of the design slump.

3.04 PLACING

A. Place controlled low strength material by method that preserves the quality of the material in terms of compressive strength and density.

B. Maintain fluid properties of the mix during placement.
   1. At point of placement, provide material that flows easily around, beneath, or through walls, pipes, conduits, or other structures.
   2. Do not place CLSM that has partially hardened or that has been contaminated by foreign materials.
   3. Handle and place CLSM using methods that minimize segregation of the mix.
   4. Deposit mix as near its final position as possible to avoid segregation due to rehandling or flowing.
   5. Contain and confine mix while it is fluid. Design containment structures and bracing at walls and forms to withstand lateral pressures of wet mix.

C. Lifts:
   1. Limit lift heights of CLSM placed against structures and other facilities that could be damaged due to the pressure from the CLSM, to the lesser of 3 feet or the lift height indicated on the Drawings.
   2. Do not place another lift of CLSM until the last lift of CLSM has set and gained sufficient strength to prevent additional lateral load against the forms or structure due to the weight of the next lift of CLSM.

D. Water conditions:
   1. Do not place CLSM in standing or flowing water.
   2. Do not permit water to flow over the surface of freshly placed or un-hardened CLSM.
   3. Do not submerge CLSM in water within 24 hours after placement.

E. Manage CLSM bleed water.
   1. Grade top surface of CLSM to drain away from the fill.
   2. Provide side containment that permits bleed water to drain to a contained management area away from the fill.

3.05 CURING AND PROTECTION

A. Curing:
   1. Prior to and during curing, install barriers to prevent equipment or personnel from falling into or becoming entrapped in CLSM.

B. Protect CLSM from:
   1. Damage from the elements.
   2. Damage of any nature during surrounding construction operations.
   3. Freezing: Do not use salt, manure, or other chemicals to provide protection from cold temperatures

3.06 FIELD QUALITY CONTROL

A. Provide quality control over the Work of this Section as specified in Section 01450 - Quality Control and as specified in this Section.

B. General:
   1. Engineer inspection and acceptance required prior to placement.
   2. Make provisions for and furnish all material for the test specimens, and provide manual assistance to assist the Owner's Testing Laboratory in preparing said specimens.

3.07 FIELD QUALITY ASSURANCE

A. Provide quality control over the work of this Section as specified in Section 01450 - Quality Control.

B. Field inspections:
   1. Engineer shall provide on-site inspection for the Work of this Section.
   2. Advise Engineer of readiness to proceed at least 24 hours prior to each placement of CLSM.
   3. Required inspections:
      a. Engineer will observe the prepared areas. Do not place CLSM until Engineer has observed and accepted preparations.
   4. Record of inspections.

C. Field sampling and testing:
   1. During construction, Contractor shall provide sampling and testing to determine whether the CLSM, as produced and placed, complies with the requirements specified.
   2. Sample CLSM for testing in accordance with ASTM D5971.
   3. Required tests:
      a. Air content: Prepare sample and test in accordance with ASTM D6023.
      b. Compressive strength: Prepare and test cylinder specimens in accordance with ASTM D4832.
         1) Prepare 6-inch diameter by 12-inch high specimens for testing.
            a) Provide one set of specimens for each 150 cubic yards of CLSM placed, but not less than 1 set for each half day's placement.
            b) Prepare and test not less than 3 cylinders for each set.
            c) Place CLSM in the molds in accordance with ASTM D4832. Do not rod or otherwise consolidate the material in the mold.
            d) In accordance with ASTM D4832 recommendations for displacing bleed water at the top of the molds and refilling the molds before covering with a lid. Do not use air-tight lids.
         2) Place the cylinders in a safe location away from construction activities.
            a) Protect cylinders from bumping and impact.
            b) Maintain temperature surrounding cylinders between 60 and 80 degrees Fahrenheit until delivery to the laboratory for testing.
            c) After the first day, surround molds with a high humidity environment by covering with wet burlap, or equivalent highly absorptive material. Maintain saturation of the cover. Do not sprinkle water directly on the cylinders.

3) After 4 days, place the cylinders in a protective container for transport to the laboratory for testing.
    a) Exercise caution in moving and transporting the cylinders since they are fragile and will withstand only minimal bumping, banging, or jolting without damage.
    b) Transport container may be a box with a Styrofoam or similar lining that will limit jarring and bumping of the cylinders.
4) Upon receipt at the testing laboratory, place test cylinders in a moist curing room until dates for testing.
5) Do not remove test cylinders from molds until the day that cylinders is to be capped and tested.
6) Cap and test for compressive strength in accordance with ASTM D4832.
    a) Do not perform initial compression test until the cylinders reach an age of at least 4 days.
    b) Test 1 cylinder at 7 days and 2 at 28 days.
7) Compressive strength of the cylinders tested at 28 days shall be equal to or greater than the minimum required compression strength, but shall not exceed maximum compression strength specified.

3.08 NON-CONFORMING WORK

A. When testing or observation indicates CLSM with properties outside the specified and accepted range, Engineer will issue instructions regarding disposition of nonconforming materials.

B. Engineer may:
    1. Reject CLSM represented by those test specimens and require its removal and replacement.
    2. Require modification of the mix design to provide CLSM with the properties specified.

C. Make such modifications at no additional expense to the Owner and with no adjustment to the schedule.

END OF SECTION

SECTION 02318

TRENCHING

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Trench excavation and trench backfill for pipelines, manholes, vaults, and appurtenances.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. D1557 - Standard Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft^3).
   2. D6938 - Standard Test Method for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Backfill: Material placed in trench above the pipe embedment zone.
   2. Bedding: Material placed under, around, and over pipes or ducts in trenches.
   3. Fine grading: Bedding material placed directly below pipes or ducts to provide support at the bottom of the trench and to bring those elements to required grades and elevations.
   4. Flexible pipe: Includes steel, ductile iron, thermoplastics such as polyvinyl chloride (PVC) and high-density polyethylene (HDPE), thermosetting plastics such as fiberglass-reinforced polymer (FRP), bar-wrapped concrete cylinder pipe, and corrugated steel pipes.
   5. Haunch zone: Material placed below and beside the pipe up to the pipe springline.
   6. Lift: A layer of soil or aggregate material, measured before compaction.
   7. Maximum density, Field Compaction: Soil density and water content when tested in accordance with ASTM D6938.
   8. Maximum density, Laboratory Compaction: Soil maximum density and optimum water content when tested in accordance with ASTM D1557.
   9. Pavement section: Includes pavement plus underlying courses such as base course and subgrade.
   10. Pipe embedment zone: Includes bedding, fine grading, and haunch zone.
   11. Pipe foundation: Material placed at the bottom of trench to provide support.
   12. Pipe foundation: Stabilization material placed at the bottom of trench to provide support when the trench bottom is not firm, dry or uniform.

13. Pipe springline: A horizontal reference line located at mid-height, or halfway point, of a circular conduit, pipe, or tunnel. It is the maximum horizontal dimension or diameter of a circular conduit, pipe, or tunnel.
14. Rigid pipe: Includes reinforced non-cylinder concrete, reinforced concrete cylinder, prestressed concrete cylinder, vitrified clay, polymer concrete, cast iron, asbestos cement, and cast-in-place pipes.

1.04 SUBMITTALS

A. As specified in Section 01330 - Submittal Procedures.

B. Product data on soils and aggregates.
   1. Material source.
   2. Gradation.
   3. Test data to demonstrate compliance with requirements as specified in this Section.

C. Samples:
   1. Provide 50-pound sample of materials when requested by the Engineer.

D. Confirmation testing:
   1. Certification of Contractor's testing laboratory.
   2. Record copy report for tests performed by Contractor's testing laboratory.

PART 2 PRODUCTS

2.01 MATERIALS

A. As specified in Section 02050 - Soils and Aggregates for Earthwork.

B. Class C concrete: As specified in Section 03300 - Cast-in-Place Concrete.

C. Controlled low-strength material: As specified in Section 02312 - Controlled Low Strength Material (CLSM).

PART 3 EXECUTION

3.01 PREPARATION

A. Stabilize excavations as specified in Section 02260 - Excavation Support and Protection.

B. Perform subsurface utility engineering (SUE) for utility locating and verification prior to any excavation work and as specified in Section 02280 - Subsurface Utility Engineering.

3.02 DEWATERING

A. As specified in Section 02240 - Dewatering.

3.03 TRENCH EXCAVATION

A. Excavate bottom of trench to depth indicated on the Drawings.

B. Areas of new fill or embankment:
   1. Prior to laying pipes or electrical service, place fill and compact as specified to not less than 2 feet above top of pipe, conduit, or duct bank.
   2. Excavate through fill for pipe trench.

C. Trench widths as specified in the following table:

Buried Pipe or Accessory	Minimum Trench Width	Maximum Trench Width
Nominal Pipe Diameter: 4-inch to 24-inch	OD + 18 inches	OD + 24 inches
Nominal Pipe Diameter: Greater than 24-inch	OD + 24 inches	OD + 36 inches
Manholes, vaults, valves, or other accessories	12 inches between outer surface and trench side or shoring	Not applicable

D. Potable water pipe and appurtenances:
   1. Lay in trenches separate from those used for sewers and recycled water.
   2. Unless otherwise specified or indicated on the Drawings, lay in trenches having cover of not less than 3 feet below surface of ground located at distance of not less than 10 feet clear horizontally from any parallel sewer and 1 foot clear vertically above any parallel sewer.

3.04 TRENCH BACKFILL - GENERAL

A. Trench area terminology and locations as indicated on the Drawings.

B. Place material, except CLSM and concrete, in maximum 6-inch lifts, measured before compaction.

C. Backfilling of manhole excavation: Conform to backfilling requirements for trenches as specified in this Section.

3.05 PIPE FOUNDATION

A. Provide trench bottom with firm, dry, uniform bearing surface at the grade indicated on the Drawings.

B. Excess excavation below elevation indicated on the Drawings will require installation of pipe foundation material to bring the trench bottom back to the elevation indicated on the Drawings at no additional cost to the Owner.
   1. Materials and placement:

C. If bottom of trench excavation consists of soil:
   1. Scarify bottom of trench to a depth of 6 inches below the grade indicated on the Drawings.

2. Materials and placement:
    a. Recompact scarified material to 95 percent of maximum density.

D. If bottom of trench excavation consists of rock or any material that, by reason of its hardness, cannot be excavated to provide uniform bearing surface:
    1. Remove such rock or other material to a depth of not less than 4 inches below pipe embedment zone.
    2. Materials:
        a. CLSM.
        b. Class C concrete.

E. If bottom of trench excavation consists of mud or other soft unstable material:
    1. Remove such unacceptable material to a depth of not less than 18 inches below pipe embedment zone.

3.06 PIPE EMBEDMENT ZONE

A. Pipe displacement:
    1. Take necessary precautions in placement and compaction of bedding material to prevent displacement of piping.
    2. In event there is movement or floating of the piping, re-excavate, re-lay, and backfill the pipe.

B. Fine grading:
    1. Place 6 inches of approved haunch zone bedding material from the trench bottom to the bottom of the pipe or duct to provide support at the bottom of the trench and to bring those elements to required line and grade.

C. Depressions for joints or couplings:
    1. Excavate holes in the fine grading material at the bottom of the trench.
    2. Provide holes of sufficient width to provide ample room for grouting, banding, or welding as necessary for making joints and to ensure that pipe rests upon prepared trench bottom and not supported by any portion of the joint.

D. Rigid pipe:
    1. Pipe embedment zone: Below pipe springline:
        a. Materials and placement:
            1) Aggregate base course compacted to 95 percent maximum dry density.
    2. Pipe embedment zone: Above pipe springline:
        a. Compacted to a depth above pipe: 12-inch minimum.
        b. Materials and placement:
            1) Aggregate base course compacted to 95 percent maximum dry density.

E. Flexible pipe:
    1. Pipe embedment zone:
        a. Compacted to a depth above pipe: 12-inch minimum.
        b. Materials and placement:
            1) Aggregate base course compacted to 95 percent maximum dry density.

2) CLSM. Place gravel bags to support and set pipe to line and grade prior to CLSM placement. Place CLSM in lifts as necessary to prevent floatation.
3) Sand: clean, washed and well-graded (100 percent passing #4 sieve and <10 percent passing 100 sieve).

3.07 BACKFILL

A. Trenches:
   1. Materials and placement:
      a. Native soil - select compacted to 90 percent maximum dry density.
      b. Imported fill compacted to 90 percent maximum dry density.
      c. Aggregate base course compacted to 90 percent maximum dry density.
      d. CLSM.

B. Trenches in rock:
   1. Backfill to top of rock.
      a. Materials and placement:
         1) CLSM.
         2) Class C concrete.
   2. Backfill from top of rock to grade, if applicable:
      a. Materials and placement:
         1) Aggregate base course compacted to 90 percent of maximum density.

C. Trenches below or within 5 feet of the outside perimeter of structures:
   1. Backfill to underside of aggregate base course below structure.
   2. Materials and placement:
      a. Aggregate base course compacted to 95 percent of maximum density.
      b. CLSM.

D. Trenches in roadways and paved areas:
   1. Backfill trench to underside of pavement.
   2. Materials and placement:
      a. Trench backfill with final 12-inch below road base course compacted to 95 percent of maximum density.
      b. Aggregate base course compacted to 95 percent of maximum density.
      c. CLSM.

E. Trenches in areas outside the improved section of roadways or in open country:
   1. Backfill to underside of topsoil layer.
   2. Materials and placement:
      a. Native soil, native soil - select, imported material, or aggregate base course compacted to 90 percent of maximum density.

F. Trenches under existing intersecting pipes, duct banks, or conduits larger than 3 inches in diameter:
   1. Backfill from above top of new pipe embedment zone to springline of intersecting pipe or conduit.
      a. Extend backfill at least 2 feet on either side of intersecting pipe or conduit to ensure backfill material remains in place while other backfill is being placed.
      b. Materials and placement:
         1) CLSM, unless otherwise indicated on the Drawings.
   2. Backfill remainder of trench:
      a. Materials and placement:
         1) CLSM.
         2) Class C concrete.

3.08 EXCESS MATERIAL

A. Remove excess excavated material from the Project site as specified in Section 02300 - Earthwork.

3.09 FIELD QUALITY CONTROL

A. Provide field quality control for the Work as specified in Section 01450 - Quality Control.

B. Confirmation tests: As specified in Section 02300 - Earthwork.
   1. Minimum frequency of confirmation testing:
      a. At each test location include tests for each type or class of backfill from bedding to finished grade.
      b. For trenches: 1 location every 100 linear feet.

C. Compliance tests:
   1. Make periodic compliance tests to verify that compaction is meeting requirements as specified in this Section.
   2. Perform remedial work if compaction test fails to meet specified requirements using one of the following methods:
      a. Remove and replace backfill at the proper density.
      b. Other means acceptable to the Engineer.
   3. Retesting:
      a. Costs of retesting: Contractor is responsible for the costs of retesting required to confirm and verify that remedial work has brought compaction within specified requirements.
      b. Contractor’s confirmation tests during performance of remedial work:
         1) Performance: Perform tests in manner acceptable to the Engineer.
         2) Frequency: Double amount specified for initial confirmation tests.

D. Piping system testing:
   1. As specified in Section 15956 - Piping Systems Testing.

END OF SECTION

SECTION 02581

PRECAST ELECTRICAL HANDHOLES AND ELECTRICAL MANHOLES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Precast Portland cement concrete handholes and accessories.

B. Alternates:
   1. Contractor may propose to construct cast-in-place structures in lieu of the precast structures specified.
      a. Obtain the Engineer's acceptance of this alternative before submitting, providing, or installing.
      b. Submit full information on design and detailing of proposed alternatives, including design details and drawings of the same types required by this Section for precast structures.

1.02 REFERENCES

A. American Association of State Highway Transportation Officials (AASHTO):
   1. Standard Specifications for Highway Bridges.

B. American Concrete Institute (ACI):

1.03 TERMINOLOGY

A. The words and terms listed below are not defined terms that require initial capital letters, but, when used in this Section, have the indicated meaning.
   1. Handhole: An enclosure for use in underground systems that has been sized and detailed to allow personnel to reach into, but not enter, the enclosure to install, operate, or maintain equipment or wiring or both. (Reference: NEC, Article 100.)
      a. As used in this Section, handhole will refer to a precast electrical handhole.
   2. Manhole: An enclosure for use in underground systems that has been sized and detailed to allow personnel to enter the enclosure to install, operate, or maintain equipment or wiring or both.
      a. As used in this Section, manhole will refer to a precast electrical manhole.
   3. Portland cement concrete: A composite material consisting of a Portland cement binder, water, admixtures, and a combination of fine and coarse mineral aggregates.
      a. Abbreviated PCC as in PCC HANDHOLE or PCC MANHOLE.
   4. Precast concrete: A concrete fabrication designed by a qualified engineer and subsequently fabricated at a qualified fabrication site, which is usually located some distance from the site where the fabrication will be installed.

1.04 SUBMITTALS

A. Furnish Submittals as specified in Section 01330 - Submittal Procedures.

B. Product data: Manufacturer’s catalog data, details, and warranties for the following items.
   1. Portland cement concrete handholes and manholes:
      a. Materials of construction.
      b. Joint details and joint-sealing materials.
      c. Data for hatches or covers and rings.
      d. Preformed channels and accessories for cable racking.
      e. Drain and sump details, including removable covers.
      f. Pulling iron details.

C. Shop Drawings:
   1. Portland cement concrete handholes and manholes:
      a. Shop drawings for each structure shall bear the seal and signature of a professional engineer licensed in the state where the structures will be installed.
      b. Dimensioned and “to-scale” plans, sections, and details for each structure, including:
         1) Layout plan for that structure.

2) Sizes, locations, and vertical positions of duct bank windows and knockout panels.
3) Locations and details for access openings, pulling irons, embedded cable supports and racks, and sumps.
4) Details of structural reinforcement showing bar size and spacing; true position of reinforcement in structural members with clear concrete cover at both inside and outside faces; location, bar size, and spacing of added reinforcement around openings; and other details relevant to design and fabrication of the structure.
5) Details of joints between adjacent precast sections, including provisions for overlap and for placement of sealants.

D. Design data:
1. Portland cement concrete handholes and manholes:
a. Structural calculations:
1) Submit complete structural calculations for each structure.
2) Provide calculations bearing the seal and signature of a professional engineer licensed in the state where the structures will be installed.
b. Manufacturer's statement of materials used for fabrication and construction, in accordance with ASTM C858, for record. Include the following:
1) Concrete mix design: For each concrete mix design to be used for the structures, include data describing:
a) Source and type of cement.
b) Sources, grading, and specific gravities of aggregates.
c) Aggregate reactivity data.
d) Concrete mix proportions and design strength.
e) Type, name, and dosage of admixtures included in the concrete mix.
2) Reinforcing steel: Mill certificates.

E. Test reports:
1. Portland cement concrete handholes and manholes:
a. Fabricator's tests for compressive strength of concrete used in structures, made in accordance with recommendations of ASTM C858.

F. Certificates:
1. Portland cement concrete handholes and manholes:
a. Manufacturer's current plant certification under NPCA for the structures to be supplied.
1) Certification shall be current and in-effect at the time structures are manufactured.
b. Manufacturer's certification that handholes and manholes are in accordance with the requirements of ASTM C858.

G. Manufacturer's instructions:
1. Instructions for handling and setting structures in place.
2. Portland cement concrete handholes and manholes:
a. Instructions for operation and maintenance of hatches.

H. Manufacturer's field reports:
    1. Portland cement concrete handholes and manholes:
        a. Manufacturer's inspection reports in accordance with ASTM C1037.

I. Closeout documents:
    1. Project record documents:
        a. Portland cement concrete handholes and manholes:
            1) Final, revised plans and details of as-constructed precast handholes and manholes if requested for record by the Engineer.
    2. Warranties:
        a. Manufacturer's standard warranty for:
            1) Portland cement concrete handholes and manholes and accessories.

1.05 QUALITY ASSURANCE

A. Qualifications:
    1. Designer:
        a. Portland cement concrete handholes and manholes:
            1) Professional engineer qualified in the design of concrete structures and holding a current license in the state where the structures will be installed.
    2. Manufacturer:
        a. Portland cement concrete handholes and manholes:
            1) Holding current NPCA plant certification for the products produced.
            2) Demonstrating at least 5 years of experience in the design, production, and installation of products of the type required for this Work.
            3) Capable of providing structural designs prepared by a professional engineer licensed in the state where the structures will be installed.
            4) Providing inspection during fabrication and handling in accordance with the requirements of ASTM C1037.
    3. Installer:
        a. Capable of providing equipment of adequate capacity and mobility to handle and set units with proper bearing on the subgrade and without damage to the unit.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Packing, shipping, handling, and unloading:
    1. Package and brace structures to avoid damage during shipping and handling.
    2. Furnish crane or forklift for unloading and setting of Portland cement concrete handholes and manholes.

B. Acceptance at Site:
    1. Structures delivered to the Site with cracks, damage, and damaged or missing accessories shall be removed from the Site and replaced at no additional cost to the Owner.

C. Storage and protection:
    1. Store handholes and manholes and their appurtenances in areas protected from damage due to weather and Site operations.

1.07 PROJECT OR SITE CONDITIONS

A. As specified in Section 01850 - Design Criteria.

1.08 SEQUENCING

A. Coordinate installation of precast electrical handholes and manholes with duct banks specified in Section 16133 - Duct Banks.

1.09 WARRANTY

A. Provide manufacturer's standard warranty for precast handhole and manhole structures and accessories.

1.10 SYSTEM START-UP

A. As specified in Section 16050 - Common Work Results for Electrical.

PART 2 PRODUCTS

2.01 GENERAL

A. Design, fabricate, and install precast electrical handholes and precast electrical manholes of the size and type indicated on the Drawings and specified.
   1. Construction of cast-in-place concrete electrical structures, including handholes and manholes, are specified in other Sections.

2.02 MANUFACTURED UNITS - PORTLAND CEMENT CONCRETE HANDHOLES AND MANHOLES

A. General:
   1. Provide Portland cement concrete handholes and manholes configured and designed as indicated on the Drawings and specified.
   2. In accordance with ASTM C858, unless otherwise noted.
      a. Concrete: Provide units with minimum specified compressive strength (f'c) of 5000 pounds per square inch and using Type II cement.

B. Manufacturers: One of the following or equal:
   1. Jensen Precast.
   2. Oldcastle Precast.

C. Components:
   1. Floor:
      a. Construct floors as a monolith.
      b. Where sump or low-point drain is included, slope floor to that point.
   2. Roof, walls, and base:
      a. Designed and rated to support vehicle and pedestrian loads at the spans indicated.
      b. See the "Electrical Handhole and Manhole Schedule" indicated on the Drawings for required load rating by structure location.

3. Floor access doors:
    a. Handholes: Aluminum plate hinged floor access door (hatch) as specified in Section 08320 - Floor Access Doors.
        1) Load rating:
            a) “Heavy Duty” for covers at locations designated for “Roadway” loads.
            b) “Medium Duty” or stronger for covers at locations designated for “Sidewalk” loads.
        2) Minimum access door size not less than 36 inches square, unless otherwise indicated on the Drawings.
        3) Provide bearing surface with pre-installed continuous elastomeric gasket to minimize water infiltration at lid.
        4) Provide skid-resistant lid with cast-in or machined-in grid pattern and the word “ELECTRICAL” in block letters at least 1.5 inches high.
    b. Manholes: Cast iron frame and cover:
        1) Manhole rings and covers: As specified in Section 05500 - Metal Fabrications.

D. Accessories:
1. Provide accessories as indicated on the Drawings and specified.
2. Materials at duct bank penetrations:
    a. Joint filler as specified in Section 03150 - Concrete Accessories.
    b. Backer rod and sealant as specified in Section 07900 - Joint Sealants.
3. Pulling irons:
    a. Provide non-corroding cable pulling irons located for use with each current duct bank location and additional irons for use with duct banks that may be installed through future knockout panels.
    b. Pulling irons may not be located on the floor.
    c. Where pulling irons are installed on the wall, any pockets surrounding the irons shall have bottom surfaces sloped to drain.
    d. Secure pulling eyes to structure reinforcement.
4. Cable racks and racking hardware:
    a. Materials: as specified in Section 16070 - Hangers and Supports.
    b. Embedded slots: Maximum depth of 1.5 inches.
5. Sumps and drains:
    a. Fiberglass or HDPE fabrications, including removable lids to prevent tripping hazards.

E. Fabrication:
1. Embeds:
    a. Install embedded items with provisions for drainage to remove dripping or standing water, and to minimize corrosion.
        1) Pulling irons may not be placed on the floor or in pockets that will collect water.
        2) Detail bottom of cable rack channels to provide a downward sloping “sill” at the bottom of each vertical channel, so that the channel slot drains toward the floor.

b. Concrete cover:
    1) Provide minimum 0.75-inch clear concrete cover between embeds and surrounding reinforcement.
    2) Provide minimum 1.25-inch clear concrete cover between embed and exterior face of wall.

F. Tests and inspections:
    1. Test and inspect structures in accordance with ASTM C858 and ASTM C1037.

2.03 DESIGN AND PERFORMANCE CRITERIA

A. General requirements:
    1. As specified in Section 16050 - Common Work Results for Electrical for general requirements for electrical work.
    2. Provide structures of the sizes and shapes indicated on the Drawings, with layouts, dimensions, and details as indicated on the Drawings and as specified.
    3. In accordance with the requirements of:
        a. NEC.
        b. Project regulatory requirements as specified in Section 01410 - Regulatory Requirements.

B. Portland cement concrete handholes and manholes:
    1. Load resistance of boxes and covers.
    2. Design requirements: Loads on structures:
        a. In accordance with ASTM C857, except as modified in this Section.
        b. Loads at the ground surface:
            1) See the “Electrical Handhole and Manhole Schedule” indicated on the Drawings for minimum surface loading requirements at each structure. Loads are designated as “sidewalk,” or ”roadway”.
            2) Vehicle and pedestrian loadings in the following paragraphs need not be additive; however, structures designated for “roadway” loading shall also support “sidewalk” loads.
            3) “Sidewalk”: Load from regular pedestrian traffic with considerations for occasional non-deliberate vehicular traffic:
                a) Designation “A-0.3” in ASTM C857 Table 1 (300-psf uniform load).
            4) ”Roadway”: Load from heavy, frequently repeated vehicle traffic:
                a) Designation “A-16” in ASTM C857 Table 1 (AASHTO HS20-44).
        c. Lateral earth pressure loads:
            1) Determine in accordance with the following requirements. Include effects of groundwater and seismic accelerations on lateral earth pressures.
                a) Equivalent lateral pressure: 80 pounds per square foot per foot of depth (triangular distribution).
                b) Surface surcharge load:
                    (1) Backfill-induced live load surcharge of 100 pounds per square foot (rectangular distribution).
                    (2) In accordance with ASTM C857 Vehicle Load Designation “A-16” for “Roadway” or “A-0.3” for “Sidewalk” where such

surcharge exceeds backfill loads described in the preceding paragraph.

c) Groundwater effects:
   (1) Include effects from groundwater and soils saturated by flooding using design elevations specified in Section 01850 - Design Criteria.
   (2) Use a passive lateral pressure of 300 pounds per cubic foot (pcf), which is determined from the equivalent fluid pressure.

d) Seismic design:
   (1) As specified in Section 01850 - Design Criteria.
   (2) On opposite sides of the structure that are perpendicular to the direction of acceleration, include equivalent lateral pressure (inverted fluid pressure distribution), beginning with a pressure of 0 at the base of the structure, and increasing at a rate of 400 pounds per square foot of rise toward the ground surface.
   (3) Apply seismic effects as additive force on side where the soil mass is being accelerated toward the structure, and as subtractive force on the opposite side where the soil mass is being accelerated away from the structure.

d. Groundwater and flood loads - buoyancy effects:
   1) As specified in Section 01850 - Design Criteria, for design groundwater and design flood elevations.
   2) Buoyancy: For groundwater and flood conditions, provide factor of safety against flotation of at least 1.20.
      a) If the weight of soil overlying footing projections on the structure is considered to resist flotation, use a buoyant unit weight of soil equal to not more than 30 pounds per cubic foot.
      b) Concrete fill may be provided in the bottom section of precast Portland cement concrete structures to add weight. Submit proposed details.

e. Soil-bearing pressure at base:
   1) Maximum 2,500 pounds per square foot total pressure on prepared subgrade soils.

f. Lifting and handling loads:
   1) Make provision in the design for the effects of loads or stresses that may be imposed on structures during fabrication, transportation, or erection.

g. Load combinations:
   1) Design structures to sustain the specified loads individually or in combination.

3. Design requirements: Structural analysis, design, and detailing:
   a. General:
      1) Analyze and design structures, including the effects of 2-way action (“plate action”) and of load transfer around current and future openings.
      2) Where structures include panels designed for future removal (“knockout panels”), design structures for loads and stresses with any combination of any or all such panels in place or removed.

b. Precast Portland cement concrete handholes and manholes:
    1) Design structures in accordance with the requirements of ACI 318 and this Section.
    2) Provide reinforcement at areas subject to tensile stress when loaded with the specified loads and combinations thereof.
    3) Provide temperature and shrinkage reinforcement to equal or exceed ACI 318 requirements in concrete sections.
    4) Provide minimum clear concrete cover over reinforcement at both interior and exterior faces of members in accordance with the following:
        a) Handholes: 1.25 inches.
        b) Manholes: 2 inches.
    5) Reinforcement details:
        a) Walls: For structures with wall thickness of 8 inches or less, locate a single mat of reinforcement at the center of the wall.
        b) Slabs: For structures with slab thickness of 7 inches or less, locate a single mat of reinforcement at the center of the slab.
        c) Structures with wall or slab thicknesses exceeding these limits shall have a reinforcement at each face of the member.
    6) Joints:
        a) Provide structures with watertight joints between sections and detailed to minimize water infiltration at duct bank and conduit penetrations.
        b) Provide structures with non-skid, shiplap, or tongue and groove joints between sections.

4. Design requirements: Materials:
    a. Portland cement concrete handholes and manholes:
        1) In accordance with ASTM C858 except as modified in this Section.

PART 3 EXECUTION

3.01 GENERAL

A. Furnish and install precast electrical handholes and manholes as indicated on the Drawings and specified.

B. Install additional handholes and manholes required so installation procedures will be in accordance with the cable manufacturer's pulling tension requirements.
    1. Include proposed locations and details of such additional handholes and manholes with the Submittals under this Section.

3.02 PREPARATION

A. Design:
    1. Prepare detailed and scalable layouts for each manhole structure showing locations of conduit or duct bank penetrations, clearances, locations, and sizes of access openings and major accessories.

B. Protection:
   1. Where handhole and manhole structures are installed adjacent to existing site structures or utilities, provide excavation support or other protection as required to maintain those facilities in service and to prevent damage to both existing and new facilities.

C. Site preparation:
   1. Excavate and prepare exposed subgrade as indicated on the Drawings and as specified.
   2. Install and compact foundation layer as indicated on the Drawings and specified.
   3. Level foundation materials so that structures will be set plumb, and duct banks will be at proper grade and alignment.
      a. Install with uniform bearing on foundation materials.
      b. Wedging or blocking of base sections for leveling over the foundation materials will not be permitted.

3.03 INSTALLATION

A. General:
   1. Protect handholes and manholes from displacement, flooding, or flotation.

B. Portland cement concrete handholes and manholes:
   1. Install structures in accordance with ASTM C891 and as specified in this Section.
      a. In the event of conflicts, the more restrictive provisions shall apply.
   2. Clean and prime joints between adjacent precast sections.
      a. Install sealing compound between sections and provide watertight joints.
   3. Set covers and hatches at elevations indicated on the Drawings.
      a. Securely attach frames to top of precast structures and grade adjustment rings.
   4. Penetrations:
      a. Holes for duct banks and other penetrations may not be cut into precast handholes and manholes unless they are located at designated locations shown on the Shop Drawings or at knockout panels cast into the structure during manufacturing.
      b. Carefully remove concrete from knockout panel areas with saws.
         1) Ensure that break-back does not extend beyond the designated limits of the knockout panel.
      c. Coat any reinforcement cut or exposed during removal of knockout panel sections with minimum 2 coats of high solids epoxy as specified in Section 09960 - High-Performance Coatings.
         1) Apply epoxy coating applied over and at least 1 inch past the perimeter of the reinforcement.
   5. Install duct banks and conduit penetrations in accordance with the penetration details indicated on the Drawings.
   6. Fill holes that were provided for handling or other temporary purposes with non-shrink cement grout using procedures as specified in Section 03300 - Cast-in-Place Concrete, unless otherwise detailed by the manufacturer.
   7. Backfill handholes and manholes as indicated on the Drawings and as specified in Section 02300 - Earthwork.

C. Site tolerances:
   1. Set electrical handholes and manholes plumb and true at locations indicated on the Drawings.
   2. Tolerances on placing:
      a. Horizontal location: Within 1 inch.
      b. Vertical elevation: Within 1/2 inch.
      c. Plumb: Within 1/8 inch over 10 feet.

3.04 REPAIR/RESTORATION

A. Repair cracks or blemishes in concrete as described in Section 03300 - Cast-in-Place Concrete.

3.05 ADJUSTING

A. After final grading is complete, adjust access covers to grade.

3.06 CLEANING

A. Before installation of cables in any duct banks and handholes or manholes, remove concrete spoil, forms, debris, silt, dust, and other foreign material.

3.07 SCHEDULES

A. See Drawings for the “Electrical Handhole and Manhole Schedule”.

END OF SECTION

SECTION 02620

FILTER FABRIC

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Nonwoven filter fabric.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. D4355 - Standard Test Method for Deterioration of Geotextiles by Exposure to Light, Moisture and Heat in a Xenon Arc Type Apparatus.
   2. D4491 - Standard Test Methods for Water Permeability of Geotextiles by Permittivity.
   3. D4533 - Standard Test Method for Trapezoid Tearing Strength of Geotextiles.
   4. D4632 - Standard Test Method for Grab Breaking Load and Elongation of Geotextiles.
   5. D4751 - Standard Test Method for Determining Apparent Opening Size of a Geotextile.
   6. D5261 - Standard Test Method for Measuring Mass per Unit Area of Geotextiles.
   7. D6241 - Standard Test Method for the Static Puncture Strength of Geotextiles and Geotextile-Related Products Using a 50-mm Probe.

1.03 DEFINITIONS

A. Filter Fabric: Nonwoven geotextile fabric manufactured from polypropylene fibers.

1.04 SUBMITTALS

A. Product data.

B. Samples.

C. Quality control submittals:
   1. Certificates of Compliance.
   2. Manufacturer's Instructions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Storage and protection:
   1. Furnish filter fabric in protective covers capable of protecting the fabric from ultraviolet rays, abrasion, and water.

1.06 PROJECT CONDITIONS

A. Take field measurements to determine the lengths and dimensions of the surfaces to receive the fabric.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. One of the following or equal:
   1. Propex, Geotex 401.
   2. Ten Cate Geosynthetics, Mirafi 140N.

2.02 MATERIAL REQUIREMENTS

A. Physical properties: Meet the following minimum requirements:

Property (1)	Test Method	Unit	Requirements(1)
Minimum Weight	ASTM D5261	oz	4.0
Grab Tensile Strength	ASTM D4632	lbs	100
Grab Elongation	ASTM D4632	%	50
Trapezoid Tear Strength	ASTM D4533	lbs	50
CBR Puncture Resistance	ASTM D6241	lbs	300
UV Resistance (strength retained at 500 hrs)	ASTM D4355	%	70
Apparent Opening Size (AOS)	ASTM D4751	US sieve	70
Permittivity	ASTM D4491	sec^{-1}	1.7
Flow Rate	ASTM D4491	gpm/ft^2	130
(1) Minimum average roll values.			

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions: Verify that conditions are satisfactory for the installation of filter fabric.

3.02 PREPARATION

A. Surface preparation:
   1. During grading operations, take care not to disturb the subgrade.
   2. This may require use of lightweight dozers for low strength soils such as saturated, cohesionless, or low cohesion soils.

B. Prior to placement of fabric: Prepare surface to smooth condition free of debris, depressions, or obstructions that may damage the fabric.

3.03 INSTALLATION

A. Follow manufacturer's installation instructions and as complimented in this Section.

B. Place the filter fabric smoothly without folds or wrinkles.

C. Use special care when placing the filter in contact with the soil so that no void spaces occur between the filter and the prepared surface.

D. Overlap the parallel rolls and ends of rolls a minimum of 24 inches and not less than manufacturer's instructions.

E. Do not drag filter fabric across subgrade.

F. Make overlaps at ends of rolls in the direction of the aggregate placement with the previous roll on top.

G. Use lightweight dozers if necessary. Do not allow equipment directly on filter fabric.

3.04 FIELD QUALITY CONTROL

A. Inspection:
   1. Before covering, the condition of the fabric will be observed by the Engineer to determine that no holes or rips exist in the fabric.
   2. Repair all holes and rips by placing a new layer of fabric extending beyond the defect in all directions a distance equal to the minimum overlap required for adjacent rolls.

END OF SECTION

SECTION 02621

STABILIZATION FABRIC

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Woven stabilization fabric used for subgrade enhancement.

1.02 REFERENCES

A. ASTM International (ASTM):
   1. D4355 - Standard Test Method for Deterioration of Geotextiles by Exposure to Light, Moisture and Heat in a Xenon Arc Type Apparatus.
   2. D4491 - Standard Test Methods for Water Permeability of Geotextiles by Permittivity.
   3. D4533 - Standard Test Method for Trapezoid Tearing Strength of Geotextiles.
   4. D4632 - Standard Test Method for Grab Breaking Load and Elongation of Geotextiles.
   5. D4751 - Standard Test Method for Determining Apparent Opening Size of a Geotextile.
   6. D6241 - Standard Test Method for the Static Puncture Strength of Geotextiles and Geotextile-Related Products Using a 50-mm Probe.

1.03 DEFINITIONS

A. Stabilization Fabric: Woven geotextile fabric manufactured from polypropylene yarns.

1.04 SUBMITTALS

A. Product data.

B. Samples.

C. Quality control submittals:
   1. Certificates of Compliance.
   2. Manufacturer's Installation Instructions.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Storage and protection:
   1. Furnish stabilization fabric in protective covers capable of protecting the fabric from ultraviolet rays, abrasion, and water.

1.06 PROJECT CONDITIONS

A. Field measurements:
   1. Take field measurements to determine the exact lengths and dimensions of the surfaces to receive the fabric.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. One of the following or equal:
   1. Propex, Geotex 200ST.
   2. Ten Cate Geosynthetics, Mirafi 500X.

2.02 MATERIAL REQUIREMENTS

A. Physical properties: Meet the following minimum requirements:

Property (1)	Test Method	Unit	Requirements(1)
Grab Tensile Strength	ASTM D4632	lbs	200
Grab Elongation	ASTM D4632	%	15
Trapezoid Tear Strength	ASTM D4533	lbs	75
CBR Puncture Resistance	ASTM D6241	lbs	700
UV Resistance (strength retained at 500 hrs)	ASTM D4355	%	70
Apparent Opening Size (AOS)	ASTM D4751	US sieve	40
Permittivity	ASTM D4491	sec^{-1}	0.05
Flow Rate	ASTM D4491	gpm/ft^2	4
(1) Minimum average roll values.			

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions: Verify that conditions are satisfactory for the installation of stabilization fabric.

3.02 PREPARATION

A. Surface preparation: During grading operations, take care not to disturb the subgrade. This may require use of lightweight dozers for low strength soils such as saturated, cohesionless, or low cohesion soils.

B. Prior to placement of fabric: Prepare surface to smooth condition free of debris, depressions, or obstructions that may damage the fabric.

3.03 INSTALLATION

A. Follow manufacturer's installation instructions and as complimented in this Section.

B. Place the stabilization fabric smoothly without folds or wrinkles.

C. Use special care when placing the stabilization fabric in contact with the soil so that no void spaces occur between the stabilization fabric and the prepared surface.

D. Overlap the parallel rolls and ends of rolls a minimum of 24 inches and not less than recommended by manufacturer.

E. Do not drag stabilization fabric across subgrade.

F. Make overlaps at ends of rolls in the direction of the aggregate placement with the previous roll on top.

G. Use lightweight dozers, if necessary. Do not allow equipment directly on stabilization fabric.

3.04 FIELD QUALITY CONTROL

A. Inspection: Before covering, the condition of the fabric will be observed by the Engineer to determine that no holes or rips exist in the fabric. Repair all holes or rips by placing a new layer of fabric extending beyond the defect in all directions, a distance equal to the minimum overlap required for adjacent rolls.

END OF SECTION

SECTION 02742A

ASPHALTIC CONCRETE PAVING (CA)

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Asphalt pavement on prepared subgrade or aggregate base course to lines, grades, and compacted thickness as indicated on the Drawings.

1.02 REFERENCES

A. American Association of State Highway and Transportation Officials (AASHTO):
   1. T 209 - Standard Method of Test for Theoretical Maximum Specific Gravity and Density of Asphalt Mixtures.

B. Caltrans Standard Test Methods:
   1. California Test 304 - Preparation of Bituminous Mixtures for Testing.
   2. California Test 362 - Determining Asphalt Content in Bituminous Mixtures by Vacuum Extraction.
   3. California Test 375 - Determining the In-Place Density and Relative Compaction of AC Pavement.
   4. California Test 382 - Determining Asphalt Content in Bituminous Mixtures (Ignition Oven Method).

C. State of California Department of Transportation Standard Specifications, latest edition (Caltrans Standard Specifications):
   1. Section 37 - Bituminous Seals.
   2. Section 39 - Asphalt Concrete.
   3. Section 92 - Asphalt Binders.
   4. Section 94 - Asphaltic Emulsions.
   5. Section 96 - Geosynthetics.

1.03 SUBMITTALS

A. Job mix formula.

B. Shop Drawings.

C. Product data:
   1. Asphalt binder.
   2. Asphalt aggregate.
   3. Pavement reinforcing fabric.
   4. Tack coat application rate calculations.

D. Quality control Submittals:
   1. Test results.

2. Certificate of Compliance.
3. Certificate of Competence.

E. Equipment list.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Asphalt pavement delivery:
1. Transport the mixture from the mixing plant to the point of use in vehicles having tight bodies previously cleaned of foreign materials.
2. Treat bodies as necessary to prevent material from sticking to the bodies.
3. Cover each load with canvas or other suitable material of sufficient size and thickness to protect the asphalt mixture from the weather.

1.05 PROJECT CONDITIONS

A. Environmental requirements:
1. Asphalt concrete:
a. Place asphalt concrete only when surface is dry, and when atmospheric temperature in the shade is 40 degrees Fahrenheit and rising, or above 50 degrees Fahrenheit if falling.
b. Do not place asphalt concrete when weather is foggy or rainy, when base on which material is to be placed is in wet or frozen conditions, or when, in the opinion of the Engineer, weather conditions will prevent proper handling, finishing, or compaction of the mixtures.
2. Prime coat:
a. Do not apply prime coat when atmospheric temperature is below 60 degrees Fahrenheit.
b. Apply prime coat only when base course is dry or contains moisture not in excess of that which will permit uniform distribution and desired penetration.

PART 2 PRODUCTS

2.01 DESIGN AND PERFORMANCE CRITERIA

A. This Work shall consist of furnishing and mixing aggregate and asphalt binder at a central mixing plant, spreading and compaction of the mixture as specified and as indicated on the Drawings.

B. In general, asphalt concrete and asphalt concrete base shall be in accordance with to Section 39 “Asphalt Concrete,” and applicable referenced sections of the Caltrans Standard Specifications:
1. Where conflicts exist, this Specification shall govern.

2.02 ASPHALT PAVEMENT MATERIALS

A. Asphalts:
   1. Asphalt binder: Steam-refined paving asphalt, PG 64-10, in accordance with Section 92-1.02B “Performance Grades Asphalt Binders” of the Caltrans Standard Specifications.
   2. Tack coat: Asphaltic emulsion, Grade SSA1, in accordance with Section 94 of the Caltrans Standard Specifications.

B. Asphalt aggregate:
   1. Aggregate shall be in accordance with Section 39-2.02B(4)(b) of the Caltrans Standard Specifications for Type A HMA grading:
      a. For pavement placed in multiple lifts:
         1) Aggregate for the final lift (surface layer) shall be 1/2-inch maximum, medium.
         2) Aggregate for other lifts/layers shall be 3/4-inch maximum, medium.
      b. For pavements placed in a single lift:
         1) Aggregate shall be 1/2-inch maximum, medium.
   2. Use of reclaimed asphalt pavement (RAP) in asphalt concrete and asphalt concrete base is prohibited.

C. Asphalt pavement shall be produced in a batch mixing plant, a continuous pugmill mixing plant, or dryer-drum mixing plant:
   1. Proportioning shall be in accordance with Section 39-2.01B(8)(a) of the Caltrans Standard Specifications.
   2. Mixing shall be in accordance with Section 39-2.01B(8)(a) of the Caltrans Standard Specifications.

2.03 AGGREGATE BASE COURSE

A. As specified in Section 02050 - Soils and Aggregates for Earthwork.

B. Placed at the following locations:
   1. At locations indicated on the Drawings.
   2. Asphalt pavement.

C. Compacted thickness shall be as indicated on the Drawings

2.04 EQUIPMENT

A. Spreading and compacting equipment:
   1. Spreading equipment shall be in accordance with Section 39-2.01C(2) and applicable referenced sections of the Caltrans Standard Specifications:
      a. Only in areas inaccessible to the machine, by approval of the Engineer, will hand spreading be permitted.
   2. Compaction equipment shall be in accordance with Section 39-2.01C(2) and applicable referenced sections of the Caltrans Standard Specifications.

2.05 SOURCE QUALITY CONTROL

A. Engineer will perform sampling and tests of materials in accordance with California Test Method Number 304 and California Test Method Number 362 or 382, as applicable. Samples will be taken from materials as delivered to the site.

PART 3 EXECUTION

3.01 EXAMINATION

A. Verification of conditions: Verify surfaces and site conditions are ready to receive work. If unsatisfactory conditions exist, do not commence installation until such conditions have been corrected. Beginning application means acceptance of existing conditions.

3.02 PREPARATION

A. Protection:
   1. Protect concrete pavements and walks, curbs and bases, and other improvements adjacent to the operations with suitable materials.
   2. Building and other surfaces shall be covered with paper or other protection, when required.
   3. Repair any damage caused by the Contractor's employees or operations to the satisfaction of the Engineer at no additional cost to the Owner.

B. Subgrade preparation:
   1. Immediately prior to applying tack coat, or immediately prior to placing the asphalt pavement when tack coat is not required, the subgrade to receive asphalt pavement shall be in accordance with the compaction requirement and elevation tolerances specified for the material involved and shall be cleaned to remove any loose or extraneous material.
   2. If the asphalt pavement is to be placed on an existing base or pavement that was not constructed as part of the contract, clean the surface by sweeping, flushing, or other means to remove loose particles of paving, dirt, and other extraneous material immediately before applying the tack coat.

3.03 TACK COAT

A. Tack coat:
   1. A tack coat of asphaltic emulsion shall be applied to vertical surfaces of existing pavement, curbs, gutters, and construction joints in the surfacing against which additional material is to be placed, or as otherwise specified in this Section.
   2. Applied in 1 application at a rate according to Section 39-2.01A(3)(j) and residual rate requirements according to the mix design and application.

3.04 ASPHALT PAVEMENT

A. Placing materials in a windrow, then picking it up and placing it in the asphalt paver with loading equipment, will be permitted provided that:
   1. Asphalt paver is of such design that the material will fall into a hopper that has a movable bottom conveyor to feed and screed.
   2. Loader is constructed and operated so that substantially of the material deposited into windrows is picked up and deposited into the paving machine.
   3. Windrow is deposited only so far in advance of the paver to provide for continuous operation of the paver and not so far as to allow the temperature of the asphalt pavement in the windrow to fall below 260 degrees Fahrenheit.

B. Unless lower temperatures are directed by the Engineer, asphalt concrete shall be spread, and the first coverage of initial or breakdown compaction shall be complete before the surface temperature of the mixture drops below 250 degrees Fahrenheit.
   1. Breakdown and intermediate compaction shall be completed before the surface temperature drops below 190 degrees Fahrenheit.
   2. Compaction shall be completed before the surface temperature drops below 150 degrees Fahrenheit.

C. Spread and compacted in the number of layers and of the thicknesses indicated in the following table:
   1. Thickness tolerance of within 0.1 inch is allowed for asphalt concrete.
   2. Total thickness tolerance of within 0.2 inches is allowed for asphalt concrete base.

Total Thickness Indicated on Drawings(1)	Number of Lifts	Top Layer Thickness (inches)		Next Lower Layer Thickness (inches)		Other Lower Layer Thicknesses (inches)	
		Min.	Max.	Min.	Max.	Min.	Max.
3 inches(2)	2	1-1/4	1-1/2	1-1/4	1-1/2	-----	-----
3-1/4 to 4-3/4 inches	2	1-3/4	2-1/4	1-3/4	3	-----	-----

Notes:

(1) When pavement-reinforcing fabric is shown to be placed between layers of asphalt pavement, the thickness of asphalt pavement above the pavement-reinforcing fabric shall be considered to be the "Total Thickness Indicated on the Drawings" for the purpose of spreading and compacting the asphalt pavement above the pavement-reinforcing fabric.

(2) If approved by the Engineer, 1 lift of 3 inches may be placed.

(3) At least 2 layers shall be placed if the total thickness is less than 5 inches. At least 3 layers shall be placed if the total thickness is more than 5 inches, and less than 10-1/2 inches. At least 4 layers shall be placed if the total thickness is greater than 10-1/2 inches.

D. A layer shall not be placed over another layer which exceeds 3 inches in compacted thickness until the temperature of the layer which exceeds 3 inches in compacted thickness is less than 160 degrees Fahrenheit at mid depth.

E. If the temperature of any layer drops below 140 degrees Fahrenheit, or if directed by the Engineer, apply tack coat before placing next layer.

F. Unless otherwise indicated on the Drawings, asphalt mixtures shall not be handled, spread, or windrowed in a manner that will stain the finished surface of any pavement or other improvements.

G. Completed mixture shall be deposited on the prepared subgrade at a uniform quantity per linear foot, as necessary to provide the required compacted thickness without resorting to spotting, picking up, or otherwise shifting the mixture.

H. Spreading:
   1. All layers of asphalt pavement shall be spread with an asphalt paver and shall be in accordance with Section 39-2.01C and applicable referenced sections of the Caltrans Standard Specifications.
   2. At locations where the asphalt pavement is to be placed over areas inaccessible to spreading and rolling equipment, layers of asphalt pavement shall be distributed directly out of the back of the dump truck and spread by hand:
      a. Asphalt pavement spread by hand shall be compacted thoroughly to the required lines, grades, and cross-sections by means of pneumatic tampers, or by other methods that will produce the same degree of compaction as pneumatic tampers.

I. Compaction:
   1. Compaction of asphalt pavement shall be in accordance with Section 39-2.01C, and applicable referenced sections of the Caltrans Standard Specifications.
   2. Percent of maximum theoretical density for each layer of asphalt pavement shall be 91 to 97 percent. Theoretical maximum density to be determined using AASHTO T 209 and Caltrans Standard Specifications Section 39.

J. Segregation shall be avoided, and the surfacing shall be free of pockets of coarse or fine material. Asphalt pavement containing hardened lumps shall not be used:
   1. In areas inaccessible to paving and compacting equipment where spreading is done by hand, minimize the amount of segregation.

K. Location of longitudinal joints in the top layer will be determined by the Engineer and shall not adversely affect the quality of the finished product.

L. At locations, or as directed by the Engineer, the asphalt concrete shall be square and at least 1-inch thick when conforming to existing surfacing. Tapering or feathering is not allowed.

3.05 FIELD QUALITY CONTROL

A. Control the quality of Work and shall provide adequate testing to ensure compliance with these Specifications:
   1. Type and size of the samples shall be suitable to determine conformance with stability, density, thickness, and other specified requirements.
      a. Use an approved power saw or core drill for cutting samples.
      b. Furnish tools, labor, and materials for cutting samples, testing, and replacing the pavement where samples were removed.

c. Take a minimum of 1 sample for every 4,000 square feet of asphalt pavement placed.

2. Where open graded friction course is to be placed, core samples shall be taken prior to friction course placement.

B. Asphalt pavement shall match the grades indicated on the Drawings and shall be completely free from unintended hollows and high spots:

1. After completion of paving work, paving shall be flooded with water.
   a. Any ponding that results in standing water greater than 3/4 inch in depth shall be ringed with chalk.
   b. Such hollows shall be corrected by removing and replacing the asphalt concrete.
   c. Asphalt concrete patch shall be square and at least 1-inch thick when conforming to existing surfacing.
   d. Tapering or feathering is not allowed.

C. Perform in-place density and compaction tests of the completed pavement in accordance with California Test Method Number 375, to determine compliance with the specified requirements. Submit test results to Engineer for approval.

D. Cracks, settling of surface, improper drainage, improper compaction, and sloppy connection to previously laid surfaces will be construed as improper workmanship and will not be accepted.

3.06 MAINTENANCE OF PAVEMENT

A. Upon completion of final rolling, traffic shall not be permitted on the finished pavement for at least 6 hours, or until the asphalt pavement has cooled sufficiently to withstand traffic without being deformed.

3.07 WORKMANSHIP AND WARRANTY

A. Provide written warranty against defects in materials or workmanship for a period of not less than 1 year upon completion of Work.

END OF SECTION

SECTION 02762

PAVEMENT MARKINGS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Pavement marking requirements for striping, text, and graphics; traffic signs.

1.02 SUBMITTALS

A. Product data.

B. Manufacturer's instructions.

1.03 QUALITY ASSURANCE

A. Applicator qualifications: Minimum 5 years of experience of applying traffic markings with satisfactory performance record.

B. Regulatory requirements: Comply with applicable requirements of governmental agencies having jurisdiction, including airborne emissions and industrial waste disposal requirements.

1.04 PROJECT CONDITIONS

A. Apply pavement marking paint when:
   1. Pavement is clean and thoroughly dry.
   2. Ambient temperature is above 40 degrees Fahrenheit.
   3. Precipitation is not expected within 12 hours of completion of application.

PART 2 PRODUCTS

2.01 PAVEMENT MARKING PAINT

A. Manufacturers: One of the following or equal:
   1. Dunn-Edwards Corp.
   2. Glidden Co.
   3. Sherwin Williams Co.

B. Materials:
   1. Pavement marking paint, latex based: One of the following or equal:
      a. Dunn-Edwards: No. W 801, Vin-L-Stripe, epoxy-modified acrylic-latex based paint.
      b. Glidden: 63240 Series, UltraHide Latex Traffic Paint.
      c. Sherwin Williams: Set fast acrylic water borne traffic marking paint.

2. Masonry conditioner: The following or equal:
    a. Sherwin Williams: B46WZ1000, Masonry Conditioner.
3. Colors:
    a. Text: White.
    b. Parking dividers: White.
    c. No parking zone markings: Yellow.
    d. No parking curb: Red.
    e. Handicap zone markings: Blue and white.
        1) Blue paint: Match color No. 15090 in Federal Standard 595A as specified in Section 2-1720 of California Administrative Code Title 24 Handicap Regulations.
    f. Accessible parking dividers and accessible route: Yellow.
    g. Directional arrows: White.
