Notice of Redemption. The Trustee on behalf, and at the expense, of the Authority will mail (by first class mail, postage prepaid) notice of any redemption to the respective Owners of any Bonds designated for redemption at their respective addresses appearing on the Bond Register, and to the Securities Depositories and to the Municipal Securities Rulemaking Board, at least 30 but not more than 60 days prior to the date fixed for redemption. Neither failure to receive any such notice so mailed nor any defect therein will affect the validity of the proceedings for the redemption of such Bonds or the cessation of the accrual of interest thereon. Such notice will state the date of the notice, the redemption date, the redemption place and the redemption price and will designate the CUSIP numbers, the Bond numbers and the maturity or maturities (in the event of redemption of all of the Bonds of such maturity or maturities in whole) of the Bonds to be redeemed, and will require that such Bonds be then surrendered at the Trust Office of the Trustee for redemption at the redemption price, giving notice also that further interest on such Bonds will not accrue after the redemption date.

Any such redemption notice may specify that redemption on the specified date will be subject to receipt by the Authority of moneys sufficient to cause such redemption (and will specify the proposed source of such moneys), and neither the Authority nor the Trustee will have any liability to the Owners or any other party as a result of its failure to redeem the Bonds as a result of insufficient moneys.

In addition to the foregoing notice, further notice will be given by the Trustee in said form by first class mail to any Bondowner whose Bond has been called for redemption but who has failed to submit his Bond for payment by the date which is 60 days after the redemption date, but no defect in said further notice nor any failure to give or receive all or any portion of such further notice will in any manner defeat the effectiveness of a call for redemption.

Rescission of Redemption Notice. The Authority will have the right to rescind any redemption by written notice to the Trustee on or prior to the date fixed for redemption. Any notice of redemption will be cancelled and annulled if for any reason funds are not available on the date fixed for redemption for the payment in full of the Bonds then called for redemption, and such cancellation will not constitute an Event of Default hereunder. The Trustee will mail notice of rescission of redemption in the same manner notice of redemption was originally provided.

Selection of Bonds of a Maturity for Redemption. Unless otherwise provided under the Indenture, whenever provision is made in the Indenture or in the applicable Supplemental

Indenture for the redemption of fewer than all of the Bonds of a maturity, the Trustee will select the Bonds to be redeemed from all Bonds of such maturity not previously called for redemption, by lot in any manner which the Trustee in its sole discretion will deem appropriate and fair. For purposes of such selection, all Bonds will be deemed to be comprised of separate \$5,000 authorized denominations, and such separate authorized denominations will be treated as separate Bonds which may be separately redeemed.

Partial Redemption of Bonds. In the event only a portion of any Bond is called for redemption, then upon surrender of such Bond the Authority will execute and the Trustee will authenticate and deliver to the Owner thereof, at the expense of the Authority, a new Bond or Bonds of the same maturity date, of authorized denominations in aggregate principal amount equal to the unredeemed portion of the Bond to be redeemed.

Effect of Redemption. From and after the date fixed for redemption, if funds available for the payment of the principal of and interest (and premium, if any) on the Bonds so called for redemption will have been duly provided, such Bonds so called will cease to be entitled to any benefit under the Indenture other than the right to receive payment of the redemption price, and no interest will accrue on such Bonds from and after the redemption date specified in such notice.

Certification of Independent Financial Consultant. In connection with any optional or special mandatory redemption of Bonds from prepayments, the Authority will deliver to the Trustee a certificate of an Independent Accountant verifying that, following such redemption of Bonds, the principal and interest generated from the remaining CFD Bonds is adequate to make the timely payment of principal and interest due on the Bonds that will remain Outstanding hereunder following such redemption.

Book-Entry Only System

General. The Bonds will be issued as fully registered bonds, registered in the name of Cede & Co. as nominee of The Depository Trust Company (“**DTC**”), and will be available to actual purchasers of the Bonds (the “**Beneficial Owners**”) in the denominations set forth above, under the book-entry system maintained by DTC, only through brokers and dealers who are or act through DTC Participants (as defined in this Official Statement) as described in this Official Statement. Beneficial Owners will not be entitled to receive physical delivery of the Bonds. See “APPENDIX G – DTC and the Book-Entry-Only System.”

If the book-entry-only system is no longer used with respect to the Bonds, the Bonds will be registered and transferred in accordance with the Indenture. See “–Registration, Transfer and Exchange of Bonds” below.

Payments Made to DTC. While the Bonds are subject to the book-entry system, the principal and interest with respect to a Bond will be paid by the Trustee to DTC, which in turn is obligated to remit such payment to its DTC Participants for subsequent disbursement to Beneficial Owners of the Bonds, as described in “APPENDIX G – DTC and the Book-Entry-Only System.”

Registration, Transfer and Exchange of Bonds

Bond Register. The Trustee will keep or cause to be kept at its Trust Office sufficient records for the registration and transfer of the Bonds, which will be the Bond Register and will at

all times during regular business hours be open to inspection by the Authority upon reasonable notice; and, upon presentation for such purpose, the Trustee will, under such reasonable regulations as it may prescribe, register or transfer or cause to be registered or transferred, on said records, Bonds as provided under the Indenture.

Transfer of Bonds. Subject to the book-entry only provisions of the Indenture, any Bond may in accordance with its terms, be transferred, upon the Bond Register, by the person in whose name it is registered, in person or by his duly authorized attorney, upon surrender of such Bond for cancellation, accompanied by delivery of a written instrument of transfer in a form approved by the Trustee, duly executed. Whenever any Bond is surrendered for transfer, the Authority will execute and the Trustee will thereupon authenticate and deliver to the transferee a new Bond or Bonds of like Series, tenor, maturity and aggregate principal amount. No Bonds selected for redemption will be subject to transfer, nor will any Bond be subject to transfer during the 15 days prior to the selection of Bonds for redemption.

Exchange of Bonds. Bonds may be exchanged at the Trust Office of the Trustee for Bonds of the same Series, tenor and maturity and of other authorized denominations. No Bonds selected for redemption will be subject to exchange, nor will any Bond be subject to exchange during the 15 days prior to the selection of Bonds for redemption. The Owners of the Bonds will be required to pay any tax or other governmental charge required to be paid for any exchange and the Owners of the Bonds will be required to pay the reasonable fees and expenses of the Trustee and Authority in connection with the exchange of any Bonds.

The cost of printing any Bonds and any services rendered or any expenses incurred by the Trustee in connection with any transfer or exchange will be paid by the Authority. However, the Owners of the Bonds will be required to pay any tax or other governmental charge required to be paid for any exchange or registration of transfer and the Owners of the Bonds will be required to pay the reasonable fees and expenses of the Trustee and Authority in connection with the replacement of any mutilated, lost or stolen Bonds.

DEBT SERVICE SCHEDULES AND COVERAGE

Debt Service Schedule – Bonds. The table below presents a schedule of debt service for the Bonds, assuming no early redemptions are made.

(1) Annual Maximum Special Tax amounts by Land Use based upon current land use information. Subsequent year Annual Maximum Special Tax amounts by land use are subject to change. Land use changes of taxable parcels do not reduce the Annual Maximum Special Taxes.

(2) Annual Maximum Special Tax totals for each District per applicable Special Tax Formula. In addition to the Maximum Special Tax rates set forth in each Special Tax Formula, Section 53321(d) of the Act provides that the special tax levied against any parcel for which an occupancy permit for private residential use has been issued may not be increased as a consequence of delinquency or default by the owner of any other parcel within a community facilities district by more than 10% above the amount that would have been levied in such fiscal year had there never been any such delinquencies or defaults.

(3) Each year following fiscal year 2007-08, the Stone Point CFD No. 5 Annual Maximum Special Taxes shall increase by 2%.

SECURITY FOR THE BONDS AND SOURCES OF PAYMENT THEREFOR

The Bonds are special obligations of the Authority, payable from and secured by Revenues (as defined herein) of the Authority consisting primarily of payments received by the Authority from the City on the CFD Bonds. Scheduled payments under the CFD Bonds collectively are sufficient to provide the Authority with money to pay the principal of and interest on the Bonds when due. This section provides summaries of the security for the Bonds and certain provisions of the Indenture. See "APPENDIX A – Summary of Certain Provisions of Principal Legal Documents" for a more complete summary of the Indenture. Capitalized terms used but not defined in this section have the meanings given in APPENDIX A.

Limited Obligation

In order to secure the payment of the principal of, premium, if any, and interest on the Bonds in accordance with their terms and the provisions of the Indenture, and subject only to the provisions of the Indenture permitting the application thereof for the purposes and on the terms and conditions set forth therein, the Authority pledges all of the Revenues and any other amounts held in any fund or account established pursuant to the Indenture, other than amounts on deposit in the Rebate Fund and Surplus Fund. This pledge constitutes a first pledge of and charge and lien upon such assets for the payment of the Bonds in accordance with their terms and will be valid and binding from and after issuance of the Bonds, without any physical delivery thereof or further act. The pledge is also irrevocable until all of the bonds issued under the Indenture are no longer Outstanding.

Under the Indenture, the Authority transfers in trust, grants a security interest in and assigns to the Trustee, for the benefit of the Owners from time to time of the Bonds all of the Revenues and all of the right, title and interest of the Authority in the CFD Bonds, subject to the terms of the Indenture. The Trustee shall be entitled to and shall collect and receive all of the Revenues, and any Revenues collected or received by the Authority shall be deemed to be held, and to have been collected or received, by the Authority as the agent of the Trustee and shall forthwith be paid by the Authority to the Trustee. Subject to the provisions of the Indenture, the Trustee also shall be entitled to and shall take all steps, actions and proceedings reasonably necessary in its judgment to enforce, either jointly with the Authority or separately, all of the rights of the Authority and all of the obligations of the City under the CFD Bonds.

Each series of CFD Bonds is a limited obligation of the City and secured by an irrevocable pledge of certain revenues of the City, consisting primarily of monies received by the City as payment of special taxes levied against taxable property within each respective District which secures such CFD Bonds. Scheduled payments under the CFD Bonds are sufficient to provide the Authority with money to pay the principal of, premium, if any, and interest on the Bonds when due. *The CFD Bonds issued under one Fiscal Agent Agreement and the pledge of special taxes to pay such CFD Bonds is not cross-collateralized to the other CFD Bonds or the pledge of special taxes to pay such CFD Bonds under the other Fiscal Agent Agreement. Accordingly, debt service on one issue of CFD Bonds may not be used to make up any shortfall in the debt service on the other issue of CFD Bonds.*

All obligations of the Authority under the Indenture and the Bonds are special obligations of the Authority, payable solely from and secured by Revenues and the amounts in the funds established by the Indenture (except amounts in the Rebate Fund or Surplus Fund). All obligations of the City under each Fiscal Agent Agreement are not general obligations of the City, but are limited obligations, payable solely from the special taxes and the funds pledged

therefor under such Fiscal Agent Agreement. Neither the faith and credit of the Authority, the City nor of the State nor any political subdivision thereof is pledged to the payment of the Bonds or CFD Bonds.

Each issue of CFD Bonds is payable solely from and secured solely by the Net Taxes (defined below), and the amounts in the Special Tax Fund created with respect to such CFD Bonds (the “**Special Tax Fund**”) under the applicable Fiscal Agent Agreement. The City is not obligated to advance available surplus funds from the City treasury to cure any deficiency in any Special Tax Fund. Moneys in each respective Special Tax Fund are available only for use with respect to the series of CFD Bonds to which such Special Tax Fund relates.

Revenues and Flow of Funds

Revenues. The Bonds are secured by a first lien on and pledge of all of the Revenues. The Indenture defines “**Revenues**” as follows:

- (a) all amounts received from the CFD Bonds;
- (b) any proceeds of the Bonds originally deposited with the Trustee and all moneys deposited and held from time to time by the Trustee in the funds and accounts established under the Indenture with respect to the Bonds (other than the Rebate Fund and the Surplus Fund); and
- (c) investment income with respect to any moneys held by the Trustee in the funds and accounts established under the Indenture with respect to the Bonds (other than investment income on moneys held in the Rebate Fund or the Surplus Fund).

Collection by the Trustee. The Trustee will collect and receive all of the Revenues, and any Revenues collected or received by the Authority will be deemed to be held, and to have been collected or received, by the Authority as the agent of the Trustee and will forthwith be paid by the Authority to the Trustee. The Trustee also is entitled to, and may take all steps, actions and proceedings reasonably necessary in its judgment to, enforce, either jointly with the Authority or separately, all of the rights of the Authority and all of the obligations of the City under the CFD Bonds.

Under the Indenture, the Trustee is directed to establish, maintain and hold in trust a special fund designated as the “Revenue Fund” and deposit the Revenues, when and as received by the Trustee, therein. All moneys at any time held in the Revenue Fund shall be held in trust for the benefit of the Owners and shall be disbursed, allocated, and applied solely for payment of the Bonds and for any other uses and purposes set forth in the Indenture.

Application of Revenues. On each Interest Payment Date and date for redemption of the Bonds, the Trustee will transfer from the Revenue Fund, and deposit into the following respective accounts for the Bonds, the following amounts in the following order of priority, the requirements of each such account (including the making up of any deficiencies in any such account resulting from lack of Revenues sufficient to make any earlier required deposit) at the time of deposit to be satisfied before any transfer is made to any account subsequent in priority:

Interest Account. On each Interest Payment Date and redemption date, the Trustee will deposit in the Interest Account an amount required to cause the aggregate amount on deposit in the Interest Account to equal the amount of interest becoming due and payable on such Interest

Payment Date on all Outstanding Bonds or to be paid on the Bonds being redeemed on such date. No deposit need be made into the Interest Account if the amount contained in such account is at least equal to the interest becoming due and payable upon all Outstanding Bonds on the next succeeding Interest Payment Date or redemption date, as applicable.

All moneys in the Interest Account will be used and withdrawn by the Trustee solely for the purpose of paying interest on the Bonds as it becomes due and payable (including accrued interest on any Bonds redeemed prior to maturity). If the amounts on deposit in the Interest Account on any Interest Payment Date or redemption date are insufficient for any reason to pay the aggregate amount of interest then coming due and payable on the Outstanding Bonds, the Trustee will apply such amounts to the payment of interest on each of the Outstanding Bonds on a pro rata basis.

Principal Account. On each Interest Payment Date and redemption date on which the principal of the Bonds will be payable, the Trustee will deposit in the Principal Account an amount required to cause the aggregate amount on deposit in the Principal Account to equal the principal amount of, and premium (if any) on, the Bonds coming due and payable on such Interest Payment Date, or required to be redeemed on such date; provided, however, that no amount will be deposited to effect a mandatory special redemption unless the Trustee has first received a certificate of an Independent Accountant certifying that such deposit to effect the redemption of the Bonds will not impair the ability of the Authority to make timely payment of the principal of and interest on the Bonds, assuming for such purposes that the City continues to make timely payments on all CFD Bonds not then in default.

All moneys in the Principal Account will be used and withdrawn by the Trustee solely for the purpose of paying the principal of the Bonds at the maturity thereof or upon any earlier redemption thereof.

Deficiencies. If on any Interest Payment Date or date for redemption the amount on deposit in the Revenue Fund is inadequate to make the transfers described above as a result of a payment default on an issue of CFD Bonds, the Trustee will immediately notify the City of the amount needed to make the required deposits. In the event that within 5 Business Days of delivering such notice the Trustee receives additional payments from the City to cure such shortfall, the Trustee will deposit such amounts to the account designated in writing by the City.

In the event the Trustee receives notice from the CFD Bonds Fiscal Agent that amounts in the Special Tax Fund held under any CFD Fiscal Agent Agreement is inadequate to make pay debt service on the respective CFD Bonds, the Trustee shall notify the Bond Insurer in accordance with the provisions of the Indenture no later than 2 Business Days prior to the applicable Interest Payment Date to which the inadequacy relates.

Deposit into Rebate Fund. On each Interest Payment Date after making the transfers described above, upon receipt of a Request of the Authority to do so, the Trustee will transfer from the Revenue Fund to the Rebate Fund for deposit in the accounts in the Rebate Fund the amounts specified in such Request.

Surplus Fund. On September 2 of each year, after making the deposits described above, the Trustee will transfer all amounts remaining on deposit in the Revenue Fund to the Surplus Fund. See “–Surplus Fund” below.

Surplus Fund

Any amounts transferred to the Surplus Fund will no longer be considered Revenues and are not pledged to repay the Bonds. So long as CFD Bonds are outstanding, on September 3 of each year, after setting aside any amount specified in a Request of the Authority as necessary to pay Administrative Expenses, any moneys remaining in the Surplus Fund will be transferred to the City for any lawful purpose.

Additional Bonds and CFD Bonds for Refunding Purposes Only

Additional Bonds. The Authority may issue additional bonds, notes or other indebtedness (“**Additional Bonds**”) secured on parity with the Bonds, in such principal amount as determined by the Authority, pursuant to a Supplemental Indenture adopted or entered into by the Authority, so long as the Additional Bonds are issued for the purpose of refunding all or a portion of the Bonds.

Additional CFD Bonds. Under each Fiscal Agent Agreement and as to each District, the City may by Supplemental Indenture establish one or more additional series of bonds secured under the applicable Fiscal Agent Agreement, equally and ratably with CFD Bonds previously issued (“**Parity Bonds**”), so long as the Parity Bonds are issued for the purpose of refunding all or a portion of the CFD Bonds or any Parity Bonds then outstanding.

SECURITY FOR THE CFD BONDS

*The provisions of the Stone Point CFD No. 1 Fiscal Agent Agreement and the Stone Point CFD No. 5 Fiscal Agent Agreement (each a “**Fiscal Agent Agreement**”) with respect to security and sources of payment for each series of CFD Bonds are substantially identical, and will be described together in this section except as otherwise set forth below.*

This section contains only a brief description of those provisions of each Fiscal Agent Agreement. See “APPENDIX A – Summary of Certain Provisions of Principal Legal Documents” for a more complete summary of the Fiscal Agent Agreements. Capitalized terms used but not defined in this section have the meanings given them in the Fiscal Agent Agreement, as summarized in APPENDIX A.

Limited Obligation

The CFD Bonds constitute a limited obligation of the City that is secured by a first lien on and pledge of, and is payable solely from, Net Taxes (defined below) collected in each respective District and amounts deposited by the City in each Special Tax Fund. The City's limited obligation to pay the principal of and interest on the CFD Bonds from Net Taxes collected in each respective District and amounts in each Special Tax Fund is absolute and unconditional.

The CFD Bonds do not constitute a legal or equitable pledge, charge, lien or encumbrance upon the respective District's or City's property, or upon any of its income, receipts or revenues, except the Net Taxes collected in the respective District and other amounts in the respective Special Tax Fund.

Except for the Net Taxes for each District, neither the credit nor the taxing power of the City is pledged for the payment of the CFD Bonds or related interest, and no

Owner of the Bonds may compel the exercise of taxing power by the City or the forfeiture of any of its property. The principal of and interest on the CFD Bonds are not a debt of the City, the State or any of its political subdivisions within the meaning of any constitutional or statutory limitation or restriction.

Net Taxes; Flow of Funds

Net Taxes. “**Net Taxes**” is defined in each Fiscal Agent Agreement to mean Gross Taxes minus the Administrative Expenses in an amount not to exceed the Administrative Expenses Cap.

“**Gross Taxes**” is defined to mean the proceeds of the Special Taxes received by the City, including any scheduled payments and any prepayments thereof, interest thereon and proceeds of the redemption or sale of property sold as a result of foreclosure of the lien of the Special Taxes to the amount of said lien and interest thereon, but does not include any penalties collected in connection with delinquent Special Taxes or any interest in excess of the interest due on the respective CFD Bonds. “**Administrative Expenses Cap**” means, for each CFD, (i) for fiscal year 2017-18, \$35,000, and (ii) for each subsequent year, an amount equal to the preceding fiscal year’s Administrative Expenses Cap plus an additional 2% of such amount.

The “**Special Taxes**” for each District are levied and collected according to the Special Tax Formula for that respective District. See “– Special Tax Methodology,” and APPENDIX C and APPENDIX D.

Allocation of Special Taxes. Except for the portion of any prepayment of Special Taxes to be deposited into the Redemption Account established under the applicable Fiscal Agent Agreement, the CFD Bonds Fiscal Agent under each Fiscal Agent Agreement will, on each date on which the Special Taxes are received from the District, deposit the Special Taxes in the Special Tax Fund to be held in trust for the owners of the respective CFD Bonds. The City will transfer the Special Taxes on deposit in the Special Tax Fund on the dates and in the amounts, in the following order of priority, to:

- (1) The Interest Account of the Special Tax Fund;
- (2) The Principal Account of the Special Tax Fund;
- (3) The Redemption Account of the Special Tax Fund;
- (4) The Reserve Account of the Special Tax Fund; and
- (5) The Surplus Fund.

For additional details on the Interest Account, Principal Account and Redemption Account of the Special Tax Fund, see APPENDIX A.

The Special Tax is collected in the manner and at the same time as *ad valorem* property taxes are collected and is subject to the same penalties and the same procedure, sale, and lien priority in case of delinquency as is provided for *ad valorem* property taxes.

No issue of CFD Bonds is secured by Special Taxes from any other District, and each District’s Special Taxes are available only to pay debt service on its own CFD Bonds.

Reserve Account

Under each Fiscal Agent Agreement, there will be maintained in the Reserve Account of the Special Tax Fund an amount equal to the “**Reserve Requirement**,” which is defined in each Fiscal Agent Agreement to mean as of any date of calculation, an amount equal to the least of: (i) Maximum Annual Debt Service on the Outstanding Bonds; (ii) 10% of the initial principal amount of the Bonds, or (iii) 125% of average Annual Debt Service on the Outstanding Bonds; provided that, if the Reserve Account is funded with cash, the “Reserve Requirement” may not exceed an amount that, pursuant to the Code, may be borrowed and invested at an unrestricted yield when all debt service Reserve Accounts maintained with respect to all bonds (including the Bonds) issued in conjunction with the Authority Bonds are taken into consideration and, in such event, the “Reserve Requirement” shall automatically be adjusted downward to the level that meets the requirements of the Code.

The Reserve Requirement may be satisfied in the form of a Reserve Account Credit Instrument, which is defined in the Fiscal Agent Agreement. See APPENDIX A.

Amounts in the Reserve Account (or draws on a Reserve Account Credit Instrument) will be applied as follows:

- Moneys in the Reserve Account will be used solely for the purpose of paying the principal of, including Sinking Fund Payments, and interest on the Bonds when due in the event that the moneys in the Interest Account and the Principal Account of the Special Tax Fund are insufficient therefor or moneys in the Redemption Account of the Special Tax Fund are insufficient to make a Sinking Fund Payment when due. If the amounts in the Interest Account, the Principal Account or the Redemption Account of the Special Tax Fund are insufficient to pay the principal of, including Sinking Fund Payments, or interest on any Bonds when due, the Fiscal Agent will withdraw from the Reserve Account for deposit in the Interest Account, the Principal Account or the Redemption Account of the Special Tax Fund, as applicable, moneys necessary for such purposes.
- Whenever moneys are withdrawn from the Reserve Account, after making the required transfers to the Interest Account and the Principal Account of the Special Tax Fund, the Fiscal Agent will transfer to the Reserve Account from available moneys in the Special Tax Fund, or from any other legally available funds which the City elects to apply to such purpose, the amount needed to restore the amount of such Reserve Account to the Reserve Requirement. Moneys in the Special Tax Fund will be deemed available for transfer to the Reserve Account only if the Fiscal Agent determines that such amounts will not be needed to make the deposits required to be made to the Interest Account, the Principal Account or the Redemption Account of the Special Tax Fund on or before the next September 1. If amounts in the Special Tax Fund together with any other amounts transferred to replenish the Reserve Account are inadequate to restore the Reserve Account to the Reserve Requirement, then the City will include the amount necessary fully to restore the Reserve Account to the Reserve Requirement in the next annual Special Tax levy to the extent of the maximum permitted Special Tax rates.
- In connection with the optional or special mandatory redemption of Bonds, or a partial defeasance of Bonds, amounts in the Reserve Account may be applied to such redemption or partial defeasance so long as the amount on deposit in the Reserve Account following such redemption or partial defeasance equals the Reserve Requirement. The City will set forth in a Certificate of an Authorized Representative the amount in the Reserve

Account to be transferred to the Redemption Account on a redemption date or to be transferred pursuant to the Fiscal Agent Agreement to partially defease Bonds, and the Fiscal Agent will make such transfer on the applicable redemption or defeasance date, subject to the limitation in the preceding sentence.

- To the extent that the Reserve Account is at the Reserve Requirement as of the first day of the final Bond Year for the Bonds, amounts in the Reserve Account may be applied to pay the principal of and interest due on the Bonds in the final Bond Year for such issue.

- If the Reserve Account is at any time funded in whole or in part with cash, the City may at any time release any cash or investments on deposit from the Reserve Account, in whole or in part, by tendering to the Fiscal Agent: (1) a Reserve Account Credit Instrument, and (2) an opinion of Bond Counsel stating that such release will not, of itself, cause the interest on the Bonds or the Authority Bonds to become includable in gross income for purposes of federal income taxation. Upon tender of such items to the Fiscal Agent, the Fiscal Agent will transfer such funds from the Reserve Account to or upon the direction of the City.

If the Reserve Account is funded with a combination of cash and a Reserve Account Credit Instrument, the Fiscal Agent will deplete all cash balances before drawing on the Reserve Account Credit Instrument. With regard to replenishment, any available moneys provided by the City will be used first to reinstate the Reserve Account Credit Instrument and second, to replenish the cash in the Reserve Account.

Covenants of the City

In each Fiscal Agent Agreement, the City covenants as follows, among other things:

Punctual Payment. It will duly and punctually pay or cause to be paid the principal of and interest on the applicable CFD Bond (and any related Parity Bond) issued under the Fiscal Agent Agreement, together with the premium, if any, to the extent that Net Taxes and other amounts pledged under the Fiscal Agent Agreement are available therefor.

Against Encumbrance. It will not mortgage or otherwise encumber, pledge or place any charge upon any of the Net Taxes except as provided in the applicable Fiscal Agent Agreement, and will not issue any obligation or security having a lien or charge upon the Net Taxes superior to or on a parity with the related CFD Bonds. Nothing in the Fiscal Agent Agreements prevents the City from issuing or incurring indebtedness which is payable from a pledge of Net Taxes which is subordinate in all respects to the pledge of Net Taxes to repay the related CFD Bond, nor prevents the City from issuing refunding bonds.

Levy of Special Tax. The City shall comply with all requirements of the Act so as to assure the timely collection of Special Taxes, including without limitation, the enforcement of delinquent Special Taxes.

(i) Processing. On or within 5 Business Days of each June 1, the CFD Bonds Fiscal Agent shall provide the Finance Director with a notice stating the amount then on deposit in the Special Tax Fund and the other funds and accounts held by the CFD Bonds Fiscal Agent under the Fiscal Agent Agreement, whether or not amounts need to be deposited into the Reserve Account to increase the amounts on deposit

therein to the Reserve Requirement, and informing the City that the Special Taxes need to be levied under the Ordinance as necessary to provide for the Special Tax Requirement (as defined below). The receipt of or failure to receive such notice by the Finance Director shall in no way affect the obligations of the Finance Director under the following two paragraphs, and the CFD Bonds Fiscal Agent shall not be liable for failure to provide such notice to the Finance Director. Upon receipt of such notice, the Finance Director shall communicate with the Auditor to ascertain the relevant parcels on which the Special Taxes are to be levied, taking into account any parcel splits or combinations during the preceding and then current year.

(ii) Levy. The Finance Director shall effect the levy of the Special Taxes each Fiscal Year in accordance with the Ordinance by each August 1 that the CFD Bonds are outstanding, or otherwise such that the computation of the levy is complete before the final date on which Auditor will accept the transmission of the Special Tax amounts for the parcels within the District for inclusion on the next real property tax roll. Upon the completion of the computation of the amounts of the levy, the Finance Director shall prepare or cause to be prepared, and shall transmit to the Auditor, such data as the Auditor requires to include the levy of the Special Taxes on the next real property tax roll.

(iii) Computation. The Finance Director shall fix and levy the amount of Special Taxes within the District in an amount sufficient, together with other amounts on deposit in the Special Tax Fund and available for such purpose, to pay (A) the principal of and interest on the CFD Bonds and any Parity Bonds when due, (B) the Administrative Expenses, including amounts necessary to discharge any rebate obligation, during such year and (C) any amounts required to replenish the Reserve Account to the Reserve Requirement (the “**Special Tax Requirement**”), taking into account the balances in such funds and in the Special Tax Fund. The Special Taxes so levied shall not exceed the authorized amounts as provided in the proceedings under the Resolution of Formation.

(iv) Collection. The Special Taxes shall be payable and be collected in the same manner and at the same time and in the same installment as the general taxes on real property are payable, and have the same priority, become delinquent at the same time and in the same proportionate amounts and bear the same proportionate penalties and interest after delinquency as do the ad valorem taxes on real property.

Commence Foreclosure Proceedings. Under the Act, the City covenants with and for the benefit of the owners of the CFD Bonds that it will order, and cause to be commenced as hereinafter provided, and thereafter diligently prosecute to judgment (unless such delinquency is theretofore brought current), an action in the superior court to foreclose the lien of any Special Tax or installment thereof not paid when due as provided in the following two paragraphs. The Finance Director shall notify the City Attorney of any such delinquency of which the Finance Director is aware, and the City Attorney shall commence, or cause to be commenced, such proceedings.

On or about October 1 of each Fiscal Year, the Finance Director shall compare the amount of Special Taxes theretofore levied in the CFD to the amount of Gross Taxes theretofore received by the City, and:

(i) Individual Delinquencies. If the Finance Director determines that any single parcel subject to the Special Tax in the District is delinquent in the payment of Special Taxes cumulatively of at least [[(with respect to Stone Point CFD No. 1, \$2,000 and with respect to Stone Point CFD No. 5, \$2,500)] or more, then the Finance Director shall send or cause to be sent a notice of delinquency (and a demand for immediate payment thereof) to the property owner within 60 days of such determination, and (if the delinquency remains uncured) foreclosure proceedings shall be commenced by the City within 120 days of such determination.

(ii) Aggregate Delinquencies. If the Finance Director determines that the total amount of delinquent Special Tax for the prior Fiscal Year for the entire District, (including the total of delinquencies under subsection (i) above), exceeds 5% of the total Special Tax due and payable for the prior Fiscal Year, the City shall notify or cause to be notified property owners who are then delinquent in the payment of Special Taxes (and demand immediate payment of the delinquency) within 60 days of such determination, and shall commence foreclosure proceedings within 120 days of such determination against each parcel of land in the CFD with a Special Tax delinquency.

Notwithstanding the foregoing, the City may determine not to initiate foreclosure proceedings if the amount in the Reserve Account is equal to the Reserve Requirement for the Authority Bonds, and there have been no defaults in the payment of debt service on the CFD Bonds.

Special Tax Methodology

The Special Tax authorized under the Act applicable to land within each District will be levied and collected according to the tax liability determined by the City through the application of the appropriate amount or rate as described in the respective Special Tax Formulas set forth in APPENDIX C and APPENDIX D. The following paragraphs in this section summarize certain provisions of the Special Tax Formula for each District. *Capitalized terms set forth in this section and not otherwise defined have the meanings set forth in the respective Special Tax Formula.*

Stone Point CFD No. 1. The Stone Point CFD No. 1 Special Taxes are levied in accordance with the Special Tax Formula for Stone Point CFD No. 1, which is set forth in APPENDIX C and summarized as follows.

Determination of Annual Costs. Each year, the City will determine the Annual Costs of the District for the upcoming fiscal year. The “**Annual Costs**” include the following items:

- (i) debt service on the Bonds;
- (ii) Administrative Expenses and County fees;
- (iii) any amounts needed to replenish bond reserve funds and to pay for delinquencies in Special Taxes for the previous Fiscal Year or anticipated for the current year; and
- (iv) pay-as-you-go expenditures for authorized improvements.

The Annual Costs are the basis for the amount of Special Tax to be levied within the District. In no event may the City levy a Special Tax in any year above the Maximum Annual Special Tax identified for each parcel in the Special Tax Formula.

Parcels Subject to the Special Tax. The City will prepare a list of the parcels subject to the Special Tax using the records of the City and the County Assessor. The City will tax all parcels within the District except "Tax-Exempt" parcels as described in the Special Tax Formula. Taxable Parcels that are acquired by a public agency after the District is formed will remain subject to the Special Tax unless a "trade" resulting in no loss of Special Tax revenue can be made, as described in the Special Tax Formula.

Assignment of Maximum Annual Special Tax. The Special Tax Formula describes in detail the precise method for assigning the Maximum Annual Special Tax to parcels within the District, which generally provides that each year the City will use the definitions contained in the Special Tax Formula to classify each Taxable Parcel as an "Original Parcel" (meaning a County Assessor's parcel existing at the time the District was formed) or a "Successor Parcel" (meaning a County Assessor's parcel formed by the subsequent subdivision of (or lot line adjustment involving) an Original Parcel or a larger Successor Parcel). The Special Tax Formula assigns a total maximum tax to the existing Original Parcels and then reallocates the tax to Successor Parcels based on the number of acres, by dividing the maximum special tax between the taxable acres on a pro rata basis. The maximum annual Special Tax is set at \$10,900 per acre.

Annual Special Tax Levy. The Special Tax will be levied each year by comparing the Annual Costs to the Maximum Annual Special Tax Revenue to be generated by all Taxable Parcels; if the Annual Costs are less than the Maximum Annual Special Tax Revenue, the Special Tax levy will be decreased proportionately for each Taxable Parcel until the Special Tax revenue equals the Annual Costs.

Termination of the Special Tax. The Special Tax will be levied and collected for as long as needed to pay the principal and interest on the Bonds and other costs incurred in order to construct the authorized District-funded facilities and to pay the Annual Costs. The Special Tax Formula provides that the Special Tax may not be levied on any parcel in the District after Fiscal Year 2036-37. When all Annual Costs incurred by the District have been paid, the Special Tax will cease to be levied.

Prepayment of the Special Tax. The Special Tax Formula provides that landowners may permanently satisfy all or a portion of the Special Tax by a cash settlement with the City, subject to the conditions set forth in the Special Tax Formula, including the condition that the Parcel whose Special Tax is to be prepaid is either (i) a whole Original Parcel or a Successor Parcel greater than one acre, and (ii) the City determines that the prepayment will not jeopardize its ability to pay the Bonds. The prepayment amount will be established using the formula set forth in the Special Tax Formula, which is generally based on the Parcel's share of the outstanding Bonds, the reserve fund, fees, call premiums, negative arbitrage and any expenses incurred by the City in connection with the prepayment.

For the complete text of the Special Tax Formula for Stone Point CFD No. 1, see APPENDIX C.

Stone Point CFD No. 5. The Stone Point CFD No. 5 Special Taxes are levied in accordance with the Special Tax Formula for Stone Point CFD No. 5, which is set forth in APPENDIX D and summarized as follows.

Parcels Subject to the Special Tax. For each Fiscal Year, the City shall prepare a list of the Parcels subject to the Special Tax using the records of the County Assessor and the City's own records. The City shall identify the Taxable Parcels from a list of all Parcels within the District. By August 1 of each Fiscal Year, using the definitions from Section 2 and the Maximum Special Taxes from Attachment 1 of the Special Tax Formula, the City shall assign the Maximum Special Taxes to Parcels. See Appendix A to the Special Tax Formula for Stone Point CFD No. 5.

Assignment of Maximum Annual Special Tax. The Special Tax Formula describes in detail the precise method for assigning the Maximum Annual Special Tax to parcels within the District, which generally provides that each year the City will use the definitions contained in the Special Tax Formula to classify each Taxable Parcel as an "Original Parcel" (meaning a County Assessor's parcel existing at the time the District was formed) or a "Successor Parcel" (meaning a County Assessor's parcel formed by the subsequent subdivision of (or lot line adjustment involving) an Original Parcel or a larger Successor Parcel). The Maximum Special Tax assigned to each Original Parcel (calculated by multiplying the number of planned HDR units allocated to Parcels 8 and 9 that are not Expected Affordable Units by an assumed per unit maximum special tax set forth in the Special Tax Formula and the number of planned MDR units allocated to Parcels 11, 12, 13 and 14 by an assumed per unit annual maximum special tax set forth in the Special Tax Formula) will remain the same regardless of the actual acreage or number of units within an Original Parcel or Successor Parcel. The Maximum Special Taxes are increased by 2% each July 1.

Annual Special Tax Levy. The Special Tax levy for each Parcel will be established annually based on the "Annual Costs" which means for each Fiscal Year for the District, the total of 1) Debt Service; 2) Administrative Expenses and County fees; 3) any amounts needed to replenish bond reserve funds and to pay for delinquencies in Special Taxes for the previous Fiscal Year or anticipated for the current year, and 4) any Pay-As-You-Go expenditures for authorized improvements. The Special Tax will be levied each year by comparing the Annual Costs to the Maximum CFD Revenue to be generated by all Taxable Parcels; if the Annual Costs are less than the Maximum CFD Revenue, decrease the Special Tax levy proportionately for each Taxable Parcel until the Special Tax revenue equals the Annual Cost.

Termination of the Special Tax. The Special Tax will be levied and collected for as long as needed to pay the principal and interest on the Bonds and other costs incurred in order to construct the authorized District-funded facilities and to pay the Annual Costs. The Special Tax Formula provides that the Special Tax may not be levied on any parcel in the District after fiscal year 2046-47. When all Annual Costs incurred by the District have been paid, the Special Tax will cease to be levied.

Prepayment of the Special Tax. Landowners may permanently satisfy all or part of the Special Tax obligation by a cash settlement with the City as permitted under Government Code Section 53344. Payments must be made by May 1 in order to have the Prepayment reflected in the following Fiscal Year's Special Tax levy. Prepayment is permitted on any parcel under the following conditions: (i) the City determines that the prepayment does not jeopardize its ability to make timely payments of debt service on the Bonds, (ii) any landowner prepaying the

Special Tax obligation must pay any and all delinquent Special Taxes and penalties for the prepaying Parcel; and (iii) prior to the calculation of the prepayment amount, the landowner must notify the City whether such landowner intends to execute a full Prepayment or Partial Prepayment. The prepayment amount will be established using the formula set forth in the Special Tax Formula, which is generally based on the Parcel's share of the outstanding Bonds, the reserve fund, fees, call premiums, negative arbitrage and any expenses incurred by the City in connection with the prepayment.

For the complete text of the Special Tax Formula for Stone Point CFD No. 5, see APPENDIX D.

Priority of Lien. The principal of and interest on the CFD Bonds is payable from the Special Tax authorized to be collected within each respective District, and payment of the Special Tax is secured by a lien on certain real property within such District. Such lien is co-equal to and independent of the lien for general taxes and any other liens imposed under the Act, regardless of when they are imposed on the property in the District. The imposition of additional special taxes, assessments and general property taxes will increase the amount of independent and co-equal liens which must be satisfied in foreclosure. The City, the County and certain other public agencies are authorized by the Act to form other community facilities districts and improvement areas and, under other provisions of State law, to form special assessment districts, either or both of which could include all or a portion of the land within such District.

Private liens, such as deeds of trust securing loans obtained by owners of property in the District, may be placed upon property in the District at any time. Under State law, the Special Taxes have priority over all existing and future private liens imposed on property subject to the lien of the Special Taxes.

Parcels in the Districts are subject to a bonded special tax lien and non-bonded special taxes and assessments for services. See "THE DISTRICTS" and "VALUE OF PROPERTY WITHIN THE DISTRICTS AND SPECIAL TX BURDENS – Overlapping Liens."

Limitation on Maximum Annual Special Tax Rate. The annual levy of the Special Tax is subject to the maximum annual Special Tax rate authorized in the Special Tax Formula. The levy cannot be made at a higher rate even if the failure to do so means that the estimated proceeds of the levy and collection of the Special Tax, together with other available funds, will not be sufficient to pay debt service on the Bonds.

In addition to the maximum annual Special Tax rate limitation in the Special Tax Formula, Section 53321(d) of the Act provides that the special tax levied against any parcel for which an occupancy permit for private residential use has been issued may not be increased as a consequence of delinquency or default by the owner of any other parcel within a community facilities district by more than 10% above the amount that would have been levied in such fiscal year had there never been any such delinquencies or defaults. In cases of significant delinquency, these factors may result in defaults in the payment of principal of and interest on the CFD Bonds and the Bonds.

Limited Obligation Upon Delinquency. ALL OBLIGATIONS OF THE AUTHORITY UNDER THE INDENTURE AND THE BONDS ARE SPECIAL OBLIGATIONS OF THE AUTHORITY, PAYABLE SOLELY FROM AND SECURED BY THE REVENUES AND THE AMOUNTS IN THE REVENUE FUND AND OTHER FUNDS PLEDGED THEREFOR UNDER

THE INDENTURE. EACH ISSUE OF CFD BONDS ARE LIMITED OBLIGATION BONDS UNDER THE ACT AND ARE PAYABLE SOLELY FROM AND ARE SECURED SOLELY BY THE SPECIAL TAXES AND THE AMOUNTS IN THE SPECIAL TAX FUND AND OTHER FUNDS PLEDGED THEREFOR UNDER THE APPLICABLE FISCAL AGENT AGREEMENT.

The Authority and the City have no obligation to advance moneys to pay bond debt service in the event of delinquent special taxes. Bondowners should not rely upon the City to advance moneys to the Special Tax Fund. Notwithstanding the foregoing, the City may, at its sole option and in its sole discretion, elect to advance available surplus funds of the City to pay for any delinquent Special Taxes pending sale, reinstatement, or redemption of any delinquent property.

THE DISTRICTS

Introduction

Set forth in this section is certain information describing the Districts, including information with respect to the Districts on an aggregate basis. Although the Authority believes the information with respect to the Districts in the aggregate is relevant to an informed decision to purchase the Bonds, investors should be aware that the **debt service on one issue of CFD Bonds may not be used to make up any shortfall in the debt service on the other issue of CFD Bonds**. Moreover, the parcels in each of the Districts are taxed according to that respective District's specific Special Tax Formula. The Special Tax Formula for Stone Point CFD No. 1 and for Stone Point CFD No. 5 is set forth in APPENDIX C and APPENDIX D, respectively.

Furthermore, potential investors should be aware that Special Taxes are levied against individual parcels within each District, and therefore any individual parcel in a District may have a value-to-lien ratio which is less than the overall value-to-lien for such District, or less than the value-to-lien of the Districts on a combined basis. See "SECURITY FOR THE BONDS AND SOURCES OF PAYMENT THEREFOR."

Unpaid Special Taxes do not constitute a personal indebtedness of the owners of the parcels within the Districts, and the owners have made no commitment to pay the principal of or interest on the CFD Bonds or the Bonds or to support payment of the CFD Bonds or the Bonds in any manner. There is no assurance that the owners have the ability to pay the special taxes or that, even if they have the ability, they will choose to pay such taxes. An owner may elect to not pay the special taxes when due and cannot be legally compelled to do so. Neither the City nor any Bondholder will have the ability at any time to seek payment from the owners of property within the Districts of any special tax or any principal or interest due on the CFD Bonds or the Bonds, or the ability to control who becomes a subsequent owner of any property within the Districts.

Description of the Districts

General. The Districts encompass various parcels within Stone Point, a master planned community located within the East Roseville Specific Plan area of the City. The Stone Point master planned community is bounded by North Sunrise Avenue to the northwest, Eureka Road to the southwest, Rocky Ridge Drive to the south, Roseville Parkway to the east and Miners Ravine to the northeast, in the city of Roseville. Land uses in the Districts include single-family

residential, planned development uses, low and high intensity office development, retail development, neighborhood parks and open space areas.

Stone Point CFD No. 1 comprises approximately 130 gross acres of land that has been developing into a mix of commercial and retail uses. The District was originally planned for approximately 98 net acres of office park, comprising approximately 1.65 million square feet of gross building area on approximately 98 acres within 17 parcels. For Fiscal Year 2016-17, 200 parcels were levied the Special Tax.

Stone Point CFD No. 5 comprises approximately ____ gross acres. This District was originally planned for ____ taxable parcels, consisting primarily of residential property and some commercial property. For Fiscal Year 2016-17, 188 parcels were levied the Special Tax. The land within Stone Point CFD No. 5 constitutes a subset of the land within Stone Point CFD No. 1; as such, all of the parcels located within Stone Point CFD No. 5 are also located within Stone Point CFD No. 1 but not all parcels within the boundaries of Stone Point CFD No. 1 are within the boundaries of Stone Point CFD No. 5.

The Stone Point Center, which is located on land within [both?] Districts, contains 41,000 square feet of retail space and a 120,000 square foot, five-story, Class A office building. Existing tenants include Morgan Stanley, Bank of Sacramento, Philadelphia Insurance, and Borges Architectural Group. Major retail tenants include Paul Martin's American Bistro, Blue Nami Sushi, Trademark Pizza, and Bloom Coffee. As discussed herein, Adventist Health System/West is building a new headquarters consisting of four parcels, all of which are located within Stone Point CFD No. 1 and two of which are also located within Stone Point CFD No. 5. See "OWNERSHIP OF PROPERTY WITHIN THE DISTRICTS" herein.

Formation of Stone Point CFD No. 1. On December 18, 2002, the City Council adopted a Resolution of Intention to form a community facilities district under the Act, to levy a special tax and to incur bonded indebtedness for the purpose of financing certain improvements. After conducting a noticed public hearing, on February 19, 2003, the City Council adopted the Resolution of Formation, which established Stone Point Community Facilities District No. 1, set forth the Special Tax Formula within the District and set forth the necessity to incur bonded indebtedness in a total amount not to exceed \$14 million. On February 19, 2003, an election was held within the District in which Richland Roseville, L.P. (who was then the sole landowner/voter in the District) unanimously approved the proposed bonded indebtedness and the levy of the Special Tax. For the complete text of the Special Tax Formula for Stone Point CFD No. 1, see APPENDIX C.

Formation of Stone Point CFD No. 5. On June 21, 2006, the City Council adopted a Resolution of Intention to form a community facilities district under the Act, to levy a special tax and to incur bonded indebtedness for the purpose of financing certain improvements. After conducting a noticed public hearing, on August 16, 2006, the City Council adopted the Resolution of Formation, which established Stone Point Community Facilities District No. 5 (Public Facilities), set forth the Special Tax Formula within the District and set forth the necessity to incur bonded indebtedness in a total amount not to exceed \$9.5 million. On the same day, an election was held within the District in which Richland Roseville, L.P. (who was then the only eligible landowner voter in the District) unanimously approved the proposed bonded indebtedness and the levy of the Special Tax. For the complete text of the Special Tax Formula for Stone Point CFD No. 5, see APPENDIX D.

Backbone Infrastructure. Construction of all backbone roadway and utility improvements required to serve development of land in the Districts has been completed.

Utilities. All typical urban utility services are available along Stone Point Drive in the Districts, and have been extended to all parcels in the Districts. These utilities include electric power, natural gas, telephone, cable television, water, and sanitary sewer and storm water facilities. The City provides electric, water, police and fire services; Pacific Gas & Electric provides natural gas. Sewer and storm water facilities are also provided by the City.

Environmental Matters.

Flood Hazard Map Information. Land in the Districts is located in Flood Zone X, areas determined to be outside the 500-year flood plain, shown on Federal Emergency Management Agency (FEMA) map Community Panel Number 06061C-0477G and -0479G, dated November 21, 2001.

Seismic Conditions. According to the Seismic Safety Commission, land in the Districts is located within Zone 3, areas of moderate seismic activity. Zone 3 is considered to be the lowest risk zone in California. In addition, land in the Districts is not within a Fault-Rupture Hazard Zone (formerly referred to as an Alquist-Priolo Special Study Zone), as defined by Special Publication 42 (revised January 1994) of the California Department of Conservation, Division of Mines and Geology.

Wetland Conditions. According to the City's planning department, property in the Districts received federal and state agency approvals in the early 1990's to fill the site's wetlands with the exception of wetlands within the proposed open space designated for Parcel 19 within CFD No. 5.

OWNERSHIP OF PROPERTY WITHIN THE DISTRICTS

Stone Point CFD No. 1. For Fiscal Year 2016-17, 200 parcels were levied a Special Tax within Stone Point CFD No. 1. Most of these parcels are developed parcels owned by individual homeowners. However, certain undeveloped or partially developed parcels were also levied, and such undeveloped or partially developed parcels represent a large percentage of the Special Tax levy, as shown below.

Stone Point CFD No. 5. For Fiscal Year 2016-17, 188 parcels were levied a Special Tax within Stone Point CFD No. 5. Most of these parcels are developed parcels owned by individual homeowners. However, certain undeveloped or partially developed parcels were also levied, and such undeveloped or partially developed parcels represent a large percentage of the Special Tax levy, as shown below.

Top Ten Taxpayers – Districts Combined. The table on the following page summarizes the top ten taxpayers of property in the Districts on a combined basis. For tables showing the top taxpayers of property in each of the Districts on an individual basis, see "VALUE OF PROPERTY WITHIN THE DISTRICTS AND SPECIAL TAX BURDENS – Value to Special Tax Burden Ratios."

*Preliminary; subject to change

(1) Each District's FY 2017-18 Special Tax levy is preliminary and subject to change.

(2) Ownership according to the County 2016-17 Secured Property Roll.

(3) The Districts' property is valued as follows: Appraised value is used for each parcel showing an assessed structure value of less than \$200,000; Assessed Value is used for all other parcels. All assessed values per the July 1, 2016 County secured assessment roll.

(4) The projected par amount of Stone Point CFD 1 Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of CFD 1's 2017-18 Maximum Special Tax to CFD 1's total 2017-18 Maximum Special Tax.

(5) All of the Stone Point CFD 5 lies within the boundaries of Stone Point CFD 1. The Projected Par amount of Stone Point CFD 5 Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of CFD 5's 2017-18 Maximum Special Tax to CFD 5's total 2017-18 Maximum Special Tax.

(6) Direct and overlapping tax and assessment debt, excludes overlapping general fund debt.

(7) Represents the percentage allocation of the combined debt of both 2017 Local Obligation Bonds of each top owner category.

Sources: Willdan Financial Services; Seevers Jordan Ziegenmeyer; California Municipal Statistics Inc.; Placer County.

A description of the top ten taxpayers, based on the projected Fiscal Year 2017-18 levy, in the Districts on an aggregate basis follows.

Adventist Health System/West. Adventist Health System/West, a California corporation ("**Adventist Health**") owned 4 parcels within Stone Point CFD No. 1 as of the January 1, 2016 lien date for the Fiscal Year 2016-17 property tax roll, none of which have an assessed value for structural improvements. Two of these 4 parcels are also located within Stone Point CFD No. 5. The four parcels owned by Adventist Health (two of which were recently purchased in March 2016) have been assembled for construction of a new headquarters building. The proposed campus is expected to be constructed in two phases, for a total of approximately 685,000 square feet. This planned \$100 million headquarters will be a largely transparent building surrounded by a park-like setting of trees and rolling hills. The first phase will consist of an approximately 280,000 square foot, five-story Class A building, which is currently in review for building permits with the City, and could potentially be open by the end of 2018. There is no schedule for the second and larger phase of the project, which is expected to include approximately 405,000 additional square feet of office space.

Adventist Health was organized in 1980 pursuant to Section 501(c)(3) of the Internal Revenue Code of 1986. Its corporate office is located in the City, and has been there since _____. Adventist Health is a parent company that controls or manages 20 nonprofit corporations that own or lease and operate hospital facilities in California, Hawaii, Oregon and Washington (collectively, the "**Adventist System**"). Approximately 275 clinics are also operated by the Adventist System. The workforce of the Adventist System includes approximately 21,000 employees, 4,500 medical staff physicians, and 3,600 volunteers. The central business of the Adventist System is the delivery of services to improve the health of the communities in which they operate. *Only the owner of the parcels in the Districts (Adventist Health) is responsible for the payment of the special taxes levied on such parcels; none of the other members of the Adventist System are responsible for such special taxes.*

Adventist Health is governed by a 13-member board of directors. Its President and Chief Executive Officer is Scott Reiner. Mr. Reiner was appointed to this position in April 2014 after serving as executive vice president and chief operating officer since 2011; prior to that, he held the role of senior vice president. Adventist Health's Executive Vice President/Chief Operating Office and Chief Strategy Office is Bill Wing. Mr. Wing assumed this position in March 2014, after serving as senior vice president for system performance and strategy since June 2011. In this role, Mr. Wing drives the strategic plan and value-based performance targets for the Adventist System in all four states in which it operates. Jack Wager is the Senior Vice President and Chief Financial Officer of Adventist Health. He assumed this role in March 2014.

Additional information regarding Adventist Health and its affiliated organizations, including audited financial statements and information about long-term indebtedness, is available on its website. *Adventist Health's website address is <http://www.adventisthealth.org>. The website address is given for reference and convenience only, the information on the website may be incomplete or inaccurate and has not been reviewed by the City or the Underwriter. Taylor Morrison of California LLC. Taylor Morrison of California LLC owned 55 parcels within the Districts (all of which are located in both Districts) as of the January 1, 2016 lien date for the Fiscal Year 2016-17 property tax roll, which it is developing into single-family homes for sale to individual homeowners. Of these 55 parcels, 47 had an assessed value for structural

improvements of \$200,000 or less for Fiscal Year 2016-17, and therefore were included in the properties appraised. All of the 55 parcels owned by Taylor Morrison as of January 1, 2016 are developing into single-family homes and it is likely that most, if not all, of these parcels are now owned by individual homeowners.

Taylor Morrison of California LLC, a California limited liability company, is the owner of the lots described above which are being constructed and marketed by Taylor Morrison Homes. Taylor Morrison of California LLC is a subsidiary of Taylor Morrison Home Corporation, a Delaware corporation ("**Taylor Morrison**"). Taylor Morrison's common stock is publicly traded on the NYSE under the symbol "TMHC." Taylor Morrison is one of the largest public homebuilders in the United States, as well as a real estate developer, with a portfolio of lifestyle and master-planned communities. It operates under both the Taylor Morrison and Darling Homes brand names.

Taylor Morrison's website address is <http://www.taylormorrison.com>. The website address is given for reference and convenience only, the information on the website may be incomplete or inaccurate and has not been reviewed by the City or the Underwriter. Nothing on the website is a part of this Official Statement or incorporated into this Official Statement by reference.

Stone Point DE, LLC. This entity owns the parcel located at 1420 Rocky Ridge Drive, which is an office building currently leased to various professional services firms, including investment advisors, doctors, lawyers and others.

Stone Point Associates LLC. This entity owns parcels located at 1474 and 1478 Stone Point Drive, which are office buildings currently leased to various professional services tenants, including H&R Block, Morgan Stanley & Co., CoBank and various law offices.

JMK Golf LLC. This entity owns parcels located at 1455, 1465, 1475 and 1485 on Eureka Road, and is currently leased to various full-service restaurants and service providers.

Value-to-Lien Ratios by Range – Districts Combined. The following table summarizes the combined value-to-lien ratios of all property in the Districts against the Districts' CFD Bonds, by value-to-lien ratio ranges.

ROSEVILLE FINANCE AUTHORITY
Summary Value-to-Lien Ratios by Range – The Districts Combined

Value to Lien Ratio	Number of Parcels Levied	Valuation of District Property⁽¹⁾	CFD 1 & CFD 5 2017 Refunding Bonds & Overlapping Debt⁽²⁾⁽³⁽⁴⁾⁾	Percent of District's Allocable Debt⁽⁵⁾
20:1 or Greater	25	\$81,686,809	\$2,810,976	37.10%
10:1 to 19.99:1	165	67,383,982	4,500,979	15.91
5:1 to 9.99:1	8	14,956,225	1,980,510	31.94
3:1 to 4.99:1 ⁽⁶⁾	2	7,710,000	2,219,031	15.05
Total	200	\$171,737,016	\$11,511,487	100.00%

* Preliminary, subject to change.

- (1) The District property is valued as follows: Appraised value is used for each parcel showing an assessed structure value of less than \$200,000; Assessed Value is used for all other parcels. All assessed values per the July 1, 2016 County secured assessment roll.
- (2) Includes the Projected Par amounts of each Local Obligation Refunding Bond together with other direct and overlapping tax and assessment debt, excludes overlapping general fund debt.
- (3) The Projected Par amount of each Local Obligation Refunding Bond has been allocated based upon each parcel's proportionate share of the respective District's total 2017/18 Maximum Special Tax.
- (4) No annual charges were levied to parcels within the District in FY 2016/17 for Property Assessed Clean Energy (PACE) liens. An annual charge such as this would be preceded by a PACE lien placed onto a parcel within the District.
- (5) Represents the percentage allocation of the combined debt of both 2017 Local Obligation Bonds of each Value to Lien Range category, the percentage excludes all other direct or overlapping debt.
- (6) Represents the total appraised value of Assessor Parcel Numbers 048-460-042 and 048-460-04, which are owned by Adventist Health System/West. The assessed valuation of each of these undeveloped non-residential parcels is \$4,280,000 and \$3,380,000, respectively.

*Preliminary; subject to change.

(1) The combined 2017-18 Special Tax levies are preliminary and subject to change.

(2) The Districts' property is valued as follows: Appraised value is used for each parcel showing an assessed structure value of less than \$200,000; Assessed Value is used for all other parcels. All assessed values per the July 1, 2016 County secured assessment roll.

(3) The projected par amount of Stone Point CFD 1 Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of CFD 1's 2017-18 Maximum Special Tax to CFD 1's total 2017-18 Maximum Special Tax.

(4) All of the Stone Point CFD 5 lies within the boundaries of Stone Point CFD 1. The projected par amount of Stone Point CFD 5 Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of CFD 5's 2017-18 Maximum Special Tax to CFD 5's total 2017-18 Maximum Special Tax.

(5) Other direct and overlapping debt excludes overlapping general fund debt.

(6) Developed single-family residential housing is any single-family home showing as owned by an individual home owner according to County records or as indicated by the appraiser that the home has been completed.

(7) These developed properties are outside of the boundaries of CFD 5.

(8) One single-family home under construction per the appraisal report.

(9) These undeveloped parcels are under CC - PD zoning (Commercial - Planned Development), which generally allows for commercial uses along with a planned development overlay. A planned development district is a special purpose district and may be established with the approval of a Zoning Ordinance amendment. It can be applied in circumstances where the desired mix of uses cannot be achieved with a residential, commercial or industrial mixed use district when combined with a special area overlay or existing planned development districts cannot be readily converted to a new zoning district. See Appendix H for further information.

VALUE OF PROPERTY WITHIN THE DISTRICTS AND SPECIAL TAX BURDENS

Property Values

The value of the land within the Districts is a critical factor in determining the investment quality of the Bonds. If a property owner defaults on the payment of a Special Tax, the City's only remedy is to foreclose on the delinquent property in an attempt to obtain funds with which to pay the delinquent Special Taxes. See "SECURITY FOR THE CFD BONDS – Covenants of the City" and "RISK FACTORS – Bankruptcy Delays." Reductions in District property values due to a downturn in the economy, natural disasters such as earthquakes or floods, stricter land use regulations or other events could have an adverse impact on the security for payment of the Special Taxes, which in turn could have an adverse impact on the security for payment of the Bonds.

The Special Tax is levied on each taxable parcel within the Districts and only the respective individual parcel is responsible for such Special Tax. In comparing the aggregate value of the taxable property within the Districts and the principal amount of the Bonds, it should be noted that only the Assessor's parcel of real property upon which there is a delinquent Special Tax can be foreclosed upon. All of the taxable property within the Districts cannot be foreclosed upon as a whole to pay delinquent Special Taxes unless all of the property is subject to delinquent Special Taxes. Individual parcels may be foreclosed upon to pay delinquent Special Taxes levied against such parcels only. See "SECURITY FOR THE CFD BONDS" and "RISK FACTORS."

The principal amount of the CFD Bonds is not allocated pro-rata among the parcels within the Districts; rather, the annual Special Taxes for the Districts are billed annually for each taxable parcel within the Districts in accordance with the applicable Special Tax Formula. Upon sale of developed parcels, the buyer typically acquires the property subject to the unpaid portion of any general taxes and special taxes levied against the parcel purchased. General taxes and special taxes are not required to be removed from the property and are not required to be, but may be, paid off in full upon transfer of property or upon development of the property.

Assessed Values in the Districts

Article XIII A of the California Constitution (Proposition 13) defines "full cash value" to mean "the county assessor's valuation of real property as shown on the 1975-76 bill under 'full cash value', or, thereafter, the appraised value of real property when purchased or newly constructed or when a change in ownership has occurred after the 1975 assessment," subject to exemptions in certain circumstances of property transfer or reconstruction. The "full cash value" is subject to annual adjustment to reflect increases, not to exceed 2 percent for any year, or decreases in the consumer price index or comparable local data, or to reflect reductions in property value caused by damage, destruction or other factors.

Because of the general limitation to 2 percent per year in increases in full cash value of properties which remain in the same ownership, the county tax roll does not reflect values uniformly proportional to actual market values. No assurance can be given that should a parcel with delinquent Special Taxes be foreclosed and sold for the amount of the delinquency, that any bid will be received for such property, or if a bid is received that such bid will be sufficient to pay such delinquent installments.

In connection with valuing property in the Districts, the City has obtained the 2016-17 County assessed valuation (the “**Assessed Valuation**”) of the taxable property in the Districts.

Assessed Value of Land in Stone Point CFD No. 1. The aggregate Assessed Valuation of taxable property in the Stone Point CFD No. 1 (200 levied parcels), derived from the Placer County Assessor’s Fiscal Year 2016-17 property tax roll, is \$142,344,245.

The Appraisal

General. To better estimate the value of certain parcels in each of the Districts, the City commissioned an appraisal of such parcels. Specifically, all parcels without improvement assessed value or with improvement assessed value of less than \$200,000 on the 2016-17 County property tax roll were appraised. Seevers Jordan Ziegenmeyer, Rocklin, California (the “Appraiser”) prepared an appraisal report with a date of value of March 29, 2017 (the “Appraisal”). The Appraisal was prepared at the request of the City. The Appraisal is set forth in APPENDIX H hereto. The description herein of the Appraisal is intended for limited purposes only; the Appraisal should be read in its entirety. The conclusions reached in the Appraisal are subject to certain assumptions and qualifications which are set forth in the Appraisal.

Property Appraised. The Appraiser appraised 84 properties, consisting of six commercial parcels and 78 residential parcels with an assessed value for structural improvements of less than \$200,000 on the 2016-17 County property tax roll. Of the 84 parcels appraised, only 4 of the commercial parcels are situated within the boundaries of CFD No. 1 and CFD No. 5; the balance of the appraised properties are situated within the boundaries of both CFD No. and CFD No. 5.

Value Estimates. The Appraisal provides a market value of the appraised properties by ownership and assessor’s parcel, as well as a cumulative, or aggregate, value of the properties as of the date of value. The valuation accounts for the impact of the lien of the Special Taxes within each District. The value estimate for the property as of the March 29, 2017 date of value, using the methodologies described in the Appraisal and subject to the limiting conditions and special assumptions set forth in the Appraisal, and based on the ownership of the property as of that date is: (i) for the parcels located within Stone Point CFD No. 1, \$52,363,000 and (ii) for the parcels located within both Stone Point CFD No. 1 and Stone Point CFD No. 5, \$38,463,000. Each estimate of value represents a “not-less-than” value due to the fact we were requested to provide a market value of the smallest floor plan (by project) on each single-family

residential lot improved with a completed home without an assessed improvement value assigned.

The Appraisal notes that the cumulative, or aggregate, value of the appraised properties represents the sum of the value estimates concluded for each ownership interest, which is not equivalent to the market value of the appraised parcels as a whole. In light of the fact the vested property owners have a number of lot(s) that could sell in bulk to one buyer within 12 months, the Appraiser determined that no discounting was necessary. The Appraisal also notes that while the Assessor's tax roll identifies 1 partially completed single-family home and 46 completed single-family homes held under the ownership of Taylor Morrison of California LLC, based on an inspection and inventory of the subject parcels, most of these homes appear to have, in fact, sold to individual homeowners. Therefore, the Appraiser concluded the valuation of the completed homes did not require bulk discounting.

Hypothetical Condition. The estimate of value is subject to the hypothetical condition that the two series of Prior CFD Bonds are refunded.

Assumptions and Limiting Conditions. In considering the estimate of value evidenced by the Appraisal, the Appraisal is based upon a number of standard and special assumptions which affect the estimates as to value. See "APPENDIX H – The Appraisal."

Projected Absorption Period. The Appraiser also estimated the marketing time that would be required for the disposition of the single-family residential lots, based on the historical marketing times of a number of local sales, as well as current and projected economic conditions, the impacts of present market conditions, as well as anticipated changes in the market. After considering the development timeline and scope of the project, the Appraiser estimated the single-family lots could transfer within 27 months of exposure on the market. Thus, the discounted cash flow analysis reflected sales of residential lots over this period. The estimate takes into account the time and process associated with delivering developable parcels. See Appendix B.

No assurance can be given that the estimated absorption will be achieved or attained over an extended period of time; real estate is cyclical in nature, and it is impossible to accurately forecast and project specific demand over a projected absorption period. See "RISK FACTORS – Property Values and Property Development."

Limitations of Appraisal Valuation. Property values may not be evenly distributed throughout the District; thus, certain parcels may have a greater value than others. This disparity is significant because in the event of nonpayment of the Special Tax, the only remedy is to foreclose against the delinquent parcel.

No assurance can be given that the foregoing valuation can or will be maintained during the period of time that the Bonds are outstanding in that the City has no control over the market value of the property within the District or the amount of additional indebtedness that may be issued in the future by other public agencies, the payment of which, through the levy of a tax or an assessment, may be on a parity with the Special Taxes. See "–Overlapping Liens and Priority of Lien" below.

For a description of certain risks that might affect the assumptions made in the Appraisal, see "RISK FACTORS" herein.

Overlapping Liens

General. Contained within the boundaries of each District are certain overlapping local agencies providing public services and assessing property taxes, assessments, special taxes and other charges on the property in each District. Many of these local agencies have outstanding debt.

In addition, property in each District is also subject to the following 2016-17 non-bonded annual special taxes:

(i) the City's Community Facilities District No. 2 (Public Services) in the maximum annual special tax rate of \$124 to \$196 per residential lot and \$986 to \$1,124 per non-residential acre. The maximum annual special tax rates of this district increase at 4% per year;

(ii) the City's Community Facilities District No. 3 (Municipal Services) in the maximum special tax rates of \$407 per low- or medium-density residential unit, \$2,227 per acre of developed commercial land, and \$1,902.48 per acre of developed business professional land. The maximum annual special tax rates of this district increase at the lower of: 1) 4% per year or 2) the increase in the cost of public safety services;

(iii) the City's Community Facilities District No. 4 (Public Services) in the maximum annual special tax rate of \$304 to \$480 per residential lot. The maximum annual special tax rates of this district increase at 4% per year;

(iv) the Placer County Mosquito Abatement District in the annual amount of \$3 per single family;

(v) the City's Olympus Point Landscape and Lighting District assessment in the maximum annual special tax rate of \$411 per residential unit and \$411 per acre of non-residential land. The maximum annual special tax rates of this district increase at 3% per year; and

(vi) bonded indebtedness for schools in the combined amount of \$237 per low- or medium-density residential unit and \$174 per high-density unit. The amounts shown are for fiscal year 2006-07; some of the amounts are subject to annual escalation.

According to Placer County, none of the parcels within the Districts were levied any charges in Fiscal Year 2016-17 by the PACE program that they administer.

The overlapping debt statement for Stone Point CFD No. 1 and Stone Point CFD No. 5 follow on the next two pages. Applicable percentages were estimated by determining the portion of the overlapping district's assessed value that is within the boundaries of the applicable District divided by the overlapping district's total taxable assessed value. The following tables were prepared by California Municipal Statistics, Inc., and are included for general information purposes only. Neither the Authority, the City nor the Underwriter has reviewed these reports for completeness or accuracy and makes no representation in connection therewith.

Value to Special Tax Burden Ratios

Stone Point CFD No. 1. The aggregate estimate of value of taxable property in Stone Point CFD No. 1 is \$171,737,016. This is the sum of the \$52,363,000 estimate of the appraised value of the parcels appraised, together with the \$119,374,016 Assessed Value of all other parcels in the District. This aggregate value of taxable property of \$171,737,016 is approximately 14.92 times the \$11,511,487* total direct and overlapping debt in Stone Point CFD No. 1 as of April 1, 2017 (giving effect to the issuance of \$5,700,000* of CFD Bonds for Stone Point CFD No. 1).

*Preliminary; subject to change.

Development Status – Stone Point CFD No. 1. The following table summarizes the combined value-to-lien ratios of all property in Stone Point CFD No. 1 against the District’s CFD Bonds and overlapping debt on a development category basis.

*Preliminary; subject to change.

(1) The combined 2017-18 Special Tax levies are preliminary and subject to change.

(2) The Districts' property is valued as follows: Appraised value is used for each parcel showing an assessed structure value of less than \$200,000; Assessed Value is used for all other parcels. All assessed values per the July 1, 2016 County secured assessment roll.

(3) The projected par amount of Stone Point CFD 1 Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of CFD 1's 2017-18 Maximum Special Tax to CFD 1's total 2017-18 Maximum Special Tax.

(4) All of the Stone Point CFD 5 lies within the boundaries of Stone Point CFD 1. The projected par amount of Stone Point CFD 5 Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of CFD 5's 2017-18 Maximum Special Tax to CFD 5's total 2017-18 Maximum Special Tax.

(5) Other direct and overlapping debt excludes overlapping general fund debt.

(6) Developed single-family residential housing is any single-family home showing as owned by an individual home owner according to County records or as indicated by the appraiser that the home has been completed.

(7) One single-family home under construction per the appraisal report.

(8) These undeveloped parcels are under CC - PD zoning (Commercial - Planned Development), which generally allows for commercial uses along with a planned development overlay. A planned development district is a special purpose district and may be established with the approval of a Zoning Ordinance amendment. It can be applied in circumstances where the desired mix of uses cannot be achieved with a residential, commercial or industrial mixed use district when combined with a special area overlay or existing planned development districts cannot be readily converted to a new zoning district. See Appendix H for further information.

Value-to-Lien Ratios by Range – Stone Point CFD No. 1. The following table summarizes the combined value-to-lien ratios of all property in the District against the District's CFD Bonds, by value-to-lien ratio ranges.

ROSEVILLE FINANCE AUTHORITY
Summary Value-to-Lien Ratios by Range – Stone Point CFD No. 1

Value to Lien Ratio	Number of Parcels Levied	Valuation of District Property⁽¹⁾	CFD 1 & CFD 5 2017 Refunding Bonds & Overlapping Debt^{*(2)(3)(4)}	Percent of District's Allocable Debt⁽⁵⁾
20:1 or Greater	25	\$81,686,809	\$2,810,976	37.10%
10:1 to 19.99:1	165	67,383,982	4,500,979	15.91
5:1 to 9.99:1	8	14,956,225	1,980,510	31.94
3:1 to 4.99:1	2	7,710,000	2,219,031	15.05
Total	200	\$171,737,016	\$11,511,487	100.00%

* Preliminary, subject to change.

- (1) The District property is valued as follows: Appraised value is used for each parcel showing an assessed structure value of less than \$200,000; Assessed Value is used for all other parcels. All assessed values per the July 1, 2016 secured assessment roll.
- (2) All of Stone Point CFD 5 lies within Stone Point CFD 1. Total debt includes the projected par amount of both the Stone Point CFD 1 and Stone Point CFD 5 Series 2017 Refunding Bonds together with other direct and overlapping tax and assessment debt, and excludes overlapping general fund debt.
- (3) The Projected Par amount of the District's Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of the District's total 2017-18 Maximum Special Tax. The projected par amount of the Stone Point CFD 5 Series 2017 Refunding Bonds has been allocated based upon each parcel's proportionate share of the CFD 5 total 2017-18 Maximum Special Tax.
- (4) No annual charges were levied to parcels within the District in FY 2016-17 for Property Assessed Clean Energy (PACE) liens. An annual charge such as this would be preceded by a PACE lien placed onto a parcel within the District.
- (5) Represents the percentage allocation of the combined debt of both 2017 Local Obligation Bonds of each Value to Lien Range category, the percentage excludes all other direct or overlapping debt.
- (6) Represents the total appraised value of Assessor Parcel Numbers 048-460-042 and 048-460-04, which are owned by Adventist Health System/West. The assessed valuation of each of these undeveloped non-residential parcels is \$4,280,000 and \$3,380,000, respectively.

RISK FACTORS

The purchase of the Bonds described in this Official Statement involves a degree of risk that may not be appropriate for some investors. The following includes a discussion of some of the risks that should be considered before making an investment decision.

Limited Obligation to Pay Debt Service

The Bonds. The Bonds are special obligations of the Authority payable solely from and secured solely by the Revenues, consisting primarily of debt service on the CFD Bonds, and other amounts held and pledged therefor under the Indenture. The Authority has no obligation to pay principal of or interest on the Bonds if the Revenues and the amounts in the other funds pledged for the Bonds are insufficient pay the debt service on the Bonds. The Authority is not obligated to advance funds to pay debt service on the Bonds.

The CFD Bonds. The City has no obligation to pay principal of or interest on the CFD Bonds if Special Tax collections are delinquent or insufficient, including funds derived from the foreclosure and sale of parcels for Special Tax delinquencies, to pay the debt service on the CFD Bonds. The City is not obligated to advance funds to pay debt service on the CFD Bonds.

Levy and Collection of the Special Taxes

General. The principal source of payment of principal of and interest on each series of the CFD Bonds is the proceeds of the annual levy and collection of the Special Tax against taxable property within the applicable District.

Limitation on Special Tax Rate. The annual levy of the Special Tax on any parcel is limited to the maximum Special Tax rate authorized in the applicable Special Tax Formula. The levy cannot be made at a higher rate even if the failure to do so means that the estimated proceeds of the levy and collection of the Special Tax, together with other available funds, will not be sufficient to pay debt service on the CFD Bonds.

No Relationship Between Property Value and Special Tax Levy. Because the Special Tax Formula is not based on property value, the levy of the Special Tax will rarely, if ever, result in a uniform relationship between the value of particular parcels of taxable property and the amount of the levy of the Special Tax against those parcels. Thus, there will rarely, if ever, be a uniform relationship between the value of the parcels of taxable property and their proportionate share of debt service on the CFD Bonds, and certainly not a direct relationship.

Factors that Could Lead to Special Tax Deficiencies. The following are some of the factors that might cause the levy of the Special Tax on any particular parcel of taxable property to vary from the Special Tax that might otherwise be expected:

Transfers to Governmental Entities. The number of parcels of taxable property could be reduced through the acquisition of taxable property by a governmental entity (by exercise of its rights as mortgage guarantor, or for other reasons) and failure of the government to pay the Special Tax based upon a claim of exemption or, in the case of the federal government or an agency thereof, immunity from taxation, thereby resulting in an increased tax burden on the remaining taxed parcels. *No investigation has been*

made as to whether any governmental entity currently owns or has an interest in any property in the Districts.

Property Tax Delinquencies. Failure of the owners of taxable property to pay property taxes (and, consequently, the Special Tax), or delays in the collection of or inability to collect the Special Tax by tax sale or foreclosure and sale of the delinquent parcels, could result in a deficiency in the collection of Special Taxes. For a summary of Special Tax collections and delinquencies in the Districts, see “THE DISTRICTS – Delinquencies on a Combined Basis.”

Delays Following Delinquencies and Foreclosure Sales. The Fiscal Agent Agreements provide that the Special Tax is to be collected in the same manner as ordinary *ad valorem* property taxes are collected and, except as provided in the special covenant for foreclosure described in “SECURITY FOR THE CFD BONDS – Covenants of the City” and in the Act, is subject to the same penalties and the same procedure, sale and lien priority in case of delinquency as is provided for ordinary *ad valorem* property taxes. Under these procedures, if taxes are unpaid for a period of five years or more, the property is subject to sale by the County.

If sales or foreclosures of property are necessary, there could be a delay in payments to the Authority, as owner of the CFD Bonds, pending such sales or the prosecution of foreclosure proceedings and receipt by the City of the proceeds of sale if the Reserve Account for the applicable series of CFD Bonds is depleted. See “SECURITY FOR THE CFD BONDS – Reserve Account.”

Payment of Special Taxes is not a Personal Obligation of the Property Owners

Property owners are not personally obligated to pay their respective Special Taxes. Rather, the Special Taxes are obligations only against the respective parcels against which they are levied. If, after a default in the payment of the Special Tax and a foreclosure sale, the resulting proceeds are insufficient, taking into account other obligations also constituting a lien against the parcel, the City has no personal recourse against the parcel owner.

Factors Affecting Property Values

The value of taxable property within the Districts is a critical factor in determining the investment quality of the Bonds. If a parcel owner defaults in the payment of the Special Taxes, the City’s only remedy is to foreclose on the delinquent property.

The following is a discussion of specific risk factors that could affect the value of property in the Districts.

Prolonged Economic Downturn. Land values in and around the City have been in the past and likely would be in the future adversely affected by national and local economic conditions. To the extent of an economic downturn, property values could remain flat and/or decrease for an indefinite period.

Declines in home values in the Districts could also result in property owner unwillingness or inability to pay mortgage payments, as well as *ad valorem* property taxes and Special Taxes, when due. Under such circumstances, bankruptcies are likely

to increase. Bankruptcy by homeowners with delinquent Special Taxes would delay the commencement and completion of foreclosure proceedings.

Risks Related to Mortgage Loans. Although residential projects that have their homes built and occupied by homeowners are typically viewed as providing bondholders with strong credits, some of the home purchasers within the Districts, especially those during 2004 to 2007, may face challenges in making their mortgage and tax payments on a timely basis, due to their initial high loan to value ratios, creative mortgage loan structures, and potential negative equity levels.

Events in the United States and world-wide capital markets could adversely affect the availability of mortgage loans to homeowners, including potential buyers of homes within the Districts. Any such unavailability could hinder the ability of the current homeowners to resell their homes, and adversely affect the market prices available to current homeowners.

Natural Disasters. The value of the parcels in the Districts in the future can be adversely affected by a variety of natural occurrences, particularly those that may affect infrastructure and other public improvements and private improvements on the parcels in the Districts and the continued habitability and enjoyment of such private improvements. For example, the areas in and surrounding the Districts, like those in much of the State, may be subject to earthquakes or other unpredictable seismic activity, however, the Districts are not located in a seismic special studies zone.

Other natural disasters could include, without limitation, landslides, floods, droughts or tornadoes. One or more natural disasters could occur and could result in damage to improvements of varying seriousness. The damage may entail significant repair or replacement costs and that repair or replacement may never occur either because of the cost, or because repair or replacement will not facilitate habitability or other use, or because other considerations preclude such repair or replacement. Under any of these circumstances there could be significant delinquencies in the payment of Special Taxes, and the value of the parcels may well depreciate.

Hazardous Substances. One of the most serious risks in terms of the potential reduction in the property values is a claim with regard to a hazardous substance. In general, the owners and operators of property may be required by law to remedy conditions of the parcel relating to releases or threatened releases of hazardous substances. The federal Comprehensive Environmental Response, Compensation and Liability Act of 1980, sometimes referred to as "CERCLA" or the "Superfund Act," is the most well-known and widely applicable of these laws, but California laws with regard to hazardous substances are also stringent and similar. Under many of these laws, the owner or operator is obligated to remedy a hazardous substance condition of property whether or not the owner or operator has anything to do with creating or handling the hazardous substance. The effect, therefore, should any of the Taxable Property in the Districts be affected by a hazardous substance, is to reduce the marketability and value of the parcel by the costs of remedying the condition, because the purchaser, upon becoming owner, will become obligated to remedy the condition just as is the seller.

Although the City is not aware that the owners or operators of any of the Taxable Property in the Districts have such a current liability, it is possible that such liabilities do currently exist. Further, it is possible that liabilities may arise in the future resulting from

the existence, currently, on the parcel of a substance presently classified as hazardous but that has not been released or the release of which is not presently threatened, or may arise in the future resulting from the existence, currently on the parcel of a substance not presently classified as hazardous but that may in the future be so classified. Further, such liabilities may arise not simply from the existence of a hazardous substance but from the method of handling it. All of these possibilities could significantly affect the property values that would otherwise be realized upon a delinquency.

No information is available as to the existence of any hazardous substances within the Districts.

Other Factors. Other factors that could adversely affect property values in the Districts include, among others, relocation of employers out of the area, shortages of water, electricity, natural gas or other utilities, and destruction of property caused by man-made disasters.

Assessed Valuations

The estimated valuation of certain of the taxable property in the Districts set forth in this Official Statement are based on the County Assessor's values. The Assessed Valuation, derived from the County Assessor's Fiscal Year 2016-17 property tax roll, is not necessarily an indication of what a willing buyer might pay for a property. The assessed value is not necessarily evidence of future value because future facts and circumstances may differ significantly from the present. No assurance can be given that any of the taxable property in the Districts could be sold for the Assessed Valuations if that property should become delinquent and subject to foreclosure proceedings.

Appraised Values

The Appraisal summarized in APPENDIX H estimates the market value of certain taxable property within the Districts. This market value is merely the present opinion of the Appraiser, and is subject to the assumptions and limiting conditions stated in the Appraisal. The City has not sought the present opinion of any other appraiser of the value of the appraised parcels. A different present opinion of value might be rendered by a different appraiser.

The opinion of value relates to sale by a willing seller to a willing buyer as of the date of valuation, each having similar information and neither being forced by other circumstances to sell or to buy. Consequently, the opinion is of limited use in predicting the selling price at a foreclosure sale, because the sale is forced and the buyer may not have the benefit of full information.

In addition, the opinion set for in the appraisal as to market value is a present opinion. It is based upon present facts and circumstances. Differing facts and circumstances may lead to differing opinions of value. The appraised market value is not evidence of future value because future facts and circumstances may differ significantly from the present.

No assurance can be given that any of the appraised property in the Districts could be sold in a foreclosure for the estimated market value contained in the Appraisal. Such sale is the primary remedy available to Bondowners if that property should become delinquent in the payment of Special Taxes.

Enforcement of Special Taxes on Governmentally Owned Properties

General. The ability of the City to foreclose the lien of delinquent unpaid Special Tax installments may be limited with regard to properties in which the Federal Deposit Insurance Corporation (the “**FDIC**”), the Drug Enforcement Agency, the Internal Revenue Service, or other federal agency has or obtains an interest.

Federal courts have held that, based on the supremacy clause of the United States Constitution, in the absence of Congressional intent to the contrary, a state or local agency cannot foreclose to collect delinquent taxes or assessments if foreclosure would impair the federal government interest.

The supremacy clause of the United States Constitution reads as follows: “This Constitution, and the Laws of the United States which shall be made in Pursuance thereof; and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the contrary notwithstanding.”

This means that, unless Congress has otherwise provided, if a federal governmental entity owns a parcel that is subject to Special Taxes within the Districts, but does not pay taxes and assessments levied on the parcel (including Special Taxes), the applicable state and local governments cannot foreclose on the parcel to collect the delinquent taxes and assessments.

Moreover, unless Congress has otherwise provided, if the federal government has a mortgage interest in the parcel and the City wishes to foreclose on the parcel as a result of delinquent Special Taxes, the property cannot be sold at a foreclosure sale unless it can be sold for an amount sufficient to pay delinquent taxes and assessments on a parity with the Special Taxes and preserve the federal government’s mortgage interest. In *Rust v. Johnson* (9th Circuit; 1979) 597 F.2d 174, the United States Court of Appeal, Ninth Circuit held that the Federal National Mortgage Association (“**FNMA**”) is a federal instrumentality for purposes of this doctrine, and not a private entity, and that, as a result, an exercise of state power over a mortgage interest held by FNMA constitutes an exercise of state power over property of the United States.

Neither the City nor the Authority has undertaken to determine whether any federal governmental entity currently has, or is likely to acquire, any interest (including a mortgage interest) in any of the parcels subject to the Special Taxes within the Districts. No assurance can be given as to the likelihood that the risks described above will materialize while the CFD Bonds are outstanding.

FDIC. If any financial institution making any loan secured by real property within the Districts is taken over by the FDIC, and prior thereto or thereafter the loan (or loans) goes into default, resulting in ownership of the property by the FDIC, then the ability of the City to collect interest and penalties specified by State law and to foreclose the lien of delinquent unpaid Special Taxes may be limited.

The FDIC’s policy statement regarding the payment of state and local real property taxes (the “**Policy Statement**”) provides that property owned by the FDIC is subject to state and local real property taxes only if those taxes are assessed according to the property’s value, and that the FDIC is immune from real property taxes assessed on any basis other than property value.

According to the Policy Statement, the FDIC will pay its property tax obligations when they become due and payable and will pay claims for delinquent property taxes as promptly as is consistent with sound business practice and the orderly administration of the institution's affairs, unless abandonment of the FDIC's interest in the property is appropriate. The FDIC will pay claims for interest on delinquent property taxes owed at the rate provided under state law, to the extent the interest payment obligation is secured by a valid lien. The FDIC will not pay any amounts in the nature of fines or penalties and will not pay nor recognize liens for such amounts. If any property taxes (including interest) on FDIC-owned property are secured by a valid lien (in effect before the property became owned by the FDIC), the FDIC will pay those claims. The Policy Statement further provides that no property of the FDIC is subject to levy, attachment, garnishment, foreclosure or sale without the FDIC's consent. In addition, the FDIC will not permit a lien or security interest held by the FDIC to be eliminated by foreclosure without the FDIC's consent.

The Policy Statement states that the FDIC generally will not pay non-ad valorem taxes, including special taxes and assessments, on property in which it has a fee interest unless the amount of tax is fixed at the time that the FDIC acquires its fee interest in the property, nor will it recognize the validity of any lien to the extent it purports to secure the payment of any such amounts. Special taxes imposed under the Act and a special tax formula, which determines the special tax due each year, are specifically identified in the Policy Statement as being imposed each year and therefore covered by the FDIC's federal immunity. The Ninth Circuit issued a ruling on August 28, 2001, in which it determined that the FDIC, as a federal agency, is exempt from Mello-Roos special taxes.

The Authority and the City are unable to predict what effect the application of the Policy Statement would have in the event of a delinquency in the payment of Special Taxes on a parcel within the Districts, in which the FDIC has or obtains an interest, although prohibiting the lien of the Special Taxes to be foreclosed out at a judicial foreclosure sale could reduce or eliminate the number of persons willing to purchase a parcel at a foreclosure sale. Such an outcome could cause a draw on either the Reserve Accounts established for the CFD Bonds and perhaps, ultimately, if enough property were to become owned by the FDIC, a default in payment on the CFD Bonds.

Exemptions Under Special Tax Formula and the Mello-Roos Act. Certain properties are exempt from the Special Tax in accordance with the Special Tax Formula and the Act, which provides that properties or entities of the state, federal or local government are exempt from the Special Tax; provided, however, that property within the Districts acquired by a public entity through a negotiated transaction or by gift or devise, which is not otherwise exempt from the Special Tax, will continue to be subject to the Special Tax.

In addition, although the Act provides that if property subject to the Special Tax is acquired by a public entity through eminent domain proceedings, the obligation to pay the Special Tax with respect to that property is to be treated as if it were a special assessment, the constitutionality and operation of these provisions of the Act have not been tested, meaning that such property could become exempt from the Special Tax. The Act further provides that no other properties or entities are exempt from the Special Tax unless the properties or entities are expressly exempted in a resolution of consideration to levy a new special tax or to alter the rate or method of apportionment of an existing special tax.

Bankruptcy Delays

The payment of the Special Taxes, and the ability of the City to foreclose the lien of a delinquent unpaid Special Tax, may be limited by bankruptcy, insolvency or other laws generally affecting creditors' rights or by State laws relating to judicial foreclosure.

The various legal opinions to be delivered concurrently with the delivery of the Bonds (including Bond Counsel's approving legal opinion) will be qualified as to the enforceability of the various legal instruments by bankruptcy, insolvency, reorganization, moratorium and other similar laws affecting creditors' rights, by the application of equitable principles and by the exercise of judicial discretion in appropriate cases.

Although bankruptcy proceedings would not cause the Special Taxes to become extinguished, bankruptcy of a property owner or any other person claiming an interest in the property could result in a delay in superior court foreclosure proceedings and could result in the possibility of Special Tax installments not being paid in part or in full. Such a delay would increase the likelihood of a delay or default in payment of the principal of and interest on the CFD Bonds, as applicable.

Disclosure to Future Purchasers

The City has recorded, in the Office of the County Recorder, a notice of the Special Tax lien with respect to the Districts. While title companies normally refer to such notices in title reports, there can be no guarantee that such reference will be made or, if made, that a prospective purchaser or lender will consider the obligations represented by the Special Taxes in the purchase of a parcel of land or a home in the Districts, or the lending of money secured by property in the Districts.

No Acceleration; Right to Pursue Remedies

Neither the Bonds nor the CFD Bonds contain a provision allowing for acceleration if a payment default or other default occurs under the Indenture or the Fiscal Agent Agreements. See "APPENDIX A – Summary of Certain Provisions of Principal Legal Documents."

So long as the Bonds are in book-entry form, DTC will be the sole Bond Owner and will be entitled to exercise all rights and remedies of Bond Owners under the Bonds and the Indenture.

Loss of Tax Exemption

As discussed under the caption "LEGAL MATTERS – Tax Matters," interest on the Bonds might become includable in gross income for purposes of federal income taxation retroactive to the date the Bonds were issued as a result of future acts or omissions of the Authority in violation of its covenants in the Indenture, or of the City in violation of its covenants in the Fiscal Agent Agreements.

The Indenture does not contain a special redemption feature triggered by the occurrence of an event of taxability. As a result, if interest on the Bonds were to be includable in gross income for purposes of federal income taxation, the Bonds would continue to remain outstanding until maturity unless earlier redeemed pursuant to mandatory redemption. See "THE BONDS – Redemption."

In addition, Congress has considered in the past, is currently considering and may consider in the future, legislative proposals, including some that carry retroactive effective dates, that, if enacted, would alter or eliminate the exclusion from gross income for federal income tax purposes of interest on municipal bonds, such as the Bonds. Prospective purchasers of the Bonds should consult their own tax advisors regarding any pending or proposed federal tax legislation.

Voter Initiatives

Under the California Constitution, the power of initiative is reserved to the voters for the purpose of enacting statutes and constitutional amendments. Since 1978, the voters have exercised this power through the adoption of Proposition 13 and similar measures, including Proposition 218, which was approved in the general election held on November 5, 1996, and Proposition 26, which was approved on November 2, 2010.

Any such initiative may affect the collection of fees, taxes and other types of revenue by local agencies such as the City. Subject to overriding federal constitutional principles, such collection may be materially and adversely affected by voter-approved initiatives, possibly to the extent of creating cash-flow problems in the payment of outstanding obligations such as the CFD Bonds.

Proposition 218—Voter Approval for Local Government Taxes—Limitation on Fees, Assessments, and Charges—Initiative Constitutional Amendment, added Articles XIII C and XIII D to the California Constitution, imposing certain vote requirements and other limitations on the imposition of new or increased taxes, assessments and property-related fees and charges.

On November 2, 2010, California voters approved Proposition 26, entitled the “Supermajority Vote to Pass New Taxes and Fees Act”. Section 1 of Proposition 26 declares that Proposition 26 is intended to limit the ability of the State Legislature and local government to circumvent existing restrictions on increasing taxes by defining the new or expanded taxes as “fees.” Proposition 26 amended Articles XIII A and XIII C of the State Constitution. The amendments to Article XIII A limit the ability of the State Legislature to impose higher taxes (as defined in Proposition 26) without a two-thirds vote of the Legislature. Article XIII C requires that all new local taxes be submitted to the electorate before they become effective. Taxes for general governmental purposes require a majority vote and taxes for specific purposes (“special taxes”) require a two-thirds vote.

The Special Taxes and the CFD Bonds were authorized by not less than a two-thirds vote of the landowners within the CFD who constituted the qualified electors at the time of such voted authorization. The City believes, therefore, that issuance of the CFD Bonds does not require the conduct of further proceedings under the Act, Proposition 218 or Proposition 26.

Like their antecedents, Proposition 218 and Proposition 26 are likely to undergo both judicial and legislative scrutiny before the impact on the Districts can be determined. Certain provisions of Proposition 218 and Proposition 26 may be examined by the courts for their constitutionality under both State and federal constitutional law, the outcome of which cannot be predicted.

Secondary Market for Bonds

There can be no guarantee that there will be a secondary market for the Bonds or, if a secondary market exists, that any Bonds can be sold for any particular price. Prices of bond issues for which a market is being made will depend upon then-prevailing circumstances. Such prices could be substantially different from the original purchase price.

No assurance can be given that the market price for the Bonds will not be affected by the introduction or enactment of any future legislation (including without limitation amendments to the Internal Revenue Code), or changes in interpretation of the Internal Revenue Code, or any action of the Internal Revenue Service, including but not limited to the publication of proposed or final regulations, the issuance of rulings, the selection of the Bonds for audit examination, or the course or result of any Internal Revenue Service audit or examination of the Bonds or obligations that present similar tax issues as the Bonds.

THE AUTHORITY

The Authority is a joint exercise of powers authority duly organized and operating pursuant to Article 1 (commencing with Section 6500) of Chapter 5, Division 7, Title 1 of the California Government Code, and pursuant to a Joint Exercise of Powers Agreement entered into in 2005 by and between the City and the Roseville Parking Authority, and is qualified to assist in financing projects and certain public improvements and to issue the Bonds under the Bond Law. The Authority has no taxing power. The Authority and the City are each separate and distinct legal entities, and the debts and obligations of one such entity are not debts or obligations of the other entity.

The Authority was established for the purpose of financing the acquisition, construction, improvement and equipping of public capital improvements. The governing board of the Authority is comprised of the same individuals as the City Council of the City.

LEGAL MATTERS

Tax Matters

In the opinion of Jones Hall, A Professional Law Corporation, San Francisco, California, Bond Counsel, subject, however to the qualifications set forth below, under existing law, the interest on the Bonds is excluded from gross income for federal income tax purposes and such interest is not an item of tax preference for purposes of the federal alternative minimum tax imposed on individuals and corporations, provided, however, that, for the purpose of computing the alternative minimum tax imposed on corporations (as defined for federal income tax purposes), such interest is taken into account in determining certain income and earnings.

The opinions set forth in the preceding paragraph are subject to the condition that the Authority and the City comply with all requirements of the Internal Revenue Code of 1986, as amended (the "**Tax Code**"), that must be satisfied subsequent to the issuance of the Bonds. The Authority and the City have covenanted to comply with each such requirement. Failure to comply with certain of such requirements may cause the inclusion of such interest in gross income for federal income tax purposes to be retroactive to the date of issuance of the Bonds.

If the initial offering price to the public (excluding bond houses and brokers) at which a Bond is sold is less than the amount payable at maturity thereof, then such difference

constitutes “original issue discount” for purposes of federal income taxes and State of California personal income taxes. If the initial offering price to the public (excluding bond houses and brokers) at which a Bond is sold is greater than the amount payable at maturity thereof, then such difference constitutes “original issue premium” for purposes of federal income taxes and State of California personal income taxes. *De minimis* original issue discount and original issue premium is disregarded.

Under the Tax Code, original issue discount is treated as interest excluded from federal gross income and exempt from State of California personal income taxes to the extent properly allocable to each owner thereof subject to the limitations described in the first paragraph of this section. The original issue discount accrues over the term to maturity of the Bond on the basis of a constant interest rate compounded on each interest or principal payment date (with straight-line interpolations between compounding dates). The amount of original issue discount accruing during each period is added to the adjusted basis of such Bonds to determine taxable gain upon disposition (including sale, redemption, or payment on maturity) of such Bond. The Tax Code contains certain provisions relating to the accrual of original issue discount in the case of purchasers of the Bonds who purchase the Bonds after the initial offering of a substantial amount of such maturity. Owners of such Bonds should consult their own tax advisors with respect to the tax consequences of ownership of Bonds with original issue discount, including the treatment of purchasers who do not purchase in the original offering, the allowance of a deduction for any loss on a sale or other disposition, and the treatment of accrued original issue discount on such Bonds under federal individual and corporate alternative minimum taxes.

Under the Tax Code, original issue premium is amortized on an annual basis over the term of the Bond (said term being the shorter of the Bond’s maturity date or its call date). The amount of original issue premium amortized each year reduces the adjusted basis of the owner of the Bond for purposes of determining taxable gain or loss upon disposition. The amount of original issue premium on a Bond is amortized each year over the term to maturity of the Bond on the basis of a constant interest rate compounded on each interest or principal payment date (with straight-line interpolations between compounding dates). Amortized Bond premium is not deductible for federal income tax purposes. Owners of premium Bonds, including purchasers who do not purchase in the original offering, should consult their own tax advisors with respect to State of California personal income tax and federal income tax consequences of owning such Bonds.

In the further opinion of Bond Counsel, interest on the Bonds is exempt from California personal income taxes.

Owners of the Bonds should also be aware that the ownership or disposition of, or the accrual or receipt of interest on, the Bonds may have federal or state tax consequences other than as described above. Bond Counsel expresses no opinion regarding any federal or state tax consequences arising with respect to the Bonds other than as expressly described above.

Absence of Litigation

The Authority and the City will certify at the time the Bonds are issued that no litigation is pending or threatened concerning the validity of the Bonds or the CFD Bonds and that no action, suit or proceeding is known by the Authority or the City to be pending that would restrain or enjoin the delivery of the Bonds or the CFD Bonds, or contest or affect the validity of the

Bonds or the CFD Bonds, or any proceedings of the Authority or the City taken with respect to the Bonds or the CFD Bonds.

Legal Opinion

All proceedings in connection with the issuance of the Bonds are subject to the approval as to their legality of Jones Hall, A Professional Law Corporation, San Francisco, California, Bond Counsel. The form of unqualified opinion of Bond Counsel approving the validity of the Bonds is attached as APPENDIX E.

NO RATINGS

The City has not applied to a rating agency for the assignment of a rating to the Bonds and does not contemplate applying for a rating.

UNDERWRITING

Piper Jaffray & Co. (the “**Underwriter**”), has agreed to purchase the Bonds at a purchase price of \$_____ (being the principal amount of the Bonds (\$_____) [plus/less] net original issue [premium/discount] of \$_____ and less an underwriter’s discount of \$_____).

The Underwriter may change the initial public offering prices of the Bonds from time to time. The agreement under which the Underwriter has agreed to purchase the Bonds provides that the Underwriter will purchase all the Bonds if any are purchased, and that the obligation to make such purchase is subject to certain terms and conditions set forth therein, including, among others, the approval of certain legal matters by counsel.

CONTINUING DISCLOSURE

The City, on behalf of itself and the Authority, will covenant for the benefit of owners of the Bonds to provide certain financial information and operating data relating to the Districts (the “**City Annual Report**”) by not later than nine months following the end of the City’s Fiscal Year (currently March 31 based on the City’s Fiscal Year ending June 30), commencing March 31, 2018, with the report for the Fiscal Year ending June 30, 2017, and to provide notices of the occurrence of certain listed events. The specific nature of the information to be contained in the City Annual Report and in notices of listed events for the City will be set forth in a continuing disclosure certificate, the form of which is attached as APPENDIX F-1.

Adventist Health has also covenanted for the benefit of owners of the Bonds to provide certain financial information and operating data relating to the property it owns, or its affiliates or subsidiaries, or entities it has an interest in or controls owns, in the Districts by not later than March 31 of each year (reflecting reported information as of December 31 of the prior year) beginning with the report due March 31, 2018 (the “**Owner Annual Report**”) and to provide notices of the occurrence of certain enumerated events. The obligation of Adventist Health to provide such information is in effect only so long as the Adventist Health and its affiliates, or their successors, are collectively responsible for a certain percentage of the special taxes in each District, as described in the Owner Annual Report. The specific nature of the information

to be contained in the Owner Annual Report and in notices of listed events for Adventist Health will be set forth in a continuing disclosure certificate, the form of which is attached as APPENDIX F-2.

The covenants of the City contained in its continuing disclosure certificate and of Adventist Health contained in its continuing disclosure certificate have been made in order to assist the Underwriter in complying with Securities Exchange Commission Rule 15c2-12(b)(5), as amended (the “**Rule**”).

A review of the City’s compliance with prior continuing disclosure undertakings in the last five years indicates that:

(1) The annual reports required for Fiscal Years 2012, 2013 and 2015 for certain of the City’s then-outstanding obligations were not filed with all required information, until up to 552 days after the dates required for such filings.

(2) The Audited Financial Statements of the City for Fiscal Years 2012 and 2013 for certain of the City’s then-outstanding obligations were filed up to 567 days after the dates required for such filings.

(3) The City did not in a timely manner file all significant event notices, including notices of changes in the ratings of certain then-outstanding obligations resulting from changes in ratings to the bond insurers who insured such obligations or the underlying ratings for such obligations.

Supplemental annual reports, notices of rating changes and other filings to correct all of the known failures by the City to comply with its continuing disclosure undertakings have been made. The City has engaged contract support for the preparation and filing of its continuing disclosure reports, including as to the Districts, in order to ensure compliance with future continuing disclosure obligations.

A review of the Adventist Health’s compliance with prior continuing disclosure undertakings in the last five years indicates that: _____.

MISCELLANEOUS

Verification of Mathematical Computations

Grant Thornton, LLP, Minneapolis, Minnesota, independent accountants, upon delivery of the Bonds, will deliver one or more reports on the mathematical accuracy of certain computations contained in schedules provided to them which were prepared by the Authority and the City relating to the sufficiency of moneys and securities deposited into the Escrow Fund to pay, when due, the redemption price of the Prior CFD Bonds.

Professionals Involved in the Offering

All proceedings in connection with the issuance of the Bonds are subject to the approval of Jones Hall, A Professional Law Corporation, San Francisco, California, Bond Counsel. Jones Hall, A Professional Law Corporation, is also acting as Disclosure Counsel to the Authority. The

Bank of New York Mellon Trust Company, N.A., San Francisco, California, will act as the Trustee. Nossaman, LLP, Irvine, California, is acting as counsel to the Underwriter.

The Authority has retained FirstSouthwest, a Division of Hilltop Securities Inc., Encino, California, as municipal advisor (the “**Municipal Advisor**”) in connection with the planning, structuring and issuance of the Bonds. The Municipal Advisor is not obligated to undertake, and has not undertaken to make, an independent verification or assume responsibility for the accuracy, completeness, or fairness of the information contained in this Official Statement.

The compensation of Bond Counsel, Disclosure Counsel, the Trustee, the Municipal Advisor and Underwriter’s counsel is contingent upon issuance of the Bonds.

Execution

The execution and delivery of this Official Statement have been duly authorized by the Authority.

ROSEVILLE FINANCE AUTHORITY

By: _____
Chief Financial Officer/Treasurer

APPENDIX A

SUMMARY OF CERTAIN PROVISIONS OF PRINCIPAL LEGAL DOCUMENTS

APPENDIX B

THE CITY OF ROSEVILLE AND PLACER COUNTY

The Districts are located in the City of Roseville (the “**City**”), which is located in southwestern Placer County (the “**County**”), California (the “**State**”). Certain financial and economic data for the City, County and State are presented in this appendix for information purposes only. The Bonds are not a debt or obligation of the City, County or State, but are a limited obligation of the Authority secured solely by the Revenues and other amounts pledged under the Indenture, all as described in more detail in this Official Statement.

General

The City is located in the County, which is located in the Sacramento Valley near the foothills of the Sierra Nevada mountain range, about 16 miles northeast of Sacramento and 110 miles east of San Francisco. The City presently occupies 42.26 square miles in the southwestern part of the County and is the largest city in the County as well as the residential and industrial center of the County. It is bordered by Sacramento County to the south, the City of Rocklin to the north and un-incorporated Placer County to the east and west. The estimated population of the City as of January 2017 was approximately 135,868.

The City has warm summers typical of central California, with an average July temperature of 77 degrees. Winter temperatures are moderate; the average January temperature is 46 degrees. The temperature drops below freezing an average of eight days per year. Rainfall averages 20 inches annually and falls mostly during the winter.

The City is predominately comprised of residential housing, small and large businesses, as well as numerous retail centers, the latter of which play a vital role in the economy of the City and contribute significantly to City and County sales tax receipts. The City has the thirteenth highest retail sales of all cities in the State, and the City is considered a regional shopping destination. The Westfield Galleria at Roseville is the main shopping center in the City and the second largest shopping mall in Northern California. Across from the Westfield Galleria lies the “Fountains at Roseville,” a 330,000 square foot retail center, containing additional stores and several recreation centers. Plans call for future construction of hotel, additional retail, and office buildings in connection with the Fountains at Roseville project. In addition to the Westfield Galleria and Fountains at Roseville, the City has many shopping plazas surrounding the Westfield Galleria and the Douglas Boulevard financial corridor. The City is also home to one of the largest auto malls in the United States and a popular water park, Roseville Golf and SunSplash.

Municipal Government

The City was incorporated on April 10, 1909 and is a charter city. The City operates under the council-manager form of government, with a five-member City Council elected at large for staggered four-year terms. At each election, the council member receiving the most votes is appointed mayor pro-tempore for two years and becomes mayor for the final two years.

City services include, among others, police and fire protection, library services, street maintenance, and parks and recreation. The City also owns two golf courses and provides its own electricity, water, sewer and refuse services to its citizens.

Population

The following table lists population estimates for the City, County and State for the last five calendar years, as of January 1, 2017.

POPULATION ESTIMATES City, County and State 2013 through 2017

<u>Year</u> <u>(January 1)</u>	<u>City of</u> <u>Roseville</u>	<u>Placer</u> <u>County</u>	<u>State of</u> <u>California</u>

Effective Buying Income

Effective buying income ("EBI") is designated as personal income less personal tax and non-tax payments. Personal income is the aggregate of wages and salaries, other labor income (such as employer contributions to private pension funds), proprietor's income, rental income (which includes imputed rental income of owner-occupants of non-farm dwellings), dividends paid by corporations, personal interest income from all sources, and transfer payments (such as pensions and welfare assistance). Deducted from this total are personal taxes (federal, state and local), non-tax payments (such as fines, fees, penalties), and personal contributions for social insurance. Effective buying income is a bulk measure of market potential. It indicates the general ability to buy and is essential in comparing, selecting and grouping markets on that basis. The following table demonstrates the growth in annual estimated EBI for the County, the State and the United States.

The table on the following page summarizes the total effective buying income for the City, County, State and the United States for the period 2012 through 2016. Effective buying income data is not yet available for calendar year 2017.

EFFECTIVE BUYING INCOME (EBI) City, County, State and United States As of January 1, 2012 through 2016

Year	Area	Total Effective Buying Income (000's Omitted)	Median Household Effective Buying Income
2012	City of Roseville	\$3,308,060	\$55,367

Employment and Industry

The unemployment rate in the Sacramento--Arden-Arcade--Roseville Metropolitan Statistical Area ("MSA"), which is comprised of El Dorado, Placer, Sacramento and Yolo Counties, was 5.0 percent in March 2017, down from a revised 5.1 percent in February 2017, and below the year-ago estimate of 5.6 percent. This compares with an unadjusted unemployment rate of 5.1 percent for California and 4.6 percent for the nation during the same period. The unemployment rate was 4.8 percent in El Dorado County, 4.2 percent in Placer County, 5.1 percent in Sacramento County, and 6.0 percent in Yolo County.

The following table summarizes the civilian labor force, employment and unemployment, as well as employment by industry, in the Sacramento--Arden-Arcade--Roseville MSA for the years 2012 through 2016.

Transportation

The County's transportation network is an integral part of its development. Centrally located in the State, the area is the hub of several major highways. Interstate 80 runs through the County, connecting San Francisco to New York. Highway 65 runs north from I-80 to Lincoln and Marysville. Interstate 5, which is west of the County, runs north to Seattle and south to Los Angeles. In the City, the major highways in the area are Interstate 80 and Interstate 5, and State Highways 65, 50, and 99.

Union Pacific Railroad bought Southern Pacific in 1996 and the J.R. Davis Yard, located in Roseville, is the largest rail facility on the West Coast. Union Pacific owns and operates track in 23 states, primarily west of the Mississippi River. Amtrak provides passenger service daily to San Francisco and San Jose, and the California Zephyr connects the County to the Midwest and Chicago.

Greyhound operates a station in the City, providing interstate destination services. Greyhound also operates throughout the County, with bus depots or regularly scheduled stops in most of the communities along major highways and roads.

Sacramento International Airport serves the Roseville area. Served by ten major carriers and several commuter airlines, as well as air-freight carriers, the airport handles passenger flights to over 140 cities with more than 130 scheduled departures per day and 4.3 million passengers annually. Nearby Auburn Municipal Airport serves charter and private aircraft for coastal, state and transcontinental flights. Executive air service is available as well. Auburn Municipal has an elevation of 1,520 feet and an east/west runway 3,100 feet in length.

Several trucking companies serve the County, ranging from interstate lines to local haulers, and transporting a wide variety of goods. United Parcel Service, with a distribution center in Rocklin, offers freight transportation services as well.

APPENDIX E
FORM OF BOND COUNSEL OPINION

_____, 2017

Roseville Finance Authority
311 Vernon Street
Roseville, California 95678

OPINION: \$_____ Roseville Finance Authority
Special Tax Revenue Refunding Bonds, Series 2017B

Members of the Authority:

We have acted as bond counsel to the Roseville Finance Authority (the "Authority") in connection with the delivery by the Authority of the above-referenced bonds (the "Bonds"), issued under the provisions of Article 4 of Chapter 5 of Division 7 of Title 1 of the California Government Code (the "Bond Law"), and pursuant to an Indenture of Trust dated as of _____ 1, 2017 (the "Indenture"), between the Authority and The Bank of New York Mellon Trust Company, N.A., as trustee. We have examined the Bond Law, an executed copy of the Indenture and such certified proceedings and other papers as we deem necessary to render this opinion.

As to questions of fact material to our opinion, we have relied upon representations of the Authority contained in the Indenture and in the certified proceedings and other certifications of public officials furnished to us, without undertaking to verify the same by independent investigation.

Based upon our examination we are of the opinion, under existing law, that:

1. The Authority is a public agency duly organized and existing under the laws of the State of California, with power to enter into the Indenture, to perform the agreements on its part contained therein and to issue the Bonds.

2. The Bonds have been duly authorized, executed and delivered by the Authority and are legal, valid and binding obligations of the Authority, payable solely from the sources provided therefor in the Indenture.

3. The Indenture has been duly approved by the Authority and constitutes a legal, valid and binding obligation of the Authority enforceable against the Authority in accordance with its terms.

4. Pursuant to the Bond Law, the Indenture establishes a valid lien on and pledge of the Revenues (as such term is defined in the Indenture) for the security of the Bonds.

5. Interest on the Bonds is excluded from gross income for federal income tax purposes and is not an item of tax preference for purposes of the federal alternative minimum tax imposed on individuals and corporations; it should be noted, however, that for the purpose of computing the alternative minimum tax imposed on corporations (as defined for federal income tax purposes), such interest is taken into account in determining certain income and earnings. The opinions set forth in the preceding sentence are subject to the condition that the Authority and the City of Roseville (the "City") comply with all requirements of the Internal Revenue Code of 1986, as amended, that must be satisfied subsequent to the issuance of the Bonds in order that interest thereon be, or continue to be, excluded from gross income for federal income tax purposes. The Authority and the City have covenanted to comply with each such requirement. Failure to comply with certain of such requirements may cause the inclusion of interest on the Bonds in gross income for federal income tax purposes to be retroactive to the date of issuance of the Bonds. We express no opinion regarding other federal tax consequences arising with respect to the ownership, sale or disposition of the Bonds, or the amount, accrual or receipt of interest on the Bonds.

6. Interest on the Bonds is exempt from personal income taxation imposed by the State of California.

The rights of the owners of the Bonds and the enforceability of the Bonds and the Indenture are limited by bankruptcy, insolvency, reorganization, moratorium and other similar laws affecting creditors' rights generally, and by equitable principles, whether considered at law or in equity.

This opinion is given as of the date hereof, and we assume no obligation to revise or supplement this opinion to reflect any facts or circumstances that may hereafter come to our attention, or any changes in law that may hereafter occur. Our engagement with respect to this matter has terminated as of the date hereof.

Respectfully submitted,

A Professional Law Corporation

APPENDIX F-1

FORM OF CONTINUING DISCLOSURE CERTIFICATE (ISSUER)

\$ _____
ROSEVILLE FINANCE AUTHORITY
SPECIAL TAX REVENUE REFUNDING BONDS
SERIES 2017B

This Continuing Disclosure Certificate (this “Disclosure Certificate”) is executed and delivered by the City of Roseville (the “City”), for and on behalf of itself and the Roseville Finance Authority (the “Authority”), in connection with the issuance by the Authority of the Special Tax Revenue Refunding Bonds captioned above (the “Bonds”). The Bonds are generally secured by revenues derived from debt service payments made on two series of special tax refunding bonds issued by the City concurrently with the issuance of the Bonds: (i) City of Roseville Stone Point Community Facilities District No. 1 Special Tax Refunding Bonds, Series 2017, and (ii) City of Roseville Stone Point Community Facilities District No. 5 (Public Facilities) Special Tax Refunding Bonds, Series 2017 (together, the “CFD Bonds”). The CFD Bonds are generally secured by special taxes levied against taxable property in each respective Community Facilities District. The Bonds are being issued under an Indenture of Trust, dated as of _____ 1, 2017 (the “Indenture”), by and between the Authority and The Bank of New York Mellon Trust Company, N.A., as trustee (the “Trustee”).

The City, on behalf of itself and the Authority, hereby covenants and agrees as follows:

Section 1. Purpose of the Disclosure Certificate. This Disclosure Certificate is being executed and delivered by the City, for and on behalf of itself and the Authority, for the benefit of the holders and beneficial owners of the Bonds and in order to assist the Participating Underwriter in complying with the Rule.

Section 2. Definitions. In addition to the definitions set forth above and in the Indenture, which apply to any capitalized term used in this Disclosure Certificate unless otherwise defined in this Section 2, the following capitalized terms shall have the following meanings:

“*Annual Report*” means any Annual Report provided by the City pursuant to, and as described in, Sections 3 and 4 of this Disclosure Certificate.

“*Annual Report Date*” means the date that is 9 months after the end of the City’s Fiscal Year (currently March 31 based on the City’s Fiscal Year end of June 30).

“*Dissemination Agent*” means Willdan Financial Services, or any successor Dissemination Agent designated in writing by the City and which has filed with the City a written acceptance of such designation.

“*Listed Events*” means any of the events listed in Section 5(a) of this Disclosure Certificate.

“*MSRB*” means the Municipal Securities Rulemaking Board, which has been designated by the Securities and Exchange Commission as the sole repository of disclosure information for

purposes of the Rule, or any other repository of disclosure information that may be designated by the Securities and Exchange Commission as such for purposes of the Rule in the future.

“*Official Statement*” means the final official statement executed by the Authority in connection with the issuance of the Bonds.

“*Participating Underwriter*” means Piper Jaffray & Co., the original underwriter of the Bonds required to comply with the Rule in connection with the offering of the Bonds.

“*Rule*” means Rule 15c2-12(b)(5) adopted by the Securities and Exchange Commission under the Securities Exchange Act of 1934, as it may be amended from time to time.

Section 3. Provision of Annual Reports.

(a) The City shall, or shall cause the Dissemination Agent to, not later than the Annual Report Date, commencing March 31, 2018, with the report for the 2016-17 Fiscal Year, provide to the MSRB, in an electronic format as prescribed by the MSRB, an Annual Report that is consistent with the requirements of Section 4 of this Disclosure Certificate. Not later than 15 Business Days prior to the Annual Report Date, the City shall provide the Annual Report to the Dissemination Agent (if other than the City). If by 15 Business Days prior to the Annual Report Date the Dissemination Agent (if other than the City) has not received a copy of the Annual Report, the Dissemination Agent shall contact the City to determine if the City is in compliance with the previous sentence. The Annual Report may be submitted as a single document or as separate documents comprising a package, and may include by reference other information as provided in Section 4 of this Disclosure Certificate; provided that the audited financial statements of the City and the Authority may be submitted separately from the balance of the Annual Report, and later than the Annual Report Date, if not available by that date. If the City’s Fiscal Year changes, it shall give notice of such change in the same manner as for a Listed Event under Section 5(c). The City shall provide a written certification with each Annual Report furnished to the Dissemination Agent to the effect that such Annual Report constitutes the Annual Report required to be furnished by the City hereunder.

(b) If the City does not provide (or cause the Dissemination Agent to provide) an Annual Report by the Annual Report Date, the City shall provide in a timely manner (or cause the Dissemination Agent to provide in a timely manner) to the MSRB, in an electronic format as prescribed by the MSRB, a notice in substantially the form attached as Exhibit A.

(c) With respect to each Annual Report, the Dissemination Agent shall:

(i) determine each year prior to the Annual Report Date the then-applicable rules and electronic format prescribed by the MSRB for the filing of annual continuing disclosure reports; and

(ii) if the Dissemination Agent is other than the City, file a report with the City certifying that the Annual Report has been provided pursuant to this Disclosure Certificate, and stating the date it was provided.

Section 4. Content of Annual Reports. The City’s Annual Report shall contain or incorporate by reference the following:

(a) The audited financial statements of the City and the Authority, together with the following statement:

THE CITY'S AND THE AUTHORITY'S ANNUAL FINANCIAL STATEMENTS ARE PROVIDED SOLELY TO COMPLY WITH THE SECURITIES EXCHANGE COMMISSION STAFF'S INTERPRETATION OF RULE 15C2-12. NO FUNDS OR ASSETS OF THE CITY OR THE AUTHORITY OTHER THAN THOSE PLEDGED UNDER THE INDENTURE ARE REQUIRED TO BE USED TO PAY DEBT SERVICE ON THE BONDS, AND NEITHER THE CITY NOR THE AUTHORITY ARE OBLIGATED TO ADVANCE AVAILABLE FUNDS FROM ANY SOURCE TO COVER ANY DELINQUENCIES. INVESTORS SHOULD NOT RELY ON THE FINANCIAL CONDITION OF THE CITY OR THE AUTHORITY IN EVALUATING WHETHER TO BUY, HOLD OR SELL THE BONDS.

The audited financial statements shall be prepared in accordance with generally accepted accounting principles as promulgated to apply to governmental entities from time to time by the Governmental Accounting Standards Board. If such audited financial statements are not available by the time the Annual Report is required to be filed pursuant to Section 3(a), the Annual Report shall contain unaudited financial statements in a format similar to the financial statements contained in the final Official Statement, and the audited financial statements shall be filed in the same manner as the Annual Report when they become available.

(b) Additional Items relating to the Authority and the Districts:

1. Principal amount of Bonds outstanding as of September 30th preceding the filing of the Annual Report.

2. Balance in funds and accounts held by Authority or Trustee related to the Bonds as of September 30th preceding the filing of the Annual Report.

3. Balance in funds and accounts held by City or Fiscal Agent related to the CFD Bonds as of September 30th preceding the filing of the Annual Report.

4. The information contained in the following tables in the Official Statement: (i) "Top Ten Payers of Projected 2017-18 Special Tax Levy – The Districts Combined", (iii) "Summary Value-to-Lien Ratios by Range – Stone Point CFD No. 1," and (iv) "Summary Value-to-Lien Ratios by Range – Stone Point CFD No. 5," in each case, as of September 30th preceding the filing of the Annual Report but excluding any overlapping debt information.

5. The Special Tax levy, the delinquency rate, total amount of delinquencies, number of parcels delinquent in payment for the five most recent fiscal years for each District with outstanding CFD Bonds.

6. Notwithstanding the June 30th reporting date for the Annual Report, the following information shall be reported as of the last day of the month immediately preceding the date of the Annual Report rather than as of June 30th. Identity of each delinquent taxpayer responsible for 5% or more of the total Special Tax levied, and the following information with respect thereto: assessor parcel number, assessed value of applicable properties, amount of Special Tax levied, amount delinquent by parcel

number and status of foreclosure proceedings. If any foreclosure has been completed, summary of results of foreclosure sales or transfers.

7. For each District, additional debt authorized to be issued by the City that is payable from or secured by assessments or special taxes with respect to property within such District.

(c) In addition to any of the information expressly required to be provided under this Disclosure Certificate, the City shall provide such further material information, if any, as may be necessary to make the specifically required statements, in the light of the circumstances under which they are made, not misleading.

(d) Any or all of the items listed above may be included by specific reference to other documents, including official statements of debt issues of the City or related public entities, which are available to the public on the MSRB's Internet web site or filed with the Securities and Exchange Commission. The City shall clearly identify each such other document so included by reference.

Section 5. Reporting of Significant Events.

(a) The City shall give, or cause to be given, notice of the occurrence of any of the following Listed Events with respect to the Bonds:

- (1) Principal and interest payment delinquencies.
- (2) Non-payment related defaults, if material.
- (3) Unscheduled draws on debt service reserves reflecting financial difficulties.
- (4) Unscheduled draws on credit enhancements reflecting financial difficulties.
- (5) Substitution of credit or liquidity providers, or their failure to perform.
- (6) Adverse tax opinions, the issuance by the Internal Revenue Service of proposed or final determinations of taxability, Notices of Proposed Issue (IRS Form 5701-TEB) or other material notices or determinations with respect to the tax status of the security, or other material events affecting the tax status of the security.
- (7) Modifications to rights of security holders, if material.
- (8) Bond calls, if material, and tender offers.
- (9) Defeasances.
- (10) Release, substitution, or sale of property securing repayment of the securities, if material.
- (11) Rating changes.

- (12) Bankruptcy, insolvency, receivership or similar event of the City or other obligated person.
- (13) The consummation of a merger, consolidation, or acquisition involving the City or an obligated person, or the sale of all or substantially all of the assets of the City or an obligated person (other than in the ordinary course of business), the entry into a definitive agreement to undertake such an action, or the termination of a definitive agreement relating to any such actions, other than pursuant to its terms, if material.
- (14) Appointment of a successor or additional trustee or the change of name of a trustee, if material.

(b) Whenever the City obtains knowledge of the occurrence of a Listed Event, the City shall, or shall cause the Dissemination Agent (if not the City) to, file a notice of such occurrence with the MSRB, in an electronic format as prescribed by the MSRB, in a timely manner not in excess of 10 business days after the occurrence of the Listed Event. Notwithstanding the foregoing, notice of Listed Events described in subsections (a)(8) and (9) above need not be given under this subsection any earlier than the notice (if any) of the underlying event is given to holders of affected Bonds under the Indenture.

(c) The City acknowledges that the events described in subparagraphs (a)(2), (a)(7), (a)(8) (if the event is a bond call), (a)(10), (a)(13), and (a)(14) of this Section 5 contain the qualifier “if material.” The City shall cause a notice to be filed as set forth in paragraph (b) above with respect to any such event only to the extent that the City determines the event’s occurrence is material for purposes of U.S. federal securities law.

(d) For purposes of this Disclosure Certificate, any event described in paragraph (a)(12) above is considered to occur when any of the following occur: the appointment of a receiver, fiscal agent, or similar officer for the City in a proceeding under the United States Bankruptcy Code or in any other proceeding under state or federal law in which a court or governmental authority has assumed jurisdiction over substantially all of the assets or business of the City, or if such jurisdiction has been assumed by leaving the existing governing body and officials or officers in possession but subject to the supervision and orders of a court or governmental authority, or the entry of an order confirming a plan of reorganization, arrangement, or liquidation by a court or governmental authority having supervision or jurisdiction over substantially all of the assets or business of the City.

Section 6. Identifying Information for Filings with the MSRB. All documents provided to the MSRB under the Disclosure Certificate shall be accompanied by identifying information as prescribed by the MSRB.

Section 7. Termination of Reporting Obligation. The City’s obligations under this Disclosure Certificate shall terminate upon the legal defeasance, prior redemption or payment in full of all of the Bonds. If such termination occurs prior to the final maturity of the Bonds, the City shall give notice of such termination in the same manner as for a Listed Event under Section 5(c).

Section 8. Dissemination Agent. The City may, from time to time, appoint or engage a Dissemination Agent to assist it in carrying out its obligations under this Disclosure Certificate,

and may discharge any Dissemination Agent, with or without appointing a successor Dissemination Agent. The initial Dissemination Agent shall be Willdan Financial Services. Any Dissemination Agent may resign by providing 30 days' written notice to the City.

Section 9. Amendment; Waiver. Notwithstanding any other provision of this Disclosure Certificate, the City may amend this Disclosure Certificate, and any provision of this Disclosure Certificate may be waived, provided that the following conditions are satisfied:

(a) if the amendment or waiver relates to the provisions of Sections 3(a), 4 or 5(a), it may only be made in connection with a change in circumstances that arises from a change in legal requirements, change in law, or change in the identity, nature, or status of an obligated person with respect to the Bonds, or type of business conducted;

(b) the undertakings herein, as proposed to be amended or waived, would, in the opinion of nationally recognized bond counsel, have complied with the requirements of the Rule at the time of the primary offering of the Bonds, after taking into account any amendments or interpretations of the Rule, as well as any change in circumstances; and

(c) the proposed amendment or waiver either (i) is approved by holders of the Bonds in the manner provided in the Indenture for amendments to the Indenture with the consent of holders, or (ii) does not, in the opinion of nationally recognized bond counsel, materially impair the interests of the holders or beneficial owners of the Bonds.

If the annual financial information or operating data to be provided in the Annual Report is amended pursuant to the provisions hereof, the first Annual Report filed pursuant hereto containing the amended operating data or financial information shall explain, in narrative form, the reasons for the amendment and the impact of the change in the type of operating data or financial information being provided.

If an amendment is made to this Disclosure Certificate modifying the accounting principles to be followed in preparing financial statements, the Annual Report for the year in which the change is made shall present a comparison between the financial statements or information prepared on the basis of the new accounting principles and those prepared on the basis of the former accounting principles. The comparison shall include a qualitative discussion of the differences in the accounting principles and the impact of the change in the accounting principles on the presentation of the financial information, in order to provide information to investors to enable them to evaluate the ability of the City to meet its obligations. To the extent reasonably feasible, the comparison shall be quantitative.

A notice of any amendment made pursuant to this Section 9 shall be filed in the same manner as for a Listed Event under Section 5(c).

Section 10. Additional Information. Nothing in this Disclosure Certificate shall be deemed to prevent the City from disseminating any other information, using the means of dissemination set forth in this Disclosure Certificate or any other means of communication, or including any other information in any Annual Report or notice of occurrence of a Listed Event, in addition to that which is required by this Disclosure Certificate. If the City chooses to include any information in any Annual Report or notice of occurrence of a Listed Event in addition to that which is specifically required by this Disclosure Certificate, the City shall have no obligation under this Disclosure Certificate to update such information or include it in any future Annual Report or notice of occurrence of a Listed Event.

Section 11. Default. If the City fails to comply with any provision of this Disclosure Certificate, the Participating Underwriter or any holder or beneficial owner of the Bonds may take such actions as may be necessary and appropriate, including seeking mandate or specific performance by court order, to cause the City to comply with its obligations under this Disclosure Certificate. A default under this Disclosure Certificate shall not be deemed an Event of Default under the Indenture, and the sole remedy under this Disclosure Certificate in the event of any failure of the City to comply with this Disclosure Certificate shall be an action to compel performance.

Section 12. Duties, Immunities and Liabilities of Dissemination Agent.

(a) The Dissemination Agent shall have only such duties as are specifically set forth in this Disclosure Certificate, and the City agrees to indemnify and save the Dissemination Agent, its officers, directors, employees and agents, harmless against any loss, expense and liabilities which they may incur arising out of or in the exercise or performance of its powers and duties hereunder, including the costs and expenses (including attorneys fees) of defending against any claim of liability, but excluding liabilities due to the Dissemination Agent's negligence or willful misconduct. The Dissemination Agent shall have no duty or obligation to review any information provided to it by the City hereunder, and shall not be deemed to be acting in any fiduciary capacity for the City, the Bond holders or any other party. The obligations of the City under this Section shall survive resignation or removal of the Dissemination Agent and payment of the Bonds.

(b) The Dissemination Agent shall be paid compensation by the City for its services provided hereunder in accordance with its schedule of fees as amended from time to time, and shall be reimbursed for all expenses, legal fees and advances made or incurred by the Dissemination Agent in the performance of its duties hereunder.

Section 13. Beneficiaries. This Disclosure Certificate shall inure solely to the benefit of the City, the Dissemination Agent, the Participating Underwriter and the holders and beneficial owners from time to time of the Bonds, and shall create no rights in any other person or entity.

Section 14. Counterparts. This Disclosure Certificate may be executed in several counterparts, each of which shall be regarded as an original, and all of which shall constitute one and the same instrument.

APPENDIX F-2

FORM OF CONTINUING DISCLOSURE CERTIFICATE (ADVENTIST HEALTH)

[To come]

APPENDIX G

DTC AND THE BOOK-ENTRY-ONLY SYSTEM

The following description of the Depository Trust Company ("DTC"), the procedures and record keeping with respect to beneficial ownership interests in the Bonds, payment of principal, interest and other payments on the Bonds to DTC Participants or Beneficial Owners, confirmation and transfer of beneficial ownership interest in the Bonds and other related transactions by and between DTC, the DTC Participants and the Beneficial Owners is based solely on information provided by DTC. Accordingly, no representations can be made concerning these matters and neither the DTC Participants nor the Beneficial Owners should rely on the foregoing information with respect to such matters, but should instead confirm the same with DTC or the DTC Participants, as the case may be.

Neither the issuer of the Bonds (the "Issuer") nor the trustee, fiscal agent or paying agent appointed with respect to the Bonds (the "Agent") take any responsibility for the information contained in this Appendix.

No assurances can be given that DTC, DTC Participants or Indirect Participants will distribute to the Beneficial Owners (a) payments of interest, principal or premium, if any, with respect to the Bonds, (b) certificates representing ownership interest in or other confirmation or ownership interest in the Bonds, or (c) redemption or other notices sent to DTC or Cede & Co., its nominee, as the registered owner of the Bonds, or that they will so do on a timely basis, or that DTC, DTC Participants or DTC Indirect Participants will act in the manner described in this Appendix. The current "Rules" applicable to DTC are on file with the Securities and Exchange Commission and the current "Procedures" of DTC to be followed in dealing with DTC Participants are on file with DTC.

1. The Depository Trust Company ("DTC") will act as securities depository for the Bonds (the "Securities"). The Securities will be issued as fully-registered securities registered in the name of Cede & Co. (DTC's partnership nominee) or such other name as may be requested by an authorized representative of DTC. One fully-registered Security certificate will be issued for each maturity of the Securities in the aggregate principal amount of such maturity, and will be deposited with DTC. If, however, the aggregate principal amount of any issue exceeds \$500 million, one certificate will be issued with respect to each \$500 million of principal amount, and an additional certificate will be issued with respect to any remaining principal amount of such issue.

2. DTC, the world's largest securities depository, is a limited-purpose trust company organized under the New York Banking Law, a "banking organization" within the meaning of the New York Banking Law, a member of the Federal Reserve System, a "clearing corporation" within the meaning of the New York Uniform Commercial Code, and a "clearing agency" registered pursuant to the provisions of Section 17A of the Securities Exchange Act of 1934. DTC holds and provides asset servicing for over 3.5 million issues of U.S. and non-U.S. equity issues, corporate and municipal debt issues, and money market instruments (from over 100 countries) that DTC's participants ("Direct Participants") deposit with DTC. DTC also facilitates the post-trade settlement among Direct Participants of sales and other securities transactions in deposited securities, through electronic computerized book-entry transfers and pledges between Direct Participants' accounts. This eliminates the need for physical movement of securities certificates. Direct Participants include both U.S. and non-U.S. securities brokers and

dealers, banks, trust companies, clearing corporations, and certain other organizations. DTC is a wholly-owned subsidiary of The Depository Trust & Clearing Corporation ("DTCC"). DTCC is the holding company for DTC, National Securities Clearing Corporation and Fixed Income Clearing Corporation, all of which are registered clearing agencies. DTCC is owned by the users of its regulated subsidiaries. Access to the DTC system is also available to others such as both U.S. and non-U.S. securities brokers and dealers, banks, trust companies, and clearing corporations that clear through or maintain a custodial relationship with a Direct Participant, either directly or indirectly ("Indirect Participants"). DTC is rated "AA+" by Standard & Poor's. The DTC Rules applicable to its Participants are on file with the Securities and Exchange Commission. More information about DTC can be found at www.dtcc.com.

3. Purchases of Securities under the DTC system must be made by or through Direct Participants, which will receive a credit for the Securities on DTC's records. The ownership interest of each actual purchaser of each Security ("Beneficial Owner") is in turn to be recorded on the Direct and Indirect Participants' records. Beneficial Owners will not receive written confirmation from DTC of their purchase. Beneficial Owners are, however, expected to receive written confirmations providing details of the transaction, as well as periodic statements of their holdings, from the Direct or Indirect Participant through which the Beneficial Owner entered into the transaction. Transfers of ownership interests in the Securities are to be accomplished by entries made on the books of Direct and Indirect Participants acting on behalf of Beneficial Owners. Beneficial Owners will not receive certificates representing their ownership interests in Securities, except in the event that use of the book-entry system for the Securities is discontinued.

4. To facilitate subsequent transfers, all Securities deposited by Direct Participants with DTC are registered in the name of DTC's partnership nominee, Cede & Co., or such other name as may be requested by an authorized representative of DTC. The deposit of Securities with DTC and their registration in the name of Cede & Co. or such other DTC nominee do not effect any change in beneficial ownership. DTC has no knowledge of the actual Beneficial Owners of the Securities; DTC's records reflect only the identity of the Direct Participants to whose accounts such Securities are credited, which may or may not be the Beneficial Owners. The Direct and Indirect Participants will remain responsible for keeping account of their holdings on behalf of their customers.

5. Conveyance of notices and other communications by DTC to Direct Participants, by Direct Participants to Indirect Participants, and by Direct Participants and Indirect Participants to Beneficial Owners will be governed by arrangements among them, subject to any statutory or regulatory requirements as may be in effect from time to time. Beneficial Owners of Securities may wish to take certain steps to augment the transmission to them of notices of significant events with respect to the Securities, such as redemptions, tenders, defaults, and proposed amendments to the Security documents. For example, Beneficial Owners of Securities may wish to ascertain that the nominee holding the Securities for their benefit has agreed to obtain and transmit notices to Beneficial Owners. In the alternative, Beneficial Owners may wish to provide their names and addresses to the registrar and request that copies of notices be provided directly to them.

6. Redemption notices will be sent to DTC. If less than all of the Securities within a maturity are being redeemed, DTC's practice is to determine by lot the amount of the interest of each Direct Participant in such maturity to be redeemed.

7. Neither DTC nor Cede & Co. (nor any other DTC nominee) will consent or vote with respect to Securities unless authorized by a Direct Participant in accordance with DTC's MMI Procedures. Under its usual procedures, DTC mails an Omnibus Proxy to the Issuer as soon as possible after the record date. The Omnibus Proxy assigns Cede & Co.'s consenting or voting rights to those Direct Participants to whose accounts Securities are credited on the record date (identified in a listing attached to the Omnibus Proxy).

8. Principal, redemption price and interest payments on the Securities will be made to Cede & Co., or such other nominee as may be requested by an authorized representative of DTC. DTC's practice is to credit Direct Participants' accounts upon DTC's receipt of funds and corresponding detail information from the Issuer or the Agent, on payable date in accordance with their respective holdings shown on DTC's records. Payments by Participants to Beneficial Owners will be governed by standing instructions and customary practices, as is the case with securities held for the accounts of customers in bearer form or registered in "street name," and will be the responsibility of such Participant and not of DTC, the Agent, or the Issuer, subject to any statutory or regulatory requirements as may be in effect from time to time. Payment of principal, redemption price and interest payments to Cede & Co. (or such other nominee as may be requested by an authorized representative of DTC) is the responsibility of the Issuer or the Agent, disbursement of such payments to Direct Participants will be the responsibility of DTC, and disbursement of such payments to the Beneficial Owners will be the responsibility of Direct and Indirect Participants.

9. If applicable, a Beneficial Owner will give notice to elect to have its Securities purchased or tendered, through its Participant, to tender/remarketing agent, and will effect delivery of such Securities by causing the Direct Participant to transfer the Participant's interest in the Securities, on DTC's records, to tender/remarketing agent. The requirement for physical delivery of Securities in connection with an optional tender or a mandatory purchase will be deemed satisfied when the ownership rights in the Securities are transferred by Direct Participants on DTC's records and followed by a book-entry credit of tendered Securities to tender/remarketing agent's DTC account.

10. DTC may discontinue providing its services as depository with respect to the Securities at any time by giving reasonable notice to the Issuer or the Agent. Under such circumstances, in the event that a successor depository is not obtained, Security certificates are required to be printed and delivered.

11. The Issuer may decide to discontinue use of the system of book-entry-only transfers through DTC (or a successor securities depository). In that event, Security certificates will be printed and delivered to DTC.

APPENDIX H
THE APPRAISAL

COUNCIL COMMUNICATION

CC #: 8534

File #: 0200 & 0201-01

Title: Utility Billing Operations - Budget Adjustment

Contact: Andrea Blomquist 916-774-5317 ablomquist@roseville.ca.us

Meeting Date: 6/21/2017

Item #: 7.27.

RECOMMENDATION TO COUNCIL

Staff recommends City Council adopt an ordinance approving a budget adjustment.

BACKGROUND

The city is in process of deploying a new Utility Billing Customer Information System (CIS). As a part of this project, there is a need to move a small portion of our Utility Billing Operations labor budget directly to the CIS project. The team works solely on the CIS project, and is currently budgeted in the Utility Billing Operations group. We are requesting to move \$260,000 from operations to the CIS Focus CIPs in an effort to reflect the current operation.

FISCAL IMPACT

This budget adjustment to move \$260,000 to our CIS Focus CIPs is included in Utility Billing Operations budgets for FY 2017 and will not require any additional funding.

ECONOMIC DEVELOPMENT / JOBS CREATED

Approval of this request will not create any new jobs.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b)(3)). The budget adjustment does not include the potential for a significant environmental effect, and therefore is not subject to CEQA.

Respectfully Submitted,

Andrea Blomquist, Billing Services Manager

Jay Panzica, Chief Financial Officer

Rob Jensen, City Manager

ATTACHMENTS:

Description

Ordinance No. 5841

Budget Adjustment

ORDINANCE NO. 5841

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE
AUTHORIZING CERTAIN AMENDMENTS TO THE 2016-17
BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY
EFFECTIVE AS AN APPROPRIATION MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. The City of Roseville Annual Budget, Fiscal Year 2016-17, is hereby amended by transferring appropriation to and from the activities indicated below:

Appropriate funds for the deployment of a new utility billing customer information system per the request of the Finance Department as listed on the attached Request for Budget Adjustment in the amount of \$260,000.00.

SECTION 2. This ordinance is hereby declared to be an appropriation measure, immediately effective pursuant to the provisions of Section 5.03 of the Charter.

SECTION 3. The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the ordinance book, under the record of the ordinance, a certificate under her hand stating the time and place of such publication by posting.

PASSED AND ADOPTED by the Council of the City of Roseville, this
_____ day of _____, 20__, by the following vote on roll call:

Justification for Budget Adjustment*

This request is to move funding from the Utility Billing Operations group to the CIS Focus Project for Utility Billing Staff and their labor costs. The team working on the Focus project is directly from Utility Billing operations and these funds will allow the team to complete project work. No additional dollars are being requested, just a move from operations to a CIP project.

COUNCIL COMMUNICATION

CC #: 8543

File #: 0214

Title: Library Grant Funds - Budget Adjustment

Contact: Rendi Hodge 916-774-5240 rhodge@roseville.ca.us

Meeting Date: 6/21/2017

Item #: 7.28.

RECOMMENDATION TO COUNCIL

Recommend Council approve an ordinance for a budget adjustment for \$15,000.00 for grant funds received from California Library Literacy Services (CLLS).

BACKGROUND

The Parks, Recreation & Libraries Department has received funds from CLLS to start and grow an Adult Literacy Program since 2010. The Library continues to maintain and develop a very active literacy program. Currently the program hosts twenty-two (22) pairs of tutors and learners working toward life-changing goals. Funds received from CLLS provide a portion of the staff costs to oversee the program and allow for purchasing materials and supplies used by tutors and learners during their sessions.

FISCAL IMPACT

This request is fully funded with offsetting grant revenue, so there is a net zero impact to the General Fund.(916)

ECONOMIC DEVELOPMENT / JOBS CREATED

Approval of this request will not create any new jobs.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b)(3)). The purchase of library materials does not include the potential for a significant environmental effect, and therefore is not subject to CEQA.

Respectfully Submitted,

Rendi Hodge, Library Supervisor

Dion Louthan, Parks, Recreation & Libraries Director

Rob Jensen, City Manager

Library BA \$15000

ORDINANCE NO. 5843

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE
AUTHORIZING CERTAIN AMENDMENTS TO THE 2016-17
BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY
EFFECTIVE AS AN APPROPRIATION MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. The City of Roseville Annual Budget, Fiscal Year 2016-17, is hereby amended by transferring appropriation to and from the activities indicated below:

Appropriate funds for grant funds received from California Library Literacy Services (CLLS) per request of the Parks, Recreation & Libraries Department, as listed on the attached Request for Budget Adjustment in the amount of \$15,000.00.

SECTION 2. This ordinance is hereby declared to be an appropriation measure, immediately effective pursuant to the provisions of Section 5.03 of the Charter.

SECTION 3. The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the ordinance book, under the record of the ordinance, a certificate under her hand stating the time and place of such publication by posting.

<i>[Signature]</i>	<i>Nancy Rothberger</i>	<i>Val ADRI 5/26/17</i>
BUDGET MANAGER/DISEGNEE	DATE	

Justification for Budget Adjustment*:

The PRL Department has performed year-to-date budget reviews and analysis and has revised its FY2016-17 year end budget estimate. Updated forecasting and higher than projected external funding contributions necessitate an increase to the General Fund materials, services, and supplies budget for Libraries (Org Key 06500) by \$15,000 to cover increased literacy costs for book purchases. This request is fully funded with offsetting grant revenue, so there is a net zero impact to the General Fund.

Title: FY2017-18 Budgeted Positions
Contact: Linda Hampton 916-774-5215 lhampton@roseville.ca.us

Meeting Date: 6/21/2017
Item #: 7.29.

RECOMMENDATION TO COUNCIL

As part of the 2017-2018 budget process, departments requested staffing changes to meet their business needs. Staff recommends the City Council approve Management A & B salary schedules to reflect a salary realignment for Assistant Human Resources Director position and approve the addition of 4.25 allocations and the deletion of 8.5 allocation on the citywide allocation schedule. It is recommended that City Council take the following actions:

1. Adopt an ordinance to approve the attached Management A & B salary schedules (Appendix L) reflecting a salary schedule reduction for Assistant Human Resources Director 0484/B845) effective June 24, 2017; and
2. Motion to approve the attached city-wide allocation schedule effective June 24, 2017.

BACKGROUND

As part of the Municipal Code, the Human Resources Department is charged with maintaining the City's classification plan. The Human Resources staff is continually evaluating staffing levels necessary to provide high service levels to the community. As part of the 2017-2018 budget process, departments requested additional staffing. Staff looked at department workload and the allocation's impact on meeting the city's goals. Additionally, the level at which each of these positions would have to be staffed was analyzed. As part of the budget process, staff is requesting 7.25 new allocations and the defunding of 8.5 allocations for a total FTE decrease of 1.25. Funding is also included for 10 reclassifications of existing positions. Staff is currently conducting job analysis work on three of the new allocations and all the reclassifications and will be bringing those to council once the analysis and meet and confer obligations with the bargaining groups have been met. Staff is also recommending decreasing the Assistant Human Resources Director salary by approximately 5.7% to conform with internal salary relationships.

Budgeted Allocation Changes

New Allocations:

Department	Job Title	FTE
Finance	Finance Clerk II	1.0
Finance	Finance Technician	1.0
Parks, Recreation & Libraries	Child Care Site Coordinator	1.0
Parks, Recreation & Libraries	Park Development Analyst II	1.0
Public Works	Senior Engineer	.25

Total: 4.25 *

*Note does not include three allocations pending completion of job analysis work and bargaining group meet and confers.

Defunded Positions

Department	Job Title	FTE
Fire	Public Safety Outreach & Community Relations Coordinator	-.5
Parks, Recreation & Libraries	Assistant Child Care Site Coordinators	-2.0
Parks, Recreation & Libraries	Interpretive Services Specialist II	-1.0
Parks, Recreation & Libraries	Natural Resources Technician	-1.0
Parks, Recreation & Libraries	Sr Parks Maintenance Worker	-1.0
Police	Community Services Officer II	-1.0
Public Works	Assistant Engineer	-2.0

Total: -8.5**FISCAL IMPACT**

The net impact of the allocation changes are included in the 2017 - 2018 budget.

ECONOMIC DEVELOPMENT / JOBS CREATED

No new jobs are created by this action.

ENVIRONMENTAL REVIEW

Staffing changes are not considered a "project" as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines 15378). Consequently no CEQA action is required.

Respectfully Submitted,

Linda Hampton, Human Resources Manager

Gayle Satchwell, Human Resources Director

ORDINANCE NO. 5846

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE AMENDING
ORDINANCE NO. 5839, THE SALARY ORDINANCE FOR MANAGEMENT EMPLOYEES,
AS AMENDED BY APPENDIX "L" TO BE EFFECTIVE
JUNE 24, 2017, AS AN URGENCY MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. Title and Purpose.

Ordinance No. 5839, the Salary Ordinance for Management Employees, is hereby amended as shown on Appendix "L" for salary schedules A and B attached hereto.

AMENDNG OF CLASSIFICATION:

<u>Classification No.</u>	<u>Position Title</u>	<u>Salary Range</u>
0484/B845	Assistant Human Resources Director	6730

SECTION 2. Salary Plan Effective Date.

This Ordinance shall be effective June 24, 2017 as an urgency measure.

SECTION 3. Urgency Ordinance.

This ordinance is hereby declared to be an urgency measure, immediately necessary for the public peace, health and safety and shall take effect June 24, 2017. A statement of urgency is as follows:

It is necessary to amend the Salary Ordinance to comply with recently approved changes for the orderly and necessary continuance of operations of the City.

SECTION 4. Posting.

The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the Ordinance Book under the record of the ordinance a certificate under her hand stating the time and place of said publication by posting.

Title: Second Reading - Municipal Code Amendment - Personnel Rule Change
Contact: Linda Hampton 916-774-5215 lhampton@roseville.ca.us

Meeting Date: 6/21/2017
Item #: 7.30.

RECOMMENDATION TO COUNCIL

ORDINANCE NO. 5847 OF THE COUNCIL OF THE CITY OF ROSEVILLE AMENDING SECTION 3.02.040 OF CHAPTER 3.02 OF TITLE 3 OF THE ROSEVILLE MUNICIPAL CODE REGARDING PERSONNEL RULES AND REGULATIONS, for second reading and adoption.

BACKGROUND

Over the next three years, the City is anticipating the retirement of a number of long-term managers who provide key critical services for the City. A review of the demographics of the current City workforce overall indicates that approximately 36% of the workforce is eligible to retire. This staggering statistic mandates that the City focus on succession planning efforts and ensuring that departments are equipped to provide seamless transition of duties to newly hired or promoted employees. The current language in the municipal code does not allow for hiring/promoting new staff into the same position or to create short-term regular positions. The proposed change will provide the departments with the ability to hire/promote a manager's replacement before the manager departs allowing both training and knowledge transfer opportunities.

FISCAL IMPACT

The fiscal impact is based upon the job classification and salary of the newly hired/promoted manager and the additional cost is for no more than a six month period of time. The expectation is that the requesting department will absorb the additional cost and if this is not possible then it will be taken from general fund contingency funds.

ECONOMIC DEVELOPMENT / JOBS CREATED

No new jobs may be created by this action.

ENVIRONMENTAL REVIEW

Personnel Rules and Regulations are not considered a “project” as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines 15378). Consequently no CEQA action is required.

Respectfully Submitted,

Linda Hampton, Human Resources Manager

Gayle Satchwell, Human Resources Director

Rob Jensen, City Manager

Description

Ordinance No. 5847

ORDINANCE NO. 5847

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE AMENDING SECTION
3.02.040 OF CHAPTER 3.02 OF TITLE 3 OF THE ROSEVILLE MUNICIPAL CODE
REGARDING PERSONNEL RULES AND REGULATIONS

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. Section 3.02.040 of Chapter 3.02 of Title 3 of the Roseville Municipal Code is hereby amended to read as follows:

3.02.040 New positions.

A. New positions may be authorized by the city council and added to the classification plan. However, no new position may be filled without the authorization of the city manager who, in so doing, shall determine that sufficient funds are available. When a new position is created, the department head must obtain the city manager's approval to fill the position via the director. The director shall then notify the department head as to the approval and method of filling said position. Except as provided by these rules, or otherwise, no person shall be appointed or employed to fill any new position until the classification plan has been amended by the city council.

B. For management positions only, upon written receipt of a management employee's irrevocable resignation and/or retirement notice, which shall include a final date of employment with the city, and after written acceptance from the director, a new position may be administratively created by the city manager for purposes of receiving transitional training from the existing resigning and/or retiring incumbent to the respective newly hired or promoted management employee. The limited use and purpose of the subsection is to provide for transitional training for specialized, highly skilled, and/or experienced management-level employee transitions where, based on the nature of the position, it is in the city's best interest for the incumbent to provide institutional and operational position-specific knowledge to the incoming employee to ensure the most efficient and effective transition between the two.

The limited authority herein described is delegated to the city manager from the city council and no change to the classification plan will be required in the creation of the type of position described in this subsection. Prior to approval of the position by the city manager, the requesting department head must identify the source of funding for the transitional training position. The department head must obtain the city manager's approval to fill the position, which shall require approval from the director. The director shall notify the department head as to the approval and method of filling said position.

In no event shall both the incumbent position and the new position – which shall be identical positions, including all job duties, specifications, terms, benefits, pay and probationary period (subject to applicable salary range, e.g. new employee Salary Range B) – be filled for a period exceeding six (6) months. Accordingly, the new position shall not be filled unless and until the incumbent position, based on the written notice and acceptance of the irrevocable resignation and/or retirement, has six (6) or fewer months of remaining employment.

Upon separation from city service by the incumbent, the incumbent's position shall, consistent with the authority herein delegated from the city council to the city manager, cease to exist, leaving only the number of positions allocated to the subject classification pursuant to the classification plan. Nothing herein shall cause the ultimate number of positions allocated to a classification to change.

SECTION 2. This ordinance shall be effective at the expiration of thirty (30) days from the date of adoption.

SECTION 3. The City Clerk is hereby directed to cause this ordinance to be published in full at least once within fourteen (14) days after it is adopted in a newspaper of general circulation in the City, or shall within fourteen (14) days after its adoption cause this ordinance to be posted in full in at least three (3) public places in the City and enter in the Ordinance Book a certificate stating the time and place of said publication by posting.

Title: Out of State Travel Request - Fire Department
Contact: Chris Baker 916-774-5833 cbaker@roseville.ca.us

Meeting Date: 6/21/2017
Item #: 7.31.

RECOMMENDATION TO COUNCIL

Staff recommends Council approval of out-of-state travel for Fire Battalion Chief Chris Baker to attend quarterly TIA/P25 Committee meetings and training sessions as the public safety responder representative to the Association of Public Communications Officials (APCO) between June 2017 and June 2018. All travel costs including airfare, lodging and per diem, will be reimbursed directly by APCO.

BACKGROUND

The TIA/P25 Committee is made up of local, state, federal, and industry officials who determine standards and direction of the newest public radio systems used by government agencies. This committee recommends standards and changes for systems that will be used in the City of Roseville beginning in 2018. The Association of Public Communications Officials (APCO) is made up of local, state, and federal agency members who have both expertise in public safety and technical / operational duties.

APCO has diligently searched for public safety responders to represent one of its seats on the TIA/P25 Committee, and has requested Battalion Chief Chris Baker to fill this spot based on his technical and operational background, along with his longstanding work as an APCO member. APCO provides full reimbursement to its committee members for travel and related expenses to attend these meetings.

The TIA/P25 meetings take place approximately four times per year for three days each, and rotate locations throughout the United States. The first meeting is scheduled in Chicago, IL.

FISCAL IMPACT

All travel, per diem and lodging expenses for the APCO TIA P25 Subcommittee meetings and/or training attended by Battalion Chief Chris Baker are directly covered by the Association of Public Communications Officials and there is no additional fiscal impact to the Roseville Fire

Department.

ECONOMIC DEVELOPMENT / JOBS CREATED

Not applicable.

ENVIRONMENTAL REVIEW

The out-of-state travel requests related to the TIA/P25 Committee are not considered a "project" as defined by the California Environmental Quality Act (CEQA). Consequently, no CEQA action is required.

Respectfully Submitted,

Chris Baker, Fire Captain

Rick Bartee, Fire Chief

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council:

1. Approve the Grants Advisory Commission recommendations to fund 49 grants in the amount of \$407,500 (\$400,000 from the Citizens' Benefit Fund and \$7,500 from the REACH Fund).
2. Approve the inclusion of \$400,000 in the fiscal year 2017-18 City of Roseville budget along with the attached list of grant recipients, see Attachment 1.
3. Adopt a Resolution approving revisions to the City's Citizens Benefit Fund Policy Manual, as identified in Attachment 3.

BACKGROUND

The City has two funding sources from which to award grants to non-profit organizations, the Citizens' Benefit Fund (CBF) and the Roseville Employees Annual Charitable Hearts (REACH) Fund. The majority of the available funds are funded through the CBF and as such must be used by non-profits for programs and services benefitting Roseville citizens. Funds through REACH may be used for programs and services outside of Roseville in surrounding communities. Therefore some programs that only serve areas outside of Roseville are restricted to funding through REACH Funds.

2017-18 FUNDING CYCLE

For the FY2017-18 fiscal year, \$407,500 is available for distribution:

- \$400,000 from the Citizens' Benefit Fund (CBF)
- \$7,500 from the REACH Fund

Non-profit 501(c)(3) or (c)(4) organizations, public agencies and schools were eligible to apply. Given the available funding, the Grants Advisory Commission set the maximum limit on the CBF grant requests at \$10,000 and the employee REACH Committee recommended a \$2,500 maximum limit on REACH grants.

The FY2017-18 funding cycle began on December 12, 2016 when applications were made

available to the public. The Grants Advisory Commission (GAC) conducted a televised voluntary applicant workshop on January 10, 2017. Grant applications were due on February 9, 2017.

A total of 62 Grant applications were submitted requesting funding support totaling \$525,752.27 from the combined funding sources. Of these requests, the Commission, at the March 14, 2017 meeting, deemed 22 Grant applications "at risk" and 3 Grant applications "disqualified". Notifications were sent on March 15, 2017. On April 11, 2017 and May 9, 2017, the Commission reviewed the "at risk" and "disqualified" application appeals. After further review, the Commission disqualified two Grant applications.

The Roseville Grants Advisory Commission met on May 9, 2017 to discuss the merits of each Grant application and make funding recommendations. The Commission recommended full or partial funding for 49 eligible Grant requests, or 81% of all eligible requests (with 73% being fully funded). A total of 11 eligible Grant requests were not recommended for funding.

Grant application funding is as follows:

- The Grants Advisory Commission recommends that 48 grant applications be funded with \$400,000 of Citizens' Benefit Funds, see Attachment 1.
- The Grants Advisory Commission recommends that 3 grant applications be funded with \$7,500 of REACH Funds, see Attachment 2.

Please note that of the 49 grant applications that are recommended for funding that two of the Grant applications (the Life Skills Training & Education Programs and Lighthouse Counseling & Family Resource Center) have been co-funded with Citizens' Benefit Funds and Reach Funds, Attachments 1 and 2.

Attachment 1 provides a comprehensive list of Citizens Benefit Fund Grant applicants that requested funding; the amount of each request and the Grants Advisory Commission's funding recommendations. NOTE: A separate motion is needed for those grants with a Council member(s) abstaining due to service within the organization recommended for funding.

With the 2017-2018 Grant awards proposed tonight, the awards for community projects/benefits from the CBF will total \$14,860,697 million. REACH Fund awards have added another \$510,007 in grant funding. The total Grant funds are \$15,370,704 from the CBF and REACH Funds together.

Annually, the Grants Liaison reviews policies and procedures in a continued effort to improve efficiencies and streamline processes. In recent years, these changes included the use of the online Zoomgrants for submittal system of grant applications and annual reports and changes to the City's investment strategy to increase annual interest earnings for greater community giving. This year, staff recommends Policy revisions to improve efficiencies and reduce Commission and City staff time relating to program policy and management, as follows:

Efficiency Recommendations

- Grants Staff Liaison will review Grant applications to verify completeness and required documents
- Eliminate Appeal process

These recommendations eliminate two Commission meetings and staff time associated with the preparation of staff reports and minutes and attendance (of three City staff members) at those meetings.

Program Policy and Management:

Additionally, staff recommends the following revisions to Grants giving program to enable the Commission to focus Grant giving and allocations to create larger community impact, as follows:

- Deleted maximum funding limits
- Deleted Public School and City of Roseville and departments therein, from applying

These recommendations focus these limited resources on non-profit agencies within the community where the greatest needs can be addressed and allows for larger grants with a greater community impact and increased efficiency in program delivery.

Attachment 3 for a complete redline/strikeout version of the Citizens Benefit Fund Policy Manual and Attachment 4 for a clean version of the document.

Similarly, staff received approval from the REACH Committee amending their policy relating to program policy and management specifically relating to limiting awards of grants to private schools and non-profit 501(c)(3) or 501(c)(4) organizations (including: Parent Teacher Clubs and Booster clubs).

FISCAL IMPACT

The fiscal impact to the General Fund is nominal. Grant money of \$407,500 is allocated from the Citizens Benefit and REACH Funds investment revenue proceeds. These monies will be included in the FY 2017-18 City of Roseville budget and approved for grant purposes. The administration of the grants program has a nominal cost associated with staff resources. Estimated annual cost of administration is approximately \$30,000 annually.

ECONOMIC DEVELOPMENT / JOBS CREATED

The funding granted to local non-profits is invested directly into the Roseville community and is used to support a variety of programs and services that benefit Roseville and Placer County citizens. The funds granted through the CBF help to improve the quality of life in Roseville and is one of the key factors to attracting and keeping businesses in Roseville. Many of the dollars granted also directly create jobs by funding staff or contract workers for the non-profits.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b)(3)). This award of grants does not include the potential for a significant environmental effect, and is not subject to CEQA.

Respectfully Submitted,

Laura Matteoli, Economic Development Manager

Chris Robles, Economic Development Director

Rob Jensen, City Manager

**City of Roseville
Citizens' Benefit Fund
Policy Manual**

Purpose

The purpose of the Citizens' Benefit Fund Policy Manual is to:

- ◆ Document the policy decisions of the Grants Advisory Commission and Roseville City Council regarding the Citizens' Benefit Fund by year and by topic;
- ◆ Serve as a reference for new Grants Advisory Commissioners and Roseville City Councilmembers as to program implementation; and
- ◆ Answer questions from the public regarding the grants process, [including questions from](#) potential grant applicants, and current grant recipients.

Chronology of Citizens' Benefit Fund

Jun 1, 1994	Grants Advisory Commission established by Ordinance 2774. Hospital Proceeds Fund Established by Ordinance number 2788. Chapter 4.06 is added to the Roseville Municipal Code to establish the Hospital Proceeds Fund.
Jul 12, 1994	City Council approves criteria and first grant application.
Jan 25, 1995	Joint City Council/Grants Advisory Commission Workshop to discuss Grant application process, including estimated timeframe for processing grant applications and restricting grant funds to benefit Roseville residents only for specific project, rather than general funding; no funding for administrative costs, audit procedures following Grant awards; procedures to notice Commission meetings and interviews with applicants.
Sep 10, 1997	Joint City Council/Grants Advisory Commission Workshop to discuss grant consideration process, appeal opportunities, award process, stewardship of funds, application form changes, multiple year funding, auditing, collaboration of organizations, grant requests for capital projects, city projects or from agencies outside the city.
Dec 16, 1998	City Council approves formal process to consider modifications to approved grants and adoption of marketing program for the Citizens' Benefit Fund.
Aug 18, 1999	Ordinance 3388 adopted by the Roseville City Council amending Chapter 4.06 of the Roseville Municipal Code. Amendments include: 1. Name change from Hospital Proceeds Fund to Citizens' Benefit Fund to reflect opportunity for donations to the fund from the community rather than limited principal amount from sale of municipal hospital. 2. Amendment to Section 4.04.040, Expenditures of Money, to indicate unappropriated amounts may be carried forward to subsequent fiscal years, or at the discretion of the City, may be added to the principal.
Jul 10, 1999	Joint City Council/Grants Advisory Commission Workshop to discuss policies related to requirement for matching funds, grant funding for leased vs. owned property, perpetual funding, monitoring/annual reports, and Ad Hoc Committee.
Nov 3, 1999	City Council adopts policies related to issues from joint Commission/Council workshop.
Dec 3, 2003	City Council approves Grants Advisory Commission recommendations for funding criteria and process improvements following three workshops by the Commission and the first REACH/Enron funding cycle.

Dec 15, 2004	City Council approved Grants Advisory Commission recommendations for revisions as a result of AB 2690 – repealing the requirement that volunteers be paid prevailing wages and eliminating the mandatory workshop.
December 19, 2012	The City Council approved a financial report on the Citizens' Benefit Fund (CBF) and a work plan for a comprehensive grants policy review.
May 29, 2014	GIM to the City Council regarding completion of phase 1 in the Comprehensive Grants Review Process – Historical Assessment Report of the Roseville Grants program.
April 20, 2015	Joint City Council/Grants Advisory Commission Workshop to discuss policies relating to administration of the fund and fund investment and program options.
December 16, 2015	City Council considered and reaffirmed: 1. Retention of the Citizens' Benefit Fund (CBF) with the City to be invested and administered by the City. 2. Retention of the Grants Program and Commission with administration by the City. 3. Revision of the Citizens' Benefit Fund (CBF) Policy Manual and Guidelines, as follows: a) Accept investment strategy revisions expanding strategy consistent with Government Codes. b) Reaffirm smoothing strategy to hold back proceeds in excess of \$500K and establish new policy for annually utilizing proceeds in excess of \$500K for smoothing or special projects or community benefits. c) Reaffirm the nine (9) funding program categories. d) Retain limits on school districts and schools, as approved by the Grants Commission. e) Continue policy that the City Manager, or his designee, approve grants submitted for City requests. f) Confirm no giving priorities with each funding request to be evaluated on its own merits. g) Establish a policy for an annual needs assessment for Council to consider and establish priorities for the coming funding cycle.
<u>June 17, 2017</u>	<u>City Council approved revisions to Grants Policy Documents to streamline program procedures relating to administration of Grants program. Additionally, Grants have been focused and aligned to solely private schools and non-profits entities.</u>

Criteria for Grant Applicants

Original Criteria and Application Submittal Requirements

Adopted July 6, 1994
Revised February 17, 2016

The original criteria and application form were established by the Grant Evaluation Criteria Subcommittee in 1994. The subcommittee conducted public meetings on May 24, June 14, and June 27 to discuss and revise the guidelines and presented their draft, adopted by the Commission on June 27th to the City Council on July 6, 1994.

The criteria included a points/rating system that was not adopted by the Commission. A majority of the questions in the current application were as originally drafted. New policies that have amended the application over time are discussed in this manual.

In January 2014, the Grants Advisory Commission approved, and made a requirement that all, Grant Applications be submitted via an online ~~web~~-~~web~~-based program.

Americans with Disabilities Act Compliance

Adopted January 1999

The Commission added a question to the application form requesting specific information regarding compliance with the Americans with Disabilities Act. The City is not allowed to fund programs or services by agencies that do not comply with ADA. Applicants are also required to comply with state disability laws, which in many cases are more stringent than the federal ADA law.

Bids Required for Capital Items

Adopted January 1996
Revised October 1999
Revised February 17, 2016

In January 1996, the Commission adopted a requirement for applicants to submit bids for capital expenditures. Capital projects costing \$2,499 and under must have 3 documented telephone bids. Capital items costing \$2,500 and above must have 3 written bids included. Bids do not have to be awarded to the lowest bidder; bids should be awarded to the most responsible bidder.

This language was modified in October 1999 by the Commission and approved by the City Council based on input from grant applicants. In some instances, three bids are not available for specialized equipment that may be manufactured by only one or two companies. Also, in most cases, telephone, online and written bids are only valid for 30 to 60 days or less; the grant application process runs from February to June (120 days) for final approval, which extends beyond the expiration date for the bids. The bids are still to be included in the packet, but with notations if less than three bids are included.

Bid Requirements: Individual items costing \$250 - \$2,499 require 3 documented telephone, online or written cost estimates. Individual items \$2,500 or greater require 3 written cost estimates. Individual items less than \$250 do not require an estimate.

Funding for Religious or Sectarian Activities Prohibited

Adopted January 1999

In January 1999, the Commission added a question to the application form asking if funding would be used to support any religious or sectarian activities. The City is allowed to fund religious organizations, but the activity, project or program cannot include the promotion a particular religious belief. The City is prohibited from funding religious activities based on laws governing the separation of church and state.

Grant Recipients Located in Roseville

Adopted September 1997

The Commission and Council specified that grant recipients are to be located in Roseville rather than previous wording stating that grant recipients are to be “local.” In practice, this has been interpreted by the Commission to mean that grant recipients that provide service in Roseville, but may have headquarters or offices in other locations, are eligible for funding.

**Ownership or Long-Term Lease for Properties
Improved by Grant Funds**Adopted November 1999
Revised February 17, 2016

Concerns were raised during the 1999-2000 grant funding cycle regarding the investment in properties by grant applicants who do not own the property. The public funds are therefore making the property of a private citizen more valuable. Grant applicants are required to submit ownership documents and/or copies of lease agreements that reveal how long the property will be leased by the applicant. With long-term leases, the value of any capital improvements will depreciate over time and benefit the grant recipients directly. The Commission recommended and the Council adopted a policy to review the applicants with long-term leases on a case-by-case basis. Staff is to look at the amount of grant funding requested and the use of the funds in particular.

Compliance with California Prevailing Wage Law – SB 975Adopted November 2002
Revised December 2004
Revised February 17, 2016

The California Labor Code as amended by SB 975 in 2000 affects applicants to the Citizens' Benefit Fund in two ways: the requirement to pay prevailing wages for public or private works of improvement that receive public funds and the use of volunteer labor.

By Interoffice Memorandum from the City Attorney's Office to the City Manager's Office dated September 20, 2002, the attorney clearly states applicants must comply with the SB 975. The memo details the policy for the State Prevailing Wage Laws and the Applicability to Volunteer Labor. The memorandum is attached as Appendix G to the Policy Manual.

By Interoffice Memorandum from the City Attorney's office to the City Manager's office dated August 31, 2004, the requirement that prevailing wages be paid to volunteers on public works projects was repealed by urgency legislation signed by the Governor.

Under the new law, AB 2690, the requirement to pay prevailing wages does not apply to volunteers, volunteer coordinators, or members of the California Conservation Corps or Community Conservation Corps. Although a volunteer cannot be paid, the volunteer may receive reasonable meals, lodging, transportation, and incidental expenses or nominal non-monetary awards without losing volunteer status if those benefits and payments are not a substitute form of compensation for work performed. The Memorandum is attached as Appendix H to the Policy Manual.

State Prevailing Wage Laws. Any grant applicant receiving \$1,000 or greater in public monies, in this case, Citizens' Benefit Funds, must pay prevailing wages to all workers employed on public works. Public works actually includes any public or private work of improvement, and is defined as "construction, alteration, demolition, installation, or repair work done under contract and paid for in whole or in part out of public funds." (Labor Code Section 1720 (a)(1)).

Exceptions to the law include public utility improvements, carpet installation, transportation projects, and certain residential and low-income housing projects. (Labor Code Section 1720(a)).

An applicant or their advisor may request the Director of Industrial Relations to provide an opinion as to the applicability of SB 975 to their project. Previous opinions and current prevailing wages can be found at the state agency's web-site: www.dir.ca.gov.

Tax Status

Adopted December 2003
[June 21, 2017](#)

The Grants Advisory Commission is recommending that only agencies with the following tax status be eligible for funding.

- 501(C) 3
- 501(C) 4
- ~~government agencies~~
- [Private](#) schools

Applications from agencies that are not within one of these categories will be ineligible. For example, 501 (C) (6) are not eligible because 1) by definition they exist primarily to serve their members rather than the community at large and 2) they can lobby and take political positions on issues, thus creating potential for conflict of interest.

Process-Related Policies

Annual Review

Adopted October 2013
Revised February 17, 2016
[Revised June 21, 2017](#)

The [Grants Staff Liaison Commission](#) will annually review the Grant Application and Guidelines, and make revisions to improve efficiencies. - The Grant Application and Guidelines shall reflect, but is not limited to: 1) current funds available; ~~2) targeted maximum awards~~, and ~~2~~3) Council priorities, if identified.

Recipient Reporting

Adopted November 1999
Revised November 2005, 2008
Revised February 17, ~~2017~~[2016](#)

Beginning with the 2009-10 funding cycle, applicants who fail to submit a Final Report for a grant received from the preceding funding year are not eligible to apply during the subsequent funding year, or any future funding cycle until at least one year after the Final Report has been submitted.-

Beginning with the 2006-2007 funding cycle, each recipient is required to submit a report describing the expenditures and accomplishments achieved with the grant funds. The report is due within 30 days of the end of the grant period. In addition, the Commission at its discretion may also require a grant recipient to submit a “mid-year” report due six months from the grantee’s initial receipt of funds.

Appeal of Grant Advisory Commission Decision

Adopted September 1997
[Deleted June 21, 2017](#)

~~There is no appeal of Grant eligibility made by the Grants Staff Liaison or allocation recommendation made by the Commission or designated Grant Staff liaison. All Final allocation decisions are made by the City Council. final City Council formally confirmed that if a grant recipient would like to appeal a recommendation of the Grants Advisory Commission, they may appeal to the City Council when the recommendations are presented. There is no appeal process beyond the City Council and its decision is final.~~

Audit Form

Adopted March 1996

~~An Audit Form, or financial form was created by the Finance Director and approved by the Grants Advisory Commission in March 1996. The form is signed as part of the Citizens’ Benefit Fund Agreement submittal with a summary accounting to be submitted with the final report at the end of the fiscal year. The current form is included as Appendix D.~~

Funds Expended within One Year

Adopted August 1997

Based upon several requests from agencies that funds be carried over to another fiscal year, or be used for additional purposes, the Commission voted to revise all forms stating that funds must be expended during the fiscal year for which the grant was included in the City budget. The Citizens' Benefit Fund contract was also amended to state that all funds must be spent with one year.

Line Item Review

Adopted November 1999

The City Council reaffirmed a standing practice that individual grant applications may be reviewed by the City Council following the recommendations being forwarded by the Grants Advisory Commission. The City Council reviews the recommendations as part of the annual budget adoption in June of each year. Councilmembers may "pull" individual grant applications for discussion, questions, and separate action.

Applicant WorkshopAdopted September 1997
Revised November 2004
Revised February 17, 2016

The Grants Advisory Commission strongly encourages that a representative from each applying agency attend the applicant workshop, held on the 2nd Tuesday of January.

Process to Amend or Extend Timeframe of Approved Grants

Adopted December 1998

In September 1998, the Commission determined that a formal process should be established to clearly define the requirements in the event a change to an approved grant was requested by a grant recipient. Through the work of Policy Subcommittee members, Sylvia Besana, Carol Garcia, and Susan Rohan, guidelines and a standard form were drafted for use by future applicants. Appendix F includes the Guidelines and Form approved by the City Council on December 16, 1998. As stated in the Guidelines, the City does not encourage amendments to approved grants. Circumstances may warrant flexibility by the Grants Commission and the City Council; however, only if the criteria established by the Policy Subcommittee are met and the amendment process is followed.

Site VisitsAdopted December 2003
Revised February 17, 2016

The Commission reached consensus to NOT conduct site visits during the application period (January through May) and to limit visits to other times during the year.

If individual Grants Commissioners visit applicants during the process of reviewing grants, they may receive information in addition to that contained in the written application that is not received by the other Commissioners. The City's criteria specifically states the grant will be awarded based upon the written materials provided to the Commission for its consideration.

Application Review and Process

Adopted December 2003

Modified October 2013

Revised February 17, 2016

Revised June 21, 2017

The Grants Commission Staff Liaison ~~Advisory Commission~~ shall review and either approve or disqualify each grant application. Staff will ~~The Grants Advisory Commission~~ makes their decisions based upon the ~~written~~ materials submitted by ~~your~~ the agency and/or organization. Grant applications submitted without required and/or complete documents will be disqualified. Grant applicants do not have the right to appeal disqualifications s. ~~to the Commission, in writing with justification and/or documents.~~ ~~The Commissioners shall review each appeal and make their final decision on each Grant application. This decision is not appealable.~~

The Grants Advisory Commission will meet in the Council Chambers on the second Tuesday of April ~~May for informal discussion of each grant application. Following discussion and review of each grant application the Commissioners will make individual funding recommendations and to review and recommend final funding for reach agreement on~~ each grant application ~~before voting on the final funding recommendations.~~

Funding Policies

City Projects

Adopted September 1997

Reaffirmed October 1999

Revised February 2016

~~City projects may be submitted, upon approval of application by the City Manager, or his designee, and will be considered on a case-by-case basis by the Commission and Council. After considerable discussion during the 1999-2000 funding cycle, this policy was reaffirmed by the Ad Hoc Commission-Council subcommittee, Grants Advisory Commission and City Council. Due to the limited amount of funding in the community and the high level of local need for qualifying projects, City projects and programs will no longer qualify for funding.~~

Categories and Target Maximum Amount

Adopted September 1997

Revised December 2003

Revised February 17, 2016

June 21, 2017

The City Council approved nine (9) CBF Categories, as follows (listed in alphabetical order, not level of emphasis):

- Animals – This category benefits animals (shelters and rescue).
- Arts & Humanities – This category benefits modern languages, literature, philosophy, visual and performing arts.
- Environmental – This category benefits the natural world and/or promotes education and protection of the natural world.
- Health – This category includes all services performed, provided or ~~arranges~~ arranged to promote, improve, conserve or restore mental or physical well-being.
- Human Services – This category focuses on human needs ~~focusing~~ focused on prevention and remediation of problems and improving the overall quality of life of service population.
- Public Society Benefit – This category includes organizations for larger public benefit and not directed to one defined class of beneficiaries (rotary clubs, learning centers, Chamber of Commerce, ~~fourth~~ 4th of July community celebration).
- Recreation & Sports – This category benefits activities ~~does~~ done for enjoyment or competition. The City of Roseville and departments therein, shall not be eligible to apply.
- Schools – This category benefits private educational institutions and ~~school~~ school- based associations that seek to enrich the education experience. Public Schools- and Districts ~~entities may~~ shall not be eligible to apply.
- Youth – This ~~categories~~ category benefits minors in challenging circumstances that have faced ~~challenges~~ obstacles.

For a more detailed definition of approved CBF Categories, please refer to the 2013 Historical Assessment of the Roseville Grant Program (Appendix I). At its discretion, the Grants Advisory Commission, with action by the City Council, may wish to prioritize the above-stated categories for CBF funding for a given application year.

In an effort to ensure efficient use of time staff and city resources, the Grants Advisory Commission and City Council may establish a minimum grant amount for this process. There shall not be any maximum funding level established within a grant cycle and each application shall be reviewed and funded based on the value and benefit to the community. The establishment of a minimum funding level and no maximum will result in funding fewer applications at greater funding levels. Collaborative applications and reductions in services duplication will be considered favorably, as well as applications that address existing gaps in community services. ~~The maximum grant amount will be determined by the Grants Advisory Commission each funding cycle based upon the available funds. The purpose of the target amount is to benefit as many citizens as possible and to give grant applicants a realistic idea of the amount that most likely will be funded. The Commissioners also stated during their discussion that with smaller amounts, the funding would be more likely to make a difference to many citizens of Roseville, thus meeting the mission of the Fund — “to improve the quality of life of Roseville’s citizens.”~~

~~The Commission will review every application and consider larger grants, especially for unique capital projects and programs/projects identified by an annual needs assessment, as directed and/or approved by the City Council. The target amount is a recommendation. Applicants are encouraged to limit their requests to no more than that amount and exceptions would be considered.~~

~~The Commission will review the target amount each year based upon the projected funds available and recommend a target amount to be adopted by the Council prior to each funding cycle. The City Council agreed that a target amount would be set annually.~~

Matching Funds Not Required

Adopted November 1999

The City Council approved the Grants Advisory Commission recommendation that matching funds not be required of grant applicants. Mandating that matching funds be required would limit the application numbers and the flexibility of the Commission and Council to award grants to worthy applicants. Matching funds will be a component of the evaluation by Commissioners and Council in determining which applicants have demonstrated their commitment to a project, but will not be mandatory.

Multiple Applications from One Agency

Affirmed December 2003

Revised November 2004

[June 21, 2017](#)

The Commission agreed that the practice of allowing multiple grant applications from a single agency should be continued. The Commission did not want to limit agencies with worthy programs from applying. ~~However, agencies submitting multiple applications are encouraged to limit their requests to no more than the Target Maximum Amount adopted by the Council for the funding year.~~ Applications are judged on their individual merit.

Multiple Year Grants

Adopted September 1997

The Grants Advisory Commission and City Council discussed, but voted against allowing grant applicants to apply for funding beyond one fiscal year. Funding is only available for the fiscal year in which the grant is approved.

Perpetual Funding

Adopted November 1999

Reaffirmed December 2003

The City Council approved the Grants Advisory Commission recommendation that no limit be set on the number of years a grant applicant may receive funding. Grant applicants will be judged on their individual merit each year.

The Commission and Council affirmed this policy after discussion in 2003. There are several agencies that receive repetitive funding from the Citizens' Benefit Fund. In fact, five organizations have received funding in all of the past ten funding cycles, and six organizations have received funding in eight of the last ten funding cycles. The Commission agreed that because the agencies provide worthy services to the community and Commissioners do an independent evaluation each year, there should not be a limit on repetitive funding.

Fund Investing & Funding Source

Adopted November 2005

Grant Funds shall be invested in accordance with the Government Code §53601, as determined by the City's Chief Financial Officer or his designee.

Grant Fund proceeds in excess of \$500,000 shall be retained for smoothing during lean years and/or special project or community benefits, as approved by the City Council.

The Grants Advisory Commission may award grants from multiple funding sources. In the event that an applicant meets funding criteria for more than one funding source, the Commission has the discretion to make awards from any or all funds for which any individual applicant is eligible.

Grant Requests from Schools

Adopted November 2008
[June 21, 2017](#)

~~Effective with the 2009-10 grant funding cycle, individual schools may compete for a maximum of \$2,500 per school. Each Private School and non-profits School (including its Parent-Teacher Clubs, Boosters Clubs and non-profit school-based programs are eligible to apply and other groups are) is limited to one grant request per site. School districts and school district foundations remain eligible to compete for the Target Maximum Amount adopted for the funding year.~~

~~The Grants Advisory Commission (GAC) and the City Council strongly support education and have funded requests from individual schools, PTC's, Booster Clubs, school districts, school district foundations and non-profit school-based programs. Grants have funded a wide variety of projects; as a result it is difficult to determine the overall impact of the grants.~~

~~In recent years, the percentage of grants requesting support for schools or school-based programs has steadily increased. In addition, the size of requests has increased. The Commission adopted this policy in order to serve many segments of the community and to support significant district-wide projects while still allowing individual schools to compete for smaller amounts.~~

RESOLUTION NO. 17-281

APPROVING REVISIONS TO THE CITIZENS BENEFIT FUND POLICY MANUAL

WHEREAS, the Grants Liaison reviews policies and procedures annually in an effort to improve efficiencies and streamline processes; and

WHEREAS, this year, staff recommends policy revisions to improve efficiencies and reduce Commission and City staff time relating to program policy management, as follows:

Efficiency Recommendations

- Grants Staff Liaison will review Grant applications to verify completeness and required documents
- Eliminate Appeal process

Program Policy and Management:

- Deleted maximum funding limits
- Deleted Public School and City of Roseville and departments therein, from applying

WHEREAS, these recommendations eliminate two Commission meetings and staff time associated with the preparation of staff reports and minutes and attendance of City staff members at those meetings; and

WHEREAS, these recommendations also focus these limited resources on non-profit agencies within the community where the greatest needs can be addressed and allows for larger grants with a greater community impact and increased efficiency in program delivery; and

WHEREAS, City Council has reviewed staff recommendations; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said recommendations are hereby approved.

PASSED AND ADOPTED by the Council of the City of Roseville this ____ day of _____, 20__, by the following vote on roll call:

AYES – COUNCILMEMBERS:

NOES – COUNCILMEMBERS:

ABSENT COUNCILMEMBERS:

MAYOR

ATTEST:

**City of Roseville
Citizens' Benefit Fund
Policy Manual**

Purpose

The purpose of the Citizens' Benefit Fund Policy Manual is to:

- ◆ Document the policy decisions of the Grants Advisory Commission and Roseville City Council regarding the Citizens' Benefit Fund by year and by topic;
- ◆ Serve as a reference for new Grants Advisory Commissioners and Roseville City Councilmembers as to program implementation; and
- ◆ Answer questions from the public regarding the grants process, including questions from potential grant applicants, and current grant recipients.

Chronology of Citizens' Benefit Fund

Jun 1, 1994	Grants Advisory Commission established by Ordinance 2774. Hospital Proceeds Fund Established by Ordinance number 2788. Chapter 4.06 is added to the Roseville Municipal Code to establish the Hospital Proceeds Fund.
Jul 12, 1994	City Council approves criteria and first grant application.
Jan 25, 1995	Joint City Council/Grants Advisory Commission Workshop to discuss Grant application process, including estimated timeframe for processing grant applications and restricting grant funds to benefit Roseville residents only for specific project, rather than general funding; no funding for administrative costs, audit procedures following Grant awards; procedures to notice Commission meetings and interviews with applicants.
Sep 10, 1997	Joint City Council/Grants Advisory Commission Workshop to discuss grant consideration process, appeal opportunities, award process, stewardship of funds, application form changes, multiple year funding, auditing, collaboration of organizations, grant requests for capital projects, city projects or from agencies outside the city.
Dec 16, 1998	City Council approves formal process to consider modifications to approved grants and adoption of marketing program for the Citizens' Benefit Fund.
Aug 18, 1999	Ordinance 3388 adopted by the Roseville City Council amending Chapter 4.06 of the Roseville Municipal Code. Amendments include: 1. Name change from Hospital Proceeds Fund to Citizens' Benefit Fund to reflect opportunity for donations to the fund from the community rather than limited principal amount from sale of municipal hospital. 2. Amendment to Section 4.04.040, Expenditures of Money, to indicate unappropriated amounts may be carried forward to subsequent fiscal years, or at the discretion of the City, may be added to the principal.
Jul 10, 1999	Joint City Council/Grants Advisory Commission Workshop to discuss policies related to requirement for matching funds, grant funding for leased vs. owned property, perpetual funding, monitoring/annual reports, and Ad Hoc Committee.
Nov 3, 1999	City Council adopts policies related to issues from joint Commission/Council workshop.
Dec 3, 2003	City Council approves Grants Advisory Commission recommendations for funding criteria and process improvements following three workshops by the Commission and the first REACH/Enron funding cycle.

Dec 15, 2004	City Council approved Grants Advisory Commission recommendations for revisions as a result of AB 2690 – repealing the requirement that volunteers be paid prevailing wages and eliminating the mandatory workshop.
December 19, 2012	The City Council approved a financial report on the Citizens' Benefit Fund (CBF) and a work plan for a comprehensive grants policy review.
May 29, 2014	GIM to the City Council regarding completion of phase 1 in the Comprehensive Grants Review Process – Historical Assessment Report of the Roseville Grants program.
April 20, 2015	Joint City Council/Grants Advisory Commission Workshop to discuss policies relating to administration of the fund and fund investment and program options.
December 16, 2015	City Council considered and reaffirmed: 1. Retention of the Citizens' Benefit Fund (CBF) with the City to be invested and administered by the City. 2. Retention of the Grants Program and Commission with administration by the City. 3. Revision of the Citizens' Benefit Fund (CBF) Policy Manual and Guidelines, as follows: a) Accept investment strategy revisions expanding strategy consistent with Government Codes. b) Reaffirm smoothing strategy to hold back proceeds in excess of \$500K and establish new policy for annually utilizing proceeds in excess of \$500K for smoothing or special projects or community benefits. c) Reaffirm the nine (9) funding program categories. d) Retain limits on school districts and schools, as approved by the Grants Commission. e) Continue policy that the City Manager, or his designee, approve grants submitted for City requests. f) Confirm no giving priorities with each funding request to be evaluated on its own merits. g) Establish a policy for an annual needs assessment for Council to consider and establish priorities for the coming funding cycle.
June 17, 2017	City Council approved revisions to Grants Policy Documents to streamline program procedures relating to administration of Grants program. Additionally, Grants have been focused and aligned to solely private schools and non-profits entities.

Adopted Policies of the Grants Advisory Commission and Roseville City Council 1994-2017
--

Criteria for Grant Applicants

Original Criteria and Application Submittal Requirements (6/94, 2/16)
Americans with Disabilities Act Compliance (1/99)
Bids Required for Capital Items to be Included (1/96, 10/99)
Funding for Religious or Sectarian Activities Prohibited (1/99)
Grant recipients located in Roseville (9/97)
Ownership or Long-term Lease of Property Improved by Grant Funds (11/99)
Compliance with State of California Prevailing Wage Law – SB 975 (11/02) & AB 2690 (12/04)
Tax Status (12/03)

Process-Related Policies

Annual Review (10/13, 6/17)
Recipient Reporting (11/99)
Appeal of Grant Advisory Commission Decision (9/97, 6/17)

Funds Expended within One Year (8/97)
Line Item Review (11/99)
Applicant Workshop (9/97)
Process to Amend or Extend Timeframe of Approved Grants (12/98)
Site Visits (12/03)
Application Review and Process (12/03, 2/16, 6/17)

Funding Policies

Categories and Target Maximum Amount (9/97, 12/03, 2/16, 6/17)
Matching Funds Not Required (11/99)
Multiple Applications from One Agency (12/03, 6/17)
Multiple Year Grants (9/97, 12/03)
Perpetual Funding (11/99)
Fund Investing and Funding Source (11/05, 2/16)
Funding for Schools (11/08, 6/17)

Criteria for Grant Applicants

Original Criteria and Application Submittal Requirements

Adopted July 6, 1994
Revised February 17, 2016

The original criteria and application form were established by the Grant Evaluation Criteria Subcommittee in 1994. The subcommittee conducted public meetings on May 24, June 14, and June 27 to discuss and revise the guidelines and presented their draft, adopted by the Commission on June 27th to the City Council on July 6, 1994.

The criteria included a points/rating system that was not adopted by the Commission. A majority of the questions in the current application were as originally drafted. New policies that have amended the application over time are discussed in this manual.

In January 2014, the Grants Advisory Commission approved, and made a requirement that all, Grant Applications be submitted via an online web-based program.

Americans with Disabilities Act Compliance

Adopted January 1999

The Commission added a question to the application form requesting specific information regarding compliance with the Americans with Disabilities Act. The City is not allowed to fund programs or services by agencies that do not comply with ADA. Applicants are also required to comply with state disability laws, which in many cases are more stringent than the federal ADA law.

Bids Required for Capital Items

Adopted January 1996
Revised October 1999
Revised February 17, 2016

In January 1996, the Commission adopted a requirement for applicants to submit bids for capital expenditures. Capital projects costing \$2,499 and under must have 3 documented telephone bids. Capital items costing \$2,500 and above must have 3 written bids included. Bids do not have to be awarded to the lowest bidder; bids should be awarded to the most responsible bidder.

This language was modified in October 1999 by the Commission and approved by the City Council based on input from grant applicants. In some instances, three bids are not available for specialized equipment that may be manufactured by only one or two companies. Also, in most cases, telephone, online and written bids are only valid for 30 to 60 days or less; the grant application process runs from February to June (120 days) for final approval, which extends beyond the expiration date for the bids. The bids are still to be included in the packet, but with notations if less than three bids are included.

Bid Requirements: Individual items costing \$250 - \$2,499 require 3 documented telephone, online or written cost estimates. Individual items \$2,500 or greater require 3 written cost estimates. Individual items less than \$250 do not require an estimate.

Funding for Religious or Sectarian Activities Prohibited

Adopted January 1999

In January 1999, the Commission added a question to the application form asking if funding would be used to support any religious or sectarian activities. The City is allowed to fund religious organizations, but the activity, project or program cannot include the promotion a particular religious belief. The City is prohibited from funding religious activities based on laws governing the separation of church and state.

Grant Recipients Located in Roseville

Adopted September 1997

The Commission and Council specified that grant recipients are to be located in Roseville rather than previous wording stating that grant recipients are to be “local.” In practice, this has been interpreted by the Commission to mean that grant recipients that provide service in Roseville, but may have headquarters or offices in other locations, are eligible for funding.

**Ownership or Long-Term Lease for Properties
Improved by Grant Funds**

Adopted November 1999
Revised February 17, 2016

Concerns were raised during the 1999-2000 grant funding cycle regarding the investment in properties by grant applicants who do not own the property. The public funds are therefore making the property of a private citizen more valuable. Grant applicants are required to submit ownership documents and/or copies of lease agreements that reveal how long the property will be leased by the applicant. With long-term leases, the value of any capital improvements will depreciate over time and benefit the grant recipients directly. The Commission recommended and the Council adopted a policy to review the applicants with long-term leases on a case-by-case basis. Staff is to look at the amount of grant funding requested and the use of the funds in particular.

Compliance with California Prevailing Wage Law – SB 975

Adopted November 2002
Revised December 2004
Revised February 17, 2016

The California Labor Code as amended by SB 975 in 2000 affects applicants to the Citizens’ Benefit Fund in two ways: the requirement to pay prevailing wages for public or private works of improvement that receive public funds and the use of volunteer labor.

By Interoffice Memorandum from the City Attorney’s Office to the City Manager’s Office dated September 20, 2002, the attorney clearly states applicants must comply with the SB 975. The memo details the policy for the State Prevailing Wage Laws and the Applicability to Volunteer Labor. The memorandum is attached as Appendix G to the Policy Manual.

By Interoffice Memorandum from the City Attorney’s office to the City Manager’s office dated August 31, 2004, the requirement that prevailing wages be paid to volunteers on public works projects was repealed by urgency legislation signed by the Governor.

Under the new law, AB 2690, the requirement to pay prevailing wages does not apply to volunteers, volunteer coordinators, or members of the California Conservation Corps or Community Conservation Corps. Although a volunteer cannot be paid, the volunteer may receive reasonable meals, lodging, transportation, and incidental expenses or nominal non-monetary awards without losing volunteer status if those benefits and payments are not a substitute form of compensation for work performed. The Memorandum is attached as Appendix H to the Policy Manual.

State Prevailing Wage Laws. Any grant applicant receiving \$1,000 or greater in public monies, in this case, Citizens' Benefit Funds, must pay prevailing wages to all workers employed on public works. Public works actually includes any public or private work of improvement, and is defined as "construction, alteration, demolition, installation, or repair work done under contract and paid for in whole or in part out of public funds." (Labor Code Section 1720 (a)(1)).

Exceptions to the law include public utility improvements, carpet installation, transportation projects, and certain residential and low-income housing projects. (Labor Code Section 1720(a)).

An applicant or their advisor may request the Director of Industrial Relations to provide an opinion as to the applicability of SB 975 to their project. Previous opinions and current prevailing wages can be found at the state agency's web-site: www.dir.ca.gov.

Tax Status

Adopted December 2003
June 21, 2017

The Grants Advisory Commission is recommending that only agencies with the following tax status be eligible for funding.

- 501(C) 3
- 501(C) 4
- Private schools

Applications from agencies that are not within one of these categories will be ineligible. For example, 501 (C) (6) are not eligible because 1) by definition they exist primarily to serve their members rather than the community at large and 2) they can lobby and take political positions on issues, thus creating potential for conflict of interest.

Process-Related Policies

Annual Review

Adopted October 2013
Revised February 17, 2016
Revised June 21, 2017

The Grants Staff Liaison will annually review the Grant Application and Guidelines, and make revisions to improve efficiencies. The Grant Application and Guidelines shall reflect, but is not limited to: 1) current funds available; and 2) Council priorities, if identified.

Recipient Reporting

Adopted November 1999
Revised November 2005, 2008
Revised February 17, 2016

Beginning with the 2009-10 funding cycle, applicants who fail to submit a Final Report for a grant received from the preceding funding year are not eligible to apply during the subsequent funding year, or any future funding cycle until at least one year after the Final Report has been submitted.

Beginning with the 2006-2007 funding cycle, each recipient is required to submit a report describing the expenditures and accomplishments achieved with the grant funds. The report is due within 30 days of the end of the grant period. In addition, the Commission at its discretion may also require a grant recipient to submit a “mid-year” report due six months from the grantee’s initial receipt of funds.

Appeal of Grant Advisory Commission Decision

Adopted September 1997
Revised June 21, 2017

There is no appeal of Grant eligibility made by the Grants Staff Liaison or allocation recommendation made by the Commission. Final allocation decisions are made by the City Council.

Funds Expended within One Year

Adopted August 1997

Based upon several requests from agencies that funds be carried over to another fiscal year, or be used for additional purposes, the Commission voted to revise all forms stating that funds must be expended during the fiscal year for which the grant was included in the City budget. The Citizens' Benefit Fund contract was also amended to state that all funds must be spent within one year.

Line Item Review

Adopted November 1999

The City Council reaffirmed a standing practice that individual grant applications may be reviewed by the City Council following the recommendations being forwarded by the Grants Advisory Commission. The City Council reviews the recommendations as part of the annual budget adoption in June of each year. Councilmembers may "pull" individual grant applications for discussion, questions, and separate action.

Applicant Workshop

Adopted September 1997
Revised November 2004
Revised February 17, 2016

The Grants Advisory Commission strongly encourages that a representative from each applying agency attend the applicant workshop, held on the 2nd Tuesday of January.

Process to Amend or Extend Timeframe of Approved Grants

Adopted December 1998

In September 1998, the Commission determined that a formal process should be established to clearly define the requirements in the event a change to an approved grant was requested by a grant recipient. Through the work of Policy Subcommittee members, Sylvia Besana, Carol Garcia, and Susan Rohan, guidelines and a standard form were drafted for use by future applicants. Appendix F includes the Guidelines and Form approved by the City Council on December 16, 1998. As stated in the Guidelines, the City does not encourage amendments to approved grants. Circumstances may warrant flexibility by the Grants Commission and the City Council; however, only if the criteria established by the Policy Subcommittee are met and the amendment process is followed.

Site Visits

Adopted December 2003
Revised February 17, 2016

The Commission reached consensus to NOT conduct site visits during the application period (January through May) and to limit visits to other times during the year.

If individual Grants Commissioners visit applicants during the process of reviewing grants, they may receive information in addition to that contained in the written application that is not

received by the other Commissioners. The City's criteria specifically states the grant will be awarded based upon the written materials provided to the Commission for its consideration.

Application Review and Process

Adopted December 2003

Modified October 2013
Revised February 17, 2016
Revised June 21, 2017

The Grants Commission Staff Liaison shall review and either approve or disqualify each grant application. Staff will make their decisions based upon the materials submitted by the agency and/or organization. Grant applications submitted without required and/or complete documents will be disqualified. Grant applicants do not have the right to appeal disqualifications.

The Grants Advisory Commission will meet in the Council Chambers on the second Tuesday of April to review and recommend final funding for each grant application.

Funding Policies

City Projects

Adopted September 1997
Reaffirmed October 1999
Revised February 2016

Due to the limited amount of funding in the community and the high level of local need for qualifying projects, City projects and programs will no longer qualify for funding.

Categories and Target Maximum Amount

Adopted September 1997
Revised December 2003
Revised February 17, 2016
Revised June 21, 2017

The City Council approved nine (9) CBF Categories, as follows (listed in alphabetical order, not level of emphasis):

- Animals – This category benefits animals (shelters and rescue).
- Arts & Humanities – This category benefits modern languages, literature, philosophy, visual and performing arts.
- Environmental – This category benefits the natural world and/or promotes education and protection of the natural world.
- Health – This category includes all services performed, provided or arranged to promote, improve, conserve or restore mental or physical well-being.
- Human Services – This category focuses on human needs focused on prevention and remediation of problems and improving the overall quality of life of service population.
- Public Society Benefit – This category includes organizations for larger public benefit and not directed to one defined class of beneficiaries (rotary clubs, learning centers, Chamber of Commerce, 4th of July community celebration).

- Recreation & Sports – This category benefits activities done for enjoyment or competition. The City of Roseville and departments therein, shall not be eligible to apply.
- Schools – This category benefits private educational institutions and school-based associations that seek to enrich the education experience. Public Schools and Districts may not be eligible to apply.
- Youth – This category benefits minors in challenging circumstances that have faced obstacles.

For a more detailed definition of approved CBF Categories, please refer to the 2013 Historical Assessment of the Roseville Grant Program (Appendix I). At its discretion, the Grants Advisory Commission, with action by the City Council, may wish to prioritize the above-stated categories for CBF funding for a given application year.

In an effort to ensure efficient use of time staff and city resources, the Grants Advisory Commission and City Council may establish a minimum grant amount for this process. There shall not be any maximum funding level established within a grant cycle and each application shall be reviewed and funded based on the value and benefit to the community. The establishment of a minimum funding level and no maximum will result in funding fewer applications at greater funding levels. Collaborative applications and reductions in service duplication will be considered favorably, as well as applications that address existing gaps in community services.

Matching Funds Not Required

Adopted November 1999

The City Council approved the Grants Advisory Commission recommendation that matching funds not be required of grant applicants. Mandating that matching funds be required would limit the application numbers and the flexibility of the Commission and Council to award grants to worthy applicants. Matching funds will be a component of the evaluation by Commissioners and Council in determining which applicants have demonstrated their commitment to a project, but will not be mandatory.

Multiple Applications from One Agency

Affirmed December 2003
Revised November 2004
Revised June 21, 2017

The Commission agreed that the practice of allowing multiple grant applications from a single agency should be continued. The Commission did not want to limit agencies with worthy programs from applying. Applications are judged on their individual merit.

Multiple Year Grants

Adopted September 1997

The Grants Advisory Commission and City Council discussed, but voted against allowing grant applicants to apply for funding beyond one fiscal year. Funding is only available for the fiscal year in which the grant is approved.

Perpetual Funding

Adopted November 1999
Reaffirmed December 2003

The City Council approved the Grants Advisory Commission recommendation that no limit be set on the number of years a grant applicant may receive funding. Grant applicants will be judged on their individual merit each year.

The Commission and Council affirmed this policy after discussion in 2003. There are several agencies that receive repetitive funding from the Citizens' Benefit Fund. In fact, five organizations have received funding in all of the past ten funding cycles, and six organizations have received funding in eight of the last ten funding cycles. The Commission agreed that because the agencies provide worthy services to the community and Commissioners do an independent evaluation each year, there should not be a limit on repetitive funding.

Fund Investing & Funding Source

Adopted November 2005
Revised February 17, 2016

Grant Funds shall be invested in accordance with the Government Code §53601, as determined by the City's Chief Financial Officer or his designee.

Grant Fund proceeds in excess of \$500,000 shall be retained for smoothing during lean years and/or special project or community benefits, as approved by the City Council.

The Grants Advisory Commission may award grants from multiple funding sources. In the event that an applicant meets funding criteria for more than one funding source, the Commission has the discretion to make awards from any or all funds for which any individual applicant is eligible.

Grant Requests from Schools

Adopted November 2008
Revised June 21, 2017

Private School and non-profit Parent-Teacher Clubs, Booster Clubs and non-profit school-based programs are eligible to apply and are limited to one grant request per site.

File#: 0201

Title: City of Roseville FY2017-18 Budget
Contact: Kathy Cullen 916-746-1306 kcullen@roseville.ca.us

Meeting Date: 6/21/2017

Item #: 9.1.

RECOMMENDATION TO COUNCIL

Adopt the proposed FY2017-18 budget ordinance and approve the changes to the position allocations, out-of-state travel requests, and new vehicle requests.

BACKGROUND

Fiscal Summary: The proposed citywide FY2017-18 budget is \$507.1 million. The proposed FY2017-18 budget for the General Fund is \$146.61 million, which includes operating expenditures and transfers out (\$137.03 million) as well as capital projects, debt, and non-recurring expenditures and transfers out (\$9.58 million). Operating and non-operating revenues and transfers in also total \$146.61 million led by increases in sales and property taxes. The net result is a balanced General Fund where revenue is equal to expenses without the use of one-time funds in FY2017-18.

Public Hearing Summary: Two public hearings for the FY2017-18 proposed budget were held on June 6 and June 7, 2017. The following is a summary of the outcome:

During the public comment section of the hearings, a few questions were asked and staff was requested to provide answers. They were as follows:

Questions Regarding the Parks Departments Budget

1. What is the attendance at Town Square Concerts?

The average attendance at concerts is 1,400.

2. What is the Maidu Museum & Historic Site annual attendance?

Approximately 54,000 visitors annually, which includes school tours, daily museum visits, programs and events.

3. What is the frequency of non-routine tree maintenance and how much did we spend?

We had 448 tree inspection calls during the last fiscal year. Costs in FY 2016 were \$168,000 and are broken down as follows:

- \$70,000 Hazards
- \$90,000 Encroachment
- \$ 8,000 Nuisance

An example of a nuisance call may be a tree that is impacted by secondary pests (aphids) which excretes sticky residue and can drip on cars and sidewalks which could be treated. Historically from this call, the tree could receive the prescribed treatment. Our ability to respond moving forward will be limited as the available dollars will be focused on hazards and safety.

An example of an encroachment issues may include tree branches over a homeowner's yard dropping leaves and needles onto patios or pools. In the past through our site visit tree inspection, we would determine the level of encroachment. We will now focus on those that have a safety or hazardous element.

4. What are the Impacts of proposed reductions:

The budget dollars will focus on hazards and safety. Certain non-routine tree maintenance varies from year to year depending on factors such as storms, drought, heavy winds, etc. Inspections will occur but corrective action will be limited on nuisance and encroachment issues. If the budget is depleted, we may seek additional funding through the contingency fund on an as needed basis.

Questions Regarding the Fire Departments Budget

1. City management stated they would not make any cuts prior to the CPAC committee. Is this still true or has the plan changed?

No. The purpose for the Council workshop in April was to identify specific cuts to balance the budget this year. The efforts of the CPAC committee will guide budget decisions in FY 18-19.

2. Is it true that the fire department staffing currently has nine vacancies?

Yes. The fire department is currently testing for the positions of Firefighter 1 and Firefighter 2. The testing and selection process will be completed by June 23rd. Fire will then begin the background checks and pre hire physicals. Academy and on boarding of the new hires is scheduled to begin late July early August.

3. Do you believe the fire at Dick's sporting goods was positively impacted by having a fourth person on the trucks?

The goal of the department is to ensure that appropriate resources are available for all incidents, either through City resources or through mutual aid. The Fire incident at Dick's was a greater alarm assignment which required numerous units be dispatched from Roseville and Rocklin. The fire was positively impacted by speed and placement of all of the units that responded to the fire. The use of the ladder pipes from the two trucks contained the fire to the area of origin preventing spread to the businesses to the west and east of the Dick's building under construction. Each member on the truck has a different task to perform that has to happen at the same time to get the ladder into operation. The setting up of the Trucks to flow water could have been done effectively with a crew of three but it would take longer to set it up. Firefighting is manual labor. When firefighters arrive at the scene of a fire, a number of firefighting tasks need to happen at the same time to effectively control a fire, rescue those in danger, and minimize damage. The faster that a force of firefighters can be on the scene and working, the better the expected outcome.

4. If the city goes ahead with the planned cuts will it put the lives of the public and fire department members at risk?

No. The proposed changes would require modifications of our operational policies to ensure the safety of both. Fire stations are located strategically throughout the community in order to place resources within acceptable response distance to the areas that the assigned resources are

expected to serve. Response time is one of the most important measurements of fire department performance. Time is critical – two commonly referred to criteria used to quantify the importance of fire department response include (1) time of flashover in a structure fire (where a fire goes beyond the control capability of a single alarm) and (2) the time where irreversible brain damage and chances for successful resuscitation are greatly reduced on an EMS call for patients that are pulseless and non-breathing. The sooner firefighters are on the scene; the sooner the fire can be controlled. Likewise, if a person has a heart attack and becomes unconscious, time is of the essence. The longer someone goes without medical assistance, the lesser the chances of survival.

The Roseville Fire Department has established six response performance measures based on its current capabilities and resources, along with a benchmark time (goal to reach) and our baseline, or current times.

RFD Overall Priority Call Baseline Response Times:

All Incidents - Department-Wide							
90% Baseline Performance	Overall	2010	2011	2012	2013	2014	2015Q1Q2
Call Processing	01:49 (53,526)	02:03 (9,317)	01:56 (9,281)	01:42 (9,941)	01:41 (10,178)	01:44 (10,225)	01:48 (4,584)
Turnout	01:56 (50,986)	01:56 (8,756)	01:56 (8,637)	01:54 (9,265)	01:55 (9,479)	01:55 (9,629)	02:01 (5,220)
Travel-Distribution	05:11 (53,286)	05:11 (9,131)	05:05 (9,124)	05:11 (9,706)	05:08 (9,864)	05:15 (10,024)	05:18 (5,437)
Call to Arrival-Distribution	07:39 (54,153)	07:51 (9,262)	07:41 (9,232)	07:36 (9,882)	07:30 (10,074)	07:38 (10,191)	07:38 (5,512)

The number in parentheses is the number of calls assessed for that statistic. The smaller the number, the chance for error is increased. These categories are further broken down by call and station in the SOC.

Overall, Roseville Fire's baseline response goals are within reasonable time standards for a community of our size and risk. The benchmark goals are not necessarily goals we will ever reach, but are used as best case scenarios and as a measurement to identify how we can strive to improve in each area of response. The five year trend shows our EMS response improved so much that the benchmark was lowered from 08:12 to 07:12. (Reference 2015 Roseville Fire Standards of Cover (SOC).

5. How will you provide for the safety of fire department members/crews?

Instead of business as usual, the department is currently evaluating modifications to its Standard Operational Guidelines that reflect both Strategically and Tactically how we operate on all incidents to accomplish the same goals whether the Truck is at 3/0 or 4/0 staffing. The safety of the citizens served by the Roseville Fire Department and the safety of firefighters as they do their work is of the utmost importance.

6. Do you think service to the community will be decreased?

Roseville Fire department will remain appropriately staffed and equipped to respond to fire incidents in the City as well as providing automatic and mutual aid to neighboring agencies throughout the State of California. Current response assignments for some call types such as these: "Low Level first alarm structure response for a smoke odor or possible fire response consists of two (2) engines, one (1) truck, and one (1) Battalion Chief; or a working fire incident, either residential or commercial, sends a High Level response for working structure consisting of four (4) engines, two (2) trucks, two (2) Battalion Chiefs and one (1) ambulance." All of these incidents are being analyzed to determine whether the needed effective response force number can be met without adding units after decreasing the Truck staffing. All Roseville Firefighters are

certified by the State of California to the "Firefighter I or II" level and each holds current Emergency Medical Technician I certification or Paramedic licensure.

Fire will continue to assess response assignments and make changes as needed that maintain low initial response times. In addition, the department will

- Use Technological advances in CAD, station, and unit Alerting, and Routing when available.
- Adjust training schedules based on data and peak call times.
- Take advantage of remote training through Target Solutions where possible.
- Evaluate Move-up and cover assignment needs continually throughout the day.
- Use pre-alerting mobile technology methods such as Active 911 and Data Analysis and GIS advances.
- Continually work with partner agencies to refined Auto Aid and Mutual Aid Agreements.

7. Emergency Preparedness had a significant decrease in funding as shown on page B-62. Why?

In FY2016/17 the Emergency Preparedness amended budget was \$303,417 which continued the funding for city-wide Emergency Preparedness continue education for all city departments. In the FY2016/17 the bulk of the Emergency Preparedness funds completed technological upgrades to the Emergency Operation Center (EOC) at Martha Riley Library. FY2017/18 proposed budget funds are to continue providing continuing education on disaster management to City employees and EOC exercises.

8. The city has stated they calculate a 4% vacancy rate for all departments in the city. Does the fire department have to meet the vacancy factor? What is the fire department vacancy factor?

Vacancy factors are not mandated for any department. Ideally, all departments are fully staffed. However, this simply is not the case as retirements and employees leaving the organization create vacancies that occur until the positions are filled.

Other items:

City Council has established a policy of maintaining ten percent (10%) of operating expenditures for economic uncertainties in the General Fund and utility operating funds. The FY2017-18 budget meets this policy and includes a General Fund Emergency Reserve Fund, which contains 10.3% of the FY2017-18 operating expenses.

The City Charter (Section 7.21) provides for an annual adjustment to the bid amount. The change in the Consumer Price Index adjusts the bid amount from \$21,745.00 to \$22,265.00

Two additional appropriations are requested to be added to the budget. The first is to add \$250,000 in appropriations for the Litigation Reserve Fund. These funds are available in the Litigation Reserve Fund, however the appropriation was not included in the budget document originally submitted. The second is to add \$400,000 in appropriations for the Citizens Benefit Trust. These funds are available in the Citizens Benefit Trust, however the appropriation was not included in the budget document originally submitted.

FISCAL IMPACT

The budget document provides a financial summary of each City fund. Departmental goals and objectives are outlined in the Operating Budgets section with the expected funding required to

meet the performance goals. Capital Improvement Projects totaling \$73.08 million are provided and include project descriptions and funding sources.

ECONOMIC DEVELOPMENT / JOBS CREATED

This action will create 9.25 new jobs.

ENVIRONMENTAL REVIEW

The budget is not considered a “project” as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines 15378). Consequently no CEQA action is required.

Respectfully Submitted,

Kathy Cullen, Budget Manager

Jay Panzica, Chief Financial Officer

Rob Jensen, City Manager

Description

Ordinance No. 5842

ORDINANCE NO. 5842

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE
ADOPTING THE ANNUAL BUDGET FOR THE FISCAL YEAR 2017-2018,
ADOPTING BUDGET CONTROL POLICIES, ADOPTING AN APPROPRIATIONS LIMIT,
ADOPTING THE BUDGET FOR THE SUCCESSOR AGENCY OF THE ROSEVILLE
REDEVELOPMENT AGENCY, AND ESTABLISHING THE
SEALED BID REQUIREMENT, TO BE EFFECTIVE IMMEDIATELY
AS AN URGENCY MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. The proposed budget for the City of Roseville entitled "Proposed Budget Fiscal Year 2017-2018, City of Roseville, California," a copy of which is on file in the office of the City Clerk, is hereby adopted as the "Annual Budget 2017-2018, City of Roseville, California."

SECTION 2. The proposed expenditures shown in the Department, Division, and Fund Summaries of the budget document, which are incorporated herein, are hereby appropriated to the organization keys ("Org Keys"), offices and operations in the amounts and for the objects and purposes therein stated. Requisitions for encumbrances and expenditures of the various appropriations described in the budget document shall be made by those offices and employees designated therein as the requisitioning authorities.

SECTION 3. The following Budget Control Policies shall become effective upon the adoption of this ordinance:

1. The operating Budget of the City of Roseville and the Successor Agency of the Roseville Redevelopment Agency shall be approved within the major summary categories of
 - a. Salaries and Benefits
 - b. Operating Services and Supplies
 - c. Capital Outlay
 - d. Internal Service Funds Materials, Services, and Supplies
2. Capital Improvement Projects. The Capital Budget of the City of Roseville and the Successor Agency of the Roseville Redevelopment Agency shall be approved by Capital Improvement Project.
3. The City Manager or designee shall apply prudent monitoring procedures to assure that actual expenditures/expenses of the City and the Successor Agency of the Roseville Redevelopment Agency do not exceed the appropriations, by Org Keys, of the above summary categories.
4. Appropriation increases and transfers to or from funds, Org Keys, or the major summary categories shall require approval by the City Council.
5. The City Manager and City Treasurer are directed to implement and maintain reserves or rate stabilization funds of approximately ten percent (10%) of General

Fund Net Operating Expenditures and total operating expense for applicable utility funds as an Appropriated Reserve for economic uncertainties.

6. The City Council delegates authority to the City Manager to approve the movement of City Council approved appropriations within the same fund, excluding Capital Improvement Projects and annual projects.

SECTION 4. Two additional appropriations are requested to be added to the budget. The first is to add \$250,000 in appropriations for the Litigation Reserve Fund and the second is to add \$400,000 in appropriations for the Citizens Benefit Trust.

SECTION 5. Pursuant to Article XIII B of the California Constitution, the appropriations limit for the City of Roseville is hereby established as \$156,023,750 for Fiscal Year 2017-2018. The State Department of Finance provides the City the annual adjustment factors used in the appropriation limit calculation. The factors are the changes in the California Per Capita Personal Income and population levels for the City or the County.

SECTION 6. Sealed bids are required, pursuant to Section 7.21 of the Roseville Charter, for all purchases and public works exceeding \$22,265. This amount has been inflated by the consumer price index per provision of Section 7.21.

SECTION 7. It is hereby ordered that a copy of this ordinance and the budget document be certified by the City Clerk and filed in the office of the City Clerk. The City Clerk is directed to post a copy of this ordinance in three (3) conspicuous locations in the City and enter the posting thereof in the Ordinance Book.

SECTION 8. This ordinance is required for the orderly operation and maintenance of municipal activities and the appropriations for usual and current expenses of the City and the Successor Agency of the Roseville Redevelopment Agency during the 2017-2018 fiscal year. Therefore, this ordinance shall take effect immediately upon passage hereof as an urgency ordinance, pursuant to Section 5.03 of the Charter of the City of Roseville.

COUNCIL COMMUNICATION

CC #: 8568

File #: 0103-03-02

Title: Housing Authority - FY2017-18 Annual Budget
Contact: Melissa Hagan 916-774-5476 mhagan@roseville.ca.us

Meeting Date: 6/21/2017

Item #: 9.2.

RECOMMENDATION TO COUNCIL

Staff is recommending that the City Council, acting as the Board of Directors of the Roseville Housing Authority, approve by resolution the Roseville Housing Authority's FY 2017-18 budget, included as Attachment A.

The Housing Choice Voucher program provides rental assistance to 663 families in the City of Roseville and Rocklin and infuses over \$4 million of federal funds into the local economy each year through payments to apartment complexes and property owners who participate in the Housing Choice Voucher program. The Housing Authority receives its funding from the federal Department of Housing and Urban Development (HUD).

BACKGROUND

The Roseville Housing Authority (Housing Authority) was formed in October 1974 and has provided over 40 years of service to its very low and extremely low income residents by helping ensure access to quality, affordable, and safe housing, and by promoting attainment of economic self-sufficiency. To that end, the Roseville Housing Authority provides rental assistance vouchers to 663 families through the Housing Choice Voucher (HCV) program; a program administered by the U.S. Department of Housing and Urban Development (HUD), whose budget is appropriated by Congress each year. The HCV program serves extremely low and very low income residents, non-elderly disabled persons, and veterans through the Veterans Affairs Supportive Housing (VASH) program. Additionally, by administering the HCV program, the Housing Authority's policies and actions are supporting the City of Roseville's actions to retain compliance with State of California Housing Element law, which among many other requirements, mandates local governments to adequately plan for and meet their affordable housing goals and needs for workers, families, seniors and persons with disabilities.

The Housing Authority is a separate legal entity and therefore its budget is separate from the City of Roseville. However, since it is a component unit of the City, activities related to administering the program are performed by city employees who charge between 30% and 90% of their time to the program. Additionally, as a component unit, its financial activities are audited annually and its

financial statements are included in the City of Roseville's Comprehensive Annual Financial Report.

Budget Analysis

The Housing Authority has one fund that accounts for its activities with revenues and expenditures presented in the attached Fund Summary (Attachment B). The revenues and expenditures for FY 2017-18 are summarized as follows:

REVENUES	AMOUNT
HUD revenues for rental assistance (prorated)	\$4,050,503
HUD admin revenues for Admin (Payroll and Supplies)	\$635,898
Misc revenues (Admin from other Agencies, Repayment Agreements)	\$27,048
HUD Unrestricted Fund Balance	\$54,431
Total Estimated Revenues Available for Appropriation	\$4,767,880
EXPENDITURES	AMOUNT
Housing Choice Vouchers (rental assistance)	\$4,050,503
HUD Restricted Fund Balance (HAP)	\$9,448
Salaries and Benefits	\$620,610
Materials, Services and Supplies & Indirect costs	\$87,319
Total Estimated Expenditures & Transfers Out	\$4,767,880

Revenues

Housing Assistance Renewal Funding

HUD funds the Housing Choice Voucher rental assistance program based on activity that occurred within the benchmarking period of January through December, and awards the funding on a calendar year basis. Additionally, HUD takes into account the total amount of funding appropriated by Congress for the entire federal program and sets a proration factor based on their analysis.

The renewal funding for Calendar Year 2017 which includes six months of FY 2018, was approved by Congress in May of 2017 and is based on the amount that was reported to HUD for CY2016. This funding will be available until September 30, 2017 which is the end of the 2017 federal fiscal year. As of the date of this report, the President's 2018 proposed budget (October 1, 2017 through September 30, 2018) includes reductions to the HCV program however they have not been approved by Congress, therefore the Housing Authority is estimating level funding for FY2017-18 and will amend the budget if necessary at a later date.

For the FY2017-18 budget, the HCV rental assistance program is estimated to receive \$4,050,503 including funding for the Veterans Affairs Supported Housing program (VASH). The VASH program, in its third year for the Housing Authority, is a joint effort between HUD and the Veterans Affairs to move Veterans and their families out of homelessness and into permanent housing. HUD provides housing assistance through its HCV Program and with the VA provides case managers to assist homeless Veterans in securing and maintaining permanent housing

through intensive case management.

Family Self-Sufficiency Program Revenues

Each year, the Housing Authority participates in HUD's Family Self-Sufficiency program which enables families assisted through the HCV program to increase their earned income and reduce their dependency on welfare assistance and rental subsidies. Participants elect to divert a portion of their assistance payments to an interest-bearing account that once having completed the required objectives of the program can be used for a variety of needs such as a down payment on a house, a car or any number of uses.

HUD awards grants to Housing Authorities who compete for the funding which covers all or a portion of the salaries of the coordinator and other staff who help administer the program. For FY2017-18, the Housing Authority is expecting to receive \$66,213 which covers approximately 84% of the salary and benefits for two employees who charge a portion of their time to the FSS program and is included within the budget for Salaries and Benefits.

Miscellaneous Revenues

In addition to serving Roseville residents, the Roseville Housing Authority administers some of the HCV program for tenants that live in Rocklin and so charges the City of Rocklin an administrative fee in order to recoup costs for administering the program. The administrative fee that was recently calculated and budgeted for FY 2018 is \$17,600.00. In addition, repayment agreements due to overpayment of rental assistance to tenants with changes in income is estimated to be \$9,448.

HUD analyzes the Housing Authority's housing assistance expenditures on a quarterly basis and remits only what is needed to fund the payments for each month. Any unused budget is held by HUD in a program reserve account and is readily available if needed. The intent is to minimize the amount of funds held in the Housing Authority's bank account and is referred to as net restricted position (NRP). To that end, the Housing Authority expects to have a minimal fund balance of \$21,923 in its NRP account by June 30, 2018 which basically represents funding for VASH vouchers received by HUD, but not yet leased.

Expenditures

Housing Choice Voucher Payments

The Housing Authority has budgeted \$4,050,503 for housing assistance payments (HAP) for 663 families in the City of Roseville and Rocklin. In this program, participating households must find housing that meets program requirements on the private rental market. Written agreements are signed between the owner, tenant and agency outlining their respective rights and responsibilities. Program participants pay a share of the rent based on their household income, and the Housing Authority pays the rental assistance amount directly to the landlord each month. This funding also includes funds estimated to be placed in an escrow account for the individuals who elect to participate in the FSS program previously discussed. Since the program is funded based on actual expenditures, the budgeted expenditures mirror the revenues expected from HUD for the housing assistance payments for the fiscal year.

Salaries and Benefits / Materials, Services, Supplies and Indirect Costs

The total cost for salaries and benefits for the entire Housing Division is \$1,146,686 and is staffed by 10 Full Time Equivalents (FTEs) who are responsible for the administration, monitoring, and implementation of the city's other federal, state, and local housing and community development funds. Of that total amount, \$620,610 is charged to the Housing Authority by several employees charging between 30% and 90% of their time for a total of 6.0 FTEs. Other funding sources,

including the general fund, cover \$435,754 leaving \$90,323 (8%) of general fund costs that subsidize a small portion of Housing Authority staffing.

BUDGET ITEM	AMOUNT	%
Housing Authority staff	\$620,610	55%
Housing Division staff charged to Other funding sources	309,448	26%
Housing Division General Fund	126,305	11%
Housing Authority Staff – General Fund Subsidy	90,323	8%
Total Housing Division Salaries and Benefits	\$1,146,686	100%

The 8% contribution from the City's general fund for the Housing Authority is mainly non-productive and paid time off that does not get charged to the program. The savings from this contribution provides a guarantee that the Housing Choice Voucher program can continue to provide rental assistance to very low income families in Roseville and Rocklin. The City's funding will also help maintain the admin program reserves estimated to be \$452,877 at June 30, 2018; one-time funds the Housing Authority has accumulated over the years and will likely be needed to offset future increases in operations and personnel costs as was true for this fiscal year. Materials, Services, Supplies and Indirect Costs is \$87,319. This budget is partially covered by the HUD Admin and miscellaneous revenues and \$54,431 covered by the Housing Authority's Unrestricted Fund Balance:

BUDGET ITEM	AMOUNT
HUD Admin Revenue	\$560,238
HUD FSS Revenue	66,213
Other Miscellaneous Revenue	27,047
Total Revenues	653,498
Salaries and Benefits	(620,610)
Materials, Services, Supplies and Indirect costs	(87,319)
Admin Costs covered by Unrestricted Fund Balance	\$54,431

FISCAL IMPACT

The Housing Choice Voucher program provides rental assistance to 663 families in the City of Roseville and Rocklin and infuses over \$4 million of federal funds into the local economy through payments to apartment complexes and property owners who participate in the program. The City's 8% general fund contribution to this valuable endeavor is greatly outweighed by its benefit to the community.

ECONOMIC DEVELOPMENT / JOBS CREATED

The Housing Authority's Housing Choice Voucher program provides an important social service to ensure safe and affordable housing for our residents. Safe and affordable housing is an essential component to the foundation of our community's economic stability. The Housing Authority

provides for a \$4 million influx of investment into the community annually. This influx of capital distributed into the community supports commerce and secondarily supports job creation and retention.

ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment (CEQA Guidelines §15061(b)(3)). Budgets do not include the potential for a significant environmental effect, and therefore are not subject to CEQA.

Respectfully Submitted,

Title: Woodcreek Oaks Boulevard Widening Project - Award of Contract and Budget Adjustment

Contact: Stefanie Kemen 916-774-5372 skemen@roseville.ca.us

Meeting Date: 6/21/2017

Item #: 9.3.

RECOMMENDATION TO COUNCIL

Staff recommends that the City Council:

1. Award the Woodcreek Oaks Boulevard Widening Project to the low bidder, Bay Cities Paving and Grading, Inc. in the amount of \$6,837,558.75;
2. Approve an ordinance for a budget adjustment in the amount of \$7,576,146;
3. Approve a resolution authorizing the City Manager to execute the agreement with Bay Cities Paving and Grading, Inc. and authorizing the Public Works Director or his designee change order authority up to 10% of the original contract price (\$683,755.88).

BACKGROUND

The Council-adopted Roadway Capital Improvement Program calls for Woodcreek Oaks Blvd to have four lanes between Pleasant Grove Boulevard and Blue Oaks Boulevard. The new Campus Oaks Development widened Woodcreek Oaks Boulevard from Blue Oaks Blvd south to Crimson Ridge Way. South of Crimson Ridge Way, Woodcreek Oaks Boulevard currently has two drive lanes, bike lanes, curb, gutter, & sidewalk, and a median designed to accommodate widening of the roadway to four lanes. This project widens this connecting segment of Woodcreek Oaks Boulevard, from Crimson Ridge way south to 600' north of Pleasant Grove Boulevard, into the median to a four lane road. The project includes a new two-lane bridge over the south branch of Pleasant Grove Creek to accommodate the additional roadway. In addition ,this project was a commitment to residents attending the HP Campus rezone neighborhood meetings as mitigation for additional traffic and existing peak time traffic congestion.

The project also includes reconstruction of all non-compliant ADA ramps throughout the project area, sidewalk repairs (as recommended by the Transportation Commission in their November 15, 2016 meeting), and pavement reconstruction in areas specifically identified as deficient by streets maintenance staff, including digouts as required, and micro resurfacing at the end of the project.

Council approved the project plans and specifications and authorized staff to call for bids at their April 5, 2017 meeting. Bids were subsequently opened on May 9, 2017 and two bids were received. The engineers estimate and bids are as follows:

	Bid Results
Engineers Estimate	\$6,800,000.00
Bay Cities Paving and Grading, Inc.	\$6,837,558.75
Teichert Construction	\$7,071,080.00

Staff has reviewed Bay Cities Paving and Grading, Inc.'s bid and found it to be complete and in order. Construction is anticipated to begin in mid-June with completion in August 2018 (includes winter suspension from November 2017 to April 2018).

PUBLIC OUTREACH

Public Works staff will be working closely with our communication staff to keep the community informed of the project's progress and traffic issues during the construction phase of the project. This includes disseminating the latest project information on the City's web page and through news stories, traffic alerts, and social media. About two weeks before the planned work, Changeable Message Signs (CMS) will be placed and staff will send letters to residents and businesses adjacent to the project area. The CMS's will be placed at several locations within the project area to warn the traveling public about the project start and end times and any potential traffic impacts expected with the work. Work is scheduled to occur during regular business hours and traffic lanes will remain open to traffic.

Staff will also send letters to residents and businesses in the project area explaining the planned work and what the recipients can expect before, during, and after the project.

FISCAL IMPACT

The project is funded primarily by Transportation Mitigation Funds, with contributions for maintenance items of work coming from the Landscape/Parks Repair/Maintenance fund and the Gas Tax Fund. Local Transportation Funds will also be used for a portion of the project. The breakdown of these funds are shown below:

Landscape/Parks Repair/Maintenance Funds	\$15,200
Local Transportation Fund	\$51,700
Gas Tax Fund	\$426,182
Transportation Mitigation Fund	\$6,589,984

The project account balance is \$1,904,914. The requested budget adjustment in the total amount of \$7,083,065 will increase the project construction budget to \$8,987,979. This will cover the construction contract, construction contingency, construction management, materials testing, and City staff time. No General Funds will be used.

ECONOMIC DEVELOPMENT / JOBS CREATED

Federal guidelines suggest that there is one job created for every \$92,000.00 in direct government spending. Based on that figure, this project will create 97 jobs.

ENVIRONMENTAL REVIEW

Construction of the Woodcreek Oaks Boulevard Widening Project is an action that is subject to CEQA. Project level CEQA compliance for the Woodcreek Oaks Boulevard Widening Project was accomplished with the preparation of the Woodcreek Oaks Boulevard Widening Project Initial Study/Mitigated Negative Declaration (IS/MND) (Adopted: February 1, 2017) (SCH: 2016102053). Because the Woodcreek Oaks Boulevard Widening Project is consistent with the project evaluated in the IS/MND, no new effects would be expected to occur and all applicable mitigation measures from the IS/MND will be implemented. As such, no additional CEQA action is required at this time.

Respectfully Submitted,

Stefanie A. Kemen, Assistant Engineer

Rhon Herndon, Public Works Director

Rob Jensen, City Manager

Description

Resolution No. 17-249

Agreement with Bay Cities Paving and Grading, Inc.

Ordinance No. 5840

Request for Budget Adjustment

RESOLUTION NO. 17-249

APPROVING AN AGREEMENT BETWEEN THE CITY OF ROSEVILLE AND BAY CITIES
PAVING AND GRADING, INC., AND AUTHORIZING THE CITY MANAGER TO
EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, an agreement between the City of Roseville and Bay Cities Paving and Grading, Inc., for the Woodcreek Oaks Boulevard Widening project, has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is hereby approved and that the City Manager is authorized to execute it on behalf of the City of Roseville; and

BE IT FURTHER RESOLVED that the Public Works Director or his designee is authorized to approve change orders for the project, consistent with the contract terms, provided that the net cost of all change orders shall not exceed ten percent (10%) of the contract price.

PASSED AND ADOPTED by the Council of the City of Roseville this ____ day of _____, 20__, by the following vote on roll call:

City Clerk

A G R E E M E N T

THIS AGREEMENT, is made and entered into this ____ day of _____,
20__, by and between the City of Roseville, a municipal corporation, ("CITY"), and
Bay Cities Paving and Grading, Inc., a _____,
("CONTRACTOR"); and

W I T N E S S E T H:

WHEREAS, the City Council of the CITY, at a meeting held on the 5th day of
April, 20¹⁷__, approved plans and specifications for the _____
Woodcreek Oaks Boulevard Widening Project

and directed the City Clerk to advertise for sealed proposals for doing said work and providing
that bids be submitted on the 9th day of **May**, 20¹⁷__; and

WHEREAS, the City Clerk, thereafter duly and regularly caused a notice to be published
in the manner and for the time prescribed by law; and

WHEREAS, CONTRACTOR, pursuant to the provisions of said notice duly filed a bid
with the City Clerk, a true copy of which bid is now on file in the office of the City Clerk, and is
hereby referred to and by this reference made a part hereof as fully as if set forth at length herein;
and

WHEREAS, all bids received pursuant to said notice were opened and examined and
publicly declared at the time specified in said advertisement for bids and at a meeting of the City
Council held on the 7th day of **June**, 20¹⁷__, the Council found and declared

the bid of CONTRACTOR to be the lowest responsible bid and thereupon awarded a contract to CONTRACTOR to do the work referred to in the aforementioned specifications.

NOW, THEREFORE, the parties agree as follows:

1. THE WORK. CONTRACTOR agrees:

a. To do the work and furnish all the labor, materials, tools, equipment and insurance required for the Woodcreek Oaks Boulevard Widening Project

in accordance with the Contract Documents (the work).

b. To do and perform the Work contemplated hereby in a good and workmanlike manner under the direction of and to the satisfaction of the Director of Public Works of the City of Roseville.

2. PAYMENT. CITY shall pay CONTRACTOR Six Million, eight hundred thirty seven thousand five hundred fifty eight and 75/100 dollars (\$ 6,837,558.75) for the Work.

3. CONTRACT DOCUMENTS. The complete Agreement between the parties hereto consists of the following documents:

- a. The advertisement for bids (including the notice to bidders, instructions to bidders and proposals);
- b. The accepted bid;
- c. Plans and specifications (including standard construction specifications, special provisions and construction details);
- d. Bonds and insurance required by the specifications; and
- e. This contract.

All documents specified above are intended to operate so that any work called for in any one and not mentioned in the other, or vice versa, is to be executed the same as if mentioned in all said documents.

4. LIQUIDATED DAMAGES. In the event CONTRACTOR does not complete the work within the time specified, CONTRACTOR agrees that CITY will suffer damages. Inasmuch as the actual damages which would result from such breach by CONTRACTOR under this Agreement are uncertain, and would be impractical or extremely difficult to fix, CONTRACTOR agrees that it shall pay, or CITY shall deduct from CONTRACTOR's fee, the amount of \$ 5,300 per day as liquidated damages, in the event of such delay.

5. TIME OF ESSENCE. Time is of the essence of this Agreement.

6. ATTORNEY'S FEES; VENUE; GOVERNING LAW. If either party commences any legal action against the other party arising out of this Agreement or the performance thereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorneys' fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

7. INDEPENDENT CONTRACTOR. CONTRACTOR shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

8. SUCCESSORS IN INTEREST. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

9. MODIFICATION. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

10. SEVERABILITY. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

11. INTEGRATED AGREEMENT. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attestation by its City Clerk under authority of Resolution No. _____, adopted by the Council of the City of Roseville on the ____ day of _____, 20____, and CONTRACTOR has caused this Agreement to be duly executed.

ORDINANCE NO. 5840

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE
AUTHORIZING CERTAIN AMENDMENTS TO THE 2016-17
BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY
EFFECTIVE AS AN APPROPRIATION MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. The City of Roseville Annual Budget, Fiscal Year 2016-17, is hereby amended by transferring appropriation to and from the activities indicated below:

Appropriate funds for the Woodcreek Oaks Boulevard Widening Project per request of the Public Works Department, as listed on the attached Request for Budget Adjustment totaling \$7,576,146.00

SECTION 2. This ordinance is hereby declared to be an appropriation measure, immediately effective pursuant to the provisions of Section 5.03 of the Charter.

SECTION 3. The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the ordinance book, under the record of the ordinance, a certificate under her hand stating the time and place of such publication by posting.

Justification for Budget Adjustment*:

These funds are for the construction of the project, based on the actual bids received. The project account balance includes only the planning level budgetary estimate of TMF funds anticipated for construction. Additional pedestrian features, streets maintenance, and parks development maintenance features were added to the project and the appropriate funds to cover those features are a part of this budget adjustment request.

Title: Power Supply - Budget Adjustment
Contact: Todd White 916-746-1668 twhite@roseville.ca.us

Meeting Date: 6/21/2017

Item #: 9.4.

RECOMMENDATION TO COUNCIL

Staff recommends City Council adopt an ordinance to approve the attached budget adjustment to authorize a \$4,550,000.00 increase for power supply expenses in the Electric Operations Fund for FY2016-17. Funds are available in the Electric Operations Fund.

BACKGROUND

At the end of March, while commissioning the Roseville Energy Park steam turbine for return to service, an unexpected discharge of electricity occurred damaging the steam turbine generator. The generator will need to be replaced with a lead time of about one year. The costs of repair and replacement power are expected to be covered by insurance, but the utility will need budget authority to cover the expenses until reimbursement is made. Staff requests a 4,550,000 budget adjustment in the Electric Operations Fund for FY2016-17 to cover the cost of replacement. There is capacity under the Siemens maintenance contract for the costs

FISCAL IMPACT

Approval of the attached budget adjustment authorizes \$4,550,000.00 in additional spending from the Electric Operations Fund for FY2016-17.

ECONOMIC DEVELOPMENT / JOBS CREATED

Not applicable.

ENVIRONMENTAL REVIEW

The budget adjustment is not considered a "project" as defined by the California Environmental Quality Act (CEQA) (CEQA Guidelines §15378). Consequently no CEQA action is required.

Respectfully Submitted,

Todd White, Assistant Electric Utility Director

Michelle Bertolino, Electric Utility Director

Rob Jensen, City Manager

ORDINANCE NO. 5844

ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE
AUTHORIZING CERTAIN AMENDMENTS TO THE 2016-17
BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY
EFFECTIVE AS AN APPROPRIATION MEASURE

THE CITY OF ROSEVILLE ORDAINS:

SECTION 1. The City of Roseville Annual Budget, Fiscal Year 2016-17, is hereby amended by transferring appropriation to and from the activities indicated below:

Appropriate funds for power supply expenses per the request of the Electric Department as listed on the attached Request for Budget Adjustment in the amount of \$4,550,000.00.

SECTION 2. This ordinance is hereby declared to be an appropriation measure, immediately effective pursuant to the provisions of Section 5.03 of the Charter.

SECTION 3. The City Clerk is hereby authorized and directed to post a true copy of the foregoing ordinance in each of three (3) conspicuous locations in the City and she shall immediately after such posting enter in the ordinance book, under the record of the ordinance, a certificate under her hand stating the time and place of such publication by posting.

Description

Resolution No. 17-249

TEFRA Notice

RESOLUTION NO. 17-249

**RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE
APPROVING THE ISSUANCE OF THE CALIFORNIA MUNICIPAL
FINANCE AUTHORITY REVENUE BONDS (JOHN ADAMS
ACADEMIES, INC.), SERIES 2017 IN AN AGGREGATE PRINCIPAL
AMOUNT NOT TO EXCEED \$4,000,000 FOR THE PURPOSE OF
FINANCING THE ACQUISITION AND IMPROVEMENT OF
EDUCATIONAL FACILITIES AND CERTAIN OTHER MATTERS
RELATING THERETO**

WHEREAS, John Adams Academies, Inc., a nonprofit corporation and an organization described in Section 501(c)(3) of the Internal Revenue Code of 1986 (the “Borrower”), has requested that the California Municipal Finance Authority (the “Authority”) participate in the issuance of one or more series of revenue bonds in an aggregate principal amount not to exceed \$4,000,000 (the “Bonds”) to (1) finance the acquisition, construction, equipping and rehabilitation of certain improvements to an existing K-12 charter school campus located in the City of Roseville, California (the “City”) at 1 Sierra Gate Plaza, including without limitation the construction on said campus of an approximately 12,000 square foot building containing a school multi-purpose room and the renovation of certain existing facilities on said campus to be owned and/or operated by the Borrower or an affiliate (the “Project”); (2) fund a debt service reserve fund, and (3) pay certain expenses incurred in connection with the issuance of the Bonds; and

WHEREAS, pursuant to Section 147(f) of the Internal Revenue Code of 1986 (the “Code”), the issuance of the Bonds by the Authority must be approved by the City because the Project is located within the territorial limits of the City; and

WHEREAS, the City Council of the City (the “City Council”) is the elected legislative body of the City and is one of the “applicable elected representatives” required to approve the issuance of the Bonds under Section 147(f) of the Code; and

WHEREAS, the Authority has requested that the City Council approve the issuance of the Bonds by the Authority in order to satisfy the public approval requirement of Section 147(f) of the Code and the requirements of Section 4 of the Joint Exercise of Powers Agreement Relating to the California Municipal Finance Authority, dated as of January 1, 2004 (the “Agreement”), among certain local agencies, including the City; and

WHEREAS, pursuant to Section 147(f) of the Code, the City Council has, following notice duly given, held a public hearing regarding the issuance of the Bonds, and now desires to approve the issuance of the Bonds by the Authority;

NOW, THEREFORE, BE IT RESOLVED, by the City Council of the City of Roseville as follows:

Section 1. The foregoing resolutions are true and correct.

Section 2. The City Council hereby approves the issuance of the Bonds by the Authority. It is the purpose and intent of the City Council that this resolution constitute approval of the issuance of the Bonds by the Authority, for the purposes of (a) Section 147(f) of the Code by the applicable elected representative of the governmental unit having jurisdiction over the area in which the Project is located, in accordance with said Section 147(f) and (b) Section 4 of the Agreement.

Section 3. The City shall not be obligated to pay the principal of or interest on or any redemption premium with respect to the Bonds and do not constitute indebtedness or an obligation of the Authority, the City, the State of California or any other political subdivision thereof, within the meaning of any constitutional or statutory debt limitation, or a charge against the general credit or taxing powers of any of them. The Bonds shall be a limited obligation of the Authority, payable solely from certain revenues duly pledged therefor and generally representing amounts paid by the Borrower.

Section 4. The officers of the City are hereby authorized and directed, jointly and severally, to do any and all things and to execute and deliver any and all documents which they deem necessary or advisable in order to carry out, give effect to and comply with the terms and intent of this resolution and the financing transaction approved hereby.

Section 5. This resolution shall take effect immediately upon its adoption.

PASSED AND ADOPTED by the City Council of the City of Roseville this 21st day of June, 2017.

NOTICE OF PUBLIC HEARING

NOTICE IS HEREBY GIVEN that on June 21, 2017, a public hearing as required by Section 147(f) of the Internal Revenue Code of 1986 will be held with respect to the proposed issuance by the California Municipal Finance Authority of its revenue bonds in one or more series in an amount not to exceed \$4,000,000 (the "Bonds"). The proceeds of the Bonds will be used to: (1) finance the acquisition, construction, equipping and rehabilitation of certain improvements to an existing K-12 charter school campus located at 1 Sierra Gate Plaza, Roseville, California, including without limitation the construction on said campus of an approximately 12,000 square foot building containing a school multi-purpose room and the renovation of certain existing facilities on said campus; (2) fund a debt service reserve fund, and (3) pay certain expenses incurred in connection with the issuance of the Bonds. The facilities are to be owned and/or operated by John Adams Academies, Inc., a nonprofit corporation and an organization described in Section 501(c)(3) of the Internal Revenue Code of 1986, or an affiliate thereof.

The Bonds and the obligation to pay principal of and interest thereon and any redemption premium with respect thereto do not constitute indebtedness or an obligation of the Authority, the State of California or any political subdivision thereof, within the meaning of any constitutional or statutory debt limitation, or a charge against the general credit or taxing powers of any of them. The Bonds shall be a limited obligation of the Authority, payable solely from certain revenues duly pledged therefor and generally representing amounts paid by the Borrower.

The hearing will commence at 7:00 p.m. or as soon thereafter as the matter can be heard, and will be held in the Roseville City Council Chambers, 311 Vernon Street, Roseville, California. Interested persons wishing to express their views on the issuance of the Bonds or on the nature and location of the facilities proposed to be financed may attend the public hearing or, prior to the time of the hearing, submit written comments.

Additional information concerning the above matter may be obtained from, and written comments should be addressed to, City Clerk, City of Roseville, 311 Vernon Street, Roseville, California 95678.

Dated: June 1, 2017.

Title: Kaiser Riverside and Cirby Medical Office Building Expansion
Contact: Lauren Hocker 916-774-5272 lhocker@roseville.ca.us

Meeting Date: 6/21/2017
Item #: 10.2.

RECOMMENDATION TO COUNCIL

At the April 27, 2017 Planning Commission meeting, the Planning Commission recommended the City Council take the following actions on the project:

- A. Adopt a resolution certifying the Final Environmental Impact Report, adopting the Findings of Fact and Statement of Overriding Considerations, adopting Mitigation Measures and adopting the Mitigation Monitoring and Reporting Program,
- B. By motion, adopt the two (2) findings of fact and approve the Major Project Permit Stage 1 subject to one hundred three (103) conditions of approval,
- C. By motion, adopt the two (2) findings of fact and approve the Major Project Permit Stage 2 subject to the same one hundred three (103) conditions of approval,
- D. By motion, adopt the two (2) findings of fact and approve the Tree Permit subject to twenty-one (21) conditions of approval,
- E. Adopt a resolution determining that "extraordinary" improvements related to the new signalized intersection at Cirby Hills Drive/Kaiser Driveway/Cirby Way are not feasible or desirable and approving the General Plan Amendment subject to one (1) condition of approval.

BACKGROUND

The project site is currently developed with the existing Kaiser Permanente medical office complex, which consists of four one-story medical office buildings, one two-story medical office building, and a one-story communications building for a total of 90,209 square feet, as well as 613 surface parking spaces, and landscaping. The applicant proposes to replace the existing structures and uses on the site with an approximately 194,000-square-foot, five-story, 80-foot-tall medical office building, along with a one-story, 21-foot-tall, 16,000-square-foot pavilion building and related site improvements, including an approximately 11-foot tall, 82,630-square-foot parking deck with 255 parking spaces, surface parking lot with 803 spaces, site/building lighting, and landscaping. The project will result in a net increase of 119,791 square feet of new medical office

building space.

The single-story pavilion building would house pharmacy, laboratory, and conference space. The five-story medical office building would include ground floor public functions including a café, health education, and optical center, as well as physical therapy/rehab and comprehensive diagnostic imaging. The clinic floors in the medical office building (floors 2 through 5) would include eight adult primary care clinics, specialty clinics for obstetrics and gynecology, dermatology and allergy, injection clinic, and comprehensive eye services including ophthalmology and optometry. This new medical office building would result in double the capacity of the existing clinics, which the applicant intends to facilitate better member access.

Currently, the existing medical office building complex employs 224 full-time people. The proposed project would add an additional 202 full time positions, for a total of 426 full time employees. Hours of operation would generally be Monday through Friday from 7:00 a.m. to 6:00 p.m. The Conference Center in the pavilion building may be open until 10:00 p.m. on some days depending on events and class schedules.

If the project is approved, project construction is anticipated to take approximately 3 years to complete and would occur in multiple phases. Phasing is required in order for the existing medical office buildings to remain open with sufficient parking capacity and public access during construction. For the entire duration of the project, valet parking would be provided to patients and visitors, and staff would be shuttled to the site from off-site parking locations (see Exhibit S). Construction parking would be limited to the existing east parking lot until the new parking deck is completed, at which point the lower level would be used for construction personnel.

The applicant proposes to keep the existing medical building offices open until the new 5-story medical office building is open, after which the existing buildings will be demolished in order to finish construction of the site. The applicant has developed a detailed, seven-phase construction plan which shows how parking, access, and utility connections will be maintained during each phase of construction (see Exhibit Q, Construction Phasing Plan). Construction is anticipated to begin in 2017 and be completed in 2020.

SUMMARY EVALUATION: MAJOR PROJECT PERMIT:

A detailed evaluation of the project's consistency with the required findings for a Major Project Permit Stage 1 and Major Project Permit Stage 2 is included in the Planning Commission staff report attached to this Council Communication. The project has been designed in a manner consistent with the General Plan and Community Design Guidelines, providing both appropriate vehicle access and circulation, and good pedestrian connectivity; a varied, interesting, and high-quality landscaping proposal; building designs which use a variety of materials, colors, and building forms; lighting that is energy efficient and is shielded to avoid light trespass; and infrastructure adequate to serve the proposed expansion in use. The key elements of the project include the landscape design, building design, and the new traffic signal. The traffic signal is discussed in the Summary Evaluation of the General Plan Amendment section, below.

The project landscaping plan divides the parking lot areas into smaller zones, with a different species of large, deciduous tree being used in each zone. Most of the selected species display fall color spring blossoms, or both. A variety of smaller trees, shrubs, and groundcover is proposed throughout the site, with the layout designed in layers to provide visual interest, rather than in dense plantings of single species. Of particular focus is the Riverside Avenue frontage and the gateway corner of Riverside Avenue and Cirby Way. In the existing condition, the landscape setback on Riverside Avenue is approximately 120 feet deep and is mostly turf. The

proposal reduces this setback to approximately 35 feet, and therefore the applicant has proposed a very detailed, dense, and interesting landscape design for this area. The proposed plantings are laid out in a wave form, and include both large and small trees. The area slopes upward from Riverside Avenue, so the intent of the landscaping is to screen the parking lot from view and provide an dynamic and attractive landscape in all seasons. In addition to the plant material, the applicant has proposed a sculptural metal feature which mirrors the wave form of the plantings, and includes a pattern of cutouts (the conceptual plan shows flying birds). The word "welcome" is proposed to be cut into the metalwork at the corner. This landscape design will create a corner gateway element at the intersection and will significantly improve the visual interest of the frontage.

The building shape and site placement has been influenced by the need to provide an efficient and effective floorplan and the need to maintain the existing medical office buildings during construction. Working within these needs, the applicant has proposed a building that uses variation in building materials, curved panels, recesses, and staggered wall planes to provide visual interest. The exterior of the five-story medical office building is proposed to include a mix of metal panels, light-weight concrete panels, glass curtainwall, glazed storefronts and concrete masonry units. The highest point of the medical office building is approximately 80 feet. The highest occupied floor (5th floor) is 55 feet high (from existing grade). The building includes a curved wave extending from ground level to the top of the building to highlight the primary entrance on the north elevation. The rest of the north elevation also includes some curvature where it meets the entrance, and includes recesses and alterations in the wall plane to echo this element. A similar effect is proposed on the south elevation, where the beige panels give way to a metal and glass pop-out that gradually staggers farther away from the plane of the wall.

SUMMARY EVALUATION: TREE PERMIT

An arborist report was prepared by Tree Associates which concluded that the site supported six protected native oak trees. Only one of these, a 7-inch valley oak (#679) located where the realigned Riverside Avenue access is proposed, will require removal to complete the project. The applicant submitted a mitigation plan with the arborist report attached (Exhibit D) which shows four new oak trees will be planted on the site to offset the 7-inch loss. City staff have reviewed this plan and concluded that it complies with Zoning Ordinance Chapter 19.66, and that the removal of this small oak tree is necessary.

SUMMARY EVALUATION: GENERAL PLAN AMENDMENT

The proposed project includes the installation of a new traffic signal on Cirby Way at the main Kaiser driveway and Cirby Hills Drive. This traffic signal is necessary to ensure proper functioning of access into and out of the site. The proposed access design was developed as a result of a traffic impact study prepared by Fehr and Peers (see Appendix D of Exhibit A), which analyzed the intersection operations and access conditions to determine the most efficient designs, given the traffic volumes on the surrounding roadways. The City's 2035 General Plan establishes an acceptable am and pm peak hour intersection operating condition of Level of Service (LOS) C or better (Circulation Element, Level of Service goal, Policy 1). This policy also states that exceptions to the standard may be considered for intersections "where the City finds that the required improvements are unacceptable." In such cases, the General Plan specifies that the City Council may determine improvements to be "extraordinary" and infeasible or undesirable, following a public hearing.

The above finding has already been made for the existing intersection of Riverside Avenue and Cirby Way, which operates at LOS E in the existing condition and is forecast to operate at LOS F

in the future. Roadway widening would have been required in order to improve the LOS at this intersection, and during public hearings for the Cirby Way roadway widening project, residents expressed opposition to this proposal. All driveways and intersections near this corridor are affected by these existing and forecasted future conditions. Thus, the applicant's proposed new signal at the driveway on Cirby Way will operate at LOS C or better after it is constructed, but in the future is forecast to operate at LOS E in the am peak hour for the same reason the Riverside/Cirby intersection operates unacceptably. Fehr and Peers concluded that improving the new signal operation would require roadway widening, which the City Council has already found is an "extraordinary" improvement, the impacts of which are undesirable. As there are no mitigation measures available to improve the operations of this new intersection to LOS C or better, a finding by the City Council is required to approve this new signal as part of the project. Exhibit T is the proposed change pages for the General Plan Circulation Element, which would add this new traffic signal to the list of signals granted an exception to the LOS C standard.

General Plan policy states that as long as a minimum of 70% of the City's intersections operate acceptably, the City Council can grant an exception. With the new traffic signal, there would be 212 signalized intersections in the City, 25 of which would operate unacceptably during the am peak hour. This results in 88% of the City's intersections operating acceptably in the am peak hour, which is consistent with City policy. Thus, the findings for the project may be made, and granting an exception would be consistent with the applicable policies of the General Plan.

PUBLIC OUTREACH:

Public outreach for the proposed project has occurred at multiple points during the processing of the project, as described below.

- Prior to application submittal, on February 10, 2016 the concept of the project was presented to the Cresthaven Neighborhood Association. Questions were asked about traffic on Cirby and Riverside.
- Upon receipt of the application, the proposed project was distributed to the various agencies and departments which have requested notice of City applications, and all comments were considered and incorporated into the Conditions of Approval, as appropriate. Notice of the application was also distributed to the Roseville Coalition of Neighborhood Associations (RCNA); no comments were received.
- On June 7, 2016 the City published the Notice of Preparation (NOP) for the Environmental Impact Report (EIR), and was sent to RCNA. No comments from RCNA were received.
- On March 9, 2017 the Draft EIR was published. Notice of the EIR was mailed to RCNA and to all property owners within 300 feet of the project. To date, agency comments have been received, but no comments from RCNA or members of the public have been received.
- On March 22, 2017 the applicant held a public informational meeting in Civic Center meeting rooms 1 and 2. Notice of this meeting was mailed to RCNA and to all property owners within 300 feet of the project. The purpose of the informational meeting was to provide the public with an opportunity to ask questions about the project, the process, and the EIR. In attendance were applicant representatives, the EIR consultant, the traffic consultant, and City staff. Three members of the public attended, and asked questions about the project. None of the attendees expressed opposition.
- A public notice of the Planning Commission hearing was published on April 14, 2017, and was distributed to all property owners within 300 feet of the project site and to RCNA. To date, no comments have been received.
- Further outreach has been occurring, to notify affected businesses and residents of

construction impacts related to Cirby Way improvements.

FISCAL IMPACT

The expansion of the medical office complex at this location will not result in negative impacts to the City's General Fund. All costs associated with the development of this site will be born by the project applicant.

ECONOMIC DEVELOPMENT / JOBS CREATED

The project will generate construction jobs, and the applicant anticipates an addition 202 full-time positions will be created by the project.

ENVIRONMENTAL REVIEW

A Draft Environmental Impact Report (DEIR) was published on March 9, 2017 (see Exhibit A). The public comment period ended on April 24, 2017. The DEIR found one significant and unavoidable impact (the operation of the new traffic signal) and concluded that all other impacts were either less than significant, or would be less than significant with application of the recommended mitigation. Three comment letters were received on the DEIR. A Final EIR (FEIR) has been included as part of Exhibit A, and was provided to commenting agencies on June 9, 2017. No changes to the DEIR were required for the FEIR. The FEIR includes an introduction, responses to the three comment letters, and the Mitigation Monitoring and Reporting Program.

***Planning Division Staff Report
Planning Commission Meeting***

April 27, 2017

Prepared by: Lauren Hocker, Associate Planner

ITEM V-B: MAJOR PROJECT PERMIT STAGE 1, MAJOR PROJECT PERMIT STAGE 2, TREE PERMIT, AND GENERAL PLAN AMENDMENT – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146

REQUEST

The applicant requests approval of a Major Project Permit Stage 1 and Major Project Permit Stage 2 to allow construction of a 16,000 square-foot, one-story pavilion building; a 194,000 square-foot, five-story medical office building; a parking deck; and an associated parking lot and landscaping that will replace the existing one and two-story Kaiser Permanente medical office building complex. A Tree Permit is requested to allow the removal of one oak tree. Off-site improvements associated with the project include the addition of a traffic signal at the Cirby Way and Cirby Hills Drive intersection. This signal will require a text-only General Plan Amendment.

Applicant/Owner – Chang Yi, Kaiser Foundation Health Plan

SUMMARY RECOMMENDATION

The Planning Division recommends that the Planning Commission take the following actions:

- A. Forward all comments received on the Draft EIR during the public review period for inclusion in the Final EIR for City Council review,
- B. Recommend the City Council adopt the two (2) findings of fact for the Major Project Permit Stage 1,
- C. Recommend the City Council approve the Major Project Permit Stage 1 subject to one hundred three (103) conditions of approval,
- D. Recommend the City Council adopt the two (2) findings of fact for the Major Project Permit Stage 2,
- E. Recommend the City Council approve the Major Project Permit Stage 2 subject to one hundred three (103) conditions of approval,
- F. Recommend the City Council adopt the two (2) findings of fact for the Tree Permit,
- G. Recommend the City Council approve the Tree Permit subject to twenty-one (21) conditions of approval,
- H. Recommend the City Council determine that “extraordinary” improvements related to the new signalized intersection at Cirby Hills Drive/Kaiser Driveway/Cirby Way are not feasible or desirable, and
- I. Recommend the City Council approve the General Plan Amendment subject to one (1) condition of approval.

SUMMARY OF OUTSTANDING ISSUES

There are no outstanding issues associated with this request. The applicant has reviewed and is in agreement with the recommended conditions of approval.

BACKGROUND

The proposed Kaiser Riverside and Cirby Medical Office Building Project site is an approximately 14-acre property on the southeastern corner of Riverside Avenue and Cirby Way. Interstate 80 (I-80) borders the south and east sides of the site, as shown in Figure 1. The property has a zoning designation of Business Professional (BP) and a land use designation of Community Commercial (CC). Medical offices are a permitted use in this zone and land use designation.

The site was approved for development with the Kaiser campus in 1978 (SR 78-28), at which time it was expected that the campus would be constructed in phases. The second phase of development was approved in 1980 (SR 80-12). Consistent with these approvals, the site is currently developed with the existing Kaiser Permanente medical office complex, which consists of four one-story medical office buildings, one two-story medical office building, and a one-story communications building for a total of 90,209 square feet, as well as 613 surface parking spaces, and landscaping (see Attachment 1, Existing Site Plan).

The applicant proposes to replace the existing structures and uses on the site with an approximately 194,000-square-foot, five-story, 80-foot-tall medical office building, along with a one-story, 21-foot-tall, 16,000-square-foot pavilion building and related site improvements, including an approximately 11-foot tall, 82,630-square-foot parking deck with 255 parking spaces, surface parking lot with 803 spaces, site/building lighting, and landscaping (see Exhibit B, Overall Site Plan). The project will result in a net increase of 119,791 square feet of new medical office building space. Of the two proposed medical buildings, the single-story pavilion building would house pharmacy, laboratory, and conference space. The five-story medical office building would include ground floor retail and public functions including a café, health education, and optical center, as well as physical therapy/rehab and comprehensive diagnostic imaging. The clinic floors in the medical office building (floors 2 through 5) would include eight adult primary care clinics, specialty clinics for obstetrics and gynecology, dermatology and allergy, injection clinic, and comprehensive eye services including ophthalmology and optometry. This new medical office building would result in double the capacity of the existing clinics, which the applicant intends to facilitate better member access.

Currently, the existing medical office building complex employs 224 full-time people. The proposed project would add an additional 202 full time positions, for a total of 426 full time employees. Hours of operation would generally be Monday through Friday from 7:00 a.m. to 6:00 p.m. The Conference Center in the pavilion building may be open until 10:00 p.m. on some days depending on events and class schedules.

Figure 1: Project Location

If the project is approved, project construction is anticipated to take approximately 3 years to complete and would occur in multiple phases. Phasing is required in order for the existing medical office buildings to remain open with sufficient parking capacity and public access during construction. For the entire duration of the project, valet parking would be provided to patients and visitors, and staff would be shuttled to the site from off-site parking locations (see Exhibit S). Construction parking would be limited to the existing east parking lot until the new parking deck is completed, at which point the lower level would be used for construction personnel.

The applicant proposes to keep the existing medical building offices open until the new 5-story medical office building is open, after which the existing buildings will be demolished in order to finish construction of the site. The applicant has developed a detailed, seven-phase construction plan which shows how parking, access, and utility connections will be maintained during each phase of construction (see Exhibit Q, Construction Phasing Plan). Construction is anticipated to begin in 2017 and be completed in 2020.

SITE INFORMATION

Location: 1001 Riverside Avenue

Total Size: 14.36 acres

Topography and Setting: As described, the site is currently developed with the Kaiser medical office campus, which includes six buildings and 623 parking spaces. Landscaping is present along the perimeter of the site and internal to the site, including a number of mature trees. Within the project site, there are a total of 290 mature trees, the majority of which were planted as landscaping. From Riverside Avenue, the project site slopes gently upward to the east. The increase in elevation from Riverside Avenue to the center of the project site is approximately 25 feet. The southern end of the site slopes downward, so that it is below the elevation of Riverside Avenue.

Alongside the project site, Riverside Avenue is a four-lane roadway, with dual left turn lanes and a right-turn lane in the northbound direction, and a two-lane I-80 onramp in the southbound direction. Cirby Way is a four-lane roadway with a center turning pocket for most of the length alongside the site, which widens to include dual left-turn lanes at the intersection with Riverside Avenue. The project site currently includes one driveway onto Cirby Way and one driveway onto Riverside Avenue.

Surrounding uses include a mix of commercial uses, including retail and a church across Riverside Avenue to the west; a gas station, retail, a public storage facility, and Placer County offices across Cirby Way to the north, and I-80 to the east and south. While all of the uses near the intersection of Riverside Avenue and Cirby are non-residential uses, there are single family homes, apartments, and condominiums in the vicinity. Across I-80 there are various commercial uses on Orlando Avenue, including the an indoor ice skating rink, a camping goods store, recreational vehicle sales, and a public storage facility. A private elementary school is also located along this street, beyond which are single-family homes and apartments.

EVALUATION: MAJOR PROJECT PERMIT STAGE 1 AND 2

Section 19.82.030 of the City of Roseville Zoning Ordinance requires two findings be made in order to approve or conditionally approve a Major Project Permit Stage 1 and 2 (MPP 1 and MPP 2). The two findings are listed below in ***italicized, bold*** text and are followed by an evaluation of the MPP in relation to each finding.

The findings for a Major Project Permit Stage 1 are as follows:

- 1. The Preliminary Development Plan is consistent with the General Plan, applicable Specific Plan, and adopted City design guidelines; and***
- 2. The design and installation of the Preliminary Development Plan shall not be detrimental to the public health and safety, or be materially detrimental to the public welfare.***

The findings for a Major Project Permit Stage 2 are as follows:

- 1. The Architecture and Landscaping is consistent with the General Plan, applicable Specific Plan, and adopted City design guidelines; and Phase 1 approval; and***
- 2. The design and installation of the Preliminary Development Plan shall not be detrimental to the public health and safety, or be materially detrimental to the public welfare.***

These findings are essentially the same, with the MPP 1 findings referring to the preliminary development plan, and the MPP 2 findings referring to the architecture and landscaping, as well as consistency with the Stage 1 project. Therefore, for the purposes of this evaluation, the MPP 1 & 2 are examined together.

Access and Circulation

The existing medical campus has one driveway on Cirby Way directly across from Cirby Hills Drive, and one on Riverside Avenue approximately 500 feet south of the Riverside Avenue/Cirby Way intersection. Both driveways have two lanes: one for inbound and one for outbound movements. The Riverside Avenue driveway is restricted to right-in, right-out movements, while the Cirby Way driveway is right-out, but allows both right-in and left-in movements (there is a left-turn pocket on Cirby Way for the driveway). The existing site includes a continuous two-lane access drive that wraps behind the south buildings on the east and south, and connects the Riverside Avenue and Cirby Way driveways. Several parking areas are connected to this access way, with pavement markings for pedestrian crossings at multiple locations, to facilitate pedestrian circulation from the parking areas. Sidewalks are present along both frontages, except the frontage to the east of the Cirby Way driveway, where there is no sidewalk. There is also a pedestrian pathway connection from the existing bus stop on Cirby Way to the existing medical buildings, and a pedestrian pathway connection from Riverside Avenue into the project site.

The applicant has designed the project access and circulation to maintain or improve both vehicle and pedestrian circulation. The Riverside Avenue driveway will retain a very similar design as the existing driveway, but will be shifted farther to the south on the site. On the Cirby Way frontage, the existing driveway will be modified to include four lanes: two right-only outbound lanes, a combination through-movement and left-turn outbound lane, and one inbound lane. To accommodate these movements, a traffic signal will be installed. This will enable the installation of a pedestrian crosswalk across Cirby Way at this location. The profile of Cirby Way, which currently includes a rise as the roadway continues east of the site, will be lowered to provide improved sight distance for drivers (see Attachment 4). A new driveway will also be installed between the Riverside Avenue/Cirby Way intersection and the new traffic signal, but this will only be for outbound right-turn movements. This is discussed in more detail in the "Evaluation: General Plan Amendment" section of this staff report.

A new pedestrian connection from Riverside Avenue into the site will be constructed. A new pedestrian pathway will also be constructed from the bus stop on Cirby Way, providing a straight pathway from the street to the pavilion and 5-story medical office building. The new design does not include the installation of sidewalk east of the main Cirby Way driveway, because the I-80 overpass to the east does not have a sidewalk. However, the project will provide a new pedestrian crossing, due to the new traffic signal at the

main entrance on Cirby Way. As with the existing site design, the proposed project includes pedestrian pathways that cross the site in east-west and north-south directions, providing access through the site from the parking areas to the new buildings. Also like the existing site, a continuous two-lane access drive will be constructed along the eastern and southern portions of the property, connecting the Riverside Avenue and primary Cirby Way driveway. The applicant also proposes new access drives to wrap around the northern and western sides of the buildings, to provide a continuous loop through the site. A drop-off and pick-up loop is also proposed in front of the pavilion and 5-story medical office building.

Parking

The City's Zoning Ordinance establishes a parking ratio of 1 space per 150 square feet for medical offices. The proposed medical office buildings will total 210,000 square feet, which results in a parking requirement of 1,400 parking spaces (see Exhibit B). The project will reconfigure the surface parking and add a parking deck on the southern end of the site, creating a total of 1,058 parking spaces (803 surface spaces and 255 spaces in the deck). This is 342 fewer spaces than the Zoning Ordinance standard would require. However, there is a process outlined in the Zoning Ordinance for parking reductions, if it can be demonstrated that the individual use has a lower parking demand than the Zoning Ordinance standard, then the actual demand may be used to design parking. Deviations from parking standards may be approved through the MPP process.

A parking analysis was prepared by Fehr and Peers as part of the traffic impact study. Fehr and Peers staff recorded the number of vehicles parked on the existing medical campus on an hourly basis, beginning at 8 am and continuing until 6 pm. On each of the two days when counts were collected, the peak parking demand occurred at 11 am, with approximately 80% of the spaces occupied. The study concluded that actual demand was approximately 0.81 spaces per 150 square feet or 6.9 spaces per health care provider. The number of health care providers is considered the most accurate measure because this number is most directly linked to the number of employees and patients traveling to and from the site. Using this figure and using a doubling of health care providers, actual parking demand for the completed project would be 978 parking spaces. This leaves a surplus of 80 parking spaces on the site. Based on the foregoing analysis, the project will provide adequate parking for the proposed use.

Underground Utilities

The existing water, sewer, and stormwater systems on the site would be maintained until the new 5-story building is occupied, in order to provide continuous service during construction. The existing campus is served by a 6-inch water line stub connected to a 10-inch public distribution main in Cirby Hills Drive, an 8-inch sewer main in Cirby Way connects to an 8-inch sewer main in Riverside Avenue, and an 18-inch stormwater pipe just east of the existing Cirby Way entrance. For the new buildings, two new 10-inch water service lines are proposed to connect to the City's existing 10-inch distribution main at Cirby Hills Drive and a 24-inch transmission main in Cirby Way. For the sewer system, two new 8-inch service lines would be installed. The first would connect to the 8-inch main in Cirby Way, similar to the existing service. The second would connect to an existing public manhole in Cirby Hills Drive that is connected to an 8-inch sewer line. No new pump stations or other facilities or upgrades would be required for the proposed project. The proposed utility plan is included as Exhibit K.

Stormwater treatment on the site would be improved by the project, given that the existing site is almost completely developed with impervious surfaces already, which were built before modern stormwater treatment standards. The project is proposed to incorporate the use of on-site infiltration and detention. Underground treatment and infiltration galleries will be constructed to treat stormwater. The system will be designed to treat and store stormwater, so that post-project stormwater runoff will be at or below per-project runoff volumes. The proposed stormwater management plan is included as Exhibit L.

The proposed utility plans have been reviewed by all internal City division and departments, as well as by external utilities, to ensure that the proposed design meets the applicable standards. The applicant worked closely with City staff to ensure that utility connections would be maintained during construction, until the new systems are in place and operational. This design ensures that service will not be disrupted.

Off-Site Improvements

Off-site improvements include: reconfiguring roads; removal and replacement of driveways, curbs, planting areas, and medians; traffic lane striping; relocation of utilities; and a new traffic signal. Approximately 400 feet of Cirby Way adjacent to the project site would be removed and reconstructed (see Attachment 4). The vertical profile of the roadway would be lowered by as much as 18 inches to improve driver sight distance. The project also includes surface improvements at the frontage of the self-storage facility on the north side of Cirby Way, including removal and reconstruction of concrete driveways, concrete curbs, asphalt pavement areas, planting areas, and site lighting. In addition, a monument sign and a flagpole may need to be relocated as a result of lowering the roadway profile. Curbs, gutters, sidewalks, median islands, and asphalt pavement along Cirby Way would be reconstructed and traffic striping within the demolition limits would be restored.

Utility systems affected by the lowering of the roadway profile would need to be relocated (lowered) to maintain minimum cover requirements. Utilities affected include, but would not be limited to, a 2-inch domestic water line (City of Roseville), sewer line extensions (City of Roseville), potable water system isolation valves (City of Roseville), potable water system air-release valves (City of Roseville), telecommunications/fiber-optics conduits (MCI, Sprint), street lighting (Roseville Electric), primary and secondary power conduits (Roseville Electric), and a 4-inch gas distribution main (Pacific Gas and Electric).

As with the utility plans, these proposals have been examined in detail by internal City divisions and departments, as well as other affected entities. The designs meet applicable standards.

Lighting and Landscaping

To provide for the safety and security of staff and the public, the project would include overhead parking lot and roadway pole lights, low-level lighting on bollards to illuminate landscaped areas and sidewalks, and building-mounted lighting at entrances. Architectural lighting would also be used to illuminate key architectural features. The lighting and photometric plans are included as Exhibits I and J.

The proposed light fixtures use premium-efficiency LED light sources. Area lighting is designed to automatically turn off during the day, and motion-activated controls are included to dim the lighting at night when there is no activity. Lighting has been designed to meet the City's Community Design Guidelines and would minimize light trespass, reduce sky-glow to increase night sky access, and improve nighttime visibility through glare reduction.

The proposed project's landscaping plan divides the parking lot areas into smaller zones, with a different species of large, deciduous tree being used in each zone. The proposed tree planting plan, shade plan, and ground planting plans are included as Exhibits E – G. California sycamore will be used in the easternmost area of the site and along the Riverside Avenue frontage, Chinese pistache will be used on the northern half of the parking area, ginko will be used along the main access drives through the site, red maple will be used in the parking area east of the pavilion and north of the main building, and redbud will be used along the Cirby Way frontage. Most of these tree species display fall color, spring blossoms, or both. A variety of smaller trees, shrubs, and groundcover is proposed throughout the site, with the layout designed in layers to provide visual interest, rather than in dense plantings of single species.

In the existing condition, the landscape setback on Riverside Avenue is approximately 120 feet deep, and is mostly turf. The proposal reduces this setback to approximately 35 feet, and therefore the applicant has proposed a very detailed, dense, and interesting landscape design for this area. The proposed plantings are laid out in a wave form, and include both large trees (sycamore) and smaller trees (redbud). The area slopes upward from Riverside Avenue, so the intent of the landscaping is to screen the parking lot from view and provide a dynamic and attractive landscape in all seasons. In addition to the plant material, the applicant has proposed a landscape feature at the corner of Riverside Avenue and Cirby Way that would extend down the Riverside Avenue frontage. Mirroring the wave form of the plantings, the applicant would install sculptural metal in a wave shape, with a pattern of cutouts (the conceptual plan shows flying birds, and is included as Exhibit H). The word “welcome” is proposed to be cut into the metal work at the corner, to create a corner gateway for this area. Though the landscape buffer will be much smaller, the proposal is a significant improvement in terms of visual interest, conforms with the City’s design guidelines, and is supported by staff.

Figure 3: Riverside Entry Corner Concept

1 CONCEPTUAL DESIGN FOR RIVERSIDE AND CIRBY FRONTAGE

2 CONCEPTUAL PLAN VIEW

3 CONCEPTUAL PERFORATED PATTERN DETAIL

The proposed parking deck will begin at a lower elevation than Riverside Avenue, so will only be 10 feet above the grade of Riverside Avenue despite being two levels (see Exhibit O, Elevations). In addition, a 90-foot landscape setback is proposed between the parking deck and the street (see Exhibit G, Ground Planting Plan). Plant screens are proposed on the southern side of the deck, with climbing vines proposed to be planted at the base of these screens. This will soften the southern elevation, which will be visible to northbound travelers on Riverside Avenue and from the I-80 ramps.

Where possible, existing mature trees are being preserved on site, including protected oak trees in the southwestern corner of the site and redwood trees north of the main building and in the north parking lot.

Of the existing 290 mature trees that were planted as part of the original landscaping plan, a total of 245 trees would be removed. A total of 45 trees would be retained and 404 new trees would be planted on the project site, resulting in a total of 449 trees (a net gain of 156 trees; see Exhibit E, Tree Planting Plan). The applicant is also proposing multiple areas within the site for outdoor gathering spaces around the building, focusing on the areas in between the pavilion and the main building, and in front (on the northern side of) the main building. Note that beginning with Phase 2 of construction, the Riverside Avenue frontage would be maintained with a wildflower seed mix until the permanent landscaping is installed (see Exhibit R).

Building Architecture

The exterior of the five-story medical office building is proposed to include a mix of metal panels, light-weight concrete panels, glass curtainwall, glazed storefronts and concrete masonry units (see Attachment 2, three-dimensional renderings; Attachment 3, Photosimulation; Exhibit O, Elevations; and Exhibit P, Materials Board). The highest point of the medical office building is approximately 80 feet. The highest occupied floor (5th floor) is 55 feet high (from existing grade). Rooftop mechanical equipment has been designed to be shielded by the building parapet. The one-story pavilion building uses the same exterior materials as the medical office building, for design cohesiveness. The highest point of the pavilion is approximately 20 feet, with limited additional height for a screened mechanical enclosure at the roof level. These two buildings have been designed in a way that allows a single entry canopy feature to tie the two buildings together.

Figure 4: Three-Dimensional Building Renderings

SOUTHWEST VIEW

3 SOUTHEAST AERIAL VIEW

NORTH VIEW

1 NORTHEAST AERIAL VIEW

Exterior colors for the five-story medical office building and one-story pavilion building include a sandy beige color for the concrete panels with varying degrees of exposed gray aggregate. The insulated metal panel colors are silver and weathered zinc arranged in a pattern that provides a contrast to the beige panels. The majority of the north, east and west elevations consist of pewter colored mullions, clear vision glass and light-gray colored spandrel glass. The base of the building is designed to have chocolate brown concrete masonry units with a shiplap profile for added visual interest.

The building includes a curved wave extending from ground level to the top of the building to highlight the primary entrance on the north elevation. The rest of the north elevation also includes some curvature where it meets the entrance, and includes recesses and alterations in the wall plane to echo this element. A similar effect is proposed on the south elevation, where the beige panels give way to a metal and glass pop-out that gradually staggers farther away from the plane of the wall. The west elevation facing Riverside Avenue is the narrowest point of the building, and includes a frame of beige panels surrounding glass windows and metal panels, as well as recesses on the corners. The eastern elevation includes a pop-out, a recess, and again the variation in materials between the beige panels and the metal and glass.

The two-level concrete parking deck at the southwestern corner of the project site takes advantage of the existing topography between the medical office building and adjacent freeway, allowing the top level of the deck to be at grade and the lower level to be partially underground. The total height above ground would be 10-feet, 10-inches tall. Exposed concrete facades of the parking deck are gray-colored with a green screen mesh attached to the exposed surfaces for climbing vines. The structure of the parking deck is designed for a possible future installation of solar photovoltaic (PV) panels on the top deck. Installation of these would require either an Administrative or a hearing-required MPP Modification, depending on the scope of the proposal.

CONCLUSION

The project has been designed in a manner consistent with the General Plan and Community Design Guidelines, providing both appropriate vehicle access and circulation, and good pedestrian connectivity; a varied, interesting, and high-quality landscaping proposal; building designs which use a variety of materials, colors, and building forms; lighting that is energy efficient and is shielded to avoid light trespass; and infrastructure adequate to serve the proposed expansion in use. The project is in the Infill area of the City, so there is no applicable Specific Plan. The site is appropriately designed, and will not be detrimental to the public health and safety, or be materially detrimental to the public welfare.

EVALUATION: TREE PERMIT

Pursuant to Zoning Ordinance Section 19.66.030, a Tree Permit is required for any removal of native oak trees or for more than 20% encroachment into the dripline of a native oak tree. The proposed project will result in the removal of one protected oak tree. The required findings to approve a Tree Permit are listed below.

- 1. Approval of the Tree Permit will not be detrimental to the public health, safety or welfare, and approval of the Tree Permit is consistent with the provisions of Chapter 19.66.***
- 2. Measures have been incorporated into the project or permit to mitigate impacts to remaining trees or to provide replacement for trees removed.***

An arborist report was prepared by Tree Associates which concluded that the site supported six protected native oak trees. Only one of these, a 7-inch valley oak (#679) located where the realigned Riverside Avenue access is proposed, will require removal to complete the project. The applicant submitted a mitigation plan with the arborist report attached (Exhibit D) which shows four new oak trees will be planted

on the site to offset the 7-inch loss. City staff have reviewed this plan and concluded that it complies with Zoning Ordinance Chapter 19.66, and that the removal of this small oak tree is necessary.

EVALUATION: GENERAL PLAN AMENDMENT

The proposed project includes the installation of a new traffic signal on Cirby Way at the main Kaiser driveway and Cirby Hills Drive. This traffic signal is necessary to ensure proper functioning of access into and out of the site. The proposed access design was developed as a result of a traffic impact study prepared by Fehr and Peers (see Appendix D of Exhibit A), which analyzed the intersection operations and access conditions to determine the most efficient designs, given the traffic volumes on the surrounding roadways. The City's 2035 General Plan establishes an acceptable am and pm peak hour intersection operating condition of Level of Service (LOS) C or better (Circulation Element, Level of Service goal, Policy 1). This policy also states that exceptions to the standard may be considered for intersections "where the City finds that the required improvements are unacceptable." In such cases, the General Plan specifies that the City Council may determine improvements to be "extraordinary" and infeasible or undesirable, following a public hearing, after weighting the following factors:

- The number of hours per day that the intersection would operate below LOS C.
- The ability of improvements to reduce delay and improve operations.
- The impact on accessibility to surrounding properties.
- The right-of-way needs and the physical impacts on surrounding properties.
- The visual impacts of the improvements, and their impact on community identity and character.
- Environmental impacts, including air quality, climate change, and noise.
- Construction and acquisition costs.
- Impacts on pedestrian and bicycle accessibility and safety.
- Impacts on general safety.
- Impacts of the required construction phasing and traffic maintenance.
- Impacts on quality of life as perceived by residents.
- Consideration of other environmental, social, or economic factors on which the City Council may base findings to allow for exceeding LOS C.

This finding has already been made for the existing intersection of Riverside Avenue and Cirby Way, which operates at LOS E in the existing condition and is forecast to operate at LOS F in the future. Roadway widenings would have been required in order to improve the LOS at this intersection, and during public hearings for the Cirby Way roadway widening project, residents expressed opposition to this proposal. All driveways and intersections near this congested corridor are affected by these existing and forecasted future conditions. Thus, the applicant's proposed new signal at the driveway on Cirby Way will operate at LOS C or better after it is constructed, but in the future is forecast to operate at LOS E in the am peak hour for the same reason the Riverside/Cirby intersection operates unacceptably. Fehr and Peers concluded that improving the new signal operation would require roadway widening, which the City Council has already found is an "extraordinary" improvement, the impacts of which are undesirable. As there are no mitigation measures available to improve the operations of this new intersection to LOS C or better, the project must be forwarded to City Council for consideration. Exhibit T is the proposed change pages for the General Plan Circulation Element, which would add this new traffic signal to the list of signals granted an exception to the LOS C standard.

General Plan policy states that provided City Council make the proper findings, and provided that a minimum of 70% of the City's intersections operate acceptably, the exception may be granted. With the new traffic signal, there would be 212 signalized intersections in the City, 25 of which would operate

unacceptably during the am peak hour. This results in 88% of the City's intersections operating acceptably in the am peak hour, which is consistent with City policy. Thus, the findings for the project may be made, and granting an exception would be consistent with the applicable policies of the General Plan.

PUBLIC OUTREACH

Public outreach for the proposed project has occurred at multiple points during the processing of the project, as described below.

- Prior to application submittal, on February 10, 2016 the concept of the project was presented to the Cresthaven Neighborhood Association. Questions were asked about traffic on Cirby and Riverside.
- Upon receipt of the application, the proposed project was distributed to the various agencies and departments which have requested notice of City applications, and all comments were considered and incorporated into the Conditions of Approval, as appropriate. Notice of the application was also distributed to the Roseville Coalition of Neighborhood Associations (RCONA); no comments were received.
- On June 7, 2016 the City published the Notice of Preparation (NOP) for the Environmental Impact Report (EIR), and was sent to RCONA. No comments from RCONA were received.
- On March 9, 2017 the Draft EIR was published. Notice of the EIR was mailed to RCONA and to all property owners within 300 feet of the project. To date, agency comments have been received, but no comments from RCONA or members of the public have been received.
- On March 22, 2017 the applicant held a public informational meeting in Civic Center meeting rooms 1 and 2. Notice of this meeting was mailed to RCONA and to all property owners within 300 feet of the project. The purpose of the informational meeting was to provide the public with an opportunity to ask questions about the project, the process, and the EIR. In attendance were applicant representatives, the EIR consultant, the traffic consultant, and City staff. Three members of the public attended, and asked questions about the project. None of the attendees expressed opposition.
- A public notice of the Planning Commission hearing was published on April 14, 2017, and was distributed to all property owners within 300 feet of the project site and to RCONA. To date, no comments have been received.
- Further outreach will be occurring, to notify affected businesses and residents of construction impacts related to Cirby Way improvements.

ENVIRONMENTAL DETERMINATION

A Draft Environmental Impact Report (DEIR) was published on March 9, 2017 (see Exhibit A). The public comment period ends on April 24, 2017. As of the writing of this staff report, one comment from the California Department of Transportation has been received (included as part of Exhibit A). The DEIR found one significant and unavoidable impact (the operation of the new traffic signal) and concluded that all other impacts were either less than significant, or would be less than significant with application of the recommended mitigation.

RECOMMENDATION

The Planning Division recommends the Planning Commission take the following actions:

- A. Forward all comments received on the Draft EIR during the public review period for inclusion in the Final EIR for City Council review.
- B. Recommend the City Council adopt the findings of fact as stated in the staff report for the **MAJOR PROJECT PERMIT STAGE 1 – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146**.
- C. Recommend the City Council approve the **MAJOR PROJECT PERMIT STAGE 1 – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146** subject to one hundred three (103) conditions of approval.
- D. Recommend the City Council adopt the findings of fact as stated in the staff report for the **MAJOR PROJECT PERMIT STAGE 2 – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146**.
- E. Recommend the City Council approve the **MAJOR PROJECT PERMIT STAGE 2 – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146** subject to one hundred three (103) conditions of approval.
- F. Recommend the City Council adopt the findings of fact as stated in the staff report for the **TREE PERMIT – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146**.
- G. Recommend the City Council approve the **TREE PERMIT – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146** subject to twenty-one (21) conditions of approval.
- H. Recommend the City Council determine that “extraordinary” improvements related to the new signalized intersection at Cirby Hills Drive/Kaiser Driveway/Cirby Way are not feasible or desirable.
- I. Recommend the City Council approve the **GENERAL PLAN AMENDMENT – 1001 RIVERSIDE AVE – KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING – PL16-0146** subject to one (1) condition of approval.

CONDITIONS OF APPROVAL FOR MAJOR PROJECT STAGE I AND 2

- 1. This major project permit approval shall be effectuated within a period of two (2) years from **June 21, 2017** and if not effectuated shall expire on **June 21, 2019**. Prior to said expiration date, the applicant may apply for an extension of time, provided this approval is does not extend the expiration beyond **June 21, 2020**. (Planning)
- 2. The project is approved as shown in Exhibits A – S and as conditioned or modified below. (Planning)
- 3. The project shall comply with all required environmental mitigation identified in the Kaiser Riverside-Cirby Medical Office Building Project Environmental Impact Report. (Planning)
- 4. The applicant shall pay City's actual costs for providing plan check, mapping, GIS, and inspection services. This may be a combination of staff costs and direct billing for contract professional services. (Engineering, Environmental Utilities, Electric, Finance)
- 5. The design and construction of all improvements shall conform to the Design and Construction Standards of the City of Roseville, or as modified by these conditions of approval, or as directed by the City Engineer. (Engineering)

6. The applicant shall not commence with any on-site improvements or improvements within the right-of-way until such time as grading and/or improvement plans are approved and grading and/or encroachment permits are issued by the Development Services Department – Engineering Division. (Engineering)
7. The approval of this project does not constitute approval of proposed improvements as to size, design, materials, or location, unless specifically addressed in these conditions of approval. (Engineering)
8. The property shall be addressed as 1001 Riverside Avenue. The Medical Office Building shall be addressed as 1011 Riverside Avenue. The Pavilion Building shall be addressed as 1021 Riverside Avenue. The Parking Deck shall be addressed as 1031 Riverside Avenue. All projects with multi-tenants or buildings must submit a plot plan with building footprint(s) to the Development Services/Business Services Division – Addressing for building/suite addressing. (Business Services)

PRIOR TO ISSUANCE OF BUILDING PERMITS:

9. Parking stalls shall meet, or exceed, the following minimum standards:
 - a. All parking stalls shall be double-striped. Parking stalls adjacent to sidewalks, landscaped areas or light fixtures, and all Accessible stalls shall about a 6" raised curb or concrete bumper. (Planning)
 - b. Standard -- 9 feet x 18 feet; Compact--9 feet x 16 feet; Accessible--14 feet x 18 feet (a 9 foot wide parking area plus a 5 foot wide loading area) and a minimum of one (1) parking space shall be Accessible van accessible--17 feet x 18 feet (9 foot wide parking area plus an 8 foot wide loading area). (Planning)
 - c. An 'exterior routes of travel' site accessibility plan incorporating slope, cross-slope, width, pedestrian ramps, curb ramps, handrails, signage, detectable warnings or speed limit signs or equivalent means shall comprise part of the site improvement plans submitted to City for review, prior to building plan check approvals. This site accessibility plan shall also include:
 - i) Accessible parking stalls shall be dispersed and located closest to accessible entrances. The total number of accessible parking spaces shall be established by Table 11B-208.2 of the CBC.
 - ii) Accessible Parking spaces and crosswalks shall be signed, marked and maintained as required by Chapter 11B of the CBC.
 - iii) Accessible parking and exterior route of travel shall comply with CBC, Chapter 11B. (Building)
10. Signs and/or striping shall be provided on-site as required by the Planning Department to control on-site traffic movements. Parking lot striping and signage shall be maintained in a visible and legible manner. (Planning)
11. The plans submitted to the Building Department for permits shall indicate all approved revisions/alterations as approved by the Commission including all conditions of approval. (Planning)
12. The project Landscape Plans shall comply with the following:
 - a. The Landscape Plan shall indicate the location of, and be designed to avoid conflicts with, all pole-mounted light fixtures and utility equipment including (but not limited to) electric transformers, switchgear, and overhead lines, backflow preventers, fire department connections, and public water, sewer, and storm drain facilities. (Planning, Fire, EUD, Electric, Public Works)

- b. The tree plantings in the parking lot shall be designed to provide a minimum of 50% shade coverage after 15 years. (Planning)
 - c. At a minimum, landscaped areas not covered with live material shall be covered with a rock, (3") bark (no shredded bark) or (3") mulch covering. (Planning)
 - d. The landscape plan shall comply with the City of Roseville Water Efficient Landscape ordinance. (Planning)
 - f. All landscaping in areas containing electrical service equipment shall conform with the Electric Department's Landscape Requirements and Work Clearances as outlined in Section 10.00 of the Departments "Specification for Commercial Construction." (Electric)
13. Any roof-mounted equipment and satellite dishes proposed shall be shown on the building plans. The equipment shall be fully screened from public streets and the surrounding properties. (Planning)
14. At the time of building permit application and plan submittal, the project applicant shall submit a proposed plan which shows the suite addressing plan for individual tenant spaces within the building. The Chief Building Official, or the designate, shall approve said plan prior to building permit approval. (Building)
15. For restaurants or other food services: The developer shall obtain all required approvals and permits from the Placer County Health Department. (Building)
16. For restaurants or other food services. The developer shall obtain all required approvals and permits from the Placer County Health Department and the City of Roseville Industrial Waste Division. (Building, Environmental Utilities)
17. Maintenance of copy of building plans: Health and Safety Code section 19850 requires the building department of every city or county to maintain an official copy of the building plans for the life of the building. As such, each individual building shall be submitted as a separate submittal package. Building plan review, permit issuance and archiving is based on each individual building address.
18. For all work to be performed off-site, permission to enter and construct shall be obtained from the property owner, in the form of a notarized right-of-entry. Said notarized right-of-entry shall be provided to Engineering prior to approval of any plans. (Engineering)
19. The Improvement Plans shall include a complete set of Landscape Plans. The Landscape Plans shall be approved with the Improvement Plans. (Planning, Engineering, Fire, Environmental Utilities, Electric)
20. A note shall be added to the grading plans that states:
- "Prior to the commencement of grading operations, the contractor shall identify the site where the **excess/borrow** earthen material shall be imported/deposited. If the **borrow/deposit** site is within the City of Roseville, the contractor shall produce a report issued by a geotechnical engineer to verify that the exported materials are suitable for the intended fill, and shall show proof of all approved grading plans. Haul routes to be used shall be specified."* (Engineering)
21. The applicant shall dedicate a separate maintenance easement to the City of Roseville for the bus stop located at the corner of Cirby Way and Riverside Avenue (shelter number 69). The easement documents, for public maintenance of the bus shelter, shall be drafted for approval and acceptance by the City of Roseville and recorded at the County Recorder's office. (Alternative Transportation, Engineering)

22. The applicant shall dedicate all necessary rights-of-way or Public Utility Easement for the widening of any streets or transfer of public utilities across and over any portion of the property as required with this entitlement. A separate document shall be drafted for approval and acceptance by the City of Roseville, and recorded at the County Recorder's Office. (Engineering)
23. The proposed driveway on Riverside Avenue shall be constructed as a standard 35 ft. wide A-7 driveway. (Engineering)
24. The proposed egress only driveway on Cirby Way shall be 15 ft. in width and approximately 260 ft. east of Riverside Avenue. The driveway shall be constructed with a radius to direct vehicles into the flow of traffic and restrict ingress movements. The appropriate signage shall be approved by the City to indicate this is a right turn egress driveway only, along with way finding signage directing vehicles to use Orlando Ave. to access I-80. (Engineering)
25. The intersection of Cirby Way/Cirby Hills/Kaiser North Driveway shall be improved with a traffic signal. All costs associated with the proposed signal shall be the responsibility of the developer. The following items shall be addressed with the construction of this signalized intersection:
 - a. Developer shall work with City Engineers to ensure proposed signal is coordinated with the other signals along the Cirby Way corridor.
 - b. The ingress/egress for the Kaiser North Driveway shall consist of one 18 ft. wide ingress lane and three 11 ft. wide egress lanes. The egress lanes shall be one left turn lane, one shared right/through lane and one right turn lane.
 - c. The left turn egress lane shall be timed such that 15 seconds is given to this phase of the signal during weekday p.m. peak hours. This timing is to meter out the left turns and encourage vehicles to use the dual rights being provided.
 - d. The throat depth for the Cirby Way/Cirby Hills/Kaiser North Driveway shall be a minimum of 250 ft. in length.
 - e. On-site and off-site way finding signs shall be placed directing traffic egressing the Kaiser North Driveway to proceed eastbound to Orland Avenue to I-80. (Engineering)
26. The existing westbound left turn pocket on Cirby Way at the Cirby Hills/Kaiser North Driveway shall be increased from 175 ft. to 250 ft. (Engineering)
27. A 190 ft. deceleration lane with 90 ft. taper shall be constructed on Cirby Way to access the Kaiser North Driveway. (Engineering)
28. Signage shall be provided on-site and within the public right of way indicating no u-turns are allowed from the existing eastbound left turn lane on Cirby Way at the Cirby Hills/Kaiser North Driveway. (Engineering)
29. The first internal intersection south of the North Kaiser Driveway shall have east/west stop control. (Engineering)
30. Provide stop control on the eastbound, westbound and southbound approaches at the main drive aisle (north of the medical offices) that intersects with the drop off area (westerly section). (Engineering)
31. A Construction Traffic Management Plan (TMP) shall be developed and approved by the City to clearly demonstrate how traffic will be handled during the various proposed phases of the project.

The TMP shall be consistent with the recommendation made in the Transportation Impact Study prepared for the project by Fehr & Peers. (Engineering).

32. Cirby Way shall be reconstructed to provide adequate sight distance as shown on the approved Cirby Way plan and profile sheets approved with this project. The sight distance shall be designed for a 45 mph design speed and a 2 ft. high object height. With the reconstruction of Cirby Way a new standard bus turnout, 120 ft. in length with 60 ft. tapers, shall be constructed. (Engineering)
33. All storm drainage, including roof drains, shall be collected on site and treated with Best Management Practices (BMP's) per the City's Stormwater Quality Design Manual. All storm water shall be routed to the nearest existing storm drain system or natural drainage facility. The grading/improvement plans for the site shall be accompanied with a shed map that defines that area tributary to this site and all drainage facilities shall be designed to accommodate the tributary flow. The storm drain system and proposed BMP's shall be privately owned and maintained by the property owner. Prior to the issuance of any permits, the owner shall provide a plan for the maintenance of the proposed BMP's and enter into a maintenance agreement with the City to ensure the BMP's are properly maintained. (Engineering)
34. Prior to the issuance of any permits, the property owner shall prepare and submit a Storm Water Pollution Prevention Plan (SWPPP) to the City, as defined by the Regional Water Quality Control Board. Upon approval, the SWPPP will be returned to the property owner during the pre-construction meeting. (Engineering)
35. The developer shall be responsible for any necessary relocation of signal interconnect cables that may require re-location as a result of the construction of roadwork, turn lanes and/or driveways. (Engineering)
36. To ensure that the design for any necessary widening, construction, or modifications of Public Streets does not conflict with existing dry utilities generally located behind the curb and gutter, and prior to the approval of design drawings for those frontage improvements, the project proponent shall have the existing dry utilities pot holed for verification of location and depth. (Engineering)
37. Sight distances for all driveways shall be clearly shown on the improvement plans to verify that minimum standards are achieved. It will be the responsibility of the project proponent to provide appropriate landscaping and improvement plans, and to relocate and/or modify existing facilities as needed to meet these design objectives. (Engineering)
38. The applicant shall remove and reconstruct any existing damaged curb, gutter, and sidewalk along the property frontage. During plan check of the improvement plans and/or during inspection, Public Works will designate the exact areas to be reconstructed. Any existing public facilities damaged during the course of construction shall be repaired by the property owner and at the property owner's expense, to the satisfaction of the City. (Engineering)
39. Prior to the approval of the improvement plans, it will be the project proponent's responsibility to pay the standard City Trench Cut Recovery Fee for any cuts within the City streets that are required for the installation of underground utilities. (Engineering)
40. Prior to the issuance of building permits, the property owner shall pay into the following fee programs: Citywide Drainage Fee, Citywide Traffic Mitigation Fee (TMF), Highway 65 Joint Partners Association (JPA), South Placer Regional Transportation Authority (SPRTA), and City/County Fee. (Engineering)

41. The Kaiser Permanente Health Plan shall update the existing Transportation Systems Management (TSM) Plan for Kaiser Riverside and Cirby Medical Office Building to be reviewed and approved by the Transportation Commission. (Public Works)
42. Prior to the issuance of a grading permit or approval of Improvement Plans, the grading plans shall clearly identify all existing water, sewer and recycled water utilities within the boundaries of the project (including adjoining public right of way). Existing utilities shall be identified in plan-view and in profile view where grading activities will modify existing site elevations over top of or within 15 feet of the utility. Any utilities that could potentially be impacted by the project shall be clearly identified along with the proposed protection measures. The developer shall be responsible for taking measures and incurring costs associated with protecting the existing water, sewer and recycled water utilities to the satisfaction of the Environmental Utilities Director. (Environmental Utilities)
43. The applicant shall pay all applicable water and sewer fees. (Environmental Utilities)
44. Water and sewer infrastructure shall be designed pursuant to the adopted City of Roseville Improvement Standards and the City of Roseville Construction Standards and shall include:
 - a. Utilities or permanent structures shall not be located within the area which would be disturbed by an open trench needed to expose sewer trunk mains deeper than 12' unless approved by Environmental Utilities in these conditions. The area needed to construct the trench is a sloped cone above the sewer main. The cone shall have 1:1 side slopes.
 - b. Water, sewer and recycled mains shall not exceed a depth of 12' below finished grade, unless authorized in these conditions of approval.
 - c. All sewer manholes shall have all-weather 10-ton vehicle access unless authorized by these conditions of approval. (Environmental Utilities)
45. Private sewer shall be built to City of Roseville standards and shall maintain 5' clear of other utilities. (Environmental Utilities)
46. No trees are allowed to be over the city appurtenances. (Environmental Utilities)
47. Water transmission main in Cirby is to maintain 4' minimum cover. If less than 4' minimum cover occurs over transmission main then the water main is to be lowered at the developers cost. (Environmental Utilities)
48. Trash enclosures, recycling areas, and enclosure approaches shall be designed to current Refuse Division specifications, the materials and colors shall match the building, and the location of such facilities shall be reviewed and approved by the Refuse Division, Planning and the Fire Department. The enclosure must have inside dimensions of 12 feet wide and 9 feet deep and be built to the specifications of the Solid Waste Department's Enclosure Description. (Refuse, Planning, Fire)
49. Access to trash enclosures shall have an inside turning radius of 25 feet and an outside turning radius of 45 feet must be maintained to allow the refuse truck access to and from the enclosure. Enclosures must have a clear approach of 65 feet in front of the enclosure to allow servicing bins. (Refuse)
50. A trash enclosure and recycling enclosure is required for each building and each tenant, otherwise, the building owner is responsible for the trash service. (Refuse)

51. The design and installation of all fire protection equipment shall conform to the California Fire Code and the amendments adopted by the City of Roseville, along with all standards and policies implemented by the Roseville Fire Department. (Fire)
52. The applicable codes and standards adopted by the City shall be enforced at the time construction plans have been submitted to the City for permitting (Fire)
53. The fire flow required, at a 50% reduction due to the buildings being sprinklered, will be based on the largest single structure in accordance with the California Fire Code at the time detail plans are submitted to the City of Roseville for review. The maximum fire flow will not exceed 4,000 gpm based on the Appendix III-AA of the California Fire Code. (Fire)
54. The fire department access road shall meet the City's requirements for width and turning radii of 30 and 50 as noted on the fire department standards for access. This shall be enforced at the time plan are submitted for review, Additional information can be found on the City's web site www.roseville.ca.us or contact Patrick Chew, Senior Fire Inspector, at 916-774-5823 or pchew@roseville.ca.us with the Fire Prevention Division for information. (Fire)
55. Automatic fire extinguishing system risers, fire alarm system panels and digital alarm communicator system panels shall be located within an approved fire control room and shall be accessible from an adjacent fire apparatus roadway. Said fire control room shall be a minimum size of 100 square feet in size and shall be openable from the exterior via an approved door opening, provided a fire pump will be required. (Fire)
56. Elevators shall be designed to accommodate first responders and their apparatuses such as gurneys. (Fire)
57. The phasing of this project shall not limit the fire department requirements for access and circulation throughout the project as a result of continuous construction in accordance with the California Fire Code, 2016 with the City of Roseville's Amendments. A separate phasing plan (and permit issued by the Building Department) shall be reviewed and approved by this department. (Fire)
58. Use, increase of hazardous materials or storage, liquids, gases and/or chemicals shall meet the requirements of the Chapter 6.95 of the Health and Safety Code, the Roseville Fire Department and the National Fire Codes. Submit a complete plan set and the Hazardous Materials Business Plan, including names and amount of any hazardous materials that will be stored or used, to the Fire and Life Safety Division for review and approval. A permit application shall also be provided at the time of submittal. Contact Steve Anderson of our Hazardous Materials Division within the Fire Department at (916) 774-5821 to initiate the process. Satisfaction of storage and use shall be determined prior to requesting occupancy. (Fire)
59. Adequate radio coverage shall be provided within all buildings for public safety agencies, as required by Roseville Municipal Code and the California Fire Code. A field test shall be provided by a person in possession of a current FCC License, or a current technician certification issued by the Associated Public-Safety Communications Officials International (APCO), or the National Association of Business and Educational Radio (NABER). The building owner shall retain all test records on the inspected premises and a copy shall be submitted to the Fire Department officials in accordance with Section 510 of the California Fire Code.

Adequate radio coverage shall include all of the following:

- a. A minimum signal strength of 95 dBm available in 90% of the area of each floor of the building when transmitted from the closest City of Roseville Radio Communication site.

- b. A minimum signal strength of 95 dBm received at the closest City of Roseville Communication site when transmitted from 90% of the area of each floor of the building.
 - c. The frequency range that must be supported shall be 821–824 MHz and 866–869 MHz.
 - d. A 100% reliability factor. (Fire, Police)
60. The Electric Department requires the submittal of the following information in order to complete the final electric design for the project:
- a. one (1) set of improvement plans
 - b. load calculations
 - c. electrical panel one-line drawings
61. All existing electric facilities shall be shown on the improvement plans, particularly on the grading and utility plans.
62. All on-site external lighting shall be installed and directed to have no off-site glare. Lighting within the parking areas and pedestrian walkways shall provide a maintained minimum of one (1) foot candle, and 0.5 foot candle of light, respectively. All exterior light fixtures shall be vandal resistant. (Planning, Police)
63. The parking lot shall have properly posted signs that state the use of the parking area is for the exclusive use of employees and customers of this project. (See California Vehicle Code Sections 22507.8, 22511.5, 22511.8, 22658(a), and the City of Roseville Municipal Code Section 11.20.110). The location of the signs shall be shown on the approved site plan. (Planning, Police)
64. It is the developer's responsibility to notify PG&E of any work required on PG&E facilities. (PG&E)

DURING CONSTRUCTION & PRIOR TO ISSUANCE OF OCCUPANCY PERMITS:

65. Any backflow preventers visible from the street shall be painted green to blend in with the surrounding landscaping. The backflow preventers shall be screened with landscaping and shall comply with the following criteria:
- a. There shall be a minimum clearance of four feet (4'), on all sides, from the backflow preventer to the landscaping.
 - b. For maintenance purposes, the landscaping shall only be installed on three sides and the plant material shall not have thorns.
 - c. The control valves and the water meter shall be physically unobstructed.
 - d. The backflow preventer shall be covered with a green cover that will provide insulation. (Planning, Environmental Utilities)
66. The following easements shall be provided by separate instrument and shown on the site plan, unless otherwise provided for in these conditions:
- a. Water, sewer, and reclaimed water easements.
 - b. Additional internal easements will be required to cover primary electrical facilities to the project when the final electrical design is completed. (Electric)
67. Easement widths shall comply with the City's Improvement Standards and Construction Standards. Separate document easements required by the City shall be prepared in accordance with the City's

"Policy for Dedication of Easements to the City of Roseville". All legal descriptions shall be prepared by a licensed land Surveyor. All existing public utility, electric, water, sewer and reclaimed water easements shall be maintained unless otherwise authorized by these conditions of approval. (Public Works, Environmental Utilities, Electric)

68. Inspection of the potable water supply system on new commercial/ industrial/ office projects shall be as follows:
 - a. The Environmental Utilities Inspector will inspect all potable water supply up to the downstream side of the backflow preventer.
 - b. The property owner/applicant shall be responsible for that portion of the water supply system from the backflow preventer to the building. The builder/contractor shall engage a qualified inspector to approve the installation of this portion of the water supply. The Building Division will require from the builder/ contractor, a written document certifying that this portion of the potable water supply has been installed per improvement plans and in accordance with the Uniform Plumbing Code. This certificate of compliance shall be submitted to the Building Division before a temporary occupancy or a building final is approved.
 - c. The building inspectors will exclusively inspect all potable water supply systems for the building from the shutoff valve at the building and downstream within the building. (Building, Environmental Utilities)
69. All improvements being constructed in accordance with the approved grading and improvement plans shall be accepted as complete by the City. (Engineering)
70. The words "traffic control appurtenances" shall be included in the list of utilities allowed in public utilities easements (PUE's) located along public roadways. (Engineering)
71. The Kaiser Permanente Health Plan shall update the existing Transportation Systems Management (TSM) Agreement for Kaiser Riverside and Cirby Medical Office Building to be reviewed and approved by the City Manager. (Alternative Transportation)
72. Water, sewer and reclaimed water shall be constructed pursuant to the adopted City of Roseville Improvement Standards and the City of Roseville Construction Standards. (Environmental Utilities)
73. All water backflow devices shall be tested and approved by the Environmental Utilities Department. (Environmental Utilities)
74. **Restaurants or other Food Service Establishment (FSE).** The applicant shall design for installation and/or install an exterior grease interceptor if the proposed business could potentially discharge substances containing fats, oils and grease (FOG) into the sewer system. The grease interceptor shall be adequate to separate and remove FOG contained in the wastewater from FSE's prior to discharge to the public sewer. (Environmental Utilities)
75. In the event an exterior grease interceptor cannot be installed due to space limitation, the developer shall install a grease trap, per City Standards, that will mechanically separate the FOG contained in the wastewater from the FSE prior to discharge to the public sewer. (Environmental Utilities)
76. Pursuant to the Municipal Code, the applicant shall apply for and obtain a FOG waste discharge permit (FOG WDP) from the Environmental Utilities Industrial Waste Division prior to occupancy or prior to discharging waste to the public sewer. The applicant shall submit information required by the Environmental Utilities Department for evaluation, including but not limited to: site plans, floor plans, mechanical and plumbing plans, and details to show all sewers, FOG control device, grease

interceptor or other pretreatment equipment and appurtenances by size, location and elevation. Additional information related to the applicant's business operations and potential discharge may be requested to properly evaluate the FOG WDP application. (Environmental Utilities)

77. All Electric Department facilities, including streetlights where applicable, shall be designed and built to the "City of Roseville Specifications for Commercial Construction." (Electric)
78. The City of Roseville Electric Department has electrical construction charges which are to be paid by the developer and which are explained in the City of Roseville "Specification for Commercial Construction." These charges will be determined upon completion of the final electrical design. (Electric)
79. Any relocation, rearrangement, or change of existing electric facilities due to this development shall be at the developer's expense. (Electric)
80. Any facilities proposed for placement within public/electric utility easements shall be subject to review and approval by the Electric Department before any work commences in these areas. This includes, but is not limited to, landscaping, lighting, paving, signs, trees, walls, and structures of any type. (Electric)
81. All electric metering shall be directly outside accessible. This can be accomplished in any of the following ways:
 - a. Locate the metered service panel on the outside of the building.
 - b. Locate the metered service panel in a service room with a door that opens directly to the outside. The developer will be required to provide a key to the door for placement in a lock box to be installed on the outside of the door. Any doors leading from the service room to other areas of the building shall be secured to prohibit unauthorized entry. (Electric)
82. One 3/4" conduit with a 2-pair phone line shall be installed from the buildings telephone service panel to the meter section of the customer's electrical switchgear or panel. (Electric)
83. It is the responsibility of the developer to insure that all existing electric facilities remain free and clear of any obstruction during construction and when the project is complete. (Electric)
84. No grading shall be permitted within five feet (5') of the 60kV poles along Cirby Way without approval from Roseville Electric. (Electric)
85. The grading along Cirby Way may require the developer pay for relocation of the 60kV pole, as determined by Roseville Electric. The determination of relocation will be based on the amount of grading and if the cut is significant enough that the resulting grade reduces the burial depth to an unsafe level based on Roseville Electric's specifications. (Electric)
86. The grade modification to Cirby Way will require relocation of the existing electric conduits, conductors and potentially the transformer serving the Security Public Storage, Streetlights and signals at the intersection of Cirby Way and Riverside Ave. Temporary facilities may need to be constructed to reduce outage time for critical services. (Electric)
87. The modification of the intersection at Cirby Way and Cirby Hills Drive will require the removal of the streetlight on the south east corner of the intersection. (Electric)
88. The exit only driveway on the south side of Cirby Way will require the relocation of the streetlight at this location. (Electric)

89. The proposed private site lighting within the PUE on the south side of Cirby Way will need to be modified to ensure it does not negatively impact the relocation of the roadway lighting. (Electric)
90. There is a portion to the east of the main building that appears to be a utility yard with some boxes drawn and no labels identifying these structures. If the intent is to utilize this location for the utility transformer and customer owned switchgear, than the details should be submitted to the electric department for review to ensure that there is proper working clearances and that the arrangement complies with the utilities specification for commercial construction. (Electric)
91. No demolition of electric facilities should be shown on these plans without coordinating these modifications with the Roseville Electric Improvement Plans. (Electric)
92. All electric facilities on this site shall be protected during construction. (Electric)

OTHER CONDITIONS OF APPROVAL:

93. Signs shown on the elevations are not approved as part of the Major Project Permit. A Sign Permit is required for all project signs. (Planning)
94. Following the installation of the landscaping, all landscape material shall be maintained in a healthy and weed free condition; dead plant material shall be replaced immediately. All trees shall be maintained and pruned in accordance with the accepted practices of the International Society of Arboriculture (ISA). (Planning)
95. The City reserves the right to restrict vehicle turning movements within the public right-of-way in the future if deemed necessary by the City Engineer. As such, the City will monitor vehicular movements from the proposed egress only driveway on Cirby Way. If at any time the City deems vehicles egressing from this driveway are not following the way finding signs to Orlando Ave, not abiding by the No U-Turn signage for eastbound Cirby Way left turns at the Cirby Hills traffic signal and are causing traffic delays by excessive queuing in the eastbound left turn pocket at the Cirby Hills traffic signal, the City shall require that the egress only driveway be blocked with a gate and used for emergency vehicle access only. (Engineering)
96. The required width of fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Minimum required widths and vertical clearances established by the Fire Code shall be maintained at all times during construction. Closure of accesses for fire apparatus by gates, barricades and other devices shall be prohibited unless approved by the Fire Chief. (Fire)
97. Temporary aboveground storage tanks may be used at construction sites for diesel fuel only and shall not exceed 1,000 gallon capacity. Tanks shall comply with all provisions found within the Fire Code. A Fire Department Permit shall be obtained prior to tank installation. The permit shall expire after 90 days from the date of issuance, unless extended by the Fire Chief. (Fire)
98. If site survey or earth moving work results in the discovery of hazardous materials in containers or what appears to be hazardous wastes released into the ground, the contractor or person responsible for the building permit must notify the Roseville Fire Department immediately. A representative from the Fire Department will make a determination as to whether the incident is reportable or not and if site remediation is required. (Fire)
99. The location and design of the gas service shall be determined by PG&E. The design of the gas service for this project shall not begin until PG&E has received a full set of City approved improvement plans for the project. (PG&E)

100. The project is subject to the noise standards established in the City's Noise Ordinance. In accordance with the City's Noise Ordinance project construction is exempt between the hours of seven a.m. and seven p.m. Monday through Friday, and between the hours of eight a.m. and eight p.m. Saturday and Sunday. Provided, however, that all construction equipment shall be fitted with factory installed muffling devices and that all construction equipment shall be maintained in good working order. (Building)
101. The developer (or designated consultant) shall certify that the building foundation location has been placed according to all approved setback requirements shown on the approved site plan. The developer shall prepare a written statement confirming building placement and provide an original copy to the City Building Department Field Inspector at the time of or prior to the foundation inspection. (Building)
102. Prior to Certificate of Occupancy, the applicant may apply for a Temporary Occupancy (TO) of the building. If a TO is desired, the applicant must submit a written request to the Building Division a minimum of thirty (30) days prior to the expected temporary occupancy date and shall include a schedule for occupancy and a description of the purpose for the Temporary Occupancy. (Building)
103. Concurrent with submittal for plan check and prior to a request for final building inspection, the applicant may request City approval of an occupancy phasing plan to allow individual or multiple building occupancies. This request shall be made in writing to the Building Division and shall include 10 copies of the following:
- A description of measures that will be undertaken to minimize conflict between residents/building occupants and construction traffic (e.g. fencing, etc.);
 - A phasing plan showing the proposed buildings, internal roads and access routes, landscaping, trash enclosure locations, and any other improvements planned for each phase; and
 - Estimated time frame for each phase and a specific date for the first phase. (Planning, Building)

CONDITIONS OF APPROVAL FOR TREE PERMIT

TREE PERMIT CONDITIONS AND COMPLIANCE VERIFICATION/INSPECTION CHECKLIST

CONDITION	COMPLIANCE VERIFIED/ INSPECTED	COMMENTS
PRIOR TO ISSUANCE OF ANY PERMITS OR ANY CONSTRUCTION ON-SITE		
1. All recommendations contained in the Arborist Report (Exhibit D) shall be incorporated as part of these conditions except as modified herein. (Planning)		
2. Tree 679 (as listed in Exhibit D) is approved for removal with this tree permit. All other protected native oak trees shall remain in place. Trees to be removed shall be clearly marked in the field and inspected by Planning Staff prior to removal. Removal of the trees shall be performed by or under the supervision of a certified arborist. (Planning)		
3. The developer shall be responsible for the replacement of the total number of inches proposed for removal prior to any tree removal. The total number of inches for this project is seven. Mitigation must be provided prior to tree removal unless otherwise approved in the tree replacement plan or in these conditions. (Planning)		

4. No activity shall be permitted within the protected zone of any native oak tree beyond those identified by this report. (Planning)		
5. A \$10,000 cash deposit or bond (or other means of security provided to the satisfaction of the Planning Division) shall be posted to ensure the preservation of all remaining trees during construction. The cash deposit or bond shall be posted in a form approved by the City Attorney. Each occurrence of a violation on any condition regarding tree preservation shall result in forfeiture of all or a portion of the cash deposit or bond. (Planning)		
6. A violation of any of the conditions of this Tree Permit is a violation of the Roseville Municipal Code, the Zoning Ordinance (Chapter 19.74) and the Tree Preservation Ordinance (Chapter 19.66). Penalties for violation of any of the conditions of approval may include forfeiture of the bond, suspension or revocation of the permit, payment of restitution, and criminal penalties. (Planning)		
7. A fencing plan shall be shown on the approved site plan and/or improvement plans demonstrating the Protected Zone for the affected trees. A maximum of three feet beyond the edge of the walls, driveway, or walkways will be allowed for construction activity and shall be shown on the fencing plan. The fencing plan shall be reviewed and approved by the Planning Division prior to the placement of the protective fencing. (Planning)		
8. The applicant shall install a minimum of a five-foot high chain link fence (or acceptable alternative) at the outermost edge of the Protected Zone of the oak tree. The fencing for encroachments shall be installed at the limit of construction activity. The applicant shall install signs at two equidistant locations on the temporary fence that are clearly visible from the front of the lot and where construction activity will occur. The size of each sign shall be a minimum of two feet (2') by two feet (2') and must contain the following language: "WARNING THIS FENCE SHALL NOT BE REMOVED OR RELOCATED WITHOUT WRITTEN AUTHORIZATION FROM THE PLANNING DIVISION". (Planning)		
9. Once the fencing is installed, the applicant shall schedule an appointment with the Planning Division to inspect and approve the temporary fencing before beginning any construction. (Planning)		
10. The applicant shall arrange with the arborist to perform, and certify in writing, the completion of deadwooding, fertilization, and all other work recommended for completion prior to the approval of improvement plans. Pruning shall be done by an Arborist or under the direct supervision of a Certified Arborist, in conformance with International Society of Arboriculture (I.S.A.) standards. Any watering and deep root fertilization which the arborist deems necessary to protect the health of the trees as noted in the arborist report or as otherwise required by the arborist shall be completed by the applicant. (Planning)		
11. A utility trenching pathway plan shall be submitted depicting all of the following systems: storm drains, sewers, water mains, and underground utilities. The trenching pathway plan shall show the proposed locations of all lateral lines. (Planning)		

12. A Site Planning Meeting shall be held with the applicant, the applicant's primary contractor, the Planning Division and the Engineering Division to review this permit, the approved grading or improvement plans, and the tree fencing prior to any grading on-site. The Developer shall call the Planning Division and Engineering Division two weeks prior to the start of grading work to schedule the meeting and fencing inspection. (Planning)		
DURING CONSTRUCTION		
13. The following information must be located on-site during construction activities: Arborist Report; Approved site plan/improvement plans including fencing plan; and, Conditions of approval for the Tree Permit. All construction must follow the approved plans for this tree permit without exception. (Planning)		
14. All preservation devices (aeration systems, oak tree wells, drains, special paving, etc.) shall be designed and installed as required by these conditions and the arborist's recommendations, and shall be shown on the improvement plans or grading plans. (Planning)		
15. If any native ground surface fabric within the Protected Zone must be removed for any reason, it shall be replaced within forty-eight (48) hours. (Planning)		
16. Storage or parking of materials, equipment and vehicles is not permitted within the protected zone of any oak tree. Vehicles and other heavy equipment shall not be operated within the Protected Zone of any oak tree. (Planning)		
17. Where recommended by the arborist, portions of the foundation shall be hand dug under the direct supervision of the project arborist. The certified arborist shall immediately treat any severed or damaged roots. Minor roots less than one (1) inch in diameter may be cut, but damaged roots shall be traced back and cleanly cut behind any split, cracked or damaged area. Major roots over one (1) inch in diameter may not be cut without approval of an arborist and any arborist recommendations shall be implemented. (Planning)		
18. The temporary fencing shall remain in place throughout the entire construction period and shall not be removed without obtaining written authorization from the Planning Division. In no event shall the fencing be removed before the written authorization is received from the Planning Division. (Planning)		
PRIOR TO ISSUANCE OF AN OCCUPANCY PERMIT		
19. Within 5 days of the completion of construction, a Certification Letter from a certified arborist shall be submitted to and approved by the Planning Division. The certification letter shall attest to all of the work (regulated activity) that was conducted in the protected zone of the tree, either being in conformance with this permit or of the required mitigation still needing to be performed. (Planning)		
20. A copy of this completed Tree Permit Compliance Verification/Inspection form shall be submitted to the Planning Division. (Planning)		
21. The approval of this Tree Permit shall expire on the same date as the Major Project Permit Stage 2. (Planning)		

CONDITIONS OF APPROVAL FOR GENERAL PLAN AMENDMENT

1. The project is approved as shown in Exhibit T. (Planning)

Attachments

1. Existing Site Plan
2. Color 3-dimensional renderings
3. Photosimulations
4. Cirby Way Improvements

NOTE: The attachments and exhibits are not included as part of CC Attachment 5, the Planning Commission Staff Report, because they are already included as attachments and exhibits to the City Council Communication.

- T. General Plan Change Pages

Note to Applicant and/or Developer: Please contact the Planning Division staff at (916) 774-5276 prior to the Commission meeting if you have any questions on any of the recommended conditions for your project. If you challenge the decision of the Commission in court, you may be limited to raising only those issues which you or someone else raised at the public hearing held for this project, or in written correspondence delivered to the Planning Manager at, or prior to, the public hearing.

RESOLUTION NO. 17-272

CERTIFYING A FINAL ENVIRONMENTAL IMPACT REPORT RELATING TO THE KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING PROJECT, ADOPTING FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS, ADOPTING MITIGATION MEASURES, AND ADOPTING A MITIGATION MONITORING PROGRAM

WHEREAS, the Kaiser Foundation Health Plan (“Applicant”) has submitted a proposal to construct a 16,000 square-foot, one-story pavilion building; a 194,000 square-foot, five-story medical office building; a parking deck; and associated parking lot and landscaping that will replace the existing one and two-story Kaiser Permanente medical office building complex; and

WHEREAS, the City determined that an environmental impact report (“EIR”) should be prepared for the Kaiser Riverside and Cirby Medical Office Building Project (“Project”) pursuant to the California Environmental Quality Act (“CEQA”), Public Resources Code Sections 21000 *et seq.*; and

WHEREAS, in June 2016, the City issued a Notice of Preparation (“NOP”) of the EIR; and

WHEREAS, the NOP was circulated for comment by responsible and trustee agencies and the public for a total of 30 days, from June 7, 2016 through July 6, 2016; and

WHEREAS, on March 9, 2017, the Draft EIR for the Project (State Clearinghouse No. 2016062020) was distributed to the public for review and comment for a 45-day period that ended April 24, 2017; and

WHEREAS, the Draft EIR and comments received thereon were reviewed by the Planning Commission at a public hearing on April 27, 2017; and

WHEREAS, written responses to all comments received on the Draft EIR have been prepared and are presented in the Final EIR, which was issued on June 9, 2017; and

WHEREAS, the Final EIR, consisting of the Draft EIR, Final EIR, and Mitigation Monitoring and Reporting Program and all documents incorporated therein, has been presented to the City Council and the City Council has reviewed and considered the information in the Final EIR.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Roseville, having independently considered the environmental effects of the Project as shown in the Final EIR, as follows:

1. It is hereby certified that the City Council has reviewed the Final EIR prepared for the Project, all staff reports pertaining to the Project, and all other pertinent documents relating to

the preparation of the Final EIR, including the Draft EIR and all comments received thereon, and finds that the Final EIR is adequate, complete and has been prepared in compliance with CEQA and any related laws.

2. It is hereby certified that the Final EIR reflects the independent judgment and analysis of the City Council of the City of Roseville and that the City Council reviewed and considered the information contained in the Final EIR prior to approving the Project.

3. The City Council hereby adopts the CEQA Findings of Fact and Statement of Overriding Considerations of the City Council of the City of Roseville for the Kaiser Riverside and Cirby Medical Office Building Project ("Findings"), on file with the City Clerk as "Exhibit A, Part 3," pursuant to Public Resources Code Section 21081.

4. The City Council hereby adopts and incorporates into the Project all of the mitigation measures for the Project that are within the responsibility and jurisdiction of the City that are identified in the Findings.

5. The City Council hereby adopts a Mitigation Monitoring Program for the Project, on file with the City Clerk as "Exhibit A."

6. The City Council specifies that the documents and other material that constitute the record of the proceedings on which the City Council's decision is based shall be located in the offices of the Planning Division and in the custody of the Development Services Director.

7. Direction to Staff:

A. The City Clerk is directed to file a Notice of Determination, together with this Resolution and its exhibits, if any, in the Office of the County Clerk of Placer County and, in accordance with Public Resources Code Section 21152, shall cause such Notice to be posted in the County Clerk's Office, all within five working days after City Council action to approve the Project.

PASSED AND ADOPTED by the Council of the City of Roseville this _____ day of _____, 2017, by the following vote on roll call:

AYES	COUNCILMEMBERS:
NOES	COUNCILMEMBERS:
ABSENT	COUNCILMEMBERS:

CHAPTER 1 INTRODUCTION

INTRODUCTION

This Final Environmental Impact Report (EIR) contains the public and agency comments received during the public review period for the Kaiser Riverside-Cirby Medical Office Building Draft EIR.

The EIR is an informational document intended to disclose to the City of Roseville (City) and the public the environmental consequences of approving and implementing the Kaiser Riverside-Cirby Medical Office Building Project (proposed project) or one of the alternatives to the project described in the Draft EIR. All written comments received during the public review period (March 9, 2017 through April 24, 2017) on the Draft EIR are addressed in this Final EIR.

The responses in the Final EIR clarify, correct, and/or amplify text in the Draft EIR, as appropriate. There were text changes made at the initiative of the Lead Agency (City). This document has been prepared in accordance with the California Environmental Quality Act (CEQA; California Public Resources Code (PRC), §§ 21000–21177).

BACKGROUND

In accordance with CEQA, the City released a Notice of Preparation (NOP) on June 7, 2016. The purpose of the NOP was to provide notification that an EIR for the project was being prepared and to solicit guidance on the scope and content of the document. Comments received on the NOP were reviewed and addressed in the Draft EIR. A summary of the comments relative to a particular issue area is provided in the introduction of each technical section in Chapter 4. The Draft EIR was circulated for public review and comment for a period of 45 days from March 9, 2017 through April 24, 2017.

Senate Bill 18 (SB 18; Government Code §§ 65352.3, 65352.4) requires that, prior to the adoption or amendment of a general plan proposed on or after March 1, 2005, a city or county must consult with Native American tribes with respect to the possible preservation of, or the mitigation of impacts to, specified Native American places, features, and objects located within that jurisdiction.

In compliance with SB 18, the City requested a list of tribal contacts from the Native American Heritage Commission, and sent letters to the listed California Native American Tribes (tribes). Responses were received from two tribes requesting to be consulted through project updates if any new information or human remains are found during project construction.

The comments and responses that make up the Final EIR, in combination with the Draft EIR, as amended by the text changes, constitute the EIR that will be considered for certification by the decision makers of the City of Roseville.

CEQA REQUIREMENTS

Under CEQA, the Lead Agency must prepare and certify a Final Environmental Impact Report (Final EIR) prior to approving a proposed project. The contents of a Final EIR are specified in Section 15132 of the CEQA Guidelines, which states that the Final EIR shall consist of:

- a) The Draft EIR or a revision of the Draft.
- b) Comments and recommendations received on the Draft EIR either verbatim or in summary.
- c) A list of persons, organizations, and public agencies commenting on the Draft EIR.
- d) The responses of the Lead Agency to significant environmental points raised in the review and consultation process.
- e) Any other information added by the Lead Agency.

The Lead Agency must provide each public agency that commented on the Draft EIR with a copy of the Lead Agency's response to such comments a minimum of 10-days before certifying the Final EIR.

USE OF THE FINAL EIR

The Final EIR allows the public and the City an opportunity to review revisions to the Draft EIR and the Responses to Comments. The Final EIR serves as the environmental document to support approval of the proposed project, either in whole or in part, or one of the alternatives to the project discussed in the Draft EIR.

As required by Section 15090(a) (1)-(3) of the CEQA Guidelines, a Lead Agency, in certifying a Final EIR, must make the following three determinations:

1. The Final EIR has been completed in compliance with CEQA.
2. The Final EIR was presented to the decision-making body of the Lead Agency, and the decision-making body reviewed and considered the information in the Final EIR prior to approving the project.
3. The Final EIR reflects the Lead Agency's independent judgment and analysis.

As required by Section 15091 of the CEQA Guidelines, no public agency shall approve or carry out a project for which an EIR has been certified that identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings (Findings of Fact) for each of those significant effects, accompanied by a brief explanation of the rationale for each finding supported by substantial evidence in the record. The possible findings are:

1. Changes or alterations have been required in, or incorporated into the project which avoid or substantially lessen the significant environmental effect as identified in the final EIR.

2. Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.
3. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final EIR.

Additionally, pursuant to Section 15093(b) of the CEQA Guidelines, when a Lead Agency approves a project that would result in significant unavoidable impacts that are disclosed in the Final EIR, the agency must state in writing the reasons supporting the action. The Statement of Overriding Considerations shall be supported by substantial evidence in the Lead Agency's administrative record. The Findings of Fact and Statement of Overriding Considerations are included in a separate document that will be considered for adoption by the City's decision makers at the time of project approval.

PROJECT UNDER REVIEW

The proposed project is located on an approximately 14-acre site located to the southeast of the intersection of Riverside Avenue and Cirby Way. Interstate 80 (I-80) borders the south and east sides of the site. The proposed project analyzed in the Draft EIR consists of the following:

- An approximately 194,000-square-foot, five-story medical office building.
- A one-story, 21-foot-tall, 16,000-square-foot pavilion building.
- An approximately 11-foot tall, 82,630-square-foot parking deck with 255 parking spaces and 803 surface parking spaces.
- Site/building lighting and landscaping.
- Demolition of the existing medical office complex that includes six building for a total of 90,209 square feet.

A detailed project description is contained in the Draft EIR in Chapter 2, Project Description. The environmental impact analysis is included in Chapter 4 of the Draft EIR.

SUMMARY OF TEXT CHANGES

Chapter 2 in this Final EIR, Changes to the Draft EIR, identifies any changes made to the document by chapter or section. No revisions or changes were required to the text of the Draft EIR.

RESPONSES TO COMMENTS

A list of public agencies commenting on the Draft EIR is included in Chapter 3 in this Final EIR. A total of two comment letters were received from public agencies, one letter was received from a tribe, and no comments were received from the public. Responses to comments received appear in Chapter 3 of this Final EIR. Each comment letter on the Draft EIR is numbered and presented with brackets indicating how the letter has been divided into individual comments. Each comment is given a binomial with the number of the comment letter appearing first, followed by the comment number. For example, comments in Letter 1 are numbered 1-1, 1-2, 1-3, and so on. Immediately following the letter are responses, each with binomials that correspond to the bracketed comments. As the subject matter of one topic may overlap between letters, the reader is occasionally referred to one or more responses to review all the information on a given subject. To assist the reader, cross-references to other comments are provided if necessary.

MITIGATION MONITORING AND REPORTING PROGRAM

The Mitigation Monitoring and Reporting Program (MMRP) for the proposed project, presented in Chapter 4 of this Final EIR, includes all of the mitigation measures required of the proposed project by the Draft EIR.

If the City Council chooses to approve the proposed project or one of the alternatives described in the Draft EIR, the Council will be required to adopt the MMRP at the same time it adopts its CEQA Findings, as required by Section 21081.6 of the Public Resources Code.

OVERVIEW OF THE PUBLIC PARTICIPATION AND REVIEW PROCESS

The City notified all responsible and trustee agencies and all known interested groups, organizations, and individuals that the Draft EIR was available for review. The following list of actions took place during the preparation, distribution, and review of the Draft EIR:

- The City filed a Notice of Completion (NOC) along with copies of the NOP stating the City's intention to prepare an EIR for the proposed project with the State Clearinghouse for the required 30-day public review period on June 7, 2016.
- An NOC and copies of the Draft EIR were filed with the State Clearinghouse on March 9, 2017, to start the required 45-day public review period. The City distributed a Notice of Availability (NOA) to interested groups, organizations, and individuals regarding the availability of the Draft EIR, as well as by direct mailing to all properties within 300 feet of the proposed project.

- Copies of the Draft EIR were available for review on the City's website (www.roseville.ca.us); at the City of Roseville Permit Center and City Clerk's office, 311 Vernon Street, Roseville, California 95678; and the Main Library, 225 Taylor Street, Roseville, California 95678.
- Kaiser Permanente held a community meeting on March 22, 2017, to share project information to the public. City staff and the EIR consultant were available to address any EIR-related questions.
- The project was heard by the City of Roseville Planning Commission on April 27, 2017. The Planning Commission considered the Draft EIR and all comments received and recommended staff prepare the Final EIR for certification by City Council. A public notice of the Planning Commission hearing was published on April 14, 2017 in the Roseville Press Tribune, a newspaper of general circulation, and was distributed to all property owners within 300 feet, as well as to interested groups, organizations, and individuals. No public comments were received during the hearing.

INTENTIONALLY LEFT BLANK

CHAPTER 2

CHANGES TO THE DRAFT EIR

INTRODUCTION

There were no minor corrections, additions or revisions made to the text of the Draft EIR initiated by the Lead Agency (City of Roseville), reviewing agencies, the public, and/or consultants based on their review. Therefore, in accordance with Section 15088.5 of the CEQA Guidelines there is no need to recirculate either select portions or all of the Draft EIR.

INTENTIONALLY LEFT BLANK

CHAPTER 3 RESPONSES TO COMMENTS

This chapter contains the comment letters received in response to the Draft EIR. Each comment letter is numbered, each comment is bracketed, and responses are provided to each comment. The responses amplify or clarify information provided in the Draft EIR and/or refer the reader to the appropriate place in the document where the requested information can be found. Comments that are not directly related to environmental issues (e.g., opinions on the merits of the project unrelated to its environmental impacts) may either be discussed or noted for the record. Where text changes in the Draft EIR are warranted based on comments received or information provided by City of Roseville staff, such text changes are included in the response to comment and are also listed in Chapter 2 of this Final EIR. No text changes were required.

Below is a list of agencies commenting on the Draft EIR.

Federal Agencies

- There were no comments received from federal agencies by the close of the comment review period (April 24, 2017).

State Agencies

- California Department of Transportation (Caltrans)
- Central Valley Regional Water Quality Control Board

Tribal Governments

- United Auburn Indian Community of the Auburn Rancheria

Local Agencies/Individuals

- There were no comments received from local agencies or individuals by the close of the comment review period (April 24, 2017).

Making Conservation
a California Way of Life.

Comment Letter 1

April 13, 2017

GTS# 03-PLA-2017-00054
03-PLA-80 PM .493
SCH# 2016062020

Ms. Lauren Hocker
City of Roseville
311 Vernon Street
Roseville, CA 95678

Kaiser Riverside Cirby Medical Office Building

Dear Ms. Lauren Hocker:

Thank you for including the California Department of Transportation (Caltrans) in the environmental/application review process for the project referenced above. The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. The Local Development-Intergovernmental Review (LD-IGR) Program reviews land use projects and plans through the lenses of our mission and state planning priorities of infill, conservation, and travel-efficient development. To ensure a safe and efficient transportation system, we encourage early consultation and coordination with local jurisdictions and project proponents on all development projects that utilize the multimodal transportation network.

The project proposes to demolish six existing 1-2 story buildings consisting of 90,290 sqft, and construct two new-multi story buildings that would consist of a combined 207,700 sqft of office space on the existing approximately 14 acre Kaiser campus in Roseville at 1001 Riverside Avenue, adjacent to Interstate 80 (I-80). The following comments are based on the Draft Environmental Impact Report received.

Vehicle Miles Travelled (VMT)

In response to the provisions of Senate Bill 743, we encourage the integration of transportation and land use in a way that reduces VMT and Greenhouse Gas (GHG) emissions by facilitating the provision of more proximate goods and services to shorten trip lengths, as well as achieve a high level of non-motorized travel and transit use. As such, we encourage the evaluation of the potential of Transportation Demand Management (TDM) strategies and Intelligent Transportation System (ITS) applications in order to better manage the transportation network, as well as transit service and bicycle or pedestrian connectivity improvements. The Department also seeks to reduce serious injuries and fatalities, as well as provide equitable mobility options for people who

1-1

"Provide a safe, sustainable, integrated, and efficient transportation system to enhance California's economy and livability"

Ms. Lauren Hocker, City of Roseville
April 13, 2017
Page 2

are economically, socially, or physically disadvantaged. Therefore, we encourage the evaluation of the project site for access problems, VMT, and service needs that may need to be addressed. ↑ 1-1 Cont.

Traffic Operations

Fehr and Peers traffic consultants conducted a traffic study to determine if the project would result in significant impacts to State and local facilities within the vicinity of the project.

1) Regarding State facilities, mainline I-80 from Riverside Avenue to Antelope Road was analyzed, as per Caltrans' request, as well as the Riverside Ave./I-80 WB ramps and the Riverside Ave./I-80 EB ramps/Orlando Ave. intersections. The study resulted in no significant impacts to the above mentioned State facilities due to the Kaiser project during peak hours for existing plus project conditions. 1-2

2) For cumulative plus project conditions, the WB right turn movement will result in a 700' queue, while the queue storage for that movement is 325'. The project proponent should be conditioned to pay fair share contribution toward necessary future improvements to this off-ramp. 1-3

3) As per the traffic study, the project will not result in impacts to existing and planned transit, bicycle and pedestrian facilities. 1-4

Hydraulics

The redevelopment of this site may increase impervious surface area through the construction of roads, driveways, parking lots, buildings, etc. with a corresponding increase in surface water runoff. This project may decrease surface water detention, retention and infiltration. No net increase to 100-year storm event peak discharge may be realized within the State's highway right of way and/or Caltrans drainage facilities as a result of the project. Any cumulative impacts to Caltrans drainage facilities arising from effects of development on surface water runoff discharge from the 100-year storm event should be minimized through project drainage mitigation measures. 1-5

Increases in peak runoff discharge for the 100-year storm event to the State's highway right of way and to Caltrans' highway drainage facilities must be reduced to at or below the preconstruction levels. The cumulative effects on drainage due to development within the region should be considered in the overall development plan of this area.

All grading and/or drainage improvements must maintain or improve existing drainage pathways and may not result in adverse hydrologic or hydraulic conditions within the State's highway right of way or to Caltrans drainage facilities. The developer must maintain or improve existing ↓ 1-6

"Provide a safe, sustainable, integrated, and efficient transportation system to enhance California's economy and livability"

Ms. Lauren Hocker, City of Roseville
 April 13, 2017
 Page 3

drainage patterns and/or facilities affected by the proposed project to the satisfaction of the State and Caltrans. This may be accomplished through the implementation of storm water management Best Management Practices (i.e., detention/retention ponds or basins, sub-surface galleries, on-site storage and/or infiltration ditches, etc.). Once installed, the property owner must properly maintain these systems. The proponent/developer may be held liable for future damages due to impacts for which adequate mitigation was not undertaken or sustained.

↑
 1-6
 Cont.

Runoff from the proposed project that will enter the State's highway right of way and/or Caltrans drainage facilities must meet all regional water quality control board water quality standards prior to entering the State's highway right of way or Caltrans drainage facilities. Appropriate storm water quality Best Management Practices may be applied to ensure that runoff from the site meets these standards (i.e., is free of oils, greases, metals, sands, sediment, etc.). Once installed, the property owner must properly maintain these systems in perpetuity.

↑
 1-7

Please provide our office with copies of any further actions regarding this project. We would appreciate the opportunity to review and comment on any changes related to this development.

↑
 1-8

If you have any question regarding these comments or require additional information, please contact David Smith, Intergovernmental Review Coordinator for Placer County, by phone (530) 634-7799 or via email to david.j.smith@dot.ca.gov.

Sincerely,

KEVIN YOUNT, Branch Chief
 Office of Transportation Planning
 Regional Planning Branch—North

"Provide a safe, sustainable, integrated, and efficient transportation system to enhance California's economy and livability"

INTENTIONALLY LEFT BLANK

Response to Comment Letter 1

Kevin Yount, Branch Chief, Office of Transportation Planning Regional Planning Branch – North, California Department of Transportation

- 1-1** The comment is encouraging that the traffic analysis includes an evaluation of the project site for any access concerns, a review of vehicle miles (VMT) traveled, and any service needs that need to be addressed.

The EIR traffic analysis is included in Section 4.3, Transportation and Circulation, and addresses site access starting on page 4.3-61 and provides a number of recommendations consistent with the City's Design Standards. The project's VMT is addressed starting on page 4.3-29 and Table 4.3-16 quantifies the project's weekday VMT. Other Transportation Considerations that include construction staging, site access and circulation, and parking is included starting on page 4.3-57. The EIR addresses site access, VMT, as well as parking and other project-related needs.

- 1-2** The comment notes that State facilities, specifically I-80 from Riverside Avenue to Antelope Road, and the Riverside Avenue/I-80 WB ramps and the Riverside Avenue/I-80 EB ramps/Orlando Avenue intersection were all analyzed in the EIR, as requested by Caltrans. The EIR notes there are no significant impacts to State roadway facilities during peak hours under Existing Plus Project conditions.

The comment is noted and no response is required.

- 1-3** The comment states that under Cumulative Plus Project conditions the WB right turn movement would require a 700-foot queue length; however, a queue length of 325 feet is available. Caltrans is requesting the project applicant be required to pay their fair share contribution towards any necessary improvement to this off-ramp.

The comment does not indicate which off-ramp, but based on the information provided it appears the comment is referencing the westbound Orlando Avenue to northbound Riverside Avenue right turn movement. The EIR evaluates queuing analysis and queue lengths under Cumulative Plus Project conditions starting on page 4.3-50. Table 4.3-13 identifies that the available storage at the Riverside Avenue/I-80 EB ramps at Orlando Avenue at the westbound right turn lane would exceed the maximum queue length under PM peak hour conditions both under No Project and Plus Project conditions. Table 4.3-13 also shows that the project would not cause traffic on the I-80/Riverside Avenue eastbound and westbound off-ramps to queue back onto the I-80 mainline. The 700 foot queue only impacts the City's local street, Orlando Avenue, and does not impact the

Caltrans off-ramp or the mainline. Because the project does not impact any Caltrans facilities the City has not required the applicant provide any fair share contribution.

- 1-4** The comment notes that the project would not adversely impact any existing or planned transit, bicycle or pedestrian facilities.

The comment is noted and no response is required.

- 1-5** The comment notes that redeveloping the project site may increase impervious surface area resulting in an increase in stormwater runoff. The comment states that no net increase in 100-year storm event stormwater can be discharged within the State's right-of-way, and any increase in stormwater runoff must be reduced to at or below preconstruction levels.

All stormwater and water runoff generated on the project site would be treated through the use of an underground detention system (galleries) that would detain and treat stormwater on site before it is discharged into the site's two existing connections to the City's storm drain system. The first is a curb inlet just south of the Riverside/Cirby intersection. The second is an 18-inch pipe just east of the existing Cirby Way entrance. Both of these two connection points would be maintained. As stated on page 2-30 of the Project Description, the project would maintain pre-project flow rates through the use of on-site infiltration and detention. The proposed project's detention system would include an orifice structure located just upstream of the connection to the City's public system. The detention structure would store excess water in underground infiltration galleries. The detention volume has been designed to store stormwater to not exceed the pre-project peak discharge flow rate associated with a 10-year storm event.

Pavement runoff would be directed to area inlets or curb inlets. Roof runoff would be connected to subsurface infiltration galleries. The on-site piping system would be designed to convey the 10% chance (10-year) storm event. Overland release would be provided to convey the 1% chance (100-year) storm event.

- 1-6** The comment states that the project applicant must maintain or improve existing drainage patterns to the satisfaction of the State and Caltrans. The project applicant must maintain these systems during project operation.

The project has been designed to ensure stormwater generated during peak events would not exceed pre-project peak discharge flow rates associated with a 10-year storm event. Please see Response to Comment 1-5.

- 1-7** The comment states that any runoff that enter the State's right-of-way must meet all regional water quality control board standards and storm water quality Best Management Practices (BMPs) be applied. The project applicant must also properly maintain these systems.

The stormwater quality control measures, as discussed above under Response to Comment 1-5, have been designed to comply with the requirements of the City's Manual for Stormwater Quality Control Standards for New Development, which is consistent with the Regional Water Quality Control Board and NPDES permit standards.

- 1-8** The comment is requesting Caltrans be notified of any further actions regarding the project.

The City will ensure Caltrans is kept apprised of any changes to the project. The comment is noted, no further response is required.

COMMENTS TO REQUEST FOR REVIEW FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT, KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING PROJECT, SCH# 2016062020, PLACER COUNTY

Pursuant to the State Clearinghouse's 9 March 2017 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Request for Review for the Draft Environment Impact Report* for the Kaiser Riverside and Cirby Medical Office Building Project, located in Placer County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore our comments will address concerns surrounding those issues.

I. Regulatory Setting

Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases,

Kaiser Riverside and Cirby
Medical Office Building Project
Placer County

- 2 -

17 April 2017

the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues.

For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:
http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/.

2-1
Cont.

Antidegradation Considerations

All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Policy is available on page IV-15.01 at:
http://www.waterboards.ca.gov/centralvalleywater_issues/basin_plans/sacsjr.pdf

In part it states:

Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.

This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

2-2

II. Permitting Requirements

Construction Storm Water General Permit

Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction Activities (Construction General Permit), Construction General Permit Order No. 2009-009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan

2-3

Kaiser Riverside and Cirby
Medical Office Building Project
Placer County

- 3 -

17 April 2017

(SWPPP).

For more information on the Construction General Permit, visit the State Water Resources Control Board website at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml.

Phase I and II Municipal Separate Storm Sewer System (MS4) Permits¹

The Phase I and II MS4 permits require the Permittees reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/.

For more information on the Caltrans Phase I MS4 Permit, visit the State Water Resources Control Board at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/caltrans.shtml.

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at:
http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

Industrial Storm Water General Permit

Storm water discharges associated with industrial sites must comply with the regulations contained in the Industrial Storm Water General Permit Order No. 2014-0057-DWQ.

For more information on the Industrial Storm Water General Permit, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/industrial_general_permits/index.shtml.

2-3
Cont.

¹ Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

Kaiser Riverside and Cirby
Medical Office Building Project
Placer County

- 4 -

17 April 2017

Clean Water Act Section 404 Permit

If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACOE). If a Section 404 permit is required by the USACOE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements.

If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACOE at (916) 557-5250.

Clean Water Act Section 401 Permit – Water Quality Certification

If an USACOE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance (i.e., discharge of dredge or fill material) of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications.

2-3
Cont.

Waste Discharge Requirements

Discharges to Waters of the State

If USACOE determines that only non-jurisdictional waters of the State (i.e., "non-federal" waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation.

Land Disposal of Dredge Material

If the project will involve dredging, Water Quality Certification for the dredging activity and Waste Discharge Requirements for the land disposal may be needed.

For more information on the Water Quality Certification and WDR processes, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/help/business_help/permit2.shtml.

Dewatering Permit

If the proposed project includes construction or groundwater dewatering to be discharged to land, the proponent may apply for coverage under State Water Board General Water Quality Order (Low Risk General Order) 2003-0003 or the Central Valley Water Board's

Kaiser Riverside and Cirby
Medical Office Building Project
Placer County

- 5 -

17 April 2017

Waiver of Report of Waste Discharge and Waste Discharge Requirements (Low Risk Waiver) R5-2013-0145. Small temporary construction dewatering projects are projects that discharge groundwater to land from excavation activities or dewatering of underground utility vaults. Dischargers seeking coverage under the General Order or Waiver must file a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Risk General Order and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf

For more information regarding the Low Risk Waiver and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2013-0145_res.pdf

2-3
Cont.

Regulatory Compliance for Commercially Irrigated Agriculture

If the property will be used for commercial irrigated agricultural, the discharger will be required to obtain regulatory coverage under the Irrigated Lands Regulatory Program. There are two options to comply:

1. **Obtain Coverage Under a Coalition Group.** Join the local Coalition Group that supports land owners with the implementation of the Irrigated Lands Regulatory Program. The Coalition Group conducts water quality monitoring and reporting to the Central Valley Water Board on behalf of its growers. The Coalition Groups charge an annual membership fee, which varies by Coalition Group. To find the Coalition Group in your area, visit the Central Valley Water Board's website at: http://www.waterboards.ca.gov/centralvalley/water_issues/irrigated_lands/app_approval/index.shtml; or contact water board staff at (916) 464-4611 or via email at IrrLands@waterboards.ca.gov.
2. **Obtain Coverage Under the General Waste Discharge Requirements for Individual Growers, General Order R5-2013-0100.** Dischargers not participating in a third-party group (Coalition) are regulated individually. Depending on the specific site conditions, growers may be required to monitor runoff from their property, install monitoring wells, and submit a notice of intent, farm plan, and other action plans regarding their actions to comply with their General Order. Yearly costs would include State administrative fees (for example, annual fees for farm sizes from 10-100 acres are currently \$1,084 + \$6.70/Acre); the cost to prepare annual monitoring reports; and water quality monitoring costs. To enroll as an Individual Discharger under the Irrigated Lands Regulatory Program, call the Central Valley Water Board phone line at (916) 464-4611 or e-mail board staff at IrrLands@waterboards.ca.gov.

2-4

Kaiser Riverside and Cirby
Medical Office Building Project
Placer County

- 6 -

17 April 2017

Low or Limited Threat General NPDES Permit

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Dewatering and Other Low Threat Discharges to Surface Waters* (Low Threat General Order) or the General Order for *Limited Threat Discharges of Treated/Untreated Groundwater from Cleanup Sites, Wastewater from Superchlorination Projects, and Other Limited Threat Wastewaters to Surface Water* (Limited Threat General Order). A complete application must be submitted to the Central Valley Water Board to obtain coverage under these General NPDES permits.

For more information regarding the Low Threat General Order and the application process, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2013-0074.pdf

For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2013-0073.pdf

NPDES Permit

If the proposed project discharges waste that could affect the quality of the waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit.

For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at:
http://www.waterboards.ca.gov/centralvalley/help/business_help/permit3.shtml

If you have questions regarding these comments, please contact me at (916) 464-4644 or Stephanie.Tadlock@waterboards.ca.gov.

Stephanie Tadlock
Environmental Scientist

cc: State Clearinghouse unit, Governor's Office of Planning and Research, Sacramento

2-5

Response to Comment Letter 2

**Stephanie Tadlock, Environmental Scientist
Central Valley Regional Water Quality Control Board**

- 2-1** The comment is describing the requirements contained in the Basin Plan, required to be adopted by the Central Valley Regional Water Quality Control Board.

No issues or concerns pertaining to the adequacy of the Draft EIR are provided. The comment is noted and no further response is required.

- 2-2** The comment is noting that all wastewater discharge must comply with the State's Antidegradation Policy and is a mandatory element in the NPDES and Waste Discharge Requirement (WDR) permitting process.

The project would connect to the City's wastewater and storm drainage systems; therefore, the City is required to comply with these requirements. The comment is noted and no further response is required.

- 2-3** The comment provides an overview of the permitting requirements. No issues or concerns pertaining to the adequacy of the Draft EIR are provided. The project will require coverage under the Construction General Permit for stormwater. Consistent with the requirements of the MS4 permit, the project is subject to the City's Stormwater Management Plan and implementing municipal codes. As the project would rely upon Section 401 permits issued in 1989, a new Section 401 application is not anticipated at this time. The comment is noted and no further response is required.

- 2-4** The comment references requirements for projects that require commercially irrigated land. The project does not include any commercial irrigation; therefore, this comment is not applicable to the project and no response is required.

- 2-5** The comment states that if the project requires any dewatering or would involve any other activity that would discharge into waters of the U.S. the project would require coverage under a NPDES permit.

The project does not anticipate any dewatering would be required and does not anticipate discharging into waters of the U.S. The project would connect to the City's wastewater and storm drain systems and would be covered under the City's NPDES permit. The comment is noted and no further response is required.

INTENTIONALLY LEFT BLANK

Response to Comment Letter 3

**Gene Whitehouse, Chairman
United Auburn Indian Community of the Auburn Rancheria (UAIC)**

Pursuant to Public Resources Code Section 21082.3, subdivision (c), certain kinds of information submitted by a California Native American tribe during the environmental review process may not be included in the environmental document or disclosed to the public without the prior written consent of the tribe. The lead agency may instead summarize the tribal letters in a general way. The following is a summary of the letter:

The UAIC thanked the City for providing the DEIR, requested the City continue sending copies of any other environmental documents published for the project, and further requested the UAIC be contacted if any cultural resources are found in the project area.

Consistent with this letter, the UAIC is included on the mailing list for this project, and Mitigation Measure CUL-1, included in the Initial Study and the Mitigation Monitoring and Reporting Program, includes provisions to contact the UAIC should any resources be discovered.

INTENTIONALLY LEFT BLANK

CHAPTER 4

MITIGATION MONITORING AND REPORTING PROGRAM

INTRODUCTION

Section 15097 of the Guidelines for the California Environmental Quality Act (CEQA) requires that, whenever a public agency approves a project based on a Mitigated Negative Declaration or an Environmental Impact Report (EIR), the public agency shall establish a mitigation monitoring or reporting program to ensure that all adopted mitigation measures are implemented.

The mitigation monitoring and reporting program (MMRP) contained herein is intended to satisfy this requirement of the CEQA Guidelines as it relates to the Kaiser Riverside-Cirby Medical Office Building Project (proposed project). This MMRP is intended to be used by City staff and mitigation monitoring personnel to ensure compliance with mitigation measures during project implementation. Mitigation measures identified in this MMRP were developed in the Draft EIR and Initial Study prepared for the proposed project.

The Draft EIR for the proposed project presents a detailed set of mitigation measures required for implementation.

As noted above, the intent of the MMRP is to ensure the effective implementation and enforcement of all adopted mitigation measures. The MMRP will provide for monitoring of construction activities, as necessary, and in the field identification and resolution of environmental concerns.

MITIGATION MONITORING AND REPORTING PROGRAM DESCRIPTION

Compliance

The City of Roseville will coordinate monitoring activities and document the implementation of mitigation measures. The table below identifies the mitigation measures, the monitoring actions, the implementing entities, the responsible parties for monitoring actions, and the timing of mitigation actions. The entity identified as having implementing responsibility has the primary duty to execute the mitigation measures. The “applicant” shall refer to the entity seeking entitlements for development of the project in the project area. In some instances this may require contracting for specialized consultant services. In instances where the implementing responsibility is shared between the City and construction contractors, the City would be responsible for ensuring that the mitigation requirements are implemented.

Field Monitoring of Mitigation Measures

Prior to the issuance of grading and building permits, while detailed development plans are being prepared for approval by City staff, City staff will be responsible for ensuring compliance with mitigation monitoring applicable to the project design phase.

During construction and following the project, the City's Public Works Department will assign inspectors who will be responsible for monitoring the implementation of the mitigation measures, the implementation of which is the responsibility of the applicant or applicant's designee. The inspectors will report to the City's Public Works Department and will be thoroughly familiar with the mitigation measures in the MMRP. In addition, the inspectors will be familiar with construction contract requirements, schedules, standard construction practices, and mitigation techniques. The City will be responsible for on-site, day-to-day monitoring of construction activities, reviewing construction plans and equipment staging/access plans to ensure conformance with adopted mitigation measures. The City will also have the authority to enforce mitigation measures by suspending particular construction activities.

Once construction has been completed, the City will monitor the project as necessary.

If any mitigation measures are not being implemented, the City may pursue corrective action. Penalties that may be applied include, but are not limited to, the following: (1) a written notification and request for compliance; (2) withholding of permits; (3) administrative fines; (4) a stop-work order; (5) criminal prosecution and/or administrative fines; (6) forfeiture of security bonds or other guarantees; (7) revocation of permits or other entitlements.

Changes to Mitigation Measures

Any substantive change in the monitoring plan made by City Staff shall be reported in writing to the Planning Division. Modifications to the mitigation may be made by City staff subject to one of the following findings, documented by evidence included in the record:

- a. The mitigation measure included in the Final EIR and MMRP is no longer required because the significant environmental impact identified in the Final EIR has been found not to exist or to occur at a level which makes the impact less than significant as a result of changes in the project, changes in conditions of the environment or other factors.

Or

- b. The modified or substitute mitigation measure to be included in the MMRP provides a quantified level of environmental protection equal to or greater than that afforded by the mitigation included in the Final EIR and the MMRP; and the modified or substitute mitigation measures do not have significant adverse effects on the environment in

addition to or greater than those which were considered by the responsible hearing bodies in their decisions on the Final EIR and the proposed project; and the modified or substitute mitigation measures are feasible, and the City through measures included in the MMRP or other City procedures can ensure their implementation.

Findings and related documentation supporting the findings involving modifications to mitigation measures shall be maintained in the project file with the MMRP and shall be made available to the public upon request.

Mitigation Monitoring and Reporting Program

The table presented on the following pages provides the MMRP for the proposed project. The MMRP identifies the following:

1. an explanation of each impact by issue area, summarized as an impact statement;
2. the full text of the mitigation measure(s) applicable to each impact statement;
3. the method and/or process by which the mitigation measure will be implemented;
4. the timing of implementation of each mitigation measure; and
5. the party responsible for ensuring implementation of each mitigation measure.

Following completion of the monitoring and reporting process, the final monitoring results will be filed with the project's Environmental Record.

4 – MITIGATION MONITORING AND REPORTING PROGRAM

Impact	Mitigation Measure	Implementation	Timing	Reviewing Party
<i>4.3 Transportation and Circulation</i>				
4.3-1 Change in LOS at Signalized Intersections in the City of Roseville	4.3-1 The project applicant shall install a southbound right-turn overlap arrow at the Cirby Way/Vernon Street intersection.	City staff shall modify its CIP to program the necessary improvements at the Cirby Way/Vernon Street intersection. Payment of the City's TMF by the applicant represents a fair share contribution to the improvements.	Improvement at the Cirby Way/Vernon Street intersection shall be programmed prior to full buildout of the project.	The City's Public Works Director and Traffic Operations Manager, or their designees, shall ensure that the mitigation measure is implemented.
<i>Initial Study – Biological Resources</i>				
Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.	BIO-1: To avoid take of any active raptor nest or disturbance of other protected native birds, to the extent feasible site disturbance shall be avoided from March 1 through August 31, which coincides with the typical nesting season for most common bird species in the region. If construction work is required to be scheduled during the typical nesting season (March through August), a qualified biologist shall conduct a preconstruction survey of the work area to determine if any native birds, including raptors, are nesting in or in the immediate vicinity of the vegetation to be removed. The preconstruction survey shall be conducted within 15 days prior to the start of work from March through May (since there is a higher potential for birds to initiate nesting during this period), and within 30 days prior to the start of work from June through August. If active nests are found in the work area, the biologist shall determine an appropriately-sized buffer around the nest based on the nesting species and its sensitivity to disturbance in which no work shall be allowed until the young have successfully fledged. The size of the nest buffer shall be determined by City staff based on the input from the biologist (using information provided in existing regulations and in guidance documents, e.g. CDFW Handbook for Swainson's Hawks), and, if necessary, after consultation with the CDFW.	If project construction is required to be scheduled during the breeding season, the applicant shall be responsible for retaining a qualified biologist to conduct a preconstruction survey of the work area. The applicant shall ensure that the survey is conducted within 15 days prior to the start of work from March through May, and within 30 days prior to the start of work from June through August. If active nests are found, the biologist will be responsible for determining an appropriately sized buffer for around the nest to allow the young to fledge. If necessary, the biologist may consult with the CDFW.	15 days prior to the start of work from March through May or within 30 days prior to the start of work from June through August.	The City's Development Services Director and/or his designee shall ensure that the appropriate preconstruction surveys are conducted prior to project construction to reduce impacts to native birds or that an appropriately sized buffer will protect active nest sites.

Impact	Mitigation Measure	Implementation	Timing	Reviewing Party
<i>Initial Study – Cultural Resources</i>				
Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5 or disturb any human remains, including those interred outside of formal cemeteries.	CUL-1: A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the applicant shall notify the City of the proposed earthwork start-date, in order to provide the City with time to contact the United Auburn Indian Community (UAIC). A UAIC tribal representative shall be invited to inspect the project site, including any soil piles, trenches, or other disturbed areas, within the first five days of groundbreaking activity. During this inspection, a site meeting of construction personnel shall also be held in order to afford the tribal representative the opportunity to provide cultural resources awareness information. If any cultural resources, such as structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains are encountered during this initial inspection or during any subsequent construction activities, work shall be suspended within 100 feet of the find, and the project applicant shall immediately notify the City of Roseville Development Services Director. The project applicant shall coordinate any necessary investigation of the site with a qualified archaeologist approved by the City, and as part of the site investigation and resource assessment the archeologist shall consult with the UAIC and provide proper management recommendations should potential impacts to the resources be found by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City by the qualified archaeologist. Possible management recommendations for historical or unique archaeological resources could include resource avoidance or, where avoidance is infeasible in light of project design or layout or is unnecessary to avoid significant effects, preservation in place or other measures. The contractor shall implement any measures deemed by City staff to be necessary and feasible to avoid or minimize significant effects to the cultural resources.	The applicant shall notify the City a minimum of 7 days prior to starting earthwork or any soil disturbing activities. If any cultural resources are encountered during development activities, the applicant and applicant's contractor shall be responsible for ensuring that work is suspended within 100 feet of the find. The applicant will also be responsible for immediately notifying the City and coordinating any necessary investigation of the site with qualified archeologists. The contractor shall also be responsible for implementing the protective measures recommended by the archeologist. In the event of the discovery of human remains, the applicant shall be responsible for immediately notifying the County Coroner. If the remains are determined to be Native American, guidelines of the Native American Heritage Commission shall be adhered to in the treatment and disposition of the remains.	Prior to and during earthwork or soil disturbing activities.	The City's Development Services Director and/or his designee shall ensure that the appropriate protocol is implemented, in the event cultural resources are encountered during project development and shall review any management recommendations made by the qualified archaeologist for sufficiency and feasibility.

CHAPTER 1 INTRODUCTION

1.1 PROJECT BACKGROUND

This environmental impact report (EIR) examines effects on the environment of the proposed Kaiser Riverside-Cirby Medical Office Building Project (proposed project). The proposed project consists of the following components:

- Construction of a new 194,000-square-foot, five-story medical office building, 16,000-square-foot pavilion building, 82,630-square-foot parking deck, and associated landscaping and surface parking.
- Demolition of the existing 90,290-square-foot one- and two-story medical office building complex and 613 surface parking spaces currently on the project site once the new buildings and parking facilities are completed.

1.2 PURPOSE AND INTENDED USE OF THIS EIR

The City of Roseville (City) has prepared this EIR for the following purposes:

- To satisfy the requirements of the California Environmental Quality Act (CEQA) (Public Resources Code [PRC] Section 21000 et seq.), the CEQA Guidelines (California Code of Regulations [CCR], Title 14, Section 15000 et seq.), and the City's procedures for implementing CEQA.
- To inform the general public; the local community; responsible agencies; trustee agencies and other interested public agencies; and the City's decision-making body, the Planning Commission regarding the potential significant environmental effects resulting from implementation of the proposed project, as well as possible measures to mitigate those significant effects and alternatives to the proposed project.
- To enable the City to consider the environmental consequences when deciding whether to approve the proposed project.

In summary, this document is intended to provide City decision makers, other agencies, and the general public with information that enables them to consider the environmental consequences of the proposed project. This document identifies significant or potentially significant environmental effects ("impacts") and ways in which those impacts can be reduced to less-than-significant levels, whether through implementation of mitigation measures adopted by the lead agency or through the implementation of an alternative to the project. In a practical sense, an EIR functions as a method of fact-finding, allowing an applicant, the public, other public agencies, and agency staff an opportunity to collectively review and evaluate baseline conditions and project impacts through

a process of full disclosure. Additionally, this EIR provides the primary source of environmental information for the lead agency to consider when exercising any permitting authority or approval power directly related to implementation of this project.

1.3 TYPE OF EIR

This EIR provides a project-level analysis for the proposed project “focusing primarily on the changes in the environment that would result from the development project” (CEQA Guidelines Section 15161). As further stated in Section 15161 of the CEQA Guidelines, a project-specific EIR “shall examine all phases of the project including planning, construction, and operation.” The proposed project is expected to be fully completed by fall 2020.

1.4 LEAD, RESPONSIBLE, AND TRUSTEE AGENCIES

As required by CEQA, this EIR identifies the lead, responsible, and trustee agencies for the proposed project. The City is the lead agency for the project because it holds principal responsibility for approving the project. A responsible agency is a public agency other than the lead agency that has discretionary approval over the project. The Central Valley Regional Water Quality Control Board is a responsible agency for this project. A trustee agency is defined as a state agency that has jurisdiction by law over natural resources that are held in trust for the people of the state. For example, the California Department of Fish and Wildlife is a trustee agency.

1.5 SCOPE OF THE EIR

The scope of this EIR includes analysis of environmental issues identified as potentially significant in the Notice of Preparation (NOP), comments on the NOP, and meetings held with the public (see Appendix A for the NOP and comment letters in response to the NOP). The Initial Study prepared for the project (see Appendix B) evaluated all the issue areas identified in the Environmental Checklist (Appendix G of the CEQA Guidelines). The Initial Study is a tool for the lead agency to use in order to determine where the proposed project may result in potentially significant impacts. Based on the NOP and Initial Study, the City identified potentially significant impacts in the following issue areas associated with the construction and/or operation of the project:

- Air Quality and Greenhouse Gases;
- Public Utilities;
- Transportation and Circulation; and
- Visual and Aesthetic Resources.

Based on this evaluation, the EIR addresses the above issue areas in Chapter 4, Environmental Analysis.

This EIR evaluates the direct impacts, reasonably foreseeable indirect impacts, and cumulative impacts resulting from planning, construction, and operation of the proposed project using the most current information available and in accordance with the provisions set forth in CEQA and the CEQA Guidelines. In addition, the EIR recommends potentially feasible mitigation measures, where possible, and project alternatives that would reduce or eliminate significant adverse environmental effects.

The alternatives chapter of the EIR (Chapter 6, Project Alternatives) was prepared in accordance with Section 15126.6 of the CEQA Guidelines. The alternatives analyzed in this EIR in addition to the proposed project are:

Alternative 1: No Project/No Build Alternative. This alternative assumes no change would occur to the existing medical office buildings on the site.

Alternative 2: Reduced Footprint Alternative. This alternative would eliminate the pavilion building, thereby reducing the project footprint and reducing the number of parking spaces required.

Alternative 3: Larger Parking Deck Alternative. This alternative adds two levels to the parking deck reducing the number of surface parking spaces and increasing the size of the parking deck.

Alternative 4: Smaller Medical Office Building Alternative. This alternative reduces the size of the medical office building and reduces the number of surface parking spaces.

1.6 ENVIRONMENTAL REVIEW PROCESS

This EIR has been prepared to meet all of the substantive and procedural requirements of CEQA. As the lead agency, the City has primary responsibility for conducting the environmental review and approving or denying the proposed project.

The NOP was released on June 7, 2016, for a 30-day public review period that closed on July 6, 2016. Agencies or interested persons who did not respond during the public review period for the NOP will have an opportunity during the 45-day public review period for the Draft EIR, as well as at public hearings on the project. The City received a total of five comment letters that included comments from Caltrans, the City of Citrus Heights, Placer County Air Pollution Control District, Central Valley Regional Water Quality Control Board, and the Native American Heritage Commission. No comments were received from the public.

The City also prepared an Initial Study that examined whether or not any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment. The Initial Study identified certain issue areas where potentially significant impacts could occur, consistent with the information provided in the NOP, thus requiring preparation of an EIR to analyze the impacts (see Appendix B).

The City's General Plan referenced to prepare the Draft EIR is available for review during normal business hours (Monday through Friday 8 a.m. to 5 p.m.) at the City of Roseville Permit Center, 311 Vernon Street, Roseville, California 95678 and is also available online at: http://www.roseville.ca.us/gov/development_services/_planning/general_plan_n_development_guidelines.asp.

As required by PRC Section 21081.6 (a)(1), because the proposed project would have significant impacts that could be lessened or avoided by mitigation measures, the City must prepare a mitigation monitoring and reporting program (MMRP), to be adopted at the same time the City's decision-making body makes its "CEQA Findings" addressing the disposition of all significant environmental effects disclosed in an EIR (see CEQA Guidelines, Section 15091). The purpose of the MMRP is to ensure compliance with required mitigation during implementation of the project.

EIR Adequacy

The level of detail contained throughout this EIR is consistent with Section 15151 of the CEQA Guidelines, which states the following:

An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of the environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.

1.7 DOCUMENT ORGANIZATION

This EIR has been designed for easy use and reference. To help the reader locate information of particular interest, a brief summary of the contents of each section of the EIR is provided. This report includes six principal parts:

- **Introduction (Chapter 1)** - Provides a brief background description of the proposed project and description of the EIR, including its purpose, intended use, type, scope, and standards for

adequacy; identification of lead, responsible, and trustee agencies; a description of the environmental review process; and a summary of how the document is organized.

- **Project Description (Chapter 2)** - Includes a discussion of the project site, including its location and boundaries; a statement of project objectives; a general description of the project site's environmental characteristics, including proposed plans for development; and a list of approvals for which this EIR will be used.
- **Executive Summary (Chapter 3)** - Includes a summary of project impacts and mitigation measures in a table format.
- **Environmental Analysis (Chapter 4)** - Includes a topic-by-topic analysis of baseline environmental conditions without the proposed project, and project-level and cumulative impacts that would or could result from development of the proposed project. It also identifies potentially feasible mitigation measures that, if adopted, would reduce the level of significance of environmental impacts. The results of field visits, data collection, and the findings of technical reports are included in the analysis.
- **CEQA Considerations (Chapter 5)** - Includes a discussion of additional issues required by CEQA, including significant and unavoidable adverse impacts, irreversible environmental changes, and growth inducement. The analysis of cumulative impacts is included in the technical analysis contained in Chapter 4.
- **Project Alternatives (Chapter 6)** - Includes an assessment of alternative methods for accomplishing most of the basic objectives of the proposed project while avoiding or substantially lessening at least one significant impact of the project. This assessment provides information for decision makers to make a reasoned choice among potentially feasible alternatives based on comparing the impacts of the alternatives to the impacts of the proposed project.
- **Appendices** - Contains a number of reference items and reports providing support and documentation of the analysis performed in the EIR.

INTENTIONALLY LEFT BLANK

CHAPTER 2 PROJECT DESCRIPTION

2.1 PROJECT LOCATION

The proposed Kaiser Riverside-Cirby Medical Office Building Project (proposed project) area encompasses approximately 14 acres in the City of Roseville (see Figure 2-1, Regional Location). The project site is located to the southeast of the intersection of Riverside Avenue and Cirby Way. Interstate 80 (I-80) borders the south and east sides of the site, as shown in Figure 2-2, Project Site. The project site is identified as assessor's parcel number 472-260-026-000.

This Environmental Impact Report (EIR) examines the potential significant environmental effects (or impacts) of the proposed project, for which the applicant is requesting land use approvals from the City of Roseville (City), as lead agency. The EIR will also serve as the environmental clearance document for the construction of required on-site and off-site public improvements, which may include water, wastewater, and storm drainage infrastructure, dry utilities, and pedestrian improvements. This EIR analyzes both the construction and operation phases of the proposed project on a project-specific level (CEQA Guidelines Section 15161). The project-level analysis in this EIR also provides the basis for CEQA compliance for other discretionary permits that may be issued by the City and other agencies. The applicant is requesting the following approvals:

- Certification of the EIR and adoption of a Mitigation Monitoring and Reporting Plan (MMRP);
- Major Project Permit – Stage 1 (Preliminary Development Plan);
- Major Project Permit – Stage 2 (Architecture and Landscape Review);
- Tree Permit; and
- General Plan Amendment.

Additional approvals may be required by responsible and trustee agencies, including the Central Valley Regional Water Quality Control Board.

2.2 PROJECT BACKGROUND

Project Setting, Existing, and Surrounding Land Uses

The approximately 14-acre project site is currently developed with six buildings that comprise the Kaiser Permanente medical office complex located at 1001 Riverside Avenue, along with 613 surface parking spaces and landscaping. The existing medical office complex includes four one-story medical office buildings, one two-story medical office building, and a one-story communications building for a total of 90,209 square feet. The existing medical office complex includes 71 provider offices that range from allergy, optometry/ophthalmology, primary care,

laboratory, imaging, pharmacy, support services, and administration. The buildings were constructed between 1980 and 1985. Landscaping is present along the perimeter of the site and internal to the site, including a number of mature trees. Within the project site, there are a total of 290 mature trees, the majority of which were planted as landscaping. From Riverside Avenue, the project site slopes gently upward to the east. The increase in elevation from Riverside Avenue to the center of the project site is approximately 25 feet.

Surrounding uses adjacent to the site include a mix of retail uses, apartments, and public storage, as shown in Table 2-1 and on Figure 2-2.

Table 2-1
Existing Zoning, General Plan Land Use Designation and Current Use

Location	Zoning	General Plan Land Use	Current Use of Property
On-Site	Business Professional (BP)	Community Commercial (CC)	Medical Office

Source: City of Roseville 2016.

Existing General Plan and Zoning

The Roseville General Plan 2035 designates the project site for Community Commercial (CC). The City of Roseville's General Plan states that the CC designation applies to sites with acreages ranging from 5 to 25 acres and with square footage ranging from 50,000 to 250,000 square feet. Floor area ratios for this designation range from 20% to 40% (City of Roseville 2016, p. II-25).

According to the City's General Plan, "Primary uses" within the CC designation include retail stores and businesses selling a full range of goods and services, including auto sales and repair, and commercial childcare facilities. "Secondary uses" allowed include professional offices uses, medical offices, and clinics (City of Roseville 2016).

The project site is zoned Business Professional (BP), which permits (e.g., allows by right) professional offices and General Medical services, but not general hospital services. The maximum building height allowed by right in the BP zone is 50 feet (City of Roseville 2016).

INTENTIONALLY LEFT BLANK

INTENTIONALLY LEFT BLANK

Farmland Classification

The most recent California Department of Conservation Important Farmland Map for Placer County designates the site as Urban and Built Up Land (California Department of Conservation 2016). Land classified as Urban and Built Up Land does not possess any characteristics conducive for active agriculture.

2.3 PROJECT OBJECTIVES

The proposed project is intended to provide for the comprehensive planning and orderly development of the Kaiser Permanente, Riverside-Cirby site. Development of the proposed project is intended to be consistent with the policies of the City. The applicant has identified the following specific objectives for the project:

- Develop a replacement outpatient medical office building that includes a café, health education, optical center, physical therapy/rehab, comprehensive diagnostic imaging, eight adult primary care clinics, specialty clinics for obstetrics and gynecology, dermatology and allergy, injection clinic, and comprehensive eye services including ophthalmology and optometry on an underutilized property with multiple end-of-life structures to accommodate existing and growing demand for medical care in the Roseville community.
- Provide high-quality healthcare to serve up to 9,000 Kaiser Permanente members (and their family or care-givers) per day in a medical facility for those needing medical assistance in Roseville and surrounding communities.
- Provide convenient access and reduce vehicle trips for Kaiser Permanente members to obtain routine, rapid-transaction medical services (e.g., pharmacy and laboratory) and provide onsite conference facilities for classes, training and other events.
- Achieve Leadership in Energy and Environmental Design (LEED) Gold Certification as well as implement Kaiser's existing sustainable building strategies.
- Provide uninterrupted services to Kaiser Permanente members throughout the construction period by staging project construction in phases.
- Provide new employment opportunities for over 200 new employees at the Riverside-Cirby medical office buildings and temporary construction jobs through redevelopment.

2.4 PROPOSED PROJECT

Project Description

The applicant proposes to replace the existing structures and uses on the project with an approximately 194,000-square-foot, five-story medical office building, along with a one-story, 21-foot-tall, 16,000-square-foot pavilion building and related site improvements, including an approximately 11-foot tall, 82,630-square-foot parking deck with 255 parking spaces, surface parking lot with 803 spaces, site/building lighting, and landscaping, described in more detail below and shown in Figure 2-3, Site Plan. The existing medical complex buildings would be removed and replaced with the proposed project, as shown in Figure 2-4. Therefore, the proposed project would result in adding 119,791 square feet of new medical office building space. The proposed projects FAR would be 34%, which is allowable under the City's CC designation.

The proposed project has been designed to be consistent with the City's Community Design Guidelines (City of Roseville 2008) and to ensure compatibility with the surrounding development. Of the two proposed medical buildings, the single-story pavilion building would house pharmacy, laboratory, and conference space. The five-story medical office building would include on the ground floor retail and public functions including a café, health education, and optical center, as well as physical therapy/rehab and comprehensive diagnostic imaging. The clinic floors in the medical office building (floors 2 through 5) would include eight adult primary care clinics, specialty clinics for obstetrics and gynecology, dermatology and allergy, injection clinic, and comprehensive eye services including ophthalmology and optometry. This new medical office building would result in double the capacity of the existing clinics, which would facilitate better member access.

Currently, the existing medical office building complex employs 224 full-time people. The proposed project would add an additional 202 full time positions, for a total of 426 full time employees. Hours of operation would generally be Monday through Friday from 7:00 a.m. to 6:00 p.m. The Conference Center in the pavilion building may be open until 10:00 p.m. on some days depending on events and class schedules.

Additional project detail is provided on the City's website at: http://www.roseville.ca.us/gov/development_services/_planning/current_projects/kaiser_riverside_and_cirby_medical_office_building.asp.

INTENTIONALLY LEFT BLANK

Building Design

The exterior of the five-story medical office building would consist of a mix of metal panels, light-weight concrete panels, glass curtainwall, glazed storefronts and concrete masonry units. The highest point of the medical office building would be approximately 80 feet. The highest occupied floor (5th floor) would be 55 feet high (from existing grade) with a typical floor-to-floor height of 13 feet 6 inches. Rooftop mechanical equipment would be shielded by the building parapet. The one-story pavilion building would use the same exterior materials as the medical office building for design cohesiveness. The highest point of the pavilion building would be approximately 20 feet, with limited additional height for a screened mechanical enclosure at the roof level. These two buildings have been situated in a way that allows a single entry canopy feature to tie the two buildings together. The placement of the buildings also creates an opportunity for outdoor courtyards that feature water efficient gardens and space for multiple outdoor programs.

Exterior colors for the five-story medical office building and one-story pavilion building would include a sandy beige color for the concrete panels with varying degrees of exposed gray aggregate. The insulated metal panel colors would be silver and weathered zinc arranged in a pattern that provides a contrast to the beige concrete panels. The majority of the north, east and west elevations consist of pewter colored mullions, clear vision glass and light-gray colored spandrel glass. The base of the building is designed to have chocolate brown concrete masonry units with a shiplap profile for added visual interest.

The two-level concrete parking deck at the southwest corner of the project site would take advantage of the existing topography between the medical office building and adjacent freeway, allowing the top level of the deck to be at grade and the lower level to be partially underground. The total height above ground would be 10-feet, 10-inches tall. Exposed concrete facades of the parking deck would be gray-colored with a green screen mesh attached to the exposed surfaces for climbing vines. The structure of the parking deck would be designed for a possible future installation of solar photovoltaic (PV) panels on the top deck. These PV structures would also provide shade for vehicles parked on the top level of the deck, and would be designed to not create glare for vehicles traveling on Riverside Avenue and I-80.

Color building elevations are shown on Figures 2-5 through 2-8.

Signage

The proposed project would include monument signs at both entries to the project site (Cirby Way and Riverside Avenue), as well as directional signage on the site (see Figure 2-3). The monument signs would be constructed of aluminum and would be internally illuminated. The total height would be 15-feet, as shown in Figure 2-9. Each building would include illuminated

exterior signage at the first floor to direct patients, visitors, and staff. Large illuminated signs would also be mounted at the top of the five-story building and would be visible from I-80 and site entries (as shown on Figure 2-5).

Project Access, Parking, and Bicycle/Pedestrian Components

The main entry to the project site would be from Riverside Avenue, with additional access at Cirby Way, as shown in Figure 2-3. The main Riverside Avenue entry, Kaiser West Driveway, would be relocated 40 feet to the south of its current location and would include a public two-way driveway. The main Riverside Avenue entry would include a public two-way driveway and an internal vehicular circulation system that would provide access to the surface parking lot and parking deck. A total of 803 surface parking spaces would be provided along with 255 parking spaces in the parking deck for a total of 1,058 spaces. A series of drop-off zones would provide patient access to the medical office building entrance to ensure traffic flow is maintained while passenger loading and unloading occurs, shown on Figure 2-10.

The secondary entry driveway at Cirby Way, Kaiser North Driveway, currently includes one-lane access into the site. The proposed project would expand this driveway to provide three lanes leaving the site. As part of the proposed project, a new traffic signal would be constructed at the Kaiser North Driveway to facilitate traffic into and out of the project site and to enable vehicles to have a protected left-turn lane or straight-through access to Cirby Hills Drive, with a right-turn lane from the site.

There would be a new right-turn, outbound-only driveway that would be located east of the Cirby Way/Riverside Avenue intersection. This would provide additional access for people leaving the site.

The proposed project would include 53 bike parking spaces and 27 bike lockers consistent with the City's Zoning Ordinance requirements (Section 19.26.020), Transportation Systems Management Ordinance (Section 11.33.050), and CALGreen (Sections 5.106.4.1.1, 5.106.4.1.2).

Sidewalks 5 to 8 feet in width would be provided from the medical office building main entrance, in the parking area, the parking deck, from Americans with Disabilities Act (ADA) parking spaces, along the internal loop road, and within the internal courtyard. As part of the project, Cirby Way would be lowered up to 18 inches and the sidewalks would be rebuilt to accommodate a new right-hand turn lane into the site.

Lighting and Landscaping

To provide for the safety and security of staff and the public, the project would include overhead parking lot and roadway pole lights, low-level lighting on bollards to illuminate landscaped areas and sidewalks, and building-mounted lighting at entrances. Architectural lighting would also be used to illuminate key architectural features.

Light fixtures would use premium-efficiency LED light sources. Area lighting would automatically turn off during the day, and motion-activated controls would be provided to dim the lighting at night when there is no activity. Lighting would be designed to meet the City's Community Design Guidelines and would minimize light trespass, reduce sky-glow to increase night sky access, and improve nighttime visibility through glare reduction.

The proposed project's landscaping plan divides the parking lot areas into smaller zones. Large deciduous trees would be planted along the main loop road that runs throughout the site. Where possible, existing mature trees, particularly redwood trees, would be preserved on site, including protected oak trees in the southwest corner of the site and redwood trees north of the main building and in the north parking lot. The proposed landscape along Riverside Avenue would consist of water efficient native plants and trees, replacing the existing lawn. Of the existing 290 mature trees that were planted as part of the original landscaping plan, a total of 245 trees would be removed including two of the existing six native oak trees that are located in the southwest corner of the site and are protected under the City's tree preservation ordinance. A total of 45 trees would be retained and 404 new trees would be planted on the project site, resulting in a total of 449 trees (a net gain of 156 trees). Landscaping would use native plants and be drought resistant where feasible, and would be required to comply with the City's Water Efficient Landscape Ordinance.

Sustainability Features

The proposed project has been designed to meet Kaiser Permanente's sustainability requirements, which include achieving LEED New Construction 2009 Gold certification and specific energy efficiency thresholds. The Energy Performance Requirement includes a minimum of 25% energy savings compared against ASHRAE 90.1 2007 Baseline. The project must also comply with the California Energy Code, Title 24.

The proposed project includes the following energy conservation and sustainable features:

- High-performance building envelope

- Optimized orientation and massing on the east–west axis, which maximizes passive solar heating during the winter, but minimizes solar heat gain during the summer months which reduces the amount of energy required for heating and cooling
- Daylight dimming of electric lighting
- LED lighting
- Electrochromic glass at select locations to reduce heating, ventilation, and air conditioning (HVAC) energy use and improve occupant visual comfort
- Optimized HVAC system
- “Solar ready” approach to easily integrate solar photovoltaics at a later date on the parking deck
- Measurement and verification of energy usage
- Preferred parking spaces for high-efficient and low-emitting vehicles, and charging stations for electric vehicles
- Preferred parking for high-occupancy vehicles (two or more people)
- Bicycle racks for all occupants and showers for staff
- Low-flow and low-flush plumbing fixtures with flush and flow rates significantly below the national standard set by the US Department of Energy’s Energy Policy Act (EPACT) 1992
- High efficiency irrigation systems
- Low and medium water use plants
- Water-efficient or water-free medical equipment
- Water-free cooling equipment
- Low-emitting materials such as adhesives, sealants, paint, coatings, flooring systems, composite wood
- Carbon dioxide sensors in densely occupied spaces.

Public Utilities

The City of Roseville would provide water, sewer, and storm drain facilities to serve the project site. The City of Roseville obtains its water supply from Folsom Lake under contracts with the United States Bureau of Reclamation, the Placer County Water Agency, and the San Juan Water District. To supplement supply during dry years, the City also operates six groundwater wells. Sanitary sewer service is available from the Pleasant Grove Wastewater Treatment Plant (PGWWTP) to serve the project. Wastewater would be conveyed from the project site to the PGWWTP through existing sewer interceptors and trunk mains. Stormwater would be treated

through the use of an underground detention system (galleries) that would detain and treat stormwater on site before it is discharged into the site's two existing connections to the City's storm drain system.

Water

The existing campus is served by a 6-inch water line stub connected to a 10-inch public distribution main in Cirby Hills Drive. This service would be maintained until the new buildings are occupied to provide continuous service to the existing buildings during construction. For the new buildings, two new 10-inch service lines would connect to the City's existing 10-inch distribution main at Cirby Hills Drive and a 24-inch transmission main in Cirby Way.

To ensure adequate water is provided in the event of a fire, the proposed project would include on-site fire service that would include a private 10-inch looped system around the site, generally following on-site roads and parking areas. The looped system would connect to two new 10-inch service stubs with a reduced-pressure detector check backflow device at each stub. Private fire hydrants would be located around the site, connecting to the 10-inch looped system. Sprinkler service lines to the new buildings from the 10-inch line would include an in-line check valve, a post indicator valve, and a fire department connection.

A domestic service line would be stubbed off of one of the new 10-inch service stubs and would include a City meter and reduced-pressure principle backflow device. An irrigation service line would be stubbed off of one of the new 10-inch service stubs and would include a City meter and reduced-pressure principle backflow device.

Wastewater

The existing campus is served by an 8-inch sewer main in Cirby Way that connects to an 8-inch sewer main in Riverside Avenue. The on-site sewer system would be maintained until the new buildings are occupied in order to provide continuous service to the existing buildings during construction. For the new buildings, due to limited capacity of the 8-inch sewer main in Riverside Avenue, two new 8-inch service lines would be installed. The first would connect to the 8-inch main in Cirby Way, similar to the existing service. The second would connect to an existing public manhole in Cirby Hills Drive that is connected to an 8-inch sewer line. No new pump stations or other facilities or upgrades would be required for the proposed project.

Stormwater Drainage

The existing campus is served by two connections to the City's storm drain system. The first is a curb inlet just south of the Riverside/Cirby intersection. The second is an 18-inch pipe just east of the existing Cirby Way entrance. These two connection points would be maintained.

The proposed project would maintain pre-project flow rates through the use of on-site infiltration and detention. The proposed project's detention system would include an orifice structure located just upstream of the connection to the City's public system. The detention structure would store excess water in underground infiltration galleries. The detention volume has been designed to store stormwater to not exceed the pre-project peak discharge flow rate associated with a 10-year storm event.

Pavement runoff would be directed to area inlets or curb inlets. Roof runoff would be connected to subsurface infiltration galleries. The on-site piping system would be designed to convey the 10% chance (10-year) storm event. Overland release would be provided to convey the 1% chance (100-year) storm event.

Low-impact development (LID) design elements would be included. The primary LID element is infiltration through the use of underground galleries. Infiltration measures would be sized to accommodate the 85th percentile storm event to meet the National Pollutant Discharge Elimination System (NPDES) post-construction LID and hydro-modification requirement, in accordance with the City of Roseville requirements.

These stormwater quality control measures have been designed to comply with the requirements of the City's Manual for Stormwater Quality Control Standards for New Development.

Off-Site Improvements

Off-site improvements include: reconfiguring roads; removal and replacement of driveways, curbs, planting areas, and medians; traffic lane striping; relocation of utilities; and a new traffic signal. Approximately 400 feet of Cirby Way adjacent to the project site would be removed and reconstructed. The vertical profile of the roadway would be lowered by as much as 18 inches to improve driver sight distance. The project also includes surface improvements at the frontage of the self-storage facility on the north side of Cirby Way, including removal and reconstruction of concrete driveways, concrete curbs, asphalt pavement areas, planting areas, and site lighting. In addition, a monument sign and a flagpole may need to be relocated as a result of lowering the roadway profile.

Curbs, gutters, sidewalks, median islands, and asphalt pavement along Cirby Way would be reconstructed. Traffic striping within the demolition limits would be restored. A new traffic signal system at the Cirby Way/Cirby Hills Drive intersection would be constructed.

Utility systems affected by the lowering of the roadway profile would need to be relocated (lowered) to maintain minimum cover requirements. Utilities affected include, but would not be limited to, a 2-inch domestic water line (City of Roseville), sewer line extensions (City of Roseville), potable water system isolation valves (City of Roseville), potable water system air-

release valves (City of Roseville), telecommunications/fiber-optics conduits (MCI, Sprint), street lighting (Roseville Electric), primary and secondary power conduits (Roseville Electric), and a 4-inch gas distribution main (Pacific Gas and Electric [PG&E]).

Construction Timeline

If the project is approved, project construction is anticipated to take approximately 3 years to complete and would occur in multiple phases. Phasing is required in order for the existing medical office buildings to remain open with sufficient parking capacity and public access during construction. For the entire duration of the project, valet parking would be provided to patients and visitors, and staff would be shuttled to the site from off-site parking locations. Construction parking would be limited to the existing east parking lot until the new parking deck is completed, at which point the lower level would be used for construction personnel.

Once construction begins, the construction area would be fenced and all construction equipment would be staged on site. Construction trailers would be located in an equipment yard behind the existing medical office buildings, with little visibility from the adjacent streets or I-80. Exports of construction material and soil would be taken to the Western Regional Sanitary Landfill located 12 miles from the project site. All construction personnel and deliveries to and from the site would be limited to the Cirby Way entrance when possible so as not to disrupt the primary Riverside Avenue entrance for patients and visitors.

The following provides a more detailed breakdown of each phase of construction.

- **Phase 1** (3 months): Demolition of the existing southernmost parking lot, followed by site excavation, installation of underground utilities, and construction of the new 2-level parking deck. Demolition of the existing west lawn along Riverside Avenue would happen concurrently, followed by new site grading, utilities and construction of temporary surface parking that extends from the existing west parking lot to the line of the new landscape border. Within the first year of construction, temporary landscaping would be provided along Riverside Avenue until the final landscaping is completed. Within the first year of construction, off-site road improvements on Cirby Way would also begin.
- **Phases 2, 3 and 4** (24 months):
 - **Phase 2:** Completion of the parking deck and demolition of the south parking lot adjacent to the existing medical office buildings. Site preparation, installation of underground utilities and foundation work for the new five-story medical office building would be completed.
 - **Phase 3:** Construction of the structural steel and exterior envelope enclosure for the five-story medical office building would be completed.

- **Phase 4:** Construction continues with interior tenant improvement of the five-story medical office building. Construction of the pavilion building would begin approximately 9 months after starting the five-story building.
- Both buildings would be complete and ready for business at the end of Phase 4. Existing functions in the old medical office buildings would be transferred into the new buildings.
- **Phase 5** (3 months): Demolition of the east parking lot followed by completion of underground utilities, hardscape and final site landscape for this area. Construction parking during this phase would be at the existing north parking lot.
- **Phase 6** (5 months): Demolition of the old medical office buildings followed by completion of underground utilities, hardscape and final site landscape for this area. This would include the north parking lot, new main entry patient-drop off and courtyards. Construction parking during this phase would be at the newly finished east lot.
- **Phase 7** (3 months): Completion of the hardscape and final site landscaping for the west parking lot. This area was temporarily finished in Phase 1 to accommodate valet parking for patients and visitors. Final landscaping along Riverside Avenue would also be completed at this time. Final construction of the internal loop road and east parking lot would align the new Cirby Way entry and exit with the rest of the site. The entire project is complete after this phase. It is anticipated construction would be completed by fall 2020.

2.5 REQUIRED PERMITS AND PROJECT APPROVALS

The City of Roseville is the lead agency for the proposed project. As required by Section 15124(d)(1)(B) of the CEQA Guidelines, this EIR lists below the permits and other approvals that are expected to be required to implement the project. In addition to these requirements, environmental review and consultation requirements related to federal, state, or other local laws or guidance applicable to individual resources are described in the Regulatory Setting subsections provided in Chapter 4 of this EIR. This EIR will serve as the environmental document for City approvals and any permits required from other governmental bodies for project construction and operation, including required on-site and off-site public improvements, which may include water, wastewater, and storm drainage infrastructure, as well as dry utilities.

The applicant is requesting the following approvals:

- Certification of the EIR and adoption of a Mitigation Monitoring and Reporting Plan (MMRP);
- Major Project Permit – Stage 1 (Preliminary Development Plan);
- Major Project Permit – Stage 2 (Architecture and Landscape Review);
- Tree Permit to remove a protected native oak tree; and

- General Plan Amendment for minor, text-only changes to the Circulation Element.¹ The project is requesting to amend Table III-3 and III-3A in the General Plan to add the new traffic signal at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway. The project also includes amendments to the Setting section of the Level of Service portion of the General Plan Circulation Element to reflect the new intersection.

This EIR may be used by responsible and trustee agencies that may have some approval authority over the proposed project (i.e., to issue a permit). The project applicant would obtain all permits and approvals, as required by law. Because the project would require construction involving clearing, grading, and excavation activities that would result in the disturbance of 1 acre or more of land, the project is subject to the Central Valley Regional Water Quality Control Board's General Construction permit for stormwater discharges from the construction site. The terms of the General Permit process will require the project applicant develop a Stormwater Pollution Prevention Plan (SWPPP) that identifies best management practices to control pollutants in stormwater discharges, both during construction and after construction is completed.

2.6 SOURCES

California Department of Conservation. 2016. "Placer County Important Farmland 2014" [map]. 1:100,000. Sacramento, California: California Department of Conservation, Farmland Mapping and Monitoring Program. April 2016.

City of Roseville. 2008. *Community Design Guidelines*. Roseville, California: City of Roseville, Planning and Redevelopment Department. Adopted December 6, 1995, amended March 19, 2008. Accessed September 20, 2016. <http://www.roseville.ca.us/civicax/filebank/blobdload.aspx?blobid=10720>.

City of Roseville. 2016. *City of Roseville General Plan 2035*. Roseville, California: City of Roseville, Development Services Department, Planning Division. Adopted June 15, 2016.

¹ The project includes a new traffic signal on Cirby Way, which will operate worse than the City's standard of Level of Service C. General Plan Circulation Element Level of Service Policy 1 requires the City Council approve all intersections operating below this level, and the Circulation Element includes tables and text listing all such intersections. Thus, the project requires amending the Circulation Element to include this new intersection.

INTENTIONALLY LEFT BLANK

CHAPTER 3 EXECUTIVE SUMMARY

3.1 PROJECT UNDER REVIEW

This Environmental Impact Report (EIR) evaluates the environmental impacts of the proposed Kaiser Riverside-Cirby Medical Office Building Project (proposed project) in the City of Roseville (City). The applicant proposes removal of an existing Kaiser-Permanente medical office complex and parking facilities to be replaced with a five-story and one-story medical office buildings and a parking deck. A detailed description of the project is contained in Chapter 2, Project Description.

3.2 SUMMARY OF IMPACTS

This summary chapter provides an overview of the technical analysis contained in Sections 4.1 through 4.4 in Chapter 4, Environmental Analysis. This summary also includes discussions of: (a) effects found to be less than significant, (b) comments received in response to the Notice of Preparation (NOP), (c) potential areas of controversy, (d) significant and unavoidable impacts and mitigation measures to avoid or reduce identified significant impacts, and (e) alternatives to the proposed project.

3.3 EFFECTS FOUND TO BE LESS THAN SIGNIFICANT

Due to certain aspects of the project, project characteristics, or existing regulatory requirements, the project is not anticipated to have significant impacts on agricultural and forest resources; biological resources; cultural resources; geology and soils; hazards and hazardous materials; hydrology and water quality; land use and planning; mineral resources; noise, population and housing; certain public services; and recreation. The CEQA Guidelines state that “[e]ffects dismissed in an Initial Study as clearly insignificant and unlikely to occur need not be discussed further unless the Lead Agency subsequently receives information inconsistent with the finding in the Initial Study” (Guidelines Section 15143). The Initial Study included in Appendix B provides an overview of why the effects associated with these issue areas were found to be less than significant and therefore not further analyzed in this EIR.

3.4 COMMENTS RECEIVED IN RESPONSE TO THE NOP

During the NOP comment period, a total of five comment letters were received. Comments were received from the following agencies: Caltrans, City of Citrus Heights, Placer County Air Pollution Control District (PCAPCD), Central Valley Regional Water Quality Control Board (RWQCB), and the Native American Heritage Commission (NAHC). All of the comments raised in the NOP

comment letters are addressed in the technical sections contained in Chapter 4 or in the Initial Study included in Appendix B. A summary of the comments received are included below.

Caltrans

Caltrans requested that the traffic report should include Vehicle Miles Traveled (VMT) calculations and evaluate opportunities to enhance multimodal connectivity to the local roadways. The comment letter also noted that a Traffic Management Plan would be required if there were any travel restrictions or detours on or affecting state highways, and stated that an encroachment permit would be needed for any work within the state's right-of-way. The letter also noted that no net increase in stormwater discharge would be allowed within a state highway right-of-way and any runoff must meet RWQCB standards and appropriate best management practices (BMPs) be applied. These topics are addressed in Section 4.3, Transportation and Circulation.

City of Citrus Heights

The City of Citrus Heights noted that the proposed project could impact both the City's roadway network as well as the current design for the Auburn Boulevard Complete Streets Project, Phase 2. The City recommended that the EIR consider analysis of the traffic impacts to the City of Citrus Heights roadway network. These concerns are addressed in Section 4.3, Transportation and Circulation.

Placer County Air Pollution Control District

The PCAPCD provided recommended project-level and cumulative thresholds to use to evaluate emissions of nitrogen oxide (NO_x), reactive organic gas (ROG) and particulate matter (PM). The PCAPCD also recommended using the Sacramento Air Quality Management District thresholds to evaluate greenhouse gas emissions. The letter also provided a summary of the construction and operational conditions required for the project. Air quality and greenhouse gases are addressed in Section 4.1 of this EIR.

Central Valley Regional Water Quality Control Board

The Central Valley RWQCB provided a standard letter stating that (1) all wastewater discharged must comply with the RWQCB's Antidegradation Policy (State Water Board Resolution 68-16) and (2) a Construction Stormwater General Permit would be required for the proposed project. The letter also lists the other construction permits that would be required for the proposed project. These concerns are addressed in Section IX of the Initial Study included in Appendix B and in Section 4.2, Public Utilities.

Native American Heritage Commission

The NAHC provided their standard letter requesting that a records search be prepared for the project site and notification be provided to the tribes culturally or geographically affiliated with the project site under AB 52 and SB 18, if required. The proposed project is requesting a General Plan Amendment; therefore, the City initiated consultation with the tribes pursuant to SB 18. Cultural resources are addressed in Section V of the Initial Study included in Appendix B.

3.5 POTENTIAL AREAS OF CONTROVERSY

The only potential area of controversy that has been identified in connection with the proposed project is an increase in traffic on local roadways.

3.6 SIGNIFICANT AND UNAVOIDABLE IMPACTS AND MITIGATION MEASURES

One significant and unavoidable cumulative traffic impact was identified for the proposed project. No feasible mitigation is available to reduce the severity of the impact; therefore, the significance of the impact remains significant and unavoidable.

3.7 ALTERNATIVES TO THE PROPOSED PROJECT

The California Environmental Quality Act (CEQA) requires that the lead agency adopt mitigation measures or alternatives, where feasible, to substantially lessen or avoid significant environmental impacts that would otherwise occur. An EIR must describe a reasonable range of alternatives to the proposed project, or to its location, that would feasibly attain most of the project's basic objectives while reducing or avoiding any of its significant impacts (CEQA Guidelines Section 15126.6(a)). However, the adoption of project modifications or alternatives are not required where significant environmental impacts will not occur. This EIR evaluates a range of project alternatives so that the decision-makers are provided with adequate information about the range of options available to reduce or avoid environmental impacts.

The following alternatives to the proposed project are evaluated in Chapter 6 of this EIR:

Alternative 1: No Project/No Development Alternative, assumes no change would occur to the existing medical office buildings on the site.

Alternative 2: Reduced Footprint Alternative, would eliminate the pavilion building, thereby reducing the project footprint and reducing the number of parking spaces required.

Alternative 3: Larger Parking Deck Alternative, adds two levels to the parking deck reducing the number of surface parking spaces and increasing the size of the parking deck.

Alternative 4: Smaller Medical Office Building Alternative, reduces the size of the medical office building and reduces the number of surface parking spaces.

3.8 SUMMARY TABLE

Information in Table 3-1, Summary of Impacts and Mitigation Measures, has been organized to correspond with environmental issues discussed in Chapter 4. The summary table is arranged in four columns and organized as follows:

1. Environmental impacts;
2. Level of significance prior to mitigation;
3. Applicable mitigation; and
4. The level of significance after implementation of mitigation.

Table 3-2 shows the severity of the impacts under each alternative as compared to the proposed project.

Table 3-1
Summary of Impacts and Mitigation Measures

Environmental Impact	Level of Significance Prior to Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
<i>4.1 Air Quality and Greenhouse Gas Emissions</i>			
Impact 4.1-1: The project could violate the City of Roseville's significance thresholds for air quality.	Less than Significant	None required	Less than Significant

Environmental Impact	Level of Significance Prior to Mitigation	Mitigation Measure(s)	Level of Significance After Mitigation
<i>Initial Study</i>			
Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.	Significant	BIO-1: To avoid take of any active raptor nest or disturbance of other protected native birds, to the extent feasible site disturbance shall be avoided from March 1 through August 31, which coincides with the typical nesting season for most common bird species in the region. If construction work is required to be scheduled during the typical nesting season (March through August), a qualified biologist shall conduct a preconstruction survey of the work area to determine if any native birds, including raptors, are nesting in or in the immediate vicinity of the vegetation to be removed. The preconstruction survey shall be conducted within 15 days prior to the start of work from March through May (since there is a higher potential for birds to initiate nesting during this period), and within 30 days prior to the start of work from June through August. If active nests are found in the work area, the biologist shall determine an appropriately-sized buffer around the nest based on the nesting species and its sensitivity to disturbance in which no work shall be allowed until the young have successfully fledged. The size of the nest buffer shall be determined by City staff based on the input from the biologist (using information provided in existing regulations and in guidance documents, e.g. CDFW Handbook for Swainson's Hawks), and, if necessary, after consultation with the CDFW.	Less than Significant
Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5 or disturb any human remains, including those interred outside of formal	Potentially Significant	CUL-1: A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the applicant shall notify the City of the proposed earthwork start-date, in order to provide the City with time to contact the United Auburn Indian Community (UAIC). A UAIC tribal representative shall be invited to inspect the project site, including any soil piles, trenches, or other disturbed areas, within the first five days of ground breaking activity. During this inspection, a site meeting of construction personnel shall also be held in order	Less than Significant

cemeteries.		to afford the tribal representative the opportunity to provide cultural resources awareness information. If any cultural resources, such as structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains are encountered during this initial inspection or during any subsequent construction activities, work shall be suspended within 100 feet of the find, and the project applicant shall immediately notify the City of Roseville Development Services Director. The project applicant shall coordinate any necessary investigation of the site with a qualified archaeologist approved by the City, and as part of the site investigation and resource assessment the archeologist shall consult with the UAIC and provide proper management recommendations should potential impacts to the resources be found by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City by the qualified archaeologist. Possible management recommendations for historical or unique archaeological resources could include resource avoidance or, where avoidance is infeasible in light of project design or layout or is unnecessary to avoid significant effects, preservation in place or other measures. The contractor shall implement any measures deemed by City staff to be necessary and feasible to avoid or minimize significant effects to the cultural resources.

Notes:

LS = impacts less than significant

NI = No impact

LS/MM = Impacts less than significant after mitigation

SU = Impacts significant and unavoidable

SU/M = Impacts significant even with mitigation

"+" indicates the impact is more severe than the project impact

"- " indicates that the impact is similar to the project impact but less severe

No "+" or "- " indicates the impact would be similar to the project impact.

CHAPTER 4 ENVIRONMENTAL ANALYSIS

4.0 INTRODUCTION

Scope of the EIR Analysis

This chapter of the environmental impact report (EIR) discusses the environmental and regulatory setting, impacts, and mitigation measures for each of the following technical issue areas (Sections 4.1 through 4.4):

- Section 4.1 Air Quality and Greenhouse Gases;
- Section 4.2 Public Utilities;
- Section 4.3 Transportation and Circulation; and
- Section 4.4 Visual and Aesthetic Resources.

Environmental Setting

According to subdivision (a) of Section 15125 of the California Environmental Quality Act (CEQA) Guidelines, an EIR must include a description of the existing physical environmental conditions in the vicinity of the project as they exist at the time when the Notice of Preparation (NOP) is published. This “environmental setting” will normally constitute the “baseline condition” against which project-related impacts are compared. Therefore, the baseline conditions for this EIR, unless noted otherwise, are based on conditions that existed in June 2016, when the NOP was published.

For analytical purposes, impacts associated with implementation of the proposed Kaiser Riverside-Cirby Medical Office Building Project (proposed project) are compared against existing conditions at the time the NOP was first published, which includes the existing 90,290-square-foot medical office building complex that includes 224 employees and 613 parking spaces. Because the existing medical office building is being replaced by the proposed project, the EIR is analyzing the “net” difference to assess project impacts. The proposed project’s cumulative effects are assessed against future, or “cumulative,” conditions, generally defined as buildout of the City of Roseville 2035 General Plan. Existing conditions and cumulative conditions can differ by issue area. Each technical section in Chapter 4 defines the existing conditions and cumulative conditions for the impacts being analyzed. Please see Chapter 5, CEQA Considerations, for more information on how cumulative impacts are evaluated.

In determining the level of significance of environmental impacts associated with the proposed project, the analysis in this EIR assumes that the proposed project would comply with relevant

federal and state laws and regulations, City General Plan policies, ordinances, and other adopted City documents, unless otherwise noted. Therefore, such mandatory policies, ordinances, and standards are not identified as mitigation measures, but rather are discussed as part of the “Regulatory Setting” governing the proposed project.

Section Format

Each section begins with a description of the project’s **environmental setting** and **regulatory setting** as it pertains to a particular issue.

The environmental setting establishes the existing conditions that characterize the project site and the surrounding area to create the existing baseline. The regulatory setting provides a summary of applicable federal, state, and local regulations, plans, policies, and laws that are relevant to each issue area.

The regulatory setting description in each section is followed by an overview of the methods of analysis that describes how the impacts were analyzed followed by the City’s thresholds of significance. After the thresholds of significance is a discussion of project-level impacts. The project-level or specific impacts discussion is followed by an analysis of the cumulative impacts of the project, which assesses whether the project, together with other reasonably foreseeable projects, would have a cumulatively significant impact upon the environment. If so, then this section addresses what the project’s incremental contribution to that cumulatively significant impact would be. The impact portion of each section includes an impact table or box, prefaced by a number for ease of identification that includes an impact statement followed by a list of applicable policies or regulations. An explanation of each impact and an analysis of its significance follow each impact statement.

An example of an impact statement is shown below.

Impact 4.1-1	Expose Sensitive Receptors to Substantial Pollution Concentrations
Applicable Policies and Regulations	City of Roseville General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Each discussion of potential impacts of the proposed project is presented in paragraph form. The project-specific impacts associated with construction and operation of the proposed project are evaluated and compared to the threshold of significance for the particular impact. The analysis discusses the applicable local, state, and federal laws and regulations that would

reduce impacts; as noted above, it is assumed that the proposed project would comply with applicable laws, ordinances, and regulations, and that the project applicant would obtain all necessary permits and comply with all required conditions of those permits. In many instances, the actions that are necessary to reduce a project impact to a less-than-significant level are already required by existing laws or requirements, in which case no mitigation measures are required to be imposed. The impact analysis concludes with a determination of the impact's significance in **bold type** (e.g., **significant impact/significant and unavoidable impact/potentially significant impact/less-than-significant impact/or results in no impact**).

Mitigation Measures

At the end of each impact analysis is a discussion of the applicable mitigation measures identified to reduce the significance of an impact, if required. The degree to which the identified mitigation measure(s) would reduce the impact is also described. As noted above, compliance with applicable laws, policies, and City regulations is assumed and will be identified in the impact analysis. In many cases, compliance with applicable laws, policies, or regulations would reduce the significance of an impact.

This section includes a discussion of how the mitigation would reduce the impact and a statement indicating whether the mitigation measure will reduce the impact to a **less-than-significant level**. The text of the mitigation measure is then provided.

Mitigation measures, if applicable, are numbered and presented in the following format.

4.1-1: Statement of what, if any, mitigation measures are required.

Note that CEQA Guidelines, Section 15370, defines mitigation as:

- Avoiding the impact altogether by not taking a certain action or parts of an action;
- Minimizing impacts by limiting the degree of magnitude of the action and its implementation;
- Rectifying the impact by repairing, rehabilitating, or restoring the affected environment;
- Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action; and
- Compensating for the impact by replacing or providing substitute resources or environments.

In addition, provided there is a “reasonable plan for mitigation” and contributions are “sufficiently tied to the actual mitigation” of the project’s impacts, a commitment to contribute a fair share to such a program may discharge an agency’s mitigation duty under CEQA (*Save Our Peninsula Com. v. Monterey County Bd. of Supervisors*, (2001) 87 Cal.App.4th 99, 141); see also CEQA Guidelines, Section 15130, subd. (a)(3) ([recognizing that a project’s contribution to a cumulative

impact may be less than cumulatively considerable where “the project is required to implement or fund its fair share of a mitigation measure or measures designed to alleviate the cumulative impact”]). See also *Anderson First Coalition v. City of Anderson*, (2005) 130 Cal.App.4th 1173).

Cumulative Analysis

An analysis of cumulative impacts follows the evaluation of project impacts each section in Chapter 4. As defined in CEQA Guidelines, Section 15355, cumulative impacts refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts. The cumulative impact from several projects is the change in the environment that results from the incremental impact of the project together with other past, present, and reasonably foreseeable projects causing related impacts. An introductory statement is provided that defines the cumulative analysis methodology and the cumulative context being analyzed for respective sections (e.g., buildout of the City’s General Plan, development within the Sacramento Valley Air Basin) is included under the “Cumulative Analysis” discussion. In some instances, a project-specific impact may be considered less than significant, but would be considered potentially significant in combination with other development within the surrounding area. Or, in some instances, a potentially significant impact could result on a project level, but would not result in a cumulatively considerable impact. The cumulative impacts analysis is presented in the same format as the impacts section, shown above.

Terminology Used in the EIR

This Draft EIR uses the following terminology to describe environmental effects of the proposed project:

- **Standards of Significance:** A set of criteria used by the lead agency to determine at what level or “threshold” an impact would be considered significant. Standards of significance used in this EIR include those set forth in CEQA Guidelines Section 15065 (Mandatory Findings of Significance) and those derived from questions set forth in Appendix G to the CEQA Guidelines; criteria based on regulatory standards of local, state, and federal agencies; and criteria based on goals and policies identified in the *City of Roseville General Plan 2035*. In fashioning criteria based on these sources, City staff have also relied on their own professional judgment and experience in some instances. In determining the level of significance, the analysis assumes that the proposed project would comply with relevant federal, state, and local regulations and ordinances.
- **Less-than-Significant Impact:** A project impact is considered less than significant when it does not reach the significance threshold according to the relevant standard, indicating that there would be no substantial change in the environment. No mitigation is required for less-than-significant impacts.

- **Potentially Significant Impact:** A potentially significant impact is an environmental effect that could cause a substantial adverse change in the environment; however, additional information is needed regarding the extent of the impact to make the determination of significance. In order to provide a conservative impact assessment under CEQA, a potentially significant impact is treated as if it were a significant impact.
- **Significant Impact:** A project impact is considered significant if it results in a substantial adverse change in the physical conditions of the environment. Significant impacts are identified by the evaluation of project effects in the context of specified significance criteria. When available, potentially feasible mitigation measures and/or project alternatives are identified to reduce these effects upon the environment.
- **Significant and Unavoidable Impact:** A project impact is considered significant and unavoidable if it results in a substantial adverse change in the physical conditions of the environment and cannot be mitigated to a level that is less than significant. Significant impacts are identified by the evaluation of project effects in the context of specified significance criteria. Even after application of potentially feasible mitigation measures and/or project alternatives are identified, these effects to the environment remain adverse.
- **Cumulative Impact:** According to CEQA, “cumulative impacts refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts” (CEQA Guidelines, Section 15355). CEQA requires that cumulative impacts be discussed when the “project’s incremental effect is cumulatively considerable” (CEQA Guidelines, Section 15130 (a)).

INTENTIONALLY LEFT BLANK

4.1 AIR QUALITY AND GREENHOUSE GAS EMISSIONS

4.1.1 Introduction

This section includes a description of existing air quality and greenhouse gas (GHG) emissions (climate change) conditions, a summary of applicable regulations, and analyses of potential short-term and long-term air quality and GHG emissions impacts of the Kaiser Riverside-Cirby Medical Office Building Project (proposed project).

One comment letter related to air quality was received in response to the Notice of Preparation (NOP). The letter was submitted by the Placer County Air Pollution Control District (PCAPCD). Notably, the PCAPCD recommended that the project's construction and operational emissions are to be evaluated using their project-level significance thresholds of 82 pounds per day (lbs/day) for reactive organic gas (ROG), oxides of nitrogen (NO_x), and particulate matter equal to or less than 10 microns in aerodynamic diameter (PM₁₀), and 550 lbs/day for carbon monoxide (CO). Additionally, the PCAPCD recommended that cumulative impacts should be assessed using the significance thresholds of 10 lbs/day for ROG and NO_x emissions. However, on October 13, 2016, the PCAPCD adopted new thresholds of significance. The NOP for the proposed project was released prior to the adoption of these new thresholds. The lead agency has discretion in such a case to determine whether to use the thresholds in effect at the time of NOP issuance, or to use the new thresholds; the City has chosen to use the new thresholds. These thresholds are described in detail in the Regulatory Setting, Local Regulations section.

Project-generated criteria air pollutant and GHG emissions were estimated using the California Emissions Estimator Model (CalEEMod) version 2016.3.1, as recommended by the PCAPCD. See Appendix A for a copy of the NOP and comments received in response to the NOP.

Materials referenced to prepare this section include, in part, the *City of Roseville General Plan 2035*, as adopted June 15, 2016 (City of Roseville 2016), Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan (PCAPCD 2008), 2015 Triennial Report (PCAPCD 2015), and the Draft Transportation Impact Study prepared by Fehr and Peers (included as Appendix D).

The documents listed above are available for review during normal business hours (Monday through Friday 8 a.m. to 5 p.m.) at the City of Roseville Permit Center, 311 Vernon Street, Roseville, California 95678.

4.1.2 Environmental Setting

Air Quality

Ambient air quality is generally affected by climatological conditions, the topography of the air basin, the type and amounts of pollutants emitted, and, for some pollutants, sunlight. The project site is located within the Sacramento Valley Air Basin (SVAB). Topographical and climatic factors in the SVAB create the potential for high concentrations of regional and local air pollutants. This section describes relevant characteristics of the air basin, types of air pollutants, health effects, and existing air quality levels.

The SVAB includes Sacramento, Shasta, Tehama, Butte, Glenn, Colusa, Sutter, Yuba, Yolo, and portions of Solano and Placer Counties. The SVAB extends from south of Sacramento to north of Redding and is bounded on the west by the Coast Ranges and on the north and east by the Cascade Range and Sierra Nevada. The San Joaquin Valley Air Basin is located to the south.

Climate and Topography

Hot, dry summers and mild, rainy winters characterize the Mediterranean climate of the valley. During the year, the temperature may range from 20 to 115 degrees Fahrenheit (°F), with summer highs usually in the 90s and winter lows occasionally below freezing. The high average summer temperatures, combined with very low relative humidity, produces hot, dry summers that contribute to ozone buildup. Average annual rainfall is about 20 inches with snowfall being very rare. The prevailing winds are moderate in strength and vary from moist clean breezes from the south to dry land flows from the north.

Weather patterns throughout the SVAB are affected by geography. Mountain ranges tend to buffer the basin from the marine weather systems that originate over the Pacific. However, the Carquinez Strait creates a breach in the Coast Range on the west of this basin, which exposes the midsection of the SVAB to marine weather. This marine influence moderates climatic extremes, such as the cooling that sea breezes provide in summer evenings. These breezes also help to move pollutants out of the valley. During about half of the days from July to September, however, a phenomenon called the “Schultz Eddy” prevents this from occurring. Instead of allowing for the prevailing wind patterns to move north carrying the pollutants out of the valley, the Schultz Eddy causes the wind pattern to circle back south. Essentially, this phenomenon causes the air pollutants to be blown south toward the Sacramento area. This effect exacerbates the pollution levels in the area and increases the likelihood of violating federal or state standards. The effect normally dissipates around noon when the delta sea breeze arrives.

The mountains surrounding the valley can also contribute to elevated pollutant concentrations during periods of surface or elevated surface inversions. These inversions are most common in late summer and fall. Surface inversions are formed when the air close to the surface cools more rapidly than the warm layer of air above it. Elevated inversions occur when a layer of cool air is suspended between warm air layers above and below it. Both situations result in air stagnation. Air pollutants accumulate under and within inversions, subjecting people in the region to elevated pollution levels and associated health concerns. The surface concentrations of pollutants are highest when these conditions are combined with smoke from agricultural burning or when temperature inversions trap cool air, fog, and pollutants near the ground.

Pollutants and Effects

Criteria Air Pollutants

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards, or criteria, for outdoor concentrations to protect public health. The federal and state standards have been set, with an adequate margin of safety, at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons from illness or discomfort. Pollutants of concern include ozone (O₃), nitrogen dioxide (NO₂), carbon monoxide (CO), sulfur dioxide (SO₂), PM₁₀, particulate matter equal to or less than 2.5 microns in aerodynamic diameter (PM_{2.5}), and lead (Pb). These pollutants are discussed below.¹ In California, sulfates, vinyl chloride, hydrogen sulfide, and visibility-reducing particles are also regulated as criteria air pollutants.

Ozone. O₃ is a colorless gas that is formed in the atmosphere when volatile organic compounds (VOCs), sometimes referred to as ROGs, and NO_x react in the presence of ultraviolet sunlight. O₃ is not a primary pollutant; it is a secondary pollutant formed by complex interactions of two pollutants directly emitted into the atmosphere. The primary sources of VOCs and NO_x, the precursors of O₃, are automobile exhaust and industrial sources. Meteorology and terrain play major roles in O₃ formation and ideal conditions occur during summer and early autumn, on days with low wind speeds or stagnant air, warm temperatures, and cloudless skies. While O₃ in the upper atmosphere absorbs harmful ultraviolet light, ground-level O₃ is damaging to the tissues of plants, animals, and humans. O₃ reacts chemically with internal body tissues, such as the lungs, and can cause adverse effects on the human respiratory system. Prolonged exposure can reduce lung function, aggravate asthma, and increase susceptibility to respiratory infections.

¹ The following descriptions of health effects for each of the criteria air pollutants associated with project construction and operations are based on the U.S. Environmental Protection Agency (EPA) Criteria Air Pollutants (EPA 2016a) and the California Air Resources Board (CARB) Glossary of Air Pollutant Terms (CARB 2016a) published information.

Nitrogen Dioxide. Most NO_2 , like O_3 , is not directly emitted into the atmosphere but is formed by an atmospheric chemical reaction between nitric oxide (NO) and atmospheric oxygen. NO and NO_2 are collectively referred to as NO_x and are major contributors to O_3 formation. High concentrations of NO_2 can cause breathing difficulties and result in a brownish-red cast to the atmosphere with reduced visibility. There is some indication of a relationship between NO_2 and chronic pulmonary fibrosis and some increase in bronchitis in children (2 and 3 years old) has also been observed at concentrations below 0.3 parts per million (ppm) by volume.

Carbon Monoxide. CO is a colorless and odorless gas formed by the incomplete combustion of fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft, and trains. In urban areas, such as the project location, automobile exhaust accounts for the majority of CO emissions. CO is a non-reactive air pollutant that dissipates relatively quickly; therefore, ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions; primarily wind speed, topography, and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, a typical situation at dusk in urban areas between November and February. The highest levels of CO typically occur during the colder months of the year when inversion conditions are more frequent. In terms of health, CO competes with oxygen, often replacing it in the blood, thus reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can be dizziness, fatigue, and impairment of central nervous system functions.

Sulfur Dioxide. SO_2 is a colorless, pungent gas formed primarily by the combustion of sulfur-containing fossil fuels. Main sources of SO_2 are coal and oil used in power plants and industries; as such, the highest levels of SO_2 are generally found near large industrial complexes. In recent years, SO_2 concentrations have been reduced by the increasingly stringent controls placed on stationary source emissions of SO_2 and limits on the sulfur content of fuels. SO_2 is an irritant gas that attacks the throat and lungs and can cause acute respiratory symptoms and diminished ventilator function in children. SO_2 can also yellow plant leaves and erode iron and steel.

Particulate Matter. Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter can form when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere. $\text{PM}_{2.5}$ and PM_{10} represent fractions of particulate matter. Inhalable or coarse particulate matter, or PM_{10} , is about 1/7 the thickness of a human hair. Major sources of PM_{10} include crushing or grinding operations; dust stirred up by vehicles traveling on roads; wood burning stoves and fireplaces; dust from construction, landfills, and agriculture; wildfires and brush/waste burning; industrial sources; windblown dust from open lands; and atmospheric chemical and photochemical reactions. Fine particulate matter, or $\text{PM}_{2.5}$, is roughly 1/28 the

diameter of a human hair. PM_{2.5} results from fuel combustion (e.g., motor vehicles, power generation, and industrial facilities), residential fireplaces, and wood stoves. In addition, PM_{2.5} can be formed in the atmosphere from gases such as sulfur oxides (SO_x), NO_x, and ROG.

PM_{2.5} and PM₁₀ pose a greater health risk than larger-size particles. When inhaled, these tiny particles can penetrate the human respiratory system's natural defenses and damage the respiratory tract. PM_{2.5} and PM₁₀ can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances, such as Pb, sulfates, and nitrates, can cause lung damage directly or be absorbed into the blood stream, causing damage elsewhere in the body. Additionally, these substances can transport absorbed gases, such as chlorides or ammonium, into the lungs, also causing injury. Whereas PM₁₀ tends to collect in the upper portion of the respiratory system, PM_{2.5} is so tiny that it can penetrate deeper into the lungs and damage lung tissues. Suspended particulates also damage and discolor surfaces on which they settle, as well as produce haze and reduce regional visibility.

Lead. Lead in the atmosphere occurs as particulate matter. Sources of lead include leaded gasoline, the manufacturing of batteries, paint, ink, ceramics, and ammunition and secondary lead smelters. Prior to 1978, mobile emissions were the primary source of atmospheric lead. Between 1978 and 1987, the phase-out of leaded gasoline reduced the overall inventory of airborne lead by nearly 95%. With the phase-out of leaded gasoline, secondary lead smelters, battery recycling, and manufacturing facilities are becoming lead-emission sources of greater concern.

Prolonged exposure to atmospheric lead poses a serious threat to human health. Health effects associated with exposure to lead include gastrointestinal disturbances, anemia, kidney disease, and in severe cases, neuromuscular and neurological dysfunction. Of particular concern are low-level lead exposures during infancy and childhood. Such exposures are associated with decrements in neurobehavioral performance including intelligence quotient performance, psychomotor performance, reaction time, and growth.

Non-Criteria Air Pollutants

Toxic Air Contaminants. A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute and/or chronic noncancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Examples include certain aromatic and chlorinated hydrocarbons, certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources such as automobiles; and area sources such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing)

and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced either on short-term (acute) or long-term (chronic) exposure to a given TAC.

Diesel Particulate Matter. Diesel particulate matter (DPM) is part of a complex mixture that makes up diesel exhaust. Diesel exhaust is composed of two phases, gas and particle, both of which contribute to health risks. The California Air Resources Board (CARB) classified “particulate emissions from diesel-fueled engines” (i.e., DPM; 17 CCR 93000) as a TAC in August 1998. DPM is emitted from a broad range of diesel engines: on-road diesel engines of trucks, buses, and cars and off-road diesel engines including locomotives, marine vessels, and heavy-duty construction equipment, among others. Approximately 70% of all airborne cancer risk in California is associated with DPM (CARB 2000). To reduce the cancer risk associated with DPM, CARB adopted a diesel risk reduction plan in 2000 (CARB 2000).

Asbestos. Asbestos is listed as a toxic air contaminant by CARB and as a Hazardous Air Pollutant by the EPA. Asbestos occurs naturally in surface deposits of several types of rock formations. Asbestos most commonly occurs in ultramafic rock that has undergone partial or complete alteration to serpentine rock (serpentinite) and often contains chrysotile asbestos. In addition, another form of asbestos, tremolite, can be found associated with ultramafic rock, particularly near faults. Crushing or breaking these rocks, through construction or other means, can release asbestiform fibers into the air. Asbestos emissions can result from the sale or use of asbestos-containing materials, road surfacing with such materials, grading activities, and surface mining. The risk of disease is dependent upon the intensity and duration of exposure. When inhaled, asbestos fibers may remain in the lungs and with time may be linked to such diseases as asbestosis, lung cancer, and mesothelioma.

Regional and Local Air Quality Conditions

Under both the federal and state Clean Air Acts, standards identifying the maximum allowable concentration of the criteria air pollutants have been adopted. The U.S. Environmental Protection Agency (EPA) and the CARB use air quality monitoring data to determine if each air basin or county is in compliance with the applicable standards. If the concentration of a criteria air pollutant is lower than the standard or not monitored in an area, the area is classified as attainment or unclassified (and unclassified areas are treated as attainment areas). If an area exceeds the standard, the area is classified as nonattainment for that pollutant.

The EPA has designated Placer County as a nonattainment area for the federal 8-hour O₃ standard, and CARB has designated the County as a nonattainment area for the state 1-hour and 8-hour O₃ standards. The County has been designated as a nonattainment area for the state 24-hour and annual PM₁₀ standards. The County is designated as a nonattainment area

for the 2006 federal 24-hour PM_{2.5} standard. The air basin is designated as unclassified or attainment for all other criteria air pollutants. The status of the air basin with respect to the National Ambient Air Quality Standards (NAAQS) is summarized in Table 4.1-1, and the status of the air basin with respect to the California Ambient Air Quality Standards (CAAQS) is summarized in Table 4.1-2.

Table 4.1-1
NAAQS and Status
Sacramento Valley Air Basin (Placer County)

Pollutant	Averaging Time	Designation/Classification
Ozone (O ₃)	8 hours	Nonattainment/Severe-15
Nitrogen dioxide (NO ₂)	1 hour, annual arithmetic mean	Unclassifiable/Attainment
Carbon monoxide (CO)	1 hour, 8 hours	Unclassifiable/Attainment
Sulfur dioxide (SO ₂)	24 hours, annual arithmetic mean	Unclassifiable
Respirable particulate matter (PM ₁₀)	24 hours	Attainment/Maintenance
Fine particulate matter (PM _{2.5})	24 hours, annual arithmetic mean	Unclassifiable/Attainment (1997 NAAQS)
Lead (Pb)	Rolling 3-month average	Unclassifiable/Attainment

Note:

¹ CARB has not issued area classification based on the state 8-hour standard. The previous classification for the 1-hour O₃ standard was Serious.

CARB and SMAQMD maintain ambient air quality monitoring stations throughout Placer County. All air pollutants are not monitored at each station; thus, data from the closest representative station that monitors a specific pollutant are summarized. The ambient air quality monitoring

stations nearest the project site are the North Sunrise Avenue station, which monitors for O₃, NO₂, PM₁₀, and PM_{2.5}, the Blackfoot Way station, which monitors CO, and the Del Paso Manor station, which monitors SO₂. The most recent background ambient air quality data from 2013 to 2015 are presented in Table 4.1-3.

Table 4.1-3
Local Ambient Air Quality Data

	Ambient Air Quality Standard	2013	2014	2015
<i>Ozone (O₃) (Roseville – North Sunrise Avenue Monitoring Station)^a</i>

	12.0 µg/m ³ (federal)	7.5	7.8	8.0

Sources: CARB 2016c; EPA 2016c.

Notes: ppm = parts per million; µg/m³ = micrograms per cubic meter; – = not available; ND = insufficient data available to determine the value. Data were taken from CARB iADAM (2015b; <http://www.arb.ca.gov/adam>) or EPA AirData (2016; <http://www.epa.gov/airdata/>) and represent the highest concentrations experienced over a given year.

Exceedances of federal and state standards are only shown for ozone and particulate matter. Daily exceedances for particulate matter are estimated days because PM₁₀ and PM_{2.5} are not monitored daily. All other criteria pollutants did not exceed either federal or state standards during the years shown. There is no federal standard for 1-hour ozone, annual PM₁₀, or 24-hour SO₂, nor is there a state 24-hour standard for PM_{2.5}.

^a Mean does not satisfy minimum data completeness criteria.

^b Roseville – North Sunrise Avenue Monitoring Station is located at 151 North Sunrise Avenue, Roseville, California 95661.

^c North Highlands – Blackfoot Way Monitoring Station is located at 7823 Blackfoot Way, North Highlands, California 95660.

^d Sacramento – Del Paso Manor Monitoring Station is located at 2701 Avalon Drive, Sacramento, California 95821.

While the data gathered at these monitoring stations may not necessarily reflect the unique meteorological environment of the project site nor the proximity of site-specific stationary and street sources, they do present the nearest available benchmark and provide the reader with a reference point to what the pollutants of greatest concern are in the region and the degree to which the area is out of attainment with specific air quality standards.

Sensitive Receptors

Some receptors are considered more sensitive than others to air pollutants. The reasons for greater than average sensitivity include pre-existing health problems, proximity to emissions source, or duration of exposure to air pollutants. The PCAPCD provides examples of sensitive receptors, which include schools, hospitals, or senior centers (PCAPCD 2012).

The project site is located in an existing developed area of the City and would replace the existing Kaiser medical office complex. The project site is bounded by existing commercial uses to the north and west and Interstate 80 (I-80) to the south and east. The closest sensitive receptors to the project site include residential neighborhoods located approximately 0.10 of a mile west of the project site.

Greenhouse Gases and Climate Change

The Greenhouse Effect

Climate change refers to any significant change in measures of climate, such as temperature, precipitation, or wind, lasting for an extended period (decades or longer). Gases that trap heat in the atmosphere are often called GHGs. The greenhouse effect traps heat in the troposphere through a threefold process: short-wave radiation emitted by the Sun is absorbed by the Earth, the Earth emits a portion of this energy in the form of long-wave radiation, and GHGs in the upper atmosphere absorb this long-wave radiation and emit it into space and back toward the Earth. This trapping of the long-wave (thermal) radiation emitted back toward the Earth is the underlying process of the greenhouse effect. The greenhouse effect is a natural process that contributes to regulating the Earth's temperature. Without it, the temperature of the Earth would be about 0F (–18 degrees Celsius [°C]) instead of its current 57°F (14°C). Global climate change concerns are focused on whether human activities are leading to an enhancement of the greenhouse effect.

Greenhouse Gases and Global Warming Potential

GHGs include, but are not limited to, carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), O₃, water vapor, hydrofluorocarbons (HFCs), hydrochlorofluorocarbons (HCFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆). Some GHGs, such as CO₂, CH₄, and N₂O, occur naturally and are emitted to the atmosphere through natural processes and human activities. Of these gases, CO₂ and CH₄ are emitted in the greatest quantities from human activities. Manufactured GHGs, which have a much greater heat-absorption potential than CO₂, include fluorinated gases, such as HFCs, HCFCs, PFCs, and SF₆, which are associated with certain industrial products and processes. A summary of the most common GHGs and their sources is included in the following text.²

Carbon Dioxide. CO₂ is a naturally occurring gas and a by-product of human activities and is the principal anthropogenic GHG that affects the Earth's radiative balance. Natural sources of CO₂ include respiration of bacteria, plants, animals, and fungus; evaporation from oceans, volcanic out-gassing; and decomposition of dead organic matter. Human activities that generate CO₂ are from the combustion of coal, oil, natural gas, and wood.

Methane. CH₄ is a flammable gas and is the main component of natural gas. Methane is produced through anaerobic (without oxygen) decomposition of waste in landfills, flooded rice

² The descriptions of GHGs are summarized from the Intergovernmental Panel on Climate Change (IPCC) Second Assessment Report (1995), IPCC Fourth Assessment Report (2007), CARB's Glossary of Terms Used in GHG Inventories (2015), and EPA's Glossary of Climate Change Terms (2016d).

fields, animal digestion, decomposition of animal wastes, production and distribution of natural gas and petroleum, coal production, and incomplete fossil fuel combustion.

Nitrous Oxide. Sources of N₂O include soil cultivation practices (microbial processes in soil and water), especially the use of commercial and organic fertilizers, manure management, industrial processes (such as in nitric acid production, nylon production, and fossil-fuel-fired power plants), vehicle emissions, and the use of N₂O as a propellant (such as in rockets, racecars, aerosol sprays).

Fluorinated Gases. Fluorinated gases are synthetic, powerful GHGs that are emitted from a variety of industrial processes. Several prevalent fluorinated gases include the following:

- **Hydrofluorocarbons:** HFCs are compounds containing only hydrogen, fluorine, and carbon atoms. HFCs are synthetic chemicals that are used as alternatives to ozone-depleting substances in serving many industrial, commercial, and personal needs. HFCs are emitted as by-products of industrial processes and are used in manufacturing.
- **Hydrochlorofluorocarbons:** HCFCs are compounds containing hydrogen, fluorine, chlorine, and carbon atoms. HFCs are synthetic chemicals that are used as alternatives to ozone depleting substances (chlorofluorocarbons).
- **Perfluorocarbons:** PFCs are a group of human-made chemicals composed of carbon and fluorine only. These chemicals were introduced as alternatives, along with HFCs, to the ozone depleting substances. The two main sources of PFCs are primarily aluminum production and semiconductor manufacturing. Since PFCs have stable molecular structures and do not break down through the chemical processes in the lower atmosphere, these chemicals have long lifetimes, ranging between 10,000 and 50,000 years.
- **Sulfur Hexafluoride:** SF₆ is a colorless gas that is soluble in alcohol and ether and slightly soluble in water. SF₆ is used for insulation in electric power transmission and distribution equipment, semiconductor manufacturing, the magnesium industry, and as a tracer gas for leak detection.

Global Warming Potential

Gases in the atmosphere can contribute to climate change both directly and indirectly. Direct effects occur when the gas itself absorbs radiation. Indirect radiative forcing occurs when chemical transformations of the substance produce other GHGs, when a gas influences the atmospheric lifetimes of other gases, and/or when a gas affects atmospheric processes that alter the radiative balance of the Earth (e.g., affect cloud formation or albedo) (EPA 2016e). The Intergovernmental Panel on Climate Change (IPCC) developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to

another gas. The GWP of a GHG is defined as the ratio of the time-integrated radiative forcing from the instantaneous release of 1 kilogram of a trace substance relative to that of 1 kilogram of a reference gas (IPCC 2014). The reference gas used is CO₂; therefore, GWP-weighted emissions are measured in metric tons of CO₂ equivalent (MT CO₂E).

CalEEMod assumes that the GWP for CH₄ is 21 (which means that emissions of 1 MT of CH₄ are equivalent to emissions of 21 MT of CO₂), and the GWP for N₂O is 310, based on the IPCC Second Assessment Report (1995). The IPCC has released subsequent assessment reports with updated GWPs, and statewide documents are beginning to transition to the use of the GWPs in the IPCC Fourth Assessment Report. GWP used in EPA's 2016 Inventory of U.S. Greenhouse Gas Emissions and Sinks and CARB's California 2016 GHG emissions inventory are based on the IPCC Fourth Assessment Report (IPCC 2007), which includes 1 for CO₂, 25 for CH₄, and 298 for N₂O. Nonetheless, the use of the different GWPs would not substantially change the overall project-generated GHG emissions, which are primarily CO₂. As such, for the purposes of this analysis, it is appropriate to use the GWP values identified in CalEEMod from the IPCC Second Assessment Report. Contributions to Greenhouse Gas Emissions

United States Emissions. Per the EPA's Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2014 (2016e), total United States GHG emissions were approximately 6,870.5 MMT CO₂E in 2014. The primary GHG emitted by human activities in the United States was CO₂, which represented approximately 80.9% of total GHG emissions (5,556.0 MMT CO₂E). The largest source of CO₂, and of overall GHG emissions, was fossil-fuel combustion, which accounted for approximately 93.7% of CO₂ emissions in 2014 (5,208.2 MMT CO₂E). Total United States GHG emissions have increased by 7.4% from 1990 to 2014, and emissions increased from 2013 to 2014 by 1.0% (70.5 MMT CO₂E). Since 1990, United States GHG emissions have increased at an average annual rate of 0.3%; however, overall, net emissions in 2014 were 8.6% below 2005 levels (EPA 2016e).

State of California Emission. According to California's 2000–2014 GHG emissions inventory (2016 edition), California emitted 441.5 MMT CO₂E in 2014, including emissions resulting from out-of-state electrical generation (CARB 2016d). The sources of GHG emissions in California include transportation, industry, electric power production from both in-state and out-of-state sources, residential and commercial activities, agriculture, high global-warming potential substances, and recycling and waste. The California GHG emission source categories and their relative contributions in 2014 are presented in Table 4.1-4.

Table 4.1-4
Greenhouse Gas Emissions Sources in California

Source Category	Annual GHG Emissions (MMT CO ₂ E)	Percent of Total ^a
Transportation	159.53	36%
Industrial Uses	93.32	21%
Electricity Generation ^b	88.24 ^b	20%
Residential and Commercial uses	38.34	9%
Agriculture	36.11	8%
High Global Warming Potential Substances	17.15	4%
Recycling and Waste	8.85	2%
Total	441.54	100%

Source: CARB 2016d.

Notes: Emissions reflect the 2014 California GHG inventory.

^a Percentage of total has been rounded.

^b Includes emissions associated with imported electricity, which account for 36.51 MMT CO₂E annually.

During the 2000 to 2014 period, per capita GHG emissions in California have continued to drop from a peak in 2001 of 13.9 MT per person to 11.4 MT per person in 2014, representing an 18% decrease. In addition, total GHG emissions in 2014 were 2.8 MMT CO₂E less than 2013 emissions. The declining trend in GHG emissions, coupled with programs that will continue to provide additional GHG reductions going forward, demonstrates that California is on track to meet the statewide 2020 target of 431 MMT CO₂E, established by Assembly Bill 32, discussed below (CARB 2016e).

City of Roseville Emissions. Based on the 2006 GHG inventory for the City, the transportation sector represents the largest source of GHG emissions, accounting for 37% (fleet at 26% and commute at 11%) of the City's annual emissions of 28,900 MT of CO₂E (Pierce 2009). The other CO₂E emission sectors included in the inventory (with percent contributions reported in parentheses) were buildings (27%), wastewater (25%), streetlights (7%), and solid waste (4%).

Potential Effects of Human Activity on Climate Change

Globally, climate change has the potential to affect numerous environmental resources through uncertain impacts related to future air temperatures and precipitation patterns. The 2014 IPCC Synthesis Report indicated that warming of the climate system is unequivocal, and since the 1950s, many of the observed changes are unprecedented over decades to millennia. Signs that global climate change has occurred include warming of the atmosphere and ocean, diminished amounts of snowpack, and rising sea levels (IPCC 2014).

In California, climate change impacts have the potential to affect sea level rise, agriculture, snowpack and water supply, forestry, wildfire risk, public health, and electricity demand and supply (CCCC 2006). The primary effect of global climate change has been a 0.2°C rise in average global tropospheric temperature per decade, determined from meteorological measurements worldwide between 1990 and 2005. Scientific modeling predicts that continued emissions of GHGs at or above current rates would induce more extreme climate changes during the twenty-first century than were observed during the twentieth century. A warming of about 0.2°C (0.36°F) per decade is projected, and there are identifiable signs that global warming could be taking place.

Although climate change is driven by global atmospheric conditions, climate change impacts are felt locally. A scientific consensus confirms that climate change is already affecting California. The average temperatures in California have increased, leading to more extreme hot days and fewer cold nights; shifts in the water cycle have been observed, with less winter precipitation falling as snow, and both snowmelt and rainwater running off earlier in the year; sea levels have risen; and wildland fires are becoming more frequent and intense due to dry seasons that start earlier and end later (CAT 2010).

An increase in annual average temperature is a reasonably foreseeable effect of climate change. Observed changes over the last several decades across the western United States reveal clear signals of climate change. Statewide average temperatures have increased by about 1.7°F from 1895 to 2011, and warming has been greatest in the Sierra Nevada (CCCC 2012). By 2050, California is projected to warm by approximately 2.7°F above 2000 averages, a threefold increase in the rate of warming over the last century. By 2100, average temperatures could increase by 4.1°F to 8.6°F, depending on emissions levels. Springtime warming—a critical influence on snowmelt—will be particularly pronounced. Summer temperatures will rise more than winter temperatures, and the increases will be greater in inland California, compared to the coast. Heat waves will be more frequent, hotter, and longer. There will be fewer extremely cold nights (CCCC 2012). A decline of Sierra snowpack, which accounts for approximately half of the surface water storage in California, by 30% to as much as 90% is predicted over the next 100 years (CAT 2006).

Model projections for precipitation over California continue to show the Mediterranean pattern of wet winters and dry summers with seasonal, year-to-year, and decade-to-decade variability. For the first time, however, several of the improved climate models shift toward drier conditions by the mid-to-late 21st century in Central and, most notably, Southern California. By late-century, all projections show drying, and half of them suggest 30-year average precipitation will decline by more than 10% below the historical average (CCCC 2012).

Wildfire risk in California will also increase as a result of climate change. Earlier snowmelt, higher temperatures and longer dry periods over a longer fire season will directly increase wildfire risk. Indirectly, wildfire risk will also be influenced by potential climate-related changes in vegetation and ignition potential from lightning. However, human activities will continue to be the biggest factor in ignition risk. It is estimated that the long-term increase in fire occurrence associated with a higher emissions scenario is substantial, with increases in the number of large fires statewide ranging from 58% to 128% above historical levels by 2085. Under the same emissions scenario, estimated burned area will increase by 57% to 169%, depending on location (CCCC 2012).

Reduction in the suitability of agricultural lands for traditional crop types may occur. While effects may occur, adaptation could allow farmers and ranchers to minimize potential negative effects on agricultural outcomes through adjusting timing of plantings or harvesting and changing crop types.

Public health-related effects of increased temperatures and prolonged temperature extremes, including heat stroke, heat exhaustion, and exacerbation of existing medical conditions, could be particular problems for the elderly, infants, and those who lack access to air conditioning or cooled spaces (CNRA 2009).

4.1.3 Regulatory Setting

Air quality is monitored through the efforts of various international, federal, state, regional, and local government agencies. The agencies work jointly and individually to improve air quality through legislation, regulations, planning, policymaking, education, and a variety of programs. The agencies responsible for regulating and improving air quality in the project area are discussed below.

Federal Regulations

Federal air quality laws regulate air pollutants, primarily through industry-specific standards and planning requirements. The primary legislation that governs federal air quality regulations is the Clean Air Act (CAA), including the CAA amendments of 1990. Federal air quality laws regulate criteria, toxic, and nuisance air pollutant emissions from industrial sources.

As mentioned earlier, criteria pollutants are substances for which the EPA has established the NAAQS. Non criteria air pollutants, also known as TACs, are airborne substances capable of causing adverse health effects as a result of short-term (acute) or long-term (chronic) exposure.

Nuisance pollutants are substances that can result in complaints from the population about adverse impacts on quality of life. The nuisance pollutants regulated by the federal air quality laws are odors and visible plumes (smoke).

Federal Clean Air Act

The federal CAA, passed in 1970 and last amended in 1990, forms the basis for the national air pollution control effort. The EPA is responsible for implementing most aspects of the CAA, including the setting of NAAQS for major air pollutants, hazardous air pollutant standards, approval of state attainment plans, motor vehicle emission standards, stationary source emission standards and permits, acid rain control measures, stratospheric O₃ protection, and enforcement provisions. NAAQS are established for “criteria pollutants” under the CAA, which are O₃, CO, NO₂, SO₂, PM₁₀, PM_{2.5}, and Pb.

The NAAQS describe acceptable air quality conditions designed to protect the health and welfare of the citizens of the nation. The NAAQS (other than for O₃, NO₂, SO₂, PM₁₀, PM_{2.5}, and those based on annual averages or arithmetic mean) are not to be exceeded more than once per year. NAAQS for O₃, NO₂, SO₂, PM₁₀, and PM_{2.5} are based on statistical calculations over 1- to 3-year periods, depending on the pollutant. The CAA requires the EPA to reassess the NAAQS at least every 5 years to determine whether adopted standards are adequate to protect public health based on current scientific evidence. States with areas that exceed the NAAQS must prepare a State Implementation Plan that demonstrates how those areas would attain the standards within mandated time frames.

State Regulations

Criteria Pollutants

The federal CAA delegates the regulation of air pollution control and the enforcement of the NAAQS to the states. In California, the task of air quality management and regulation has been legislatively granted to CARB, with subsidiary responsibilities assigned to air quality management districts and air pollution control districts at the regional and county levels. CARB, which became part of the California Environmental Protection Agency (CalEPA) in 1991, is responsible for ensuring implementation of the California Clean Air Act (CCAA) of 1988, responding to the federal CAA, and regulating emissions from motor vehicles and consumer products.

CARB has established CAAQS, which are generally more restrictive than the NAAQS. The CAAQS describe adverse conditions; that is, pollution levels must be below these standards before a basin can attain the standard. Air quality is considered “in attainment” if pollutant levels are continuously below the CAAQS and violate the standards no more than once each year. The CAAQS for O₃, NO₂, CO, SO₂ (1-hour and 24-hour), PM₁₀, and PM_{2.5} and visibility-reducing particles are values that are not to be exceeded. All others are not to be equaled or exceeded. The current CAAQS are presented in Table 4.1-5.

Table 4.1-5
Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards ¹	National Standards ²	
		Concentration ³	Primary ^{3,4}	Secondary ^{3,5}
O ₃	1 hour	0.09 ppm (180 µg/m ³)	—	Same as Primary Standard ⁶
	8 hours	0.070 ppm (137 µg/m ³)	0.070 ppm (137 µg/m ³) ⁶	
NO ₂ ⁷	1 hour	0.18 ppm (339 µg/m ³)	0.100 ppm (188 µg/m ³)	Same as Primary Standard
	Annual Arithmetic Mean	0.030 ppm (57 µg/m ³)	0.053 ppm (100 µg/m ³)	
CO	1 hour	20 ppm (23 mg/m ³)	35 ppm (40 mg/m ³)	None
	8 hours	9.0 ppm (10 mg/m ³)	9 ppm (10 mg/m ³)	
SO ₂ ⁸	1 hour	0.25 ppm (655 µg/m ³)	0.075 ppm (196 µg/m ³)	—
	3 hours	—	—	0.5 ppm (1,300 µg/m ³)
	24 hours	0.04 ppm (105 µg/m ³)	0.14 ppm (for certain areas) ⁷	—
	Annual	—	0.030 ppm (for certain areas) ⁷	—
PM ₁₀ ⁹	24 hours	50 µg/m ³	150 µg/m ³	Same as Primary Standard
	Annual Arithmetic Mean	20 µg/m ³	—	
PM _{2.5} ⁹	24 hours	No Separate State Standard	35 µg/m ³	Same as Primary Standard
	Annual Arithmetic Mean	12 µg/m ³	12.0 µg/m ³	15.0 µg/m ³
Lead ^{10,11}	30-day Average	1.5 µg/m ³	—	—
	Calendar Quarter	—	1.5 µg/m ³ (for certain areas) ¹¹	Same as Primary Standard
	Rolling 3-Month Average	—	0.15 µg/m ³	
Hydrogen sulfide	1-hour	0.03 ppm (42 µg/m ³)	—	—
Vinyl chloride ¹⁰	24-hour	0.01 ppm (26 µg/m ³)	—	—
Sulfates	24-hour	25 µg/m ³	—	—

Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards ¹	National Standards ²	
		Concentration ³	Primary ^{3,4}	Secondary ^{3,5}
Visibility reducing particles	8-hour (10:00 a.m. to 6:00 p.m. PST)	Insufficient amount to produce an extinction coefficient of 0.23 per kilometer due to particles when the relative humidity is less than 70%	—	—

Source: CARB 2016e

Notes: ppm = parts per million by volume; $\mu\text{g}/\text{m}^3$ = micrograms per cubic meter; mg/m^3 = milligrams per cubic meter.

¹ California standards for O₃, CO, SO₂ (1-hour and 24-hour), NO₂, suspended particulate matter—PM₁₀, PM_{2.5}, and visibility-reducing particles, are values that are not to be exceeded. All others are not to be equaled or exceeded. CAAQS are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

² National standards (other than O₃, NO₂, SO₂, particulate matter, and those based on annual averages or annual arithmetic mean) are not to be exceeded more than once a year. The O₃ standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over 3 years, is equal to or less than the standard. For PM₁₀, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) is equal to or less than one. For PM_{2.5}, the 24-hour standard is attained when 98% of the daily concentrations, averaged over 3 years, are equal to or less than the standard.

³ Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

⁴ National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

⁵ National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

⁶ On October 1, 2015, the EPA Administrator signed the notice for the final rule to revise the primary and secondary NAAQS for O₃. The EPA is revising the levels of both standards from 0.075 ppm to 0.070 ppm, and retaining their indicators (O₃), forms (fourth-highest daily maximum, averaged across three consecutive years) and averaging times (eight hours). The EPA is in the process of submitting the rule for publication in the Federal Register. The final rule will be effective 60 days after the date of publication in the Federal Register. The lowered national 8-hour standards are reflected in the table.

⁷ To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 parts per billion (ppb). Note that the national 1-hour standard is in units of ppb. California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.

⁸ On June 2, 2010, a new 1-hour SO₂ standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO₂ national standards (24-hour and annual) remain in effect until 1 year after an area is designated for the 2010 standard, except that in areas designated nonattainment of the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

⁹ On December 14, 2012, the national annual PM_{2.5} primary standard was lowered from 15 $\mu\text{g}/\text{m}^3$ to 12.0 $\mu\text{g}/\text{m}^3$. The existing national 24-hour PM_{2.5} standards (primary and secondary) were retained at 35 $\mu\text{g}/\text{m}^3$, as was the annual secondary standard of 15 $\mu\text{g}/\text{m}^3$. The existing 24-hour PM₁₀ standards (primary and secondary) of 150 $\mu\text{g}/\text{m}^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.

¹⁰ CARB has identified lead and vinyl chloride as TACs with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

¹¹ The national standard for lead was revised on October 15, 2008, to a rolling 3-month average. The 1978 lead standard (1.5 $\mu\text{g}/\text{m}^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

Toxic Air Contaminants

The State Air Toxics Program was established in 1983 under Assembly Bill (AB) 1807 (Tanner). The California TAC list identifies more than 700 pollutants, of which carcinogenic and non-carcinogenic toxicity criteria have been established for a subset of these pollutants pursuant to the California Health and Safety Code. In accordance with AB 2728, the state list includes the (federal) hazardous air pollutants.

The Air Toxics “Hot Spots” Information and Assessment Act of 1987 (AB 2588) seeks to identify and evaluate risk from air toxics sources; however, AB 2588 does not regulate air toxics emissions. TAC emissions from individual facilities are quantified and prioritized. “High-priority” facilities are required to perform a health risk assessment and, if specific thresholds are exceeded, are required to communicate the results to the public in the form of notices and public meetings.

In 2000, CARB approved a comprehensive Diesel Risk Reduction Plan to reduce diesel emissions from both new and existing diesel-fueled vehicles and engines. The regulation is anticipated to result in an 80% decrease in statewide diesel health risk in 2020 as compared with the diesel risk in 2000. Additional regulations apply to new trucks and diesel fuel, including the On-Road Heavy Duty Diesel Vehicle (In-Use) Regulation, the On-Road Heavy Duty (New) Vehicle Program, the In-Use Off-Road Diesel Vehicle Regulation, the New Off-Road Compression-Ignition (Diesel) Engines and Equipment program, and In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets Regulation. All of these regulations and programs have timetables by which manufacturers must comply and existing operators must upgrade their diesel-powered equipment. Several Airborne Toxic Control Measures (ATCMs) that reduce diesel emissions are described in greater detail below.

Despite these reduction efforts, CARB recommends that proximity to sources of DPM emissions be considered in the siting of new sensitive land uses. In April 2005, CARB published *Air Quality and Land Use Handbook: a Community Health Perspective*. This handbook is intended to give guidance to local governments in the siting of sensitive land uses near sources of air pollution. Recent studies have shown that public exposure to air pollution can be substantially elevated near freeways and certain other facilities such as ports, rail yards, and distribution centers. Specifically, the document focuses on risks from emissions of DPM, a known carcinogen, and establishes recommended siting distances of sensitive receptors. CARB notes that these recommendations are advisory and should not be interpreted as defined “buffer zones,” and that local agencies must balance other considerations, including transportation needs, the benefits of urban infill, community economic development priorities, and other quality of life issues. With careful evaluation of exposure, health risks, and affirmative steps to reduce risk where necessary, CARB’s position is that infill development, mixed use, higher density, transit-oriented

development, and other concepts that benefit regional air quality can be compatible with protecting the health of individuals at the neighborhood level (CARB 2005).

Idling of Commercial Heavy Duty Trucks (13 CCR 2485): This ATCM was adopted to control emissions from idling trucks. It prohibits idling for more than 5 minutes for all commercial trucks with a gross vehicle weight rating over 10,000 pounds. The ATCM contains an exception that allows trucks to idle while queuing or involved in operational activities.

In-Use Off-Road Diesel-Fueled Fleets (13 CCR 2449 et seq.): This ATCM requires that specific fleet average requirements are met for criteria air pollutant emissions, particularly NO_x and particulate matter, from in-use off-road diesel-fueled vehicles. Where average requirements cannot be met, best available control technology requirements apply.

In-Use On-Road Diesel-Fueled Vehicles (13 CCR 2025): This ATCM was adopted to reduce NO_x and particulate matter emissions from most in-use on-road diesel trucks and buses with a gross vehicle weight rating greater than 14,000 pounds and requires use of exhaust retrofit equipment and replacement of older vehicles.

Clean Car Standards: As required under AB 1493 (Pavley 2002) and as authorized by the granting of a waiver from the federal CAA, CARB established GHG emission standards for passenger vehicles, light-duty trucks, and other personal vehicles. These standards apply to all new passenger vehicles starting with the 2009 model year.

Senate Bill 656

In 2003, the State Legislature passed Senate Bill (SB) 656 to reduce public exposure to PM₁₀ and PM_{2.5}. The legislation requires the CARB, in consultation with local air pollution control and air quality management districts, to adopt a list of the most readily available, feasible, and cost-effective control measures that could be implemented by air districts to reduce PM₁₀ and PM_{2.5}. The legislation establishes a process for achieving near-term reductions in PM throughout California ahead of federally required deadlines for PM_{2.5}, and provides new direction on PM reductions in those areas not subject to federal requirements for PM. Source categories addressed by SB 656 include measures to address residential wood combustion and outdoor green-waste burning; fugitive dust sources such as paved and unpaved roads and construction; combustion sources such as boilers, heaters, and charbroiling; solvents and coatings; and product manufacturing. These measures include, but are not limited to, the following:

- Require water or chemical stabilizers/dust suppressants during grading activities
- Limit visible dust emissions beyond the project boundary during construction
- Require paving/curbing of roadway shoulder areas
- Require street sweeping

Local Regulations

At the local level, air quality is managed by the PCAPCD and the City.

Placer County Air Pollution Control District

The PCAPCD regulates many sources of air pollutants and is responsible for implementing certain programs and regulations for controlling air pollutant emissions to improve air quality and attain NAAQS and CAAQS. Various development projects have the potential to generate air pollutants that would result in adverse environmental impacts. In order to evaluate air pollutant emissions from development projects, the PCAPCD recommends significance thresholds for emissions of ROG, NO_x, CO, and PM₁₀. The PCAPCD recommends significance thresholds as listed in Table 4.1-6, expressed in lbs/day, which serve as air quality standards that may be used in the evaluation of air quality impacts associated with development projects. These thresholds were adopted on October 13, 2016, and were accompanied by a justification report and technical appendices, available on the PCAPCD website at: <https://www.placer.ca.gov/departments/air/landuseceqa/ceqathresholds>.

Table 4.1-6
PCAPCD Recommended Thresholds of Significance

Pollutant	Construction Threshold (lbs/day)	Operational Threshold (lbs/day)
ROG	82	55
NO _x	82	55
PM ₁₀	82	82

Source: PCAPCD 2016.

Note: N/A = not applicable

The PCAPCD recommends that if a project would not result in significant project-level criteria pollutant emissions of ROG, NO_x, and PM₁₀, for which the region is designated non-attainment, project emissions would not be considered to be cumulatively considerable and would result in a less-than-significant cumulative impact.

Ozone Attainment Plan

Placer County has been designated nonattainment for the federal 8-hour ozone standard. As discussed above, the Ozone Attainment Plan was prepared to describe and demonstrate how Placer County, as part of the Sacramento nonattainment area, would attain the required federal 8-hour ozone standard by the proposed attainment deadline. The Ozone Attainment Plan demonstrates how existing and new control strategies would provide the necessary future emission reductions to meet the CAA requirements and attain the NAAQS for ozone. The Ozone Attainment Plan is the currently adopted and applicable air quality plan for the region.

Therefore, the PCAPCD, along with other local air districts in the Sacramento region, is required to comply with and implement the Ozone Attainment Plan.

Triennial Progress Report

To comply with the planning requirements of the CCAA, the PCAPCD has prepared several triennial progress reports that build upon the Air Quality Attainment Plan adopted in 1991. The *2015 Triennial Progress Report* (PCAPCD 2015) is the most recent report. The triennial progress report, like the Ozone Attainment Plan, includes a current emission inventory and projected future inventories of ROG and NO_x emissions in Placer County. The future inventories reflect future growth rates of population, travel, employment, industrial/commercial activities, and energy use, as well as controls imposed through local, state, and federal emission reduction measures. The triennial report discusses rules that the PCAPCD has amended or adopted during the previous 3 years, incentive programs that have been implemented, and other measures that would supplement those in the Ozone Attainment Plan to achieve annual emission reductions required by the CAA.

The triennial progress report indicates that a majority of ROG and NO_x emission in the County come from mobile sources. Additionally, emission trends within the County show a 47% decrease in ROG emissions from 39 tons per day to 21 tons per day and a 43% decrease in NO_x emissions from 36 tons per day to 21 tons per day between 1990 and 2015.

PCAPCD Rules and Regulations

Appendices B and D of the PCAPCD CEQA Air Quality Handbook include an all-inclusive list of rules and regulations required and recommended for all projects.³ Project proponents are responsible for compliance with the adopted PCAPCD rules. To facilitate rule compliance, the City includes applicable rules as standard notes on improvement plans, grading plans, or design review permits.

A general summary of the key PCAPCD rules and regulations is presented below.

Rule 202 – Visible Emissions

Rule 202 limits the amount of time during which air pollutant emissions of a certain shade of darkness or degree of opacity may be discharged, specifically to no more than 3 minutes in any 1 hour.

³ In addition, a complete listing of all PCAPCD rules can be found at <http://www.placer.ca.gov/Departments/Air/Rules.aspx>.

Rule 205 – Nuisance

Rule 205 prohibits a discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public.

Rule 217 – Cutback and Emulsified Asphalt Paving Materials

Rule 217 limits the VOC (ROG) content of asphalt paving materials used in the district.

Rule 218 – Architectural Coatings

Rule 218 requires that architectural coatings supplied, sold, offered for sale, applied, solicited for application, or manufactured for use within the PCAPCD area meet specified maximum VOC (ROG) content levels.

Rule 228 – Fugitive Dust

Rule 228 is intended to reduce the amount of particulate matter entrained in the ambient air, or discharged into the ambient air, as a result of anthropogenic (man-made) fugitive dust sources by requiring actions to prevent, reduce, or mitigate fugitive dust emissions. The provisions of Rule 228 apply to any activity or man-made condition capable of generating fugitive dust within Placer County.

Rule 246 – Natural Gas-Fired Water Heaters

Rule 246 is intended to limit the emission of NO_x from natural-gas-fired water heaters.

Rule 501 – General Permit Requirements

Rule 501 provides an orderly procedure for the review of new sources of air pollution, and modification and operation of existing sources, through the issuance of permits.

City of Roseville General Plan 2035

The *City of Roseville General Plan 2035* (City of Roseville 2016) provides goals and policies adopted by the City Council to help guide the direction of City development. The following are applicable goals from the Air Quality and Climate Change Element of the City's General Plan.

Goal 1 Improve Roseville's Air Quality by: a) achieving and maintaining ambient air quality standards established by the U.S. Environmental Protection Agency and the California Air Resources Board; and b) minimizing public exposure to toxic or

hazardous air pollutants and air pollutants that create a public nuisance through irritation to the senses (such as unpleasant odors).

- Goal 2** Integrate air quality planning with the land use and transportation planning process.
- Goal 3** Encourage the coordination and integration of all forms of public transport while reducing motor vehicle emissions through a decrease in the average daily trips and vehicle miles traveled and by increasing the commute vehicle occupancy rate by 50% to 1.5 or more persons per vehicle.
- Goal 5** Provide adequate pedestrian and bikeway facilities for present and future transportation needs.
- Goal 7** While recognizing that the automobile is the primary form of transportation, the City of Roseville should make a commitment to shift from the automobile to other modes of transportation.
- Policy 2** Work with the Placer County Air Pollution Control District to monitor air pollutants of concern on a continuous basis.
- Policy 3** Develop consistent and accurate procedures for evaluating the air quality impacts of new projects.
- Policy 4** As part of the development review process, develop mitigation measures to minimize stationary and area source emissions.

Transportation- and Circulation-Related

- Policy 6** Develop consistent and accurate procedures for mitigating transportation emissions from new and existing projects.
- Policy 7** Encourage alternative modes of transportation including pedestrian, bicycle, and transit usage.

Energy Conservation-Related

- Policy 10** Conserve energy and reduce air emissions by encouraging energy-efficient building designs and transportation systems.

Climate Change and Greenhouse Gas Emissions Regulatory Setting

As with air quality regulations, federal, state, and local agencies work jointly and individually to reduce GHG emissions and combat climate change through legislation, regulations, planning,

policymaking, education, and a variety of programs. A brief summary of the regulatory framework for GHG emissions is provided below.

Federal Regulations

Massachusetts v. EPA

On April 2, 2007, in *Massachusetts v. EPA*, the Supreme Court directed the EPA Administrator to determine whether GHG emissions from new motor vehicles cause or contribute to air pollution that may reasonably be anticipated to endanger public health or welfare, or whether the science is too uncertain to make a reasoned decision. In making these decisions, the EPA Administrator is required to follow the language of Section 202(a) of the Clean Air Act. On December 7, 2009, the EPA Administrator signed a final rule with the following two distinct findings regarding GHGs under Section 202(a) of the CAA:

- The Administrator found that elevated concentrations of GHGs—CO₂, CH₄, N₂O, HFCs, PFCs, and SF₆—in the atmosphere threaten the public health and welfare of current and future generations. This is referred to as the “endangerment finding.”
- The Administrator further found the combined emissions of GHGs—CO₂, CH₄, N₂O, and HFCs—from new motor vehicles and new motor vehicle engines contribute to the GHG air pollution that endangers public health and welfare. This is referred to as the “cause or contribute finding.”

These two findings were necessary to establish the foundation for regulation of GHGs from new motor vehicles as air pollutants under the CAA.

State Regulations

Several state-level actions have been taken to limit GHG emissions implicated in global warming, which are briefly described below. A more complete description of the relevant legislation is provided in Appendix C, Climate Change and Greenhouse Gas Regulatory Setting.

Executive Order S-3-05

In 2005, in recognition of California’s vulnerability to the effects of climate change, Governor Schwarzenegger established Executive Order (EO) S-3-05, which set forth a series of target dates by which statewide emissions of GHGs would be progressively reduced, as follows:

- By 2010, reduce GHG emissions to 2000 levels;
- By 2020, reduce GHG emissions to 1990 levels; and
- By 2050, reduce GHG emissions to 80% below 1990 levels.

Assembly Bill 32 and CARB Scoping Plan

In furtherance of the goals established in EO S-3-05, the legislature enacted AB 32 (Núñez and Pavley), the California Global Warming Solutions Act of 2006 (September 27, 2006). AB 32 requires California to reduce its GHG emissions to 1990 levels by 2020, representing a reduction of approximately 15% below emissions expected under a “business-as-usual” scenario. In 2008, the *Climate Change Scoping Plan: A Framework for Change* (Scoping Plan) was approved by CARB in order to help achieve the goals of AB 32. The Scoping Plan evaluates opportunities for sector-specific reductions, integrates all CARB and California Climate Action Team early actions and additional GHG reduction measures by both entities, identifies additional measures to be pursued as regulations, and outlines the role of a cap-and-trade program. In 2014, the Scoping Plan Update was adopted which revised the 2020 emissions target and included additional strategies and recommendations. The Scoping Plan Update recommends that a statewide mid-term target and mid-term and long-term sector targets be established toward meeting the 2050 goal established by EO S-3-05 to reduce California’s GHG emissions to 80% below 1990 levels.

On April 29, 2015, California Governor Edmund G. Brown, Jr. signed Executive Order B-30-15, which established a 2030 statewide GHG reduction target of 40% below 1990 levels. The intent of the Executive Order is to establish a mid-term target in between the 2020 statewide target and the 2050 statewide target established under AB 32. CARB was directed to update the Climate Change Scoping Plan to reflect the mid-term target. On January 20, 2017, CARB released The *2017 Climate Change Scoping Plan Update (Second Update)* for public review and comment (CARB 2017). This update to the scoping plan proposes the CARB’s strategy for achieving the states 2030 GHG target, including continuing the Cap-and-Trade Program through 2030 and includes a new approach to reduce GHGs from refineries by 20%.

Senate Bill 375

SB 375 (Steinberg) (September 2008) addresses GHG emissions associated with the transportation sector through regional transportation and sustainability plans, was enacted into law. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits over 40 percent of the total GHG emissions in California. SB 375 required CARB to adopt regional GHG reduction targets for the automobile and light-truck sector for 2020 and 2035. SB 375 does the following: (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies. The goal of the Sustainable Communities Strategy is to establish a forecasted development pattern for the region that, after considering transportation measures and policies, will achieve, if feasible, the GHG reduction targets. In

2010, CARB adopted the SB 375 targets for the regional Metropolitan Planning Organizations; the targets for the Sacramento Area Council of Governments (SACOG) includes a 7% per capita reduction in GHG emissions from automobiles and light trucks by 2020 and a 16% reduction by 2035 compared with 2005 levels.

Senate Bill 32 and Assembly Bill 197

Enacted by the Legislature in August 2016, SB 32 and AB 197 are companion bills that will extend GHG reduction targets and make changes to CARB membership; increase legislative oversight of CARB climate change activities; and expand dissemination of GHG, criteria air pollutant, and TAC emissions data to enhance transparency and accountability. SB 32 requires CARB to ensure that statewide GHG emissions are reduced to 40% below 1990 levels by 2030. AB 197 established the Joint Legislative Committee on Climate Change Policies consisting of at least three members of the Senate and three members of the Assembly in order to provide ongoing oversight over implementation of the state's climate policies. AB 197 also added two members of the Legislature to CARB as nonvoting members, requires CARB to make available and update at least annually via its website emissions of GHGs, criteria air pollutants, and TACs from reporting facilities, and requires CARB to identify specific information for GHG emissions reduction measures when updating the scoping plan.

Senate Bill X1 2

On April 12, 2011, Governor Jerry Brown signed SB X1 2, in which the California Public Utilities Commission (CPUC) is required to establish the quantity of electricity products from eligible renewable energy resources to be procured by retail sellers in order to achieve targets of 20% by December 31, 2013; 25% by December 31, 2016; and 33% by December 31, 2020. The statute also requires that the governing boards for local publicly owned electric utilities establish the same targets and that the governing boards be responsible for ensuring compliance with these targets.

Local Regulations

Sacramento Region Blueprint

In 2007, SACOG, the designated Metropolitan Planning Organization for the Sacramento region, adopted the Preferred Blueprint Scenario for 2050 (Blueprint). Although not a binding regulatory document, the Blueprint depicts a way for local agencies within the region to grow through 2050 in a manner consistent with the seven smart growth principles: (1) transportation choices, (2) mixed-use developments, (3) compact development, (4) housing choice and diversity, (5) use of existing assets, (6) quality design, and (7) natural resources conservation. The seven smart growth principles provide guidance for land use planners, which, when

implemented, would ultimately result in an overall reduction in vehicle miles traveled (VMT), emissions of criteria pollutants, and GHG emissions.

SACOG Sustainable Communities Strategy

On February 18, 2016, SACOG adopted the latest update to the Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) for 2036 (SACOG 2016). Building on prior plans, including the Blueprint Growth Strategy discussed below and the 2008 MTP, the SCS accommodates future growth through a more compact land use pattern largely within the region's current development footprint, emphasizes operational improvements over new roadway capacity projects, and reflects other factors that have tended to reduce motor vehicle use. The SCS demonstrates that, if implemented, the region will achieve an 8% below 2005 per-capita GHG reduction in passenger vehicle emissions in 2020 and a 16% reduction in 2035. These reductions meet the GHG targets for SACOG. The 2016 update to the MTP/SCS focused on refinement of and addressing implementation challenges to the previous (2012) plan. The SACOG Board of Directors has adopted five guiding policy themes including, land use forecast, transportation funding, investment strategy, investment timing, and plan effects which provide direction for the plan update.

City of Roseville 2035 General Plan

The *City of Roseville 2035 General Plan* (City of Roseville 2016) provides goals and policies adopted by the City Council to help guide the direction of City development. The City has been advocating steps to reduce GHG emissions. The following are applicable goals from the Air Quality and Climate Change Element of the General Plan that are relevant to the proposed project.

GHG-related policies that are actively being implemented by the City include the following:

Land Use Element – Community Form Policies – Relationship to Transit, Pedestrian, Air Quality

Policy 5 Where feasible, improve existing development areas to create better pedestrian and transit accessibility.

Land Use Element – Community Form Policies - Downtown, Neighborhoods

Policy 5 Encourage infill development and rehabilitation that:

- Upgrades the quality and enhances the character of existing areas;
- Enhances public transit use and pedestrian access;
- Efficiently utilizes and does not overburden existing services and infrastructure; and

- Results in land use patterns and densities that provide the opportunity for the construction of household types affordable to all income groups.

Land Use Element – Community Design Policies

- Policy 1** Through the design review process, apply design standards that promote the use of high quality building materials, architectural and site designs, landscaping signage, and amenities.
- Policy 2** Continue to develop and apply design standards that result in efficient site and building designs, pedestrian friendly projects that stimulate the use of alternative modes of transportation, and the establishment of a functional relationship between adjacent developments.
- Policy 3** Encourage designs that strike a balance between the incorporation of aesthetic and development requirements, and the economic considerations associated with development.

Circulation Element – Bikeway/Trails Policies

- Policy 1** Develop a comprehensive and safe system of recreational and commuter bicycle routes and trails that provides connections between the City's major employment and housing areas and between its existing and planned bikeways.

Air Quality and Climate Change Element – Energy Conservation

- Policy 10** Conserve energy and reduce air emissions by encouraging energy efficient building designs and transportation systems.

Open Space and Conservation Element – Open Space System Policies

- Policy 4** Require all new development to provide linkages to existing and planned open space systems. Where such access cannot be provided through the creation of open space connections, identify alternative linkages.

Public Facilities Element – Water System Policies

- Policy 10** Develop and implement water conservation standards and measures as necessary elements of the water system.

Public Facilities Element – Wastewater and Recycled Water Systems Policies

- Policy 6** Develop, plan, and provide incentives for use of recycled water by the public and private sectors.

Public Facilities Element – Solid Waste, Source Reduction and Recycling Policies

- Policy 2** Comply with the source reduction and recycling standards mandated by the State by reducing the projected quantity of solid waste disposed at the regional landfill by 50%, as well as any mandated future reductions.

Public Facilities Element – Water and Energy Conservation Policies

- Policy 1** Develop and implement water conservation standards.
- Policy 5** Develop and adopt a landscape ordinance that provides standards for the use of drought tolerant, xeriscape, and water-conserving landscape practices for both public and private projects.
- Policy 7** Require large electricity users to submit a use and conservation plan concurrent with development review specifying measures to be taken to minimize demand.
- Policy 8** Enforce energy requirements and encourage development and construction standards that promote energy efficiency and conservation.
- Policy 10** Continue and expand energy efficiency and conservation programs to serve all utility users.

City of Roseville Greenhouse Gas Emissions Reduction Action Plan Analysis

The City of Roseville *Greenhouse Gas Emissions Reduction Action Plan Analysis* focuses on reducing emissions from City-controlled sources (Pierce 2009). This plan focuses on several alternatives that Roseville could pursue to reduce its emissions from 0% to 39% below 2000 levels by 2015. The plan is ultimately not applicable to the project because the plan was developed to reduce emissions from City-controlled sources existing at the time of plan preparation.

City of Roseville Communitywide Sustainability Action Plan

The City of Roseville *Communitywide Sustainability Action Plan* sets forth a comprehensive strategy to reduce GHGs and air pollutant emissions with the community, and addresses both

municipal and communitywide emissions (AECOM 2010). The most relevant, applicable measures from this plan that apply to the proposed project include:

Measure LU-1.1 Promote infill, mixed-use and transit oriented development within the City's infill urban area. Adjust development standards to maximize opportunities for such projects and explore funding operations to incentivize them.

Measure LU-4.1 Facilitate green building design and construction standards in the community to reduce emissions.

Measure E-1.4

- (a) Qualifying new commercial construction should strive to achieve ENERGY STAR performance criteria. This denotes that the building's estimated energy use is intended to be in the top 25% compared to similar buildings throughout the nation. Once the building is built and operating for at least one year, it may qualify to receive an ENERGY STAR plaque.
- (b) For new commercial construction projects not qualifying for ENERGY STAR, building designs should strive for a 15% reduction in overall energy budge over California Title 24 performance standards.

Measure WR-1.1 Create a comprehensive source reduction analysis and plan for the community to promote efforts to assist residents, businesses and schools to decrease their per capita waste generation.

Measure WC-1.1 Develop an SB 7⁴ implementation plan to achieve an across the board 20% reduction (gallons per capita per day [GPCD]) in water demand by 2020.

4.1.4 Impacts

Methods of Analysis

Air quality and GHG emissions impacts fall into three categories: short-term impacts due to construction-generated emissions, long-term impacts due to project operation, and cumulative impacts.

⁴ SB 7 was enacted in November 2009, requiring all water suppliers to increase water use efficiency. The legislation was divided into two sectors: Urban Water Conservation and Agricultural Water Conservation. The overall goal of reducing per capita urban water use by 20% by December 31, 2020, was set for the Urban Water Conservation sector.

Air Quality Analysis Methodology

Project-related air quality impacts fall into two categories: short-term impacts due to construction and long-term impacts due to project operation. First, during project construction (short-term), the project would result in an increase in emissions primarily due to off-road construction equipment, on-road vehicles, architectural coating and asphalt off-gassing, and fugitive dust from earth moving. Under operations (long-term), the project would result in an increase in emissions due to motor vehicle trips and energy (natural gas) consumption. Other sources include minor area sources such as landscaping and use of consumer products.

The proposed project's short-term construction-related and long-term operational emissions were estimated using CalEEMod (version 2016.3.1), a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions from land use projects. The model applies inherent default values for various land uses, including trip generation rates based on the Institute of Transportation Engineers Trip Generation Manual, vehicle mix, trip length, average speed, etc. Where project-specific data was available, such data were input into the model in place of model default values (e.g., construction phases, timing, equipment, and estimated daily project trips). All project modeling results are included in Appendix C.

Greenhouse Gas Emissions Methodology

The issue of global climate change is inherently a cumulative issue as the GHG emissions of individual projects cannot be shown to have any material effect on global climate. Thus, the proposed project's impact to climate change is addressed only as a cumulative impact.

While the City has developed a Greenhouse Gas Reduction Action Plan Analysis or Climate Action Plan (CAP) to reduce GHG emissions pursuant to AB 32, it is not applicable to development projects because its purpose is to provide a comprehensive analysis so the City can select the most appropriate path for reducing GHG emissions and climate change effects attributed to City operations.

To provide a full understanding of the proposed project's potential contribution to climate change, the project's short-term construction-related and long-term operational GHG emissions were estimated using CalEEMod. The model quantifies direct GHG emissions from construction and operation (including vehicle use), as well as indirect GHG emissions, such as GHG emissions from energy use (natural gas and electricity), solid waste disposal, and water use. The existing Kaiser medical office building GHG emissions were also modeled with CalEEMod and compared to estimated project-generated emissions.

Issues Addressed in the Initial Study

The Initial Study prepared for the proposed project, included as Appendix B, evaluated if the proposed project would conflict with or obstruct implementation of an applicable air quality plan and if the project would create odors that would affect a substantial number of people. The Initial Study determined that because the proposed project is designated and zoned for commercial activities and would be consistent with the assumptions for that land use, which are consistent with the regional air quality plans and the City's adopted land use plans, the proposed project would not be expected to conflict with or obstruct implementation of applicable air quality plans, and the impact would be less than significant.

The Initial Study also evaluated the potential for the project to create odors from construction equipment and delivery trucks as well as from project operation. Typical urban projects such as residences and businesses generally do not result in substantial objectionable odors when operated in compliance with City Ordinances (e.g., proper trash disposal and storage). The proposed project does not contain any uses or activities that would cause the generation of substantial unpleasant odors. Thus, construction and operation of the proposed project would not result in the creation of objectionable odors affecting a substantial number of people nor would the project site be affected by any existing objectionable odors. Impacts related to odors are less than significant. Therefore, these issues are not further addressed.

Thresholds of Significance

Project-Level Thresholds – Criteria Pollutants

Consistent with Appendix G of the CEQA Guidelines and the City's General Plan a project-specific air quality impact is considered significant if implementation of the proposed project would do any of the following (PCAPCD 2016):

- Violate any air quality standard or contribute substantially to an existing or projected air quality violation (i.e., exceed 82 lbs/day of ROG, NO_x, or PM₁₀ during construction or 55 lbs/day of ROG or NO_x and 82 lbs/day of PM₁₀ during operation).
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable AAQS (including releasing emissions which exceed quantitative thresholds for ozone precursors of 55 lbs/day of ROG or NO_x).
- Expose sensitive receptors to substantial pollutant concentrations (e.g., generate localized concentrations of CO that exceed the 1-hour 20 ppm or the 8-hour 9 ppm AAQS or substantial concentrations of toxic air contaminants).

Cumulative Thresholds - Criteria Pollutants

The PCAPCD recommends applying the project-level thresholds to determine the significance of cumulative impacts. If a project would not result in significant project-level criteria emissions for which the region is designated non-attainment (i.e., exceed the PCAPCD recommended project threshold of 55 lbs/day for ROG and NO_x, or 82 lbs/day of PM₁₀), project emissions would not be considered to be cumulatively considerable and would result in a less-than-significant cumulative impact.

For projects which exceed the cumulative threshold, the City, as lead agency, prefers to rely on a two-tier criteria pollutant cumulative analysis methodology similar to that adopted by the SMAQMD. SMAQMD's approach is outlined in its *Guide to Air Quality Assessment in Sacramento County* (SMAQMD 2013). Using this methodology, should a project exceed the thresholds, a Tier 2 evaluation is conducted to determine State Implementation Plan (SIP) consistency in accordance with CEQA Guidelines Section 15064(h)(3). Under the Tier 2 analysis, projects found consistent with the SIP and that would not conflict with the SIP emissions budget are considered less than cumulatively considerable. The City finds the methodology appropriate because the City is located within the SVAB, the same air basin where the above methodology is used by numerous CEQA lead agencies with concurrence and support from SMAQMD.

Cumulative Thresholds - Greenhouse Gases

Section 15064.7(c) of the CEQA Guidelines specifies that “[w]hen adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence” (14 CCR 15064.7(c)). Similarly, the revisions to Appendix G, Environmental Checklist Form, which is often used as a basis for lead agencies’ selection of significance thresholds, do not prescribe specific thresholds. Rather, the CEQA Guidelines establish two new CEQA thresholds related to GHGs, and these will therefore be used to discuss the significance of project impacts:

- Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
- Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The PCAPCD recommends the following approach to determine if a project’s GHG emissions would result in a significant impact:

- Tier 1 would consist of evaluating whether or not a project qualifies for any applicable exemption under CEQA.

- Tier 2 consists of determining whether the project is consistent with a qualified climate action plan. If a project is consistent with a qualifying local climate action plan, it does not have significant greenhouse gas emissions.
- Tier 3 consists of comparing the project's GHG emissions to the de minimis level of 1,100 MT CO₂E per year. If a project does not exceed this threshold, it does not have significant greenhouse gas emissions.
- Tier 4 is a bright line threshold level to determine significance using an 82% emission capture rate approach and is 10,000 MT CO₂E per year). If a project exceeds this cap, impacts are found to be significant. If a project does not exceed this threshold, the project is compared with the efficiency thresholds.
- Tier 5 compares the project emissions to efficiency thresholds. These thresholds are 4.5 MT CO₂E/capita for residential projects in an urban area and 5.5 MT CO₂E/capita for residential projects in a rural area. For nonresidential development, the thresholds are 26.5 MT CO₂E/1,000 sf for projects in urban areas and 27.3 MT CO₂E/1,000 sf for projects in rural areas. If a project does not exceed the applicable efficiency threshold, it does not have significant greenhouse gas emissions.

Impact 4.1-1	Violate the City of Roseville's Significance Thresholds for Air Quality and Expose Sensitive Receptors to Substantial Pollution Concentrations
Applicable Policies and Regulations	PCAPCD Rules 202, 205, 217, 218, 225, 228, 246, and 501 and Regulation 3
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Construction of the proposed project would result in the temporary addition of pollutants to the local air shed caused by on-site sources (i.e., off-road construction equipment, soil disturbance, and VOC off-gassing) and off-site sources (i.e., on-road haul trucks, vendor trucks, and worker vehicle trips). Existing buildings that may contain asbestos would also be demolished. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions. Therefore, an increment of day-to-day variability exists.

Pollutant emissions associated with the proposed construction/demolition activity were quantified using CalEEMod. Default values were used where detailed project information was not available. A detailed depiction of the construction schedule—including information regarding phasing, equipment used during each phase, haul trucks, vendor trucks, and worker vehicles—is contained in the CalEEMod outputs, provided in Appendix C.

The proposed project includes the demolition of the existing 90,209-square-foot medical office building and surface parking area that would be replaced with the construction of a 194,000-square-foot medical office building, 16,000-square-foot pavilion building, and an 82,630-square-foot parking structure. Construction of the proposed project would generate construction-related air pollutant emissions from entrained dust, equipment and vehicle exhaust emissions, asphalt pavement, and architectural coatings. Exhaust from internal combustion engines used by construction equipment and vendor trucks (delivery trucks) and worker vehicles would result in emissions of ROG, NO_x, CO, and PM₁₀. Construction of the proposed project would also generate SO_x and PM_{2.5} emissions; however, only the criteria air pollutants that the PCAPCD have adopted thresholds for are presented in Table 4.1-7. Entrained dust results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil, resulting in PM₁₀ and PM_{2.5} emissions. To account for compliance with PCAPCD Rule 228 (fugitive dust), it was assumed that the active sites would be watered at least twice daily, or as necessary depending on weather conditions, resulting in a 55% reduction in fugitive dust as implemented by CalEEMod. The application of architectural coatings, such as exterior/interior paint and other finishes, would also produce VOC (ROG) emissions. The proposed project would comply with the requirements of PCAPCD Rule 218 (Architectural Coatings), which sets a cap for the VOC content in paint of 100 grams of VOC per liter of coating for non-flat coatings.

It is anticipated that construction of the proposed project would commence in late Spring/early Summer 2017, with completion by Fall/Winter 2020, which was the earliest date at which construction would initiate per the project's preliminary construction schedule. Assuming the earliest start date for construction represents the worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years.

For this analysis, it was assumed that heavy construction equipment would operate 5 days a week (22 days per month) during proposed project construction. The construction schedule and further details used for the modeling is included in Appendix C.

CalEEMod was used to quantify construction/demolition emissions from off-road equipment, haul trucks associated with demolition and soils export, on-road worker vehicle emissions, and vendor delivery trips. A detailed depiction of the construction schedule—including information regarding phasing, equipment utilized during each phase, haul trucks, vendor trucks, and worker vehicles—is contained in the CalEEMod outputs, provided in Appendix C. Predicted construction emissions for the worst-case day for each of the construction years are presented in Table 4.1-7, and are compared to the PCAPCD significance thresholds.

Table 4.1-7
Maximum Daily Construction Criteria Air Pollutant Emissions

Year	ROG (lbs/day)	NO _x (lbs/day)	PM ₁₀ (lbs/day)
<i>Summer</i>			
2017	11.08	79.63	8.05
2018	50.67	59.30	7.64
2019	50.30	51.87	4.46
2020	5.05	46.02	6.50
<i>Winter</i>			
2017	11.04	79.74	8.05
2018	50.63	59.55	7.65
2019	50.26	52.03	4.46
2020	5.05	46.16	6.50
Maximum Daily	50.67	79.63	8.05
PCAPCD Pollutant Threshold	82	82	82
Threshold Exceeded?	No	No	No

Source: See Appendix C for detailed results.

Notes: These estimates reflect implementation of PCAPCD Rule 228 which regulate fugitive dust generated during construction and Rule 218 which limits the VOC content of architectural coatings.

lb/day = pounds per day; ROG = reactive organic gas; NO_x = oxides of nitrogen; PM₁₀ = coarse particulate matter

As noted above, the proposed project would comply with PCAPCD rules, such as Rule 228, which establishes standards for activities which emit fugitive dust and Rule 218, which sets limits on the VOC content of architectural coatings. Estimated project-generated maximum daily construction emissions, including emission reductions resulting from compliance with PCAPCD's Rules 228 and 218, would not exceed the PCAPCD significance thresholds for ROG, NO_x, CO, or PM₁₀, in all construction years. Therefore, construction impacts of the proposed project would be **less than significant** and no mitigation measures are required.

Following the completion of construction activities, the proposed project would generate criteria pollutant emissions from vehicular traffic, area sources (consumer products, architectural coatings, landscaping equipment), and energy sources (natural gas appliances, space and water heating).

The emissions associated with on-road mobile sources include running and starting exhaust emissions, evaporative emissions, brake and tire wear, and fugitive dust from paved and unpaved roads. Default trip generation rates and trip lengths included in CalEEMod for each analyzed land use for the proposed project were adjusted to match the overall daily trips (7,504 trips) and total average daily VMT length data (8.2 miles per trip). Emissions from energy sources include natural gas combustion for appliances and space and water heating. For the proposed project, Title 24 values and non-Title 24 energy intensities were updated based on the

proposed project's estimated annual energy consumption of 850,000 kilowatt-hours (kWh). As discussed in Section 4.2, Public Utilities, indoor and outdoor water uses were updated based on the proposed project's annual water consumption of 4,570,661 gallons per year as calculated using City's current demand factor for Community Commercial land use designations of 2,598 gallons per day per acre. In addition, the proposed project's estimated solid waste generation was calculated as 598.6 tons per year and is based on the City's demand rate for solid waste of 7.7 pounds per employee per day, as discussed in Section 4.2, Public Utilities.

The existing medical office building trip generation rates and trip lengths were also updated in CalEEMod to match the overall daily trips (3,753 trips) and total average daily VMT length data (8.2 miles per trip). The existing medical office building's Title 24 values and non-Title 24 energy intensities were updated based on their most recent annual energy consumption in 2015, which was 953,208 kWh. Indoor and outdoor water uses were updated based on the existing medical office building's annual water consumption of 5,050,505 gallons per year. Such as with the proposed project's solid waste calculation, the existing medical office building's solid waste generation was also estimated by using the City's demand rate 7.7 pounds per employee per day as discussed in Section 4.2, Public Utilities. Solid waste generation for the existing medical office building was updated to 314.8 tons per year. CalEEMod was used to estimate daily emissions from the operational sources, with operational emissions depicted in Table 4.1-8.

Table 4.1-8
Maximum Daily Operational Criteria Air Pollutant Emissions

Emission Source	ROG (lbs/day)	NO_x (lbs/day)	PM₁₀ (lbs/day)
<i>Proposed Project (Summer)</i>			
Area	5.20	0.00	0.00
Energy	0.10	0.93	0.07

<i>Existing (Summer)</i>			
Area	13.96	0.00	0.00
Energy	0.04	0.40	0.03
Mobile	8.50	44.21	16.46
Total Summer	23.62	44.61	16.49
<i>Existing (Winter)</i>			
Area	13.96	0.00	0.00

Table 4.1-8
Maximum Daily Operational Criteria Air Pollutant Emissions

Emission Source	ROG (lbs/day)	NO _x (lbs/day)	PM ₁₀ (lbs/day)
Energy	0.04	0.40	0.03
Mobile	6.86	45.98	16.47
Total Winter	20.86	46.38	16.50
Proposed Project Maximum Daily	20.85	87.80	32.89
Existing Land Uses Maximum Daily	23.62	46.38	16.50
Net Change (Project minus Existing)	(2.77)	41.42	16.39
PCAPCD Pollutant Threshold	55	55	82
Threshold Exceeded?	No	No	No

Source: See Appendix C for detailed results.

Note: lbs/day = pounds per day; ROG = reactive organic gas; NO_x = oxides of nitrogen; PM₁₀ = coarse particulate matter

As shown in Table 4.1-8, the net change of ROG, NO_x, and PM₁₀ emissions would be substantially below the PCAPCD significance thresholds. This impact would be **less than significant**.

4.1.5 Cumulative Impacts

The cumulative context of an air pollutant is dependent on the specific pollutant being considered. O₃ precursors are a regional pollutant; therefore, the cumulative context would be existing and future development within the entire SVAB. This means that O₃ precursors generated in one location do not necessarily have O₃ impacts in that area. Instead, precursors from across the region can combine in the upper atmosphere and be transported by winds to various portions of the air basin. Consequently, all O₃ precursors generated throughout the air basin are part of the cumulative context.

The geographic scope for the cumulative analysis is the City and surrounding areas, which is located within the Sacramento Federal Nonattainment Area (SFNA) for O₃. The SFNA includes the counties of Sacramento, Yolo, Solano (partial), Sutter (partial), Placer (except Lake Tahoe Air Basin), and El Dorado (except Lake Tahoe Air Basin). The PCAPCD establishes emissions thresholds for regional emissions.

Particulates (fugitive dust and DPM) and TACs would result in localized impacts in close proximity to pollutant sources. There are no other active cumulative projects in the immediate vicinity of the proposed project site that are anticipated to contribute to localized TAC exposure; therefore, an analysis of the cumulative effects is not addressed below.

The issue of global climate change is inherently a cumulative issue as the GHG emissions of individual projects cannot be shown to have any material effect on the global climate. Thus, the

proposed project's impact to climate change is addressed only as a cumulative impact. The cumulative context for climate change comprises anthropogenic (i.e., human-made) GHG emissions sources across the globe, and no project alone would reasonably be expected to contribute to a noticeable incremental change to the global climate. Subsequently, California has established legislation and regulatory measures providing a statewide context for developing an enforceable statewide cap on GHG emissions. Given the environmental consequences resulting from GHGs and global climate change, CEQA requires that lead agencies consider evaluating the cumulative impacts of GHGs, even relatively small (on a global basis) contributions.

Impact 4.1-2	Result in a Cumulatively Considerable Net Increase in Criteria Pollutants and Impede the City's Efforts to Meet AB 32 Standards for the Reduction of GHG Emissions
Applicable Policies and Regulations	Non applicable
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The SFNA is in nonattainment for O₃ and particulate matter. Due to its nonattainment status for the federal and state ozone standards, the geographic scope of the area for the proposed project cumulative analysis includes the City and surrounding areas within the SFNA for O₃. Ongoing development and operation of new land uses would generate additional emissions of O₃ precursors and particulate matter, which may adversely affect the ability of the region to achieve attainment with the applicable air quality standards. This is a significant cumulative impact.

As recommended by the PCAPCD, a project whose construction or operational emissions would not exceed the ROG or NO_x significance thresholds of 55 lbs/day or PM₁₀ significance thresholds of 82 lbs/day would not be considered cumulatively considerable and would be less than significant. As discussed in Impact 4.1-1, the proposed project's ROG, NO_x, and PM₁₀ construction emissions would not exceed the significance thresholds, and therefore, the proposed project's emissions of O₃ precursors would not be considerable and the proposed project's contribution to the cumulative criteria air pollutant impacts would be **less than significant**.

The cumulative nature of climate change and the program's potential to contribute to climate change impacts associated with project-generated GHG emissions is evaluated in Impact 4.1-3 below. GHG impacts are recognized exclusively as cumulative impacts and there are no non-cumulative GHG emission impacts from a climate change perspective (CAPCOA 2008). The supporting documentation for the 2010 CEQA amendments indicates that the impact of GHG emissions should be considered in the context of a cumulative impact, rather than a project-

level impact (CNRA 2009a), and an environmental document must analyze the incremental contribution of a project to GHG levels and determine whether those emissions are cumulatively considerable (CNRA 2009b). To reduce cumulative GHG emissions, various statewide regulatory measures focusing on different GHG emission sources have been implemented that will ultimately reduce GHG emissions associated with the program and other future new development projects. Examples include the Low Carbon Fuel Standard, which set GHG standards for passenger vehicles, and the cap-and-trade program. Regional measures have been adopted by various agencies (e.g., cities, counties, metropolitan planning organizations) throughout the state to support and enhance the effectiveness of the statewide efforts. Although many of the statewide and regional plans, policies, and regulations would not be specifically applicable to reductions in GHG emissions from the program and would vary in applicability to off-site (non-program-related) cumulative projects, to the extent required by law, the proposed program and other cumulative projects would be required to comply with applicable existing regulations and future regulations adopted in furtherance of statewide and/or regional goals.

To evaluate whether the proposed project would generate GHG emissions that are cumulatively considerable, total project-generated GHG emissions associated with construction/demolition activities were amortized over a 25-year period to determine the average annual GHG emissions level, which was then compared to an annual bright-line significance threshold. As previously discussed in Section 4.1.4, the threshold applied in the GHG emissions analysis was the recommended PCAPCD efficiency threshold of 26.5 MT CO₂E per 1,000 square feet per year for nonresidential land uses in urban areas. Construction of the proposed project from 2017 through 2020 was estimated to result in a total of 797 MT CO₂E. Project-generated construction emissions amortized over 25 years would be approximately 32 MT CO₂E per year. Project-generated annual GHG emissions, which include operational activities and amortized construction GHG emissions, would total 3,460 MT CO₂E, resulting in a net increase of 2,859 MT CO₂E per year over existing conditions. Based on the total GHG emissions attributable to the proposed project of 2,859 CO₂E and a total project size of 210,000 sf, the project would result in 13.61 MT CO₂E per 1,000 square feet, which is below the efficiency threshold recommended by the PCAPCD. As the estimated average annual operational GHG emissions would not exceed the recommended PCAPCD efficiency threshold of 26.5 MT CO₂E, the proposed project would have a **less-than-significant impact** with regards to cumulatively considerable GHG emissions.

Impact 4.1-3	Generate a Substantial Contribution to GHG Emissions that Conflicts with an Applicable Plan or Policy
Applicable Policies and Regulations	AB 32 City of Roseville General Plan Greenhouse Gas Policies
Significance with Policies and Regulations	Less than Significant
Mitigation Measures	None required
Significance after Mitigation	Less than Significant

Construction of the proposed project would result in GHG emissions, which are primarily associated with use of off-road construction equipment, on-road hauling and vendor (material delivery) trucks, and worker vehicles. Proposed project GHG emissions associated with temporary construction activity have been quantified using CalEEMod. On-site sources of GHG emissions include off-road equipment, and off site sources include hauling and vendor trucks and worker vehicles. Emissions from on-site and off-site sources are combined for the purposes of this analysis; a breakdown of emissions by source is provided in Appendix C. Table 4.1-9 presents construction emissions for the proposed project in 2017 through 2020 from on-site and off-site emission sources.

Table 4.1-9
Estimated Annual Construction Greenhouse Gas Emissions

Year	MT CO ₂ /year	MT CH ₄ /year	MT N ₂ O/year	MT CO ₂ E/year
2017	256.37	0.03	0.00	257.15
2018	288.81	0.02	0.00	289.35
2019	130.33	0.01	0.00	130.63
2020	119.10	0.02	0.00	119.60
Total	794.61	0.08	0.00	796.73
Amortized Construction Emissions	31.78	0.00	0.00	31.87

Notes: See Appendix C for detailed results.

MT CO₂ = metric tons carbon dioxide; MT CH₄ = metric tons methane; MT N₂O = metric tons nitrous oxide; MT CO₂E = metric tons carbon dioxide equivalent

As shown in Table 4.1-9, estimated annual construction GHG emissions would be approximately 797 MT CO₂E per year as a result of construction-related activities. Construction GHG emissions are a one-time release and are typically considered separate from operational emissions, as global climate change is inherently a cumulative effect that occurs over a long period of time and is quantified on a yearly basis. Even though construction-related emissions will cease at the end of the construction, the pollutants will remain in the atmosphere for long periods afterwards, in some cases for hundreds of years. To ensure that the combined emissions associated with construction and operations are considered together, the proposed project's construction GHG emissions have been amortized over the lifetime of the project, which is assumed for this analysis to be 25 years, and included in the annual operational GHG emissions. The proposed project would result in amortized construction emissions of 32 MT CO₂E.

GHG emissions associated with operation of the proposed project are provided in Table 4.1-10. Trip rates and the average trip length for the proposed project and the existing medical office building provided by the Draft Transportation Impact Study (Appendix D) were incorporated into CalEEMod. The proposed project would double the trip generation of the existing medical office building (7,504 trips compared with 3,753 trips). For both the proposed project and existing

medical office building, energy intensity factors, water consumption rates, and solid waste generation quantities were updated with project-specific input values. For the proposed project, a 20% reduction in water consumption and a 75% waste diversion as mandated by the state was reflected within CalEEMod.

<i>Combined Emissions</i>	<i>3,358.90</i>	<i>3.95</i>	<i>0.00</i>	<i>3,459.78</i>
Net increase (Proposed Project minus Existing)				2,858.82

Notes: See Appendix C for detailed results.

MT CO₂ = metric tons carbon dioxide; MT CH₄ = metric tons methane; MT N₂O = metric tons nitrous oxide; MT CO₂E = metric tons carbon dioxide equivalent

Project-generated estimated emissions presented in Table 4.1-10 reflect application of an indoor water conservation strategy (20% reduction consistent with CALGreen requirements) and a 75% diversion of solid waste per Assembly Bill 341; these measures were not included in the estimated emissions for the existing medical office building.

As shown in Table 4.1-10, the proposed project would result in an increase of 2,859 MT CO₂E/year relative to existing conditions. Approximately 90% of the proposed project's annual GHG emissions are from mobile sources; consequently, to reduce GHG emissions any further project vehicle trips would need to be reduced by more than half. Measures have already been included in the proposed project that reduce the project's GHG emissions from energy consumption, waste, and water use when compared to a typical project.

As previously discussed, the PCAPCD proposes several tiers in determining if a project's contribution to GHG emissions is significant. Under this approach, the proposed project's operational GHG emissions would exceed the 1,100 MT CO₂E "de minimis" threshold but would

be below the bright-line cap of 10,000 MT CO₂E. Therefore, significance is determined based upon a comparison to the efficiency threshold of 26.5 MT CO₂E per 1,000 square feet per year for nonresidential land uses in urban areas. Based on the total GHG emissions attributable to the proposed project of 2,859 CO₂E and a total project size of 210,000 square feet, the project would result in 13.61 MT CO₂E per 1,000 square feet, which is below the efficiency threshold recommended by the PCAPCD⁵. GHG emissions would result in a less-than-significant impact.

The City's CAP establishes requirements for projects to reduce a portion of their estimated GHG to assist the City in meeting state requirements to reduce GHG emissions in compliance with state law. The CAP includes six sustainability action strategies which cover the following areas: energy, transportation, land use and green building, marketing and education, solid waste, and water. Each sustainability action strategy includes primary and supporting measures. Primary measures generate directly attributable GHG reductions based on current technology, empirical studies and available data. Supporting measures are not quantifiable, but do support the reduction potential of the primary measures. While most measures may not be directly applicable to the proposed project, the proposed project would not directly conflict with measures for each of the six strategies. Development of the project site would support measures within the CAP by avoiding greenfield development.

In regards to if development of the proposed project would be consistent with EO B-30-15 (goal of reducing GHG emissions to 40% below 1990 levels by 2030) and EO S-3-05 (goal of reducing GHG emissions to 80% below 1990 levels by 2050); the PCAPCD considered implementation of statewide regulatory requirements by 2030 in developing their CEQA thresholds for GHG impacts. In addition, the proposed project would support achievement of the Executive Order's near-term 2020 goal (as codified in AB 32) and the long-term 2050 goal through meeting California Title 24 requirements. Specifically, the proposed project would result in the demolition of the existing older, energy inefficient structure with newer, energy-efficient features and associated improvements. In addition, CARB notes in the First Update to the Scoping Plan that "California is on track to meet the near-term 2020 greenhouse gas limit and is well positioned to maintain and continue reductions beyond 2020 as required by AB 32" (CARB 2014). Since the proposed project would not conflict with measures outlined within the City's CAP, which were developed to establish strategies to comply with AB 32 and to reduce citywide GHG emissions, and development of the proposed project was shown to not exceed the PCAPCD threshold of 26.5 MT CO₂E per 1,000 square feet, the proposed project would not interfere with the State's trajectory in meeting the 2020, 2030, and 2050 GHG emissions reduction targets set forth in AB 32, EO B-30-15 and EO S-3-05.

⁵ The thresholds adopted by PCAPCD does not include baseline emissions which the City does not agree with, however, until the City has guidance in place the analysis used the PCAPCD significance thresholds in order to assess the impacts of the proposed project's GHG emissions.

Based on the preceding considerations, the proposed project would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, the proposed project would result in a **less-than-significant impact**.

4.2 PUBLIC UTILITIES

4.2.1 Introduction

This section of the Environmental Impact Report (EIR) evaluates potential impacts associated with demand for water supply, wastewater treatment, landfill capacity, and energy associated with implementation of the Kaiser Riverside-Cirby Medical Office Building Project (proposed project). The analysis of water supply, including the environmental and regulatory setting and impact discussion, is followed by the analysis of wastewater treatment and landfill capacity. The cumulative impact analysis is included at the end of this section.

No comment letters were received that addressed concerns regarding water supply, wastewater treatment, or landfill capacity in response to the Notice of Preparation (NOP). Please see Appendix A for a copy of the comments received in response to the NOP.

Information contained in this section is based, in part, on information provided in the *City of Roseville General Plan 2035*, as adopted June 2016 (City of Roseville 2016a), and other City documents.

4.2.2 Environmental Setting – Water Supply

Water Supply

The City of Roseville (City) would serve as the water supplier for the proposed project. The City's water supply sources include surface water from Folsom Lake, groundwater, and recycled water for landscape irrigation. The City's source for water has historically been from Folsom Lake (since 1971). Groundwater is occasionally used as backup supply during emergency or drought conditions. Recycled water is available for landscape irrigation from both the Dry Creek and the Pleasant Grove Wastewater Treatment Plants (WWTPs). The City's surface water supply is more fully described below.

In addition to the water supplies identified above, supplemental water is available from other agencies through water system interties. These water system interties are typically operated during treatment plant disruptions, such as are occasionally experienced during plant construction projects or other maintenance operations that require treatment plant or pump station shutdown. Water system interties are also used for distribution of water between two different service areas when required due to local operational needs.

Surface Water Supply

The City's current surface water supply is American River water diverted from Folsom Lake. Folsom Lake has been the primary source of water supply to the City since 1971. Prior to 1971, the City relied on Placer County Water Agency (PCWA) water delivered through the Boardman

Canal to a treatment facility that was located in the eastern portion of the City. Additionally, prior to 1971, the City also used groundwater from wells located in the older part of the City.

Surface water is now delivered from Folsom Lake via United States Bureau of Reclamation (USBR) facilities through a pumping plant and parallel 48-inch and 60-inch transmission lines to the City's water treatment plant, located on Barton Road in Granite Bay. The City's water plant has a treatment capacity of 100 million gallons per day (mgd) and currently treats 40 mgd (Samuelson, pers. comm. 2016). Water is treated through conventional treatment processes of flocculation/sedimentation, filtration, and disinfection. Treated water is fluoridated for consumer health, and pH is adjusted for corrosion protection of the distribution system.

The City has contracts for 66,000 acre-feet per year (AFY) of surface water through contracts with the USBR, PCWA, and San Juan Water District (SJWD). The City maintains a contract entitlement with the USBR for 32,000 acre-feet of Central Valley Project supplies. Roseville's water supply contract with PCWA allows for 30,000 acre-feet of American River Middle Fork Project water wheeled through USBR facilities at Folsom Lake. Lastly, the City has a current contract with SJWD for 4,000 acre-feet. The SJWD supply is a normal or wet year supply (available during normal or wet years) and is served from part of SJWD's contract with PCWA for 25,000 acre-feet of Middle Fork Project water, also served from Folsom Lake.

In the 1990s, the City participated in the Water Forum, a regional stakeholder effort concerned with the protection of the Lower American River and reliable water supplies. The Water Forum resulted in the development of purveyor-specific agreements that outline how suppliers will meet commitments agreed to as part of the Water Forum efforts. The goal of the Water Forum was to provide a safe and reliable water supply through the year 2030, while protecting resources associated with the Lower American River and stabilizing regional groundwater supplies. Roseville's agreement included a limitation of diversion from the American River in both wet and dry years. In wet years, the City agreed to limit diversions from its American River supply contracts to no more than 52,900 acre-feet in normal/wet years, and no less than 39,800 acre-feet in driest years (critically dry). Through its agreement with SJWD, the City increased its normal year water supplies by an additional 4,000 acre-feet, for a total normal/wet year supply of 58,900 acre-feet. These water supply contracts and Water Forum limitations are summarized in Table 4.2-1 and further described within the City's 2015 Urban Water Management Plan (UWMP; City of Roseville 2016b).

Table 4.2-1
City of Roseville Surface Water Contracts

Contracted Water Supply Source	Contract Amount (AFY)
USBR	32,000
PCWA	30,000

Table 4.2-1
City of Roseville Surface Water Contracts

Contracted Water Supply Source	Contract Amount (AFY)
SJWD (normal/wet year only)	4,000
Total Contracted Supplies	66,000
Available Supplies: Normal/Wet Years ¹	58,900
Available Supplies: Driest/Critically Dry Years ¹	39,800

Note:

¹ As a result of City commitments made under the Water Forum.

Source: City of Roseville 2016b.

Although water contract entitlements total 66,000 acre-feet, the City's diversions from the American River are limited by the Water Forum Agreement (WFA; Water Forum 2000), as noted above. The Water Forum categorized water years into three types: (1) Normal or Wet Years (normal/wet), (2) Drier Years, and (3) Driest Years (critically dry). These hydrologic year types are defined as follows:

- **Normal or Wet Years:** When the projected March through November American River Unimpaired Inflow to Folsom Reservoir is greater than 950,000 acre-feet;
- **Drier Years:** When the projected March through November American River Unimpaired Inflow to Folsom Reservoir is between 950,000 and 400,000 acre-feet; and
- **Driest (Critically Dry) Years:** When the projected March through November American River Unimpaired Inflow to Folsom Reservoir is less than 400,000 acre-feet.

In normal/wet years, the City has agreed to limit surface water diversions to 58,900 AFY. In driest years, the City's maximum diversion from the American River is limited to 39,800 AFY. It is important to note that during drier and driest years, the City also agreed to ensure that up to an additional 20,000 AFY of its contracted water be made available for release down the American River by PCWA through re-operation of its Middle Fork project. Thus, in drier years, the City may divert an amount between 54,900 (58,900 less the 4,000 SJWD supply that is not available in drier/driest years) and 39,800 AFY from the American River based on unimpaired river flow into Folsom Lake (Water Forum 2000).

According to the citywide Water Supply Assessment (WSA) prepared for the Amoruso Ranch Specific Plan EIR, the total water demand at buildout of the City's General Plan would be 64,366 AFY, which includes 4,715 AFY of recycled water (City of Roseville 2016c).

In drier years, the City meets its water supply needs through the combined use of available surface water supplies, mandated water conservation, and groundwater supplies. The City currently operates six groundwater well facilities that are capable of delivering approximately

17,500 AFY of water supply if run full time for the entire year. The wells are maintained primarily as a backup water supply and for improving water supply reliability. The City has plans to expand its groundwater well network by adding 10 additional groundwater wells, which would increase delivery up to a total of 43,800 AFY (City of Roseville 2016b). The City also has plans to acquire an additional 1,500 AFY of water from PCWA's new Ophir Water Treatment Plant (WTP) beginning in 2030, which is expected to have 100% reliability in all hydrologic conditions (City of Roseville 2016c).

Water Treatment

Surface water is delivered and treated at the City's Barton Road WTP, located on Barton Road in Granite Bay prior to delivery to City water customers. Water delivered from Folsom Lake via USBR facilities through a pumping plant and parallel 48-inch and 60-inch transmission lines is treated at the City's Barton Road WTP.

Barton Road Water Treatment Plant

The Barton Road WTP has a treatment capacity of 100 mgd and currently treats an average of 40 mgd (Samuelson, pers. comm. 2016). Water is treated through conventional treatment processes of flocculation/sedimentation, filtration, and disinfection. Treated water is fluoridated for consumer health, and pH is adjusted for corrosion protection of the distribution system.

Groundwater

Surface water from the American River is the City's primary source of water supply. However, because the Sacramento region is located in a semi-arid climate, periodic droughts occur resulting in reduced availability of surface water from the American River. The City of Roseville is located within the North American sub-basin. The North American sub-basin lies in the eastern central portion of the Sacramento Groundwater Basin and covers a surface area of 548 square miles in Sutter, Placer, and Sacramento counties. The City maintains groundwater wells for backup supply and dry year supply. The City is also in the process of obtaining permits for using its wells for aquifer storage and recovery (ASR) to store potable water in the aquifer making it available for use during other times. A Groundwater Management Plan (GMP) was completed in November of 2007 in cooperation with PCWA, City of Lincoln, and California American Water. The project site is not identified as an area for a planned well as part of the City's ASR program and is not considered an important site for recharge (City of Roseville 2016b).

Existing Water Infrastructure and Water Demand

The existing Kaiser campus is served by a 6-inch water line stub connected to a 10-inch public distribution main in Cirby Hills Drive. This service would be maintained until the new

buildings are occupied to provide continuous service to the existing buildings during construction. For the new medical office buildings, two new 10-inch service lines would connect to the City system and would be stubbed to the property: at the existing 10-inch main at Cirby Hills Drive; and at the 24-inch transmission main in Cirby Way, approximately 250 feet east of the Riverside Avenue intersection. A domestic service line and irrigation line would be stubbed off one of the new 10-inch service stubs and would include a City water meter and reduced-pressure principal backflow device.

To ensure adequate water is provided in the event of a fire, the private on-site fire service would include a private 10-inch looped system around the site, generally following on-site roads and parking areas. The looped system would connect to the two new 10-inch service stubs with a reduced-pressure detector backflow device at each stub. Private fire hydrants would be located around the site, connecting to the 10-inch loop. Sprinkler service lines to the new buildings from the 10-inch loop would include an in-line check valve, a post indicator valve, and a fire department connection.

The existing 90,209-square-foot medical office complex has a water demand of 5,713 gallons per day (gpd) (6.1 AFY) for domestic water use and 8,124 gpd (9.1 AFY) for irrigation water for a total of 13,837 gpd and 15.2 AFY (Yi, pers. comm. 2016).

4.2.3 Regulatory Setting – Water Supply

Federal Regulations

Folsom Dam on the American River, from which the City draws its surface water supplies, is managed by the USBR as part of the Central Valley Project (CVP). The CVP was originally conceived as a state project to protect the Central Valley from water shortages and floods by regulating and storing water in reservoirs in the water-rich northern half of the state and transporting it to the water-poor San Joaquin Valley and its surrounding areas by means of a series of canals, aqueducts, and pumping plants. The basic concept and facilities of the CVP were included in the first California State Water Plan formulated in the 1930s. In the Depression era, however, the state was unable to sell the necessary bonds to finance the project. Most of the water development envisioned by the state was eventually accomplished by the federal CVP, beginning with its initial authorization in 1935. Construction on the CVP began in 1937 with the Contra Costa Canal, which began delivering water in 1940. The next facility built was Shasta Dam, the keystone of the CVP. Work on the dam began in 1938, and water storage started even before its completion in 1945. Congress subsequently passed 13 separate measures to authorize the construction of other major water management and storage facilities over the next three decades, including Friant Dam, which was completed in 1942 and Folsom Dam completed in 1955. The final dam, New Melones, was completed in 1979.

There are 8 divisions of the CVP and 10 corresponding units, many of which operate in conjunction, while others are independent of the rest of the network. The American River Division is located in north-central California, on the east side of the Great Central Valley. It manages the water of the American River, which drains off the Sierra Nevada and flows into the Sacramento River. The American River Division stores water in the American River watershed, including Folsom Lake to both provide water supply for local areas and to supply the rest of the system.

Numerous laws, directives, opinions, and orders affect or otherwise have influence on the management of the CVP. The primary operative statute is the Central Valley Project Improvement Act (CVPIA), which was signed into law on October 30, 1992, by President George H. W. Bush. The CVPIA amended previous authorizations of the CVP to include fish and wildlife protection, restoration, and mitigation as project purposes having equal priority with irrigation and domestic uses, and fish and wildlife enhancement as a project purpose equal to power generation.

State Regulations

Urban Water Management Planning Act

The Urban Water Management Planning Act was established in Division 6, Part 2.6 of the California Water Code. The act was developed due to concerns for potential water supply shortages throughout the State of California. It requires information on water supply reliability and water use efficiency measures. Urban water suppliers are required as part of the act to develop and implement UWMPs to describe their efforts to promote efficient use and management of water resources. The City has complied with the Urban Water Management Planning Act through the adoption of the City's 2015 UWMP.

Senate Bill X7-7

In November 2009, the Legislature enacted, and the Governor signed, Senate Bill X7-7, which created a statewide goal of achieving a 20% reduction in urban per capita water use in California by 2020. Under this statute, urban water suppliers are required to establish water conservation targets for the years 2015 and 2020. The City's current Urban Water Management Plan (discussed in Local Regulations, below) includes these targets.

Local Regulations

Water Forum Agreement

The WFA is the result of the efforts of a diverse group of community stakeholders. The stakeholder group was formed in 1994 with the goal to formulate principles for developing

solutions to meet future regional water supply needs. Participants in the Water Forum have developed two coequal objectives:

- Provide a reliable and safe water supply for the region's economic health and planned development to the year 2030.
- Preserve the fishery, wildlife, recreational, and aesthetic values of the Lower American River.

Purveyor-specific agreements have also been developed that describe in detail how each of the elements will be implemented by the respective purveyors. Purveyors include the City, the PCWA, and the SJWD, as well as other regional water agencies. The purveyor-specific agreements are compiled into a Memorandum of Understanding that each stockholder's authorizing body has executed. In return for signing the final WFA, water purveyors receive regional support for water supply projects, including site-specific infrastructure development.

City of Roseville Groundwater Management Plan

In August 2007, the City, in participation with the PCWA and the City of Lincoln, completed a groundwater management plan compliant with both Senate Bill (SB) 1938 and Assembly Bill (AB) 3030. Surface water from the American River is the City's primary source of water supply. Groundwater is only used as a backup water source to augment surface water in the event of drought conditions.

City of Roseville Community Design Guidelines

The City of Roseville Community Design Guidelines (City of Roseville 2008) provides technical guidelines for public spaces, including landscaping guidelines, for commercial and office development.

City of Roseville Municipal Code

Section 14 of the City's Municipal Code (City of Roseville 2016e) contains regulations associated with water rates (Chapter 14.08), water conservation (Chapter 14.09), and installation of water facilities (Chapter 14.08).

City of Roseville General Plan

The *City of Roseville General Plan 2035* Public Facilities Element contains goals and policies relating to water supply and distribution (City of Roseville 2016a). Goals and policies applicable to the proposed project are listed below:

Water System

- Goal 1** Maintain a water system that adequately serves the existing community and planned growth levels, ensuring the ability to meet projected water demand and to provide needed improvements, repairs and replacements in a timely manner.
- Goal 2** Provide water services to all existing and future Roseville water utility customers. The provision of services by another provider may be considered where it is determined that such service is beneficial to the City and its utility customers or the provisions of City services is not feasible.
- Goal 4** Actively pursue water conservation measures.
- Policy 5** Ensure all development provides for and pays a fair share of the cost for adequate water distribution, including line extensions, easements, and plant expansions.
- Policy 10** Develop and implement water conservation standards and measures as necessary elements of the water system.

City of Roseville Urban Water Management Plan

The City has prepared and adopted a *2015 Urban Water Management Plan* (City of Roseville 2016b). This plan was prepared to comply with the Urban Water Management Planning Act of the California Water Code (described previously under State Regulations). UWMPs must be developed by urban water providers that annually supply more than 3,000 customers or more than 3,000 acre-feet of water annually, and submitted to the California Department of Water Resources every 5 years. The UWMP describes the availability of water and discusses water use, recycled water use, and water conservation.

City of Roseville Water Conservation Ordinance

In 1991, the City developed and adopted the Roseville Water Conservation and Drought Mitigation Ordinance as documented in the City's Municipal Code Chapter 14.09 (City of Roseville 2016e). Under this ordinance, the City has authority to declare water shortage conditions and implement drought-related mitigation measures.

In February 2008, the City adopted Ordinance 4629, which added Sections 14.09.200–14.09.220 and amended Sections 14.09.020–14.09.090 of the Roseville Municipal Code regarding water conservation. The purpose of this ordinance is to ensure compliance with all federal, state, and local requirements relating to water conservation and drought mitigation. Ordinance 4629 provides an approach to conservation that reflects that there are now more water customers billed on metered rates, which creates additional tools to achieve conservation.

City of Roseville Water-Efficient Landscape Ordinance

In 2006, the state enacted legislation (Water Conservation in Landscaping Act of 2008) requiring the State Department of Water Resources to update the State Model Water-Efficient Landscape Ordinance. The updated model ordinance contains several new landscape and irrigation design requirements aimed at reducing water waste in landscape irrigation. All local land use agencies were required to adopt the model ordinance or develop an ordinance that is at least as effective by January 2010. On October 21, 2009, the Roseville City Council adopted an ordinance (4786) effective January 1, 2010, tailored to meet the City's needs that it was based on, and was at least as effective as, the state's model ordinance. On March 16, 2016, the Roseville City Council adopted Ordinance 5659 (City of Roseville 2016e), which repealed Chapter 19.67 of Title 19 of the Roseville Municipal Code and replaced it with Chapter 14.18 of Title 14; this action moved the Water Efficient Landscape Ordinance to a different section of the Municipal Code, Chapter 14.18, Water Efficient Landscaping, complies with the requirements of the Water Conservation in Landscaping Act of 2006.

City of Roseville 2016 Design/Construction Standards

Section 8 of the City's 2016 Design/Construction Standards, Domestic Water Supply System Design (City of Roseville 2016d), provides criteria for the design of domestic water systems. Compliance with these standards ensures that water delivery facilities are properly sized to distribute water to any new customers that would be created as a result of implementing the proposed project.

4.2.4 Impacts – Water Supply**Methods of Analysis**

The potable water demand created by the proposed project is compared against the City's water supply portfolio and its ability to obtain water from the American River in normal/wet year conditions. The existing 90,209-square-foot medical office complex has a water demand of 13,837 gpd or 15.5 AFY (Yi, pers. comm. 2016). The City has indicated that adequate water supplies are available to serve the proposed project, as described below. No new water source or supply of water would be required to serve the site, and development of this project would not impact water supply for existing residences or businesses.

The proposed project's water demand was calculated for the total 210,000-square-foot medical office buildings using the City's current demand factor for Community Commercial land use designations of 2,598 gpd/acre (City of Roseville 2016c). The proposed project's total water demand compared to the existing medical office complex demand is shown in Table 4.2-2.

**Table 4.2-2
Proposed Project Water Demand**

Proposed Use	Acreage	Demand Factor (gpd/acre)	Floor-Area Ratio	Total Demand for Built Area (mgd)	Total Demand (AFY) ¹
New Medical Office Buildings	14.36 ²	2,598	34%	.42	46.8
Existing Medical Office Complex	14.36 ²	2,598	30%	.37	41.6
Net Difference					5.15

Notes:

¹ Gallons per day (gpd), 1.0 gpd = 0.00112 acre-feet per year (AFY)

² Total site acreage is based on the March 3, 2016 site plan.

Source: City of Roseville 2016c.

The applicant's architect, HOK prepared a Water Conservation Plan (Plan) for the proposed project that describes ways the project would reduce water consumption and estimates the amount of water the project would require (HOK 2016). The Plan estimates the project would use 1,504 gpd/acre, which represents a savings of 42% below the City's demand factor of 2,598 gpd/acre. This estimated water demand represents the total demand for irrigation water and domestic water. The irrigation water was calculated based on the City's requirements. The domestic water was calculated based on detailed estimates of daily building usage. However, for the purposes of the analysis a more conservative approach was assumed using the City's water demand rate of 2,598 gpd/acre. A copy of this report is included in Appendix E.

Thresholds of Significance

Consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines, the City's General Plan, and professional judgment, a significant impact would occur if the proposed project would do any of the following:

- Result in insufficient water supplies to serve the project from existing entitlements and resources, such that new or expanded water supplies are required.
- Result in or require the construction or expansion of water treatment, conveyance, and/or storage facilities that would create significant environmental effects.
- Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or substantial lowering of the local groundwater table.

Impact 4.2-1	Availability of Water Supplies to Meet Project Demand in Wet/Dry Years
Applicable Policies and Regulations	City of Roseville General Plan Policies Urban Water Management Plan City of Roseville Water Conservation Ordinance Water-Efficient Landscaping Ordinance
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Development of the proposed project would require water for operation of the medical office buildings and exterior landscaping. Using the City's water demand rate for Community Commercial of 2,598 gpd per acre (City of Roseville 2016c), the proposed project's total calculated demand for water would be .42 mgd or 46.8 AFY, as shown in Table 4.2-2. The net increase in water demand compared to the existing medical office building is estimated to be 5.15 AFY. The Water Conservation Plan prepared for the project (see Appendix E) calculates the project's water demand based on the project's use of high efficiency fixtures and systems resulting in a demand of 1,504 gpd/acre or .24 mgd and 27.0 AFY.

In order to help meet projected water demand, the City is planning to acquire an additional 1,500 AFY from PCWA's future Ophir WTP. This water is projected to be available beginning in 2030 and have 100% reliability in all hydrologic conditions. With this additional water source, the City is projected to have a water supply of 67,500 AFY in normal years, 39,500 AFY in single-dry years, and 47,500–55,500 in multiple dry years (City of Roseville 2016c). This supply is sufficient to meet the projected water demand at buildout during normal years; however, it would not be sufficient to meet water demand during single-dry years or multiple-dry years. During single-dry and multiple-dry years, the City would use a combination of water conservation measures and groundwater pumping to meet the projected water demand.

The State Water Resources Control Board (SWRCB) voted to eliminate the statewide 25% water savings approach in May 2016 and in its place has given water agencies local control over conservation efforts (City of Roseville 2016g). The City is still requesting water customers continue to use water efficiently by maintaining a 10% voluntary reduction goal through January 2017. It is assumed this voluntary reduction would continue through 2017 even in light of the rainfall the region has received to date.

A 10% reduction goal would meet the City's definition of a Stage One Drought under the Water Conservation Ordinance, Municipal Code Section 14.09.040 (City of Roseville 2016e). Water restrictions under a Stage One Drought require a 10% reduction in water use by residents and businesses from normal seasonal use. The proposed project, as described in Chapter 2, states

project landscaping would be native and drought resistant where feasible, and would be designed to comply with the City's Water-Efficient Landscape Ordinance. It is anticipated the project's desire to promote water conservation and compliance with the City's Water Conservation Ordinance and Water-Efficient Landscaping Ordinance, would help conserve water and reduce overall water demand. In any event, the drought of 2013 and 2014, one of the worst in decades, does not represent typical conditions, and water supplies in future years are expected to reflect cycles of wet and dry years, as has occurred in the past. Further, the City has a diversified water supply portfolio that includes groundwater supplies for use in dry years such as currently being experienced. The 2015 UWMP and Citywide WSA indicate that the City has sufficient water supply to meet the demand at buildout of the General Plan (City of Roseville 2016b, 2016c).

All new homes and businesses in the City have water meters and pay for water usage according to the City's rate structure. The 10-inch domestic service lines that would provide water to the project site would have City meters and reduce pressure principal backflow devices. Because the demand for potable water has been factored into the City's long-range plans to serve development of this site and the proposed project would comply with the City's Water Conservation Ordinance and Water-Efficient Landscaping Ordinance and includes a number of water saving features, as described above, the impact is considered **less than significant**.

Impact 4.2-2	Construct or Expand Water Treatment, Conveyance, and/or Storage Facilities to Accommodate the Project
Applicable Policies and Regulations	City of Roseville General Plan Policies Urban Water Management Plan City of Roseville Water Conservation Ordinance
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would install a public "looped" 10-inch water main to serve on-site domestic and fire safety water demands, per the City's requirements. The public looped water main points of connection would come from an existing 10-inch public distribution water main in Cirby Hills Drive and a 24-inch transmission main in Cirby Way.

Surface water is delivered and treated at the City's Barton Road WTP prior to delivery to City water customers. The Barton Road WTP has a treatment capacity of 100 mgd and currently treats an average of 40 mgd (Samuelson, pers. comm. 2016). As identified under Impact 4.2-1 and in Table 4.2-2, the proposed project's total calculated water demand would be .42 mgd or 46.8 AFY, with a net increase of 5.15 AFY compared to the existing medical office complex. Accordingly, the Barton Road WTP has adequate capacity to accommodate the water demands

associated with the proposed project and the project would not require the construction or expansion of water treatment facilities. In addition, the City's Environmental Utilities Department has reviewed the proposed project and has determined that the existing water infrastructure that serves the area has been designed to accommodate buildout of the site with commercial uses and does not need to be expanded or upsized to accommodate the proposed project. Therefore, the project impact would be **less than significant**.

Impact 4.2-3	Deplete Groundwater Supplies or Interfere with Groundwater Recharge
Applicable Policies and Regulations	City of Roseville General Plan Policies Urban Water Management Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Groundwater supply is partly dependent on recharge by percolation of rainwater through permeable surfaces. Groundwater recharge in the project area occurs primarily along stream channels such as Dry Creek and Cirby Creek. As described in Section 4.2.2, Environmental Setting – Water Supply, the existing 14-acre site is currently developed with a 90,209-square-foot medical office complex with associated surface parking on 8.15 acres. Development of the proposed project would add approximately 2.30 acres of new impervious surfaces to the project site for a total of 10.45 acres. Recharge is already limited by impervious surfaces under existing conditions and this site is not identified by the City as being a recharge area.

Runoff from the project site would be collected and diverted through on-site drainage controls. Collecting on-site surface runoff would be controlled by area inlets or curb inlets and runoff would be connected to subsurface infiltration galleries. Water from flows released from the project site into downstream channels could also provide some recharge. Because recharge on the project site is currently limited and the additional 2.30 acres of impervious surface is not being placed in an area identified by the City as a groundwater recharge zone, it would not deplete the City's groundwater supplies or interfere with groundwater recharge, the proposed project would have a **less-than-significant impact** on groundwater recharge potential and available groundwater supply.

4.2.5 Mitigation Measures

None required.

4.2.6 Environmental Setting – Wastewater

The City is the wastewater service provider for properties located within the City and will be the service provider for the proposed project. Wastewater is collected in sewer lines that ultimately connect to one of two regional wastewater treatment facilities. Treated wastewater is then either discharged into local area creeks in compliance with state permit requirements, or used as recycled water.

Wastewater Service Area

The City, the South Placer Municipal Utility District, and Placer County are regional participants in the South Placer Wastewater Authority (SPWA). The SPWA was created in 2000 to oversee policy for funding regional wastewater infrastructure. The City owns and operates two regional wastewater treatment facilities on behalf of the regional partners. These treatment facilities are the Dry Creek Wastewater Treatment Plant (DCWWTP) and the Pleasant Grove Wastewater Treatment Plant (PGWWTP). The proposed project would be served by the DCWWTP located in Placer County at 1800 Booth Road just outside of the southwestern City limits.

The City prepared the South Placer Regional Wastewater and Recycled Water Systems Evaluation (Systems Evaluation, City of Roseville 2009), which delineates the 2005 regional wastewater service area boundary (2005 SAB) and provides baseline and projected future information of these regional wastewater and recycled water systems. The 2005 SAB includes areas within the cities of Roseville, Rocklin, Loomis, and portions of Granite Bay and unincorporated Placer County. The project site is located within the 2005 SAB.

The Systems Evaluation is also the long-term planning tool to project wastewater treatment needs and to identify necessary capital improvement projects to accommodate urban growth within the 2005 SAB. The Systems Evaluation addressed system conditions as of June 2004 (the most recent data available) and anticipated buildout conditions within the 2005 SAB. Buildout of the 2005 SAB, including proposed rezones and land use intensifications, would result in 16.34 mgd average dry-weather flow (ADWF) at the DCWWTP (City of Roseville 2009, Table ES-6). Under the ultimate SPWA boundary (the current 2005 Service Area plus anticipated Urban Grown Areas), the ADWF of the DCWWTP is estimated at 19.98 mgd ADWF (City of Roseville 2009, Table ES-6).

Wastewater Treatment

Since the proposed project would be served by the DCWWTP, information on that plant is provided below.

Dry Creek Wastewater Treatment Plant

The DCWWTP is located on Booth Road, along Dry Creek, just outside the southwestern City limits. The DCWWTP provides sewerage services for the southwest portion of the City, and portions of Placer County and the South Placer Municipal Utilities District. The DCWWTP provides tertiary treatment for up to 18 mgd ADWF and 45 mgd peak wet weather flows (PWWF). The DCWWTP's 2015 ADWF was approximately 7.7 mgd, of which approximately 5 mgd comes from the City (City of Roseville 2016b). Treated wastewater is discharged to Dry Creek, a water of the United States and a tributary to the Sacramento River via the Natomas East Main Drainage Canal. Discharges from the DCWWTP are currently regulated by Waste Discharge Requirements (WDRs) Order R5-2014-0049, issued by the Central Valley Regional Water Quality Control Board (RWQCB) on March 28, 2014.

Wastewater Collection

The City's wastewater collection system includes both gravity sewer lines and lift stations with associated force mains.

Existing Wastewater Infrastructure and Wastewater Treatment Demand

The existing Kaiser campus is served by an 8-inch sewer main in Cirby Way that connects to an 8-inch sewer main in Riverside Avenue. The sewer main in Riverside Avenue is currently at or over capacity, per an assessment conducted by BKF Engineers (BKF 2017). The proposed project includes the installation of two new 8-inch service lines; the first connecting to the 8-inch sewer main in Cirby Way and the second connecting to an existing public manhole at the intersection of Cirby Way and Cirby Hills Drive.

4.2.7 Regulatory Setting – Wastewater

Federal Regulations

National Pollutant Discharge Elimination System Permits (Federal and State)

The National Pollutant Discharge Elimination System (NPDES) permit system was established in the Clean Water Act to regulate municipal and industrial discharges to surface waters of the United States. The discharge of wastewater to surface waters is prohibited unless an NPDES permit has been issued to allow that discharge. Each NPDES permit includes the following provisions: effluent and receiving water limits of allowable concentrations and/or mass of pollutants contained in the discharge; prohibitions on discharges not specifically allowed under the permit; provisions that describe required actions by the discharger, including industrial pretreatment, pollution prevention, and self-monitoring activities; and other regulatory

requirements. The DCWWTP is authorized under NPDES permit No. CA0079502, adopted on March 28, 2014, to discharge 18 mgd ADWF into Dry Creek.

State Regulations

Porter-Cologne Water Quality Control Act

The Porter-Cologne Water Quality Control Act (Porter-Cologne Act) is California's statutory authority for the protection of water quality. Under the Porter-Cologne Act, the state must adopt water quality plans, policies, and objectives that will provide protection to the state's waters for the use and enjoyment of the people of California. In California, the SWRCB has authority and responsibility for establishing policy for water quality control issues for the state. Regional authority for planning, permitting, and enforcement is delegated to the nine RWQCBs. The Porter-Cologne Act authorizes the SWRCB and RWQCBs to issue NPDES permits containing WDRs, and to enforce these permits. SWRCB and RWQCB regulations implementing the Porter-Cologne Act are included in Title 27 of the California Code of Regulations.

General Waste Discharge Requirements for Sanitary Sewer Systems

The General WDRs for Sanitary Sewer Systems were adopted by the SWRCB in May 2006. These WDRs require local jurisdictions to develop a sewer system management plan (SSMP) that addresses the necessary operation and emergency response plans to reduce sanitary sewer overflows (SWRCB 2006). The WDRs require that the local jurisdiction approve the SSMP and the Roseville City Council approved the City's SSMP on January 21, 2009. The SSMP was updated December 12, 2013, and subsequently recertified by the Roseville City Council on January 8, 2014.

Local Regulations

South Placer Wastewater Authority

The SPWA is a joint powers authority formed to fund regional wastewater and recycled water facilities in southwestern Placer County for three partner agencies (the "participants"): the City, the South Placer Municipal Utility District, and Placer County. The regional facilities funded by the SPWA thus far include recycled water facilities, trunk sewer lines, and two WWTPs (including the DCWWTP). All three participants transmit wastewater to these WWTPs. The SPWA also monitors compliance with operational criteria established in the funding and operations agreements among the participants.

City of Roseville General Plan 2035

The *City of Roseville General Plan 2035* (City of Roseville 2016a) Public Facilities Element contains goals and policies that are designed to ensure that residents and businesses have adequate wastewater service. Goals and policies applicable to the proposed project are listed below.

Wastewater and Recycled Water Systems

Goal 4 Meet State of California and U.S. Environmental Protection Agency (EPA) water quality standards for the discharge of treated wastewater, as well as meet State of California quality standards for the production of recycled water.

Policy 4 Ensure that wastewater treatment capacity is available and that wastewater generation is minimized.

Policy 7 Prevent hazardous materials from entering the wastewater system.

City of Roseville Municipal Code

Section 14 of the City's Municipal Code (City of Roseville 2016d) contains regulations associated with sewer use, sewer rates and charges, and industrial wastewater. Chapter 14.26 prohibits discharge to a sanitary sewer of any pollutant or wastewater that would interfere with the operation or performance of the City's wastewater collection or treatment facilities.

City of Roseville 2016 Design/Construction Standards

Section 9 of the City's 2016 Design/Construction Standards, Sanitary Sewer Design (City of Roseville 2016d), provides criteria for design of sewer systems. Compliance with these standards would reduce impacts related to wastewater conveyance by ensuring that wastewater collection and conveyance facilities are properly sized to convey the flows from development associated with the proposed project.

4.2.8 Impacts – Wastewater**Methods of Analysis**

For wastewater treatment, the total demand for treatment was calculated for the proposed project and compared to the capacity of the DCWWTP. The existing 90,209-square-foot medical office complex has a wastewater demand of 6,105.3 gpd (Yi, pers. comm. 2016). The proposed project's total wastewater demand was calculated for the 210,000-square-foot medical office buildings using the City's generation rate. According to the City's 2016 Design Standards, the ADWF generation rate for commercial facilities is 850 gpd/acre (City of Roseville 2016d). The

proposed project's total wastewater demand is compared to the existing medical office complex wastewater demand using the City's demand rate, as shown in Table 4.2-3.

The current capacity of the DCWWTP is 18 mgd and existing flows treated at the plant are 7.7 mgd. The demand for wastewater treatment has been factored into the City's long-range plans to serve development of this site. The DCWWTP is currently sized to accommodate treatment flow from the proposed project, as described below under Impact 4.2-5.

**Table 4.2-3
Proposed Project Wastewater Generation**

Proposed Use	Acreage	Demand Factor (gpd/acre)¹	Average Wastewater (gpd)	Peak Flow (gpd) (Peaking Factor = 2.0)
New Medical Office Buildings	14.36 ²	850	13,793	27,586
Existing Medical Office Complex	14.36 ²	850	12,206	24,412
Net Difference			1,587	3,174

Notes:

¹ The City's demand factors are based on a FAR of .30. The project has a FAR of .34; therefore the difference is added to the average wastewater calculation.

² The site acreage is based on the March 3, 2016 site plan.

Source: City of Roseville 2016d.

Thresholds of Significance

Consistent with Appendix G of the CEQA Guidelines, the City's General Plan, and professional judgment, a significant impact would occur if the proposed project would do any of the following:

- Result in or require the construction or expansion of wastewater treatment or collection facilities that would create significant environmental effects.
- Result in a determination that inadequate capacity is available at the wastewater treatment plant to serve the project's projected demand in addition to existing wastewater treatment commitments.
- Exceed wastewater treatment requirements of the Regional Water Quality Control Board.

Impact 4.2-4	Construction or Expansion of Wastewater Collection Facilities
Applicable Policies and Regulations	City of Roseville Improvement Standards and Design/ Construction Standards
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The project site is currently developed and based on the City's demand rate has an average demand for wastewater treatment of 12,206 gpd, as shown in Table 4.2-3. The existing campus is served by an 8-inch sewer line located in Cirby Way, which in turn connects to an 8-inch sewer main in Riverside Avenue. The proposed project would be served by two 8-inch service lines, one connecting to the 8-inch sewer main in Cirby Way and the second connecting to an existing public manhole in the intersection of Cirby Way and Cirby Hills Drive. The existing line downstream of this manhole is an 8-inch pipe.

According to a Technical Memorandum prepared by BKF Engineers (BKF 2017), the existing sewer infrastructure in Riverside Avenue is at or over capacity. The proposed project has been designed consistent with the City's 2016 Design/Construction Standards to ensure pre-project flows would be maintained and not exceeded in the post-project condition. Additionally, the second service line connecting to the manhole at the intersection of Cirby Way and Cirby Hills Drive would convey the remaining wastewater or difference between the pre-and post-project wastewater flows in order to ensure nothing greater than the pre-project flows would go to the Riverside Avenue sewer main. Additionally, the proposed project is required to comply with Section 9, Sanitary Sewer Design, of the City's 2016 Design/Construction Standards (City of Roseville 2016d) which specifies requirements for main sizes, slope and velocity of main placement, materials, depth, and alignment. Therefore, the proposed project could be served by the City's existing wastewater collection facilities and would not require any upgrades or expansions to the City's wastewater infrastructure, and the impact would be **less than significant**.

Impact 4.2-5	Capacity at the DCWWTP to Serve the Proposed Project
Applicable Policies and Regulations	City of Roseville General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Wastewater flows generated by the proposed project would be conveyed to the DCWWTP for treatment. As shown in Table 4.2-3, the proposed project would have a total peak wastewater demand of 27,586 gpd or 0.027 mgd. The net increase in wastewater flows would be 1,587 gpd with peak flows at 3,174 gpd compared to existing conditions. The current capacity of the DCWWTP is 18 mgd and current ADWF flows treated at the plant are 7.7 mgd. As documented in the Systems Evaluation report (City of Roseville 2009), wastewater demand generated within the 2005 SAB that flows to the DCWWTP for treatment is projected to reach 16.34 mgd ADWF at buildout of the 2005 SAB. The DCWWTP is permitted to continue to discharge up to 18 mgd ADWF into Dry Creek under the facility's NPDES permit No. CA0079502 (March 28, 2014). Of the 7.7 mgd currently treated at the DCWWTP, only 5 mgd comes from the City (City of

Roseville 2016b). The proposed project's net increase in wastewater of 0.003 mgd would represent only a fraction of the wastewater currently being treated from the City. The DCWWTP has adequate capacity available to serve the proposed project and would not require immediate upgrades or expansions to accommodate flows from the project. Therefore, this impact is considered **less than significant**.

Impact 4.2-6	Exceed Wastewater Treatment Requirements of the Regional Water Quality Control Board
Applicable Policies and Regulations	Porter-Cologne Water Quality Control Act NPDES Permit
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The Porter-Cologne Water Quality Control Act authorizes the SWRCB and RWQCB to issue NPDES permits containing WDRs, and to enforce these permits. NPDES Permit No. CA0079502 and WDR No. R5-2014-0049 adopted on March 28, 2014 establish the effluent limitations and standards for the treatment plant, based on the current design capacity of 18 mgd ADFW. Because the DCWWTP has capacity to serve the proposed project within its existing NPDES Permit and in compliance with WDRs required by the RWQCB, the proposed project would not exceed wastewater treatment requirements of the RWQCB, and the impact is considered **less than significant**.

4.2.9 Mitigation Measures

None required.

4.2.10 Environmental Setting – Solid Waste

Solid Waste Collection and Disposal

Solid waste generated in the City is collected and hauled by the City and delivered to the Western Placer Waste Management Authority (WPWMA) for processing and disposal. The WPWMA, a regional agency composed of the cities of Roseville, Rocklin, Lincoln, and Placer County, owns and operates the Materials Recovery Facility (MRF) and the Western Regional Sanitary Landfill (WRSL) and a Permanent Household Hazardous Waste Collection Facility. The MRF and the WRSL are located on 320 acres at the southwest corner of Athens Avenue and Fiddymont Road in Placer County. Nortech Waste LLC, a private firm, operates the MRF and Nortech Landfill Inc., a private firm, operates the landfill under separate contracts to the WPWMA.

The City has entered into a joint powers agreement (JPA) with these other agencies for solid waste management. The JPA administers the County's Solid Waste Management Plan. The City entered into a flow-control agreement with the WPWMA in 2005, which requires all solid waste generated within the City limits be delivered to the MRF for sorting and disposal at the WRSL. In compliance with the City's Municipal Code, Section 9.17.050 (City of Roseville 2016f), all construction and demolition debris generated within the City must be delivered to the WPWMA facilities for recycling or disposal. Collection of solid waste within the City is operated and managed by the City's Environmental Utilities Department. Permitted non-exclusive franchise haulers may handle temporary refuse collection and disposal for construction and demolition.

The majority of solid waste collected from within the service area is first delivered to the MRF for processing. The MRF, which opened in 1995, receives, separates, processes, and markets recyclable materials removed from delivered solid waste. The MRF has a mixed-waste processing capacity of 2,200 tons per day (design capacity of the facility) and a permitted processing capacity of 1,750 tons per day (current amount permitted to be processed). In addition to processing mixed-solid waste, the MRF includes a green waste compost facility. The compost portion of the facility has a permitted a capacity of 75,000 cubic yards per year (CalRecycle 2016a).

The WRSL is a Class II/III municipal solid waste (non-hazardous) landfill. Currently, the WRSL (Facility Permit 31-AA-0210) is permitted to accept 1,900 tons of refuse per day, and the average tonnage received is approximately 803 tons per day over a 7-day period. The WRSL has a total capacity of 36,350,000 cubic yards, and based on current projected development, the WRSL has a projected lifespan extending through 2058 (CalRecycle 2016b). Of the 235,842 tons of solid waste received by the WRSL in 2015, 96,667 tons (41%) were from the City (CalRecycle 2016c). The City projects that the solid waste generation at buildout of the General Plan would be 275,000 tons per year (City of Roseville 2016c).

4.2.11 Regulatory Setting – Solid Waste

Federal Regulations

Resource Conservation and Recovery Act

Title 40 of the Code of Federal Regulations (CFR), Part 258, Resource Conservation and Recovery Act (RCRA), Subtitle D, contains regulations for municipal solid waste landfills and requires states to implement their own permitting programs incorporating the federal landfill criteria. The federal regulations address the location, operation, design, groundwater monitoring, and closure of landfills.

State Regulations

California Integrated Waste Management Act

The California Integrated Waste Management Act, also known as AB 939 (Public Resources Code [PRC] Section 41780), enacted in 1989, contains regulations affecting solid waste disposal in California. AB 939 is designed to increase landfill life and conserve other resources through increased source reduction and recycling. AB 939 requires cities and counties to prepare solid waste management plans and adopt source reduction and recycling elements (SRREs) to implement AB 939's goals. These goals include diverting approximately 50% of solid waste from landfills and identifying programs to stimulate local recycling in manufacturing and the purchase of recycled products.

The SRRE that is part of the City's Public Facilities Element included in the General Plan contains goals and policies for solid waste disposal. To meet these goals, the SRRE specifies three methods: (1) source reduction, which is a net reduction in waste generation at the source; (2) recycling, which is a reuse of materials to produce new similar products or different products; and (3) composting, which is a process of biological decomposition of solid organic debris, such as leaves, grass clippings, and other organic material commonly found in the municipal waste stream, to create usable material.

Senate Bill 1016

SB 1016 enacted in 2007 changes the process for bi-annual review of a jurisdiction's source reduction and recycling element and allows the California Integrated Waste Management Board (CIWMB) to make a finding whether each jurisdiction is in compliance with the requirements based on the jurisdiction's change in its per capita disposal rate. Starting on January 1, 2018, CalRecycle is required to review each jurisdiction's SRRE and household hazardous waste element at least once every 2 years.

The CIWMB no longer is a diversion rate used to calculate compliance with AB 939, but a per capita disposal rate is used that calculates the number of pounds of solid waste diverted, divided by the total population, divided by 365 days. The City's most recent, 2014 disposal rate was 4.1 pounds per person per day (PPD) and 7.4 pounds per employee per day (CalRecycle 2016d).

Solid Waste Reuse and Recycling Access Act of 1991

AB 1327 (Solid Waste Reuse and Recycling Access Act), enacted in 1991, requires jurisdictions to adopt ordinances that require development projects to provide adequate storage areas for collection and removal of recyclable materials.

Assembly Bill 341

AB 341, which was enacted in 2011, states that it is the policy goal of the state that not less than 75% of solid waste generated be reduced, recycled, or composted by the year 2020. The bill also requires that on and after July 1, 2012, a business, defined to include a commercial or public entity that generates more than 4 cubic yards of commercial solid waste per week or is a multifamily residential dwelling of five units or more arrange for recycling services. Jurisdictions, on and after July 1, 2012, are required to implement a commercial solid waste recycling program or revise their SRRE to meet this requirement.

California Department of Resources Recycling and Recovery

CalRecycle is the new home of California's recycling and waste reduction efforts. Officially known as the Department of Resources Recycling and Recovery, CalRecycle is a new department within the California Natural Resources Agency and administers programs formerly managed by the California Integrated Waste Management Board and Division of Recycling. CalRecycle is the State agency charged with the primary responsibility for permitting of solid waste facilities. CalRecycle operates through its designated Local Enforcement Agencies (LEAs), which typically are county health departments. Air pollution from solid waste facilities is regulated by local air pollution control districts or air quality management districts, while water pollution is regulated by RWQCBs.

Universal Waste Regulations

Universal wastes are hazardous wastes that are widely produced by households and many different types of businesses such as medical offices. Universal wastes include televisions, computers, and other electronic devices as well as batteries, fluorescent lamps, and mercury thermostats and other mercury-containing equipment, among others. The hazardous waste regulations identify seven categories of hazardous wastes that can be managed as universal wastes. Any unwanted item that falls within one of these waste streams can be handled, transported, and recycled following the simple requirements set forth in the universal waste regulations (22 CCR Division 4.5, Chapter 23).

California Medical Waste Management Act

California Health and Safety Code Sections 117600-118360, last updated September 2015, is known as the Medical Waste Management Act (MWMA) and regulates proper handling, storage, treatment, and transportation of medical waste. The MWMA outlines requirements for small and large generators of medical waste, including registration as a medical waste generator and payment of annual permit fees, as well as completion of a Medical Waste Management Plan. Additionally, the MWMA regulates medical waste haulers and medical waste treatment facilities.

California Health and Safety Code Sections 25500-25547.8

Under Health and Safety Code Chapter 6.95, Hazardous Materials Release Response Plans and Inventory, individual generators of hazardous waste would be required to prepare a Hazardous Materials Business Plan (HMBP). HMBPs are required when hazardous materials are generated in quantities greater than 55 gallons, 500 pounds, or 200 cubic feet. The HMBP includes basic information about the location, types, quantities, and health risks of hazardous materials stored, used, or disposed of at the site, as well as information about employee training and emergency response plans. The local Certified Unified Program Agencies (CUPA) is responsible for implementing unified programs for hazardous materials. The CUPA for the City is the City of Roseville Fire Department (City of Roseville 2016h).

Local Regulations***Western Placer Waste Management Authority***

As noted previously, the WPWMA is a regional agency composed of Placer County and the cities of Roseville, Rocklin, and Lincoln. The WPWMA provides recycling and waste disposal opportunities to those communities, as well as to the City of Auburn and the Town of Loomis. The WPWMA oversees operations of the MRF, the WRSL, and the Permanent Household Hazardous Waste Collection Facility. The MRF receives, separates, processes, and markets recyclable materials removed from delivered solid waste.

The City entered into a flow-control agreement with the WPWMA in 2005. This agreement states that any waste generated within the City (including temporary construction and demolition debris) must first be processed at the WPWMA MRF for sorting and then sent to the WRSL for disposal. Any materials that are collected through recycling programs that are established by the City, such as the collection of green waste, cardboard, newspaper, and other recyclables, does not have to be delivered to the MRF. The City retains the rights to market any collected recyclables.

Placer County Solid Waste Local Enforcement Agency

Placer County Environmental Health Services has been certified by CalRecycle as the LEA to enforce state solid waste statutes and regulations within the County. The LEA's primary functions are permitting, inspection, and enforcement at solid waste operations and facilities such as landfills/disposal sites (active and closed), including sites for disposal of construction/demolition debris and inert materials; transfer stations, including materials recovery facilities; and composting facilities.

City of Roseville General Plan and Zoning Ordinance

As described previously, the City's Solid Waste Collection and Disposal SRRE is part of the City of Roseville General Plan, Public Facilities Element (City of Roseville 2016a), and contains goals and policies for solid waste disposal. Chapter 9.17 of the Municipal Code (City of Roseville 2016f) includes provision for refuse hauling and recycling. The City's Environmental Utilities Department has also prepared a Household Hazardous Waste Plan and a Non-Disposal Facilities Plan, which have been approved by the CIWMB, per AB 939.

Applicable goals and policies from the *City of Roseville General Plan 2035* (City of Roseville 2016a) Public Facilities Element are listed below.

Solid Waste Collection and Disposal Source Reduction and Recycling

- Goal 2** Provide solid waste collection and disposal services to all existing and future Roseville development through the City's Solid Waste Utility. The provision of services by another provider may be considered where it is determined that such service is beneficial to the City and its customers or the provision of City services is not feasible.
- Goal 3** Continue to participate in local and regional approaches to source reduction, material recovery, recycling, and solid waste disposal.
- Policy 2** Comply with the source reduction and recycling standards mandated by the State by reducing the projected quantity of solid waste disposed at the regional landfill by 50%, as well as any mandated future reductions.

4.2.12 Impacts – Solid Waste**Methods of Analysis**

For solid waste, the demand for disposal was calculated for the proposed project and compared to the capacity of the MRF and WRSL. Data on the current amount of solid waste generated by the existing medical office complex was not available. However, an estimate for the existing medical office complex is included in Table 4.2-4 based on the City's solid waste generation rate of 7.7 pounds per employee per day (Samuelson, pers. comm. 2016). Since the City's actual disposal rate for 2014 was 7.4 pounds per employee per day (CalRecycle 2016d), this number represents a conservative estimate. Solid waste generation was also calculated for the entire 210,000-square-foot medical office building based on the City's demand rate for solid waste of 7.7 pounds per employee per day (Samuelson, pers. comm. 2016). The proposed project's total solid waste generation and net increase is calculated in Table 4.2-4.

Table 4.2-4
Proposed Project Solid Waste Generation

Proposed Use	Demand Factor	Employees²	Solid Waste Generation (lbs/day)¹	Solid Waste Generation (tons/year)
New Medical Office Buildings	7.7 lbs/employee/day	426	3,280.2	598.6
Existing Medical Office Complex	7.7 lbs/employee/day	224	1,724.8	314.8
Net Difference			1,555.4	283.8

Notes:¹ pounds per day² See chapter 2, Project Description, for the number of employees.**Source:** Samuelson, pers. comm. 2016.**Thresholds of Significance**

Consistent with Appendix G of the CEQA Guidelines, the City's General Plan and professional judgment, a significant impact would occur if the proposed project would do any of the following:

- Be served by a landfill or MRF with insufficient permitted capacity to accommodate the project's solid waste disposal needs. OR
- Fail to comply with federal, state, and local statutes and regulations related to solid waste.

Impact 4.2-7	Capacity for Solid Waste Disposal at the MRF or WRS
Applicable Policies and Regulations	AB 939 City of Roseville Municipal Code, Chapter 9.17 City's Source Reduction and Recycling Element
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would generate solid waste associated with construction activities as well as from project operation. During project construction concrete, metal, and wood scraps would be sorted on site for recycling. Solid waste from project operation would be generated by medical offices, administrative offices, the café, and general use of the facility along with green waste from landscaping. To minimize the amount of solid waste generated by the proposed project, as required by Section 9.17 of the City's Municipal Code, the project contractor would submit a plan to the City's Department of Environmental Utilities to ensure recycling, storage, and disposal of all construction debris occurs in compliance with relevant federal, state, and local statutes (City of Roseville 2016f).

Per table 4.2-4, not factoring in on-site recycling, operation of the proposed project is estimated to generate a net increase of approximately 238.8 tons of solid waste annually. All solid waste would first go to the MRF for sorting to capture any recyclable materials and the remaining waste would then be shipped to the WRSL for disposal. Medical or bio-hazardous waste generated at the project site would be collected on-site and picked up by Stericycle for proper disposal. Card board generated on site would be collected, put in bales and recycled with a third party vendor. The additional amount of solid waste generated by the proposed project that would require disposal at the WRSL does not factor in waste reclaimed at the MRF to provide a more conservative estimate. As noted above, the proposed project is estimated to generate a net increase of 238.8 tons per year, or .77 tons per day of solid waste. Currently, the WRSL is permitted to accept up to 1,900 tons of refuse per day, and according to the County, the average tonnage received is approximately 803 tons per day (CalRecycle 2016b). In 2015, the WRSL received 235,842 tons of solid waste, of which 96,667 tons (41%) were from the City of Roseville (CalRecycle 2016c). The proposed project's estimated net increase in solid waste generation would compose less than one percent of the amount of waste received by the WRSL from the City of Roseville. The WRSL has a remaining capacity of 29,093,819 cubic yards and under current projected development conditions, the landfill has a permitted lifespan extending through 2058 (CalRecycle 2016b). Because there is adequate capacity at the MRF and WRSL to accommodate solid waste generated by the proposed project, this impact would be **less than significant**.

Impact 4.2-8	Compliance with Applicable Federal, State, and Local Statutes and Regulations Related to Solid Waste
Applicable Policies and Regulations	AB 939 SB 1016 City of Roseville General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would comply with all federal, state, and local statutes that relate to the disposal and recycling of solid waste and medical waste. For example, the project contractor would submit a plan to the City's Department of Environmental Utilities to ensure recycling, storage and disposal of all construction debris occurs in compliance with relevant federal, state, and local statutes. Medical waste generated by the proposed project would be disposed of in accordance with the requirements of the Medical Waste Management Act. As a generator of medical waste, the proposed project would be required to register with the California Department of Public Health and file a Medical Waste Management Plan. Additionally, the project would be required to prepare a Hazardous Materials Business Plan (HMBP), which includes basic information about the location, types, quantities, and health risks of hazardous

materials stored, used, or disposed of at the site, as well as information about employee training and emergency response plans. The Medical Waste Management Plan and the HMBP would be prepared or updated and would include a complete list of the quantities and locations of the hazardous materials on site, as well as procedures and training for proper handling, storage, and disposal of these materials in compliance with all applicable laws and regulations. As noted previously all solid waste would be delivered to the MRF for sorting prior to disposal at the WRSL. Therefore, the impact is considered **less than significant**.

4.2.13 Mitigation Measures

None required.

4.2.14 Environmental Setting – Energy

The approximately 14-acre project site is currently developed with six buildings that comprise the Kaiser Permanente medical office complex located at 1001 Riverside Avenue, along with 613 surface parking spaces and landscaping. The project is served by Roseville Electric and Pacific Gas & Electric (PG&E) for natural gas.

Roseville Energy Park

The Roseville Energy Park (REP) The REP is a 160 megawatt natural gas fired power plant that utilizes the state-of-the-art combined cycle gas turbine (“CCGT”) technology — a technology recognized and selected by the California state legislature to serve as the Emission Performance Standard (“EPS”). The standard will be applied to base load resources located within the state of California and resources that ultimately produce the power that is imported into California. The REP went into service in October 2007, providing the cleanest fossil-fired energy possible from a facility of its size.

4.2.15 Regulatory Setting – Energy

Federal

Federal Energy Policy and Conservation Act

In 1975, Congress enacted the Federal Energy Policy and Conservation Act, which established the first fuel economy standards for on-road motor vehicles in the United States. Pursuant to the act, the National Highway Traffic Safety Administration is responsible for establishing additional vehicle standards. In 2010, fuel economy standards were set at 27.5 miles per gallon for new passenger cars and 23.5 miles per gallon for new light trucks. Fuel economy is determined based on each manufacturer’s average fuel economy for the fleet of vehicles available for sale in the United States.

Energy Independence and Security Act of 2007

On December 19, 2007, the Energy Independence and Security Act of 2007 was signed into law. In addition to setting increased Corporate Average Fuel Economy standards for motor vehicles, the act includes other provisions related to energy efficiency:

- Renewable fuel standard (RFS) (Section 202)
- Appliance and lighting efficiency standards (Sections 301–325)
- Building energy efficiency (Sections 411–441)

This federal legislation requires ever-increasing levels of renewable fuels to replace petroleum (Section 202, RFS). The U.S. Environmental Protection Agency (EPA) is responsible for developing and implementing regulations to ensure that transportation fuel sold in the United States contains a minimum volume of renewable fuel. The RFS program regulations were developed in collaboration with refiners, renewable fuel producers, and many other stakeholders.

State***Title 24 of the California Code of Regulations***

Title 24 of the California Code of Regulations was established in 1978 and serves to enhance and regulate California's building standards. Energy consumption by new buildings in California is regulated by the State Building Energy Efficiency Standards, included in Title 24. The efficiency standards apply to new construction of both residential and non-residential buildings, and regulate energy consumed for heating, cooling, ventilation, water heating, and lighting. The building efficiency standards are enforced through the local building permit process. Local government agencies may adopt and enforce energy standards for new buildings, provided these standards meet or exceed those provided in Title 24 guidelines. The standards are updated periodically to allow consideration and possible incorporation of new energy-efficiency technologies and methods. The premise for the standards is that energy-efficient buildings require less electricity, natural gas, and other fuels. The Title 24, Part 6, standards are updated every three years. The most recent amendments to Title 24, Part 6, referred to as the 2016 standards, will become effective on January 1, 2017 and will apply to the project. The 2016 standards focus on several key areas to improve the energy efficiency of newly constructed buildings and additions and alterations to existing buildings. The standards include efficiency improvements to the non-residential standards including alignment with the American Society of Heating and Air-Conditioning Engineers (ASHRAE) 90.1 2013 national standards. Title 24 also includes Part 11, known as California's Green Building Standards (CALGreen). The CALGreen standards took effect in

January 2011, and instituted mandatory minimum environmental performance standards for all ground-up, new construction of commercial, low-rise residential, and state-owned buildings, as well as schools and hospitals. The mandatory standards require:

- 20% mandatory reduction in indoor water use;
- 50% of construction and demolition waste must be diverted from landfills;
- Mandatory inspections of energy systems to ensure optimal working efficiency; and
- Low-pollutant emitting exterior and interior finish materials, such as paints, carpets, vinyl flooring, and particle boards.

The CALGreen standards also include voluntary efficiency measures that are provided at two separate tiers and implemented per the discretion of local agencies and applicants. CALGreen's Tier 1 standards call for a 15% improvement in energy requirements through more strict water conservation, 65% diversion of construction and demolition waste, 10% recycled content in building materials, 20% permeable paving, 20% cement reduction, and cool/solar reflective roofs. CALGreen's more rigorous Tier 2 standards call for a 30% improvement in energy requirements through even more strict water conservation, 75% diversion of construction and demolition waste, 15% recycled content in building materials, 30% permeable paving, 30% cement reduction, and cool/solar reflective roofs.

The 2013 CALGreen Code went into effect on July 1, 2014. There are a number of important updates in the 2013 code, such as: (1) an extensive update of California's Energy Code; (2) updated CALGreen-requirements for non-residential building alterations and additions; and (3) new plumbing code provisions pertaining to greywater and rainwater catchments.

Assembly Bill 1493

Adopted in 2002 by the state legislature, Assembly Bill (AB) 1493 ("Pavley" regulations) required that the California Air Resources Board (CARB) develop and adopt, no later than January 1, 2005, regulations to achieve the maximum feasible and cost-effective reduction of GHG emissions from motor vehicles.

It is expected that the Pavley regulations will reduce GHG emissions from California passenger vehicles by about 22% in 2012 and about 30% in 2016, all while improving fuel efficiency and reducing motorists' costs.

Executive Order B-16-12

Governor Brown issued Executive Order S-16-12 on March 23, 2012. The Executive Order requires that state entities under the governor's direction and control support and facilitate the

rapid commercialization of ZEVs. It orders CARB, the CEC, the CPUC, and other relevant agencies work with the Plug-in Electric Vehicle Collaborative and the California Fuel Cell Partnership to establish benchmarks to help achieve the following by 2015:

- The state's major metropolitan areas will be able to accommodate ZEVs, each with infrastructure plans and streamlined permitting;
- The state's manufacturing sector will be expanding ZEV and component manufacturing;
- The private sector's investment in ZEV infrastructure will be growing; and
- The state's academic and research institutions will be contributing to ZEV research, innovation and education.

CARB, the CEC, and CPUC, are also directed to establish benchmarks to help achieve the following goals by 2020:

- The state's ZEV infrastructure will be able to support up to one million vehicles;
- The costs of ZEV will be competitive with conventional combustion vehicles;
- ZEVs will be accessible to mainstream consumers;
- There will be widespread use of ZEVs for public transportation and freight transport;
- Transportation sector GHG emissions will be falling as a result of the switch to ZEVs;
- Electric vehicle charging will be integrated into the electricity grid; and
- The private sector's role in the supply chain for ZEV component development and manufacturing will be expanding.

Local

City of Roseville General Plan 2035

Applicable goals and policies from the *City of Roseville General Plan 2035* (City of Roseville 2016a) Public Facilities Element and Air Quality and Climate Change Element are listed below.

Public Facilities Element

Policy 10 Require new development to pay a fair share of the cost of new sub-transmission and distribution needed to serve the development and to dedicate sites and easements needed for substations, transmission, subtransmission, and distribution.

Air Quality and Climate Change Element

Goal 3 Encourage the coordination and integration of all forms of public transport while reducing motor vehicle emissions through a decrease in the average daily trips and vehicle miles traveled and by increasing the commute vehicle occupancy rate by 50% to 1.5 or more persons per vehicle.

Policy 7 Encourage alternative modes of transportation including pedestrian, bicycle, and transit usage.

Policy 10 Conserve energy and reduce air emissions by encouraging energy efficient building designs and transportation systems.

4.2.16 Impacts – Energy

Methods of Analysis

The project's consumption of energy is evaluated qualitatively.

Thresholds of Significance

Consistent with Appendix F of the CEQA Guidelines, the City's General Plan and professional judgment, a significant impact would occur if the proposed project would do any of the following:

- Result in wasteful, inefficient, or unnecessary consumption of energy.

Impact 4.2-9	Result in Wasteful consumption of energy
Applicable Policies and Regulations	City of Roseville General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Project construction will require grading, utility installation, foundation construction, building construction, paving, and landscaping installation. All construction is typical for the region and building type, and the project site does not include unusual circumstances that would require unusually high energy usage. For the finishing phase of construction, some electricity may be used (e.g., for power tools and work lighting). While this electricity usage cannot be quantified at this time, it is anticipated to be relatively minor compared to normal building operations. When not in use, electric equipment would be powered off so as to avoid unnecessary energy consumption. Natural gas would not be used during construction.

As described in Chapter 2, Project Description, the project has been designed to meet Kaiser Permanente's sustainability requirements, which include achieving LEED New Construction 2009 Gold certification and specific energy efficiency thresholds. The Energy Performance Requirement includes a minimum of 25% energy savings compared against ASHRAE 90.1 2007 Baseline. The project must also comply with the California Energy Code, Title 24. The project also includes an on-site pharmacy and laboratory which would reduce vehicle trips to get prescriptions filled or to get test results.

The proposed project would not consume a greater amount of energy in its operational phase than similar medical office building projects. Project operations would not result in the wasteful, inefficient, and unnecessary consumption of energy. Impacts would be considered **less than significant**.

4.2.17 Mitigation Measures

None required.

4.2.18 Cumulative Impacts

The cumulative context for water supply is buildout of the City's 2035 General Plan (City of Roseville 2016c), and the City's recently approved Amoruso Ranch Specific Plan project.

The cumulative context for wastewater treatment is buildout of the SPWA service area. This includes growth within the 2005 SAB, as well as planned future Urban Grown Areas that will create the ultimate service area boundary of the SPWA regional partners as documented in the SPWA Systems Evaluation report (City of Roseville 2009).

The cumulative context for solid waste is buildout of the City's 2035 General Plan (City of Roseville 2016a) as modified by the recently approved Amoruso Ranch Specific Plan (City of Roseville 2016c).

Impact 4.2-10	Cumulative Increase in Demand for Water Supply and Treatment Capacity
Applicable Policies and Regulations	City of Roseville General Plan Policies Urban Water Management Plan City of Roseville Water Conservation Ordinance
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Detailed information on the City's water supply and water demands are documented in the City's most recent 2015 UWMP (City of Roseville 2016b) and the citywide WSA completed for

the Amoruso Ranch Specific Plan EIR (City of Roseville 2016c). As documented in the WSA, at buildout of the City, water demand is expected to reach 64,366 AFY, which includes 4,715 AFY of recycled water. This projection is based on land use-based water demand projections documented in the City's General Plan through buildout. The City has contractual water supplies of 66,000 AFY under normal year conditions, but is limited by the City's Water Forum Agreement to 58,900 AFY under dry years. The City has future plans to purchase additional treated water from PCWA of no less than 1,500 AFY as part of the Ophir Water Treatment Plant project, which would bring the total surface water supply up to 60,400 AFY. When considering total available water supplies at buildout, supplies exceed demand by 749 AFY. Per the WSA, this is calculated by subtracting potable water demand of 59,651 AFY from available supplies 60,400 AFY (City of Roseville 2016c).

Per the WSA, the City would have sufficient water to meet projected water demands in addition to meeting the existing service area's planned future demands. The City does not need to obtain new water sources to serve the City at buildout. During single-dry years and certain multiple-dry years the demand that cannot be met with surface water supplies would be mitigated through a combination of demand reductions (water conservation) and groundwater pumping. The City does not anticipate the need to import water from other regions at any time through buildout of the General Plan. Because the City has sufficient supply to meet the water demand at buildout of the General Plan and does not anticipate the need to import water from other regions, this is considered a **less-than-significant cumulative impact**.

Impact 4.2-11	Cumulative Increase in Demand for Wastewater Treatment and Plant Capacity
Applicable Policies and Regulations	NPDES Permit
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Wastewater from the proposed project would be treated at the DCWWTP. As noted previously, the City prepared the South Placer Regional Wastewater and Recycled Water Systems Evaluation (City of Roseville 2009), which delineates the 2005 SAB and provides baseline and projected future demand for its regional wastewater and recycled water systems. The Systems Evaluation is also the long-term planning tool to project wastewater treatment needs and to identify necessary capital improvement projects to accommodate urban growth within the 2005 SAB. Buildout of the 2005 SAB, including rezones and land use intensifications, would result in 16.34 mgd ADWF at the DCWWTP. Under the ultimate SPWA boundary (the current 2005 Service Area plus anticipated Urban Grown Areas), the ADWF of the DCWWTP is estimated at 19.98 mgd ADWF (City of Roseville 2009, Table ES-6). The cumulative demand on

the DCWWTP from existing development, in addition to proposed new development, is considered a significant cumulative impact.

The demands for wastewater treatment have been factored into the City's long-range plans to provide these services. This includes growth not only within the 2005 SAB, but planned future Urban Growth Areas. The City's DCWWTP is designed to treat an ADWF of 18 mgd while implementing improvements needed to meet anticipated new NPDES permit regulations. The DCWWTP's NPDES Permit No. CA0079502/WDR No. R5-2014-0049 was renewed and approved on March 28, 2014. The proposed project's peak demand for wastewater treatment of .27 mgd would be comparatively small when viewed within the context of the entire SAB and the project's incremental contribution would not be cumulatively considerable; therefore, the project's contribution to this existing cumulative impact would be **less than significant**.

Impact 4.2-12	Cumulative Increase in Disposal of Solid Waste in the WRSL
Applicable Policies and Regulations	City of Roseville General Plan AB 939
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

Currently, the MRF has permitted processing capacity of up to 1,750 tons per day and the WRSL is permitted to accept up to 1,900 tons of waste per day through 2058. However, the need for processing capacity at the MRF and for a final closure date at the landfill would be influenced by several factors, including regional growth rates, economic conditions, and the efficiency of waste recovery. Depending on these factors, waste from the proposed project in combination with buildout of the City would eventually shorten the lifespan of the MRF and the landfill. This is considered a significant cumulative impact.

As discussed above, the City accounted for approximately 41% of the total waste received at the WRSL in 2015 (CalRecycle 2016c). The project would generate less than 1% of the total amount of solid waste received at the WRSL from the City. Additionally, the project site is already developed with commercial uses and use of the site for commercial purposes was previously assumed in the General Plan land use designations. Therefore, the project's anticipated incremental contribution to the existing cumulative impact is considered **less than significant**.

4.2.19 Mitigation Measures

None required.

4.3 TRANSPORTATION AND CIRCULATION

4.3.1 Introduction

This section describes the results of a transportation impact analysis conducted to evaluate potential transportation-related impacts of the proposed Kaiser Riverside-Cirby Medical Office Building Project (proposed project) on roadways, intersections, transit, bicycle, and pedestrian movements.

Comments received in response to the Notice of Preparation (NOP) included a comment letter from the California Department of Transportation (Caltrans) suggesting an analysis of the vehicle miles traveled (VMT) and calculations be included. The comment letter also recommends that the environmental impact report (EIR) analysis should evaluate opportunities to enhance multi-modal connectivity to the local street network to facilitate improved traffic conditions and to reduce potential traffic conflicts. The letter also notes that if any restrictions or detours are needed on state highways, a Traffic Management Plan (TMP) is required as well as an encroachment permit. Lastly, any increase in a 100-year storm event where surface water runoff occurs within a state highway right-of-way needs to be evaluated and mitigated to at or below pre-construction levels. The proposed project does not require any work within a state highway right-of-way; therefore, there would be no need to address the topic of a TMP, encroachment permit, or surface water runoff within a state highway right-of-way. Caltrans' other concerns are addressed below.

The City of Citrus Heights also issued an NOP comment letter expressing concern regarding the project's potential impacts on traffic operations along the Auburn Boulevard corridor and the planned Auburn Boulevard Complete Streets Project, Phase 2. Auburn Boulevard between the Roseville/Citrus Heights City Limits and Antelope Road is a five-lane arterial (two travel lanes in each direction separated by a two-way left-turn lane). According to the City of Citrus Heights count database (<http://www.citrusheights.net/DocumentCenter/View/1188>), Auburn Boulevard just south of the Roseville/Citrus Heights City limits carried 24,500 vehicles per day in May 2012, down from 27,500 vehicles per day in 2006. Exhibit 4.2-1 of the *Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan Final Environmental Impact Report* (City of Citrus Heights 2011) identifies this road segment as operating at LOS D.

Policy 29.2 of the *City of Citrus Heights General Plan* (adopted August 2011) specifies that the City will strive to achieve LOS E or better conditions for City roadways and intersections during peak hours. The intent of this policy is to effectively utilize the roadway network capacity while balancing the desire to minimize potential adverse effects of vehicle travel on the environment and other modes. Exceptions to the LOS E policy are allowed for certain roadway segments and intersections including Auburn Boulevard from Old Auburn Road to the northern City limits. At these locations,

further roadway widening is not allowed and operational improvements such as signal coordination/timing changes and turn lane lengthening are recommended for any potential impacts.

In 2014, Fehr & Peers conducted a traffic analysis that included the Auburn Boulevard/Antelope Road signalized intersection. This is a critical intersection along the Auburn Boulevard corridor between the City limits and Sylvan Road/Old Auburn Road because it provides freeway access to I-80 to the west and access to numerous retail uses along the Sunrise Boulevard corridor to the east. This intersection operated at LOS C during the AM peak hour and LOS D during the PM peak hour.

According to Figure 6 in the Final TIS (see Appendix D), approximately 25% of proposed project trips would be distributed to/from the south of Auburn Boulevard into the City of Citrus Heights. This would equate to the addition of approximately 940 project-added trips per day. This would cause the volume on this segment to increase from 24,500 to 25,440 vehicles per day. Based on the roadway segment LOS methodology (see Table 4-2.2 of *Citrus Heights General Plan Update and Greenhouse Gas Reduction Plan* Final EIR), operations would remain at an acceptable LOS D. Given the level of project-added traffic during peak hours, a similar conclusion would likely have been reached if intersections along this corridor were to have been studied.

Phase 2 of the Auburn Boulevard Complete Streets Project will address the area from Grand Oaks Boulevard to Whyte Avenue. According to the City of Citrus Heights website (at: <http://www.citrusheights.net/Faq.aspx?QID=165>), this project would consist of undergrounding utilities and various roadway improvements. Construction of this phase is several years away as the project requires significant right-of-way acquisition, design and engineering, and additional funding sources. Since the proposed project would not adversely affect traffic operations along Auburn Boulevard, there is no reason to expect that it would require a change in the design of its Complete Streets project. For the above reasons, these facilities were not included in the study area and are not further evaluated.

A copy of the NOP and comments received in response to the NOP are included in Appendix A.

Information referenced to prepare this section is based, in part, on review of existing documentation, including the *City of Roseville General Plan 2035* (City of Roseville 2016) and the draft *Transportation Impact Study for Kaiser Permanente Riverside Medical Office Expansion in Roseville, California* (Appendix D to this EIR).

4.3.2 Environmental Setting

This section describes the proposed project study area, including the surrounding roadway network and bicycle, transit, and pedestrian facilities in the site vicinity. The City of Roseville

(City) does not analyze roadway segments for level of service (LOS) or impacts to roadway segments for two reasons. First, the City's General Plan policies pertain to LOS at signalized intersections; no mention is made of roadways. Second, signalized intersections are the "critical nodes" that dictate the overall operation of the City's roadway system. In most instances, congestion or bottlenecks that develop on City streets are the result of capacity constraints at intersections, and not at roadway segments. Therefore, this analysis focuses on intersection operations as the basis for the roadway system impact analysis. The City has also historically relied on the weekday PM peak hour to characterize its street system operations and need for capital improvements because this hour generally represents the busiest hour of travel during a typical weekday.

LOS is a qualitative measure of traffic operating conditions whereby a letter grade, from A (the best) to F (the worst), is assigned. These grades represent the perspective of drivers and are an indication of the comfort and convenience associated with driving. In general, LOS A represents free-flow conditions with no congestion, and LOS F represents severe congestion with over-capacity conditions. The LOS at signalized intersections is based on the average delay experienced by all motorists travelling through the intersection, as described in the 2010 Highway Capacity Manual. For side-street stop-controlled intersections, the delay and LOS is based on the minor street movement with the greatest average delay. Table 4.3-1 relates the delay range for each LOS category for signalized and unsignalized intersections.

Table 4.3-1
Level of Service Thresholds – Intersections

Level of Service	Average Control Delay (seconds per vehicle)	
	<i>Signalized Intersections¹</i>	<i>Unsignalized Intersections</i>
A	≤ 10	≤ 10
B	> 10 to 20	> 10 to 15
C	> 20 to 35	> 15 to 25
D	> 35 to 55	> 25 to 35
E	> 55 to 80	> 35 to 50
F	> 80	> 50

Note:

¹ Delay values rounded to the nearest second and evaluated for LOS based on the above thresholds (i.e., 10 sec = LOS A).

Source: Appendix D

Study Area

The study area, which was developed in consultation with City Engineering Division staff, is based on the project's size, location, and generation/distribution of trips. The study area reflects the best professional judgment of the City's traffic engineering consultants and Engineering Division staff. The City has historically relied on the weekday PM peak hour to characterize its

street system operations and need for capital improvements because this hour generally represents the busiest hour of travel during a typical weekday. Accordingly, this study includes an analysis of project impacts associated with its typical weekday PM peak-hour operations. However, in recognition of the peaks in traffic associated with weekday AM peak-hour operations surrounding the project site, analysis of project impacts during this peak hour are presented as well. The study area includes the following 10 intersections in the southern area of the City, as well as 1 planned intersection. Figure 4.3-1 includes a map showing the project location and study intersections:

1. Cirby Way/Foothills Boulevard/Roseville Road
2. Cirby Way/Vernon Street
3. Cirby Way/Melody Lane
4. Cirby Way/Riverside Avenue
5. Cirby Way/Cirby Hills Drive/Kaiser North Driveway
6. Cirby Way/Orlando Avenue
7. Cirby Way/Sunrise Avenue
8. Riverside Avenue/Interstate 80(I-80) Westbound Ramps
9. Riverside Avenue/I-80 Eastbound Ramps/Orlando Avenue
10. Riverside Avenue/Kaiser West Driveway
11. Cirby Way/New Kaiser Driveway (future)

Although the City does not analyze roadway segments for LOS, the following nine roadway segments were selected to display the distribution of project traffic:

1. Foothills Boulevard – Vineyard Road to Cirby Way
2. Roseville Road – South of Cirby Way
3. North Sunrise Avenue – Coloma Way to Cirby Way
4. North Sunrise Avenue – South of Cirby Way
5. Cirby Way – Foothills Boulevard to Riverside Avenue
6. Cirby Way – Riverside Avenue to North Sunrise Avenue
7. Cirby Way – North Sunrise Avenue to Rocky Ridge Drive
8. Riverside Avenue – North of Cirby Way
9. Riverside Avenue – Cirby Way to I-80 Westbound Ramps

INTENTIONALLY LEFT BLANK

Additionally, the study area includes both directions of I-80 between Douglas Boulevard and Antelope Road based on a comment letter submitted by Caltrans on May 25, 2016.

The following describes the study time periods:

- Weekday AM Peak Hour: occurs between 7:30 to 8:30 a.m. at the majority of study intersections.
- Weekday PM Peak Hour: occurs between 4:45 to 5:45 p.m. at the majority of study intersections.

Roadway Network

The following describes key roadways in the study area (see Figure 4.3-1).

Regional access to the project site is provided by I-80 via an existing interchange with Riverside Avenue. The following arterial streets provide access to the site.

- **Riverside Avenue** is a north–south arterial that extends southerly from downtown Roseville into Citrus Heights, becoming Auburn Boulevard. Within the study area, it has a posted speed limit of 35 miles per hour (mph) with two travel lanes in each direction separated by a center median or channelized left-turn pockets.
- **Cirby Way** is an east–west arterial that extends from Foothills Boulevard through the City, ultimately becoming Old Auburn Road in Citrus Heights. Within the study area, it has a posted speed limit of 40 mph with two lanes in each direction separated by a two-way left-turn lane or channelized left-turn pockets.

Traffic signals along Cirby Way are coordinated to facilitate progression of through traffic.

Transit Network

The City operates both fixed-route busing and demand-responsive dial-a-ride services throughout much of the City. Bus stops are located in both directions of Cirby Way. The project site is served by the following bus routes:

Route A operates in a westbound loop starting at the Galleria Transfer Point at Galleria Mall, using Sunrise Avenue, Cirby Way, Riverside Avenue, and East Roseville Parkway. Route A operates Monday through Friday on approximately 30-minute headways from 6:00 a.m. to 6:30 p.m., and hourly headways thereafter until 9:53 p.m. On Saturday, Route A operates on 1-hour headways from 8:00 a.m. to 5:00 p.m. The nearest transit stops to the project site in the westbound direction are located directly across from the Medical Center along Cirby Way.

Route B operates in an eastbound loop starting at the Galleria Transfer Point at Galleria Mall, using Riverside Avenue, Cirby Way, Sunrise Avenue, and East Roseville Parkway. Route B operates Monday through Friday on approximately 30-minute headways from 6:10 a.m. to 6:40 p.m., and hourly headways thereafter until 9:43 p.m. On Saturday, Route B operates on 1-hour headways from 8:07 a.m. to 4:50 p.m. The nearest transit stops to the project site in the eastbound direction are located adjacent to the north of the Medical Center along Cirby Way.

Route R operates in a north–south direction, providing service primarily along Foothills Boulevard from the Louis/Orlando Transfer Point at Whyte Avenue/Riverside Avenue to Foothills Boulevard/Blue Oaks Boulevard. Route R operates Monday through Friday, with two northbound buses in the AM peak hour at 7:30 and 8:15 a.m. and two southbound buses in the AM peak hour at 7:52 and 8:37 a.m. In the PM peak hour, there are two northbound buses at 3:53 and 4:38 p.m. and two southbound buses at 4:15 and 5:00 p.m. The nearest transit stop to the project site in the northbound direction is at Cirby Way/Lindsay Drive, and the nearest transit stop in the southbound direction is at Whyte Avenue/Auburn Boulevard.

Bicycle and Pedestrian Facilities

A Class II bicycle lane (designated on-street with appropriate signing and striping) is provided in both directions of Foothills Boulevard north of Cirby Way, Cirby Way between Foothills Boulevard and Melody Lane (west of Riverside Avenue), Riverside Avenue between Cirby Way and the I-80 westbound ramps, and Orlando Avenue. Sidewalks are also present along the majority of the streets within the project vicinity. Sidewalks are not present along the south side of Cirby Way from Kaiser North Driveway to Orlando Avenue. At signalized intersections, crosswalks with push-button pedestrian activation are present. Figure 4.3-2 shows the bike and pedestrian facilities located near the project site. Crosswalks are provided at signalized intersections.

Existing Traffic Conditions

Peak-Hour Traffic Volumes

Traffic counts were obtained at most study intersections from the City's traffic count database in April 2015. However, given the importance of the Cirby Way/Riverside Avenue intersection to overall system operations, an additional set of traffic counts were conducted on Tuesday, October 13, 2015 (which were similar to the April 2015 results), and used in the study. Similarly, traffic counts collected at the two Kaiser driveways on Tuesday, October 13, 2015, were used. Schools were in session at the time of the counts and no unusual traffic conditions were observed. Figure 4.3-3 shows the resulting weekday AM and PM peak-hour traffic volumes, lane configurations, and traffic controls at each study intersection. Throughout the study area, the AM peak hour occurred from 7:30 to 8:30 a.m. and the PM peak hour occurred from 4:45 to 5:45 p.m.

INTENTIONALLY LEFT BLANK

INTENTIONALLY LEFT BLANK

Mainline freeway counts were obtained from Caltrans Performance Measurement System (PeMS) on the same day as the April 2015 traffic counts. This ensured that ramp volumes counted in April would be consistent with the freeway analysis mainline volumes.

Intersection Operations

Table 4.3-2 displays the existing weekday AM and PM peak-hour traffic operations analysis results at the 10 existing study intersections (refer to Appendix D for detailed calculations). As shown, the Cirby Way/Riverside Avenue intersection (Intersection #4) operates at LOS E during the AM and PM peak hours. During the PM peak hour, both side-street stop-controlled driveway movements departing the project site (i.e., at Intersections #5 and #10) operate at LOS F. During the AM peak hour, the movement departing the project site by means of the Kaiser North Driveway (i.e., at Intersection #5) operates at LOS F as well.

Table 4.3-2
Intersection Level of Service – Existing Conditions

Intersection	Control	AM Peak Hour		PM Peak Hour	
		Average Delay ¹	LOS ¹	Average Delay ¹	LOS ¹
1. Cirby Way/Foothills Boulevard/Roseville Road	Traffic Signal	26	C	31	C
2. Cirby Way/Vernon Street	Traffic Signal	29	C	47	D
3. Cirby Way/Melody Lane	Traffic Signal	10	B	13	B
4. Cirby Way/Riverside Avenue	Traffic Signal	63	E	56	E
5. Cirby Way/Cirby Hills Drive/Kaiser North Driveway	SSSC	7 (59)	A (F)	7 (85)	A (F)
6. Cirby Way/Orlando Avenue	Traffic Signal	15	B	14	B
7. Cirby Way/Sunrise Avenue	Traffic Signal	48	D	56	E
8. Riverside Avenue/I-80 WB Ramps	Traffic Signal	23	C	22	C
9. Riverside Avenue/I-80 EB Ramps/Orlando Avenue	Traffic Signal	24	C	31	C
10. Riverside Avenue/Kaiser West Driveway	SSSC	8 (28)	A (D)	6 (50)	A (F)

Notes:

EB = Eastbound

WB = Westbound

SSSC = Side-street stop-control.

All intersections are analyzed in SimTraffic.

¹ Average delay (rounded to the nearest second) and LOS for signalized intersections is the weighted average for all movements. Average delay and LOS at SSSC intersections shown for both worst-case side street movement (in parentheses) and intersection as a whole.

Source: Appendix D

Roadway Operations

Table 4.3-3 summarizes the average daily traffic (ADT) on roadway segments surrounding the project site under existing conditions. This data was obtained from the City's traffic count database and represents conditions in April 2015. As shown, the Riverside Avenue segment from Cirby Way to I-80 westbound ramps currently carries the greatest volume of traffic through the project area with 44,400 daily vehicles. Cirby Way from Foothills Boulevard to Riverside Avenue carries the second greatest number of daily vehicles through the project area with 40,400 daily vehicles.

Table 4.3-3
Roadway Average Daily Traffic – Existing Conditions

Roadway Segment	Number of Lanes	Existing Conditions
Foothills Blvd. – Vineyard Road to Cirby Way	5	38,100
Roseville Road – South of Cirby Way	2	27,600
North Sunrise Ave. – Coloma Way to Cirby Way	4	37,400
North Sunrise Ave. – South of Cirby Way	4	34,700
Cirby Way – Foothills Blvd. to Riverside Ave.	4	40,400
Cirby Way – Riverside Ave. to North Sunrise Ave.	4	31,500
Cirby Way – North Sunrise Ave. to Rocky Ridge Dr.	4	23,700
Riverside Ave. – North of Cirby Way	4	16,600
Riverside Ave. – Cirby Way to I-80 WB Ramps	6	44,400

Source: City of Roseville 2015; Appendix D.

Freeway Operations

Table 4.3-4 displays the existing AM and PM peak-hour traffic operations analysis results at study freeway facilities (refer to Appendix D for detailed calculations). As shown, all eastbound I-80 freeway facilities operate at LOS C or better, while all westbound I-80 freeway facilities operate at LOS D or better.

Table 4.3-4
I-80 Freeway Level of Service – Existing Conditions

Freeway Facility	Type	AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS
Eastbound I-80					
Antelope Rd to Riverside Ave	Basic	14.6	B	13.5	B
Riverside Ave Off-Ramp	Diverge	9.2	A	11.9	B
Riverside Ave On-Ramp	Merge	22.3	C	19.6	B
Riverside Ave to Douglas Blvd	Basic	17.5	B	14.4	B

Table 4.3-4
I-80 Freeway Level of Service – Existing Conditions

Freeway Facility	Type	AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS
Douglas Blvd Diagonal Off-Ramp	Diverge	12.6	B	9.6	A
Douglas Blvd Loop Off-Ramp	Diverge	18.2	B	14.8	B
<i>Westbound I-80</i>					
Douglas Blvd Diagonal On-Ramp	Merge	25.8	C	32.7	D ²
Douglas Blvd Loop On-Ramp	Merge	26.7	C	32.0	D ²
Douglas Blvd to Riverside Ave	Basic	23.4	C	31.5	D
Riverside Ave Off-Ramp	Diverge	28.8	D	33.8	D
Riverside Ave Loop On-Ramp	Basic ¹	15.8	B	19.7	B
Riverside Ave Diagonal On-Ramp	Merge	16.3	B	22.5	C
Riverside Ave to Antelope Rd	Basic	19.5	C ³	25.3	C

Notes:

¹ On-ramp falls out of the realm of a merge segment and is thus analyzed as a basic segment.

² During the PM peak hour, these on-ramps serve large volumes of traffic. Despite being metered at each ramp, their close spacing and curvature of I-80 causes slow-downs.

³ During the AM peak hour, traffic congestion originating from the I-80/Capital City Freeway interchange can occasionally spill back to this segment, causing congestion. The queue spillbacks occur sporadically, caused both by recurring and non-recurring (i.e., accidents, weather, etc.) congestion.

Source: Appendix D

4.3.3 Regulatory Setting

There are no federal traffic regulations applicable to this proposed project.

State Regulations

California Department of Transportation

Caltrans' *Transportation Concept Report* (TCR) serves as the long-range transportation planning document to evaluate project impacts based on changes to a facility's LOS in comparison to the concept LOS identified in the TCR. The TCR defines Caltrans' goal for the development of the transportation corridor in terms of LOS and type of facilities, and broadly identifies the improvements needed to reach those goals. The minimum level of acceptability set forth in the TCR for I-80 is a LOS E standard.

Regional Regulations

Metropolitan Transportation Plan

The Sacramento Area Council of Governments (SACOG) is responsible for preparing the Metropolitan Transportation Plan (MTP). The MTP is a 28-year plan for transportation improvements in the six-county region, based on projections for growth in population, housing, and jobs.

Ensuring convenient access to jobs, school, entertainment, recreation, and critical services such as banking, medical care, and shopping will require a transportation system of roads, transit, bikeways, and sidewalks to manage a community's diverse needs.

SACOG is the Metropolitan Planning Organization responsible for developing the state and federally required MTP every 4 years, in coordination with the 22 cities and 6 counties in the greater Sacramento region. Under memoranda of understanding, long-range transportation plans in El Dorado and Placer Counties are also incorporated into the MTP.

Federal law requires the MTP to conform to air quality goals for the region, satisfy financial constraints such that all proposed projects can be reasonably funded, and undergo extensive public review. State law further requires that the MTP process include careful environmental analysis and review.

The MTP 2036 is the first MTP for the Sacramento region to proactively link land use, air quality, and transportation needs, as required by Senate Bill (SB) 375. Development of the MTP 2036 included an 18-month public priority-setting process to identify a list of transportation improvement projects to best meet the needs of the region as a whole.

Local Regulations

City of Roseville 2030 General Plan

The following goals and policies from the City's General Plan Circulation Element are applicable to the proposed project's transportation and circulation.

Level of Service

Goal 1 Maintain an adequate level of transportation service for all of Roseville's residents and employees through a balanced transportation system, which considers automobiles, transit, bicyclists, and pedestrians.

- Policy 1** Maintain a level of service (LOS) “C” standard at a minimum of 70 percent of all signalized intersections and roadway segments in the City during the p.m. peak hours. Exceptions to the LOS “C” standard may be considered for intersections where the City finds that the required improvements are unacceptable based on established criteria identified in the implementation measures. In addition, Pedestrian Overlay Districts are exempted from the LOS standard.
- Policy 2** Strive to meet the level of service standards through a balanced transportation system that reduces the auto emissions that contribute to climate change by providing alternatives to the automobile and avoiding excessive vehicle congestion through roadway improvements, Intelligent Transportation Systems, and transit improvements.

General Plan LOS Policy

It is the underlying goal of the entire Circulation Element of the City’s General Plan that the City’s circulation system promotes the following: (1) the safe, efficient, and reliable movement of people and goods; (2) shift from the single-occupant automobile to other modes of transportation; and (3) provide an adequate level of transportation service for all persons traveling in and through Roseville.

As noted above, the City’s LOS policy calls for maintenance of an LOS C standard at a minimum of 70% of all signalized intersections in the City during the AM and PM peak hour. The determination of project consistency with this policy is based on buildout of currently entitled land within the City cumulative market rate development outside of the City.

This LOS policy embodies the City’s commitment to an efficient, functional transportation system, but reflects an acknowledgement that some amount of congestion beyond LOS C during peak commute conditions is inevitable in an area supporting urban land use densities and intensities of use. The City believes the policy strikes an appropriate balance, given the adverse environmental and social consequences that are often associated with constructing these kinds of road improvements, such as additional lanes, that would be needed to maintain LOS C at all times. The creation of new pavement for such improvements can translate into biological and cultural resource impacts, lost homes and businesses, and a road system with streets so wide as to intimidate pedestrians and cyclists and render walking and bicycling less pleasant and a more dangerous means of travel than they otherwise would be.

The City’s Circulation Element explains how the City arrived at this balanced policy result after conducting the traffic modeling needed to ascertain what traffic levels will be at City buildout and reasonably foreseeable development levels outside of the City using “market based” land use growth projections. The text explains that the City has established LOS C as the goal for both the

General Plan and the development of Citywide traffic impact fees, but that the policy has been structured to allow the City, on a case-by-case basis, to allow exceptions to the LOS C standard.

City of Roseville Transportation Systems Management Ordinance

The purpose of the City's Transportation Systems Management (TSM) program is to develop an integrated and cooperative approach between the City and the business community to promote alternative transportation options to reduce traffic congestion and to improve the air quality in the Roseville area. The TSM program applies to businesses or common work locations (such as office building/complex, commercial/retail center, or industrial building/park) with 50 or more employees. The City's TSM requirements are located in Chapter 11.33 of the Roseville Municipal Code.

The goals and intent of the TSM program are to:

- Reduce total vehicle emissions in the City by reducing the number of vehicular trips that might otherwise be generated by home-to-work commuting.
- Reduce peak-hour traffic circulation in the City by reducing both the number of vehicular trips and the vehicular miles traveled that might otherwise be generated by home-to-work commuting by a minimum of 20%.
- Increase the efficiency of the existing transportation network in the City.
- Promote an integrated and cooperative approach between the City and the business community to promote alternative transportation opportunities and improve the air quality in Roseville.
- Cooperate and coordinate with other cities, counties, communities, and regional agencies in these endeavors.

Typical measures included in a TSM include the provision of bicycle lockers and on-site shower facilities, workplace ride-share programs, and employee education and incentive programs to use alternative transportation.

Traffic Mitigation Fee Programs

The City currently participates in four traffic mitigation fee programs to fund capital projects in Roseville and South Placer. The funding for those improvements is nexus based and is designed to fund improvements included within the City's fee programs. The traffic mitigation fees are collected by the participating agencies at building permit issuance. Per the various agreements that established the traffic mitigation fee programs, the payment of fees in lieu of improvements has been determined to be acceptable mitigation for any impacts caused by a project.

Long-Range Transit Master Plan

The City has worked with the Placer County Transportation Planning Agency (PCTPA) and surrounding jurisdictions to develop the *Transit Master Plan for South Placer County*, which is a long-range transit plan document, intended to guide the growth of transit services within the City and the surrounding jurisdictions in Placer County through the planning horizon of 2030–2040. The PCTPA Board adopted the plan and a guide template for services, which includes increased services and a new bus rapid transit program in response to anticipated development.

Bicycle Master Plan

The City's General Plan calls for the development of a comprehensive bikeway system that would provide connections between the City's major employment and housing areas and between existing and planned bikeways. The bicycle master plan was last updated in 2008 and the next update is scheduled to begin in 2017. It provides guidelines for the development of a City-wide network of bicycle facilities and design standards for new bicycle facilities in Roseville.

The *City of Roseville Bikeway Master Plan* (City of Roseville 2008) includes the following policies that are relevant to the proposed project:

- Support facilities that encourage bicycling should, to the extent feasible, be made a standard component of all new public and private projects.
- Provide short-term bike parking (bike racks) conveniently located at businesses entrances and safe, secure long-term covered bike parking (lockers, cages, rooms) at employment sites.
- Promote showers and changing facilities at major employment sites.
- Where construction operations occur near Class II or III bikeways, the developer/contractor will be responsible for maintaining clear and clean paths of travel.
- Street maintenance overlay projects and other construction projects within the public right-of-way and along designated bikeways shall be reviewed for conformance with the Bicycle Master Plan. Where existing facilities are not in conformance with the Bicycle Master Plan and current City standards, the facilities may be brought up to standards where determined feasible by the Public Works Director/City Engineer.
- Construction projects within public right-of-way should address bicycle safety and movement per federal, state, and local standards.

Pedestrian Master Plan

The *City of Roseville Pedestrian Master Plan* (City of Roseville 2011) was adopted by the City Council to establish policies, projects, and programs that improve the pedestrian system in Roseville and increase walking for transportation, recreation, and health. The Pedestrian Master Plan includes goals, policies, and implementation measures for pedestrian improvements and programs; a recommended pedestrian network; and a Capital Improvements Program (CIP) that establishes a 20-year framework for improvements to the pedestrian environment.

The Pedestrian Master Plan includes the following policies that are relevant to the proposed project (City of Roseville 2011):

- Provide continuous and direct pedestrian connections between residential areas, schools, shopping areas, public services, employment centers, parks, and public transit stops.
- Include sidewalks in the planning and design of all new, reconstructed or widened streets. Sidewalks should be installed on both sides of the street, unless circumstances call for an exception.
- Improve pedestrian crossings in areas of high pedestrian activity, where pedestrian collision trends are identified, or where safety is otherwise identified by the City of Roseville as an issue.
- Sidewalks and street crossings should provide access for all people, regardless of physical abilities, consistent with the Americans with Disabilities Act and ADA Transition Plan.

4.3.4 Impacts

Methods of Analysis

Project Access

Currently, access to the site is provided by the following two driveways:

- Kaiser West Driveway is situated on Riverside Avenue about 275 feet¹ north of the I-80 westbound off-ramp/Riverside Avenue intersection and 510 feet south of the Cirby Way/Riverside Avenue intersection. It is restricted to right-turns only by a raised median on Riverside Avenue.
- Kaiser North Driveway permits all turning movements with the exception of outbound left- and through movements from the Kaiser driveway. “Right Turn Only” signs are posted to advise motorists of this turning movement restriction. This driveway is situated

¹ Dimensions are referenced from the driveway centerline to the near curb return of the nearest intersection.

about 675 feet east of the Cirby Way/Riverside Avenue intersection. However, the distance is about 800 feet when measured from intersection centerline to centerline.

With the proposed expansion, access would be provided as follows:

- Kaiser West driveway on Riverside Avenue would remain as a right-turn-only driveway, but would be relocated 40 feet to the south.
- Kaiser North driveway on Cirby Way would be signalized (allowing all turning movements) and coordinated with other traffic signals along Cirby Way.
- New Kaiser driveway would be a new right-turn-outbound-only driveway that would be located about 260 feet east of the Cirby Way/Riverside Avenue intersection.

Project Travel Characteristics

This section describes the project's expected travel characteristics, including the number of trips it would generate, the distribution of those trips, and the resulting travel routes. Table 4.3-5 displays the existing and proposed land uses, and the number of existing and proposed health care providers. As shown, the proposed project would increase the total square footage of the site by 133%. However, the number of health care providers would increase by 100%, meaning there would be fewer health care providers per square foot. This is part of the applicant's overall objective to "decompress" the campus by providing more building space per provider.

Table 4.3-5
Proposed Kaiser Permanente Riverside Medical Offices Land Use Information

Quantity	Existing	Proposed	Percent Change
Building Size	90,290 sq. ft. (Occupied)	210,000 sq. ft. (Total)	130% increase
Health Care Providers	71	142	100% increase
Health Care Providers Per Square Foot	1 per 1,272 sq. ft.	1 per 1,462 sq. ft.	15% decrease

Note: Buildout land uses from *Riverside Cirby MOB*, HOK Inc., 2016.

Source: Appendix D

Trip Generation

Traffic counts were conducted on Tuesday, October 13, 2015, at the two driveways serving the existing project site. Kaiser administrators report that October is generally one of their busier months in terms of patient visitation. Therefore, counts are considered representative of average, if not somewhat above-average conditions, in terms of patient visitation. Table 4.3-6 displays the number of AM and PM peak-hour trips generated by the project on this day. During the AM peak hour, 82% of trips were inbound. During the PM peak hour, 75% of trips were outbound.

Table 4.3-6
Trip Generation of Existing Kaiser Permanente Riverside Medical Offices

Facility	ksf	Trip Rates (per ksf)		Trips	
		AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
Kaiser Permanente Riverside Medical Office	90.29	3.87	5.07	349 ¹	458 ¹
Medical Office ITE Rate	90.29	3.5 ²	4.27 ²	316	386
Difference Versus ITE Trip Rates				+33	+72

Notes: ksf = thousand square feet

¹ Traffic counts collected on Tuesday, October 13, 2015. Trip generation during peak hour of adjacent street traffic (7:30 to 8:30 AM and 4:45 to 5:45 PM) is reported.

² Based on trip rates contained in the *Trip Generation Manual* (ITE 2012) for the Medical-Office Land Use Category (720).

Source: Appendix D

The project site's observed trip generation was compared against its expected trip generation using the Medical-Office Land Use Category from the *Trip Generation Manual* (ITE 2012). Table 4.3-6 indicates that the existing facility generates 33 more AM peak hour trips and 72 more PM peak hour trips than would be expected using ITE trip rates. This represents an 11% increase in the AM peak hour and a 19% increase during the PM peak hour. The fact that the observed trip rate was higher than the expected rate from ITE is not surprising given that the site currently has a higher than typical density of health care providers.

Table 4.3-7 displays the AM and PM peak hour trip generation of the proposed project. Although the project's size would increase by 130%, its number of providers would double (i.e., increase by only 100%). The number of health care providers is considered the most appropriate independent variable for use in estimating trips because it relates directly to the number of employees who would work at the site as well as the number of patients who would visit the site to receive medical services. As shown in Table 4.3-7, the proposed project would result in the campus generating twice as many trips as currently occur.

Table 4.3-7
Trip Generation of Proposed Kaiser Permanente Riverside Medical Offices

Facility	ksf	Health Care Providers	Trip Rates (per ksf)		Trips	
			AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
Existing Medical Office	90.29	71	3.87	5.07	349 ¹	458 ¹
Proposed Medical Center	210	142	3.23 ²	4.37 ²	698	917
Net Increase in Trips					+349	+458

Notes:

ksf = thousand square feet

¹ Traffic counts collected on Tuesday, October 13, 2015. Trip generation during peak hour of adjacent street traffic (7:30 to 8:30 a.m. and 4:45 to 5:45 p.m.) is reported.

² Trip rate associated with proposed expansion calculated by dividing total trips by square footage. However, as noted previously, trip generation is based on the increase in health care providers, which dictate both the number of on-site employees and patient visits.

Source: Appendix D

The daily trip generation of the existing operations on the project site was calculated to be 3,753 trips, as follows:

- Combined AM/PM peak-hour trip rates of existing project versus Institute of Traffic Engineers (ITE) trip rates: $3.87 + 5.07 = 8.94$ versus $3.5 + 4.27 = 7.77$ (trips counts) is a 15% increase over ITE rates.
- ITE daily trip rate of 36.13 increased by 15% to yield 41.57 trips per thousand square feet (ksf).
- Daily trip generation = $90.29 \text{ ksf} \times 41.57 \text{ trips per ksf} = 3,753 \text{ daily trips}$.

Since the proposed project would double the number of health care providers, it would result in an additional 3,753 daily trips. Thus, at project buildout, the campus would generate 7,504 daily trips, a net increase of 3,751 daily trips.

Trip Distribution/Assignment

Figure 4.3-4 shows the existing/observed trip distribution of the existing project. These percentages were derived based on driving turning movement volumes and origin-destination surveys of trip patterns from the Kaiser West driveway that extended through the Cirby Way/Riverside Avenue intersection. As shown, nearly half of inbound traffic enters the Kaiser West Driveway after passing through the I-80/Riverside Avenue interchange. In contrast, 64% of outbound trips travel east on Cirby Way (over I-80) due to the prohibitions of outbound left-turns at the Kaiser North Driveway and U-turns on northbound approach at the Cirby Way/Riverside Avenue intersection.

Figure 4.3-5 shows the expected distribution of inbound and outbound project trips under Existing Plus Project conditions. The distribution percentages consider the following:

- As part of the proposed project, a new traffic signal would be installed on Cirby Way at the Kaiser North Driveway. The new signal would permit all turning movements, but prohibit eastbound U-turns. The northbound approach would consist of a shared left/through lane, and two right-turn lanes, each having 250 feet of storage. The expected effect of this new signal is a shift in outbound traffic away from the Kaiser West Driveway as motorists would be able to pass through the Cirby Way/Riverside Avenue intersection to access the I-80/Riverside Avenue interchange.

- The Kaiser West Driveway would be relocated 40 feet to the south and would continue to permit right-turns only.
- The new Kaiser Driveway would permit outbound right-turns only. In addition, as noted above, the traffic signal at the Cirby Way/Kaiser North Driveway would prohibit eastbound U-turns. By prohibiting this movement, all vehicles exiting this driveway would travel eastbound on Cirby Way across I-80.
- Driveway usage considers the location of parking within the proposed Medical Center.
- The distribution of trips along Cirby Way and Riverside Avenue is based on existing travel patterns and complementary land uses.

Figure 4.3-5 illustrates the net increase in trips caused by the project. The proposed traffic signal on Cirby Way at the Kaiser North Driveway would not only affect the distribution of new project trips, but also change the distribution/routes of existing Kaiser trips, as described below:

- The inbound trip distribution percentage exhibit (Figure 4.3-5) shows 20% of trips arriving from the east along Cirby Way (from Sunrise Avenue). In contrast, the outbound trip distribution percentage shows only 2% of project trips using this route. This difference is caused by the introduction of a traffic signal, which would allow motorists to more easily travel southbound on Auburn Boulevard into Citrus Heights and unincorporated Sacramento County. Currently, due to a variety of turn movement restrictions along Cirby Way (e.g., eastbound U-turns prohibited at Orlando Avenue), these movements are primarily made via Sunrise Avenue.

Figure 4.3-5 should not be interpreted as to imply that only 2% of outbound project trips (1 out of 50 cars) travel eastbound on Cirby Way toward Sunrise Avenue; this number reflects the *net change*, not the total amount of trips. While many new trips would be made using this route, the reconfiguration of access options would cause many existing users to switch to alternate routes.

SimTraffic Model Calibration

All study intersections were analyzed using the SimTraffic micro-simulation model. It is critical that the SimTraffic microsimulation model be adequately validated to existing conditions to accurately predict “plus project” conditions. Model validation typically consists of measures relating to volume served, queue lengths, and average travel time. Given the modest size of the study area but moderate levels of congestion, volume served and vehicle queueing are considered the most important validation parameters. See Appendix D for more specifics on the SimTraffic model.

INTENTIONALLY LEFT BLANK

INTENTIONALLY LEFT BLANK

Transit System

The proposed project would improve access to transit by constructing the following improvements:

- A pedestrian linkage would be constructed within the project site to directly connect to the existing bus stop on the south side of Cirby Way directly east of Riverside Avenue.
- As part of the new signalized intersection on Cirby Way at the Kaiser North Driveway, a crosswalk would be constructed on the east leg. This crosswalk would include push-button pedestrian actuation, which would enable protected crossings between the bus stop located on the north side of Cirby Way directly east of the driveway and the project site.

Furthermore, the proposed project has been reviewed by the City's Alternative Transportation Division, and was not found to have any negative impacts on transit operations, travel times, and/or circulation.

Bicycle/Pedestrian Facilities

The *City of Roseville 2008 Bikeway Master Plan* shows the recommended bicycle network in the project vicinity. Key components of this network include:

- Future Class II bicycle lanes along Cirby Way, connecting it from Foothills Boulevard to Rocky Ridge Drive.
- Future Class II bicycle lanes along Riverside Avenue north of Cirby Way.

Class II bike lanes do not currently exist along Cirby Way along the project frontage. City Public Works Department staff do not recommend that a Class II bike lane be constructed along the project frontage at this time (as part of the reconstruction of Cirby Way from east of Riverside Avenue to the new signalized driveway to improve sight distance), because such a facility would not connect with any other continuous bike lanes. If and when the City does decide to add bike lanes to Cirby Way east of Riverside Avenue, it would be a more comprehensive addition of bike lanes on both sides of the road and for a longer section of roadway than just the Kaiser frontage. This would most likely occur the next time Cirby Way is overlaid and needs to be restriped. The frontage design of the proposed project is designed to accommodate future restriping to include Class II bicycle lanes, and thus does not conflict with the policies and guidelines of the City's Bikeway Master Plan.

Vehicle Miles Traveled (VMT)

The Caltrans NOP comment letter requested a comprehensive analysis of VMT, including the site's current VMT and VMT associated with its expansion. The letter states that VMT estimates should consider reductions in travel associated with transit use, ridesharing, and active

transportation, and should include appropriate documentation. Lastly, the letter recommends that “mitigation for any roadway section or intersection with increasing VMT should be identified and mitigated as possible.” The proposed project would generate an estimated 16,298 VMT on a typical weekday.

VMT is considered a useful metric in understanding the overall impacts of a project on the transportation system. VMT is often expressed on a “per capita” or “per employee” basis to understand the relative efficiency of one project versus another. Whereas VMT per employee or per capita are commonly used for residential and office projects, neither ratio is applicable for medical office projects. This is because the proposed project consists of trips made by employees, members, deliveries, and even visitors. On a given weekday, it is not known precisely how many employees and patients may be on site. Therefore, VMT ratios are not calculated in this study.

By definition, one VMT occurs when a vehicle is driven 1 mile. In addition, a given VMT value represents vehicular miles of travel for an entire weekday. Lastly, VMT values in this chapter represent the full length of a given trip, and are not truncated at city, county, or region boundaries.

To estimate the project’s VMT, the model-wide change in VMT was calculated by summing all travel on all roadways within the model. This approach enables a change in trip origin or destination (in response to the campus expansion) to be reflected.

To the extent that the existing campus has trips made by ridesharing, transit, bicycling, or walking, they are considered in the VMT estimate because it is derived from the campus’ observed vehicular trip rates. Thus, this analysis meets the Caltrans’ request that VMT reductions associated with these modes be considered.

Table 4.3-16 displays the analysis results for the proposed project. As shown, the project would generate an estimated 16,298 VMT on a typical weekday. Appendix D provides a more detailed overview of the VMT calculations for the project.

Table 4.3-16
Weekday Vehicle Miles Traveled

Land Use	Model-Wide No Project VMT	Model-Wide Plus Project VMT	Project Related VMT
Proposed Medical Center Expansion	73,973,726	73,990,024	16,298

Source: Appendix D

As shown on Table 4.3-16, all roadways within the study area would experience increased ADT as a result of the proposed project. The Caltrans comment letter recommends that mitigation be considered for any roadway facility with increasing VMT. However, this suggestion is not

consistent with the City's adopted standards of significance for traffic analysis under CEQA, which are supported by City General Plan circulation policies. Furthermore, this suggestion is not supported by the *I-80 and Capital Freeway Corridor System Management Plan* (Caltrans 2009). Neither the General Plan nor the *I-80 and Capital Freeway Corridor System Management Plan* calls for mitigating increased VMT regardless of the level of traffic on a given roadway.

Issues Addressed in the Initial Study

The Initial Study prepared for the project (see Appendix B) determined that because the proposed project has been designed in compliance with City Engineering and the Fire Department standards to ensure emergency access meets current standards impacts to emergency access would be less than significant. In addition, because the project site is not located near agricultural areas or other potentially incompatible uses and does not include any existing potentially hazardous design features that would exacerbated by the project impacts due to existing design hazards and incompatible uses are also considered less than significant.

The Initial Study also found that because the project site is not located within an airport planning area or within any height restriction area established around an airport for the purpose of protecting navigable airspace, there would be no impacts to changes in air traffic patterns. All of these issues are not further addressed.

Thresholds of Significance

The City's LOS policy calls for maintaining an LOS C standard at a minimum of 70% of all signalized intersections in the City during the AM and PM peak hour. The City Council, following a public hearing, may determine, on a case-by-case basis that "extraordinary" improvements are not feasible or desirable and may relax the LOS C standard for a particular intersection.

The Roseville City Council approved the Amoruso Ranch Specific Plan in 2016 along with several important changes in how the City analyzes intersections and measures the adequacy of their operations. Specifically, as part of the *Amoruso Ranch Specific Plan Final Transportation Impact Study* (Fehr & Peers 2016), the following changes in analysis methods, horizons, and analysis periods were made:

1. Replacing the *Interim Materials on Highway Capacity – Circular 212* (Transportation Research Board 1980) methodology to analyze signalized intersections with the more state-of-the-practice *Highway Capacity Manual* (Transportation Research Board 2010) methodology.
2. Updating the 2025 CIP travel demand model to reflect a new 2035 CIP condition.

3. Expanding the General Plan LOS policies to include weekday AM peak-hour conditions, in addition to PM peak hour.

Since the City Council approved the Amoruso Ranch Specific Plan and its corresponding changes in analysis methods and time periods, the City's General Plan now reflects a revised list of intersections that would operate at LOS D or worse during the weekday AM and PM peak hours. The following study intersections would operate at LOS D or worse under Cumulative Plus Project conditions (using Highway Capacity Manual intersection analysis methods) during the AM and PM peak hours:

AM Peak Hour

- Cirby Way/Sunrise Avenue (LOS D)
- Cirby Way/Foothills Boulevard (LOS F)
- Cirby Way/Riverside Avenue (LOS D)
- Cirby Way/Vernon Street (LOS D)

PM Peak Hour

- Cirby Way/Sunrise Avenue (LOS E)
- Cirby Way/Foothills Boulevard (LOS E)
- Cirby Way/Riverside Avenue (LOS F)
- Cirby Way/Vernon Street (LOS E)
- Riverside Avenue/Orlando/I-80 Eastbound Off-Ramp (LOS E)
- Riverside Avenue/I-80 Westbound Ramps (LOS F)

Freeway Facilities

According to the *Interstate 80 and Capital Freeway Corridor System Management Plan* (Caltrans 2009), Caltrans has identified the route concept LOS² for the following segments:

- LOS F for I-80 from Riverside Avenue/Auburn Boulevard (Sacramento/Placer County Line) to Sierra College Boulevard.
- LOS F for I-80 from State Route 51 (Capital City Freeway) to Riverside Avenue/Auburn Boulevard (Sacramento/Placer County Line).

² The Transportation Concept Report is a Caltrans long-term planning document that evaluates the conditions of a given state highway (route) and establishes a concept (vision) of how that facility should operate.

LOS E or better conditions are desired when feasible but LOS F conditions are likely to occur in the study area under no build conditions, as recognized by the concept LOS thresholds. The LOS E threshold will be used to identify minimum acceptable operations (that is, deficiencies) and potential impacts to state highway mainline segments, ramp junctions, weaving segments, and ramp terminal intersections. For locations with LOS F under the no project condition, an impact would occur if the project would worsen the LOS F condition based on the applicable quantitative performance measure associated with the specific type of facility.

The following thresholds of significance have been used to determine whether implementing the proposed project would result in a significant transportation or circulation impact. These thresholds of significance are derived from questions posed in Appendix G of the California Environmental Quality Act (CEQA) Guidelines, thresholds of significance adopted by the City in the General Plan and previous environmental documents, and professional judgment. For purposes of this study, a significant impact would occur if the proposed project would:

Roadway System

- Cause a signalized intersection in Roseville to be degraded as follows under existing or 2035 CIP conditions during the AM or PM peak hours:
 - For intersections currently operating at LOS C or better: Worsen operations to LOS D or worse.
 - For intersections that currently operate at less than LOS C: Cause operations to further worsen by one or more service levels.
 - For intersections that currently operate at LOS F: Cause intersection delay to worsen by 12.5 seconds or greater.
- Cause the overall percentage of signalized intersections throughout the City operating at LOS C or better during the AM and PM peak hours to fall below 70%.

Freeway System

- Cause a facility maintained by Caltrans to worsen from acceptable to unacceptable during the AM or PM peak hours.
- Worsen unacceptable operations to a significant degree (as indicated by a change in the applicable performance measure) at a facility maintained by Caltrans during the AM or PM peak hours.
- Cause traffic at an off-ramp maintained by Caltrans to queue back to the mainline, or add traffic to an off-ramp that already queues back to the mainline.

Transit System

- Have a negative impact on transit operations, travel times, and/or circulation.

Bicycle System

- Not meet the policies and guidelines of Roseville's Bikeway Master Plan.

Pedestrian System

- Interfere with the operation of an existing pedestrian facility or preclude the construction of a planned pedestrian facility.

Existing Plus Project Conditions Methodology

Preliminary traffic analyses by Fehr & Peers showed that the introduction of a new traffic signal at the Kaiser North Driveway on Cirby Way would cause the wetbound approach to the Cirby Way/Riverside Avenue intersection to experience substantial traffic growth. The SimTraffic results showed increased delays and queues, which would spill back to the new signalized intersection and beyond. To prevent this condition, the new signal at the Kaiser North Driveway would be designed and operated as follows:

- The driveway would be operated as part of the coordinated system of signalized intersections along Cirby Way.³ The eastbound–westbound approaches would operate with protected left-turn phasing. The northbound–southbound approaches would operate with split phasing.⁴
- The driveway would feature a single northbound left/through lane exiting the Medical Center that would consist of 250 feet of vehicle storage and provide a maximum green time of 15 seconds during the weekday PM peak hour.⁵ Outside of this time period, no signal timing restrictions would exist.
- The driveway would feature two northbound right-turn lanes exiting the Medical Center that would each consist of 250 feet of vehicle storage. On-site signage would be provided to direct motorists to use these lanes to access I-80 via eastbound Cirby Way to Orlando Avenue. Additionally, Kaiser representatives have indicated that they can disseminate this suggested outbound vehicle routing to their employees.

³ During peak hours, the signalized intersections along Cirby Way operate with a 120-second cycle length.

⁴ Split phase operation is necessary due to the shared left/through lanes provided on the northbound and southbound approaches. A crosswalk would be provided on the east leg of the intersection across Cirby Way.

⁵ It is estimated that six vehicles per cycle could be accommodated by the 15 seconds of green time. Given that there are 30 cycles per hour, this implies 180 vehicles would turn left from the North Kaiser Driveway during the PM peak hour.

The objectives of the above design and operations are to:

- Use traffic signal timing to moderate the level of project-related traffic that is added to the westbound approach to the Cirby Way/Riverside Avenue intersection to avoid causing traffic to spill back into the new signalized intersection.
- Provide a single, lengthy (250-foot) northbound left-turn/through lane that can be used if so desired. However, given the limited amount of green time allocated to this movement during the PM peak hour, some motorists in this turn lane would have to wait two cycle lengths to turn onto Cirby Way. This is a disincentive to make this movement, instead encouraging the use of the alternative route (i.e., Cirby Way to Orlando Avenue) to access I-80.
- Encourage Kaiser employees to use an alternative route (i.e., Cirby Way to Orlando Avenue) to access I-80, which would help limit traffic volumes using the northbound left-turn/through lane, which would presumably have a high proportion of use by Kaiser members who may not otherwise be as familiar with alternative routes to reach I-80.

In addition, the project design would include the following:

- A new right-turn outbound only driveway on Cirby Way. This driveway would provide traffic relief to the heavily-used first internal intersection along the Kaiser North driveway.
- A widening of the northbound departure lane from the first internal intersection to include three receiving lanes, in order to minimize blockages of the dual right-turn lanes at the Cirby Way/Kaiser North driveway intersection by northbound left-turning traffic.

Traffic Forecasts

Figure 4.3-6 displays the AM and PM peak-hour traffic forecasts under Existing Plus Project conditions. Appendix D describes the manner in which these forecasts were developed.

Intersection Operations

Table 4.3-8 displays the average delay and LOS at the study intersections under Existing Plus Project conditions. Refer to Appendix D for technical calculations.

Table 4.3-8
Intersection Level of Service –Existing Plus Project Conditions

Intersection	Control	Existing Conditions				Existing Plus Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay ¹	LOS ¹	Delay ¹	LOS ¹	Delay ¹	LOS ¹	Delay ¹	LOS ¹
1. Cirby Way/ Foothills Boulevard/ Roseville Road	Traffic Signal	26	C	31	C	28	C	31	C
2. Cirby Way/Vernon Street	Traffic Signal	29	C	47	D	31	C	58	E

10. Riverside Avenue/ Kaiser West Driveway	SSSC	8 (28)	A (D)	6 (50)	A (F)	8 (58)	A (F)	11 (103)	B (F)

Notes:

¹ Average delay (rounded to the nearest second) and LOS for signalized intersections is the weighted average for all movements. Average delay and LOS shown for both worst-case side street movement (in parentheses) and intersection as a whole.

² Intersection signalized under "plus project" conditions.

AWSC = All-way Stop Control. SSSC = Side-street Stop Control.

Bolded text represents significant impacts.

Source: Appendix D

INTENTIONALLY LEFT BLANK

As shown in Table 4.3-8 the following would occur:

- Cirby Way/Vernon Street intersection: During the PM peak hour, the proposed project would worsen this intersection from LOS D to E, causing a significant impact.
- Cirby Way/Riverside Avenue intersection: Operations would remain at LOS E at this intersection, though the proposed project would increase the average delay by 20 seconds during the PM peak hour.
- Kaiser West Driveway (stop-controlled): The proposed project would exacerbate LOS F conditions at this stop-controlled approach.
- Kaiser North Driveway (signalized): The new signalized intersection at this driveway would operate at LOS B during the AM peak hour and LOS C during the PM peak hour.

Table 4.3-9 shows the maximum queues for critical movements (i.e., affected by project trips) at the Cirby Way/Riverside Avenue intersection under Existing Plus Project conditions. In addition, maximum queues are shown for the two project driveways, I-80/Riverside Avenue interchange ramp terminal intersections (see Appendix D for detailed calculations), and other intersection movements, which would experience meaningful project-related increases.

The following key conclusions are drawn from this table:

1. The proposed project would not cause traffic to spillback onto the I-80 mainline.
2. The proposed project would cause the maximum westbound left-turn queue at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway intersection to exceed the available storage by 25 feet.
3. The proposed project would cause the maximum westbound right-turn queue at the Riverside Avenue/Kaiser West Driveway intersection to increase from 200 feet to 275 feet, thus exceeding the available storage by 75 feet.
4. Outbound traffic using the new driveway on Cirby Way would have a maximum queue of 100 feet. Although this would block the first internal parking aisle, it would not adversely affect public streets since this driveway permits outbound movements only.
5. The eastbound right-turn lane at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway signalized intersection would have modest queues within the turn lane. However, review of the SimTraffic model indicates that queued traffic in the adjacent eastbound through lanes would block access to the right-turn lane.

Table 4.3-9

Table 4.3-9
Queueing Analysis – Existing Plus Project Conditions

Driveway/Intersection	Movement ¹	Available Storage ² (feet)	Maximum Queue (feet) ³			
			Existing Conditions		Existing Plus Project Conditions	
			AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
10. Riverside Avenue/Kaiser West Driveway	Westbound Right ^{5,7}	200/125	75	200	75	<u>275</u>
11. Cirby Way/New Kaiser Driveway	Northbound Right	50	-	-	50	<u>100</u>

Notes:

¹ Maximum queues shown for critical movements at adjacent intersections, project driveways, and Caltrans ramp terminal intersections.

² Based on measurements from aerial imagery and project site plan. For through movements, available storage is distance to upstream intersection.

³ Results based on average of 10 SimTraffic runs, except for those movements listed under note 7. Reported results are 'per lane'.

⁴ Intersection signalized under "plus project" conditions.

⁵ Turn lane storage changes under 'plus project' conditions. Available storage is reported as existing storage/project storage

⁶ During the AM and PM peak hours, traffic spills out of the northbound left-turn lanes into the adjacent through lanes, queuing back to the I-80/Riverside Avenue WB Ramps intersection.

⁷ Intersection maximum queues reported from existing counts.

N/A = Not Applicable (because loop off-ramp is a free-flowing merge onto northbound Riverside Avenue).

Bolded and **underlined** cells indicate that maximum queue exceeds the available storage.

Source: Appendix D

Roadway Operations

Table 4.3-10 summarizes average daily traffic on roadway segments surrounding the project site under Existing Plus Project conditions. As shown, the Riverside Avenue segment from Cirby Way to I-80 westbound ramps would experience the greatest increase in project traffic, increasing by 2,200 daily vehicles. Cirby Way from Foothills Boulevard to Riverside Avenue would experience the second-largest increase, with 1,400 daily vehicles. All other roadway segments would see modest increases in average daily traffic.

Table 4.3-10
Roadway Average Daily Traffic – Existing Plus Project Conditions

Roadway Segment	Number of Lanes	Existing Conditions	Project-Added Trips	Existing Plus Project Conditions

Freeway Operations

Table 4.3-11 displays the Existing Plus Project weekday AM and PM peak-hour operations at freeway facilities (refer to Appendix D for detailed calculations). As shown, all eastbound I-80 freeway facilities would continue to operate acceptably at LOS C or better with the project, while all westbound I-80 freeway facilities continue to operate acceptably at LOS D or better with the project.

Notes:

¹ On-ramp falls out of the realm of a merge segment and is thus analyzed as a basic segment.

² During the PM peak hour, these on-ramps serve large volumes of traffic. Despite being metered at each ramp, their close spacing and curvature of I-80 causes slow-downs.

³ During the AM peak hour, traffic congestion originating from the I-80/ Capital City Freeway interchange can occasionally spill back to this segment causing congestion. The queue spillbacks occur sporadically caused both by recurring and non-recurring (i.e., accidents, weather, etc.) congestion.

Source: Appendix D

Cumulative (2035 CIP) Conditions Analysis Methodology

The City uses a 2035 CIP travel demand model to analyze future roadway conditions in the City. The model assumes buildout of the City, including various approved and pending specific plans, such as the Sierra Vista, Creekview, and Amoruso Specific Plans. Land uses outside of the City represent projected absorption by the year 2035. The City's traffic model also includes its existing roadway system along with planned CIP roadway and intersection improvements. The City's CIP project list represents a reasonable mitigation plan because the improvements are reasonably foreseeable based on a strong likelihood (and past history) that they would very likely be fully funded by the time they are needed based on the current fees being collected.

The only planned roadway improvement within the study area is the addition of a second southbound left-turn lane on Vernon Street at Cirby Way.

Traffic Forecasts

Traffic forecasts were developed for the following two cumulative scenarios:

- Cumulative No Project – Assumes the existing project remains in place (and that a traffic signal is not installed at the Kaiser North Driveway).
- Cumulative Plus Project – Assumes the existing project is replaced by the proposed project (and that a traffic signal is installed at the Kaiser North Driveway).

Figure 4.3-7 shows the cumulative no project peak-hour forecasts at the study intersections. These forecasts show that the Cirby Way/Riverside Avenue intersection would experience a 33% and 35% increase in traffic over existing AM and PM peak-hour volumes, respectively. This suggests that additional congestion and queuing is expected at this intersection, which could have adverse queue spillback effects on adjacent intersections.

The proposed project expansion was added to the cumulative (2035 CIP) version of the City travel demand model. The model was run, and the results were checked to confirm that the external vehicle trips generated from the project's traffic analysis zone (TAZ) matched the trip generation totals in Table 4.3-6. The distribution of inbound and outbound trips varied slightly from existing conditions, as land uses and roadway connections within the City will have changed between these scenarios. Figure 4.3-8 shows the Cumulative Plus Project peak-hour forecasts at study intersections.

Notes:

¹ Average delay (rounded to the nearest second) and LOS for signalized intersections is the weighted average for all movements. Average delay and LOS shown for both worst-case side street movement (in parentheses) and intersection as a whole.

² Refer to discussion on following page for rationale for why the project causes a reduction in delay at this intersection.

³ Intersection signalized under "plus project" conditions.

AWSC = All-way Stop Control. SSSC = Side-street Stop-Control.

Bolded text represents significant impacts.

Source: Appendix D

Table 4.3-12 shows that the proposed project would not cause any intersection to worsen by one LOS grade or more. However, the new signalized Kaiser North Driveway intersection on Cirby Way

would operate at LOS E during the AM peak hour. This occurs as a result of traffic queuing back into it from the westbound approach to the Cirby Way/Riverside Avenue intersection.

Table 4.3-12 also yields some other noteworthy results, including:

- The project causes AM peak-hour delays at the Cirby Way/Riverside Avenue intersection to be reduced from 111 to 85 seconds. This occurs as a result of introducing the new traffic signal into the network. Under no project conditions, all delay on the westbound Cirby Way approach is assigned to Cirby Way/Riverside Avenue; under plus project conditions, the westbound delay that occurs upstream of the new signal is assigned to the new signalized intersection.
- Under no project conditions, motorists would incur very lengthy delays during the AM and PM peak hours while attempting to enter or exit the unsignalized Kaiser North driveway.

Table 4.3-13 shows the maximum queues at the project driveways and key movements at study area public street intersections (refer to Appendix D for detailed calculations).

10. Riverside Avenue/ Kaiser West Driveway	Westbound Right ⁵	200/125	50	125	50	125
11. Cirby Way/New Kaiser driveway	Northbound Right	50	-	-	50	125

Notes:

¹ Maximum queues shown for critical movements at adjacent intersections, project driveways, and Caltrans ramp terminal intersections.

² Based on measurements from aerial imagery and project site plan. For through movements, available storage is distance to upstream intersection.

³ Results based on average of 10 SimTraffic runs. Reported results are 'per lane'.

⁴ During the AM and PM peak hours, traffic spills out of the northbound left-turn lanes into the adjacent through lanes, queuing back to the I-80/Riverside Avenue WB Ramps intersection.

⁵ Turn lane storage changes under "plus project" conditions due to introduction of new traffic signal.

⁶ Intersection signalized under "plus project" conditions

Bolded and underlined cells indicate that maximum queue exceeds the available storage.

Source: Appendix D

The most notable queue exceedances under Cumulative Plus Project conditions include:

- Under both scenarios, traffic on westbound Cirby Way would spill back from Riverside Avenue across and beyond the I-80 overcrossing.
- The northbound left/through movement from the signalized Kaiser North Driveway intersection onto Cirby Way would experience a 375-foot maximum vehicle queue during the PM peak hour, which would exceed the 250 feet of available storage. This occurs as

a result of westbound queues from Cirby Way/Riverside Avenue spilling back into the new signal, thereby restricting the flow of northbound left-turn traffic exiting the site.

- The westbound left-turn from Cirby Way into the signalized Kaiser North Driveway intersection would experience a 200-foot maximum vehicle queue during the AM peak hour, which would exceed the 175 feet of available storage.

Table 4.3-13 shows that the project would not cause traffic on the I-80/Riverside Avenue eastbound and westbound off-ramps to queue back onto the I-80 mainline.

Roadway Operations

Table 4.3-14 summarizes average daily traffic on roadway segments surrounding the project site under cumulative conditions. As shown, the Riverside Avenue segment from Cirby Way to I-80 westbound ramps would see the greatest increase in project traffic, increasing by 2,200 daily vehicles. Cirby Way from Foothills Boulevard to Riverside Avenue would see the second largest increase, with 1,400 daily vehicles. All other roadway segments would see modest increases in average daily traffic.

Table 4.3-14
Roadway Average Daily Traffic – Cumulative Conditions

Roadway Segment	Number of Lanes	Cumulative No Project Conditions	Project-Added Trips	Cumulative Plus Project Conditions
Foothills Blvd – Vineyard to Cirby Way	5	56,900	1,000	57,900
Foothills Blvd – South of Cirby Way	2	39,700	200	39,900
Sunrise Ave – Coloma Way to Cirby Way	4	44,100	100	44,200

Source: Appendix D

Freeway Operations

Table 4.3-15 displays the cumulative weekday AM and PM peak-hour operations at freeway facilities (refer to Appendix D for detailed calculations). As shown, all eastbound I-80 freeway facilities would operate acceptably at LOS E or better, while all westbound I-80 freeway facilities would operate at LOS F except for the Riverside Avenue diagonal on-ramp and mainline section west of Riverside Avenue, which would operate at LOS D and E, respectively.

Table 4.3-15
I-80 Freeway Level of Service – Cumulative Conditions

Freeway Facility	Type	Cumulative Conditions				Cumulative Plus Project Conditions

Riverside Ave to Antelope Rd	Basic	24.7	C	42.0	E ²	24.3	C	42.4	E

Notes:

¹ On-ramp falls out of the realm of a merge segment and is thus analyzed as a basic segment.

³ During the AM peak hour, traffic congestion originating from the I-80/ Capital City Freeway interchange can occasionally spill back to this segment causing congestion. The queue spillbacks occur sporadically caused both by recurring and non-recurring (i.e., accidents, weather, etc.) congestion.

Density cannot be calculated for LOS F conditions. Thus, density value shows “-”.

Source: Appendix D

The proposed project would not cause any changes in freeway facility levels of service in the cumulative scenario. However, it would add traffic to certain freeway facilities projected to operate at LOS F during the PM peak hour:

- **Westbound I-80 Douglas Boulevard Diagonal On-Ramp and Loop On-Ramp merges, and Douglas Boulevard to Riverside Avenue mainline segment, Westbound I-80 Riverside Avenue Off-Ramp Diverge, and Westbound I-80 Riverside Avenue Loop On-Ramp:** The project would add 20 trips to these facilities, which carry 8,100 vehicles (within their ramp influence areas) during the PM peak hour. This represents a 0.02% increase, which is less than the variation in traffic volumes on a day-to-day basis.

Existing Plus Project Conditions

Impact 4.3-1	Change in LOS at Signalized Intersections in the City of Roseville
Applicable Policies and Regulations	City of Roseville General Plan
Significance with Policies and Regulations	Significant
Mitigation Measures	Mitigation Measure 4.3-1
Significance after Mitigation	Less than significant

The proposed project would cause the signalized Cirby Way/Vernon Street intersection to fall from LOS D to LOS E. This is considered a **significant impact**. The proposed project would not cause any study intersections to worsen from LOS C or better to LOS D or worse. Therefore, the proposed project would not cause the overall percentage of signalized intersections throughout the City operating at LOS C or better during the AM and PM peak hours to fall below 70%.

Impact 4.3-2	Add Traffic to Caltrans Freeway Ramps
Applicable Policies and Regulations	City of Roseville General Plan Caltrans requirements
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would not cause a facility maintained by Caltrans to worsen from acceptable to unacceptable during the AM or PM peak hours. The project would not worsen unacceptable operations to a significant degree (as indicated by a change in the applicable performance

measure) at a facility maintained by Caltrans during the AM or PM peak hours. The project would not cause traffic at an off-ramp maintained by Caltrans to queue back to the mainline, or add traffic to an off-ramp that already queues back to the mainline. Therefore, project impacts to freeway facilities are considered **less than significant** and no mitigation is required.

Impact 4.3-3	Impacts to Bicycle Facilities or Network
Applicable Policies and Regulations	Bikeway Master Plan City of Roseville General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The City has recommended that a Class II bike lane not be constructed along the project frontage at this time because such a facility would not connect with any other bike lanes. Having a short, disconnected segment of bicycle lane could be confusing to drivers and bicyclists and would not contribute any benefits to the bikeway system. If and when the City does decide to add bike lanes to Cirby Way east of Riverside Avenue, it will be a more comprehensive addition of bike lanes on both sides of the road and for a longer section of roadway than just the Kaiser frontage. The project frontage has been designed to accommodate future restriping for bicycle lanes. The proposed project would not be inconsistent with any applicable policies and guidelines of Roseville's *Bikeway Master Plan* in terms of providing bicycle facilities. Therefore, project impacts to bicycle facilities are considered **less than significant** and no mitigation is required.

Impact 4.3-4	Impacts to Pedestrian Access
Applicable Policies and Regulations	Pedestrian Master Plan City of Roseville General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would not interfere with the operation of an existing pedestrian facility or preclude the construction of a planned pedestrian facility. It would provide improved pedestrian connections to existing bus stops along Cirby Way and internally within the project site. Therefore, project impacts to pedestrian facilities are considered **less than significant** and no mitigation is required.

Impact 4.3-5	Increased Demand for Transit
Applicable Policies and Regulations	Short-Range Transit Plan City of Roseville General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would not have a negative impact on transit operations, travel times, and/or circulation. It would include a new traffic signal on Cirby Way that would be coordinated with the other signals along the corridor to accommodate through-traffic progression. It would provide improved pedestrian connections to existing bus stops along Cirby Way. Therefore, project impacts to transit facilities are considered **less than significant** and no mitigation is required.

4.3.5 Cumulative Impacts

The cumulative analysis assesses whether cumulative impacts from past, present, and probable future projects, as well as the proposed project, are significant. If the cumulative impacts are not significant, this conclusion is presented. If the cumulative impacts are significant, a determination is then made as to whether the project's incremental contribution to those impacts is "cumulatively considerable" (that is, significant in and of itself). See description of year 2035 background conditions above in Section 4.3.4 under the Methods of Analysis section.

Impact 4.3-6	Decrease in LOS at City Intersections Under 2035 Conditions
Applicable Policies and Regulations	City of Roseville General Plan
Significance with Policies and Regulations	Significant
Mitigation Measures	None available
Significance after Mitigation	Significant and unavoidable

The proposed project includes the construction of a new traffic signal at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway. Operations at this intersection would degrade from LOS B under existing conditions to LOS E during the AM peak hour under cumulative conditions due to queue spillbacks from the Cirby Way/Riverside Avenue intersection. Although a variety of signal timing modifications were tested, none were found to restore operations to LOS C or better (without substantially adversely affecting other corridors). Therefore, no feasible mitigation is available and this impact is considered **significant and unavoidable**. Pursuant to General Plan Policy, City Council approval is required for this impact. Adding this intersection to the list of intersections operating at LOS D or worse, a total of 79% of City intersections would operate acceptably during the PM peak hour, which meets the City's policy requiring acceptable operations for at least 70% of intersections.

Impact 4.3-7	Add traffic to Caltrans Freeway Ramps Under 2035 Conditions
Applicable Policies and Regulations	Caltrans requirements
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would not cause a facility maintained by Caltrans to worsen from acceptable to unacceptable during the AM or PM peak hours. The project would cause a 0.02% increase in traffic to segments of westbound I-80 that would cumulatively operate unacceptably. This is less than the variation in traffic volumes on a day-to-day basis and would not be noticeable to the driving public. Therefore, project impacts to freeway facilities would not be considerable and the project would not contribute to an existing cumulative impact and the impact is considered **less than significant** and no mitigation is required.

4.3.6 Mitigation Measures

To address Impact 4.3-1, Mitigation Measure 4.3-1 would enable the southbound right-turn movement to operate simultaneously with the eastbound left-turn, and would restore operations to the existing LOS D condition during the PM peak hour (see Appendix D).⁶ This feasible improvement is not included in the City's CIP. Because eastbound U-turns are prohibited, this measure would not require any other changes in permitted movements. Therefore, this mitigation measure would restore this impact to a **less-than-significant level**.

4.3-1 The project applicant shall install a southbound right-turn overlap arrow at the Cirby Way/Vernon Street intersection.

4.3.7 Other Transportation Considerations

Construction Staging

Development of the proposed project requires a multi-phased construction staging plan that considers the need to demolish existing buildings, construct new buildings and parking lots/garages, reconstruct the Cirby Way project frontage (to improve sight distance), and reconstruct both project driveways. This effort is further complicated by the need to maintain continuous medical office services, adequate parking, and a safe and convenient walking environment throughout construction.

⁶ The southbound right-turn movement accommodates 235 AM peak-hour vehicles and 413 PM peak-hour vehicles in a single lane. These substantial volumes would benefit from a right-turn overlap phase.

Construction of the proposed project would generate a variety of truck and employee trips. Since the magnitude of these trips during peak hours would be less than that of the proposed project, absolute impacts (in terms of delay and queuing) when compared to project operations would not be significant. However, construction staging and lane closures could cause adverse effects (both on site and off site) if not carefully planned.

Accordingly, the applicant must develop a construction TMP in accordance with City requirements to the satisfaction of the City's Engineering Department. The plan would address overall construction staging, changes in vehicular access, employee parking, truck staging, and complete/partial street closures.

At this stage, any type of construction impact analysis is premature due to the uncertainty of the construction staging plan. Appendix D recommends that the construction TMP be developed such that the following performance standards are maintained at the site at all times:

- Delivery trucks do not idle/stage on Riverside Avenue or Cirby Way.
- All construction employees park on-site or in designated lots owned/leased by the applicant.
- A minimum of two driveway accesses are provided at all times into the project site.
- Special traffic management and construction staging is necessary for the reconstruction of Cirby Way to balance driver inconvenience, duration of construction, and cost.
- Roadways, sidewalks, crosswalks, and bicycle facilities shall be maintained clear of debris (e.g., rocks) that could otherwise impede travel and impact public safety.
- An adequate supply of parking is maintained on-site throughout construction to meet the parking needs of employees and members. Alternatively, employees park at a designated off-site lot and are shuttled to/from the project site.
- Pedestrian connections (including on-site and from public streets) are convenient and safe for pedestrian travel through construction.

INTENTIONALLY LEFT BLANK

Access and Circulation Recommendations

Fehr & Peers reviewed the initial site plans for consistency with applicable standards contained in *City of Roseville Design Standards* (January 2013) and provided a number of recommendations in Appendix D and Figure 4.3-9 regarding site access. The revised site plans reflect those recommendations except for the area noted below where existing constraints or new design eliminates the need for the recommended improvements:

- Given the new outbound-only driveway on Cirby Way, the prior recommendation of a continuous auxiliary lane between the bus turnout and the new signal is no longer applicable. The new driveway would include a narrow throat width and curvature to discourage inbound right-turns.

The City will review the civil improvement drawings for Cirby Way to confirm the following recommendations:

- The westbound left-turn lane at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway is lengthened from 175 to 250 feet to meet City design standards and accommodate projected vehicle queues.
- The eastbound right-turn lane at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway is designed so that it consists of 190 feet of storage and a 90-foot taper (versus the current configuration of 160 feet of storage and a 120-foot taper).
- The eastbound left-turn lane at the new signal include signage prohibiting u-turns so as to avoid causing excess queuing in that turn lane, weaving across Cirby Way from the new driveway, and excess travel demand passing through the Cirby Way/Riverside Avenue intersection during the PM peak hour.
- Signage is placed in the narrow raised median indicating that the new driveway permits right-turns only, and that u-turns are prohibited beyond the end of the narrow raised median.
- If deemed necessary by the City, post a “No Right-Turn” sign in advance of the new right-turn outbound only driveway on Cirby Way.

Internal Circulation

The initial site plans were also reviewed for internal site circulation and recommendations were provided. Most of those recommendations were incorporated into the revised site design.

The project site plan includes a vehicle pick-up/drop-off area in the immediate vicinity of the two medical office buildings. Several circulation options for this area were considered and the design shown in Appendix D was deemed most preferable. As currently contemplated, the

westerly section of the drop-off would be inbound-only, whereas the easterly section would be two-way (i.e., necessary to provide ingress/egress to the adjacent parking areas to the east).

The following additional internal circulation recommendations are provided:

- At the first internal intersection along the Kaiser North Driveway, provide stop-control on the eastbound and westbound approaches only.
- Provide stop-control on the eastbound, westbound, and southbound approaches at the main drive aisle (north of the medical office buildings) that intersects with the drop-off area (westerly section).
- The project architect should review the configuration of the truck loading area in the southeast corner of the site to ensure that outbound trucks have an adequate line of sight of oncoming motorists.

Parking Supply and Demand

According to the project architect (HOK), the project would provide 1,050 parking spaces, which represents a ratio of one space per 200 square feet. This translates into a supply of parking of one space per 147 square feet based on the total square footage which is slightly less than the City's Zoning Ordinance, which requires one space per 150 square feet of medical office space.

The City's parking standards for General Medical services is based on the typical operations of a high-volume physician's office, such as a dentist, general practitioner, or pediatrician. In recognition that not all medical offices operate in the same way, there is a process outlined in the Zoning Ordinance for parking reductions. If it can be demonstrated that the individual use has a lower parking demand than the Zoning Ordinance standard, then the actual demand may be used in lieu of the Zoning Ordinance standard.

In order to determine what the parking demand would be for the project, Fehr & Peers completed a parking utilization study. Data was collected on Tuesday, October 16, and Wednesday, October 17, 2012. During each day, the number of parked vehicles was recorded on an hourly basis beginning at 8 AM and continuing until 6 PM. At that time, the campus had 583 regular spaces and 30 handicapped spaces for a total of 613 spaces. Table 4.3-17 shows the parking demand results. On each day, the peak parking demand occurred at 11 AM with approximately 80% of all spaces being occupied.

Table 4.3-17
Parking Demand – Existing Conditions

Date	Peak Demand	Parking Demand Rate per KSF	Parking Demand Rate per Provider
Tuesday, October 16, 2012	476 (78%) at 11 AM	5.27	6.70
Wednesday, October 17, 2012	501 (82%) at 11 AM	5.55	7.06
Average	489 (80%)	5.41	6.89

Notes: ksf = thousand square feet

Parking rate calculations are based on 90.29 ksf gross floor area and 71 health care providers.

Percentages are based on 613 total handicapped and regular parking spaces.

Source: Appendix D.

Table 4.3-17 shows that the campus had an average peak parking demand rate of 5.41 spaces per thousand square feet or 6.9 spaces per health care provider. As noted in Section 4.3.4, the number of health care providers is considered the most accurate measure of changes in travel activity at the campus because this number directly influences total campus employment as well as patient and visitor travel. Therefore, the parking demand rate per health care provider was used to calculate project parking demand. Table 4.3-18 shows the parking demand results under Existing Plus Project conditions.

Table 4.3-18
Parking Demand – Existing Plus Project Conditions

Scenario	Parking Supply	Peak Demand	Maximum Utilization	Parking Demand Rate per KSF	Parking Demand Rate per Provider
Existing Conditions	613	489	80%	5.41	6.89
Existing Plus Project Conditions	1,050	978	93%	4.66	6.89

Notes: ksf = thousand square feet

Existing parking rate calculations are based on 90.29 ksf gross floor area and 71 health care providers.

Percentages are based on 613 total handicapped and regular parking spaces.

Source: Fehr & Peers, 2016.

As shown, the projected parking demand of 978 spaces would represent 93% of the available parking supply. This estimate is based on the number of health care providers doubling, which effectively means decompression of the campus based on its 133% increase in square footage. If the number of health care providers should more than double, then the parking supply would likely exceed the values shown above. However, there are a number of other potentially influential variables that could affect parking demand, such as an aging population and increased use of public transit, paratransit, or rideshare services (e.g., Uber or Lyft).

Various engineering and parking resources discuss the differences in parking demand and supply (Appendix D). Most recommend an “effective supply factor” of 5% to 10% over the anticipated design hour accumulation of vehicles. This factor accounts for inefficiencies caused by parking restrictions, parking turnover, searching for parking, imbalanced lot usage, and other causes. The proposed parking supply would yield a 7% effective supply factor, which is within the suggested range. The parking analysis demonstrates that the proposed parking is sufficient to meet demand.

4.4 VISUAL AND AESTHETIC RESOURCES

4.4.1 Introduction

This section of the Environmental Impact Report (EIR) evaluates potential impacts associated with the existing visual characteristics of the project site and neighboring areas that could result from development of the proposed Kaiser Riverside-Cirby Medical Office Building Project (proposed project). The analysis includes an evaluation of changes in visual character, effects on scenic views, visual compatibility with the project's surroundings, and the potential for sensitive receptors near the project site to be disturbed by light and glare associated with the proposed project. The cumulative impact analysis is included at the end of this section and describes impacts to visual resources caused by the proposed project in addition to other expected development in the City of Roseville (City).

No comment letters were received that addressed concerns with visual and aesthetic resources in response to the Notice of Preparation (NOP). Please see Appendix A for a copy of the comments received in response to the NOP.

Information referenced to prepare this section is based, in part, on information provided in the *City of Roseville General Plan 2035*, adopted June 2016 (City of Roseville 2016), and other City documents.

4.4.2 Environmental Setting

Existing Setting

Surrounding Development

The Kaiser Riverside-Cirby Medical Office Building Project site (project site) is located on the southeast corner of Riverside Avenue and Cirby Way in the City. The project site is bordered by Interstate 80 (I-80) at its south and east ends and Riverside Avenue at its west end. Cirby Way borders the project site's north end. The project site consists of approximately 14 acres and presently includes six one- and two-story buildings that comprise the Kaiser Permanente medical office complex located at 1001 Riverside Avenue, along with surface parking spaces and landscaping. Landscaping is present along the perimeter of the site and internal to the site, consisting of grasses, shrubs, and mature trees. There are a number of mature trees, including redwood trees in a small grove north of the main building and in the north parking lot and oak trees on the southwest corner of the project site.

Surrounding uses adjacent to the site include a mix of retail, medical office, apartments, and public storage. Figure 4.4-1 provides a map of the viewpoints and representative photographs of surrounding development. The north side of the site, across Cirby Way, includes commercial,

medium density residential, and business professional uses. To the west of the project site, across Riverside Avenue, are single-story buildings with retail uses such as Triple Crown Auto Sales and four retail single-story complexes containing stores such as Sherwin-William Paint Store, Complete Ponds, and Ink n Toner Solutions Roseville. These buildings are tan in color and have associated surface parking in front of the buildings along with parking lot lights and landscaping which includes pruned medium-sized shrubs, turf areas, and medium to large trees. This retail area also contains a large one-story off-white building with maroon accents (First Ukrainian Evangelical Church), a one-story tan building (The Olive Branch Church) and a one-story tan Sikh worship center surrounded by retail uses (Gurudwara Amrit Darbar). The First Ukrainian Church, shown in Figure 4.4-2, is abutted by a large surface parking lot at its backside and the other religious worship centers include surface parking as well.

Further to the south of these larger retail complexes along Melody Lane, there is a smaller five building complex that contains stores and office spaces in one-story tan buildings. This retail area is bordered to the west by a residential area containing single-story homes with backyards that face Melody Lane. The houses in this residential area have fences enclosing their backyards and generally have large lawns in their front yard, along with a variety of large, medium, and smaller trees. The exterior color of these houses is generally neutral tones in beige, gray and white. Views of the project site from this residential area are generally blocked by fencing, large trees, and surrounding buildings.

To the north of the project site, across Cirby Way, there is a large retail area containing four buildings with stores such as Starbucks, Savvy Nail Spa, and Gamboa's Body & Frame (see Figure 4.4-3). These one-story buildings are a light tan color with a flat roof and include rounded arches and brick columns as an aspect of their architecture. Many stores within this complex use red signs that are illuminated at night. There is surface parking in front with overhead parking lot lights. This complex also contains a Chevron gas station. Adjacent to this complex to the north along Cirby Way, there is a public storage site owned by Security Public Storage. This public storage facility includes 15 single-story white buildings with dark-rust trimmed roofs, surrounded by a paved area.

To the north of this public storage facility along Cirby Way, at the northeastern side of the project site, there is a large area containing tall untended grass surrounded by mature trees, including redwoods, along Cirby Hills Drive and Valley Oak Drive that leads to a residential neighborhood. Views of the project site from homes in this residential area are blocked by large mature trees that surround both the project site and the vegetated area at the entrance of Cirby Hills Drive. The residential areas along Valley Oak Drive and Live Oak Circle are townhome communities consisting of one and two-story gray houses with dark brown roofs and white trim. The majority of these houses face inward toward Valley Oak Drive or Live Oak Circle, with the exception of one house along Valley Oak Drive. These houses have front lawns, along with mature trees in their front and backyards.

INTENTIONALLY LEFT BLANK

DUDEK

Kaiser Riverside-Cirby Medical Office Building Project

INTENTIONALLY LEFT BLANK

There is a large, tan two-story health care facility owned by Telecare Corporation situated between the residential area along Live Oak Circle and the project site that blocks views of the project site from the front and side of houses along Live Oak Circle (see Figure 4.4-4). Although the health care facility faces the project site, views of the site are blocked by large mature trees bordering the project site and surrounding the health care facility. This health care facility is surrounded at its west end by a large green lawn area that is bordered at its north and south ends by large mature trees. The border of the health care facility building is landscaped with small to medium pruned shrubs. The northeast end of the health care facility includes surface parking with lighting.

The southern and eastern ends of the project site are bordered by I-80. Views of the existing site from I-80 are largely blocked by mature trees along the edge of the freeway. Moreover, vehicles are traveling at high rates of speed (the posted limit is 65 miles per hour), making any views of the site limited and transitory.

Across from I-80 to the southeast, there is a retail area bordered by Orlando Avenue. This retail area includes a RV sales parking lot owned by Village RV, and stores including Camping World of Sacramento. The RV sales parking lot includes parking lights. Views from the parking lot include the existing medical complex, but these views are largely blocked by large mature trees on the perimeter of the project site.

Northeast of the Village RV parking lot along Orlando Avenue is the Skatetown Ice Arena, a large white building surrounded by substantial surface parking with overhead lighting. North of the Skatetown Ice Area across Orlando Avenue is a public storage facility, CubeSmart Self Storage, which consists of 11 white buildings surrounded by a paved area. To the southwest of this retail area is Merryhill Elementary and Middle School, a white building with a rust-colored roof, which is surrounded by green grass and medium to large-trees. There is a one-building retail complex below the school that is white in color and includes unlit surface parking with trees and small shrubs used as landscaping.

A residential area consisting of single family homes borders the east and south sides of the retail and school areas. These houses are primarily one to two-stories tall with large grass lawns in the front yard. Backyards are separated with wooden fences. Houses include a range of neutral colors.

Existing Project Site

The existing six buildings on the project site are off-white in color, with a light brown trim and brown roofing (shown in Figures 4.4-5 and 4.4-6). The buildings are surrounded by paved pathways for accessibility, as well as lighting, and landscaping. Landscaping around the buildings includes areas of grass interspersed with medium to large trees and small to medium shrubs. The parking lots surrounding the perimeter of the buildings includes parking lot lighting, as well as medium to large trees and small to medium shrubs as landscaping (shown in Figure

4.4-7). The project site is elevated above Riverside Avenue and slopes gently upward to the east, with a wide sloping lawn area backed by trees. The increase in elevation from Riverside Avenue to the center of the project site is approximately 25 feet.

Scenic Highways

There are no designated or eligible State Scenic Highways in or adjacent to the City (Caltrans 2016). The City's 2035 General Plan does not designate scenic vistas or scenic resources within the City (City of Roseville 2016).

Views of the Project Site from the Surrounding Area

Views of the project site from the surrounding area are primarily blocked due to the large, mature trees that border the project site, as well as trees and buildings in the project site vicinity. In addition, because the site is elevated relative to Riverside Avenue and the buildings are set back on the site only partial and limited views of the existing buildings looking west and northwest are available. The project site is shielded from view from residential areas along Valley Oak Drive and Cirby Hills Drive by landscaping including large, mature trees, and by the Telecare Corporation health care facility (Figure 4.4-8). Partial views of the project site can be seen from Cirby Hills Drive at the project site's north end and from the retail area along Cirby Way and Riverside Avenue (shown in Figures 4.4-9 and 4.4-10), and across Orlando Avenue and I-80 from the Village RV and Orlando Avenue retail area parking lot at the project's southeast end (shown in Figure 4.4-11). Views of the project site include the current medical complex, surface parking lots, and areas of green grass and mature trees.

Views from the Project Site

Views from the project site's north end consist of Cirby Way in the foreground and a small, single-story tan-colored retail complex in the middle-ground. Looking east along Cirby Way from the project site's north end, the single-story Security Public Storage is visible. These buildings are white in color with a dark-rust trimmed roof. Further along Cirby Way to the east, the tan-colored single-story Telecare Corporation medical facility is visible looking north from the entrance into the project site from Cirby Way (Figure 4.4-12). From this entrance, the large, mature trees and grass that border the entrance to Cirby Hills Drive are visible from the northern end of the project site as well. The residential area bordering Valley Oak Drive consisting of gray houses with dark brown roofs and white trim can be seen in the distance. Long range views are blocked by surrounding buildings and large mature trees. Views from the project site's eastern end primarily consist of views of I-80 in the foreground and the CubeSmart Self Storage facility, containing 11 single-story white buildings, in the background. Looking to the southeast, views of I-80 can be seen in the foreground, with views of the Village RV Parking lot in the background (Figure 4.4-13).

INTENTIONALLY LEFT BLANK

Views from the west include a large paved area that provides surface parking for Triple Crown Auto Sales and the large retail area bordering Melody Lane. This retail area consists of one-story brick-colored buildings with large black-trimmed windows and black awnings. The retail area's surface parking lots are fitted with lighting structures and landscaping which includes areas of grass and small pruned shrubs. The First Ukrainian Evangelical Church is also visible from the project site's west end (Figure 4.4-14). This is a large, one-story tan building with maroon accents.

Light and Glare

Nighttime lighting is used in order to provide for the safety and security of the public. Lighting, however, can sometimes create a nuisance for nearby light-sensitive receptors, such as residential neighborhoods, by illuminating areas beyond those intended. This is called light trespass, and includes unintentional illumination of nearby areas such as spillover light and glare. Oftentimes, artificial light sources will cause spillover light by lighting surfaces around the intended area. This effect is reduced when the intensity of the lighting source is increased, thereby decreasing the amount of light that dissipates into the surrounding area. The use of light sources that are modern, energy-efficient, and shielded or downward facing are useful in reducing spillover light.

Glare occurs when light is reflected off of surfaces and causes a nuisance to surrounding sensitive-receptors. Glare can result from sunlight or from artificial light reflecting off building exteriors, such as glass windows or other highly reflective surface materials. Squinting or turning away from a light source is an indication of glare. Glare resulting from sunlight reflecting off building exteriors can be reduced with design features that use low-reflective glass and exterior materials and colors that absorb, rather than reflect, light. Glare can be avoided or reduced by redirecting light sources so that there is no direct line of sight to the light source, or by blocking the direct line of sight, using low-intensity light fixtures, or reducing the reflectiveness of building exteriors and materials used.

Existing Light and Glare Conditions

The existing medical office complex uses lighting sources in its parking lots and buildings. Neighboring retail areas also use building lighting for security and for their parking lots. Existing sources of light from street lights and building lights is visible at night from residential and commercial uses to the north and from vehicle headlights on I-80 to the south and east, Riverside Avenue to the west, and Cirby Way to the north. There are no buildings that create glare conditions in the area.

Existing Zoning

The project site is zoned Business Professional (BP), which permits (allowed by right) professional offices and General Medical services, but not general hospital services. The maximum building height allowed by right is 50 feet (City of Roseville 2013).

4.4.3 Regulatory Setting

Federal Regulations

There are no specific federal regulations pertaining to visual quality or aesthetics that would apply to the proposed project.

State Regulations

California Scenic Highway Program

California's Scenic Highway Program was created by the Legislature in 1963 to preserve and protect scenic highway corridors from change which would diminish the aesthetic value of lands adjacent to highways. The state laws governing the Scenic Highway Program are found in the Streets and Highways Code, Section 260 et seq. The State Scenic Highway System includes a list of highways that are either eligible for designation as scenic highways or have been so designated.

There are no designated or eligible State Scenic Highways in or adjacent to the City (Caltrans 2016). The City's 2035 General Plan does not designate scenic vistas or scenic resources within the City (City of Roseville 2016).

Local Regulations

City of Roseville 2035 General Plan

The City of Roseville 2035 General Plan (General Plan) Land Use Element includes goals and policies for the enhancement and protection of visual quality. The following policies are applicable to the visual character of the proposed project:

Community Design Goals and Policies:

Goal 1 Achieve a consistent level of high quality aesthetic and functional design through the development of, and adherence to, superior design concepts and principles as defined in the Community Design Guidelines.

FIGURE 4.4-14

DUDEK

Kaiser Riverside-Cirby Medical Office Building Project

INTENTIONALLY LEFT BLANK

- Goal 4** Emphasize the preservation and enhancement of historically and culturally significant buildings, native oak trees, woodlands and other significant features, as a primary element in defining Roseville’s community character.
- Policy 1** Through the design review process, apply design standards that promote the use of high quality building materials, architectural and site designs, landscaping signage, and amenities.
- Policy 2** Continue to develop and apply design standards that result in efficient site and building designs, pedestrian friendly projects that stimulate the use of alternative modes of transportation, and the establishment of a functional relationship between adjacent developments.
- Policy 3** Encourage designs that strike a balance between the incorporation of aesthetic and development requirements, and the economic considerations associated with development.
- Policy 4** Promote flexibility in the design review process to achieve design objectives, and encourage projects with innovative, unique and creative architectural style and design.
- Policy 6** Through the design review process, encourage site and building designs that are in scale and compatible with adjacent development with respect to height, bulk, form, mass, and community character.
- Policy 7** Encourage project designs that place a high priority and value on open space, and the preservation, enhancement and incorporation of natural resources and other features including consideration of topography, vegetation, wetlands, and water course.
- Policy 9** The location and preservation of native oak trees and oak woodlands shall be a primary factor in determining site design, building location, grading, construction and landscaping, and in establishing the character of projects through their use as a unifying element in both new and existing development.

City of Roseville Community Design Guidelines

The City’s Community Design Guidelines (last amended in 2008) define design elements that are important to the City to ensure design quality for the City’s projects. These guidelines discuss site layout and design, on and off-site circulation, parking, landscaping, shading requirements, light and screening, architecture, and building design, features, and materials used. Design goals for commercial projects within the City include:

- Incorporate environmentally sustainable features into project design. Consider and respond to the relationship and context of adjacent projects.
- To promote site designs that preserve, enhance, and incorporate the natural features of a site as an element within the overall design.
- Foster project designs that create and enhance a sense of identity and place.
- Create and promote usable, active, and thriving public spaces.
- Ensure community longevity by designing projects that will endure over time.
- Creating project designs that are transit and pedestrian friendly.
- Create and promote usable, active, and thriving public spaces.
- Ensuring project designs that are attractive and safe for customers, yield a variety of retail and business opportunities, and contribute to creating active gathering places for the community.
- Creating projects of superior architectural and visual interest, while recognizing the need for balance between form, function, and economic limitations.

The Community Design Guidelines are also intended to provide design professionals, property owners, planning commissioners, staff, and residents with a clear understanding of the City's expectations for the planning, design, and review of development proposals, and to increase the community's awareness and appreciation of design considerations. The following guidelines are applicable to the proposed project:

- CC-3** The relationship and orientation of buildings to arterial and other prominent roadways should be considered to enhance street frontage.
- CC-5** Projects on the corners of prominent intersections should be treated as community gateways and should be of the highest design quality.
- Corners should be defined with appropriate retail uses and architectural treatment.
 - Buildings on Signature Corners should be located at the back of the landscape corridor to provide massing and visual interest to frame the intersection.
- CC-6** Buildings should be placed on project sites to create a transition to surrounding uses and enhance community character.
- CC-9** Landscaping, public spaces, art and/or other “gateway” features should be used to define the entryways into the project.

- CC-10** Entryway features should reflect the overall architectural identity or character of the development.
- CC-14** Natural topography should be integrated into site design to the extent feasible.
- CC-15** Grade changes should be transitioned through landscaped slope banks and/or terraced retaining walls up to four feet in height where possible.
- CC-39** Overall character of the development should be defined through the use of a consistent design concept.
- Building design should be consistent with the defined architectural style and should incorporate the architectural embellishments commonly associated with that style.
 - Facades should be designed to include authentic architectural elements.
- CC-41** Variation of wall planes, rooflines, and building form should be considered to create visually engaging designs.
- Architectural elements such as varied roof forms, articulation of the facade, breaks in the roof, walls with texture materials and ornamental details, and landscaping should be incorporated to add visual interest.
 - Architectural elements such as fenestrations and recessed planes should be incorporated into façade design. Large areas of flat, blank wall and lack of treatment are strongly discouraged.
 - Roof height, pitch, ridgelines, and roof materials should be varied to create visual interest and avoid repetition. Architectural style should be considered when designing the roof plan.
- CC-42** Proportional relationship between adjacent buildings and between the building and the street should be maintained.
- Unit/building layout should ensure the gradual transition of building height and mass.
 - Pedestrian scaled entry should be a prominent feature of the front elevation.
- CC-44** Main building entries should be emphasized through building articulation and form to allow easy identification from the street and parking lot, and convenient access for pedestrians.

- Building entry zones should be clearly defined through the use, or combined use, of elements such as accent paving, accent planting, color pots and bollards.
- Architectural detail such as windows, awnings, trellises, articulation, arcades, landscape planters, and material changes at the street level should be used to soften the edge of the building and enhance pedestrian scale.

CC-46 Variation in color and materials should be considered to create visually engaging designs.

- High quality and durable materials, such as stone, brick, and cementitious siding are encouraged.
- Creative use of plaster and stucco finishes that add visual depth and texture is highly encouraged.
- Creative and appropriate use of color is encouraged.
- Use of color should be consistent with the overall architectural style or theme of the project.
- Variation in exterior treatment of adjacent buildings is encouraged.

CC-47 Architectural treatment shall be applied to all elevations of a building facing public areas. Options include elements such as color, materials, or form drawn from the design of the primary frontage. (Public areas is defined to include streets, parking lots, open space, and adjacent residential developments.) Consideration should be given to the level of visual access in determining the level of detail required on a particular elevation.

- Elevations of buildings facing a street should be given particular emphasis.
- Elevations of buildings on corners should include treatment on walls facing the street, and should incorporate design features such as variation in wall plane, variation in building mass, and window placement.

CC-50 Green building design should be considered in the project.

- Natural climate control features such as roofs with larger overhangs and trellises or deciduous trees over south-facing windows are encouraged to reduce energy demand.
- Use of windows for natural light indoors as much as possible is encouraged. Windows should be placed for cross-ventilation and airflow to promote natural cooling.

- Building materials that are less hazardous and/or are made from recycled materials are encouraged.
- Building designs that incorporate opportunities for renewable energy production such as solar panels are encouraged.
- Use of native vegetation is encouraged to reduce water consumption for landscaping.
- Use of recycled water is encouraged for landscaping, where available.

CC-54 Utilities and mechanical equipment should be screened from public view.

- Roof mounted equipment, including but not limited to air conditioners, fans, vents, antennas, and microwave dishes shall be setback from the roof edge, or placed behind a parapet or in a well so that they are not visible to motorists or pedestrians on the adjacent streets.

CC-59 Tree placement should provide shading of sidewalks, and outdoor public spaces.

CC-60 Native planting or compatible species of drought-tolerant plants should be used as much as possible to reduce water consumption, consistent with the City's Water Efficient Landscape Requirements.

CC-64 Trees should shade at least 50% of the paved parking areas as measured at 15 year maturity based on the tree species and midsummer sun angle conditions. The shade values for various tree species are located in the specific plan landscape guidelines. Shade calculations shall be made in accordance with the Parking Lot Shade Diagram in Appendix C.

CC-81 Pedestrian-scale lighting should be integrated into building and landscape design.

- Light fixtures should be compatible with the architectural style, materials, color, and scale of the project.
- Main entries/storefronts should have the highest level of illumination followed by pedestrian walking areas.

CC-86 Lighting sources shall have cut off lenses and should be located to avoid light spillage and glare on adjacent properties and in private spaces.

CC-89 Streets, entry drives, drive aisles, and parking areas shall have a minimum illumination level of 1.0 footcandle at the pavement surface.

CC-90 Pole mounted lighting should be spaced for maximum energy efficiency and be no taller than 25 feet.

City of Roseville Municipal Code

The City of Roseville Municipal Code includes requirements for zoning, signage, and the construction of buildings. It is assumed the project would comply with the City's Municipal Code regulations.

4.4.4 Impacts

Methods of Analysis

The significance of an environmental impact cannot always be determined through the use of a specific, quantifiable threshold. CEQA Guidelines Section 15064(b) affirms this by the statement indicating that “an ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting.” This is particularly true of aesthetic impacts. The value attached to changes in visual character is largely subjective. This EIR does not assign a judgment of “good” or “bad” to a proposed change; rather, it identifies any “substantial adverse effect,” as defined below, as a significant environmental impact.

The impact analysis for impacts associated with the existing visual character of the project site and surrounding areas evaluates any “substantial adverse effect” as a significant environmental impact. A substantial adverse effect pertaining to changes in visual character is determined based on the City's methods of visual analysis. Visual impacts are defined by the City based on the project site area's existing scenic quality, the nature of the change proposed compared to the existing site, the level of viewer exposure and concern about changes in the visual character of the area, and how visual changes due to the proposed project may be perceived by a given viewer group. The City's inclusion of viewer concern and exposure in determining visual impacts allows a somewhat subjective evaluation of changes in visual character to be set by those who would be most affected by the change. The existing visual quality, viewer exposure, and viewer concern for changes are first determined to assess the visual sensitivity of the location. This acts as a baseline to determine the impacts of the expected visual change. A substantial adverse effect can occur to visual resources when a project site has high visual sensitivity and high levels of adverse visual change or obstruction of scenic views.

In order to evaluate existing project conditions, a site visit was conducted. This analysis uses photographs from the site visit to determine visual characteristics. The City's 2035 General Plan was reviewed to assess the visual elements valued by the community. This analysis assumes that development of the project site would comply with the General Plan goals and policies, and Community Design Guidelines. Therefore, these were not considered mitigation measures in this analysis.

Issues Addressed in the Initial Study

The Initial Study prepared for the project (see Appendix B) reviewed the City's 2035 General Plan, which does not designate, identify, or define any scenic vistas or scenic resources within the City (City of Roseville 2016). The California Department of Transportation's (Caltrans) Scenic Highway Mapping System does not include any state-designated or eligible scenic vistas or scenic highways within or adjacent to the City of Roseville (Caltrans 2016). In addition, the project site does not contain any historic buildings or rock outcroppings that would be considered scenic resources. Therefore, impacts to these resources are less than significant and are not further evaluated.

Thresholds of Significance

Consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines, the City's General Plan, and professional judgment, a significant impact would occur if the proposed project would do the following:

- Substantially degrade the existing visual character or quality (day or night) of the site and its surroundings, including changes in the natural terrain or topography.
- Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

Impact 4.4-1	Substantially Degrade the Existing Visual Character of the Project Site
Applicable Policies and Regulations	City of Roseville General Plan policies City of Roseville Community Design Guidelines Zoning Ordinance
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The proposed project would involve removing the existing six buildings and surface parking on the project site to develop a five-story medical office building, along with a one-story pavilion building, parking deck and related site improvements, including site/building lighting, and landscaping on the already developed 14 acre project site. The most direct views of the site are from nearby commercial areas to the north and west of the site, as well as from vehicles traveling along Cirby Way, Riverside Avenue, and exiting I-80. The site is currently located in an urban setting and introducing a more intense level of development would not negatively impact any prominent or high-quality natural features. The analysis below provides an evaluation of the change in visual character of the site due to the proposed project.

The project is proposing to construct a five-story medical office building with a total building height of 80 feet. A smaller one story building and a two story parking deck would also be constructed. Both of these buildings would be less than 25 feet in height. Figures 2-5 through 2-8 in chapter 2, Project Description show elevations of the proposed new buildings. The City's General Plan designates the site for community commercial uses and the site is zoned BP, which allows (by right) buildings up to 50 feet in height. The City's Zoning Ordinance allows taller buildings after specific analysis of proposed building elevations as part of design review or a major project permit. The medical office building exceeds the height requirements of the zoning ordinance, therefore, the applicant is requesting a Major Project Permit to permit a taller building (City of Roseville 2016).

The proposed project has been designed to be consistent with the City's Community Design Guidelines and to ensure compatibility with the surrounding development. The exterior of the five-story medical office building would consist of a mix of metal panels, light-weight concrete panels, glass curtainwall, glazed storefronts and concrete masonry units. Rooftop mechanical equipment would be shielded by the building parapet. The one-story pavilion building would use the same exterior materials as the medical office building for design cohesiveness. The highest point of the pavilion building would be approximately 21 feet, with limited additional height for a screened mechanical enclosure at the roof level. These two buildings have been situated in a way that allows a single entry canopy feature to tie the two buildings together. The placement of the buildings also creates an opportunity for outdoor courtyards that feature water efficient gardens and space for multiple outdoor programs.

The exterior colors for the medical office building and pavilion building would include a sandy beige color. The concrete panels include varying degrees of exposed gray aggregate. The insulated metal panel colors would be silver and weathered zinc arranged in a pattern that provides a contrast to the beige concrete panels. The majority of the north, east and west elevations consist of pewter colored mullions, clear vision glass and light-gray colored spandrel glass. The base of the building is designed to have chocolate brown concrete masonry units with a shiplap profile for added visual interest.

The two-level concrete parking deck at the southwest corner of the project site would take advantage of the existing topography between the medical office building and adjacent freeway, allowing the top level of the deck to be at grade and the lower level to be partially underground. The total height above ground would be 10-feet, 10-inches tall. Exposed concrete facades of the parking deck would be gray-colored with a green screen mesh attached to the exposed surfaces for climbing vines. The structure of the parking deck would be designed for a possible future installation of solar photovoltaic (PV) panels on the top deck. These PV structures would also provide shade for vehicles parked on the top level of the deck, and would be designed to not create glare for vehicles traveling on Riverside Avenue or I-80. Building elevations are shown on

Figures 2-5 through 2-8 in chapter 2, Project Description. The proposed two-story parking deck would be shielded from view from vehicles on Riverside Avenue and I-80 by trees planted along the south and west sides of the project site. The pavilion building would be shielded from views once trees surrounding the building mature and due to its height would not be visible to vehicles traveling along Riverside Avenue or Cirby Way.

The project site would require building demolition, tree and landscape removal and grading to prepare for development. Construction is planned to occur in phases, with the existing medical office buildings remaining open and accessible to the public until the new buildings are completed and ready for occupancy. The first phase of construction would include site clearing and grading for the medical office building and parking deck. Once the new medical office building and parking deck are open, the existing buildings would be demolished and surface parking lots would be completed. Temporary landscaping would be provided along Riverside Avenue until final landscaping is completed. Construction of the pavilion building would begin about 9 months after initiating construction of the medical office building. Construction sites are generally of low visual quality, but these conditions are temporary and are somewhat expected in a developed urban area, such as exists on the existing site and in the vicinity. Therefore, building demolition, site grading, and tree and landscape removal would not permanently or substantially impact the existing developed character of the site and surroundings.

The proposed project is consistent with the City of Roseville General Plan and has been designed consistent with the City's Community Design Guidelines. The City of Roseville's Community Design Guidelines are intended to create building and community designs which are a visual asset to the community. The Community Design Guidelines include guidelines for building design, site design, and landscape design and were developed to enhance the existing urban visual environment in the City. The guidelines emphasize that buildings should be placed, designed, and arranged in a way that ensures connectivity with their surroundings. Designs with structural, material, and color diversity are encouraged. The Community Design Guidelines state that buildings should be located on project sites to allow for a transition to surrounding uses that respect the existing community character. The entrances of the project should be enhanced by landscaping and be consistent with the visual character of the surrounding development. The Community Design Guidelines also state that the natural topography of the site should be preserved as much as is possible. Furthermore, as oak trees are present on the project site, development must be consistent with the City's Tree Preservation Ordinance (City of Roseville 2008).

The proposed project has been designed to include extensive landscaping consistent with the City's Community Design Guidelines, which encourage the use of landscaping to screen views, require buffering of pedestrian walkways from the street, and require development to provide shade, a visual buffer, and relief from the visual appearance of large expanses of hard surfaces.

In addition, the parking lot includes trees to meet the City's shade tree guidelines, which require that at least 50% of the paved parking areas be shaded. The project site currently contains 290 mature trees, most of which were planted as part of the original landscaping plan. This includes six protected oak trees located in the southwest corner of the site. A total of 45 trees would be retained and 404 new trees would be planted on the project site, resulting in a total of 449 trees (a net gain of 156 trees). Landscaping would use native plants and be drought resistant where feasible. The project's landscaping plan has been designed consistent with the City's Design Guidelines and the City's Water Efficient Landscaping Ordinance. This landscaping plan proposes to divide the parking lot areas into smaller zones. Large deciduous trees would be planted along the main loop road that runs throughout the site. Where possible, existing mature trees, particularly redwood trees, would be preserved on site, including protected oak trees in the southwest corner of the site and redwood trees north of the main building and in the north parking lot. The proposed landscaping along Riverside Avenue would consist of water efficient native plants and trees, replacing the existing lawn. Trees and plants along Riverside Avenue have been selected to provide color or interest at all times of the year, with tree species that include spring flowers and fall leaf colors, and a variety of understory groundcover and shrubs that also flower during spring, summer, and fall.

As the project site slopes upward to the east from Riverside Avenue, accounting for an increase in elevation from Riverside Avenue to the center of the project site of approximately 25 feet, this slope would help shield direct views of the proposed project's surface parking lots and buildings.

Views of the project site from vehicles driving on I-80 would change from the existing single-story medical office complex shielded by mature trees to the two building medical office complex. The new medical office building would be taller than the existing buildings. Although the project site would include 449 trees at full build-out, the medical office building would still be taller than the trees at maturity, and therefore visible from the vicinity of the project site. Views of the project site from I-80 would therefore change from the current view which includes a landscaped perimeter with mature trees in the foreground and surface parking lots and single story buildings in the background, to views of landscaped areas with trees in the foreground and the new medical office buildings in the background.

Views from Riverside Avenue and Melody Lane looking east towards the project site would change from current views of landscaping consisting of lawn and mature trees in the foreground and partial views of the roofs of the buildings in the background, along with surrounding surface parking in the background, to views of landscaping including lawn and trees in the foreground, and views of surface parking and the proposed medical office building in the background. Immediately north of the area where the parking deck is located, background views of the project site from Riverside Avenue would change from surface parking to the medical office building. Near the intersection of Riverside Avenue and Cirby Way, the landscaped area

consisting of lawn bordering the project site would be reduced, and areas of surface parking would be expanded. Therefore, views from this section of Riverside Avenue would change from the existing large lawn area at the northwest side of the project site to views of trees in the foreground with partial views of surface parking in the background. Views of surface parking would be largely blocked by the slope on the western end of the site, as well as by the proposed dense landscaping. The pavilion building would be shielded from views once trees surrounding the building mature.

Views of the project site from Cirby Way would include surface parking bordered by landscaped areas. The majority of the proposed project's surface parking lots would be located on the northern end of the project site, adjacent to Cirby Way. As the proposed pavilion building and medical office building would be located to the south of these parking lots, views of the site would change from the existing one-story buildings to more surface parking surrounded by trees, shrubs and other landscaping in the foreground, with partial views of the upper floors of the medical office building in the distance. The pavilion building would be shielded from views once trees surrounding the building mature.

The major change in visual character of the project site would be the introduction of the much taller five-story medical office building. While this project would introduce a new component into the view shed, there are no existing scenic vistas or protected view sheds and the existing site is already developed with urban uses. Thus, the analysis focuses on the visual quality of the proposed project and the sensitivity of surrounding viewer groups to the proposed change.

As the project site is primarily surrounded by one to two-story buildings, the upper floors of the building would be visible from roadways and businesses near the site. Residential areas are farther from the site and surrounded by fences, buildings, and trees, and thus even when the building is five stories it would not be prominent or highly visible from residential properties primarily located to the west. For these reasons, the viewer groups who would be most strongly affected by the proposed project are those working or doing business at one of the surrounding commercial properties, or travelers on the surrounding roadways. The experience of the change in the visual environment would be more limited and transitory for this viewer group than it would be from a residential area, as viewers would be traveling past the site, walking from a vehicle to a building entrance, or conducting other business in the area. The transitory nature of the viewer experience reduces the sensitivity of this viewer group to change, when compared to more sensitive groups such as recreation users at parks or residents at homes.

As noted, the building design and landscaping complies with the City's Community Design Guidelines. The building architecture uses variation in wall planes, materials, and colors to create a façade with high visual interest. The landscaping along the roadway frontages likewise uses a range of color palettes and textures designed to maintain visual interest during all

seasons, and to screen the parking area from view. While any assessment of visual quality is necessarily subjective in nature, one purpose of the City's Community Design Guidelines is to provide a clear standard of review. Furthermore, CEQA Guidelines Section 15183(f) allows a lead agency to rely on previously adopted development policies or standards as mitigation for the environmental effects. The City of Roseville adopted CEQA Implementing Procedures in April 2008 (Resolution 08-172) which included a finding that compliance with the Community Design Guidelines would avoid significant visual impacts when applied in urban settings.

The proposed project would be built on an existing developed 14-acre site. The proposed project has been designed according to the City's Community Design Guidelines and City of Roseville 2035 General Plan, along with the City's Zoning Ordinance. The project site does not contain a high level of existing visual quality because it does not contain any scenic resources and is located in an urbanized setting. The introduction of urban-style development associated with the proposed project would not negatively impact any prominent or high-quality natural features. Because the proposed project would comply with the City's Community Design Guidelines and the proposed project would not substantially degrade the existing visual quality of the site, and because the predominantly affected viewer groups would experience the proposed change in a more limited and transitory way, the impact would be considered **less than significant**.

Impact 4.4-2	Introduction of New Sources of Light and Glare
Applicable Policies and Regulations	City of Roseville Community Design Guidelines City of Roseville Municipal Code
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

As discussed previously, the existing medical office complex uses lighting sources in its parking lots, signage and buildings. Neighboring retail areas also use lighting for building security, signage and for their parking lots. There are no buildings that create glare conditions in the area or on the project site. Existing sources of light from street lights and building lights are visible at night from residential and commercial uses to the north and west of the project site, and from vehicle headlights on I-80 to the south and east, Riverside Avenue to the west, and Cirby Way to the north.

The proposed project involves the introduction of new light sources including overhead parking lot and roadway pole lights, low-level lighting on bollards to illuminate landscaped areas and sidewalks, illuminated signage, and building-mounted lighting. Architectural lighting would also be used to illuminate key architectural features and the two monument signs.

The proposed project is located within an urbanized area of the City with many existing lighting sources. The City requires new lighting to comply with City standards (i.e., Community Design Guidelines, which include limiting the height of light standards and requiring cut-off lenses and glare shields to minimize light and glare impacts). The proposed project's lighting fixtures would use premium-efficiency LED light sources that would automatically turn-off during the day and would be motion-activated to provide dim lighting at night when there is no activity. Lighting would be designed to minimize light trespass, reduce sky-glow to increase night sky access, and improve night-time visibility through glare reduction. Hours of operation would generally be Monday through Friday from 7:00 a.m. to 6:00 p.m. The Conference Center in the pavilion building may be open until 10:00 p.m. on some days depending on events and class schedules.

The proposed project would include monument signs at both entries to the project site (Cirby Way and Riverside Avenue), as well as directional signage on the site (see Figure 2-3). The monument signs would be constructed of aluminum and would be internally illuminated. The total height would be 15-feet, as shown in Figure 2-9. Each building would include illuminated exterior signage at the first floor to direct patients, visitors, and staff. Large illuminated signs would be mounted at the top of the medical office building and would be visible from I-80 and site entries. The City's Community Design Guidelines specify that lighting should be used in outdoor parking areas and pedestrian walkways and that light fixtures should comply with the architectural style and visual character of the project. The Community Design Guidelines state

that light should serve to increase safety and security of the project and pole mounted lighting should be 25 feet in height at maximum and energy efficiency should be considered for all lighting design (City of Roseville 2008).

The two proposed buildings would use a mix of metal panels, light-weight concrete panels, glass curtainwall, glazed storefronts and concrete masonry units for its exterior façade. None of the project elements are expected to be highly reflective, and thus the project would not contribute to an increased source of glare. The proposed project would result in an increase in cars on local roadways and within the parking lots on the project site, which would create light and glare impacts resulting from car headlights. However, these additional cars would not account for a substantial increase to existing conditions, as light and glare effects from car headlights within the parking lots would be blocked by landscaping surrounding the project site and also due to the elevated nature of the site, and therefore would not result in substantial light impacts outside of the project boundaries. Along local roadways within the project site's vicinity, the increase in light and glare associated with car headlights would not be a substantial change to existing conditions. The proposed two-story parking deck would be shielded from view from vehicles on Riverside Avenue and I-80 by trees planted along the south and west sides of the project site. The medical office building would face north and south and the building façade does not contain any large expanse of glass or other reflective surfaces. The pavilion building would be shielded from views once trees surrounding the building mature and due to its height would not be visible to vehicles traveling along Riverside Avenue or Cirby Way. As the project site slopes upward approximately 25 feet from Riverside Avenue to the center of the project site, views of the project site's surface parking lots and buildings, and associated glare and light spillover from car headlights, parking lights and building lighting will be shielded.

A photometric lighting assessment determined that parking lots lights would have between 1.5 and 4 foot candles (FC) illuminance, which would provide good visibility while being consistent with IES NA 2010 (Illuminating Engineering Society Lighting Handbook) and IES NA RP-8-14 (Recommended Practices for Roadway Lighting) recommendation (Silverman & Light 2017). Pedestrian pathways throughout the site would be illuminated with a minimum of 1 FC in the center of the egress pathway, and therefore follows NFPA 101 requirements. Pedestrian areas surrounding the main entrance and attached canopy of the medical office building are more highly illuminated than other areas, which supports patient wayfinding, drop-off, and pick-up. Light levels around the perimeter of the project site are between 2 and 4 FC, and therefore would not cause excessive light pollution. Furthermore, all fixtures that would be used on the project site (with the exception of the tree uplights) do not produce any uplight, according to the LED Luminaire Standard Schedule. The tree lights are within 3% of the total site lumens in total, and therefore follow California Building Code Title 24 and the U.S. Green Building Council LEED v4 Light Pollution requirements. This assessment shows that the proposed project meets all current required codes and recommendations regarding lighting quality, pedestrian egress

and overall light pollution. The proposed project lighting would also meet the City's Design Guidelines' standards of a minimum of 1 FC illumination of streets, entry drives, drive aisles, and parking areas. Furthermore, this updated lighting meets modern standards for efficiency and light trespass reduction and would be replacing the existing parking lot lighting on the site, which uses older, less efficient fixtures.

As discussed above, project lighting would use light spillover and glare reduction methods to reduce light impacts. These include height limitations for lighting, and using cut-off lenses and glare shields. Light sources would automatically be turned off during the day and only dim-lighting during the nighttime when no activity is present. Landscaping along the site boundary would furthermore shield light spillover from the site. Compliance with the City's Community Design Guidelines requirements would reduce the impact on light associated with the project that could be disruptive to adjacent areas ensuring impacts associated with light and glare would be **less than significant**.

4.4.5 Mitigation Measures

None required.

4.4.6 Cumulative Impacts

The cumulative context for the proposed project is buildout of the City's 2035 General Plan (City of Roseville 2016). The scope of the cumulative analysis includes areas within the view shed of and from the project site into the foreseeable future. Cumulative light effects will be evaluated based on whether development light sources in the surrounding area could impact a similar area as that which is impacted by the proposed project's light sources.

Impact 4.4-5	Contribution to Cumulative Changes in the Existing Visual Character
Applicable Policies and Regulations	City of Roseville Community Design Guidelines City of Roseville 2035 General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The majority of the area surrounding the project site has been developed with urban uses, which include a mix of commercial, business/professional, and residential uses. There is minimal potential for development to occur adjacent to the project site because the area has been developed, but future development is possible along Cirby Hills Drive and Valley Oak Drive and in the areas that border these roads. There are also a few undeveloped lots further away from the project area that have the potential to be developed. It is anticipated

development in these areas are likely to be urban/suburban residential development or commercial development consistent with current surrounding uses. Because these uses would be consistent with the current visual character of the surroundings, this would not be considered a cumulative impact as they are within an already developed setting.

As discussed previously, the proposed project would change the existing visual character of the project site, but the change would not be considered substantial. The project site does not contain any scenic resources, high-quality natural resources, or a high level of existing visual quality and is located in an area with similar visual attributes. Therefore, the proposed project's contribution to cumulative impacts on visual resources would be **less than significant**.

Impact 4.4-6	Contribution to a Cumulative Increase in Light and Glare
Applicable Policies and Regulations	City of Roseville Community Design Guidelines City of Roseville 2035 General Plan
Significance with Policies and Regulations	Less than significant
Mitigation Measures	None required
Significance after Mitigation	Less than significant

The existing development surrounding the project area already consists of artificial lighting from buildings, signage, parking lot lights, street lighting, and car headlights. As the project site is surrounded by three roadways, car headlights contribute a source of artificial lighting. Future development in the area surrounding the project site would account for an increase in artificial lighting. However, the amount of land that could be developed within the project's vicinity is limited. Any future development would be required to follow the City's Community Design Guidelines which intend to minimize light spillover and glare.

As stated previously, the proposed project involves introduction of new nighttime light sources to provide for the security and safety of project users. This would include overhead parking lot and roadway pole lights, illuminated signage, low-level lighting on bollards to illuminate landscaped areas and sidewalks, and building-mounted lighting at entrances, as well as architectural lighting. The proposed project would also account for an increase in the light source from car headlights. All of these light sources would increase existing ambient light conditions. However, these lights would only contribute low-level lighting at night and would be off during the day. The City's Design Guidelines require limiting the height of light standards and requiring cut-off lenses and glare shields to minimize light and glare impacts. Because all lighting would be required to be cut-off fixtures and reduce glare, the proposed project would not contribute to a substantial increase in spillover light or glare. Due to this, the portion of light and glare impacts that the project would contribute to the cumulative increase in light and glare would not be substantial, and therefore the impact would be **less than significant**.

4.4.7 Mitigation Measures

None required.

CHAPTER 5 CEQA CONSIDERATIONS

5.1 INTRODUCTION

Section 15126 of the California Environmental Quality Act (CEQA) Guidelines requires that all phases of a project must be considered when evaluating its impact on the environment, including planning, acquisition, development, and operation. As part of this analysis, the Environmental Impact Report (EIR) must also identify (1) significant environmental effects of the proposed project, (2) significant environmental effects that cannot be avoided if the proposed project is implemented, (3) significant irreversible environmental changes that would result from implementation of the proposed project, (4) growth-inducing impacts of the proposed project, and (5) alternatives to the proposed project (evaluated in Chapter 6, Project Alternatives).

5.2 SIGNIFICANT ENVIRONMENTAL EFFECTS

Chapter 3 of this EIR, Executive Summary, and Chapter 4, Environmental Analysis, Sections 4.1 through 4.4, and the Initial Study prepared for the project (see Appendix B) provide a comprehensive identification of the Kaiser Riverside-Cirby Medical Office Building project's (proposed project's) significant environmental effects, including the level of significance both before and after mitigation.

5.3 SIGNIFICANT AND UNAVOIDABLE IMPACTS

Section 15126.2(b) of the CEQA Guidelines requires that an EIR describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. The environmental effects of the proposed project on various aspects of the environment are discussed in detail in the technical sections contained in Chapter 4, Environmental Analysis, of this EIR. There is one cumulative traffic impact that cannot be avoided if the proposed project is approved, listed below. All of the remaining impacts can be mitigated to a less-than-significant level through the adoption of recommended mitigation measures.

- Decrease in level of service at City intersections under 2035 conditions.

5.4 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL EFFECTS

Section 15126.2 (c) of the CEQA Guidelines requires a discussion of any significant irreversible environmental change that would be caused by the proposed project. Generally, a project would result in significant irreversible changes if:

- The primary and secondary impacts would generally commit future generations to similar uses (such as highway improvement that provides access to a previously inaccessible area);

- Irreversible damage could result from any potential environmental accidents associated with the project;
- The project would involve a large commitment of nonrenewable resources; or
- The proposed consumption of resources is not justified.

Implementation of the proposed project would result in the long-term commitment of resources of the project site to urban land use. The development of the proposed project would likely result in or contribute to the following irreversible environmental change:

- Irreversible consumption of energy and natural resources associated with the future use of the site.

Development of the proposed project would continue the commitment of the project site to urban development. Restoration of the site to an un-developed condition, prior to development of the existing medical office complex, would not be feasible given the degree of disturbance, the urbanization of the area, and the level of capital investment.

Resources that would be permanently and continually consumed by project implementation include water, electricity, natural gas, and fossil fuels. Wood products, asphalt, and concrete would be used in construction, along with gas and diesel fuel. With respect to operational activities, compliance with all applicable state and local building codes, as well as mitigation measures, planning policies, and standard conservation features, would ensure that resources are conserved to the maximum extent possible. The project would incorporate a number of sustainable practices that reduce the consumption of energy. Nonetheless, construction activities related to the proposed project would result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels, natural gas, and gasoline and diesel for automobiles and construction equipment.

The CEQA Guidelines also require a discussion of the potential for irreversible environmental damage caused by environmental accidents associated with the project. While the project would result in the use, transport, storage, and disposal of minor amounts of hazardous materials during project construction and operation, as described in the Initial Study (see Appendix B), all such activities would comply with applicable local, state and federal laws related to the use, storage and transport hazardous materials, which significantly reduces the likelihood and severity of accidents that could result in irreversible environmental damage. The project itself does not include any uniquely hazardous uses that would require any special handling or storage. Further, the project does not contain any industrial uses that would use or store acutely hazardous materials.

Implementation of the proposed project would result in the long-term commitment of resources to urban development, consistent with current conditions. The most notable significant

irreversible impacts include the use of non-renewable and/or slowly renewable natural and energy resources, such as lumber and other forest products and water resources during construction activities. Operations associated with future uses would also consume an increase in natural gas and electricity compared to existing conditions. These irreversible impacts, which are unavoidable consequences of urban growth, are described in detail in the appropriate sections of this EIR (see Chapter 4).

5.5 GROWTH-INDUCING IMPACTS

As required by Section 15126.2(d) of the CEQA Guidelines, an EIR must discuss ways in which a proposed project could foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. Also, the EIR must discuss the characteristics of the project that could encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. Growth can be induced in a number of ways, such as through the elimination of obstacles to growth, the stimulation of economic activity within the region, or the establishment of policies or other precedents that directly or indirectly encourage additional growth. Under CEQA, this growth is not to be considered necessarily detrimental, beneficial, or of significant consequence. Induced growth would be considered a significant impact if it can be demonstrated that the potential growth, directly or indirectly, significantly affects the environment.

In general, a project could foster spatial, economic, or population growth in a geographic area if the project removes an impediment to growth (e.g., the establishment of an essential public service, the provision of new access to an area, or a change in zoning or General Plan amendment approval), or economic expansion or growth occurs in an area in response to the project (e.g., changes in revenue base, employment expansion). These circumstances are further described below.

- **Elimination of Obstacles to Growth:** This refers to the extent to which a proposed project removes infrastructure limitations or provides infrastructure capacity, or removes regulatory constraints that could result in growth unforeseen at the time of project approval.
- **Economic Effects:** This refers to the extent to which a proposed project could cause increased activity in the local or regional economy. Economic effects can include such effects as the “multiplier effect.” A “multiplier” is an economic term used to describe interrelationships among various sectors of the economy. The multiplier effect provides a formula of how much economic output increases with an increase in spending attributed to the direct employment effect of a project, as well as indirect and induced employment growth. The multiplier effect acknowledges that on-site employment and population growth of each project is not the complete picture of growth caused by the project.

Elimination of Obstacles to Growth

The elimination of either physical or regulatory obstacles to growth is considered to be a growth-inducing effect, though not necessarily a significant one (i.e., one that results in significant environmental effects). A physical obstacle to growth typically involves the lack of public service infrastructure. The extension of public service infrastructure, including roadways, water mains, and sewer lines, into areas that are not currently provided with these services would be expected to support new development. Similarly, the elimination or change to a regulatory obstacle, including existing growth and development policies, could result in new growth. The proposed project is located in a developed area of the City and the project site is currently served by City utilities. Development of the project would not eliminate any obstacles to future growth.

The elimination of physical obstacles to growth is considered a growth-inducing effect, though not necessarily a significant one. There are no known physical constraints to growth in the vicinity of the project site.

The proposed project includes the reuse of an existing developed site completely surrounded by urban development within the City. The project site is immediately adjacent to Interstate 80 (I-80) to the south and east, which would preclude development immediately south and east of the site; a mix of auto sales and other retail development is located to the west, which would preclude inducing growth to the west of the site. Land to the north of the project site, across Cirby Way, is also developed with retail uses, public storage and apartments; which would preclude inducing growth to the north of the site. The upsizing of on-site utility infrastructure to accommodate the project would not be considered growth-inducing because there are existing development limitations surrounding the project site, for which the infrastructure would not be modified, and the project is re-developing an existing developed site. Due to the location of the project site and the fact that the proposed project would not remove any constraints that could potentially be obstacles to growth, implementation of the proposed project would not induce growth within this area of the City.

Economic Effects

Additional local employment can be generated through the multiplier effect, as discussed previously in this chapter. The multiplier effect tends to be greater in regions with larger, diverse economies due to a decrease in the requirement to import goods and services from outside the region.

Two different types of additional employment are tracked through the multiplier effect. *Indirect* employment includes those additional jobs that are generated through the expenditure patterns of direct employment associated with the project. Indirect jobs tend to be in relatively close proximity to the places of employment and residence.

The multiplier effect also calculates *induced* employment. Induced employment follows the economic effect beyond the expenditures of the residents within the project area to include jobs created by the stream of goods and services necessary to support residences within the proposed project. When a manufacturer buys or sells products, the employment associated with those inputs or outputs are considered *induced* employment.

For example, when an employee of the project goes out to lunch, the person who serves the employee lunch holds a job that is *indirectly* related to the proposed project. When the server then goes out and spends money in the economy, the jobs generated by this third-tier effect are considered *induced* employment.

The multiplier effect also considers the secondary effect of employee expenditures. Thus, it includes the economic effect of the dollars spent by those employees and residents who support the employees of the project.

Increased future employment generated by employee spending ultimately results in physical development of space to accommodate those employees. It is the characteristics of this physical space and its specific location that will determine the type and magnitude of environmental impacts of this additional economic activity. The proposed project would affect the local economy through the construction of a larger medical office complex. The new medical office complex would create approximately 202 new jobs and the 224 existing employees would relocate to the new project for a total of approximately 426 employees. The addition of approximately 202 new jobs would help contribute to both indirect and induced employment opportunities, as described previously. Although some degree of economic effect can be predicted, but the actual environmental implications of this type of economic growth are too speculative to predict or evaluate, since they likely would be spread throughout the City, Placer County, and beyond.

Impacts of Induced Growth

The growth induced directly and indirectly by the proposed project could contribute to its environmental impacts, discussed in Chapter 4, in the City and adjacent Placer County, as well as the greater regional area. Any such environmental effects, however, are too diffuse and speculative to predict or describe with any particularity.

Indirect and induced population growth in the city would further contribute to the loss of open space because it would encourage the conversion of undeveloped land to urban uses for additional housing and infrastructure. However, it is assumed this new growth would occur within areas of the City designated and zoned for development. In addition, even if any open space were converted to urban uses, the particular open space that might be converted cannot be predicted with any certainty. According to the City of Roseville Business Services Division, the City has an unbuilt housing supply of approximately 20,000 residential units in its approved Specific Plan areas.

In summary, although the proposed project can be said to induce some growth, the consequences of such growth-inducement are too speculative to predict and thus cannot be said to contribute meaningfully to any significant environmental effect. Growth-inducing effects are therefore **less than significant**.

5.6 CUMULATIVE IMPACTS

CEQA requires that an EIR contain an assessment of the cumulative impacts that could be associated with the proposed project. This assessment involves examining project-related effects on the environment in the context of similar effects that have been caused by past or existing projects, and the anticipated effects of future projects. As indicated in the CEQA Guidelines, the discussion of cumulative impacts need not provide the same level of detail as project-related impacts. The discussion should be guided by “standards of practicality and reasonableness” (CEQA Guidelines, Section 15130(b)). Although project-related impacts can be individually minor, the cumulative effects of these impacts, in combination with the impacts of other projects, could be significant under CEQA and must be addressed (14 CCR 15130(a)). Where a lead agency concludes that the cumulative effects of a project, taken together with the impacts of other closely related past, present, and reasonably foreseeable probable future projects are significant, the lead agency then must determine whether the project’s incremental contribution to such significant cumulative impact is “cumulatively considerable” (and thus significant in and of itself).

Cumulative Context

To ensure an adequate discussion of cumulative impacts is included in an EIR, CEQA allows the lead agency to use either a list of past, present, and probable future projects (including those projects outside of the control of the lead agency), or projections included in an adopted local, regional, or statewide plan like a general plan (CEQA Guidelines, Section 15130(b)(1)). The general cumulative impact context for evaluating cumulative impacts for the majority of the technical issue areas evaluated in Chapter 4 of this EIR considers development projections identified in the City’s 2035 General Plan, as amended, or evaluates the potential loss of resources on a much broader, regional scale. These cumulative impact analyses in this EIR thus do not rely on any list of specific pending, reasonably foreseeable development proposals in the general vicinity of the proposed project.

It is important to note that the assumptions made in the cumulative analysis varies by technical area. For example, traffic and traffic-related air emissions assume development that is planned and/or anticipated in the City, as well as the surrounding unincorporated area, because each contributes to traffic on local and regional roadways that is quantifiable. Operational air quality impacts are evaluated against conditions in the City of Roseville and

surrounding areas within the Sacramento Federal Nonattainment Area for ozone. The cumulative analysis in each of the technical sections first evaluates the overall impact of the cumulative scenario (including the proposed project); if that impact is found to be significant, then the analysis evaluates the proposed project's incremental contribution to the cumulative scenario to determine if that contribution is cumulatively significant. A description of the cumulative context for each issue area evaluated is included in the cumulative impacts at the end of each technical section of Chapter 4.

INTENTIONALLY LEFT BLANK

CHAPTER 6

PROJECT ALTERNATIVES

6.1 INTRODUCTION

The CEQA Guidelines state that “An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible.” (CEQA Guidelines, Section 15126.6, subd. (a). “[T]he discussion ... shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly” (*Id.*, subd. (b).). The feasibility of an alternative may be determined based on a variety of factors, including, but not limited to, site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries, and site accessibility and control (*Id.*, subd. (f)(1)). An EIR need not evaluate the environmental effects of alternatives in the same level of detail as the proposed project, but must include enough information to allow meaningful evaluation, analysis, and comparison with the proposed project.

Alternatives in an EIR must be *potentially* feasible (CEQA Guidelines, Section 15126.6(a)). The courts have clarified that agency decision makers ultimately decide what is “actually feasible.” Under CEQA, “feasible” is defined as capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors (CEQA Guidelines, Section 15364). The concept of “feasibility” also encompasses the question of whether a particular alternative or mitigation measure promotes the underlying goals and objectives of a project and is based on a reasonable balancing of the relevant economic, environmental, social, legal, and technological factors.

The lead agency’s decision making body, in this case the Roseville City Council, has the discretion to select a project alternative in lieu of the project. If this were to occur, the City Council would need to ensure that the level of detail included in the alternatives analysis is adequate and that there would not be any new or significant impacts. The required Findings of Fact and Statement of Overriding Considerations and Mitigation Monitoring and Reporting Plan would need to be prepared that identifies the alternative as the project selected for approval. It is anticipated that if any of the project alternatives is selected, the mitigation measures identified for the project would not change and would still be required.

This chapter identifies the proposed project objectives, describes the project alternatives, and evaluates the comparative effects of the alternatives relative to the proposed project. As required under Section 15126.6(e) of the CEQA Guidelines, the environmentally superior alternative is identified and included at the end of this chapter.

One significant and unavoidable cumulative impact was identified for the project. Impact 4.6-3, Decrease in Level of Service at City Intersections under 2035 Conditions.

Project Objectives

Pursuant to CEQA Guidelines, Section 15124(b), a clear statement of project objectives is required. Development of the proposed project is intended to be consistent with the policies of the City. The applicant has identified the following specific objectives for the project:

- Develop a replacement outpatient medical office building that includes a café, health education, optical center, physical therapy/rehab, comprehensive diagnostic imaging, eight adult primary care clinics, specialty clinics for obstetrics and gynecology, dermatology and allergy, injection clinic, and comprehensive eye services including ophthalmology and optometry on an underutilized property with multiple end-of-life structures to accommodate existing and growing demand for medical care in the Roseville community.
- Provide high-quality healthcare to serve up to 9,000 Kaiser Permanente members (and their family or care-givers) per day in a medical facility for those needing medical assistance in Roseville and surrounding communities.
- Provide convenient access and reduce vehicle trips for Kaiser Permanente members to obtain routine, rapid-transaction medical services (e.g., pharmacy and laboratory) and provide onsite conference facilities for classes, training and other events.
- Achieve Leadership in Energy and Environmental Design (LEED) Gold Certification as well as Kaiser's existing sustainable building strategies.
- Provide uninterrupted services to Kaiser Permanente members throughout the construction period by staging project construction in phases.
- Provide new employment opportunities for over 200 new employees in the Riverside-Cirby medical office buildings and temporary construction jobs through redevelopment.

Alternatives Evaluated but Dismissed

As noted previously, the purpose of an alternatives analysis is to develop alternatives to the proposed project that substantially lessen at least one of the significant environmental effects identified as a result of the project, while still meeting most, if not all, of the basic project

objectives. Project alternatives that would reduce the size of development on the site or change the mix of uses that would lessen the severity of impacts identified under the project are addressed later in this chapter.

The City has determined that a site adjacent to or near easy access to a freeway is required for this type of regional project. City staff evaluated other parcels of land within the City that could support the project and determined that there are no other parcels of undeveloped land of similar size close to freeway access that could support the project and for which the site is designated and zoned for commercial uses, does not contain any (or has minimal) biological resources, and provides adequate site accessibility. Because staff was unable to find a suitable site that could meet these requirements as well as meet the project objectives, an off-site or alternate project location was dismissed from further evaluation. A suitable site was not identified within the City that would eliminate environmental effects and/or would be potentially feasible.

6.2 ALTERNATIVES ANALYZED

CEQA requires the evaluation of the comparative impacts of the “No Project” alternative (CEQA Guidelines, Section 15126.6(e)(1)). The No Project Alternative “shall discuss the existing conditions at the time the [NOP] is published, or if no notice of preparation is published, at the time environmental analysis is commenced, as well as what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services” (CEQA Guidelines, Section 15126.6(e)(2)). “The purpose of describing and analyzing a no project alternative is to allow decision makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project” (CEQA Guidelines, Section 15126.6(e)(1)).

This section provides a description of the alternatives to the proposed project analyzed in this Draft EIR and evaluates how specific impacts differ in severity from those associated with the project. The potentially significant impacts identified under the alternatives analysis can be fully mitigated through compliance with mitigation measures identified in Sections 4.1 through 4.4 included in Chapter 4, which contains the environmental analysis of the proposed project.

The project alternatives identified herein address the significant impacts (before mitigation) identified for the project, including traffic and air emissions associated with project construction and operation. Thus, the alternatives developed for the project contemplate a smaller project footprint and changes to the building size to address these impacts. In many instances, the majority of impacts (e.g., land disturbance) are virtually identical to, or very similar to, the proposed project and are described as such.

This Draft EIR has incorporated a reasonable range of project alternatives that attain a majority of the project objectives in a reasonable manner while reducing the severity of the significant impacts (before mitigation) identified under the proposed project.

The alternatives to the proposed project analyzed in this Draft EIR are:

- Alternative 1: No Project/No Development**, assumes the project would not be built and the existing Kaiser medical office complex would remain.
- Alternative 2: Reduced Footprint**, would eliminate the pavilion building, thereby reducing the project footprint and reducing the number of parking spaces required.
- Alternative 3: Larger Parking Deck**, adds two levels to the parking deck reducing the number of surface parking spaces and increasing the size of the parking deck.
- Alternative 4: Smaller Medical Office Building**, reduces the size of the medical office building by one floor and reduces the number of surface parking spaces.

Table 6-1
Comparison of Development Assumptions for the Project Alternatives

	Project Components
Proposed Project	Medical Office Building - 194,000 sf, five-stories Pavilion Building - 16,000 sf, one-story Parking Deck - 82,630 sf parking deck with 255 parking spaces Surface parking – 803 spaces
Alternative 1: No Project/ No Development	None
Alternative 2: Reduced Footprint	Medical Office Building – No change Pavilion Building - Eliminated Parking Deck – No change Surface parking – 697 spaces (reduction by 106 spaces)
Alternative 3: Larger Parking Deck	Medical Office Building- No change Pavilion Building – No change Parking Deck – Add two levels and approximately 254 parking spaces Surface parking - 549 spaces (reduction of 254 spaces)
Alternative 4: Smaller Medical Office Building	Medical Office Building – Reduce to 156,000 sf, 4 stories Pavilion Building – No change Parking Deck – No change Surface parking - 545 (reduction of 258 spaces)

Alternative 1: No Project/No Development Alternative***Description***

The No Project/No Development Alternative considers the effects of forgoing the project entirely, and leaving the existing medical office building. The No Project/No Development Alternative thus allows decision-makers to compare the impacts of the proposed project to retaining the existing condition of the site. The No Project/No Development Alternative describes the environmental conditions that exist at the time that the environmental analysis commences (CEQA Guidelines, Section 15126.6 (e)(2)).

Comparative Analysis of Environmental Effects

The No Project/No Development Alternative would produce no changes on the project site, because the site would remain in its current condition, effectively eliminating those project impacts discussed in this Draft EIR. There would be no air emissions associated with project construction and no potential disturbance to any nesting birds in trees on or adjacent to the project site. There would be no potential to unearth any unknown subsurface cultural or historic resources and there would be no increase in the number of vehicles accessing the site and on area roadways and intersections. There would be no operational impacts on the surrounding roadway network and there would be no increase in demand for water supply, wastewater treatment and solid waste disposal.

Relationship to Proposed Project Objectives

The No Project/No Development Alternative would not achieve any of the project objectives because it would not develop the site with medical office uses, would not provide employee opportunities, and would not provide sustainably designed buildings.

Alternative 2: Reduced Footprint***Description***

Under the Reduced Footprint Alternative the 16,000 square foot pavilion building is eliminated along with approximately 106 surface parking spaces. The other components of the proposed project would remain the same under this alternative. Eliminating the pavilion building and 106 surface parking spaces would eliminate the onsite pharmacy, laboratory, and conference space, create a reduction in the amount of impervious surface area, reduce the number of trees to be removed, and would allow more landscaped areas on the site.

Comparative Analysis of Environmental Effects

Impacts under the Reduced Footprint Alternative would be similar to those of the proposed project, but overall less intense because it would generate a decrease in vehicle trips compared to the proposed project due to eliminating the pharmacy, laboratory and conference space in the pavilion building. Impacts associated with construction and site disturbance (i.e., air emissions, biological resources, and cultural resources) would essentially be the same as the proposed project because the existing medical office buildings would still be removed to accommodate the new medical office building and parking deck and the required offsite improvements to Cirby Way and the extension of utilities would still be required. It is assumed the medical office building would be located in a similar location on the site as the proposed project with vehicular access provided from Cirby Way and Riverside Avenue, the same as the project. Surface parking is assumed to be provided around the buildings in the same configuration as the project. But because there would be a reduction in the need for 106 parking spaces it would allow slightly more undeveloped acreage to remain on the project site.

Impacts Identified as Being the Same as or Similar to those of the Proposed Project

Overall impacts associated with project construction, site disturbance, and building demolition would be essentially the same as the proposed project. It is assumed under this alternative that roughly the entire site would be disturbed to accommodate project development. Therefore, the potential disturbance to any nesting birds and unknown subsurface prehistoric and historic resources due to project construction would be the same as the proposed project and Mitigation Measures BIO-1 and CUL-1 identified in the Initial Study would still be required. The increase in air emissions associated with construction equipment and activity would also not change from what was evaluated under the proposed project.

Impacts Identified as Being Less Severe than those of the Proposed Project

Under this alternative, the total number of vehicle trips would be reduced due to elimination of the pavilion building, as shown in Table 6-2. On a daily basis, the proposed project would generate 3,753 daily trips. Alternative 2 would generate 3,106 daily trips, or a 17.2% decrease in trips compared to the proposed project. Under AM peak hour conditions there would be a reduction of 71 trips and under PM peak hour conditions there would be a reduction of 69 trips. Under Existing plus Project conditions an impact was identified at the Cirby Way/Vernon Street intersection during the PM peak hour. Under Alternative 2 this impact would not change and Mitigation Measure 4.3-1 would still be required. In addition, the cumulative significant and unavoidable traffic impact would still occur under this alternative.

A reduction in vehicles would also contribute to a slight reduction in air emissions associated with project operation. The demand for water supply, wastewater treatment, and generation of

solid waste would also be slightly reduced under this alternative. In addition, the elimination of the pavilion building would change the visual character of the site compared to the proposed project, and project lighting would be lessened under this alternative because building and parking lot lights would be eliminated. The number of trees and additional landscaped areas would increase under this alternative due to the reduction in surface parking. Under this alternative the increase in stormwater runoff would be lessened due to less impervious surface and the number of trees to be removed could also be reduced.

Table 6-2
Trip Generation of Project Alternatives

Facility	ksf	Trip Rates (per ksf)		Trips	
		AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
Existing Medical Center	90.29	3.87	5.07	349	458
Proposed Project	210 ¹	3.23 ²	4.37 ²	698	917
Net Increase in Trips				+349	+458
Proposed Project	210	3.23	4.37	698	917
Alt 2: Reduced Footprint ³	194	3.23	4.37	627	848
Change in Trips				-71	-69
Proposed Project	210	3.23	4.37	698	917
Alt 4: Smaller MOB ⁴	172	3.23	4.37	556	752
Change in Trips				-142	-165

Notes:

¹ We were directed to assume all 210 ksf of building would be MOB use (i.e., pavilion building is included).

² Trip rate associated with proposed project expansion calculated by dividing total trips by square footage. However, as noted in TIS, trip generation is based on the increase in health care providers, which dictate both the number of on-site employees and patient visits.

³ Alternative 2 would eliminate the pavilion building. For consistency of approach across alternatives, its trip generation has been calculated based on this reduced square footage amount (i.e., there are proportionally fewer providers).

⁴ Alternative 4 would reduce the total amount of MOB space. For consistency of approach across alternatives, its trip generation has been calculated based on this reduced square footage amount (i.e., there are proportionally fewer providers).

Source: Fehr & Peers 2017

Impacts Identified as Being More Severe than those of the Proposed Project

Under this alternative there are no impacts that would be considered more severe than the proposed project.

Relationship to Project Objectives

Under this alternative, not all of the project objectives would be met. Due to the elimination of the pavilion building there would not be a pharmacy, laboratory or conference space available to Kaiser members. Therefore, the third objective would not be met. In addition, there would be

fewer jobs available and it would be less convenient for Kaiser members to get prescriptions and lab results; therefore, this alternative also does not meet the last project objective.

Alternative 3: Larger Parking Deck

Description

Under Alternative 3, two levels would be added to the parking deck adding approximately 254 parking spaces thereby reducing surface parking by 254 spaces. The pavilion building and the medical office building would still be developed under this alternative and would not change from the proposed project. The reduction in surface parking spaces would reduce the amount of impervious surface area, would reduce the number of trees to be removed, and would allow more landscaped areas on the site.

Comparative Analysis of Environmental Effects

Impacts under the Larger Parking Deck Alternative associated with site clearing, grading, building demolition and general construction activities would essentially be the same as the proposed project. Impacts associated with biological resources, and cultural resources would not change and Mitigation Measures BIO-1 and CUL-1 identified in the Initial Study would still be required. The number of vehicle trips would remain the same and Mitigation Measure 4.3-1 would still be required. The primary difference between this alternative and the proposed project is that there would be area that would be available for development as a small park with tables and benches for both employees and members to enjoy.

Impacts Identified as Being the Same as or Similar to those of the Proposed Project

Overall impacts associated with project construction and site disturbance would be essentially the same as the project. It is assumed under this alternative that roughly the entire site would be graded and cleared to accommodate project development including removing the existing medical office buildings, installing the required offsite improvements to Cirby Way, and extending utilities to serve the site. Mitigation Measures BIO-1 and CUL-1 would still be required. The number of vehicle trips would also remain the same as the proposed project and Mitigation Measure 4.3-1 would still be required and the significant and unavoidable cumulative traffic impact would also not change under this alternative. In addition, the increase in demand for public utilities would be the same as the project as well as the increase in air emissions associated with both project construction and operation. Lastly, under this alternative the medical office building and pavilion Building would remain the same as the proposed project and the visual impacts would not change from what was evaluated. The parking deck would increase from two stories, or approximately 11 feet tall to four stories or 33 to 34 feet tall. The parking deck is located on the back side or south side of the medical office building and would

be visible from I-80 and Riverside Boulevard. The increase in height of this structure would not result in any changes to the impact analysis and impacts to visual resources would remain less than significant.

Impacts Identified as Being Less Severe than those of the Proposed Project

Under this alternative the increase in stormwater runoff would decrease due to less impervious surface and the number of trees to be removed could be reduced. Although impacts associated with stormwater runoff and tree removal were found to be less than significant, under this alternative removal of areas designated for surface parking would potentially allow for development of a passive park for both employees and members to use as a quiet respite. In addition, because there would be a reduction in the amount of surface parking spaces the number of parking lot lights would be reduced. This would slightly reduce the overall amount of light generated by the project.

Impacts Identified as Being More Severe than those of the Proposed Project

Under this alternative there are no impacts that would be considered more severe than the proposed project.

Relationship to Project Objectives

Under this alternative all of the project objectives would be met because the primary project elements are not changing. The medical office building would still be developed and high-quality healthcare would still be provided to serve Kaiser Permanente members. There would be no disruption to medical services during project construction and all buildings would be designed to meet LEED gold standards and employment opportunities would be provided.

Alternative 4: Smaller Medical Office Building

Description

Under the Smaller Medical Office Building alternative, the size of the medical office building is reduced by approximately 38,800 square feet which would reduce the building to four stories in height and would reduce parking by approximately 258 spaces. The pavilion building and parking deck would still be developed under this alternative. The 258 parking spaces would be removed from the surface parking reducing the amount of impervious surface area, reducing the number of trees to be removed, and allowing more landscaped areas on the site.

Comparative Analysis of Environmental Effects

Under the Smaller Medical Office Building Alternative impacts associated with site clearing, grading and construction activities would essentially be the same as the proposed project because the general project footprint would stay the same. As discussed in the Initial Study, impacts associated with biological resources and cultural resources would occur due to construction activities and Mitigation Measures BIO-1 and CUL-1 would still be required. Overall, the number of vehicle trips would decrease slightly due to the reduction in the availability of medical services; however, Mitigation Measure 4.3-1 would still be required. The primary difference between this alternative and the proposed project is that there would be a smaller medical office building and a reduction in the amount of surface parking.

Impacts Identified as Being the Same as or Similar to those of the Proposed Project

Impacts associated with site clearing, building demolition and grading would essentially be the same as the proposed project and Mitigation Measures BIO-1 and CUL-1 would still be required. Air emissions associated with construction would not change from what was analyzed as part of the project.

Impacts Identified as Being Less Severe than those of the Proposed Project

Under this alternative because there would be a reduction in the amount of medical office space, the increase in demand for water supply, wastewater treatment and generation of solid waste would all decrease slightly under this alternative. In addition, the amount of traffic would also slightly decrease under this alternative due to the reduction in medical offices. On a daily basis, the proposed project would generate 3,753 daily trips. Alternative 4 would generate 2,330 daily trips, or a 37.9% decrease compared to the proposed project. Under AM peak hour conditions there would be a reduction of 142 trips and under PM peak hour conditions there would be a reduction of 165 trips, as shown in Table 6-2. Under Existing plus Project conditions an impact was identified at the Cirby Way/Vernon Street intersection during the PM peak hour. Under Alternative 4 it is likely this impact would not occur and Mitigation Measure 4.3-1 would not be required. In addition, the cumulative significant and unavoidable traffic impact would still occur under this alternative. Any reduction in vehicle trips would also reduce air emissions, including greenhouse gases.

The overall height of the medical office building would reduce from five stories to four stories, a reduction of approximately 14 feet. The total height of the building including the parapet would be reduced from approximately 80 feet to 66 feet. The change in visual character of the site, and project lighting would be slightly lessened under this alternative because the medical office building would be slightly lower in height and the number of parking lot lights would be reduced.

Impacts Identified as Being More Severe than those of the Proposed Project

Under this alternative there are no impacts that would be considered more severe than the proposed project.

Relationship to Project Objectives

This alternative would generally meet all the project objectives, but because there would be a reduction in the number of medical offices it would not meet all the amenities and services provided in the first objective and would meet the second and last objective, but to a lesser degree than the proposed project because there would be a reduction in the number of health care providers and construction workers.

Environmentally Superior Alternative

An EIR is required to identify the environmentally superior alternative from among the range of reasonable alternatives that are evaluated. Section 15126.6(e)(2) of the CEQA Guidelines requires that an environmentally superior alternative be designated and states that if the environmentally superior alternative is the “No Project” alternative, the EIR shall also identify an environmentally superior alternative among the other alternatives.

From the alternatives evaluated for the project, the environmentally superior alternative would be Alternative 1, the No Project/No Development Alternative. This alternative would avoid all significant impacts associated with the proposed project because it would not require any site disturbance, project construction, or an increase in vehicle trips.

Based on a review of the remaining project alternatives, Alternative 4, the Smaller Medical Office Building Alternative would be the environmentally superior alternative. This alternative would not avoid all impacts associated with project construction and operation, but would slightly reduce the severity of the impacts associated with site disturbance and project construction and, more specifically, project-related traffic.

Table 6-3
Evaluation of Alternatives by Impact Area

Impact	Proposed Project	Alternative 1: No Project/No Development	Alternative 2: Reduced Footprint	Alternative 3: Larger Parking Deck	Alternative 4: Smaller Medical Office Building
<i>4.1 Air Quality and Greenhouse Gas Emissions</i>					
4.1-1: Conflict with applicable air quality plan.	LS	NI	LS	LS	LS
4.1-2: Violate the City of Roseville's standards for air quality.	LS	NI	LS-	LS	LS-
4.1-3: Result in a cumulatively considerable net increase in criteria pollutants and impede the City's efforts to meet AB 32 standards for the reduction of GHG emissions.	LS	NI	LS-	LS	LS-
4.1-4: Generate a substantial contribution to GHG emissions that conflicts with an applicable plan or policy.	LS	NI	LS-	LS	LS-
<i>4.2 Public Utilities</i>					
4.2-1: Availability of water supplies to meet project demand in Wet/Dry years.	LS	NI	LS-	LS	LS-
4.2-2: Construct or expand water treatment, conveyance, and/or storage facilities to accommodate the project	LS	NI	LS	LS	LS
4.2-3: Deplete groundwater supplies or interfere with groundwater recharge.	LS	NI	LS-	LS-	LS-
4.2-4: Construction or expansion of wastewater collection or treatment facilities.	LS	NI	LS	LS	LS
4.2-5: Capacity at the DCWWTP to serve the proposed project.	LS	NI	LS-	LS	LS-
4.2-6: Exceed wastewater treatment requirements of the Regional Water Quality Control Board.	LS	NI	LS	LS	LS

Table 6-3
Evaluation of Alternatives by Impact Area

Impact	Proposed Project	Alternative 1: No Project/No Development	Alternative 2: Reduced Footprint	Alternative 3: Larger Parking Deck	Alternative 4: Smaller Medical Office Building
4.2-7: Capacity for solid waste disposal at the MRF or WRSL.	LS	NI	LS-	LS	LS-
4.2-8: Compliance with applicable federal, state, and local statutes and regulations related to solid waste.	LS	NI	LS	LS	LS
4.2-9: Result in the wasteful consumption of energy,	LS	NI	LS-	LS	LS-
4.2-10: Cumulative increase in demand for water supply and treatment capacity.	LS	NI	LS-	LS	LS-
4.2-11: Cumulative increase in demand for wastewater treatment and plant capacity.	LS	NI	LS-	LS	LS-
4.2-12: Cumulative increase in solid waste disposal at the WRSL.	LS	NI	LS-	LS	LS-
<i>4.3 Transportation</i>					
4.3-1: Change in LOS at signalized intersections in the City of Roseville.	LS/MM	NI	LS/MM-	LS/MM	LS
4.3-2: Add traffic to Caltrans freeway ramps.	LS	NI	LS-	LS	LS-
4.3-3: Impacts to bicycle facilities or network.	LS	NI	LS	LS	LS
4.3-4: Impacts to pedestrian access.	LS	NI	LS	LS	LS
4.3-5: Increased demand for transit.	LS	NI	LS	LS	LS
4.3-6: Decrease in LOS at city intersections under 2035 conditions.	SU/MM	NI	SU/MM-	SU/MM	SU/MM-
4.3-7: Add traffic to freeway off-ramps under 2035 conditions.	LS	NI	LS-	LS	LS-

Table 6-3
Evaluation of Alternatives by Impact Area

Impact	Proposed Project	Alternative 1: No Project/No Development	Alternative 2: Reduced Footprint	Alternative 3: Larger Parking Deck	Alternative 4: Smaller Medical Office Building
<i>4.4 Visual and Aesthetic Resources</i>					
4.4-1: Substantially degrade the existing visual character of the project site	LS	NI	LS-	LS+	LS-
4.4-2: Introduction of new sources of light and glare.	LS	NI	LS-	LS+	LS-
<i>Initial Study – Appendix B</i>					
Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.	LS/MM	NI	LS/MM	LS/MM	LS/MM
Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5.	LS/MM	NI	LS/MM	LS/MM	LS/MM
Disturb any human remains, including those interred outside of formal cemeteries.	LS/MM	NI	LS/MM	LS/MM	LS/MM

Notes:

LS = impacts less than significant

NI = No impact

LS/MM = Impacts less than significant after mitigation

SU = Impacts significant and unavoidable

SU/M = Impacts significant even with mitigation

“+” indicates the impact is more severe than the project impact

“-” indicates that the impact is similar to the project impact but less severe

No “+” or “-” indicates the impact would be similar to the project impact.

NOP and NOP Comments Received

NOTICE OF PREPARATION

Date: June 7, 2016

To: State Clearinghouse
Responsible Agencies
Trustee Agencies
Interested Parties

Subject: Notice of Preparation of an Environmental Impact Report for the proposed Kaiser Riverside and Cirby Medical Office Building Project

Project Title/File Number: Kaiser Riverside and Cirby Medical Office Building
File number: PL16-0146

NOP Comment Period: End of posting period is July 6, 2016 at 5:00 p.m.

Project Location: 1001 Riverside Avenue, Roseville 95678
APN 472-260-026

Project Applicant: Kaiser Permanente Health Plan

Property Owner: Kaiser Permanente Health Plan

Lead Agency and Contact Person: Lauren Hocker, Associate Planner
City of Roseville Planning Department
311 Vernon Street
Roseville, CA 95678
(916) 774-5276
Fax: (916) 774-5219
Email: lhocker@roseville.ca.us
Website: www.roseville.ca.us

1.0 INTRODUCTION

The City of Roseville (City) will be the lead agency for the Kaiser Riverside and Cirby Medical Office Building project ("proposed project"). This Notice of Preparation (NOP) has been issued to notify responsible and trustee agencies and other interested parties that the City will be preparing an Environmental Impact Report (EIR) for the proposed project, and to solicit feedback on the scope and content of the analysis in the EIR. The proposed project will require the approvals listed in Section 4 below.

The proposed project description is provided in Section 3 of this NOP. A location map, vicinity map, and site plan are provided as Figure 1–3 of this NOP. Exhibits and a project description are also available on the City's website: www.roseville.ca.us/kaiser. In addition, the City has prepared an Initial Study/Environmental Checklist for the proposed project to identify potential and probable environmental impacts and to focus out of the analysis those issues where impacts are either less than significant or can clearly be reduced to a less-than-significant level through mitigation measures to which the applicant has agreed. The City has determined that

the proposed project may have a significant effect on the environment; therefore, an EIR is being prepared to address the topic areas in which the Initial Study/Environmental Checklist determined that the proposed project may generate significant effects.

NOP Comment Period: Due to the time limits mandated by state law, your response to this NOP must be sent no later than 30 calendar days after receipt of this notice, and should be received by July 6, 2016 (30 days after the date this notice was first posted). Please submit comments to City of Roseville no later than 5 p.m. on July 6, 2016. Please provide written comments to:

Lauren Hocker, Associate Planner
City of Roseville Planning Department
311 Vernon Street
Roseville, CA 95678
(916) 774-5276
Fax: (916) 774-5219
Email: lhocker@roseville.ca.us

2.0 REGULATORY BACKGROUND

This NOP provides notification that an EIR will be prepared for the proposed project. This NOP has been prepared in accordance with the California Environmental Quality Act (CEQA), Public Resources Code, 21000 et seq.), and with Section 15082 of the State "CEQA Guidelines" (Cal. Code of Regulations, Title 14, Division 6 Chapter 3). According to CEQA Guidelines Section 15064, an EIR must be prepared if there is substantial evidence in light of the whole record that the proposed project may have a significant effect on the environment.

This NOP describes the proposed project in Section 3, and describes the requested project approvals in Section 4. Section 5 identifies the probable environmental effects of the proposed project that will be the subject of the EIR. Section 6 discusses the cumulative impacts analysis.

3.0 Project Description

The proposed project includes a one-story pavilion building, five-story medical office building, and a parking deck that will replace the existing one and two-story Kaiser Permanente medical office building complex. The approximately 14-acre project site is located in the City of Roseville, as shown on Figure 1, Regional Location.

3.1 Project Location

The project site is located on the southeastern corner of Riverside Avenue and Cirby Way, as shown in Figure 2, Site Vicinity. Interstate 80 (I-80) borders the southern and eastern sides of the site, with adjacent commercial uses to the west, south and east. Property to the north of the site, across Cirby Way, includes commercial, medium density residential, and business professional uses. The project site is located on Parcel 177 within the City's Infill Planning Area.

The assessor's parcel number (APN) for the project site is 472-260-026-000.

3.2 Project Setting and Surrounding Land Uses

The project site is currently developed with six buildings totaling 90,290 square feet that comprise the Kaiser Permanente medical office complex, along with 613 surface parking spaces and landscaping. The project site is designated for Commercial/Community Commercial uses in the City's General Plan. The site is zoned Business Professional (BP). Uses permitted in the Commercial/Community Commercial designation and zoned BP include professional offices and general medical services.

Surrounding uses include the following:

Location	Zoning	General Plan Land Use	Current Use of Property
On-Site	Business Professional (BP)	Community Commercial (CC)	Medical Office
North	Community Commercial (CC), General Commercial/Special Area (GC/SA), Planned Development (PD)	Community Commercial (CC), Medium Density Residential (MDR), Business Professional (BP)	Retail uses, Public storage, Apartments
South	N/A - I-80	N/A - I-80	I-80
East	N/A - I-80	N/A - I-80	I-80
West	Planned Development (PD)	Community Commercial (CC)	Auto Sales, Retail uses

Source: City of Roseville, 2016

The project site is primarily developed with buildings and surface parking lots; however, there are areas of landscaping along the perimeter of the site and internal to the site. A number of mature landscape trees are present throughout the site. From Riverside Avenue the project site slopes upward to the east. The change in elevation from Riverside Avenue to the center of the project site is approximately 25 feet.

The most recent California Department of Conservation Important Farmland Map for Placer County designates the site as Urban and Built up Land (California Department of Conservation 2012).

3.3 Proposed Project Elements

The applicant proposes to develop an approximately 194,000 square-foot, five-story medical office building along with a one-story, 16,000 square-foot pavilion building and related site improvements, including a parking deck, site/building lighting, and landscaping, described in more detail below. The Site Plan is shown in Figure 3. The EIR will evaluate the effects associated with the net new increase in square footage of the project, along with the effects of demolishing all of the existing buildings and other improvements on the site. Demolition of the existing buildings will occur after the new buildings are completed and operational (see Figure 4, showing the buildings to be demolished).

Off-site improvements associated with the project include the addition of a traffic signal at the Cirby Way and Cirby Hills Drive intersection, to improve access and traffic in and out of the project site. A section of Cirby Way would also be lowered to improve driver sight visibility at the new traffic light.

Project Design

The proposed project is comprised of two buildings. The single-story pavilion building would house the pharmacy, laboratory and conference space. The ground floor of the five-story medical office building would include retail and public functions such as a café, health education, and optical center, as well as Physical Therapy/Rehab and comprehensive diagnostic imaging. The clinic floors in the medical office building would be devoted to medical offices and are projected to include eight adult primary care clinics, specialty clinics for OB/GYN, Dermatology and Allergy, injection clinic, and comprehensive eye services including Ophthalmology, and Optometry. This new medical office building would double the capacity of the existing clinic to facilitate better member access. The highest point of the medical office building would be approximately 80 feet, with the highest occupied floor (the 5th) beginning at approximately 55 feet.

The existing medical office buildings would remain operational during project construction. This requires the project be phased to maintain public safety and to allow for sufficient patient and visitor access during construction. Once the new buildings are completed, the existing medical office buildings would be demolished to make way for the project's surface parking lot.

Project Access and Parking

The main entry to the project site would be from Riverside Avenue, with a secondary entry at Cirby Way, as shown in Figure 3. The main Riverside Avenue entry would include a public two-way driveway and an internal vehicular circulation system that would provide access to a surface parking lot and parking deck with approximately 1,052 stalls, as shown in Figure 3. A series of drop-off zones would provide patient access to the medical office building entrance, to ensure traffic flow is maintained while passenger loading and unloading occurs.

The secondary entry driveway at Cirby Way includes one-lane access into the site, with 3 lanes leaving the site. A new traffic signal is proposed at the Cirby Way entrance to facilitate traffic into and out of the project site and to enable vehicles to have a protected left-turn lane or straight through access to Cirby Hills Drive, with a right-turn lane from the site.

Signage

The proposed project would include monument signs at both entries to the project site, as well as directional signage on the site. The buildings would include signage at the first floor level to direct patients, visitors and staff. It is anticipated that large signs would be mounted at the top of the five-story building (approximately 55 feet to the occupied floor and 80 feet above grade to the top of the parapet) and would be visible from the freeway and site entries. These signs would be lit at night.

Lighting and Landscaping

To provide for the safety and security of staff and the public, the project would provide overhead parking lot and roadway pole lights, low level lighting on bollards to illuminate landscaped areas and sidewalks, and building-mounted lighting at entrances. Architectural lighting may also be used to illuminate key architectural features.

The project description information submitted by the applicant indicates that light fixtures would use premium-efficiency LED light sources. Area lighting would automatically turn-off during the day, and motion-activated controls would be provided to dim the lighting at night when there is

no activity. Lighting would be designed to minimize light trespass, reduce sky-glow to increase night sky access, and improve night-time visibility through glare reduction.

The project's conceptual landscaping plan proposes to divide the parking lot areas into smaller zones. Large deciduous trees would be planted along the main loop road that runs throughout the site. Where possible, existing mature trees, particularly redwood trees would be preserved on site, including protected oak trees in the southwestern corner of the site and redwood trees north of the main building and in the north parking lot. It is anticipated that landscaping would use native plants and be drought resistant where feasible, and will comply with the City's Water Efficient Landscape Ordinance.

Sustainability Features

The proposed project will be designed to meet Kaiser Permanente's sustainability requirements, which include LEED NC 2009 Gold certification and specific energy efficiency thresholds. The Energy Performance Requirement includes a minimum of 25% energy savings compared against ASHRAE 90.1 2007 Baseline. The project must also comply with the California Energy Code, Title 24.

Energy conservation features proposed would include:

- High performance building envelope
- Optimized orientation and massing on the east/west axis
- Daylight dimming of electric lighting
- LED lighting
- Solar thermal water heating
- Electrochromic glass to reduce HVAC energy use and improve occupant visual comfort
- Optimized HVAC system
- "Solar ready" approach to easily integrate photovoltaics at a later date
- Measurement and verification of energy usage

Additional proposed sustainability strategies include:

- Preferred parking spaces for high-efficiency and low-emitting vehicles, and charging stations for electric vehicles
- Preferred parking for high occupancy vehicles (2 or more people)
- Bicycle racks for all occupants and showers for staff
- Low-flow and low-flush plumbing fixtures
- Efficient irrigation systems
- Low-emitting materials such as adhesives, sealants, paint, coatings, flooring systems, and composite wood
- Carbon dioxide sensors in densely occupied spaces

Public Utilities

The proposed project would require connections to City utilities. The following describes the proposed potable water, sanitary sewer, and storm drainage improvements. A discussion of off-site improvements follows below.

Potable Water: The existing campus is served by a 6-inch water line stub connected to a 10-inch public distribution main in Cirby Hills Drive. This service would be maintained until the new buildings are occupied to provide continuous service to the existing buildings during construction. For the new buildings, a new 10-inch service line would connect to the existing 10-inch main at Cirby Hills Drive and would be stubbed to the property.

- Fire: The private onsite fire service would include a 10-inch looped system around the site, generally following on-site roads and parking areas. The loop system would connect to the new 10-inch service stub with a double detector check backflow device. Private fire hydrants would be located around the site, connecting to the 10-inch loop. Sprinkler service lines to the new buildings from the 10-inch loop would include an in-line check valve, a post indicator valve, and a fire department connection.
- Domestic: A domestic service line would be stubbed off of the new 10-inch service stub and will include a City meter and reduced pressure principle backflow device.
- Irrigation: An irrigation service line would be stubbed off of the new 10-inch service stub and will include a City meter and reduced pressure principle backflow device.

Sanitary Sewer: The existing campus is served by a 6-inch sanitary sewer connecting to a 6-inch public sewer main in Cirby Way which in turn connects to an 8-inch sewer main in Riverside Avenue. The onsite system would be maintained until the new buildings are occupied to provide continuous service to the existing buildings during construction. For the new buildings, due to limited capacity of the 8-inch sewer main in Riverside Avenue, two new 6-inch service lines would be installed. The first would connect to the 6-inch main in Cirby Way, similar to the existing service. The second would connect to an existing public manhole in Cirby Hills Drive.

Storm Drainage: The existing campus is served by two connections to the City's storm drain system. The first is a curb inlet just south of the Riverside/Cirby intersection. The second is an 18-inch pipe just east of the existing Cirby Way entrance. These two connection points would be maintained.

- Hydrology: Existing on-site hydrologic areas would be maintained to the maximum extent feasible. Pre-project flow rates would be maintained through the use of on-site infiltration and detention. Detention would be achieved via an orifice structure just upstream of the connection to the public system. Detention volume of the 10% chance (10-year) storm event would be stored in infiltration galleries and the void space of the rock layers beneath the bio-treatment areas.
- Drainage: Pavement runoff would be directed to bio-treatment areas or curb inlets. Roof runoff will be connected to subsurface infiltration galleries. The treatment areas and on-site piping system would be designed to convey the 10% chance (10-year) storm event. Overland release would be provided to convey the 1% chance (100-year) storm event.
- Low Impact Development (LID): The bio-treatment areas would serve as pretreatment for the underlying infiltration layers and secondary subsurface infiltration galleries. Infiltration measures would be sized to infiltrate the 50% chance

(2-year) storm event to meet the NPDES post-construction LID and hydro-modification requirements.

Off-Site/Public Works Improvements

The applicant proposes to complete some additional off-site improvements, with the intent of improving driver sight distance, improving the frontage, and improving site access. Approximately 400 feet of Cirby Way adjacent to the project site would be removed and reconstructed. The vertical profile of the roadway would be lowered by as much as 18 inches to improve driver sight distance. The project also includes surface improvements at the frontage of the self-storage facility on the north side of Cirby Way, including removal and reconstruction of concrete driveways, concrete curbs, asphalt pavement areas, planting areas, and site lighting. In addition, a monument sign and a flagpole may need to be relocated as a result of the lowering of the roadway profile.

- Utilities: Utility systems affected by the lowering of the roadway profile include a 2-inch domestic water line (City of Roseville), potable water system isolation valves (City of Roseville), potable water system air-release valves (City of Roseville), telecommunications/fiber optics conduits (MCI, Sprint), street lighting (Roseville Electric), primary and secondary power conduits (Roseville Electric), and a 4-inch gas distribution main (PG&E). These systems would need to be relocated (lowered) to maintain minimum cover requirements.
- Improvements: Curbs, gutters, sidewalks, median islands, and asphalt pavement along Cirby Way will be reconstructed. Traffic striping within the demolition limits will be restored. A new traffic signal system at the Cirby Way/Cirby Hills Drive intersection would be constructed.

Construction Timeline

Project construction is anticipated to take approximately three years to complete. Pending project approval, construction for the parking deck and Medical Office Building would start in late 2016/early 2017. Both the parking deck and new building would be completed and open for operation by summer 2019. Once the new building and parking deck are open, the existing buildings would be demolished and surface parking lots would be completed. The project is scheduled to be complete by late spring 2020.

4.0 PROJECT APPROVALS

The EIR will serve as the environmental document for City approvals and any permits required from other governmental bodies for project construction and operation including required onsite and offsite public improvements, which may include water, wastewater, and storm drainage infrastructure; and dry utilities. The EIR will analyze construction and operation of the proposed project on a project-specific level (CEQA Guidelines Section 15161). The project-level analysis in the EIR will also provide the basis for CEQA compliance for subsequent approvals for the project, such as any use permits, design review permits, and other discretionary permits issued by the City or any other regulatory agency.

The following approvals would be required for the project:

- Major Project Permit – Stage 1 (Preliminary Development Plan)

- Major Project Permit – Stage 2 (Architecture and Landscape Review)

5.0 PROBABLE ENVIRONMENTAL EFFECTS AND SCOPE OF THE EIR

Preliminarily, the City anticipates potentially significant impacts with respect to the following categories (though mitigation measures may be available to reduce some or all of these impacts to less-than-significant levels):

- Air Quality and Greenhouse Gases (Climate Change)
- Public Utilities (water, wastewater)
- Transportation and Circulation

Preliminarily, the City anticipates less-than-significant impacts, or no impacts in the following categories:

- | | |
|-----------------------------------|----------------------------------|
| • Aesthetics | • Mineral Resources |
| • Agriculture/Forestry Resources | • Noise |
| • Biological Resources | • Population/Housing |
| • Cultural Resources | • Public Services |
| • Geology/Soils | • Recreation |
| • Hazards and Hazardous Materials | • Public Utilities (solid waste) |
| • Hydrology/Water Quality | |
| • Land Use/Planning | |

6.0 CUMULATIVE IMPACTS ANALYSIS

As required by CEQA, the EIR will also evaluate the cumulative impacts of the proposed project. As stated in CEQA Section 15065(a)(3), proposed projects should be evaluated to determine whether the project's impacts are "cumulatively considerable," which means that the "incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of current projects, and the effects of probable future projects."

Ms. Lauren Hocker
Development Services - Planning Division
City of Roseville
311 Vernon Street
Roseville, CA 95678

Kaiser Riverside & Cirby Medical Office Building

Dear Ms. Hocker,

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the project referenced above. Caltrans' new mission, vision, and goals signal a modernization of our approach to California's transportation system. We review this local development for impacts to the State Highway System in keeping with our mission, vision and goals for sustainability/livability/economy, and safety/health. We provide these comments consistent with the State's smart mobility goals that support a vibrant economy, and build communities, not sprawl.

The proposed project consists of a new 210,000 sq ft medical office building with associated site improvements and the demolition of existing buildings on the site, and is located on the southeast corner of Riverside Avenue and Cirby Way and is directly adjacent to Interstate 80 (I 80). The following comments are based on the Notice of Preparation.

Traffic Operations

This new building is replacing a building that is approximately 120,000 square feet smaller than the existing building. Therefore, the project is expected to generate an additional 190 a.m. peak hour trips and 180 p.m. peak hour trips.

Due to recent pending changes in legislation, we suggest that the transportation analysis include Vehicle Miles Traveled (VMT) calculations. In addition, we suggest the project take into account the recommended thresholds in the Office of Planning & Research (OPR) guidelines.

See link below:

https://www.opr.ca.gov/docs/Revised_VMT_CEQA_Guidelines_Proposal_January_20_2016.pdf

Finally, the analysis should include a focus on evaluating opportunities to enhance multi-modal connectivity to the local streets network for access to this project site. Encouraging and providing opportunities for alternate modes could facilitate improved traffic movement and reduce potential traffic conflicts.

Traffic Management Plan

If it is determined that traffic restrictions and detours are needed on or affecting State highways, a TMP or construction Traffic Impact Study may be required for approval by Caltrans prior to construction. TMPs must be prepared in accordance with Caltrans' *Manual on Uniform Traffic Control Devices*. Further information is available for download at the following web address: <http://www.dot.ca.gov/hq/traffops/signtech/mutcdsupp/pdf/camuted2012/Part6.pdf>.

Hydraulics

The redevelopment of this site may increase impervious surface area through the construction of roads, driveways, parking lots, buildings, etc. with a corresponding increase in surface water runoff. This project may decrease surface water detention, retention and infiltration. No net increase to 100-year storm event peak discharge may be realized within the State's highway right of way and/or Caltrans drainage facilities as a result of the project. Any cumulative impacts to Caltrans drainage facilities arising from effects of development on surface water runoff discharge from the 100-year storm event should be minimized through project drainage mitigation measures.

Increases in peak runoff discharge for the 100-year storm event to the State's highway right of way and to Caltrans' highway drainage facilities must be reduced to at or below the pre-construction levels. The cumulative effects on drainage due to development within the region should be considered in the overall development plan of this area.

All grading and/or drainage improvements must maintain or improve existing drainage pathways and may not result in adverse hydrologic or hydraulic conditions within the State's highway right of way or to Caltrans drainage facilities. The developer must maintain or improve existing drainage patterns and/or facilities affected by the proposed project to the satisfaction of the State and Caltrans. This may be accomplished through the implementation of storm water management Best Management Practices (i.e., detention/retention ponds or basins, sub-surface galleries, on-site storage and/or infiltration ditches, etc.). Once installed, the property owner must properly maintain these systems. The proponent/developer may be held liable for future damages due to impacts for which adequate mitigation was not undertaken or sustained.

Runoff from the proposed project that will enter the State's highway right of way and/or Caltrans drainage facilities must meet all regional water quality control board water quality standards

Ms. Lauren Hocker/City of Roseville
July 8, 2016
Page 3

prior to entering the State's highway right of way or Caltrans drainage facilities. Appropriate storm water quality Best Management Practices may be applied to ensure that runoff from the site meets these standards (i.e., is free of oils, greases, metals, sands, sediment, etc.). Once installed, the property owner must properly maintain these systems in perpetuity.

Encroachment Permit

Any work or traffic control that encroaches upon the State's ROW requires a Caltrans issued encroachment permit. To apply, a completed encroachment permit application, environmental documentation, and five sets of plans indicating the State's ROW must be submitted to the address below:

Office of Permits
Caltrans – District 3
703 B Street
Marysville, CA 95901

Traffic-related mitigation measures should be incorporated into the construction plans prior to the encroachment permit process. Please visit the following URL for additional information: <http://www.dot.ca.gov/hq/traffops/developserv/permits/>.

We would appreciate the opportunity to review and comment on any changes related to this development. Please provide our office with copies of any other actions concerning this project.

If you have questions regarding these comments or require additional information, please contact Kevin Yount, Intergovernmental Review Coordinator for Placer, by phone at (530) 741-4286 or via email to kevin.yount@dot.ca.gov.

Sincerely,

SUSAN ZANCHI, Chief
Office of Transportation Planning – North

Central Valley Regional Water Quality Control Board

COMMENTS TO REQUEST FOR REVIEW FOR THE NOTICE OF PREPARATION FOR THE DRAFT ENVIRONMENTAL IMPACT REPORT, KAISER RIVERSIDE AND CIRBY MEDICAL OFFICE BUILDING PROJECT, SCH# 2016062020, PLACER COUNTY

Pursuant to the State Clearinghouse's 7 June 2016 request, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) has reviewed the *Request for Review for the Notice of Preparation for the Draft Environment Impact Report* for the Kaiser Riverside and Cirby Medical Office Building Project, located in Placer County.

Our agency is delegated with the responsibility of protecting the quality of surface and groundwaters of the state; therefore our comments will address concerns surrounding those issues.

I. Regulatory Setting

Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases,

the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues.

For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:

http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/.

Antidegradation Considerations

All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Policy is available on page IV-15.01 at:

http://www.waterboards.ca.gov/centralvalleywater_issues/basin_plans/sacsjr.pdf

In part it states:

Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.

This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

II. Permitting Requirements

Construction Storm Water General Permit

Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction Activities (Construction General Permit), Construction General Permit Order No. 2009-009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan

(SWPPP).

For more information on the Construction General Permit, visit the State Water Resources Control Board website at:

http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml.

Phase I and II Municipal Separate Storm Sewer System (MS4) Permits¹

The Phase I and II MS4 permits require the Permittees reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/.

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at:

http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

Industrial Storm Water General Permit

Storm water discharges associated with industrial sites must comply with the regulations contained in the Industrial Storm Water General Permit Order No. 2014-0057-DWQ.

For more information on the Industrial Storm Water General Permit, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/industrial_general_permits/index.shtml.

Clean Water Act Section 404 Permit

If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACOE). If a Section 404 permit is required by the USACOE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water

¹ Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements.

If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACOE at (916) 557-5250.

Clean Water Act Section 401 Permit – Water Quality Certification

If an USACOE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications.

Waste Discharge Requirements – Discharges to Waters of the State

If USACOE determines that only non-jurisdictional waters of the State (i.e., “non-federal” waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation.

For more information on the Water Quality Certification and WDR processes, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/help/business_help/permit2.shtml.

Dewatering Permit

If the proposed project includes construction or groundwater dewatering to be discharged to land, the proponent may apply for coverage under State Water Board General Water Quality Order (Low Risk General Order) 2003-0003 or the Central Valley Water Board's Waiver of Report of Waste Discharge and Waste Discharge Requirements (Low Risk Waiver) R5-2013-0145. Small temporary construction dewatering projects are projects that discharge groundwater to land from excavation activities or dewatering of underground utility vaults. Dischargers seeking coverage under the General Order or Waiver must file a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Risk General Order and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf

For more information regarding the Low Risk Waiver and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2013-0145_res.pdf

Regulatory Compliance for Commercially Irrigated Agriculture

If the property will be used for commercial irrigated agricultural, the discharger will be required to obtain regulatory coverage under the Irrigated Lands Regulatory Program. There are two options to comply:

1. **Obtain Coverage Under a Coalition Group.** Join the local Coalition Group that supports land owners with the implementation of the Irrigated Lands Regulatory Program. The Coalition Group conducts water quality monitoring and reporting to the Central Valley Water Board on behalf of its growers. The Coalition Groups charge an annual membership fee, which varies by Coalition Group. To find the Coalition Group in your area, visit the Central Valley Water Board's website at: http://www.waterboards.ca.gov/centralvalley/water_issues/irrigated_lands/app_approval/index.shtml; or contact water board staff at (916) 464-4611 or via email at IrrLands@waterboards.ca.gov.
2. **Obtain Coverage Under the General Waste Discharge Requirements for Individual Growers, General Order R5-2013-0100.** Dischargers not participating in a third-party group (Coalition) are regulated individually. Depending on the specific site conditions, growers may be required to monitor runoff from their property, install monitoring wells, and submit a notice of intent, farm plan, and other action plans regarding their actions to comply with their General Order. Yearly costs would include State administrative fees (for example, annual fees for farm sizes from 10-100 acres are currently \$1,084 + \$6.70/Acre); the cost to prepare annual monitoring reports; and water quality monitoring costs. To enroll as an Individual Discharger under the Irrigated Lands Regulatory Program, call the Central Valley Water Board phone line at (916) 464-4611 or e-mail board staff at IrrLands@waterboards.ca.gov.

Low or Limited Threat General NPDES Permit

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Dewatering and Other Low Threat Discharges to Surface Waters* (Low Threat General Order) or the General Order for *Limited Threat Discharges of Treated/Untreated Groundwater from Cleanup Sites, Wastewater from Superchlorination Projects, and Other Limited Threat Wastewaters to Surface Water* (Limited Threat General Order). A complete application must be submitted to the Central Valley Water Board to obtain coverage under these General NPDES permits.

For more information regarding the Low Threat General Order and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2013-0074.pdf

For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2013-0073.pdf

NPDES Permit

If the proposed project discharges waste that could affect the quality of the waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit.

For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/help/business_help/permit3.shtml

If you have questions regarding these comments, please contact me at (916) 464-4644 or Stephanie.Tadlock@waterboards.ca.gov.

Subject: Notice of Preparation of an Environmental Impact Report for the proposed Kaiser Riverside and Cirby Medical Office Building Project – City of Citrus Heights Comments

Dear Ms. Hocker

Thank you for the opportunity to provide comment on the subject project Notice of Preparation. The project is located very close to the border Citrus Heights shares with the City of Roseville. The City of Citrus Heights has been working closely with the City of Roseville and Placer County on Citrus Heights' Auburn Boulevard Complete Streets Project, Phase 2. The proposed Kaiser Medical Office Building Project could not only impact the City of Citrus Heights' roadway network but also our current design for the Auburn Boulevard Complete Streets Project, Phase 2. As a result, the City of Citrus Heights recommends that the EIR for the project consider analysis of the traffic impacts to the City of Citrus Heights' roadway network. The exact limits, intersections, roadways, etc. to be studied would be determined once more information on the trip distribution and generation for the proposed project is received.

Citrus Heights staff would be happy to meet to discuss the project and anticipated impacts further.

Thank you for consideration of our comments.

Sincerely,

Devon Rodriguez
Economic Development Specialist

RE: SCH# 2016062020 Kaiser Riverside and Cirby Medical Office Building Project, draft Environmental Impact Report, City of Roseville, Placer County, California

Dear Ms. Hocker:

The Native American Heritage Commission has received the Notice of Preparation (NOP) for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.), specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit. 14, § 15064.5 (b) (CEQA Guidelines Section 15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared. (Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd.(a)(1) (CEQA Guidelines § 15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a **separate category of cultural resources**, "tribal cultural resources" (Pub. Resources Code § 21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code § 21084.3 (a)). **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. § 800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments. **Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. **Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project:** Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
 - a. A brief description of the project.
 - b. The lead agency contact information.
 - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
 - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subs. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
 - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).
3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
 - a. Alternatives to the project.
 - b. Recommended mitigation measures.
 - c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).
4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
 - a. Type of environmental review necessary.
 - b. Significance of the tribal cultural resources.
 - c. Significance of the project's impacts on tribal cultural resources.
 - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).
5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).
6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
 - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
 - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).
7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
 - a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
 - b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).
8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).
9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).
10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
 - a. Avoidance and preservation of the resources in place, including, but not limited to:
 1. Planning and construction to avoid the resources and protect the cultural and natural context.

- II. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
 - b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
 - I. Protecting the cultural character and integrity of the resource.
 - II. Protecting the traditional use of the resource.
 - III. Protecting the confidentiality of the resource.
 - c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
 - d. Protecting the resource. (Pub. Resource Code § 21084.3 (b)).
 - e. Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).
 - f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).
11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
- a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
 - b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
 - c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)). *This process should be documented in the Cultural Resources section of your environmental document.*

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code § 65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code § 65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code section 65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction. (Gov. Code § 65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
 - a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
 - b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: <http://nahc.ca.gov/resources/forms/>

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
 - a. If part or all of the APE has been previously surveyed for cultural resources.
 - b. If any known cultural resources have been already been recorded on or adjacent to the APE.
 - c. If the probability is low, moderate, or high that cultural resources are located in the APE.
 - d. If a survey is required to determine whether previously unrecorded cultural resources are present.
2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
 - a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
 - b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.
3. Contact the NAHC for:
 - a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
 - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
 - a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
 - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
 - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

Please contact me if you need any additional information at gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.
Associate Governmental Program Analyst

SUBJECT: Kaiser Riverside & Cirby Medical Office Building Notice of Preparation of an Environmental Impact Report, (PL 16-0146)

Dear Planning Staff,

Thank you for submitting the **Kaiser Riverside & Cirby Medical Office Building** (Project) and associated **Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR)** to the Placer County Air Pollution Control District (District) for review. The applicant is requesting approval to construct a new 210,000 square foot medical office building and associated site improvements, and the demolition of the existing buildings on the site. The District provides the following comments for consideration.

Environmental Review

The District recently developed a California Environmental Quality Act (CEQA) Air Quality Handbook (Handbook) to assist public agencies with the preparation of air quality analyses for land use projects within Placer County. This Handbook provides recommended analytical approaches and feasible mitigation measures when preparing air quality analyses for land use projects. The Handbook is available via the District's website at <http://www.placer.ca.gov/departments/air/landuseceqa>. Additional detail relating to the following recommended items can be found within the Handbook.

1. The Project is located within the Sacramento Valley Air Basin (SVAB) and is under the jurisdiction of the District. The SVAB is designated as nonattainment for federal and state ozone (O₃) standards, nonattainment for the state particulate matter standard (PM₁₀). Within the Air Quality section of the Initial Study, the District recommends the discussion include the area designations for the federal and state standards for the SVAB.
2. The District recommends the following Project-level Thresholds of Significance when analyzing the Project related construction and operational activities to determine potential air quality impacts.

PCAPCD Recommended Project-Level Thresholds	
82 lbs/day	Nitrogen Oxide (NOx) Reactive Organic Gas (ROG) Particulate Matter (PM ₁₀)

3. The District recommends the following Cumulative-level Thresholds for the purposes of identifying if additional mitigation measures are necessary. Additional information on the District's Cumulative Threshold can be found in Chapter 2 of the District's CEQA Handbook (October, 2012)¹.

PCAPCD Recommended Cumulative-Level Thresholds	
10 lbs/day	Nitrogen Oxide (NOx) Reactive Organic Gas (ROG)

4. Although the District has not formally adopted or approved a (GHG) threshold, the District continues to recommend lead agencies consider use of an adopted or approved threshold when analyzing a project's related GHG impacts and potential to interfere with the Global Warming Solutions Act (AB32) GHG reduction goals, including but not limited to the Sacramento Metropolitan Air Quality Management District's (SMAQMD) GHG thresholds adopted October 24, 2014. Additional information on the SMAQMD's GHG Threshold, including screening tables, recommended methodology, and mitigation measures can be found by visiting their webpage at <http://airquality.org/ceqa/cegaguideupdate.shtml>. Additionally, the CAPCOA guidance document "Quantifying Greenhouse Gas Mitigation Measures" provides additional resources to identify feasible mitigation measures and quantification of emission reductions¹.
5. The California Emissions Estimator Model (CalEEMod) is recommended when estimating the Project related construction and operational emissions. CalEEMod quantifies criteria pollutant emissions, including greenhouse gases (GHGs) from construction and operation (including vehicle use), as well as GHG emissions from energy production, solid waste handling, vegetation planting and/or removal, and water conveyance. In addition, CalEEMod calculates the benefits from implementing mitigation measures, including GHG mitigation measures, developed and approved by CAPCOA. Please contact the District for information on appropriate default settings applicable to the project area. A free download of CalEEMod is available at <http://www.capcoa.org/caleemod/>.
6. In the event that the air quality analysis demonstrates the potential for the Project to cause or generate significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate significant adverse air quality impacts. Additional mitigation measures can be found in the District's CEQA Handbook within the related appendices.
7. The District recommends that if either of the following criteria is associated with of any intersection or roundabout is determined by the traffic study to degrade to a level of

1

<http://www.placer.ca.gov/~media/apc/documents/Planning/CEQAHandbook/Final/PCAPCDCEQAHandbook2.ashx>

service “E” or “F” as a result of this project, alone or cumulatively:

- A traffic study for the project indicates that the peak-hour Level of Service (LOS) on one or more streets or at one or more intersections (both signalized and non-signalized) in the project vicinity will be degraded from an acceptable LOS (e.g., A, B, C, or D) to an unacceptable LOS (e.g., LOS E or F); or where the total project-level CO emissions exceed 550 lbs/day; **or**
- A traffic study indicates that the project will substantially worsen an already existing unacceptable peak-hour LOS on one or more streets or at one or more intersections in the project vicinity. “Substantially worsen” includes situations where delay would increase by 10 seconds or more when project-generated traffic is included.

If either of these criteria is true of any intersection affected by the project with traffic mitigation incorporated, the District recommends that the applicant/consultant conduct a CO dispersion modeling analysis using a program such as CALINE-4. The CALINE-4 dispersion model used to estimate local CO concentrations resulting from motor vehicle emissions was developed by California Department of Transportation (Caltrans) and is available from Caltrans Environmental Division’s web page at http://www.dot.ca.gov/hq/env/air/main_sections/analysistools.htm.

CALINE-4 requires the user to supply certain input parameters. The inputs should be as recommended in the CO Protocol. If inputs other than those recommended in the Caltrans CO Protocol are used, they should be documented in the environmental document.

8. If existing or future sensitive receptors are located within close proximity to the Project area, where there is the potential for exposure to toxic air contaminants (TAC) and other hazardous air pollutants (e.g., such as diesel particulate matter (DPM) from diesel exhaust), the District recommends the environmental document describe the level of analysis, such as a Health Risk Assessment (HRA) or other modeling analysis, necessary to determine if the Project will have the potential to cause adverse health impacts.

Advisory Comment

The Asbestos National Emission Standard for Hazardous Air Pollutants (Asbestos NESHAP) (Title 40 Code of Federal Regulations, Subpart M § 61.145) establishes requirements applicable to demolition and renovation projects. Generally, these requirements are:

1. Prior to beginning renovation or demolition, a thorough asbestos inspection must be conducted by a California Division of Occupational Safety and Health (CALOSHA) Certified Asbestos Consultant or a Site Surveillance Technician.
2. Owners or operators must submit written notification to the California Air Resources Board (ARB) and the U.S. Environmental Protection Agency at least 10 working days prior to beginning renovation or demolition activity.
 - a. **For demolition projects:** Written notification is required for all demolition projects, even if no asbestos is identified in the inspection. State law prohibits local agencies from issuing demolition permits unless the applicant has demonstrated exemption or compliance with the notification

requirements of the Asbestos NESHAP (CA Health and Safety Code § 19827.5).

- b. **For renovation projects:** Written notification is required if the amount of asbestos containing material that will be disturbed during the renovation exceeds 260 linear feet of material on pipe, 160 square feet of material on other facility components, or 35 cubic feet of “off facility components” where the length or area could not be measured prior to disturbance.

Construction Related Conditions of Approval

- 1a) Prior to approval of Grading or Improvement Plans, on project sites greater than one acre, the applicant shall submit a Construction Emission / Dust Control Plan (DCP) to the Placer County Air Pollution Control District. The applicant shall not break ground prior to receiving District approval of the DCP, and delivering that approval to the local jurisdiction issuing the permit. The DCP is available online and can be submitted via the District’s website².
- 1b) The prime contractor shall submit to the District a comprehensive inventory ([Model Equipment List \(XLS\)](#))³ of all the heavy-duty off-road equipment (50 horsepower or greater) that will be used in aggregate of 40 or more hours for the construction project. If any new equipment is added after submission of the inventory, the prime contractor shall contact the District prior to the new equipment being utilized. At least three business days prior to the use of subject heavy-duty off-road equipment, the project representative shall provide the District with the anticipated construction timeline including start date, name, and phone number of the property owner, project manager, and on-site foreman.
- 1c) Prior to approval of Grading or Improvement Plans, the applicant shall submit to the District a Construction Mitigation Calculation ([Construction Mitigation Calculator \(XLS 4.4 Mb\)](#))⁴ demonstrating that the heavy-duty (> 50 horsepower) off-road vehicles to be used in the construction project, including owned, leased and subcontractor vehicles, will achieve a project wide fleet-average of 20% of NOx and 45% of DPM reduction as compared to CARB statewide fleet average emissions. Acceptable options for reducing emissions may include use of late model engines, low-emission diesel products, alternative fuels, engine retrofit technology, after-treatment products, and/or other options as they become available.
2. The following standard notes shall be listed on the Improvement/Grading Plan, or as an attached form:
 - a. During construction the contractor shall utilize existing power sources (e.g., power poles) or clean fuel (e.g., gasoline, biodiesel, natural gas) generators rather than temporary diesel power generators.
 - b. During construction, the contractor shall minimize idling time to a maximum of 5 minutes for all diesel powered equipment.
 - c. Idling of construction related equipment and construction related vehicles should not occur within 1,000 feet of any sensitive receptor.

² <http://www.placer.ca.gov/departments/air/dustctrlreqs>

³ <http://airquality.org/ceqa/modelequipmentlist3-3-16.xls>

⁴ http://airquality.org/ceqa/ConstructionEmissionsMitigationCalculator_v6_2012Jan.xls

3. The District's Rules and Regulations shall be listed as standard notes, or as an attached form to all subsequent Grading/Improvement Plans. A list of the District's Rules and Regulations can be found in Appendix B of the District's CEQA Handbook⁵.

Operational Related Conditions of Approval

1. The District's Rules and Regulations shall be listed as standard notes or as an attached form to all subsequent Building Permits for the operational phase of the Project. A list of the District's Rules and Regulations can be found in Appendix D of the District's CEQA Handbook.
2. In compliance with District Rule 501⁶, an Authority to Construct (ATC) permit must be obtained from the District for any stationary sources or processes (e.g., certain types of engines, back-up generators, boilers, heaters, etc.) consisting of 1) Any engine greater than 50 brake horsepower, 2) Any boiler that produces heat in excess of 1,000,000 Btu per hour, or 3) Any equipment or process which discharges 2 pounds per day or more of pollutants (California Health & Safety Code § 39013).

Thank you for allowing the District this opportunity to review the project proposal. Please do not hesitate to contact me at 530.745.2333 or agreen@placer.ca.gov if you have any questions.

Sincerely,

Angel Green
Associate Planner
Planning & Monitoring Section

APPENDIX B

Initial Study

INITIAL STUDY & ENVIRONMENTAL CHECKLIST

Project Title/File Number: Kaiser Riverside-Cirby Medical Office Building Project File Number: PL16-0146

Project Location: 1001 Riverside Avenue, Roseville 95678 APN 472-26-026

Project Description: The applicant requests approval of a two stage Major Project Permit for development of a one-story pavilion building, five-story medical office building and a parking deck that will replace the existing one and two-story Kaiser Permanente medical office building complex.

Project Applicant: Kaiser Permanente Health Plan, 1600 Eureka Road, Roseville 95661

Property Owner: Kaiser Permanente Health Plan, 1600 Eureka Road, Roseville 95661

Lead Agency Contact: Lauren Hocker, Associate Planner; Phone (916) 774-5276

This initial study has been prepared to identify and assess the anticipated environmental impacts of the above described project application. The document relies on site-specific studies prepared to address in detail the effects or impacts associated with the project. Where documents were submitted by consultants working for the applicant, City staff reviewed such documents in order to determine whether, based on their own professional judgment and expertise, staff found such documents to be credible and persuasive. Staff has only relied on documents that reflect their independent judgment, and has not accepted at face value representations made by consultants for the applicant.

This document has been prepared to satisfy the California Environmental Quality Act (CEQA), (Public Resources Code, Section 21000 et seq.) and the State CEQA Guidelines (14 CCR 15000 et seq.). CEQA requires that all state and local government agencies consider the environmental consequences of projects over which they have discretionary authority before acting on those projects.

The initial study is a public document used by the decision-making lead agency to determine whether a project may have a significant effect on the environment. If the lead agency finds substantial evidence that any aspect of the project, either individually or cumulatively, may have a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial, the lead agency is required to prepare an EIR. If the agency finds no substantial evidence that the project or any of its aspects may cause a significant effect on the environment, a negative declaration shall be prepared. If in the course of analysis, the agency recognizes that the project may have a significant impact on the environment, but that by incorporating specific mitigation measures to which the applicant agrees, the impact will be reduced to a less-than-significant effect, a mitigated negative declaration shall be prepared.

PROJECT DESCRIPTION

Project Location

The proposed Kaiser Riverside-Cirby Medical Office Building Project (proposed project) area encompasses approximately 14-acres in the City of Roseville (see Figure 1, Project Location Map). The project site is located at 1001 Riverside Avenue on the southeast corner of Riverside Avenue and Cirby Way, as shown in Figure 2, Site Vicinity. Interstate 80 (I-80) borders the south and east sides of the site, with adjacent commercial uses to the west, south and east. The north side of the site, across Cirby Way, includes commercial, medium density residential, and business professional uses. The project site is located on Parcel 177 within the City's Infill Planning Area.

Background

The project site is currently developed with five buildings that comprise the Kaiser Permanente medical office complex along with surface parking and landscaping. The existing medical office complex includes a total of 90,290 square-feet and 613 parking spaces. Landscaping is present along the perimeter of the site and internal to the site, including a number of mature trees. From Riverside Avenue the project site slopes to the east. The increase in elevation from Riverside Avenue to the center of the project site is approximately 25 feet.

Environmental Setting

The project site is designated for Community Commercial uses in the City's General Plan. The site is zoned Business Professional (BP). Under this designation CC uses typically include sites between 5 and 25 acres with buildings that range from 50,000 to 250,000 square feet with a floor area ratio (FAR) of between 20 to 40 percent. Primary uses within the CC designation include retail stores and businesses selling a full range of goods and services. Secondary uses allowed include professional office uses, medical offices and clinics. The BP zoning permits professional offices but not general hospital services and the maximum building height allowed by right is 50-feet.

Surrounding uses include the following:

Table 1: Existing Zoning, General Plan Land Use Designations and Use of Adjacent Areas

Location	Zoning	General Plan Land Use	Actual Use of Property
Site	Business Professional (BP)	Community Commercial (CC)	Medical Office
North	Community Commercial (CC), General Commercial/Special Area (GC/SA), Planned Development (PD)	Community Commercial (CC), Medium Density Residential (MDR), Business Professional (BP)	Retail uses, public storage, apartments
South	N/A – I-80	N/A – I-80	I-80
East	N/A – I-80	N/A – I-80	I-80
West	Planned Development (PD)	Community Commercial (CC)	Auto sales and retail uses

Source: City of Roseville, 2015

Proposed Project

The applicant proposes to develop an approximately 194,000 square-foot, five-story medical office building along with a one-story 16,000 square-foot pavilion building and related site improvements including a parking deck, site/building lighting, and landscaping. The existing Kaiser Medical Office complex would be removed

and replaced with the proposed project; which would result in the addition of 119,710 square-feet of medical office space.

The proposed project is comprised of two buildings. The single-story pavilion building would house the pharmacy, laboratory and conference space. The ground floor of the five-story medical office building includes retail and public functions such as a café, health education, and optical center, as well as Physical Therapy/Rehab and comprehensive diagnostic imaging. The clinic floors in the MOB include eight adult primary care clinics, specialty clinics for OB/GYN, Dermatology and Allergy, injection clinic, and comprehensive eye services including Ophthalmology and Optometry. This new medical office building doubles the capacity of the existing clinic to facilitate better member access. Currently, the existing medical complex employs 224 people and the proposed project would add an additional 202 people for a total of 426 employees.

Off-site improvements associated with the project include the addition of a traffic signal at the Cirby Way and Cirby Hills Drive intersection, to improve access and traffic in and out of the project site. A section of Cirby Way would also be lowered to improve driver sight visibility at the new traffic light.

CITY OF ROSEVILLE MITIGATION ORDINANCES, GUIDELINES, AND STANDARDS

For projects that are consistent with the development density established by existing zoning, community plan, or general plan policies for which an EIR was certified, CEQA Guidelines section 15183(f) allows a lead agency to rely on previously adopted development policies or standards as mitigation for the environmental effects, when the standards have been adopted by the City, with findings based on substantial evidence, that the policies or standards will substantially mitigate environmental effects, unless substantial new information shows otherwise (CEQA Guidelines §15183(f)). The City of Roseville adopted CEQA Implementing Procedures (Implementing Procedures) which are consistent with this CEQA Guidelines section. The current version of the Implementing Procedures were adopted in April 2008, along with Findings of Fact, as Resolution 08-172. The below regulations and ordinances were found to provide uniform mitigating policies and standards, and are applicable to development projects. The City's Mitigating Policies and Standards are referenced, where applicable, in the Initial Study Checklist.

- City of Roseville 2035 General Plan Policies
- City of Roseville Zoning Ordinance (RMC Title 19)
- City of Roseville Improvement Standards (Resolution 02-37)
- City of Roseville Construction Standards (Resolution 01-208)
- Noise Regulation (RMC Ch.9.24)
- Drainage Fees (Dry Creek [RMC Ch.4.49] and Pleasant Grove Creek [RMC Ch.4.48])
- Stormwater Quality Design Manual (Resolution 16-152)
- Urban Stormwater Quality Management and Discharge Control Ordinance (RMC Ch. 14.20)
- Traffic Mitigation Fee (RMC Ch.4.44)
- Highway 65 Joint Powers Authority Improvement Fee (Resolution 2008-02)
- South Placer Regional Transportation Authority Transportation and Air Quality Mitigation Fee (Resolution 09-05)
- Tree Preservation Ordinance (RMC Ch.19.66)
- Community Design Guidelines (Resolution 95-347)

OTHER ENVIRONMENTAL DOCUMENTS RELIED UPON

- Amoruso Ranch Specific Plan Final Environmental Impact Report

Pursuant to CEQA Guidelines Section 15183, any project which is consistent with the development densities established by zoning, a Community Plan, or a General Plan for which an EIR was certified shall not require additional environmental review, except as may be necessary to examine whether there are project-specific significant effects which are peculiar to the project or its site. The Amoruso Ranch Specific Plan EIR updated the City's General Plan to 2035, and updated the citywide analyses of traffic, water supply, water treatment, wastewater treatment, and waste disposal. The proposed project is consistent with the adopted land use designations examined within the environmental document listed above, and thus this analysis relies on the above documents to adequately disclose and mitigate City-wide effects. When applicable, the topical sections within the Initial Study summarize the findings within the City's Mitigating Policies and Standards documents listed above. The analysis, supporting technical materials, and findings of the environmental documents are incorporated by reference, and are available for review at the Civic Center, 311 Vernon Street, Roseville, CA.

EXPLANATION OF INITIAL STUDY CHECKLIST

The California Environmental Quality Act (CEQA) Guidelines recommend that lead agencies use an Initial Study Checklist to determine potential impacts of the proposed project on the physical environment. The Initial Study Checklist provides a list of questions concerning a comprehensive array of environmental issue areas potentially affected by this project. This section of the Initial Study incorporates a portion of Appendix G Environmental Checklist Form, contained in the CEQA Guidelines. Within each topical section (e.g. Air Quality) a description of the setting is provided, followed by the checklist responses, thresholds used, and finally a discussion of each checklist answer.

There are four (4) possible answers to the Environmental Impacts Checklist on the following pages. Each possible answer is explained below:

- 1) A "Potentially Significant Impact" is appropriate if there is enough relevant information and reasonable inferences from the information that a fair argument based on substantial evidence can be made to support a conclusion that a substantial, or potentially substantial, adverse change may occur to any of the physical conditions within the area affected by the project. When one or more "Potentially significant Impact" entries are made, an EIR is required.
- 2) A "Less Than Significant With Mitigation" answer is appropriate when the lead agency incorporates mitigation measures to reduce an impact from "Potentially Significant" to "Less than Significant." For example, floodwater impacts could be reduced from a potentially-significant level to a less-than-significant level by relocating a building to an area outside of the floodway. The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less-than-significant level. Mitigation measures are identified as MM followed by a number.
- 3) A "Less Than significant Impact" answer is appropriate if there is evidence that one or more environmental impacts may occur, but the impacts are determined to be less than significant, or the application of development policies and standards to the project will reduce the impact(s) to a less-than-significant level. For instance, the application of the City's Improvement Standards reduces potential erosion impacts to a less-than-significant level.
- 4) A "No Impact" answer is appropriate where it can be demonstrated that the impact does not have the potential to adversely affect the environment. For instance, a project in the center of an urbanized area with no agricultural lands on or adjacent to the project area clearly would not have an adverse effect on agricultural resources or operations. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources cited in the Initial Study. Where a "No Impact" answer is adequately supported by the information sources cited in the Initial Study, further

narrative explanation is not required. A "No Impact" answer is explained when it is based on project-specific factors as well as generous standards.

All answers must take account of the whole action involved, including off- and on-site, indirect, direct, construction, and operation impacts, except as provided for under State CEQA Guidelines.

INITIAL STUDY CHECKLIST

I. Aesthetics

The approximately 14-acre project site is currently developed with commercial uses that include five one- and two-story buildings that comprise the Kaiser Permanente medical office complex and surface parking, constructed in 1980 and 1985. Interstate 80 (I-80) borders the south and east sides of the site, with adjacent commercial uses to the west, south and east. The north side of the site, across Cirby Way, includes commercial, medium density residential, and business professional uses. The project is located in an area designated as Infill in the City's General Plan (City of Roseville 2015, Figure 2-1). The project site contains mature trees, including redwood trees north of the main building and in the north parking lot and oak trees on the southwest corner. The General Plan does not designate scenic vistas or scenic resources within the City. Existing sources of light from street lights and building lights is visible at night from residential and commercial uses to the north and from vehicle headlights on I-80 to south and east, Riverside Avenue to the west, and Cirby way to the north. There are no designated or eligible State Scenic Highways in or adjacent to the City (Caltrans 2016).

The buildings' exterior façades would consist of a mix of metal panels and screens, light weight concrete panels and/or plaster, glass and brick. The highest point of the medical office building would be approximately 80 feet. The highest occupied floor (5th floor) would be 55 feet high (from existing grade) with a typical floor-to-floor height of 13 feet 6 inches. The top of parapet would be 75-feet tall. Mechanical screens would be used to shield rooftop mechanical equipment.

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect on a scenic vista?				X
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c) Substantially degrade the existing visual character or quality of the site and its surroundings?			X	
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?			X	

Thresholds of Significance and Regulatory Setting:

The significance of an environmental impact cannot always be determined through the use of a specific, quantifiable threshold. CEQA Guidelines Section 15064(b) affirms this by the statement “an ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting.” This is particularly true of aesthetic impacts. As an example, a proposed parking lot in a dense urban center would have markedly different visual effects than a parking lot in an open space area. For the purpose of this study, the significance thresholds are as stated in CEQA Guidelines Appendix G, as shown in a–d of the checklist above. The Findings of the Implementing Procedures indicate that compliance with the Zoning Ordinance (e.g. building height, setbacks, etc.), and Community Design Guidelines (CDG) (Resolution 95-347) will prevent significant impacts in urban settings as it relates to items a, b, and c, below.

Discussion of Checklist Answers:

- a–b) The City’s General Plan does not designate, identify, or define any scenic vistas or scenic resources within the City. The project site is currently developed and does not contain any historic buildings or rock outcroppings that would be considered scenic resources. According to the California Department of Transportation’s (Caltrans) Scenic Highway Mapping System there are no state-designated or eligible scenic vistas or scenic highways within or adjacent to the City of Roseville (Caltrans 2016). Since the project site does not contain any designated scenic resources and is not within a State scenic highway, development of the project site would have **no impact** on these resources.
- c) The project site is located in an urban setting and as a result lacks any prominent or high-quality natural features which could be negatively impacted by development. The City of Roseville’s CDG are intended to create building and community designs which are a visual asset to the community. The CDG includes guidelines for building design, site design and landscape design, developed to enhance the existing urban visual environment. The project site is currently developed with commercial uses and is surrounded by a mix of residential and commercial development. The project site contains 290 mature trees, most of which were planted as part of the original landscaping plan. Approximately 255 trees would be removed to accommodate the project, 35 trees would be preserved on site where possible, and 411 new trees would be planted. The project’s landscaping plan has been designed consistent with the City’s CDG and the City’s Water Efficient Landscaping Ordinance; therefore, the project would not substantially degrade the existing visual quality of the site and the impact would be **less than significant**.
- d) The proposed project involves nighttime lighting to provide for the security and safety of project users. However, the project is already located within an urbanized setting with many existing lighting sources. The City requires new lighting comply with City standards (i.e., CDG), which includes limiting the height of light standards and requiring cut-off lenses and glare shields to minimize light and glare impacts. The project’s light fixtures would use premium-efficiency LED light sources that would automatically turn-off during the day and would be motion-activated to provide dim lighting at night when there is no activity. Lighting would be designed to minimize light trespass, reduce sky-glow to increase night sky access, and improve night-time visibility through glare reduction. None of the project elements are highly reflective, and thus the project would not contribute to an increased source of glare. Design of building elements and lighting is in compliance with the CDG and would ensure that impacts to light and glare would be **less than significant**.

II. Agricultural & Forestry Resources

The State Department of Conservation (DOC) oversees the Farmland Mapping and Monitoring Program, which was established to document the location, quality, and quantity of agricultural lands, and the conversion of those lands over time. The primary land use classifications on the maps generated through this program are: Urban and Built Up Land, Grazing Land, Farmland of Local Importance, Unique Farmland, Farmland of

Statewide Importance, and Prime Farmland. According to the current California Department of Conservation Placer County Important Farmland Map (DOC 2014), the majority of the City, including the project site, is designated as Urban and Built-Up Land. The current Williamson Act Contract map shows that there are no Williamson Act contracts within the City (DOC 2016). None of the land within the City is considered forest land by the California Department of Forestry and Fire Protection (Cal Fire 2006).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				X
d) Result in the loss of forest land or conversion of forest land to non-forest use?				X
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				X

Thresholds of Significance and Regulatory Setting:

Unique Farmland, Farmland of Statewide Importance, and Prime Farmland are called out as protected farmland categories within CEQA Guidelines Appendix G. Neither the City nor the State has adopted quantified significance thresholds related to impacts to protected farmland categories or to agricultural and forestry resources. For the purpose of this study, the significance thresholds are as stated in CEQA Guidelines Appendix G, as shown in a–e of the checklist above.

Discussion of Checklist Answers:

- a–e) The project site is developed with commercial uses and is in an urban area of the City. The project site is not used for agricultural purposes, does not include agricultural zoning, and is not within or adjacent to one of the areas of the City designated as a protected farmland category on the Placer County Important Farmland map. The project site is designated as Urban Built-Up Land on the Placer County Important Farmland map, which is defined as land occupied by structures with a building density of at least 1 unit to 1.5 acres (DOC 2014). The project site does not include land under a Williamson Act Contract. The site is not considered forest land and does not contain a zoning or General Plan land use designation for forestry or timber resources. The project would have **no impact** on the loss or conversion of farmland, Williamson Act Contract land, forestland or timberland to non-agricultural or non-forest uses.

III. Air Quality and Greenhouse Gases

The City of Roseville, along with the south Placer County area, is located in the Sacramento Valley Air Basin (SVAB). The SVAB is within the Sacramento Federal Ozone Non-Attainment Area. Under the Clean Air Act, Placer County has been designated a "serious non-attainment" area for the federal 8-hour ozone standard, "non-attainment" for the state ozone standard, and a "non-attainment" area for the state PM₁₀ (particulate matter less than 10 microns in diameter) standard (CARB 2013). The primary pollutants of concern for the City are PM₁₀, Carbon Monoxide (CO), and ozone (City of Roseville 2015, p. IV-2). Within Placer County, the Placer County Air Pollution Control District (PCAPCD) is responsible for ensuring that emission standards are not violated. The State Implementation Plan (SIP) and the *Sacramento Regional 8-Hour Ozone Attainment and Reasonable Future Progress Plan* are applicable federal air quality plans for the project site and the PCAPCD's 2015 Triennial Progress Report is an applicable local air quality plan for the project site.

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?			X	
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	X			

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
c) Result in a cumulatively considerable net increase of any criteria for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?	X			
d) Expose sensitive receptors to substantial pollutant concentrations?	X			
e) Create objectionable odors affecting a substantial number of people?			X	

Thresholds of Significance and Regulatory Setting:

In responding to checklist items a, b, and d, project-related air emissions would have a significant effect if they would result in concentrations that either violate an ambient air quality standard or contribute to an existing air quality violation. To assist in making this determination, the PCAPCD adopted thresholds of significance, which were developed by considering both the health-based ambient air quality standards and the attainment strategies outlined in the State Implementation Plan. The PCAPCD-recommended significance threshold is 82 pounds daily of reactive organic gases (ROG), nitrogen oxides (NO_x), and particulate matter (PM), which are the thresholds applied for both construction-related emissions and operational emissions. For all other constituents, significance is determined based on the concentration-based limits in the Federal and State Ambient Air Quality Standards. Toxic Air Contaminants (TAC) are also of public health concern, but no thresholds or standards are provided because they are considered to have no safe level of exposure. Analysis of TAC is based on the *Air Quality and Land Use Handbook – A Community Health Perspective* (April 2005, California Air Resources Board), which lists TAC sources and recommended buffer distances from sensitive uses.

For checklist item c, the PCAPCD's *CEQA Air Quality Handbook (Handbook)* recommends the use of a cumulative threshold of significance for land use projects of 10 pounds per day for ROG and NO_x. Although described as a significance threshold, the *Handbook* specifically states that the threshold should not be used to determine whether to prepare an EIR; in other words, that it is not intended to be used as a threshold for significance. The *Handbook* recommends that the "threshold" be used to determine when to apply mitigation for cumulative impacts. Given that it is not recommended for use as a threshold for determining the significance of a cumulative impact, the City (acting as CEQA lead agency), has chosen to rely on a two-tier cumulative analysis methodology similar to that adopted by the Sacramento Metropolitan Air Quality Management District (SMAQMD), as outlined in the *SMAQMD Guide to Air Quality Assessment in Sacramento County*. The City is located within the SVAB, which is the same air basin where the SMAQMD methodology is used by numerous CEQA lead agencies; on these grounds, the City finds use of this methodology to be appropriate.

The first analysis tier involves determining whether a project would result in significant project-level criteria air pollutant emissions for which the region is designated non-attainment (i.e., exceed the PCAPCD recommended project threshold of 82 lbs/day for ROG or NO_x). If it does not, then project emissions would not be considered cumulatively considerable. Should a project exceed the thresholds, a Tier 2 evaluation is conducted to determine whether project emissions would jeopardize implementation of the State Implementation Plan (SIP), which is a methodology consistent with CEQA Guidelines Section 15064 (h)(3). Under the Tier 2 analysis, projects found to be consistent with the SIP and which would not conflict with the SIP emissions budget are considered less than cumulatively considerable.

With regard to checklist item e, there are no quantified significance thresholds for exposure to objectionable odors. Significance is determined after taking into account multiple factors, including screening distances from odor sources (as found in the PCAPCD CEQA Handbook), the direction and frequency of prevailing winds, the time of day when odors are present, and the nature and intensity of the odor source.

Discussion of Checklist Answers:

a–b) The proposed project site is under the jurisdiction of the PCAPCD within the SVAB. The SVAB is designated nonattainment for both federal and State ozone standards. Accordingly, the PCAPCD, along with other local air districts in the SVAB, is required to comply with and implement the SIP to demonstrate when and how the region can attain the federal ozone standards. As such, the PCAPCD, along with the other air districts in the region, prepared the *Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan* in December 2008. This Plan demonstrates how existing and new control strategies would provide the necessary future emission reductions to meet the federal Clean Air Act requirements and adoption of all reasonably available control measures is required for attainment. Regional air quality plans contain emissions inventories and a project would be considered in conflict with, or obstruct implementation of, regional air quality plans if the project would be inconsistent with the emissions inventory. These emissions inventories are developed based on projected increases in population growth and vehicle miles traveled within a region. The project is designated and zoned for commercial activities and would be consistent with the assumptions for that land use. Because the project is consistent with the City's adopted land use plans, it would not be expected to conflict with or obstruct implementation of applicable air quality plans, and the impact would be **less than significant**.

Emissions associated with construction and operation of the proposed project would be quantified to determine if the project would violate any air quality standard or contribute substantially to an existing or projected air quality violation. Therefore, this would be considered a **potentially significant** impact and will be further evaluated in the EIR.

c) The SVAB is designated nonattainment for both federal and State ozone standards. Reductions in emissions are necessary within nonattainment areas in order to improve air quality and attain health-based standards. Vehicle usage and business activity within the nonattainment area from the project, combined with other past, present and reasonably foreseeable projects within the City could delay attainment of the standards. The project could cumulatively contribute to regional air quality health effects through emissions of criteria or mobile source air pollutants. This is considered a **potentially significant** impact and will be further addressed in the EIR.

d) The proposed project includes development of a medical office building on a site previously developed with commercial uses. The project site is surrounded by existing roadways and development, including apartments to the north. There is a potential that construction and operation of the proposed project could expose sensitive receptors to an increase in pollutants. This is considered a **potentially significant** impact and will be further addressed in the EIR.

- e) Diesel fumes from construction equipment and delivery trucks are often found to be objectionable; however, construction is temporary and diesel emissions are minimal and regulated. Typical urban projects such as residences and businesses generally do not result in substantial objectionable odors when operated in compliance with City Ordinances (e.g., proper trash disposal and storage). The project does not contain any uses or activities that would cause the generation of substantial unpleasant odors. Thus, construction and operation of the proposed project would not result in the creation of objectionable odors affecting a substantial number of people nor would the project site be affected by any existing objectionable odors. Impacts related to odors are **less than significant**.

IV. Biological Resources

The project site is fully developed with commercial uses consisting of five buildings forming the Kaiser Permanente medical office complex. Landscaping is present along the perimeter of the site and internal to the site, including a number of mature trees. There are a total of 290 mature trees on the project site, most of which were planted as part of the original landscaping plan and include redwood trees located north of the main building and in the north parking lot, but which also include six protected oak trees located in the southwest corner of the site. The project site is bordered by I-80 to the south and east and a mix of retail uses, apartments and public storage to the north and west. An existing creek, Cirby Creek, is located 0.36 mile north of the project site and is designated as wetland/potential wetland area (City of Roseville 2015 Figure V-2). There are no adopted Habitat Conservation Plans or Natural Community Conservation Plans within the City.

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?		X		
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies or regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?				X

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				X
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				X
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			X	
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?				X

Thresholds of Significance and Regulatory Setting:

There is no ironclad definition of significance as it relates to biological resources. Thus, the significance of impacts to biological resources is defined by the use of expert judgment supported by facts, and relies on the policies, codes, and regulations adopted by the City and by regulatory agencies which relate to biological resources (as cited and described in the Discussion of Checklist Answers section). Thresholds for assessing the significance of environmental impacts are based on the CEQA Guidelines checklist items a–f, above. Consistent with CEQA Guidelines Section 15065, a project may have a significant effect on the environment if:

The project has the potential to substantially degrade the quality of the environment; substantially reduce the habitat of a fish or wildlife species; cause a fish or wildlife population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; [or] substantially reduce the number or restrict the range of an endangered, rare or threatened species . . .

Various agencies regulate impacts to the habitats and animals addressed by the CEQA Guidelines checklist. These include the United States Fish and Wildlife Service (USFWS), National Oceanic and Atmospheric Administration–Fisheries, United States Army Corps of Engineers (Army Corps), Central Valley Regional Water Quality Control Board (CVRWQCB), and California Department of Fish and Wildlife (CDFW). The primary regulations affecting biological resources are described in the sections below.

Checklist item a. addresses impacts to special status species. A “special status” species is one which has been identified as having relative scarcity and/or declining populations. Special status species include those formally listed as threatened or endangered, those proposed for formal listing, candidates for federal listing, and those classified as species of special concern. Also included are those species considered to be “fully protected” by the CDFW, those granted “special animal” status for tracking and monitoring purposes, and those plant species considered to be rare, threatened, or endangered in California by the California Native Plant Society (CNPS). The primary regulatory protections for special status species are within the Federal Endangered Species Act (FESA), California Endangered Species Act (CESA), California Fish and Game Code, and the Federal Migratory Bird Treaty Act (MBTA).

Checklist item b. addresses all “sensitive natural communities” that may be affected by local, State, or federal regulations/policies while checklist item c. focuses specifically on one type of such a community: federally-protected wetlands. Focusing first on wetlands, there are two questions to be posed in examining wet habitats: the first is whether the wetted area meets the technical definition of a wetland, and the second is whether the wetland is subject to federal jurisdiction. The 1987 Army Corps Wetlands Delineation Manual is used to determine whether an area meets the technical criteria for a wetland. A delineation verification by the Army Corps verifies the size and condition of the wetlands and other waters in question, and determines the extent of government jurisdiction as it relates to the federal and state Clean Water Act.

The Clean Water Act protects all “navigable waters”, which are defined as traditional navigable waters that are or were used for commerce, or may be used for interstate commerce; tributaries of covered waters; and wetlands adjacent to covered waters, including tributaries. Isolated wetlands—that is, those wetlands that are not hydrologically connected to other “navigable” surface waters (or their tributaries)—are not considered to be subject to the Clean Water Act. Thus, isolated wetlands are not subject to federal wetland protection regulations. However, in addition to the Clean Water Act, the State also has jurisdiction over impacts to surface waters through the Porter-Cologne Water Quality Control Act (Porter-Cologne), which does not require that waters be “navigable”. For this reason, federal non-jurisdictional waters—isolated wetlands—can be regulated by the State pursuant to Porter-Cologne. The City of Roseville General Plan also provides protection for wetlands, including isolated wetlands, pursuant to the General Plan Open Space and Conservation Element. Federal, State and City regulations/policies all seek to achieve no net loss of wetland acreage, values, or function.

Aside from wetlands, checklist item b. also addresses other “sensitive natural communities,” which includes any habitats protected by local or regional plans, policies or regulations or by the CDFW or USFWS. The City of Roseville General Plan Open Space and Conservation Element includes policies for the protection of riparian areas (streamside habitat) and floodplain areas; these are Vegetation and Wildlife section Policies 2 and 3. Policy 4 also directs preservation of additional area around stream corridors and floodplain if there is sensitive woodland, grassland, or other habitat which could be made part of a contiguous open space area. Other than wetlands, which were already discussed, USFW and CDFW habitat protections generally result from species protections, and are thus addressed via checklist item a.

For checklist item d., there are no regulations specific to the protection of migratory corridors. This item is addressed by an analysis of the habitats present in the vicinity and analyzing the probable effects on access to those habitats which will result from a project.

The City of Roseville Tree Preservation ordinance (RMC Ch.19.66) requires protection of native oak trees, and compensation for oak tree removal. The Findings of the Implementing Procedures indicate that compliance

with the City of Roseville Tree Preservation ordinance (RMC Ch.19.66) will prevent significant impacts related to loss of native oak trees, referenced by item e., above.

Regarding checklist item f., there are no adopted Habitat Conservation Plans within the City of Roseville.

Discussion of Checklist Answers:

- a) The project site does not contain any habitat types suitable for special-status plant or wildlife species since the site is developed with buildings, sidewalks, and surface parking. However, the site contains mature redwood and oak trees, which could be used for nesting by raptors and migratory birds protected by the Fish and Game Code and federal regulations. There are 290 mature trees present on-site of which, 255 are proposed for removal. The remaining 35 trees, including protected oak trees in the southwest corner of the site and redwood trees north of the main building and in the north parking lot, would be preserved on site. The potential disturbance of protected nesting birds during construction activities would be considered a significant impact. Compliance with Mitigation Measure BIO-1 requires pre-construction surveys for nesting raptors be conducted if construction is initiated during the nesting season (generally between March 1 and August 31), and requires that a non-disturbance buffer be established around any active nests that are discovered and be maintained until the nest is determined to be inactive. With implementation of Mitigation Measure BIO-1, the project would have a **less-than-significant impact** on sensitive species.
- b-c) The project site is developed with buildings, sidewalks and surface parking and does not contain any sensitive natural communities, riparian habitat, floodplains or wetlands. The nearest designated wetland and riparian habitat is Cirby Creek, located approximately 0.36 mile north of the project site (City of Roseville 2015, Figure V-2). Land uses immediately adjacent to the project site include I-80 and a mix of retail, residential and light industrial uses. Therefore, re-use of the project site would have **no impact** on sensitive natural communities, riparian habitat, floodplains or wetlands since none are located on or immediately adjacent to the project site.
- d) Throughout the City there is an interconnected network of open space corridors and preserves, designed to ensure that the movement of wildlife is not substantially impeded as the City develops. The project site is not within or adjacent to an area designated as open space or parks and recreation space in the City's General Plan (City of Roseville 2015, Figure V-1). The nearest open space designated land is located approximately 0.36 mile north of the project site. Land uses adjacent to the project site are developed with a mix of retail, residential and light industrial uses. The project site is currently developed and re-use of this site would not negatively impact existing or planned open space corridors. Therefore, the project would have **no impact** on interference with movement of wildlife or native wildlife nursery sites.
- e) The City's Tree Preservation Ordinance is defined in Chapter 19.66 of the Zoning Ordinance. Under this ordinance protected trees are defined as native oak trees equal to or greater than six inches diameter at breast height (dbh) measured as a total of a single trunk or multiple trunks (City of Roseville 2014). The project site contains a number of mature trees including oak trees in the southwest corner and redwood trees north of the main building and in the north parking lot. Of the 290 mature trees on the project site, six native oak trees located in the southwest corner of the project site are considered to be protected trees under the City's Zoning Ordinance. A total of 255 trees are proposed for removal including 60 trees which were recommended for removal in the Arborist Report (Tree Associates 2016) completed for the project. Of the 255 trees proposed for removal, two native oak trees are protected under the City's Tree Preservation Ordinance. The project would be required to request a Tree Permit from the City for removal of the two protected trees (Pers. Comm. Yi). Under the Tree Permit the removal of these trees would require replacement trees be planted that meet the provisions of the Tree Preservation Ordinance. The project is proposing to plant 411 new trees throughout the project site and

would follow the recommendations in the Arborist Report to preserve trees and minimize impacts during project construction. This would ensure that the project's impact related to conflict with local policies and regulations protecting biological resources would be **less than significant**.

- f) There are no Habitat Conservation Plans; Natural Community Conservation Plans; or other approved local, regional, or state habitat conservation plans that apply to the project site. Therefore the project would have **no impact** on conflicts with conservation plans.

Mitigation Measure

BIO-1: To avoid take of any active raptor nest or disturbance of other protected native birds, to the extent feasible site disturbance shall be avoided from March 1 through August 31, which coincides with the typical nesting season for most common bird species in the region.

If construction work is required to be scheduled during the typical nesting season (March through August), a qualified biologist shall conduct a preconstruction survey of the work area to determine if any native birds, including raptors, are nesting in or in the immediate vicinity of the vegetation to be removed. The preconstruction survey shall be conducted within 15 days prior to the start of work from March through May (since there is a higher potential for birds to initiate nesting during this period), and within 30 days prior to the start of work from June through August. If active nests are found in the work area, the biologist shall determine an appropriately-sized buffer around the nest based on the nesting species and its sensitivity to disturbance in which no work shall be allowed until the young have successfully fledged. The size of the nest buffer shall be determined by City staff based on the input from the biologist (using information provided in existing regulations and in guidance documents, e.g. CDFW Handbook for Swainson's Hawks), and, if necessary, after consultation with the CDFW.

V. Cultural Resources

The Roseville region was within the territory of the Nisenan (also Southern Maidu or Valley Maidu) and two large permanent Nisenan habitation sites have been identified and protected in Maidu Park (City of Roseville 2015, p. V-31). Numerous smaller cultural resources, such as midden deposits and bedrock mortars, have also been recorded in the City. The gold rush which began in 1848 marked another settlement period, and evidence of Roseville's ranching and mining past are still found today. Historic features include rock walls, ditches, low terraces, and other remnants of settlement and activity. A majority of documented sites within the City are located in areas designated for open space uses (City of Roseville 2015, p. V-31). The Haman House and the Maidu Indian sites are listed on the National Register of Historic Places (City of Roseville 2015, p. V-31). The nearest designated site of historical and cultural importance is located approximately 1.08 miles north of the project site (City of Roseville 2015, Figure V-4).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Cause a substantial adverse change in the significance of an historic resource as defined in Section 15064.5?			X	

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?		X		
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			X	
d) Disturb any human remains, including those interred outside of formal cemeteries?		X		
e) Cause a substantial adverse change in the significance of a Tribal Cultural Resource as defined in Public Resources Code Section 21074?			X	

Thresholds of Significance and Regulatory Setting:

The significance of impacts to cultural resources is based directly on the CEQA Guidelines checklist items a–d listed above. The Archaeological, Historic, and Cultural Resources section of the City of Roseville General Plan also directs the proper evaluation of and, when feasible, protection of significant resources (Policies 1 and 2). There are also various federal and State regulations regarding the treatment and protection of cultural resources, including the National Historic Preservation Act and the Antiquities Act (which regulate items of significance in history), and Section 7050.5 of the California Health and Safety Code and Section 5097.9 of the California Public Resources Code (which regulates the treatment of human remains), and Section 21073 et seq. of the California Public Resources Code (regarding Tribal Cultural Resources). The CEQA Guidelines also contains specific sections, other than the checklist items, related to the treatment of effects on historic resources.

Pursuant to the CEQA Guidelines, if it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts to be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (Section 21083.2 (a), (b), and (c)). A *historical resource* is a resource listed, or determined to be eligible for listing, in the California Register of Historical Resources (CRHR) (Section 21084.1); a resource included in a local register of historical resources (Section 15064.5(a)(2)); or any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant (Section 15064.5 (a)(3)). Public Resources Code Section 5024.1 requires evaluation of historical resources to determine their eligibility for listing on the CRHR.

In addition to archeological resources, tribal cultural resources are also given particular treatment. Tribal cultural resources are defined in Public Resources Code Section 21074, as either (1) a site, feature, place, geographically-defined cultural landscape, sacred place, or object with cultural value to a California Native American Tribe, that is listed or eligible for listing on the California Register of Historical Resources, or on a

local register of historical resources or, as (2) a resource determined by the lead agency, supported by substantial evidence, to be significant according to the historical register criteria in Public Resources Code section 5024.1(c), and considering the significance of the resource to a California Native American Tribe.

Because the project site was completely graded and disturbed to construct the buildings and parking areas that currently occupy the site in 1980, a records search was not conducted for this project because of the disturbed and developed nature of the project site.

Discussion of Checklist Answers:

- a-b) The project site is not located in a designated historic district and no designated historic resources are located on or adjacent to the project site. Buildings on the project site slated for removal were constructed in 1980 and 1985 and are not considered historically or architecturally significant. The project site is developed and no archaeological resources are known to exist on the project site; however, earth disturbing activities have the potential to uncover previously unidentified archaeological resources. Should any be found on-site, mitigation measure CUL-1 would apply, which requires an immediate cessation of work, and contact with the appropriate agencies to address the resource before work can resume. Implementation of Mitigation Measure CUL-1 would ensure that the project's impact to historic and archaeological resources is **less than significant**.

- c-d) The project site is developed and does not contain any unique geologic features. Due to development on the project site no paleontological resources or human remains are known to exist on the site nor is this area listed in the City's General Plan as an area of historical or cultural importance; however, earth disturbing activities, such as grading, have the potential to uncover previously undiscovered resources or remains. Compliance with Section 7050.5 of the California Health and Safety Code and Section 5097.9 of the California Public Resources Code, both regulate the treatment of human remains if unearthed during project activities. Specifically, it is stated that in the event of the discovery of human remains, the County Coroner shall be immediately notified and if the remains are determined to be Native American, the guidelines of the Native American Heritage Commission shall be adhered to in the treatment and disposition of remains. This would ensure that the project has a **less than significant** impact on the discovery of paleontological resources or of human remains.

- e) Notice of the proposed project was mailed to tribes which had requested such notice pursuant to AB 52. A request for consultation was not received within the mandated 30 day response time, and consistent with items a-b and d above, no resources are known to exist on the project site. However, mitigation measure CUL-1 requires specific steps be taken to reduce impacts to cultural resources, should any be found on-site. The measure requires an immediate cessation of work, and contact with the appropriate agencies to address the resource before work can resume. Impacts to tribal cultural resources are anticipated to be **less than significant**.

Mitigation Measure

CUL-1: A minimum of seven days prior to beginning earthwork or other soil disturbance activities, the applicant shall notify the City of the proposed earthwork start-date, in order to provide the City with time to contact the United Auburn Indian Community (UAIC). A UAIC tribal representative shall be invited to inspect the project site, including any soil piles, trenches, or other disturbed areas, within the first five days of groundbreaking activity. During this inspection, a site meeting of construction personnel shall also be held in order to afford the tribal representative the opportunity to provide cultural resources awareness information. If any cultural resources, such as structural features, unusual amounts of bone or shell, artifacts, human remains, or architectural remains are encountered during this initial inspection or during any subsequent construction activities, work shall be suspended within 100 feet of the find, and

the project applicant shall immediately notify the City of Roseville Development Services Director. The project applicant shall coordinate any necessary investigation of the site with a qualified archaeologist approved by the City, and as part of the site investigation and resource assessment the archeologist shall consult with the UAIC and provide proper management recommendations should potential impacts to the resources be found by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City by the qualified archaeologist. Possible management recommendations for historical or unique archaeological resources could include resource avoidance or, where avoidance is infeasible in light of project design or layout or is unnecessary to avoid significant effects, preservation in place or other measures. The contractor shall implement any measures deemed by City staff to be necessary and feasible to avoid or minimize significant effects to the cultural resources.

VI. Geology and Soils

The south Placer area, including the City, is located in an area designated as a low-severity earthquake zone (California Geological Survey 2008). There are three inactive faults (Volcano Hill, Linda Creek, and an unnamed fault) in the vicinity, but there are no known active seismic faults within Placer County (City of Roseville 2015, p. VIII-3). Neither Placer County nor the City is on the list of cities and counties affected by Alquist-Priolo Earthquake Fault Zones (DOC 2010). Due to the geographic location and soil characteristics within the City, the General Plan indicates that soil liquefaction, landslides, and subsidence are not a significant risk in the area (City of Roseville 2015, p. VIII-3).

The nearest faults to the project site are Willows and Deadman faults, which are located approximately 10 miles to the southwest and east-northeast at their nearest points, respectively (RMA Group 2015). According to the Geotechnical Report prepared for the project, the project site is underlain by Pleistocene age older alluvial deposits and soils on the project site are medium dense to dense generally consisting of interbedded layers of sandy clays, clayey sands, and silty sands with the occasional gravel and silty fines (RMA Group 2015). These soils were determined to have a low expansion classification. The project site has a 3% gradient downward to the southeast and is not expected to be at risk for landslides.

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Ruptures of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? (Refer to Division of Mines and Geology Special Publication 42.)			X	

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?			X	
iv) Landslides?			X	
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located in a geological unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?				X

Thresholds of Significance and Regulatory Setting:

The significance of impacts related to geology and soils is based directly on the CEQA Guidelines checklist items a–e listed above. Regulations applicable to this topic include the Alquist-Priolo Act, which addresses earthquake safety in building permits, and the Seismic Hazards Mapping Act, which requires the state to gather and publish data on the location and risk of seismic faults.

The Findings of the Implementing Procedures indicate that compliance with the Flood Damage Prevention Ordinance (RMC Ch.9.80) and Design/Construction Standards (Resolution 07-107) will prevent significant impacts related to checklist item b. The Ordinance and standards include permit requirements for construction and development in erosion-prone areas and ensure that grading activities will not result in significant soil erosion or loss of topsoil. The use of septic tanks or alternative waste systems is not permitted in the City of Roseville, and therefore no analysis of criterion e is necessary.

Discussion of Checklist Answers:

- a) The project will not expose people or structures to potential substantial adverse effects involving seismic shaking, ground failure or landslides.
- i-iii) According to United States Geological Service mapping and literature, active faults are largely considered to be those which have had movement within the last 10,000 years (within the Holocene or Historic time periods) (USGS 2016) and there are no major active faults in Placer County. The California Geological Survey has prepared a map of the state which shows the earthquake shaking potential of areas throughout California based primarily on an area's distance from known active faults. The map shows that the City lies in a relatively low-intensity ground-shaking zone (California Geological Survey 2008). Neither Placer County nor the City is on the list of cities and counties affected by Alquist-Priolo Earthquake Fault Zones (DOC 2010). Since the site is not located within the boundaries of an Earthquake Fault Zone and no faults are known to pass through the project site, surface fault rupture within the site is considered unlikely. Commercial, institutional, and residential buildings as well as all related infrastructure are required, in conformance with Chapter 16, *Structural Design Requirements*, Division IV, *Earthquake Design* of the California Building Code (CBC), to lessen the exposure to potentially damaging vibrations through seismic-resistant design. In compliance with the Code, all structures on the project site would be built to withstand ground shaking from possible earthquakes in the region; therefore, impacts are **less than significant**.
- iv) Landslides typically occur where soils on steep slopes become saturated or where natural or manmade conditions have taken away supporting structures and vegetation. The project site has a three percent gradient downward to the southeast. The existing slope of the project site is not steep enough to present a hazard during development or upon completion of the project. In addition, measures would be incorporated during construction to shore minor slopes and prevent potential earth movement. Therefore, impacts associated with landslides are **less than significant**.
- b) Grading activities would result in the disruption, displacement, compaction and over-covering of soils associated with site preparation (grading and trenching for utilities). Grading activities for the project would be required for construction on-site and for the off-site road improvements. Grading activities require a grading permit from the Engineering Division. The grading permit is reviewed for compliance with the City's Improvement Standards, including the provision of proper drainage, appropriate dust control, and erosion control measures. Grading and erosion control measures will be incorporated into the required grading plans and improvement plans. Additionally, project construction is subject to the requirements of the National Pollution Discharge Elimination System (NPDES) Construction General Permit issued by the Regional Water Quality Control Board and the City's 2016 Design/Construction Standards, which require preparation of a Stormwater Pollution Prevention Plan (SWPPP). The SWPPP would identify measures taken to prevent sedimentation and erosion during project construction (City of Roseville 2016). The project would comply with requirements in the City's Design/Construction standards as well as provisions of the grading permit; therefore, the impacts associated with disruption, displacement, and compaction of soils associated with the project are **less than significant**.
- c, d) A geotechnical report was prepared for the project by RMA Group, as required by the City's Public Works Department, Engineering Division. Soils on the project site are medium dense to dense generally consisting of interbedded layers of sandy clays, clayey sands, and silty sands with the occasional gravel and silty fines and were determined to have a low expansion classification (RMA Group 2015). Site specific liquefaction analysis concluded that the soils on the project site would not be subject to liquefaction during the ground motion expected during an earthquake (RMA Group 2015). The City's Building Department would review construction plans before a building permit is issued and

the Engineering Division would review and approval all rough grading plans to ensure that all measures recommended by the geotechnical report are incorporated as appropriate. Therefore, impacts related to unstable or expansive soils that could result in liquefaction, landslides, lateral spread or collapse endangering life or property would be **less than significant**.

VII. Greenhouse Gases

Greenhouse gases trap heat in the earth's atmosphere. The principal greenhouse gases (GHGs) that enter the atmosphere because of human activities are carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), and fluorinated gases. As explained by the United States Environmental Protection Agency (US EPA), global average temperature has increased by more than 1.5 degrees Fahrenheit since the late 1800s, and most of the warming of the past half century has been caused by human emissions (US EPA 2016). The City has taken proactive steps to reduce GHG emissions, which include the introduction of General Plan policies to reduce emissions, changes to City operations, and climate action initiatives.

The City developed a *Greenhouse Gas Emissions Reduction Action Plan Analysis* (City of Roseville 2009), which includes an emissions inventory, strategies to reduce GHG emissions and specific energy conservation measures. A 2006 GHG emissions inventory for the City was prepared for use in the 2009 analysis as a baseline against which to measure future GHG emissions reductions. The results showed that buildings accounted for the highest percentage of emissions (27%), followed by fleet (26%) and wastewater (25%), commute (11%), streetlights (7%) and solid waste (4%) (City of Roseville 2009, Figure 1).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	X			
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	X			

Thresholds of Significance and Regulatory Setting:

In Assembly Bill 32 (the California Global Warming Solutions Act), signed by Governor Schwarzenegger in September 2006, the legislature found that climate change resulting from global warming was a threat to California, and directed that "the State Air Resources Board design emissions reduction measures to meet the statewide emissions limits for greenhouse gases . . .". The target established in AB 32 was to reduce GHG emissions to 1990 levels by the year 2020. CARB subsequently prepared the *Climate Change Scoping Plan* (Scoping Plan) for California, which was approved in 2008. The Scoping Plan provides the outline for actions to reduce California's GHG emissions. CARB's updated August 2011 Scoping Plan calculated a reduction needed of 21.7% from future "Business As Usual" (BAU) conditions in the year 2020. The current Scoping Plan (adopted May 2014) indicates that statewide emissions of GHG in 1990 amounted to 431 million metric tons, and that the 2020 BAU scenario is estimated as 509 million metric tons (including Pavley and Renewables Portfolio Standard reduction), which would require a reduction of 15.3% from 2020 BAU.

The Placer County Air Pollution Control District (PCAPCD) recommends that thresholds of significance for GHG be related to AB 32 reduction goals, but has not adopted a threshold. However, the neighboring Air District, the Sacramento Metropolitan Air Quality Management District (SMAQMD), has established thresholds which relate significance to AB 32. The City is located within the Sacramento Valley Air Basin, which is the same air basin where the SMAQMD methodology is used by numerous CEQA lead agencies; on these grounds, the City finds use of these thresholds to be appropriate. The thresholds were developed to ensure that 90% of new GHG emissions would be reviewed and assessed for mitigation. In accordance with these thresholds, if the project emits 1,100 or more metric tons of carbon dioxide equivalents (CO₂e) per year in either the construction phase or the operational phase, mitigation is required. Thus a GHG impact is significant if a project generates 1,100 metric tons of CO₂e per year or more (during either construction or operation).

Discussion of Checklist Answers:

- a–b) The project has the potential to generate GHG emissions through use of construction equipment and trucks as well as from energy usage, vehicle traffic, solid waste generation, and wastewater generation from operation of the proposed medical office building. GHG emissions associated with construction and operation of the proposed project are considered **potentially significant** and will be further addressed in the EIR.

VIII. Hazards and Hazardous Materials

Hazardous materials and hazardous wastes are heavily regulated by federal, State and local agencies including the U.S. and California Environmental Protection Agencies (EPA and CalEPA) and the California Department of Toxic Substances Control (DTSC). The largest hazardous waste generators in the City include NEC, Hewlett-Packard, Union Pacific Railroad and H.B. Fuller Company (City of Roseville, p. VIII-40). There are no designated routes for the transportation of hazardous materials within the City, but most hazardous materials are transported by truck and the City does have designated truck routes which attempt to avoid residential areas (City of Roseville 2015 p. VIII-40).

The City has adopted the 2011 *Multi-Hazard Mitigation Plan* as the local hazard mitigation plan for natural disasters. Additionally, the Roseville Fire Department (RFD) has developed a *Hazardous Materials Response Plan*, which identifies participants, responsibilities, and operational duties in the event of a hazardous material emergency, including clean-up and contamination procedures (City of Roseville 2015, p. VIII-41). The RFD has a Hazardous Materials Response Team and has the primary responsibility for handling hazardous materials emergency response. All hazardous materials handlers which store in excess of 55 gallons, 500 pounds or 200 cubic feet of gas are required to submit Hazardous Materials Management (Business) Plans, which provides information to emergency responders on the quantity and location of hazardous materials (City of Roseville 2015, p. VIII-40).

The project site is not included in the Cortese List for hazardous waste and substances and no hazardous waste and substance sites have been identified within 1,000 feet of the project site (DTSC 2007). A Pre-Demolition Asbestos and Lead Survey Report was completed for the project site by Forensic Analytical Consulting Services (FACS 2016). The report concluded that limited amounts of asbestos containing materials (ACMs) and lead-based paints were found on the project site. The nearest school to the project site is Merryhill Elementary and Middle School located approximately 0.16 mile south across I-80. There are no airports located within the City and the project site is not included in the area of influence for any airports or private airstrips. Due to its location, urban development, and lack of steep slopes and thick brush, most of the City is in a low-severity zone for wildland fire hazards (City of Roseville 2015, p. VIII-31).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment though reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within on-quarter mile of an existing or proposed school?			X	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?				X
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?				X
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing in the project area?				X

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X	
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?				X

Thresholds of Significance and Regulatory Setting:

The significance of impacts related to hazardous materials is based directly on the CEQA Guidelines checklist items a–h listed above. The determination of significance based on the above criteria also depends on the probable frequency and severity of consequences to people who might be exposed to the health hazard, and the degree to which project design or existing regulations would reduce the frequency of or severity of exposure. A material is defined as hazardous if it appears on a list of hazardous materials prepared by a federal, state or local regulatory agency, or if it has characteristics defined as hazardous by such an agency. As an example, products commonly used for household cleaning are classified as hazardous when transported in large quantities, but one would not conclude that the presence of small quantities of household cleaners at a home would pose a risk to a school located within ¼-mile.

Many federal and State agencies regulate hazards and hazardous substances, including the U.S. and California EPA, California DTSC, Central Valley Regional Water Quality Control Board (CVRWQCB), and the California Occupational Safety and Health Administration (Cal OSHA). The state has been granted primacy (primary responsibility for oversight) by the US EPA to administer and enforce hazardous waste management programs. State regulations also have detailed planning and management requirements to ensure that hazardous materials are handled, stored, and disposed of properly to reduce human health risks. California regulations pertaining to hazardous waste management are published in the California Code of Regulations (see 8 CCR, 22 CCR, and 23 CCR).

The project site is not within an airport land use plan, within two miles of a public or public use airport and there are also no private airstrips in the vicinity of the project areas. Therefore, no further discussion is provided for items e. and f.

Discussion of Checklist Answers:

- a, b) Standard construction activities would require the use of hazardous materials such as fuels, oils, lubricants, glues, paints and paint thinners, and cleaning solvents. The Pre-Demolition Asbestos and Lead Survey Report identified ACMs and lead-based paints in buildings on the project site (FACS 2016). Demolition of buildings and disposal of ACMs and lead-based paints would be required to comply with federal and State Occupational Safety and Health (Federal OSHA, Cal/OSHA) standards for abatement. The Cal/OSHA requirements for asbestos and lead abatement are found in Title 8 of the

California Code of Regulations Section 1529 and 1532.2, respectively, Compliance with Cal/OSHA requirements and proper hazardous management practices, such as use and storage in the manner specified on the material packaging and disposal of hazardous waste at a facility equipped to treat such waste would ensure that hazardous material use during construction would remain less-than-significant.

During project operation, the MOB would use hazardous materials and would generate hazardous waste. The project is replacing an existing medical facility and would not be introducing a new land use or handling hazardous materials that are not already handled onsite. Hazardous waste commonly found in medical facilities could include radioactive materials, biohazardous materials, pharmaceuticals, chemicals used for equipment sterilization, formaldehyde, and solvents, oxidizers, corrosives, and stains used in clinical laboratories. Hazardous waste present during project operation could potentially include hazardous chemical waste, radioactive waste, biohazardous waste and medical sharps (i.e., needles or blades). Chapter 9.60 of the City's Municipal Code requires disclosure of the use and storage of hazardous materials in existing and proposed commercial activities in accordance with Placer County guidelines and state law (City of Roseville 1983). According to the General Plan the project would be required to submit a Hazardous Materials Management Plan, which would detail site specific chemical inventories, emergency contact information, as well as vicinity and facility maps if the project would store 55 gallons, 500 pounds or 200 cubic feet of gas (City of Roseville 2015, p. VIII-40).

Since the project would generate hazardous waste there is a potential for the accidental release of hazardous materials into the environment if they are not properly handled and disposed. Hazardous waste would be properly contained and disposed of according to standard hazardous materials regulations set forth by the EPA and Cal EPA, DTSC, California Department of Public Health (CDPH), the California Building Code (CBC) and the California Fire Code (CFC). There are no designated routes for the transportation of hazardous materials in the City, but most transport of these materials would use designated truck routes which are designed to divert traffic away from residential areas. Plans for the transportation of hazardous materials on state and federal highways, including I-80 and Highway 65 have been created by the California Highway Patrol (City of Roseville 2015, VIII-40-41). The City's Hazardous Materials Release Reporting Policy (City of Roseville 2008a) requires immediate notification via 911, the emergency dispatch number, in the event of a chemical release. This policy also contains criteria for determining if a release poses a significant threat to human health and safety and outlines follow up policies that must be taken by the owner or operator of the facility. Existing regulations and programs are sufficient to ensure that potential impacts associated with the transport, use and disposal of hazardous materials or through reasonable foreseeable accident conditions during project operation are **less than significant**.

- c) The nearest school to the project site is Merryhill Elementary and Middle School, located approximately 0.16 mile south across I-80 to the southeast. The project is replacing an existing medical facility and would not be introducing a new land use or handling hazardous materials that are not already handled onsite. As discussed in items (a) and (b) above, the proposed project would comply with all required regulations pertaining to use, storage and disposal of hazardous materials. Existing regulations and programs are sufficient to ensure that potential impacts as a result of the use or storage of hazardous materials within one quarter mile of a school are reduced to **less-than-significant** levels.
- d) The project is not located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and no hazardous waste and substance sites have been identified within 1,000 feet of the project site (DTSC 2007). Therefore, **no impact** would occur.
- g) This project is located within an area currently receiving City emergency services and the site is already developed and incorporated into emergency response plans. The project does not include construction of new roads or uses that would interfere with the City's emergency response or evacuation plans. During project construction and the re-contouring of Cirby Way, traffic in the project vicinity would be temporarily impacted; however, access along Cirby Way would be maintained during construction and the project is

not expected to impact access for emergency vehicles. Ultimately, the project's off-site improvements to Cirby Way would improve circulation in the vicinity of the project site making it more accessible to emergency vehicles. The project would be designed in accordance with the RFD development standards and emergency routes would remain open during construction. Therefore, the project would result in a **less-than-significant** impact to the City's Emergency Response or Management Plans.

- h) The California Department of Forestry and Fire Protection (CAL Fire) is the state agency responsible for wildland fire protection and management. As part of that task, CAL Fire maintains maps designating Wildland Fire Hazard Severity zones. The City is not located within a Very High Fire Hazard Severity Zone, and is not within a CAL Fire responsibility area. Fire suppression is entirely under the responsibility of the RFD (Cal Fire 2008). The project site is in an urban area, and therefore would not expose people to any risk from wildland fire. There would be **no impact** with regard to this criterion.

IX. Hydrology and Water Quality

The City is located within the Pleasant Grove Creek Basin and the Dry Creek Basin. Pleasant Grove Creek and its tributaries drain most of the western and central areas of the City and Dry Creek and its tributaries drain the remainder of the City (City of Roseville 2015, p. VIII-10). Most major stream areas in the City are located within designated open space.

The project site is not located within a 100- or 200-year floodplain (City of Roseville 2015, Figure VIII-2). The closest dam to the project site is Folsom Dam, which is located approximately 7.30 miles southeast of the project site.

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements?			X	
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			X	

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off-site?			X	
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off-site?			X	
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted water?			X	
f) Otherwise substantially degrade water quality?			X	
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?				X
h) Place within a 100-year flood hazard area structures, which would impede or redirect flood flows?				X
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?				X

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
j) Inundation by seiches, tsunami, or mudflow?				X

Thresholds of Significance and Regulatory Setting:

The significance of impacts related to hydrology and water quality is based directly on the CEQA Guidelines checklist items a–j listed above. For checklist item a, the Findings of the Implementing Procedures indicate that compliance with the City of Roseville Design/Construction Standards (Resolution 07-107), Urban Stormwater Quality Management and Discharge Control Ordinance (RMC Ch. 14.20), and Stormwater Quality Design Manual (Resolution 16-152) will prevent significant impacts. The standards require preparation of an erosion and sediment control plan for construction activities and includes designs to control pollutants within post-construction urban water runoff. Likewise, it is indicated that the Drainage Fees for the Dry Creek and Pleasant Grove Watersheds (RMC Ch.4.48) and City of Roseville Design/Construction Standards (Resolution 07-107) will prevent significant impacts related to item e. The ordinance and standards require the collection of drainage fees to fund improvements that mitigate potential flooding impacts, and require the design of a water drainage system that will adequately convey anticipated stormwater flows. Finally, it is indicated that compliance with the Flood Damage Prevention Ordinance (RMC Ch. 9.80) will prevent significant impacts related to items g, h, and i. The Ordinance includes standard requirements for all new construction, including regulation of development with the potential to impede or redirect flood flows, and prohibits development within flood hazard areas. Impacts from tsunamis and seiches were screened out of the analysis (item j) given the fact that the project is not located near a water body or other feature that would pose a risk of such an event.

Discussion of Checklist Answers:

a,c,d,f) The project site is currently developed, but the project would require building demolition, grading, trenching for utilities, construction of new buildings and completion of surface parking lots. Disturbing the soil during grading or trenching can allow sediment to be mobilized by rain or wind, and cause displacement into waterways. Dry Creek is located less than half a mile to the north and Cirby Creek is located less than half a mile northeast of the project site. To address this and other issues, the developer is required to receive a grading permit prior to the start of construction. The City's grading permit requires measures be included for dust and erosion control. In addition, the City's NPDES Municipal Stormwater Permit issued by the CVRWQCB requires the City to reduce pollutants in stormwater to the maximum extent practicable. The City does this, in part, by means of the City's 2016 Design/Construction Standards, which require preparation and implementation of a SWPPP, as discussed above in Geology and Soils. All permanent stormwater quality control measures must be designed to comply with the City's Manual for Stormwater Quality Control Standards for New Development, the City's 2016 Design/Construction Standards, Urban Stormwater Quality Management and Discharge Control Ordinance, and Stormwater Quality Design Manual. Additionally, the project includes Low Impact Design (LID) elements such as bio-treatment areas, which would serve as pretreatment for the underlying infiltration layers and secondary subsurface infiltration. Compliance with these standards and regulations and approval of a grading permit would ensure that impacts related to water quality, runoff, and erosion are **less than significant**.

b) The project does not involve the installation of groundwater wells. The City maintains wells to supplement surface water supplies during multiple dry years. The project site is already developed and the project would not change the land use. The proposed project is consistent with the General Plan land use designation for the site, and is thus consistent with the citywide Water Supply Assessment. Project impacts related to groundwater extraction are **less than significant**.

- e) The project site is served by two connections to the City's storm drain system, one curb inlet just south of the Riverside/Cirby intersection and one 18-inch pipe just east of the existing Cirby Way entrance. The project would maintain the pre-project flow rates through use of on-site infiltration and detention. Detention would be achieved via an orifice structure just upstream of the connection to the public system. Detention volume of the 10% chance (10-year) storm event would be stored in infiltration galleries (horizontal drain) and the void space of the rock layers beneath the bio-treatment areas. Pavement runoff would be directed to bio-treatment areas or curb inlets while roof runoff would be connected to subsurface infiltration galleries. The treatment areas and on-site piping would be designed to convey the 10% chance (10-year) storm event and overland release would be provided to convey the 1% chance (100-year) storm event. Infiltration measures would be sized to infiltrate the 50% chance (2-year) storm event to meet the NPDES post-construction LID and hydro-modification requirement, in accordance with City Design and Construction standards. Additionally, the project would pay the Drainage Fees for the Dry Creek and Pleasant Grove Watersheds in accordance with Chapter 4.48 of the Municipal Code. Compliance with City standards and payment of the drainage fee would ensure that the project would maintain pre-project flow rates and the existing and planned infrastructure would be sufficient to handle runoff. This impact would be **less than significant**.

- g,h) According to the City's floodplain data, the project site is not located within a 100- or 200-year floodplain (City of Roseville 2015, Figure VIII-2). As a result, implementation of the proposed project would not place any structures within an area at risk of flooding. There would be **no impact** with regard to this criterion.

- i) Folsom Dam, which is located approximately 7.30 miles southeast of the project site, is the closest dam to the project site. While portions of the City could be subject to flooding in the event of failure or damage to Folsom Dam, the project site is not located in an area that would be subject to inundation due to dam failure. Therefore, there would be **no impact**.

- j) Because the proposed project is located within an area that is flat and is not within a floodplain there is no risk of debris flow or mudflow. Therefore, there would be **no impact** with regard to this criterion.

X. Land Use and Planning

The project site is currently developed with five buildings that comprise the Kaiser Permanente medical office complex. The City's 2035 General Plan designates the site for Community Commercial (CC). Under this designation CC uses typically include sites between 5 and 25 acres with buildings that range from 50,000 to 250,000 square feet with a Floor Area Ratio (FAR) of between 20 and 40%. Primary uses within the CC designation include retail stores and businesses selling a full range of goods and services including auto sales and repair, and commercial child care facilities. Secondary uses allowed include professional office uses, medical offices and clinics (City of Roseville 2015, p. II-25).

The project site is zoned for Business Professional (BP), which permits (allowed by right) professional offices including medical offices, but not general hospital services. The maximum building height allowed by right is 50-feet, but taller buildings can be approved through the Major Project Permit approval process.

Surrounding land uses include a mix of retail uses, public storage, apartments and I-80. The surrounding land uses have General Plan designations of CC, MDR and BP; while the zoning of surrounding land uses includes CC, GC/SA and PD (refer to Table 1 in the Project Description above).

The project site is located in a planning area designated as Infill (City of Roseville 2015 Figure II-1), which is not governed by a specific plan. There are no Habitat Conservation Plans or Natural Community Conservation Plans within the City.

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Physically divide an established community?				X
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?			X	
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?				X

Thresholds of Significance and Regulatory Setting:

The significance of impacts related to land use is based directly on the CEQA Guidelines checklist items a–c listed above. This analysis assumes consistency with applicable City General Plan policies, Improvement Standards, and design standards prior to determining significance, so these requirements do not appear as mitigation measures.

Discussion of Checklist Answers:

- a) The project site is currently developed and located adjacent to I-80 and other developed land uses, including a mix of retail, residential and light industrial uses. Development of the project site would include offsite roadway improvements, but would not expand the development footprint or add new roadways. The project would not divide or disrupt an existing community and therefore there would be **no impact**.
- b) The project site is designated for CC in the City's General Plan and located in an infill area which is not governed by a specific plan. The project site is zoned BP in Chapter 19 of the City's Municipal Code. Adjacent land uses have General Plan designations of CC, MDR and BP. According to Table II-9 in the General Plan Land Use element, the CC designation is compatible with BP land uses and other CC land uses and conditionally compatible with MDR land uses. The project is consistent with the City's intended use for the site; since the site is currently developed with a medical office building complex, the project would not introduce any new land uses to the site. Additionally, the project would be required to comply with the City's Improvement Standards and Construction Standards and Community Design Guidelines in order to receive a grading and building permit. Compliance with these standards and consistency with the underlying General Plan and zoning designations would ensure that impacts related to conflict with applicable land use plans is **less than significant**.

- c) There are no Habitat Conservation Plans or Natural Community Conservation Plans covering the project site; therefore, **no impact** would occur.

XI. Mineral Resources

The Surface Mining and Reclamation Act (SMARA) of 1975 requires the State Geologist to classify land into Mineral Resource Zones (MRZ's) based on the known or inferred mineral resource potential of that land. The California Division of Mines and Geology (CDMG) is responsible for the classification and designation of areas containing—or potentially containing—significant mineral resources. CDMG published Open File Report 95-10 (CDMG 1995), which provides the mineral classification map for Placer County. A detailed evaluation of mineral resources has not been conducted within the City limits, but MRZ's have been identified. There are four broad MRZ categories (MRZ-1 through MRZ-4), and only MRZ-2 represents an area of known significant mineral resources. According to the Open File Report 95-10 map, a majority of the City of Roseville, including the project site, is located within an area designated as MRZ-4. A MRZ-4 designation indicates that there are no known mineral occurrences, but geologic information does not rule out either the presence or absence of significant mineral resources (CDMG 1995).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X

Thresholds of Significance:

The significance of impacts related to mineral resources is based directly on the CEQA Guidelines checklist items a. and b. listed above.

Discussion of Checklist Answers:

- a–b) The project site is not in the area of the City known to include any mineral resources that would be of local, regional, or statewide importance. The project does not propose to excavate the site for mineral resources; therefore, **no impacts** related to mineral resources would result from construction of the project.

XII. Noise

The project site is located immediately adjacent to I-80 on the south and west sides. Other surrounding land uses in the project area include a mix of retail uses, public storage and apartments. The closest sensitive receptor is the apartments located north of Cirby Way, approximately 0.15 mile from the project site. Figure IX-

5 in the City's General Plan identifies noise sensitive receptor sites within the City. Three of these sites, all identified as religious institutions, are located within a 0.5 mile radius of the project site. According to the General Plan, the project site is within the 60 L_{dn} noise contour for existing roadways and the 65 L_{dn} noise contour for future roadways (City of Roseville 2015, Figure IX-1 and Figure IX-2). Figure IX-4 of the City's General Plan identifies 13 major existing stationary noise sources; the closest noise source to the project is Lonestar located approximately 0.73 mile northeast. The General Plan established noise level for office buildings is 60 L_{dn} for outdoor activity areas and 45 L_{eq} for interior spaces (City of Roseville 2015, Table IX-1).

Would the project result in:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Exposer of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			X	
b) Exposure of persons to or generation of excessive ground borne vibration of ground borne noise levels?			X	
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?			X	
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			X	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?				X

Thresholds of Significance and Regulatory Setting:

Standards for transportation noise and non-transportation noise affecting existing or proposed land uses are established within the City of Roseville General Plan Noise Element Table IX-1 and IX-3, and these standards are used as the thresholds to determine the significance of impacts related to items a. and c. The significance of other noise impacts is based directly on the CEQA Guidelines checklist items b., and d–f listed above. The Findings of the Implementing Procedures indicate that compliance with the City Noise Regulation (RMC Ch. 9.24) will prevent significant non-transportation noise as it relates to items a., b., and c. The Ordinance establishes noise exposure standards that protect noise-sensitive receptors from a variety of noise sources, including non-transportation/fixed noise, amplified sound, industrial noise, and events on public property. The project is not within an airport land use plan, within two miles of a public or public use airport and there are also no private airstrips in the vicinity of the project area. Therefore, items e. and f. have been ruled out from further analysis.

Discussion of Checklist Answers:

- a,c) The closest sensitive receptors (e.g., residents) are the apartments located north of Cirby Way approximately 0.15 mile from the project site and three religious institutions located within a 0.5 mile radius. Land uses on the project site would not change since the site is already developed with a medical office facility and the project would not introduce any new sources of noise. Therefore, project operation would not contribute to a substantial increase in ambient noise levels above existing conditions. Ambient noise levels are expected to be within the City's acceptable noise thresholds for project operation; therefore, this impact is considered **less than significant**.
- b,d) Surrounding uses may experience short-term increases in groundborne vibration, groundborne noise, and airborne noise levels during construction. However, these increases would only occur for a short period of time. When conducted during daytime hours, construction activities are exempt from complying with the City's noise standards (RMC Chapter 9, Health and Safety, 9.24 Noise Regulation [Noise Ordinance]). The Noise Ordinance exempts "private construction (e.g., construction, alteration or repair activities) between the hours of 7:00 a.m. and 7:00 p.m. Monday through Friday, and between the hours of 8:00 a.m. and 8:00 p.m. Saturday and Sunday; provided, however, that all construction equipment shall be fitted with factory installed muffling devices and that all construction equipment shall be maintained in good working order (Ord. 3638 §1, 2001.)". No pile driving would be required to construct the building and groundborne vibration would be limited to the City's permitted hours of project construction. In addition, the potential for groundborne vibration or noise to occur is low because the type of equipment used and construction activities would not be creating the type of vibration or groundborne noise that could be experienced by adjacent uses. While the noise and groundborne vibration generated may be a minor nuisance, the City's Noise standards are designed to ensure that impacts are not unduly intrusive. Based on this, the impact is **less than significant**.

XIII. Population and Housing

The project site is located in an infill area of the City and consists of five office buildings employing approximately 224 people. Construction of the proposed project is expected to generate an additional 202 jobs. The project site does not contain any housing and no housing is proposed as part of the project.

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			X	
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?				X
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?				X

Thresholds of Significance and Regulatory Setting:

The significance of impacts related to population and housing is based directly on the CEQA Guidelines checklist items a–c listed above.

Discussion of Checklist Answers:

- a) The CEQA Guidelines identify several ways in which a project could have growth-inducing impacts (Public Resources Code Section 15126.2), either directly or indirectly. Growth-inducement may be the result of fostering economic growth, fostering population growth, providing new housing, or removing barriers to growth. Growth inducement may be detrimental, beneficial, or of no impact or significance under CEQA. An impact is only deemed to occur when it directly or indirectly affects the ability of agencies to provide needed public services, or if it can be shown that the growth would significantly affect the environment in some other way.

The project site is currently developed with five buildings forming the Kaiser Permanente Medical Office complex which employs approximately 224 people. The project would remove the existing buildings and construct a new, larger MOB. The new facility is expected to generate an additional 202 jobs. Given the City's unemployment rate of approximately 5.7%, these positions should be filled by people who already reside in the area, or are currently employed at the existing facility (City of Roseville 2015, p. X-51). The project is not large enough to induce substantial population growth resulting in the need to construct new homes and provide new services for this new population. Additionally, the City has ample land approved for residential development in the Sierra Vista and West Roseville Specific Plans to accommodate future residential population growth. The project site does not contain any housing and housing would not be constructed as part of the proposed project. The project would connect to

existing utilities and although off-site roadway improvements would be made to Cirby Way, these improvements are localized and would not extend the roadway into an undeveloped area. Therefore, the project would have a **less than significant** impact related to directly or indirectly inducing population growth.

- b, c) The project site is currently developed with a five building medical office complex. No housing exists on the project site, and construction of the project would not result in the displacement of any housing or people. The project would have **no impact** on displacing a substantial number of people or housing necessitating construction of replacement housing elsewhere.

XIV. Public Services

Fire protection is provided by the Roseville Fire Department (RFD). RFD has ten fire stations throughout the City (City of Roseville 2015, Figure VIII-5). The nearest fire station to the project site is Station 3 located at 1300 Cirby Way, approximately 0.90 mile east of the project site. As of January 2009, there was a total 122 Fire Department personnel assigned to four main departments: Administration (8), Operations (103), Training (1) and Fire Prevention (10) (City of Roseville 2015, p. VIII-30). The City has an established four minute response time standard, but does not have specific staffing standards relative to the population. The RFD currently meets the four minute response standard 70% of the time (City of Roseville 2015, p. VIII-31).

Police protection in the City is provided by the Roseville Police Department (RPD). The RPD is headquartered at 1501 Junction Boulevard, approximately 2.16 miles from the project site. The City has not adopted a formal staffing standard, but strives to maintain a ratio of 1.2 sworn officers per 1,000 residents (City of Roseville 2015, p. VIII-27). The RPD has a force of 128 sworn officers and 77 non-sworn officers.

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Fire protection?			X	
b) Police protection?			X	
c) Schools?				X
d) Parks?				X
e) Other public facilities?				X

Thresholds of Significance and Regulatory Setting:

The significance of impacts related to public services is based directly on the CEQA Guidelines checklist items a–e listed above. Development Agreements and other conditions have been adopted in all proposed growth areas of the City which identify the physical facilities needed to serve growth, and the funding needed to provide for the construction and operation of those facilities and services. In addition, the project has been routed to the various public service agencies, both internal and external, to ensure that the project meets the agencies' design standards (where applicable) and to provide an opportunity to recommend appropriate conditions of approval.

Discussion of Checklist Answers:

- a) The project site is currently receiving fire protection services from the RFD and would not require additional fire personnel or the construction or expansion of existing facilities to serve the project. The nearest fire station is Station 3 located at 1300 Cirby Way, approximately 0.90 mile east of the project site. Existing City codes and regulations require adequate water pressure be available, and construction must comply with the Uniform Fire and Building Codes used by the City. The project would include a 10-inch looped system around the site that would connect to a new 10-inch service stub with a double detector check backflow device to ensure adequate water is provided in the event of a fire. Private fire hydrants would be located around the site, connecting to the 10-inch loop system. Sprinkler service lines to the new buildings from the 10-inch loop system would include an in-line check valve, a post indicator valve, and a fire department connection. Additionally, in accordance with the General Plan implementing measure related to provision of fire protection services, the applicant is required to pay a fire service construction tax, which is used for purchasing capital facilities for the RFD. Existing codes, regulations, funding agreements, and facilities plans are sufficient to ensure **less than significant** impacts.
- b) The project site is currently developed and receiving services from the RPD. The RPD is headquartered at 1501 Junction Boulevard, approximately 2.16 miles from the project site. The City has not adopted a formal staffing standard for the police department, but strives to keep a ratio above 1.2 officers per 1,000 residents (City of Roseville 2015, p. VIII-27). The RPD has a force of 128 sworn officers and 77 non-sworn officers. Based on the United States Census Bureau's 2014 estimated population for the City (128,615 residents), the City would need approximately 154 officers to satisfy the City's desired police-to-population ratio. Although the Department is currently below this ratio, the project does not include any residential uses that would add a permanent new population. In addition, the project would not require the expansion of the existing police department, or require the construction of a new facility. The applicant would be required to pay fees into a Community Facilities District, which provides funding for police services. Sales taxes and property taxes resulting from the project would also add revenue to the City's General Fund, which also serves to fund police services. Existing codes, regulations, funding agreements, and facilities plans are sufficient to ensure **less than significant** impacts.
- c-e) The project does not include any residential uses; therefore, the project would not result in a population increase that would require new schools, parks or access to other public facilities and services. Therefore, the project would have **no impact** on school, parks or other public facilities.

XV. Recreation

Parks and recreation facilities in the City are operated by the City of Roseville Parks and Recreation Department. The City has adopted a standard of providing 9 acres of park land (three acres for each neighborhood, city-wide and open space) per 1,000 residents. Based on the buildout of the General Plan, the City has secured approximately 12 acres of park land per 1,000 residents (City of Roseville 2015, p. VI-1). Other recreation facilities in the City include four golf courses, fitness/racquet clubs, and recreation areas in multi-family developments or other commercial recreation businesses such as entertainment centers or water parks.

According to the City's General Plan Parks and Recreation element, the nearest open space area to the project site is the Dry Creek open space/floodway, located approximately 0.27 mile northeast. The nearest park is Eastwood Park located approximately 0.62 mile northeast of the project site (City of Roseville 2015, Figure VI-1).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that physical deterioration of the facility would occur or be accelerated?				X
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				X

Thresholds of Significance:

The significance of impacts related to recreation services is based directly on the CEQA Guidelines checklist items a–b listed above.

Discussion of Checklist Answers:

- a-b) The project does not include any residential use that would generate a demand for parks or recreation facilities or require the construction of new or expansion of existing recreational facilities. Given that the project is consistent with the General Plan land use designation and includes medical office building, the project would not cause any unforeseen or new impacts related to the use of existing or proposed parks and recreational facilities. Therefore, the project would have **no impact** on the provision of or degradation of parks and recreational facilities.

XVI. Transportation/Traffic

The major freeways that serve the City are State Route (SR) 65 and I-80. The project site is located immediately adjacent to I-80 on the south and west sides. Table III-1 in the City's General Plan identified major arterial streets in the infill area including Cirby Way, Riverside Avenue, Auburn Boulevard, Sunrise Avenue, Douglas Boulevard, Vernon Street and Atlantic Street and major collector streets including Melody Lane, Whyte Avenue, Orlando Avenue and Oak Ridge Drive (City of Roseville 2015, Table III-1). Cirby Way, from Roseville Road to Riverside Avenue, and Riverside Avenue from Cirby Way to the I-80 west-bound on-ramp, are designated Surface Transportation Assistance Act (STAA) approved roads. Cirby Way, from Riverside Avenue to Sunrise Avenue, and Sunrise Avenue from Cirby Way south to the City limits, are California legal approved truck routes. Additionally, Roseville Road from Cirby Way south to the City limits is an approved truck route, and from Cirby Way north to Main Street is a designated STAA approved road (City of Roseville 2015, Figure III-2).

Currently, there are ten intersections in the City that operate below a level of service (LOS) C during an average weekday P.M. peak hour (City of Roseville 2015, p. III-13). Of these ten intersections, three occur in the general vicinity of the project area; Vernon Street at Cirby Way (LOS D), Sunrise Boulevard at Douglas

Boulevard (LOS E), and Cirby Way at Sunrise Avenue (LOS D). According to Figure III-4 of the General Plan four “normal” at-grade intersection improvement projects are scheduled along Cirby Way from Roseville Road to Sunrise Avenue, two “extraordinary” intersection improvement projects are scheduled along Riverside Avenue from Cirby Way to the I-80 west-bound on-ramp, and two “normal” at-grade intersection improvement projects are scheduled along Riverside Avenue north of Cirby Way to Douglas Boulevard (City of Roseville 2015, Figure III-3). Three roadway widening projects are scheduled in the project vicinity; one along Cirby Way from Roseville Road to Riverside Avenue, one on Sunrise Boulevard from the City limits north to Douglas Boulevard, and one along Roseville Road from the City limits north to Main Street (City of Roseville 2015, Figure III-3).

Cirby Way and Riverside Avenue are both used by public transit and a transit stop, Louis/Orlando Transfer Point, is located 0.37 mile south of the project site on Auburn Boulevard at Whyte Avenue. The site designated in the General Plan as a potential light rail line is located east of Roseville Road approximately one mile from the project site (City of Roseville 2015, Figure III-5). According to Figure III-6 of the City’s General Plan, a number of Class I (trails), Class II (bike lanes) and Class III (bike routes) bicycle designations are provided in the project vicinity. Cirby Way is designated as a Class II bike lane and Riverside Avenue is designated as a Class III bike route (City of Roseville 2015, Figure III-6).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	X			
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	X			

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?				X
d) Substantially increase hazards due to a design feature(s) (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			X	
e) Result in inadequate emergency access?			X	
f) Conflict with adopted policies, plans, or programs supporting public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?			X	

Thresholds of Significance and Regulatory Setting:

The significance of checklist items c–f are based directly on the CEQA Guidelines checklist descriptions. For checklist items a. and b., the Circulation Element of the General Plan establishes Level of Service C or better as an acceptable operating condition at all signalized intersections and roadway segments during p.m. peak hours. Exceptions to this policy may be made by the City Council, but a minimum of 70% of all signalized intersections should maintain LOS C. The Findings of the City's Implementing Procedures indicate that compliance with the Traffic Mitigation Fee (RMC Ch. 4.44) will fund roadway projects and improvements necessary to maintain the City's Level of Service standards for projects consistent with the General Plan. An existing plus project conditions (short-term) traffic impact study may be required for projects with unique trip generation or distribution characteristics, in areas of local traffic constraints, or to study project access. A cumulative plus project conditions (long-term) study is required if a project is inconsistent with the General Plan or Specific Plan and would generate more than 50 pm peak-hour trips. The guidelines for the preparation of a traffic study are found in the City of Roseville Design and Construction Standards–Section 4.

The project site is not located within an airport planning area or within any height restriction area established around an airport for the purpose of protecting navigable airspace. Consequently, impacts to changes in air traffic patterns (checklist item c) were screened out of this analysis.

Impacts with regard to items d. and e. are assessed based on the expert judgment of the City Engineer and City Fire Department, as based upon evidence and consistency with the City's Design and Construction Standards.

Discussion of Checklist Answers:

- a,b) The project site is already developed with medical office buildings, however, the project would expand the complex by 119,710 square-feet and create an additional 439 parking spaces and could generate an increase in vehicles accessing the project site. Since the project has the potential to generate an increase in traffic that could potentially change the performance of the circulation system and roadways serving the area this impact is considered **potentially significant** and will be further evaluated in the EIR.
- d,e) The project has been designed in compliance with City Engineering and the RFD standards to ensure emergency access meets current standards. The main entry to the project site would be from Riverside Avenue with a secondary entry at Cirby Way. The main Riverside Avenue entry would include a public two-way driveway and an internal vehicular circulation system would provide access to a surface parking lot. The secondary entrance on Cirby Way includes one lane access into the site, with three lanes leaving the site. The internal driveways throughout the site have been designed to meet fire equipment turning radii and to ensure access in the event of an emergency. Furthermore, if the project is approved, the City and RFD would review the project plans prior to issuing a grading permit to ensure that the project complies with the required standards and adequate emergency access is provided. In addition, the project site is not located near agricultural areas and does not include any existing potentially hazardous design features that would exacerbated by the project. Therefore, emergency access impacts and impacts due to existing design hazards and incompatible uses are considered **less than significant**.
- f) The City of Roseville has adopted a Pedestrian Master Plan (City of Roseville 2011a), Bicycle Master Plan (City of Roseville 2008b), and a Short-Range Transit Plan (City of Roseville 2005). Policies in the Pedestrian Master Plan require provision of sidewalks on both sides of the street, improved pedestrian crossings at areas of high pedestrian activity, sidewalks and street crossings that provide access for all people consistent with the Americans with Disabilities Act (ADA), and streetscape design that enhances the comfort and appeal of the pedestrian environment (City of Roseville 2011a). Policies in the Master Bicycle Plan requires, if feasible, provision of bicycle signal detectors at modified intersections where bicycle lanes exist and installation of Class II bike lanes during major roadway improvement projects on arterial streets without bike lanes. The Bicycle Plan also encourages installation of Class I off-street bike paths to create bikeway continuity. Additional policies include providing support facilities that would encourage bicycling such as showers and changing facilities and providing adequate short term bike parking conveniently located at business entrances (City of Roseville 2008b). Lastly, policies in the Short-Range Transit Plan detail the City's service plan to provide additional stops, modified routes, and expanded service areas for public transportation including regional transit, commuter services, and dial-a-ride (City of Roseville 2005).

The project includes 53 bike parking spaces and 27 bike lockers consistent with the City's Zoning Ordinance requirements, the Transportation System Management Ordinance, CalGreen standards, and recommendations in the Bicycle Master Plan. Sidewalks five-foot to eight-feet in width would be provided around the medical office buildings. The project would provide bicycle facilities and sidewalks in accordance with applicable ordinances, policy and plan requirements. Therefore, the project would have a **less-than-significant** impact on conflict with adopted plans, policies or regulations related to public transit, bicycle and pedestrian facilities. However, this issue will be evaluated in the EIR.

XVII. Utilities and Service Systems

Water

Water to the project site is provided by the City of Roseville. The Roseville Water Treatment Plant (WTP) is located on Barton Road in the eastern part of the City, approximately 5.5 miles from the project site. The

Roseville WTP was most recently expanded in 2008 and is capable of treating up to 100 million gallons per day (mgd) of raw water from its source at Folsom Lake (City of Roseville 2011b). The City obtains its water through the Federal Central Valley Project and is entitled to 32,000 acre-feet per year (AFY) through this contract. Other contracts with the Placer County Water Agency and the San Juan Water District provide the City with an additional 34,000 AFY (City of Roseville 2011b). In 2010, the City used approximately 30,000 AFY (City of Roseville 2015, p. VII-31). The City's water distribution system consists of water mains ranging from four to 66 inches in diameter. The City requires water meters on all new construction projects (City of Roseville 2015, p. VII-31).

The project site is served by a 6-inch water line stub connected to a 10-inch public distribution main in Cirby Hills Drive. This service would be maintained until the new buildings are occupied to provide continuous service to the existing buildings during construction. For the new buildings, two 10-inch service lines would connect to the City system and would be stubbed to the property: (1) at the existing 10-inch distribution main at Cirby Hills Drive; and (2) at the 24-inch transmission main in Cirby Way, approximately 250 lineal feet east of the Riverside Avenue Intersection. A domestic service line and irrigation line would be stubbed off of one of the new 10-inch service stubs and would include a City water meter and reduced pressure principal backflow device.

Wastewater

The City of Roseville would be the wastewater service provider for the project site. The City is a participant in the South Placer Wastewater Authority and operates two regional wastewater treatment facilities on behalf of the regional partners. All flows from the project site would be directed to the Dry Creek Wastewater Treatment Plant (DCWWTP). The DCWWTP is located at 1800 Booth Road and serves the City in addition to Rocklin, Loomis, and portions of Granite Bay and unincorporated Placer County. The DCWWTP can discharge up to 18 mgd average dry weather flows (ADFW) and 45 mgd peak wet weather flows (PWWF) into Dry Creek under the existing National Pollution Discharge Elimination System (NPDES) permit No. CA0079502 (City of Roseville 2011b). The DCWWTP is currently operating at approximately 60% of rated flow capacity (City of Roseville 2015, p. VII-38). The DCWWTP has an ADFW of approximately 10 mgd, of which approximately 6 mgd come from the City (City of Roseville 2011b). The DCWWTP currently produces 850 AFY of recycled water that is used within the City's service area boundary for irrigation purposes (City of Roseville 2011b).

The project site is served by a 6-inch sanitary sewer connecting to a 6-inch public sewer main in Cirby Way which in turn connects to an 8-inch sewer main in Riverside Avenue. The project would install two new 6-inch service lines; the first connecting to the 6-inch main in Cirby Way and the second connecting to an existing public manhole in Cirby Hills Drive. The project would not require pump stations.

Stormwater

The City operates under a NPDES Municipal Stormwater Permit, which requires development, implementation and enforcement of a NPDES Phase 2 Stormwater Management Program (SWMP). The City's SWMP (City of Roseville 2004) outlines a comprehensive set of activities and strategies that comprise the City's minimum control measures and best management practices (BMPs) to reduce stormwater pollutants. Additionally, the Stormwater Ordinance, Chapter 14.20 of the City's Municipal Code, outlines design requirements, maintenance and management plans, regulations, enforcement actions and BMPs related to controlling, preventing and reducing stormwater pollutants.

The project site is served by two connections to the City's storm drain system; the first is a curb inlet just south of the Riverside Avenue/Cirby Way intersection and the second is an 18-inch pipe just east of the existing Cirby Way entrance. Pre-project flows would be maintained through use of on-site infiltration and detention. Detention would be achieved via an orifice structure just upstream of the connection to the public system. Detention volumes would be stored in infiltration galleries (pipes) and the void space of the rock layers beneath the bio-treatment areas. Pavement runoff would be directed to bio-treatment areas or curb inlets, while roof

runoff would be connected to the subsurface infiltration galleries. The treatment areas and on-site piping system would be designed to convey the 10% chance (10-year) storm event. Overland release would be provided to convey the 1% chance (100-year) storm event. Low Impact Development (LID) design elements would also be included. This includes bio-treatment areas that would serve as pretreatment for the underlying infiltration layers and secondary subsurface infiltration galleries.

Solid Waste

The Western Placer Waste Management Authority (Authority) is the regional agency handling recycling and waste disposal for the City and the surrounding areas and would provide solid waste disposal and recycling services to the project site. The Authority oversees the operation of the Western Regional Sanitary Landfill (WRSL), located at the southwest corner of Athens Road and Fiddymont Road, and serving the western portion of the County including the City. The Authority also oversees a Materials Recovery Facility (MRF), which separates and recovers waste products for recycling, reuse, or conversion to energy resources. Currently, the WRSL (Facility Permit 31-AA-0210) is permitted to accept 1,900 tons of refuse per day, and the average tonnage received is approximately 803 tons per day over a 7-day period. The WRSL has a total capacity of 36,350,000 cubic yards, and as of June 2005, a remaining capacity of 29,093,819 cubic yards. Under current projected development, the WRSL has a projected lifespan extending through 2058 (CalRecycle 2016).

Would the project:

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	X			
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	X			
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	X			
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	X			

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
e) Result in a determination by the wastewater treatment provider which serves the project that it has adequate capacity to serve the project's projected demand in addition of the provider's existing commitments?	X			
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	X			
g) Comply with federal, state, and local statutes and regulations related to solid waste?	X			

Thresholds of Significance and Regulatory Setting:

The significance of impacts related to utilities and service systems is based directly on the CEQA Guidelines checklist items a–g listed above.

Discussion of Checklist Answers:

- a,e) The proposed project would be served by the DCWWTP. The Central Valley RWQCB regulates water quality and quantity of effluent discharged from the City's wastewater treatment facilities. The DCWWTP has the capacity to treat 18 mgd and is currently treating 9.4 mgd. The project site is currently developed with five medical office buildings, but the project would add approximately 119,710 square-feet and 202 new employees to the project site. The expansion of the facilities would result in increased generation of wastewater requiring treatment by the DCWWTP. Additionally, due to limited capacity of the existing 8-inch sewer main in Cirby Way, the project is proposing to add two new 6-inch service lines. The first would connect to the 8-inch main in Cirby Way and the second would connect to an existing public manhole in Cirby Hills Drive. This impact is considered **potentially significant**; the increase in wastewater generated by the project will be quantified and the capacity of the existing wastewater conveyance will be evaluated in the EIR.
- b,c) The project would increase impervious surfaces, expand overall building square footage and add employees which could increase stormwater runoff, water demand, and wastewater generation. New water, wastewater and storm drain infrastructure would be constructed within the project site to tie the project into the City's existing infrastructure and would be constructed in locations where site development is already occurring as part of the overall project. However, the project's increase in demand for water supplies and storm drain capacity and runoff is considered **potentially significant** and will be further quantified and evaluated in the EIR.
- d) Potable water to serve the project would be provided by the City. The City's primary source of water is Folsom Lake, and the City's supply totals 66,000 AFY (City of Roseville 2011b). The untreated surface water is delivered to the City's WTP on Barton Road, which is capable of treating up to 100 mgd of raw

water from its source at Folsom Lake. In addition to potable water, the City uses recycled water supplies to meet a portion of the non-potable water demand. The project site is already developed with medical office buildings that generate a demand for water. However construction of the new medical office buildings would increase the project's overall water demand. Water demand associated with the project is considered **potentially significant** and will be quantified and further evaluated in the EIR.

- f, g) The Western Placer Waste Management Authority is the regional agency handling recycling and waste disposal for Roseville and surrounding areas. The regional waste facilities include a MRF and the WRSL. Currently, the WRSL is permitted to accept up to 1,900 tons of municipal solid waste per day. Under current projected development conditions the WRSL has a projected lifespan extending through 2058. Currently, the WRSL accepts an approximate average tonnage of 803 tons per day. The project would increase the total square footage of the existing building by 119,710 square feet and would add 202 new employees which would increase the solid waste generation of the project. This impact is considered **potentially significant** and will be further quantified and evaluated in the EIR.

XVIII. Mandatory Findings of Significance

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of an endangered, threatened or rare species, or eliminate important examples of the major periods of California history or prehistory?			X	
b) Does the project have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	X			
c) Does the project have environmental effects	X			

Environmental Issue	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
which will cause substantial adverse effects on human beings, either directly or indirectly?				

Significance Criteria and Regulatory Setting:

The significance of impacts related to mandatory findings of significance is based directly on the CEQA Guidelines checklist items a–c listed above.

Discussion of Checklist Answers:

- a) The project site is currently developed with five office buildings forming the Kaiser Permanente Medical Office complex. There are no special-status species, special-status species habitat, riparian habitat, wetland habitat or sensitive natural communities located on the project site. The project site contains a number of mature trees, which would be preserved on-site to the extent feasible and any tree removal would be completed in compliance with the City's Tree Preservation Ordinance. The project site does not contain any historical buildings, is not within a historical district and does not contain any architecture that would be considered architecturally significant. Development of the project site would have a **less than significant** cumulative impact on the loss or degradation of biological or cultural resources.
- b) Project-level air quality emissions resulting from construction and operation could contribute to a cumulative increase in air quality emissions and will be further evaluated in the EIR. GHG emissions are cumulative in nature and the project specific potential GHG emissions will be further evaluated in the EIR. The project would generate additional demand for utilities and could contribute to the need for additional or expanded infrastructure. Project related cumulative impacts to water, wastewater, solid waste and energy are considered **potentially significant** and will be further analyzed in the EIR.
- c) The proposed project would generate an increase in air emissions and GHG emissions through construction and operation that may directly or indirectly have an adverse effect on residents living in the area. This impact is considered **potentially significant** and will be further evaluated in the EIR.

ENVIRONMENTAL DETERMINATION:

*In reviewing the site specific information provided for this project and acting as Lead Agency, the City of Roseville, Development Services Department, Planning Division has analyzed the potential environmental impacts created by this project and determined that there are some impacts that would be considered potentially significant and therefore an EIR is required. Therefore, **on the basis of the foregoing initial study:***

- ☐ I find that the proposed project COULD, but with mitigation agreed to by the applicant, clearly will not have a significant effect on the environment and a *MITIGATED NEGATIVE DECLARATION* has been prepared.
- ☐ I find that the proposed project WILL NOT have a significant effect on the environment and a *NEGATIVE DECLARATION* has been prepared.
- ☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

Initial Study Prepared by:

Lauren Hocker, Associate Planner
City of Roseville, Planning Division

Riverside Cirby MOB - Placer-Sacramento County, Annual

Riverside Cirby MOB
Placer-Sacramento County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Medical Office Building	210.00	1000sqft	4.00	210,000.00	0
Parking Lot	805.00	Space	6.98	304,049.00	0
Unenclosed Parking Structure	245.00	Space	2.20	82,630.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	74
Climate Zone	2	Operational Year	2020		
Utility Company	Roseville Electric				
CO2 Intensity (lb/MW hr)	584.45	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Riverside Cirby MOB. Placer County (Sacramento Valley Air Basin). CO2 Intensity adjusted based on RE 33% Renewables by 2020.

Land Use - Project includes development of two buildings totaling 210,000-square-feet (194 ksf of MOB space and 16 ksf pavilion), an 82,630 sf parking garage and 805 surface parking on approx 14 acres.

Construction Phase - Construction would occur from March 2017 to September 2020.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Off-road Equipment - Update construction equipment per client. Modified hours/day to reflect total hours over phase.

Trips and VMT - Rounded worker trips. 2 two-way vendor trips during building construction. 1,200 two-way haul trips for grading (distributed amongst all grading phases) and 1,000 two-way haul trips for demo. Haul trip length to nearest facility is 12 miles.

Demolition - Demolition would result in 7,760.72 tons of waste material (4,149.61 tons from the structure and 3,611.11 tons from pavement).

Grading - 19,406 cubic yards of soil exported (distributed amongst all grading phases).

Vehicle Trips - New trip rate calculated based on total trips generated by the project from traffic analysis. Average trip length of 8.2 miles.

Energy Use - T24, NT24, and lighting energy intensities adjusted based on project's energy consumption of 850,000 kWh.

Water And Wastewater - Updated indoor and outdoor water use as calculated in 4.2 Public Utilities.

Solid Waste - 598.6 tons per year waste generate as calculated in 4.2 Public Utilities.

Construction Off-road Equipment Mitigation - Fugitive dust reductions.

Water Mitigation - Reduce water consumption by 20% by 2020.

Waste Mitigation - 75% waste diversion consistent with AB 341.

Riverside Cirby MOB - Placer-Sacramento County, Summer

Riverside Cirby MOB
Placer-Sacramento County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Medical Office Building	210.00	1000sqft	4.00	210,000.00	0
Parking Lot	805.00	Space	6.98	304,049.00	0
Unenclosed Parking Structure	245.00	Space	2.20	82,630.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	74
Climate Zone	2			Operational Year	2020
Utility Company	Roseville Electric				
CO2 Intensity (lb/MW hr)	584.45	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Riverside Cirby MOB. Placer County (Sacramento Valley Air Basin). CO2 Intensity adjusted based on RE 33% Renewables by 2020.

Land Use - Project includes development of two buildings totaling 210,000-square-feet (194 ksf of MOB space and 16 ksf pavilion), an 82,630 sf parking garage and 805 surface parking on approx 14 acres.

Construction Phase - Construction would occur from March 2017 to September 2020.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Trips and VMT - Rounded worker trips. 2 two-way vendor trips during building construction. 1,200 two-way haul trips for grading (distributed amongst all grading phases) and 1,000 two-way haul trips for demo. Haul trip length to nearest facility is 12 miles.

Demolition - Demolition would result in 7,760.72 tons of waste material (4,149.61 tons from the structure and 3,611.11 tons from pavement).

Grading - 19,406 cubic yards of soil exported (distributed amongst all grading phases).

Vehicle Trips - New trip rate calculated based on total trips generated by the project from traffic analysis. Average trip length of 8.2 miles.

Energy Use - T24, NT24, and lighting energy intensities adjusted based on project's energy consumption of 850,000 kWh.

Water And Wastewater - Updated indoor and outdoor water use as calculated in 4.2 Public Utilities.

Solid Waste - 598.6 tons per year waste generate as calculated in 4.2 Public Utilities.

Construction Off-road Equipment Mitigation - Fugitive dust reductions.

Water Mitigation - Reduce water consumption by 20% by 2020.

Waste Mitigation - 75% waste diversion consistent with AB 341.

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	74
Climate Zone	2			Operational Year	2020
Utility Company	Roseville Electric				
CO2 Intensity (lb/MW hr)	584.45	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Riverside Cirby MOB. Placer County (Sacramento Valley Air Basin). CO2 Intensity adjusted based on RE 33% Renewables by 2020.

Land Use - Project includes development of two buildings totaling 210,000-square-feet (194 ksf of MOB space and 16 ksf pavilion), an 82,630 sf parking garage and 805 surface parking on approx 14 acres.

Construction Phase - Construction would occur from March 2017 to September 2020.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Off-road Equipment - Update construction equipment per client.

Trips and VMT - Rounded worker trips. 2 two-way vendor trips during building construction. 1,200 two-way haul trips for grading (distributed amongst all grading phases) and 1,000 two-way haul trips for demo. Haul trip length to nearest facility is 12 miles.

Demolition - Demolition would result in 7,760.72 tons of waste material (4,149.61 tons from the structure and 3,611.11 tons from pavement).

Grading - 19,406 cubic yards of soil exported (distributed amongst all grading phases).

Vehicle Trips - New trip rate calculated based on total trips generated by the project from traffic analysis. Average trip length of 8.2 miles.

Energy Use - T24, NT24, and lighting energy intensities adjusted based on project's energy consumption of 850,000 kWh.

Water And Wastewater - Updated indoor and outdoor water use as calculated in 4.2 Public Utilities.

Solid Waste - 598.6 tons per year waste generate as calculated in 4.2 Public Utilities.

Construction Off-road Equipment Mitigation - Fugitive dust reductions.

Water Mitigation - Reduce water consumption by 20% by 2020.

Waste Mitigation - 75% waste diversion consistent with AB 341.

CO2 Intensity (lb/MW hr)	654.23	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Riverside Cirby MOB. Placer County (Sacramento Valley Air Basin). CO2 Intensity adjusted based on RE 25% Renewables by 2016.

Land Use - Existing MOB is 90,290 sf and 613 parking spaces.

Vehicle Trips - Per traffic analysis, ITE trip rate (36.13) for MOB was increased by 15% to 41.57. Average trip length of 8.2 miles.

Energy Use - T24, NT24, and lighting energy intensities adjusted based on existing MOB - 953,208 kWh.

Water And Wastewater - Updated indoor and outdoor water use as calculated in 4.2 Public Utilities.

Solid Waste - 314.8 tons per year as calculated in 4.2 Public Utilities.

9498 Riverside Cirby MOB - Existing Annual Emissions

Climate Zone	2			Operational Year	2019
Utility Company	Roseville Electric				
CO2 Intensity (lb/MW hr)	654.23	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Riverside Cirby MOB. Placer County (Sacramento Valley Air Basin). CO2 Intensity adjusted based on RE 25% Renewables by 2016.

Land Use - Existing MOB is 90,290 sf and 613 parking spaces.

Vehicle Trips - Per traffic analysis, ITE trip rate (36.13) for MOB was increased by 15% to 41.57. Average trip length of 8.2 miles.

Energy Use - T24, NT24, and lighting energy intensities adjusted based on existing MOB - 953,208 kWh.

Water And Wastewater - Updated indoor and outdoor water use as calculated in 4.2 Public Utilities.

Solid Waste - 314.8 tons per year as calculated in 4.2 Public Utilities.

9498 Riverside Cirby MOB - Existing Summer Emissions

CO2 Intensity (lb/MW hr)	654.23	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Riverside Cirby MOB. Placer County (Sacramento Valley Air Basin). CO2 Intensity adjusted based on RE 25% Renewables by 2016.

Land Use - Existing MOB is 90,290 sf and 613 parking spaces.

Vehicle Trips - Per traffic analysis, ITE trip rate (36.13) for MOB was increased by 15% to 41.57. Average trip length of 8.2 miles.

Energy Use - T24, NT24, and lighting energy intensities adjusted based on existing MOB - 953,208 kWh.

Water And Wastewater - Updated indoor and outdoor water use as calculated in 4.2 Public Utilities.

Solid Waste - 314.8 tons per year as calculated in 4.2 Public Utilities.

9498 Riverside Cirby MOB - Existing Winter Emissions

EXECUTIVE SUMMARY

This study analyzes the transportation impacts associated with the proposed expansion of the Kaiser Permanente Riverside Medical Offices, which are located in the southern portion of the City of Roseville. The project is located south of Cirby Way, north of Interstate 80, and east of Riverside Avenue. This study analyzes expected transportation conditions with the proposed expansion in place under existing and cumulative conditions. Project access, internal circulation, and construction staging are also evaluated.

PROJECT DESCRIPTION

The proposed project would demolish six one- to two-story medical-office buildings that currently consist of 90,290 square feet of occupied medical office space and construct two new multi-story buildings that would consist of a combined 207,700 square feet of medical office space. Access would be provided as follows:

- Kaiser West Driveway on Riverside Avenue would be relocated 40 feet to the south of its current location, and remain a right-turn only driveway.
- Kaiser North Driveway on Cirby Way would be signalized and permit all turn movements.

STUDY AREA AND PERIODS

The study area includes ten intersections in the southern area of the City of Roseville as well as Interstate 80 between Antelope Road and Douglas Boulevard. Project impacts are analyzed on the surrounding roadway network during the weekday AM (7:30 – 8:30) and PM (4:45 – 5:45) peak hours.

PROJECT IMPACTS UNDER EXISTING CONDITIONS

The proposed project would cause the signalized Cirby Way/Vernon Street intersection to be degraded to a significant degree under existing conditions. This is considered a significant impact. The following mitigation measure would restore the impact to a **less-than-significant** level:

- *The project applicant shall install a southbound right-turn overlap arrow at the Cirby Way/Vernon Street intersection.*

The new traffic signal at the Kaiser North Driveway on Cirby Way would be designed and operated in the following manner to avoid causing adverse effects to the Cirby Way/Riverside Avenue intersection:

- It would operate as part of the coordinated system of signalized intersections along Cirby Way.
- It would feature a single 250-foot northbound left/through lane exiting the project site that would provide a maximum green time of 15 seconds during the weekday PM peak hour. Outside of this time period, no signal timing restrictions would exist.

- It would feature two northbound right-turn lanes exiting the project site that would each consist of 250 feet of vehicle storage. On-site signage would be provided to direct motorists to use these lanes to access Interstate 80 via eastbound Cirby Way to Orlando Avenue. Additionally, Kaiser representatives have indicated that they can disseminate this suggested outbound vehicle routing to their employees.

Under existing plus project conditions, the new signal would operate at LOS B during the AM peak hour and LOS C during the PM peak hour. Operations would remain at LOS E during each peak hour at the Cirby Way/Riverside Avenue intersection, though delays would increase.

Project impacts to freeway facilities, bicycle facilities, pedestrian facilities, and transit facilities would be less-than-significant and no mitigation is required.

PROJECT IMPACTS UNDER CUMULATIVE CONDITIONS

The new traffic signal at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway would operate at LOS E under cumulative AM peak hour conditions. This is considered a significant impact. Operations at this intersection degrade to LOS E due to queue spillbacks from the Cirby Way/Riverside Avenue intersection. No feasible mitigation is available and this impact is considered significant and unavoidable.

The project would not cause the overall percentage of signalized intersections throughout the City of Roseville operating at LOS C or better during the AM and PM peak hours to fall below 70%. The City Council, following a public hearing, may determine, on a case-by-case basis that "extraordinary" improvements are not feasible or desirable and may relax the LOS C standard for a particular intersection. According to the results of this study, the City Council would need to make such a determination for the intersections listed on page 45 of this study.

Project impacts to freeway facilities, bicycle facilities, pedestrian facilities, and transit facilities under cumulative conditions would be less-than-significant and no mitigation is required.

PROJECT ACCESS AND INTERNAL CIRCULATON

The following project access recommendations are offered (see **Figure ES-1**):

- Construct a new right-turn only driveway east of the bus turnout along Cirby Way to enable more efficient egress and ingress from the north parking lot as shown on Figure ES-1. The bus turnout would continue as an auxiliary lane along the project frontage, terminating as a right-turn lane at the new signal.
- Lengthen the westbound left-turn lane at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway from 175 to 250 feet.

250 ft. Recommended Turn Lane Length

Figure ES-1
Recommendations

- Replace the proposed Kaiser West Driveway (on Riverside Avenue) design with a standard commercial driveway design per *City of Roseville Design Standards*.
- Stripe "KEEP CLEAR" markings, and post stop signs at the first internal intersection as shown on Figure ES-1 to address potential on-site queuing issues.
- Construct a 120-foot right-turn curb flare at the Kaiser West driveway.

The following internal circulation recommendations are offered (see **Figure ES-1**):

- Reconfigure the north parking lot to eliminate the drive aisle opening closest to the Kaiser North driveway and instead construct a new drive aisle opening further west.
- Install a raised crosswalk along the Kaiser West driveway at the pedestrian opening to the parking garage and on the new driveway near the vehicle turnaround area.
- Design and construct the northeast corner of the first internal intersection along the Kaiser North driveway with no permanent features that would be difficult or expensive to relocate. This is recommended to provide design flexibility to enable a second northbound departing lane to be constructed under future conditions if warranted by vehicular queuing in the northbound left/through lane.

CONSTRUCTION STAGING

Development of the proposed project would require a multi-phased construction staging plan that considers the need to demolish existing buildings, construct new buildings and parking lots/garages, reconstruct the Cirby Way project frontage (to improve sight distance), and reconstruct both project driveways. This effort is further complicated by the need to maintain continuous medical-office services, adequate parking, and a safe and convenient walking environment throughout construction.

Accordingly, the project should develop a Construction Traffic Management Plan (TMP) to the satisfaction of the City's Engineering Department. The plan would address overall construction staging, changes in vehicular access, employee parking, truck staging, and complete/partial street closures. The construction TMP should be developed such that the performance standards shown on Page 57 are achieved throughout construction.

I. INTRODUCTION

PURPOSE

This study analyzes the transportation impacts associated with the proposed expansion of the Kaiser Permanente Riverside Medical Offices (henceforth referred to as “the project”), which is located in the southern portion of the City of Roseville. The project is located directly south of Cirby Way, north of Interstate 80, and east of Riverside Avenue. This study analyzes expected transportation conditions with the proposed expansion in place under existing and cumulative conditions. Project access, internal circulation, vehicles miles travelled, and construction staging is also evaluated.

PROJECT DESCRIPTION

Figure 1 shows the project location in the context of the study area, including study intersections. As shown, the project site is located in the southeast corner of the Cirby Way/Riverside Avenue intersection. The proposed project would demolish six one- to two-story medical-office buildings that currently consist of 90.29 thousand square feet (KSF) of occupied medical office space and construct two new multi-story buildings that would consist of a combined 207.7 KSF of medical office space.

STUDY AREA AND PERIODS

The City of Roseville has historically relied on the weekday PM peak hour to characterize its street system operations and need for capital improvements because this hour generally represents the busiest hour of travel during a typical weekday. Accordingly, this study includes an analysis of project impacts associated with its typical weekday PM peak hour operations. However, in recognition of the peaks in traffic associated with weekday AM peak hour operations surrounding the project site, analysis of project impacts during this peak hour are presented as well. The study area includes the following ten intersections in the southern area of the City of Roseville:

1. Cirby Way/Foothills Boulevard/Roseville Road
2. Cirby Way/Vernon Street
3. Cirby Way/Melody Lane
4. Cirby Way/Riverside Avenue
5. Cirby Way/Cirby Hills Drive/Kaiser North Driveway
6. Cirby Way/Orlando Avenue
7. Cirby Way/Sunrise Avenue
8. Riverside Avenue/I-80 Westbound Ramps
9. Riverside Avenue/I-80 Eastbound Ramps/Orlando Avenue
10. Riverside Avenue/Kaiser West Driveway

- 1 Study Intersection
- Project Site

Figure 1
Study Area

These intersections were selected in consultation with City of Roseville Engineering Department staff and consider the project's size, location, and expected generation/distribution of trips.

Although the City of Roseville does not analyze roadway segments for level of service, the following nine roadway segments were selected to display the distribution of project traffic:

1. Foothills Boulevard – Vineyard Road to Cirby Way
2. Roseville Road – South of Cirby Way
3. North Sunrise Avenue – Coloma Way to Cirby Way
4. North Sunrise Avenue – South of Cirby Way
5. Cirby Way – Foothills Boulevard to Riverside Avenue
6. Cirby Way – Riverside Avenue to North Sunrise Avenue
7. Cirby Way – North Sunrise Avenue to Rocky Ridge Drive
8. Riverside Avenue – North of Cirby Way
9. Riverside Avenue – Cirby Way to I-80 WB Ramps

Additionally, the study area includes both directions of Interstate 80 between Douglas Boulevard and Antelope Road based on a comment letter submitted by Caltrans on May 25, 2016.

The following describes the study time periods:

- Weekday AM Peak Hour: occurs between 7:30 to 8:30 AM at the majority of study intersections.
- Weekday PM Peak Hour: occurs between 4:45 to 5:45 PM at the majority of study intersections.

ANALYSIS METHODOLOGIES

Level of service (LOS) is a qualitative measure of traffic operating conditions whereby a letter grade, from A (the best) to F (the worst), is assigned. These grades represent the perspective of drivers and are an indication of the comfort and convenience associated with driving. In general, LOS A represents free-flow conditions with no congestion, and LOS F represents severe congestion, over-capacity conditions.

Signalized Intersections

All study intersections were analyzed using procedures from the *Highway Capacity Manual* (HCM), Transportation Research Board, 2010. The SimTraffic microsimulation model, which considers the effects of signal coordination, vehicle queue spillbacks between intersections, and other conditions, was used to analyze individual intersections and overall corridor traffic operations.

The LOS at signalized intersections is based on the average delay experienced by all motorists travelling through the intersection as described in the 2010 HCM. For side-street stop-controlled intersections, the

delay and LOS is based on the minor street movement with the greatest average delay. **Table 1** relates the delay range for each LOS category for signalized and unsignalized intersections.

TABLE 1: LEVEL OF SERVICE THRESHOLDS – INTERSECTIONS		
Level of Service	Average Control Delay (seconds per vehicle)	
	Signalized Intersections ¹	Unsignalized Intersections ²
A	≤ 10 sec/veh	≤ 10 sec/veh
B	> 10 to 20 sec/veh	> 10 to 15 sec/veh
C	> 20 to 35 sec/veh	> 15 to 25 sec/veh
D	> 35 to 55 sec/veh	> 25 to 35 sec/veh
E	> 55 to 80 sec/veh	> 35 to 50 sec/veh
F	> 80 sec/veh	> 50 sec/veh
Notes: ¹ Delay values rounded to the nearest second and evaluated for LOS based on the above thresholds (i.e, 10 sec = LOS A). Source: Fehr & Peers, 2016		

Freeway Facilities

Per Caltrans standards, existing conditions freeway segment operations are evaluated using methodologies from the Transportation Research Board's 2010 Highway Capacity Manual. The LOS for a freeway segment is based on the vehicle density (passenger cars/lane/mile) as shown in **Table 2**.

The LOS performance for merge and diverge sections is computed in one of two ways. If both the ramp and the adjacent freeway mainline segments are under capacity, then LOS is based on the density of the ramp junction. If either the ramp or the adjacent freeway mainline segment have reached (or exceed) capacity, then the merge/diverge segment is considered to operate at LOS F regardless of the computed ramp junction density. The LOS for ramp junctions is based on the vehicle density (passenger cars/lane/miles) as shown in Table 2.

**TABLE 2:
FREEWAY LEVEL OF SERVICE DEFINITIONS**

Level of Service ¹	Mainline (Density) ¹	Ramp Junctions (Density) ¹
A	≤ 11	≤ 10
B	> 11 to 18	> 10 to 20
C	> 18 to 26	> 20 to 28
D	> 26 to 35	> 28 to 35
E	> 35 to 45	> 35
F	> 45 or Demand exceeds capacity ²	Demand exceeds capacity ²

Notes:

¹ Density expressed in passenger car equivalents per hour per mile per lane.

² Occurs when freeway demand exceeds upstream (diverge) or downstream (merge) freeway segment capacity, or if off ramp demand exceeds off-ramp capacity.

Source: Fehr & Peers, 2016

STANDARDS OF SIGNIFICANCE

Roadway Facilities

The City of Roseville's level of service policy, based on the City's currently adopted General Plan, calls for maintaining a LOS C standard at a minimum of 70 percent of all signalized intersections in the City during the PM peak hour. The City Council, following a public hearing, may determine, on a case-by-case basis that "extraordinary" improvements are not feasible or desirable and may relax the LOS C standard for a particular intersection. Exceptions to the LOS C policy apply at the following study intersections during the PM peak hour:

- Cirby Way/Sunrise Avenue – LOS F
- Cirby Way/Riverside Avenue – LOS F
- Cirby Way/Vernon Street – LOS F
- Cirby Way/Orlando Avenue – LOS D
- Cirby Way/Foothills Boulevard – LOS F
- Riverside Avenue/Orlando Avenue/I-80 WB Ramps – LOS D

The above conclusions are based on output from the City's 2025 CIP traffic model, with intersections analyzed using the "Circular 212" method.

The Roseville City Council will soon be considering approval of the Amoruso Ranch Specific Plan along with several important changes in how the City analyzes intersections and measures the adequacy of their operations. Specifically, as part of the *Amoruso Ranch Specific Plan Final Transportation Impact Study* (Fehr & Peers, February 2016), the following changes in analysis methods, horizons, and analysis periods were made:

1. Replacing the *Interim Materials on Highway Capacity – Circular 212* (Transportation Research Board, 1980) methodology to analyze signalized intersections with the more state-of-the-practice *Highway Capacity Manual* (Transportation Research Board, 2010) methodology.
2. Updating the 2025 CIP travel demand model to reflect a new 2035 CIP condition.
3. Expanding the General Plan level of service (LOS) policies to include weekday AM peak hour conditions, in addition to PM peak hour.

If the City Council approves the Amoruso Ranch Specific Plan and accepts the above changes in analysis methods and time periods, the City's General Plan would be updated to reflect a revised list of intersections that would operate at LOS D or worse during the weekday AM and PM peak hours. The following study intersections would operate at LOS D or worse under 2035 CIP conditions (using HCM intersection analysis methods) during the AM and PM peak hours:

AM Peak Hour

- Cirby Way/Sunrise Avenue (LOS D)
- Cirby Way/Foothills Boulevard (LOS F)
- Cirby Way/Riverside Avenue (LOS D)
- Cirby Way/Vernon Street (LOS D)

PM Peak Hour

- Cirby Way/Sunrise Avenue (LOS E)
- Cirby Way/Foothills Boulevard (LOS E)
- Cirby Way/Riverside Avenue (LOS F)
- Cirby Way/Vernon Street (LOS E)
- Riverside Avenue/Orlando/I-80 EB Off-Ramp (LOS E)
- Riverside Avenue/I-80 WB Ramps (LOS F)

Freeway Facilities

According to the *Interstate 80 and Capital Freeway Corridor System Management Plan* (Caltrans District 3, May 2009), Caltrans has identified the route concept LOS for the following segments:

- LOS F for I-80 from Riverside Avenue/Auburn Boulevard (Sacramento/Placer County Line) to Sierra College Boulevard
- LOS F for I-80 from State Route 51 (Capital City Freeway) to Riverside Avenue/Auburn Boulevard (Sacramento/Placer County Line)

LOS E or better conditions are desired when feasible but LOS F conditions are likely to occur in the study area under no build conditions as recognized by the concept LOS thresholds. The LOS E threshold will be used to identify minimum acceptable operations (that is, deficiencies) and potential impacts to State highway mainline segments, ramp junctions, weaving segments, and ramp terminal intersections. For locations with LOS F under the no project condition, an impact would occur if the project would worsen the LOS F condition based on the applicable quantitative performance measure associated with the specific type of facility.

The following thresholds of significance have been used to determine whether implementing the proposed project would result in a significant transportation impact. These thresholds of significance are derived from questions posed in Appendix G of the CEQA Guidelines, thresholds of significance adopted by the City in applicable general plans and previous environmental documents, and professional judgment.

For purposes of this study, a significant impact would occur if the project would:

Roadway System

1. Cause a signalized intersection in Roseville to be degraded as follows under existing or 2035 CIP conditions during the AM or PM peak hours:
 - o For intersections currently operating at LOS C or better: worsen operations to LOS D or worse.
 - o For intersections that currently operate at less than LOS C: cause operations to further worsen by one or more service levels.
 - o For intersections that currently operate at LOS F: cause intersection delay to worsen by 12.5 seconds or greater.
2. Cause the overall percentage of signalized intersections throughout the City of Roseville operating at LOS C or better during the AM and PM peak hours to fall below 70 percent;

Freeway System

1. Cause a facility maintained by Caltrans to worsen from acceptable to unacceptable during the AM or PM peak hours;
2. Worsen unacceptable operations to a significant degree (as indicated by a change in the applicable performance measure) at a facility maintained by Caltrans during the AM or PM peak hours;

3. Cause traffic at an off-ramp maintained by Caltrans to queue back to the mainline, or add traffic to an off-ramp that already queues back to the mainline.

Bicycle System

- Not meet the policies and guidelines of Roseville's Bikeway Master Plan.

Pedestrian System

- Interfere with the operation of an existing pedestrian facility or preclude the construction of a planned pedestrian facility.

Transit System

- Have a negative impact on transit operations, travel times, and/or circulation.

II. EXISTING CONDITIONS

This chapter describes the existing transportation system including the roadway, freeway, bicycle, pedestrian, and transit systems within the study area.

ROADWAY SYSTEM

Regional access to the project site is provided by Interstate 80 (I-80) via an existing interchange with Riverside Avenue. The following arterial streets provide access to the site.

- **Riverside Avenue** is a north-south arterial that extends southerly from downtown Roseville into Citrus Heights, becoming Auburn Boulevard. Within the study area, it has a posted speed limit of 35 miles per hour (mph) with two travel lanes in each direction separated by a center median or channelized left-turn pockets.
- **Cirby Way** is an east-west arterial that extends from Foothills Boulevard through the City of Roseville, ultimately becoming Old Auburn Road in Citrus Heights. Within the study area, it has a posted speed limit of 40 mph with two lanes in each direction separated by a two-way left turn lane or channelized left-turn pockets.

Traffic signals along Cirby Way are coordinated to facilitate progression of through traffic.

Peak Hour Traffic Volumes

Traffic counts were obtained at most study intersections from the City's traffic count database in April 2015. However, given the importance of the Cirby Way/Riverside Avenue intersection to overall system operations, an additional set of traffic counts were conducted on Tuesday, October 13, 2015 (which were similar to the April 2015) and used in the study. Similarly, traffic counts collected at the two Kaiser driveways on Tuesday, October 13, 2015 were used. Schools were in session at the time of the counts and no unusual traffic conditions were observed. **Figure 2** shows the resulting weekday AM and PM peak hour traffic volumes, lane configurations, and traffic controls at each study intersection. Throughout the study area, the AM peak hour occurred from 7:30 to 8:30 AM and the PM peak hour occurred from 4:45 to 5:45 PM.

Mainline freeway counts were obtained from Caltrans Performance Measurement System (PeMS) on the same day as the April 2015 traffic counts. This ensured that ramp volumes counted in April would be consistent with the freeway analysis mainline volumes.

Note: Traffic counts conducted in October 2015.

Figure 2
Peak Hour Traffic Volumes
and Lane Configurations -
Existing Conditions

SimTraffic Model Calibration

It is critical that the SimTraffic microsimulation model be adequately validated to existing conditions to accurately predict “plus project” conditions. Model validation typically consists of measures relating to volume served, queue lengths, and average travel time. Given the modest size of the study area but moderate levels of congestion, volume served and vehicle queueing are considered the most important validation parameters.

As part of the traffic count data collection, maximum vehicle queues were recorded for several critical turning movements along the Cirby Way and Riverside Avenue corridors at the same time as the traffic counts. **Table 3** displays the available storage, observed maximum vehicle queue, and modeled (via SimTraffic) maximum queue. The maximum modeled queue represents the maximum back of queue observed for the peak 15 minute interval of the peak hour, averaged between ten SimTraffic runs.

TABLE 3: QUEUEING ANALYSIS – SIMTRAFFIC CALIBRATION						
Driveway / Intersection	Move ment	Available Storage ¹ (feet)	Maximum Observed Vehicle Queue ²		Maximum Modeled Vehicle Queue ³	
			AM Peak Hour (feet)	PM Peak Hour (feet)	AM Peak Hour (feet)	PM Peak Hour (feet)
Cirby Way/Riverside Avenue	WB LT	475	325	550	400	400 ⁴
Cirby Way/Cirby Hills Drive/Kaiser North Driveway	NB RT	75	75	275	50	175 ⁴
	WB LT	175	100	50	75	50
Riverside Avenue/Kaiser West Driveway	WB RT	200	75	200	75	150 ⁴
Notes: ¹ Based on measurements from aerial imagery. ² Results based on queue counts conducted on Tuesday, October 13, 2015. ³ Results based on average of 10 SimTraffic runs. ⁴ Refer to description below for reason model estimate was less the observed maximum queue. N/A = Not Applicable. Bolded and <u>underlined</u> cells indicate that maximum queue exceeds the available storage. Source: Fehr & Peers, 2016						

Table 3 shows that the SimTraffic model generally validates well to observed maximum queues for many of the critical movements into and out of the project site and at the Cirby Way/Riverside Avenue intersection. However, the following movements were challenging to accurately validate for the following reasons:

- Westbound left-turn at Cirby Way/Riverside Avenue – The outside left-turn lane was observed to have a maximum queue of 22 vehicles (i.e., 550 feet) during the PM peak hour. This occurred as a result of imbalanced lane usage (i.e., motorists used the outside left-turn lane in advance of accessing westbound I-80). SimTraffic was able to model this imbalanced lane utilization. However, excess queuing in this movement was reported by SimTraffic as being part of the queue for the westbound through movement.
- Northbound right-turn at Kaiser North Driveway on Cirby Way – This movement experiences a surge of outbound traffic at 5 PM, which results in an observed maximum queue of 11 vehicles. The SimTraffic model wasn't able to model the degree of peaking that occurs nor the effects of somewhat limited sight distance for outbound right-turning traffic. As a result, the modeled maximum queue of seven vehicles represents an underestimate of four vehicles.
- Westbound right-turn at Kaiser West Driveway on Riverside Avenue – The SimTraffic model underestimates by two vehicles the maximum observed queue of eight vehicles. This movement is particularly tricky to validate due to the desire for some motorists to merge into the northbound left-turn lane (and their degree of driver aggressiveness) at Cirby Way/Riverside Avenue.

The SimTraffic model validates well against most of the other queuing that occurs. The model is able to replicate the vehicle queues that extend back from the Cirby Way/Riverside Avenue intersection, through the I-80 WB Ramps/Riverside Avenue intersection, to the mid-point of the I-80 overcrossing. To the extent modeled queues underestimated observed queues at the Kaiser driveways, a difference method forecasting procedure, as described later, is used to account for this occurrence.

Below is a screenshot of the SimTraffic model used to analyze the PM peak hour intersections under Existing Conditions.

View of SimTraffic micro-simulation model used to analyze PM peak hour Existing Conditions

INTERSECTION OPERATIONS

Table 4 displays the existing weekday AM and PM peak hour traffic operations analysis results at the ten study intersections (refer to Appendix A for detailed calculations). As shown, the Cirby Way/Riverside Avenue intersection operates at LOS E during the AM and PM peak hours. During the PM peak hour, both side-street stop-controlled driveway movements departing the project site operate at LOS F.

ROADWAY OPERATIONS

Table 5 summarizes the average daily traffic (ADT) on roadway segments surrounding the project site under existing conditions. This data was obtained from the City of Roseville's traffic count database and represents conditions in April 2015. As shown, the Riverside Avenue segment from Cirby Way to I-80 WB ramps currently carries the greatest volume of through the project area with 44,400 daily vehicles. Cirby Way from Foothills Boulevard to Riverside Avenue carries the second most daily vehicles through the project area with 40,400 daily vehicles.

**TABLE 4:
INTERSECTION LEVEL OF SERVICE – EXISTING CONDITIONS**

Intersection	Control	AM Peak Hour		PM Peak Hour	
		Average Delay ¹	LOS ¹	Average Delay ¹	LOS ¹

FREEWAY OPERATIONS

Table 6 displays the existing weekday AM and PM peak hour operations at study freeway facilities (refer to Appendix A for detailed calculations). As shown, all eastbound Interstate 80 freeway facilities operate acceptably at LOS C or better, while all westbound Interstate 80 freeway facilities operate acceptably at LOS D or better.

BICYCLE/PEDESTRIAN SYSTEM

Figure 3 displays the bike and pedestrian facilities located near the project site. A Class II bicycle lane (designated on-street with appropriate signing and striping) is provided in both directions of Foothills Boulevard north of Cirby Way, Cirby Way between Foothills Boulevard and Melody Lane (west of Riverside Avenue), Riverside Avenue between Cirby Way and the I-80 WB Ramps, and Orlando Avenue. Sidewalks are also present along the majority of the streets within the project vicinity. Sidewalks are not present along the south side of Cirby Way from Kaiser North Driveway to Orlando Avenue. At signalized intersections, crosswalks with push-button pedestrian activation are present.

**TABLE 6:
I-80 FREEWAY LEVEL OF SERVICE – EXISTING CONDITIIONS**

Freeway Facility	Type	AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS

Riverside Ave Diagonal On-Ramp	Merge	16.3	B	22.5	C
Riverside Ave to Antelope Rd	Basic	19.5	C ³	25.3	C
Notes:					
¹ On ramp falls out of the realm of a merge segment and is thus analyzed as a basic segment.					
² During the PM peak hour, these on-ramps serve large volumes of traffic. Despite being metered at each ramp, their close spacing and curvature of I-80 causes slow-downs.					
³ During the AM peak hour, traffic congestion originating from the I-80/ Capital City Freeway interchange can occasionally spill back to this segment causing congestion. The queue spillbacks occur sporadically caused both by recurring and non-recurring (i.e., accidents, weather, etc.) congestion.

TRANSIT SYSTEM

The City of Roseville operates both fixed route busing and demand-responsive dial-a-ride services throughout much of City. Bus stops are located in both directions of Cirby Way. The project is served by the following bus routes:

Route A operates in a westbound loop starting at the Galleria Transfer Point at Galleria Mall, using Sunrise Avenue, Cirby Way, Riverside Avenue, and East Roseville Parkway. Route A operates Monday through Friday on approximately 30 minute headways from 6:00 AM to 6:30 PM, and hourly headways thereafter until 9:53 PM. On Saturday, Route A operates on 1-hour headways from 8:00 AM to 5:00 PM. The nearest transit stops to the project site in the westbound direction are located directly across from the Medical Center along Cirby Way.

Route B operates in an eastbound loop starting at the Galleria Transfer Point at Galleria Mall, using Riverside Avenue, Cirby Way, Sunrise Avenue, and East Roseville Parkway. Route B operates Monday through Friday on approximately 30 minute headways from 6:10 AM to 6:40 PM, and hourly headways thereafter until 9:43 PM. On Saturday, Route B operates on 1-hour headways from 8:07 AM to 4:50 PM. The nearest transit stops to the project site in the eastbound direction are located adjacent to the north of the Medical Center along Cirby Way.

Route R operates in a north/south direction, providing service primarily along Foothills Boulevard from the Louis/Orlando Transfer Point at Whyte Avenue/Riverside Avenue to Foothills Boulevard/Blue Oaks Boulevard. Route R operates Monday through Friday, with two northbound routes in the AM peak hour at 7:30 and 8:15 and two southbound routes in the AM peak hour at 7:52 and 8:37. In the PM peak hour, there are two northbound routes at 3:53 and 4:38 and two southbound routes at 4:15 and 5:00. The nearest transit stops to the project site in the northbound direction is at Cirby Way/Lindsay Drive, and Whyte Avenue/Auburn Boulevard in the southbound direction.

City of Roseville Transit Network Surrounding Project

III. PROJECT TRAVEL CHARACTERISTICS

This chapter describes the expected travel characteristics of the proposed project. Refer to **Figure 4** for project site plan (*Riverside Cirby MOB*, HOK Inc., March 2016).

LAND USE AND EMPLOYMENT GROWTH

Table 7 displays the existing and proposed land uses, and the number of existing and proposed health care providers. As shown, the proposed project expansion would increase the total square footage of the site by 130 percent. However, the number of health care providers would increase by 100 percent, meaning there would be fewer health care providers per square foot. This is part of the applicant's overall objective to 'decompress' the campus by providing more building space per provider.

TABLE 7: PROPOSED KAISER PERMANENTE RIVERSIDE MEDICAL OFFICES LAND USE INFORMATION			
Quantity	Existing	Proposed	Percent Change
Building Size	90,290 sq. ft. (Occupied)	207,700 sq. ft. (Total)	130% increase
Health Care Providers	71	142	100% increase
Health Care Providers Per Square Foot	1 per 1,272 sq. ft.	1 per 1,462 sq. ft.	15% decrease
Notes: Buildout land uses from <i>Riverside Cirby MOB</i> , HOK Inc., March 2016. Source: Fehr & Peers, 2016			

EXISTING AND PROPOSED VEHICULAR ACCESS

Currently, access to the site is provided by the following two driveways:

- Kaiser West Driveway – is situated on Riverside Avenue about 275 feet¹ north of the I-80 WB off-ramp/Riverside Avenue intersection and 510 feet south of the Cirby Way/Riverside Avenue intersection. It is restricted to right-turns only by a raised median on Riverside Avenue.

¹ Dimensions are referenced from the driveway centerline to the near curb return of the nearest intersection.

- | | | |
|---|---|--|
|  Medical Office Building |  Existing Traffic Signal |  Permitted Driveway Turn Movement |
|  Parking Garage |  Proposed Traffic Signal | |

Figure 4
Project Site Plan

- Kaiser North Driveway – permits all turning movements with the exception of outbound left- and through movements from the Kaiser driveway. “Right Turn Only” signs are posted to advise motorists of this turning movement restriction. This driveway is situated about 675 feet east of the Cirby Way/Riverside Avenue intersection. However, the distance is about 800 feet when measured from intersection centerline to centerline.

With the proposed expansion, access would be provided as follows:

- The Kaiser West driveway on Riverside Avenue would remain as a right-turn only driveway, but would be relocated 40 feet to the south.

The Kaiser North driveway on Cirby Way would be signalized (allowing all turning movements) and coordinated with other traffic signals along Cirby Way.

EXISTING TRIP GENERATION OF MEDICAL CENTER

Traffic counts were conducted on Tuesday, October 13, 2015 at the two driveways serving the existing project. Kaiser administrators report that October is generally one of their busier months in terms of patient visitation. Therefore, counts are considered representative of average, if not somewhat above average conditions, in terms of patient visitation. **Table 8** displays the number of AM and PM peak hour trips generated by the project on this day. During the AM peak hour, 82 percent of trips were inbound. During the PM peak hour, 75 percent of trips were outbound.

TABLE 8: TRIP GENERATION OF EXISTING KAISER PERMANENTE RIVERSIDE MEDICAL OFFICES					
Facility	ksf	Trip Rates (per ksf)		Trips	
		AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
Kaiser Permanente Riverside Medical Office	90.29	3.87	5.07	349 ¹	458 ¹
Medical Office ITE Rate	90.29	3.5 ²	4.27 ²	316	386
Difference Versus ITE Trip Rates				+33	+72
Notes:					
¹ Traffic counts collected on Tuesday, October 13, 2015. Trip generation during peak hour of adjacent street traffic (7:30 to 8:30 AM and 4:45 to 5:45 PM) is reported.					
² Based on trip rates contained in the <i>Trip Generation Manual</i> (Institute of Transportation Engineers, 2012) for the Medical-Office Land Use Category (720).					
Source: Fehr & Peers, 2016					

The site's observed trip generation was compared against its expected trip generation using the Medical-Office Land Use Category from the *Trip Generation Manual* (Institute of Transportation Engineers, 2012). Table 8 indicates that the existing facility generated 33 more AM peak hour trips and 72 more PM peak hour trips than would be expected using ITE trip rates. This represents an 11 percent increase in the AM peak hour and a 19 percent increase during the PM peak hour. The fact that the observed trip rate was higher than the expected rate from ITE is not surprising given that the site currently has a higher than typical density of health care providers.

Table 9 displays the AM and PM peak hour trip generation of the proposed project. Although the project's size would increase by 130 percent, its number of providers would double. The number of health care providers is considered the most appropriate independent variable for use in estimating trips because it relates directly to the number of employees who would work at the site as well as the number of patients who would visit the site to receive medical services. As shown in Table 9, the proposed Medical Center would result in the campus generating twice as many trips as currently occur.

The daily trip generation of the existing project was calculated to be 3,753 trips as follows:

- Combined AM/PM peak hour trip rates of existing project versus ITE: $3.87 + 5.07 = 8.94$ versus $3.5 + 4.27 = 7.77$ is a 15% increase over ITE.
- ITE daily trip rate of 36.13 increased by 15% to yield 41.57 trips per ksf.
- Daily trip generation = $90.29 \text{ ksf} \times 41.57 \text{ trips per ksf} = 3,753 \text{ daily trips}$.

The daily trip generation of the proposed Medical Center was calculated to be 7,504 trips as follows:

- Combined AM/PM peak hour trip rates of proposed project versus ITE: $3.36 + 4.41 = 7.77$ versus $3.5 + 4.27 = 7.77$ is identical to the ITE combined rate.
- ITE daily trip rate of 36.13 trips per ksf is applied to proposed project.
- Daily trip generation = $207.7 \text{ ksf} \times 36.13 \text{ trips per ksf} = 7,504 \text{ daily trips}$.

Thus, the proposed Medical Center expansion would result in a net increase of 3,750 daily trips.

**TABLE 9:
TRIP GENERATION OF PROPOSED KAISER PERMANENTE RIVERSIDE MEDICAL OFFICES**

Facility	ksf	Health Care Providers	Trip Rates (per ksf)		Trips	
			AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
Existing Medical Center	90.29	71	3.87	5.07	349 ¹	458 ¹
Proposed Medical Center	207.7	142	3.36 ²	4.41 ²	698	916
Net Increase in Trips					+349	+458

Notes:

¹ Traffic counts collected on Tuesday, October 13, 2015. Trip generation during peak hour of adjacent street traffic (7:30 to 8:30 AM and 4:45 to 5:45 PM) is reported.

² Trip rate associated with proposed expansion calculated by dividing total trips by square footage.

Source: Fehr & Peers, 2016

TRIP DISTRIBUTION CHARACTERISTICS

Figure 5 shows the existing/observed trip distribution of the existing project. These percentages were derived based on driving turning movement volumes and origin-destination surveys of trip patterns from the Kaiser West driveway that extended through the Cirby Way/Riverside Avenue intersection. As shown, nearly half of inbound traffic enters the Kaiser West Driveway after passing through the I-80/Riverside Avenue interchange. In contrast, 64 percent of outbound trips travel east on Cirby Way (over I-80) due to the prohibitions of outbound left-turns at the Kaiser North Driveway and u-turns on northbound approach at the Cirby Way/Riverside Avenue intersection.

from 7:30 - 8:30 am and 4:45 - 5:45 pm.

These periods match the peak hour of adjacent street traffic.

Figure 5

Existing Travel Characteristics
of Kaiser Cirby Riverside Campus

Figure 6 shows the expected distribution of inbound and outbound project trips under existing plus project conditions. The distribution percentages consider the following:

- A new traffic signal is installed on Cirby Way at the Kaiser North Driveway. The new signal would permit all turning movements. The northbound approach would consist of a shared left/through lane, and two right-turn lanes, each having 250 feet of storage. The expected effect of this new signal is a shift in outbound traffic away from the Kaiser West Driveway as motorists would be able to pass through the Cirby Way/Riverside Avenue intersection to access to I-80/Riverside Avenue interchange.
- The Kaiser West Driveway would be relocated 40 feet to the south and permit right-turns only.
- Driveway usage considers the location of parking within the proposed Medical Center.
- The distribution of trips along Cirby Way and Riverside Avenue is based on existing travel patterns and complementary land uses.

Figure 6
Inbound/Outbound
Peak Hour Trip Distribution -
Existing Plus Project Conditions

IV. EXISTING PLUS PROJECT CONDITIONS

This chapter analyzes the potential impacts of the proposed project on the surrounding roadway network under an “existing plus project” scenario. It also includes an evaluation of project access.

DESIGN/OPERATION OF NEW SIGNALIZED INTERSECTION AT KAISER NORTH DRIVEWAY

Preliminary traffic analyses by Fehr & Peers showed that the introduction of a new traffic signal at the Kaiser North Driveway on Cirby Way would cause the westbound approach to the Cirby Way/Riverside Avenue intersection to experience substantial traffic growth. SimTraffic results showed increased delays and queues, which would spill back to the new signalized intersection and beyond. To prevent this condition, the new signal at the Kaiser North Driveway would be designed and operated as follows:

- Operated as part of the coordinated system of signalized intersections along Cirby Way.² The eastbound-westbound approaches would operate with protected left-turn phasing. The northbound-southbound approaches would operate with split phasing.³
- Would feature a single northbound left/through lane exiting the Medical Center that would consist of 250 feet of vehicle storage and provide a maximum green time of 15 seconds during the weekday PM peak hour.⁴ Outside of this time period, no signal timing restrictions would exist.
- Would feature two northbound right-turn lanes exiting the Medical Center that would each consist of 250 feet of vehicle storage. On-site signage would be provided to direct motorists to use these lanes to access Interstate 80 via eastbound Cirby Way to Orlando Avenue. Additionally, Kaiser representatives have indicated that they can disseminate this suggested outbound vehicle routing to their employees.

² During peak hours, the signalized intersections along Cirby Way operate with a 120-second cycle length.

³ Split phase operation is necessary due to the shared left/through lanes provided on the northbound and southbound approaches. A crosswalk would be provided on the east leg of the intersection across Cirby Way.

⁴ It is estimated that six vehicles per cycle could be accommodated by the 15 seconds of green time. Given that there are 30 cycles per hour, this implies 180 vehicles would turn left from the North Kaiser Driveway during the PM peak hour.

The objectives of the above design and operations are to:

- Use traffic signal timing to moderate the level of project-related traffic that is added to the westbound approach to the Cirby Way/Riverside Avenue intersection to avoid causing traffic to spill back into the new signalized intersection.
- Provide a single, lengthy (250-foot) northbound left-turn/through lane that can be used if so desired. However, given the limited amount of green time allocated to this movement during the PM peak hour, some motorists in this turn lane would have to wait two cycle lengths to turn onto Cirby Way. This is a disincentive to make this movement, instead encouraging the use of the alternative route (i.e., Cirby Way to Orlando Avenue) to access Interstate 80.
- By encouraging Kaiser employees to use the alternative route (i.e., Cirby Way to Orlando Avenue) to access Interstate 80, the northbound left-turn/through lane would presumably have a high proportion of use by Kaiser members who may not otherwise be as familiar with alternative routes to reach Interstate 80.

TRAFFIC FORECASTS

Figure 7 displays the AM and PM peak hour traffic forecasts under existing plus project conditions. These forecasts were developed through the following three-step process:

1. Unassign trips associated with the existing Kaiser Riverside Medical Offices based on trip generation and observed travel patterns shown in Figure 5 to yield a set of “existing conditions without existing Kaiser project” volumes.
2. Assign trips associated with the existing Kaiser and proposed project through the study intersections based on its expected trip generation and distribution percentages shown on Figure 6, subject to the operational parameters described previously at the new signalized intersection at the Kaiser North Driveway.
3. Add the trips from step 2 to the trips from step 1 to yield the “existing plus project” forecasts.

This process was necessary because introduction of the new traffic signal would not only affect proposed project travel patterns, but it would also existing travel patterns for existing Kaiser trips.

INTERSECTION OPERATIONS

Table 10 displays the average delay and LOS at the study intersections under existing plus project conditions. Refer to Appendix B for technical calculations.

Figure 7
Peak Hour Traffic Volumes
and Lane Configurations -
Existing Plus Project Conditions

**TABLE 10:
INTERSECTION LEVEL OF SERVICE –EXISTING PLUS PROJECT CONDITIONS**

Intersection	Control	Existing Conditions				Existing Plus Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Delay ¹	LOS ¹	Delay ¹	LOS ¹	Delay ¹	LOS ¹	Delay ¹	LOS ¹
1. Cirby Way/Foothills Boulevard/Roseville Road	Traffic Signal	26	C	31	C	28	C	31	C
2. Cirby Way/Vernon Street	Traffic Signal	29	C	47	D	31	C	58	E
3. Cirby Way/Melody Lane	Traffic Signal	10	B	13	B	11	B	12	B
4. Cirby Way/Riverside Avenue	Traffic Signal	63	E	56	E	63	E	76	E
5. Cirby Way/Cirby Hills Drive/Kaiser North Driveway	SSSC/ Traffic Signal ²	7 (59)	A (F)	7 (85)	A (F)	20	B	31	C
6. Cirby Way/Orlando Avenue	Traffic Signal	15	B	14	B	11	B	15	B
7. Cirby Way/Sunrise Avenue	Traffic Signal	48	D	56	E	50	D	69	E
8. Riverside Avenue/I-80 WB Ramps	Traffic Signal	23	C	22	C	27	C	29	C
9. Riverside Avenue/I-80 EB Ramps/Orlando Avenue	Traffic Signal	24	C	31	C	23	C	32	C
10. Riverside Avenue/Kaiser West Driveway	SSSC	8 (28)	A (D)	6 (50)	A (F)	8 (58)	A (F)	11 (103)	B (F)

Notes:

¹ Average delay (rounded to the nearest second) and LOS for signalized intersections is the weighted average for all movements. Average delay and LOS shown for both worst-case side street movement (in parentheses) and intersection as a whole.

² Intersection signalized under “plus project” conditions.

AWSC = All-way Stop Control. SSSC = Side-street Stop Control.

Bolded text represents significant impacts.

Source: Fehr & Peers, 2016

During the PM peak hour, the project would worsen the Cirby Way/Vernon Street intersection from LOS D to E, causing a significant impact. Operations would remain at LOS E at the Cirby Way/Riverside Avenue intersection, though the project would increase the average delay by 20 seconds During the PM peak hour. The project would exacerbate LOS F conditions at the stop-controlled Kaiser West Driveway approach. The new signalized intersection at the Kaiser North Driveway would operate at LOS B during the AM peak hour and LOS C during the PM peak hour.

Table 11 shows the maximum queues for critical movements (i.e., affected by project trips) at the Cirby Way/Riverside Avenue intersection under existing plus project conditions. In addition, maximum queues are shown for the two project driveways, I-80/Riverside Avenue interchange ramp terminal intersections (see Appendix B for detailed calculations), and other intersection movements, which would experience meaningful project-related increases.

The following key conclusions are drawn from this table:

1. The project would not cause traffic to spillback onto the I-80 mainline.
2. The project would cause the maximum westbound left-turn queue at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway intersection to exceed the available storage by 25 feet.
3. The project would cause the maximum westbound right-turn queue at the Riverside Avenue/Kaiser West Driveway intersection to be 275 feet.

Items 2 and 3 are addressed in Chapter VII (Project Access and Internal Circulation).

**TABLE 11:
QUEUEING ANALYSIS – EXISTING PLUS PROJECT CONDITIONS**

**TABLE 11:
QUEUEING ANALYSIS – EXISTING PLUS PROJECT CONDITIONS**

Driveway / Intersection	Movement ¹	Available Storage ² (feet)	Maximum Queue (feet) ³			
			Existing Conditions		Existing Plus Project Conditions	
			AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
10. Riverside Avenue/Kaiser West Driveway	Westbound Right ⁵⁷	200/125	75	200	75	<u>275</u>

Notes:

¹ Maximum queues shown for critical movements at adjacent intersections, project driveways, and Caltrans ramp terminal intersections.

² Based on measurements from aerial imagery and project site plan. For through movements, available storage is distance to upstream intersection.

³ Results based on average of 10 SimTraffic runs, except for those movements listed under note 7. Reported results are 'per lane'.

⁴ Intersection signalized under "plus project" conditions.

⁵ Turn lane storage changes under 'plus project' conditions.

⁶ During the AM and PM peak hours, traffic spills out of the northbound left-turn lanes into the adjacent through lanes, queuing back to the I-80/Riverside Avenue WB Ramps intersection.

⁷ Intersection maximum queues reported from existing counts.

N/A = Not Applicable (because loop off-ramp is a free-flowing merge onto northbound Riverside Avenue).

Bolded and underlined cells indicate that maximum queue exceeds the available storage.

Source: Fehr & Peers, 2016

ROADWAY OPERATIONS

Table 12 summarizes average daily traffic on roadway segments surrounding the project site under existing plus project conditions. As shown, the Riverside Avenue segment from Cirby Way to I-80 WB ramps would experience the greatest increase in project traffic, increasing by 2,200 daily vehicles. Cirby Way from Foothills Boulevard to Riverside Avenue would experience the second largest increase, with 1,400 daily vehicles. All other roadway segments would see modest increases in average daily traffic.

**TABLE 12:
ROADWAY AVERAGE DAILY TRAFFIC – EXISTING PLUS PROJECT CONDITIONS**

Roadway Segment	Number of Lanes	Existing Conditions	Project-Added Trips	Existing Plus Project Conditions
Foothills Blvd. – Vineyard Road to Cirby Way	5	38,100	1,000	39,100
Roseville Road – South of Cirby Way	2	27,600	200	27,800
North Sunrise Ave. – Coloma Way to Cirby Way	4	37,400	100	37,500

FREEWAY OPERATIONS

Table 13 displays the existing plus project weekday AM and PM peak hour operations at freeway facilities (refer to Appendix B for detailed calculations). As shown, all eastbound Interstate 80 freeway facilities would continue to operate acceptably at LOS C or better with the project, while all westbound Interstate 80 freeway facilities continue to operate acceptably at LOS D or better with the project.

**TABLE 13:

Notes:

¹On ramp falls out of the realm of a merge segment and is thus analyzed as a basic segment.

²During the PM peak hour, these on-ramps serve large volumes of traffic. Despite being metered at each ramp, their close spacing and curvature of I-80 causes slow-downs.

³During the AM peak hour, traffic congestion originating from the I-80/ Capital City Freeway interchange can occasionally spill back to this segment causing congestion. The queue spillbacks occur sporadically caused both by recurring and non-recurring (i.e., accidents, weather, etc.) congestion.

V. CUMULATIVE CONDITIONS

This chapter analyzes the potential impacts of the proposed project on the surrounding roadway network under cumulative conditions. It begins by discussing the planned roadway system in the study area and analyzes intersection operations.

CUMULATIVE SETTING

The City of Roseville utilizes a 2035 Capital Improvements Program (CIP) travel demand model to analyze future roadway conditions in the City. The model assumes buildout of the City of Roseville including various approved and pending specific plans such as the Sierra Vista, Creekview, and Amoruso Specific Plans. Land uses outside of the City represent projected absorption by the Year 2035. The City's traffic model also includes its existing roadway system along with planned CIP roadway and intersection improvements. The City's CIP project list represents a reasonable mitigation plan because the improvements are reasonably foreseeable based on a strong likelihood (and past history) that they will very likely be fully funded by the time they are needed based on the current fees being collected.

The only planned roadway improvement within the study area is the addition of a second southbound left-turn lane on Vernon Street at Cirby Way.

TRAFFIC FORECASTS

Traffic forecasts were developed for the following two cumulative scenarios:

- Cumulative No Project – assumes the existing project remains in place (and that a traffic signal is not installed at the Kaiser North Driveway).
- Cumulative Plus Project – assumes the existing project is replaced by the proposed project (and that a traffic signal is installed at the Kaiser North Driveway).

Figure 8 shows the Cumulative No Project peak hour forecasts at the study intersections. These forecasts show that the Cirby Way/Riverside Avenue intersection would experience a 33 and 35 percent increase in traffic over existing AM and PM peak hour volumes, respectively. This suggests that additional congestion and queuing is expected at this intersection, which could have adverse queue spillback effects on adjacent intersections.

The proposed project expansion was added to the cumulative (2035 CIP) version of the City of Roseville travel demand model. The model was run, and the results were checked to confirm that the external vehicle trips generated from the project's traffic analysis zone (TAZ) matched the trip generation totals in Table 8. The distribution of inbound and outbound trips varied slightly from existing conditions, as land uses and roadway connections within the City of Roseville will have changed between these scenarios.

Figure 9 shows the Cumulative Plus Project peak hour forecasts at study intersections.

Notes:									
¹ Average delay (rounded to the nearest second) and LOS for signalized intersections is the weighted average for all movements. Average delay and LOS shown for both worst-case side street movement (in parentheses) and intersection as a whole.									
² Refer to discussion on following page for rationale for why the project causes a reduction in delay at this intersection.									
³ Intersection signalized under "plus project" conditions.									
AWSC = All-way Stop Control. SSSC = Side-street Stop Control.									
Bolded text represents significant impacts.									
Source: Fehr & Peers, 2016									

Table 14 shows that the project would not cause any intersection to worsen by one LOS grade or more. However, the new signalized Kaiser North Driveway intersection on Cirby Way would operate at LOS E during the AM peak hour. This occurs as a result of traffic queuing back into it from the westbound approach to the Cirby Way/Riverside Avenue intersection. Below is an image from SimTraffic showing the extent of this vehicle queuing. This impact is considered significant.

Table 14 also yields some other noteworthy results including:

- The project causes AM peak hour delays at the Cirby Way/Riverside Avenue intersection to be reduced from 111 to 85 seconds. This occurs as a result of introducing the new traffic signal into the network. Under no project conditions, all delay on the westbound Cirby Way approach is assigned to Cirby Way/Riverside Avenue; under plus project conditions, the westbound delay that occurs upstream of the new signal is assigned to the new signalized intersection.
- Under no project conditions, motorists would incur very lengthy delays during the AM and PM peak hours while attempting to enter or exit the unsignalized Kaiser North driveway.

SimTraffic micro-simulation model used to analyze the AM peak hour under cumulative plus project conditions

Below is the list of study intersections from the *Amoruso Ranch Specific Plan Final Transportation Impact Study* that were identified to operate at worse than LOS C under 2035 CIP conditions (using HCM intersection analysis methods). Edits to this list are shown in red font or strikethrough notation to represent changes in operations based on this cumulative plus project analysis.

AM Peak Hour

- Cirby Way/Sunrise Avenue (LOS ~~D~~ **F**)
- Cirby Way/Foothills Boulevard (LOS ~~F~~ **E**)
- Cirby Way/Riverside Avenue (LOS ~~D~~ **F**)
- Cirby Way/Vernon Street (LOS ~~D~~ **C**)
- **Cirby Way/Kaiser North Driveway/Cirby Hills Dr. (LOS E)**
- **Riverside Avenue/I-80 WB Ramps (LOS D)**
- **Riverside Avenue/Orlando/I-80 EB Off-Ramp (LOS F)**

PM Peak Hour

- Cirby Way/Sunrise Avenue (LOS ~~E~~ **F**)
- Cirby Way/Foothills Boulevard (LOS E)
- Cirby Way/Riverside Avenue (LOS ~~F~~ **E**)
- Cirby Way/Vernon Street (LOS E)
- Riverside Avenue/Orlando/I-80 EB Off-Ramp (LOS E)
- ~~Riverside Avenue/I-80 WB Ramps (LOS F)~~

Reasons for these changes include the following:

1. Cirby Way Widening – The *Amoruso Ranch Specific Plan Final Transportation Impact Study* traffic modeling had assumed the widening of Cirby Way to six lanes between Riverside Avenue and Foothills Boulevard including the addition of a third eastbound through lane approaching and departing the Cirby Way/Riverside Avenue intersection. For this study, the City directed Fehr & Peers to assume no widening of Cirby Way or capacity increases at Cirby/Riverside. Accordingly, the removal of this widening from the 2035 CIP model caused a redistribution of traffic, whereby certain intersections (e.g., Cirby Way/Sunrise Avenue) experienced greater traffic levels and delays whereas others (e.g., Cirby Way/Vernon Street) experienced less traffic and delay.
2. The proposed Kaiser Medical Center expansion causes changes in traffic patterns including greater use of Orlando Avenue to the I-80 EB Ramps intersection and LOS E at the new signalized Kaiser North Driveway during the AM peak hour.
3. In several instances, these intersections were on the cusp of operating at one level versus another, and as a little as a one or two second increase or decrease in delay caused the LOS change.

Table 15 shows the maximum queues at the project driveways and key movements at study area public street intersections (refer to Appendix C for detailed calculations).

TABLE 15: QUEUEING ANALYSIS – CUMULATIVE CONDITIONS						
Driveway / Intersection	Movement ¹	Available Storage ² (feet)	Maximum Queue (feet) ³

**TABLE 15:
QUEUEING ANALYSIS – CUMULATIVE CONDITIONS**

Driveway / Intersection	Movement ¹	Available Storage ² (feet)	Maximum Queue (feet) ³			
			Cumulative No Project Conditions		Cumulative Plus Project Conditions	
			AM Peak Hour	PM Peak Hour	AM Peak Hour	PM Peak Hour
9. Riverside Avenue/I-80 EB Ramps/Orlando Avenue	Northbound Through	1,500	1,500	1,275	1,500	1,250
	Eastbound Loop Off	N / A	N / A	N / A	N / A	N / A
10. Riverside Avenue /Kaiser West Driveway	Westbound Right ⁵	200/125	50	125	50	125

Notes:

¹ Maximum queues shown for critical movements at adjacent intersections, project driveways, and Caltrans ramp terminal intersections.

² Based on measurements from aerial imagery and project site plan. For through movements, available storage is distance to upstream intersection.

³ Results based on average of 10 SimTraffic runs. Reported results are 'per lane'.

⁴ During the AM and PM peak hours, traffic spills out of the northbound left-turn lanes into the adjacent through lanes, queuing back to the I-80/Riverside Avenue WB Ramps intersection.

⁵ Turn lane storage changes under "plus project" conditions due to introduction of new traffic signal.

⁶ Intersection signalized under "plus project" conditions

Bolded and underlined cells indicate that maximum queue exceeds the available storage.

Source: Fehr & Peers, 2016

The most notable queue exceedances under cumulative plus project conditions include:

- Under both scenarios, traffic on westbound Cirby Way would spill back from Riverside Avenue across and beyond the I-80 overcrossing.
- The northbound left/through movement from the signalized Kaiser North Driveway intersection onto Cirby Way would experience a 375-foot maximum vehicle queue during the PM peak hour, which would exceed the 250 feet of available storage. This occurs as a result of westbound queues from Cirby Way/Riverside Avenue spilling back into the new signal, thereby restricting the flow of northbound left-turn traffic exiting the site.
- The westbound left-turn from Cirby Way into the signalized Kaiser North Driveway intersection would experience a 200-foot maximum vehicle queue during the AM peak hour, which would exceed the 175 feet of available storage.

This table shows that the project would not cause traffic on the I-80/Riverside EB and WB off-ramps to queue back onto the I-80 mainline.

ROADWAY OPERATIONS

Table 16 summarizes average daily traffic on roadway segments surrounding the project site under cumulative conditions. As shown, the Riverside Avenue segment from Cirby Way to I-80 WB ramps would see the greatest increase in project traffic, increasing by 2,200 daily vehicles. Cirby Way from Foothills Boulevard to Riverside Avenue would see the second largest increase, with 1,400 daily vehicles. All other roadway segments would see modest increases in average daily traffic.

TABLE 16: ROADWAY AVERAGE DAILY TRAFFIC – CUMULATIVE CONDITIONS				
Roadway Segment	Number of Lanes	Cumulative No Project Conditions	Project-Added Trips	Cumulative Plus Project Conditions
Foothills Blvd – Vineyard to Cirby Way	5	56,900	1,000	57,900
Foothills Blvd – South of Cirby Way	2	39,700	200	39,900
Sunrise Ave – Coloma Way to Cirby Way	4	44,100	100	44,200

Riverside Ave – Cirby Way to I-80 WB	6	47,700	2,200	49,900

Source: Fehr & Peers, 2016

FREEWAY OPERATIONS

Table 17 displays the cumulative weekday AM and PM peak hour operations at freeway facilities (refer to Appendix C for detailed calculations). As shown, all eastbound Interstate 80 freeway facilities would operate acceptably at LOS E or better, while all westbound Interstate 80 freeway facilities would operate LOS F except for the Riverside Avenue Diagonal On-Ramp and mainline section west of Riverside Avenue, which would operate at LOS D and E, respectively.

**TABLE 17:
I-80 FREEWAY LEVEL OF SERVICE – CUMULATIVE CONDITIIONS**

Freeway Facility	Type	Cumulative Conditions				Cumulative Plus Project Conditions			
		AM Peak Hour		PM Peak Hour		AM Peak Hour		PM Peak Hour	
		Density	LOS	Density	LOS	Density	LOS	Density	LOS
Eastbound Interstate 80									
Antelope Rd to Riverside Ave	Basic	26.2	D	14.8	B	26.4	D	14.8	B
Riverside Ave Off-Ramp	Diverge	17.8	B	15.5	B	17.9	B	15.4	B

Riverside Ave to Antelope Rd	Basic	24.7	C	42.0	E ²	24.3	C	42.4	E

Notes:

¹On ramp falls out of the realm of a merge segment and is thus analyzed as a basic segment.

³During the AM peak hour, traffic congestion originating from the I-80/ Capital City Freeway interchange can occasionally spill back to this segment causing congestion. The queue spillbacks occur sporadically caused both by recurring and non-recurring (i.e., accidents, weather, etc.) congestion.

Source: Fehr & Peers, 2016

The project would not cause any changes in freeway facility levels of service. However, it would add traffic to certain freeway facilities projected to operate at LOS F during the PM peak hour:

- WB I-80 Douglas Blvd Diagonal On-Ramp and Loop On-Ramp merges, and Douglas Boulevard to Riverside Avenue mainline segment, WB I-80 Riverside Ave Off-Ramp Diverge, and WB I-80 Riverside Ave Loop On-Ramp: The project would add 20 trips to these facilities which carry 8,100 vehicles (within their ramp influence areas) during the PM peak hour. This represents a 0.02 percent increase, which is less than the variation in traffic volumes on a day to day basis.

BICYCLE/PEDESTRIAN FACILITIES

Below is an image from the *City of Roseville 2008 Bikeway Master Plan*, which shows the recommended bicycle network in the project vicinity. Key components of this network include:

- Future Class II bicycle lanes along Cirby Way, connecting it from Foothills Boulevard to Rocky Ridge Drive.
- Future Class II bicycle lanes along Riverside Avenue north of Cirby Way.

Source: Recommended Bicycle Network from City of Roseville 2008 *Bicycle Master Plan*.

As shown on Figure 3, Class II bike lanes do not currently exist along Cirby Way along the project frontage. As part of the reconstruction of Cirby Way from east of Riverside Avenue to the new signalized driveway (to improve sight distance), the project applicant is recommended to evaluate, and if feasible, construct Class II bike lanes along the project frontage along Cirby Way. If the addition of Class II bike lanes on Cirby Way is deemed infeasible due to lack of right-of-way or other constraints, then future updates of the *City of Roseville Bikeway Master Plan* should be modified accordingly.

TRANSIT SYSTEM

The project would improve access to transit by constructing the following improvements:

- The existing bus stop located on the south side of Cirby Way directly east of Riverside Avenue would be reconstructed (and relocated slightly further east). A pedestrian linkage would be constructed from within the project site to directly connect to the new bus stop.
- As part of the new signalized intersection on Cirby Way at the Kaiser North Driveway, a crosswalk would be constructed on the east leg. This crosswalk would include push-button pedestrian actuation, which would enable protected crossings between the bus stop located on the north side of Cirby Way directly east of the driveway and the project site.

VI. VMT CALCULATIONS

This chapter describes the methodology used to calculate the average weekday Vehicle Miles of Travel (VMT) associated with the proposed project. VMT is presented for informational purposes in this chapter. However, the values shown here are used as inputs to other technical studies such as air quality, noise, and greenhouse gas emissions.

The May 25, 2016 Caltrans NOP comment letter requested a comprehensive analysis of VMT, including the site's current VMT and VMT associated with its expansion. The letter states that VMT estimates should consider reductions in travel associated with transit use, ridesharing, and active transportation, and should include appropriate documentation. Lastly, the letter recommends that "mitigation for any roadway section or intersection with increasing VMT should be identified and mitigated as possible".

METHODOLOGY

VMT is considered a useful metric in understanding of the overall impacts of a project on the transportation system. VMT is often expressed on a 'per capita' or 'per employee' basis to understand the relative efficiency of one project versus another. By definition, one VMT occurs when a vehicle is driven one mile. In addition, a given VMT value represents vehicular miles of travel for an entire weekday. Lastly, VMT values in this chapter represent the full length of a given trip, and are not truncated at city, county, or region boundaries.

The following three-step process was used to estimate the VMT associated with the proposed project:

1. Kaiser Permanente provided anonymous zip code data for its existing employees and members who work at or receive services at the current facility. Kaiser staff indicated that they anticipate these geographic areas to continue to be the primary residence origins of employees and members after the expansion is complete.
2. The zip code data was translated into the City of Roseville base year travel demand model's traffic analysis zone (TAZ) system with appropriate weighting of TAZs based on zip code data. This provided origins for trips traveling to the project site, and destinations for trips leaving the project site.
3. Based on the project's expected average daily trip generation (3,750 trips), the model was used to track all trips between the project site and the TAZs representing the employee and member residence zip codes. Through this process, project-related travel is calculated on every single roadway in the traffic model network. The summation of all miles traveled on all roadways constituted total project VMT.

Table 18 displays the analysis results for the proposed project. As shown, the project would generate an estimated 30,639 VMT on a typical weekday. This estimate applies to both existing and cumulative conditions. This equates to an average trip length of 8.2 miles, which is reasonable based on the distribution of members and employees into specific zip codes.

TABLE 18: WEEKDAY VEHICLE MILES TRAVELED – PROPOSED PROJECT			
Land Use	Project Weekday VMT	Daily Project Trips	Average Trip Length
Proposed Medical Center Expansion	30,639	3,751	8.2 miles
Note: VMT = Vehicle Miles Traveled			

The following additional notes and observations are made regarding this analysis:

1. Because the proposed project would double the trip generation of the existing campus and the overall geographic origins of employees and members would not change, it can be concluded that the existing campus currently generates approximately 30,639 VMT on a weekday.
2. To the extent that the existing campus has trips made by ridesharing, transit, bicycling, or walking, they are considered in the VMT estimates (because VMT is derived from the campus' observed vehicular trip rates). Thus, this analysis meets the Caltrans' request that VMT reductions associated with these modes be considered.
3. Whereas VMT per employee or per capita are commonly used for residential and office projects, neither ratio is applicable for medical-office projects. This is because the proposed project consists of trips made by employees, members, deliveries, and even visitors. On a given weekday, it is not known precisely how many employees and patients may be on-site. Therefore, VMT ratios are not calculated in this study.
4. The Caltrans comment letter recommends that mitigation be considered for any roadway facility with increasing VMT. As shown on Table 16, all roadways within the study area would experience increased VMT. However, this suggestion is not supported by City of Roseville General Plan circulation policies, nor is it supported by the *Interstate 80 and Capital Freeway Corridor System Management Plan* (Caltrans District 3, May 2009). Neither document calls for mitigating increased VMT regardless of the level of traffic on a given roadway.

VII. PROJECT ACCESS AND INTERNAL CIRCULATION

This chapter evaluates the proposed project access and internal circulation. It also includes a discussion regarding construction staging.

PROJECT ACCESS

The following conclusions are offered along the two fronting roadways based on data in Chapters IV and V, the project site plan, City design standards, and engineering judgment. Recommendations are illustrated on **Figure 10**.

Cirby Way Project Frontage

- A review of the project driveways with applicable standards contained in *City of Roseville Design Standards* (January 2013) revealed the following:
 - o The site plan shows an eastbound right-turn lane of 175 feet at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway, whereas City standards call for a 200-foot turn lane.
 - o Construct a new right-turn only driveway east of the bus turnout along Cirby Way to enable more efficient egress and ingress from the north parking lot. The driveway is recommended to be aligned as shown on Figure 10 to provide direct access to the vehicle turnaround area near the main building⁵. As shown in Figure 10, the bus turnout would continue as an auxiliary lane along the project frontage, terminating as a right-turn deceleration lane at the new signal.⁶
 - o The westbound left-turn lane at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway is recommended to be lengthened from 175 to 250 feet to meet City design standards and accommodate projected vehicle queues.

⁵ Zone 2 of ST-46 within the City of Roseville 2016 *Design Standards* states that driveways are permitted as long as they are a minimum distance of 240 feet from the start of the adjacent bus turnout (See Appendix F). The site plan shows this distance will be 250 feet, thus permitting the construction of this driveway.

⁶ The eastbound left-turn lane at the new signal would need to prohibit u-turns so as to avoid causing excess queuing in that turn lane, weaving across Cirby Way from the new driveway, and excess travel demand passing through the Cirby Way/Riverside Avenue intersection during the PM peak hour.

250 ft. Recommended Turn Lane Length

Figure 10
Recommendations

Riverside Avenue

- The project site plan shows an atypical design for the Kaiser West Driveway (consisting of two separate outbound right-turn lanes). One lane would consist of channelized, free-flow movement that would appear to merge into the northbound right-turn lane, while the other would be a typical 90-degree stop-controlled movement. Fehr & Peers recommends the following at this driveway:
 - o Construct driveway with a standard commercial driveway design per *City of Roseville Design Standards*.
 - o To address potential on-site queuing issues, stripe “KEEP CLEAR” markings, and post stop signs at the first internal intersection as shown on Figure 10.
 - o Construct a 120-foot right-turn curb flare (see Appendix F) at the project driveway. Although City standards would dictate construction of a full deceleration lane at this driveway, the driveway’s proximity to Caltrans’ right-of-way/access control, and other physical constraints preclude this construction. The recommended 120-foot distance is estimated to be the maximum length that can be provided without needing to relocate the existing electrical control boxes south of the driveway.

INTERNAL CIRCULATION

Figure 10 shows that a number of recommendations are offered to improve internal circulation for vehicles and pedestrians. Key recommendations include the following:

- Install a raised crosswalk along the Kaiser West driveway at the pedestrian opening to the parking garage. The raised crosswalk will slow motorists and improve pedestrian visibility.
- Reconfigure the north parking lot to eliminate the drive aisle opening closest to the Kaiser North driveway and instead construct a drive aisle opening further west as shown on Figure 10.
- As shown on Figure 10, it is recommended that the northeast corner of the first internal intersection along the Kaiser North driveway not be built with permanent features that would be difficult or expensive to relocate. This is because the cumulative analysis indicated that the northbound left-turn queue from the signal would extend into this intersection. If this occurs, it would be desirable to provide a second northbound departing lane that enables motorists to access the dual right-turn lanes onto eastbound Cirby Way. Doing so will help alleviate queuing within the campus.

The project architect should review the configuration of the truck loading area in the southeast corner of the site to ensure that outbound trucks have an adequate line of sight of oncoming motorists.

CONSTRUCTION STAGING

Development of the proposed project would require a multi-phased construction staging plan that considers the need to demolish existing buildings, construct new buildings and parking lots/garages, reconstruct the Cirby Way project frontage (to improve sight distance), and reconstruct both project driveways. This effort is further complicated by the need to maintain continuous medical-office services, adequate parking, and a safe and convenient walking environment throughout construction.

Construction of the proposed project would generate a variety of truck and employee trips. Since the magnitude of these trips during peak hours would be less than that of the proposed project, absolute impacts (in terms of delay and queuing) when compared to project operations would not be significant. However, construction staging and lane closures could cause adverse effects (both on-site and off-site) if not carefully planned.

Accordingly, the project should develop a Construction Traffic Management Plan (TMP) to the satisfaction of the City's Engineering Department. The plan would address overall construction staging, changes in vehicular access, employee parking, truck staging, and complete/partial street closures.

At this stage, any type of construction impact analysis is premature due to the uncertainty of the construction staging plan. Fehr & Peers recommends that the construction TMP be developed such that the following performance standards are maintained at the site at all times:

- Delivery trucks do not idle/stage on Riverside Avenue or Cirby Way.
- All construction employees park on-site or in designated lots owned/leased by the applicant.
- A minimum of two driveway accesses are provided at all times into the project site.
- Special traffic management and construction staging is necessary for the reconstruction of Cirby Way to balance driver inconvenience, duration of construction, and cost.
- Roadways, sidewalks, crosswalks, and bicycle facilities shall be maintained clear of debris (e.g., rocks) that could otherwise impede travel and impact public safety.
- An adequate supply of parking is maintained on-site throughout construction to meet the parking needs of employees and members. Alternatively, employees park at a designated off-site lot and are shuttled to/from the project site.
- Pedestrian connections (including on-site and from public streets) are convenient and safe for pedestrian travel through construction.

VIII. IMPACTS AND MITIGATION MEASURES

This chapter evaluates the significance of project impacts (both project-specific and cumulatively considerable) using the criteria described in Chapter I. Where impacts are deemed significant, mitigation measures are recommended to lessen their significance.

EXISTING PLUS PROJECT CONDITIONS

Evaluation of Intersection Impacts

Impact TR-1 The project would cause the signalized Cirby Way/Vernon Street intersection to be degraded to a significant degree under existing conditions. This is considered a significant impact.

Mitigation Measure TR-1

The project applicant shall install a southbound right-turn overlap arrow at the Cirby Way/Vernon Street intersection.

This improvement, which would enable the southbound right-turn movement to operate simultaneously with the eastbound left-turn, would restore operations to the existing LOS D condition during the PM peak hour (see Appendix E).⁷ This feasible improvement is not included in the City's CIP. Because eastbound u-turns are prohibited, this measure would not require any other changes in permitted movements. This improvement would restore the impact to a **less-than-significant** level.

Table 10 shows that the project would not cause any study intersections to worsen from LOS C or better to LOS D or worse. Therefore, the project would not cause the overall percentage of signalized intersections throughout the City of Roseville operating at LOS C or better during the AM and PM peak hours to fall below 70 percent.

Evaluation of Freeway Impacts

The project would not cause a facility maintained by Caltrans to worsen from acceptable to unacceptable during the AM or PM peak hours. The project would not worsen unacceptable operations to a significant degree (as indicated by a change in the applicable performance measure) at a facility maintained by

⁷ The southbound right-turn movement accommodates 235 AM peak hour vehicles and 413 PM peak hour vehicles in a single lane. These substantial volumes would benefit from a right-turn overlap phase.

Caltrans during the AM or PM peak hours. The project would not cause traffic at an off-ramp maintained by Caltrans to queue back to the mainline, or add traffic to an off-ramp that already queues back to the mainline. Therefore, project impacts to freeway facilities are considered **less-than-significant** and no mitigation is required.

Evaluation of Bicycle Impacts

Assuming the project constructs a Class II bike lane along its Cirby Way frontage, it will be meeting the applicable policies and guidelines of Roseville's *Bikeway Master Plan* in terms of providing bicycle facilities. If construction of a Class II bike lane is deemed infeasible due to right-of-way or other constraints, then a modification to the City's *Bikeway Master Plan* will be necessary. Therefore, project impacts to bicycle facilities are considered **less-than-significant** and no mitigation is required.

Evaluation of Pedestrian Impacts

The project would not interfere with the operation of an existing pedestrian facility or preclude the construction of a planned pedestrian facility. It would provide improved pedestrian connections to existing bus stops along Cirby Way. Therefore, project impacts to pedestrian facilities are considered **less-than-significant** and no mitigation is required.

Evaluation of Transit Impacts

The project would not have a negative impact on transit operations, travel times, and/or circulation. It would include a new traffic signal on Cirby Way that would be coordinated with the other signals along the corridor to accommodate through traffic progression. It would provide improved pedestrian connections to existing bus stops along Cirby Way. Therefore, project impacts to transit facilities are considered **less-than-significant** and no mitigation is required.

CUMULATIVE PLUS PROJECT CONDITIONS

Evaluation of Intersection Impacts

Impact TR-2 The project would construct a new traffic signal at the Cirby Way/Cirby Hills Drive/Kaiser North Driveway that would operate at LOS E during the AM peak hour. This is considered a significant impact.

Mitigation Measure

None available.

Operations at this intersection would degrade from LOS C under existing conditions to LOS E during the AM peak hour under cumulative conditions due to queue spillbacks from the Cirby Way/Riverside Avenue intersection. Although a variety of signal timing modifications were tested, none were found to restore operations to LOS C or better (without substantially adversely affecting other corridors). Therefore, no feasible mitigation is available and this impact is considered **significant and unavoidable**.

The *Amoruso Ranch Specific Plan Final Transportation Impact Study* concluded that for all signalized intersections in the City under 2035 CIP Plus Amoruso Ranch Specific Plan conditions, LOS C or better would be achieved at 89.8% during the AM peak hour and 78.7% during the PM peak hour. As shown on page 45 of this study, the project (and background changes in assumed lane assumptions) would cause two additional intersections to operate at LOS D or worse during the AM peak hour. The project would cause one fewer intersection to operate at worse than LOS C during the PM peak hour. Thus, the project (and background changes in assumed lane assumptions) would result in 88.9% and 79.2%, of signalized intersections operating at LOS C or better during the AM and PM peak hours, respectively. Therefore, the project would not cause the overall percentage of signalized intersections throughout the City of Roseville operating at LOS C or better during the AM and PM peak hours to fall below 70%.

The City Council, following a public hearing, may determine, on a case-by-case basis that "extraordinary" improvements are not feasible or desirable and may relax the LOS C standard for a particular intersection. According to the results of this study, the City Council would need to make such a determination for the intersections listed on page 45 of this study.

Evaluation of Freeway Impacts

The project would not cause a facility maintained by Caltrans to worsen from acceptable to unacceptable during the AM or PM peak hours. The project would cause a 0.02% increase in traffic to segments of westbound I-80 that would cumulatively operate unacceptably. This is less than the variation in traffic volumes on a day to day basis and would not be noticeable to the driving public. Therefore, project impacts to freeway facilities are considered **less-than-significant** and no mitigation is required.
