

## **AGENDA**

**May 3, 2023**

**CITY COUNCIL**  
6:00 p.m.  
Council Chambers  
311 Vernon Street  
Roseville, California  
[www.roseville.ca.us](http://www.roseville.ca.us)

The meeting may be viewed on Comcast channel 14, Consolidated Communications channel 73, and AT&T U-Verse. City Council meetings are also video streamed live on the City's website at [roseville.ca.us/watch](http://roseville.ca.us/watch) and [roseville.ca.us/agenda](http://roseville.ca.us/agenda), and the City's YouTube channel at [youtube.com/CityofRosevilleCa](http://youtube.com/CityofRosevilleCa).

If you need a disability-related modification or accommodation to participate in this meeting, please contact Voice: 916-774-5200, TDD: 916-774-5220. Requests must be made as early as possible.

### **THE CITY OF ROSEVILLE WELCOMES YOUR PARTICIPATION**

If an agenda item is open to public comment, such public comment shall be addressed to the chair of the meeting.

**Public Comment** - Speakers have three minutes under Public Comment to speak on issues that are not listed on the agenda and are within the City's jurisdiction. The Brown Act does not permit any action or discussion on items not listed on the agenda.

**Consent Calendar** - If applicable, the Consent Calendar consists of routine items that may be approved by one motion. Any person can remove an item from the Consent Calendar to be discussed separately.

**Agenda Items** - Speakers have five minutes to address items that are listed on the agenda.

**Americans with Disabilities Act** - Notify the City Clerk or Secretary at least 72 hours in advance if special assistance is required to participate in a meeting including the need of auxiliary aids or services.

**Audio/Visual Presentations** - If making a presentation regarding an agenda item, audio/visual materials must be submitted to the City Clerk or Secretary at least 72 hours in advance.

Security procedures are in place to attend Roseville City Council meetings. All attendees must

successfully pass through a security metal detector. Any person with a prohibited item will not be allowed entry. Prohibited items include, but are not limited to: firearms (even with valid CCW), knives, pepper spray/mace, explosives of any kind/ any weapons and/or dangerous devices of any kind, illegal drugs and alcohol.

Roseville City Clerk 311 Vernon Street, Roseville, CA 916-774-5200 TDD 916-774-5220

**1. CALL TO ORDER**

**2. ROLL CALL**

**3. PLEDGE OF ALLEGIANCE**

**4. MEETING PROCEDURES**

**5. PRESENTATIONS**

**5.1. Proclamation - Public Service Recognition Week**

Proclaim May 7-13, 2023, as public service recognition week and encourage all citizens to recognize the accomplishments and contributions of government employees at all levels.

CONTACT: Blair Hutchison 916-774-5266 [bmhutchison@roseville.ca.us](mailto:bmhutchison@roseville.ca.us)

**5.2. Proclamation - Small Business Month May 2023**

Proclaim May 2023 as National Small Business Month and encourage support of this national effort so Roseville's small businesses can do what they do best – grow their businesses, create jobs, and ensure that our communities remain as vibrant tomorrow as they are today.

**Bids / Purchases / Services**

**7.2. Ammunition - Sole Source Purchase Order**

Memo from Management Analyst Mark Peinado and Police Chief Troy

Bergstrom recommending the City Council authorize a sole source purchase order to Miwall Corporation for the purchase of law enforcement duty ammunition. The Police Department has an ongoing requirement for ammunition for its various firearms used by police officers, animal control officers, and the regional SWAT team. Sufficient funds have been included for this purchase in the Police Department's FY2022-23 budget in the General Fund.

Scott Christian 916-774-5099 schristian@roseville.ca.us

### 7.3. Custodial Services - Contract Purchase Agreement

Memo from Administrative Technician Darci Carpenter and Public Works Director Jason Shykowski recommending the City Council adopt RESOLUTION NO. 23-143 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND UNITED BUILDING MAINTENANCE, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002800). Staff requests Council approve a contract purchase agreement with United Building Maintenance, Inc., to provide custodial and floor care services, in accordance with Custodial Services Request For Proposals No. 01-059, at a number of City facilities. The total annual value of the initial agreement with United Building Maintenance, Inc., is \$918,615.39, not to exceed annual budgeted amounts. The bid allowed for four additional renewal years at one-year intervals. Staff requests authorization to utilize the optional renewal years of the bid contract without further Council approvals until the contract expires or until City staff determines that continuing with the same vendor is not in the City's best interest. Funding for this agreement is included in the Custodial Services Unit FY2022-23 budget in the Facilities Services Fund, and will be included in future year proposed budgets.

### 7.4. Emergency Repairs - Contract Purchase Agreement Amendment and Budget Adjustment

Memo from Parks, Recreation & Libraries Superintendent Rob Nakamura and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt RESOLUTION NO. 23-156 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND ATI HOLDCO LLC DBA ATI RESTORATION LLC, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE; and adopt ORDINANCE NO. 6647 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2022-23 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. On February 2, 2023, a water line pipe/fitting at one of the sinks at the Coyote Ridge Adventure Club burst and leaked for over 12 hours causing significant water damage

to the interior flooring, walls, cabinetry and siding. Staff requests approval of a budget adjustment from the Youth Development Fund to remove wet material, conduct required air quality testing to ensure safety, and repair damages. Additionally, the North facing section of the driving range barrier at Diamond Oaks Golf Course was damaged during the winter storms on December 31, 2022. The increase to the contract purchase agreement will be an additional \$170,000 for a new total of \$260,000. Staff also requests a budget adjustment from the Golf Course Fund to remove and replace the structure. The project was approved as part of the FEMA Non-Competitive Procurement Justification due to the 2023 Winter Storm Emergency Response. The recommended budget adjustments and contract amendment have no impact on the General Fund.

#### 7.7. Regional Pump Station 26 and Force Main Capacity Improvement Project - Reject All Bids, Approve Plans and Specifications, and Authorize Staff to Call for Bids

Memo from Associate Engineer Rana Moore and Environmental Utilities Director Richard Plecker recommending the City Council adopt RESOLUTION NO. 23-146 REJECTING ALL BIDS FOR THE REGIONAL PUMP STATION 26 AND FORCE MAIN CAPACITY IMPROVEMENT PROJECT (RFQ #08-109). Staff requests Council reject all bids, approve the revised

Regional Pump Station 26 and Force Main Capacity Improvement project construction plans and specifications, and authorize staff to advertise the project and accept bids from prospective bidders. Funding is provided by the South Placer Wastewater Authority.

**7.8. Ferric Chloride - Contract Purchase Agreement Amendment**

Memo from Chief Plant Operator Jason Fick and Environmental Utilities Director Richard Plecker recommending the City Council adopt RESOLUTION NO. 23-151 APPROVING A CONTRACT PURCHASE AGREEMENT AMENDMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND KEMIRA WATER SOLUTIONS, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3001884). Staff requests Council approve an amendment to a contract purchase agreement with Kemira Water Solutions, Inc. from the original amount of \$124,800.00 to \$153,800.00 for the purchase of ferric chloride for the Pleasant Grove Wastewater Treatment Plant. Funding for the additional \$29,000 will be provided from the Environmental Utilities Department's Wastewater Operations Fund budget.

7.12. Internet Protocol version 4 (IPv4) - Engagement Agreement

Memo from Assistant IT Director Jesse Ravera and Chief Information Officer Hong Sae recommending the City Council adopt RESOLUTION NO. 23-155 APPROVING AN AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND HILCO IP SERVICES, LLC DBA HILCO STREAMBANK, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT AND ANY RELATED FORMS AND AGREEMENTS NEEDED TO EFFECTUATE THE TRANSACTIONS, ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve the Engagement Agreement with Hilco Streambank to broker the sale and transfer of excess City-owned Internet Protocol version 4 (IPv4) addresses. This agreement is expected to generate one time revenue from \$1.3 million to \$2.4 million. The City will sell between 32,766 and 57,344 IP addresses with a minimum sale price of \$43 per IP address. The net proceeds will be deposited into the Information Technology Replacement Fund to be used for future technology replacement projects.

7.13. Building Forward Library Facilities Improvement Program - Grant Application

Memo from Parks, Recreation & Libraries Manager Natasha Martin and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt RESOLUTION 23-149 APPROVING A GRANT APPLICATION TO THE CALIFORNIA STATE LIBRARY, AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE ALL RELATED FORMS AND AGREEMENTS ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approval to submit a grant application for the following project funding from California State Library's Building Forward Library Facilities

Improvement Program: Round Two funding includes the Martha Riley Community Library in the amount of \$2,063,794, Maidu Library, \$3,045,529 and Downtown Library, \$4,526,492. In this round there will be \$175,000,000 in competitive grant funding available. The total matching requirements for each project are as follows: Martha Riley Community Library, \$412,759, Maidu Library, and \$609,106, Downtown Library, \$905,298. The matching funds for these projects will be included in future Capital Improvement Plan funding for the General Fund.

#### 7.14.Homeless Prevention and Rapid Rehousing - Grant Agreement Amendment

Memo from Housing Manager Trisha Isom and Economic Development Director Melissa Anguiano recommending the City Council adopt RESOLUTION NO. 23-152 APPROVING A GRANT AGREEMENT AMENDMENT, BY AND BETWEEN AMI HOUSING, INC. AND THE CITY OF ROSEVILLE, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve the Homeless Prevention and Rapid Rehousing contract amendment between AMI Housing and the City. The recommended amendment will extend the contract through June 30, 2024 and supports the City's goal to maintain a safe and healthy community. No General Fund resources were used for the contract and no additional funding is being requested at this time.

## **8. ORDINANCES**

### **8.1. Sierra Vista Specific Plan Westbrook Boulevard - Reimbursement Agreement and Budget Adjustment**

Memo from City Engineer Marc Stout and Development Services Director Mike Isom recommending the City Council adopt RESOLUTION NO. 23-157 APPROVING A REIMBURSEMENT AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND JOHN MOURIER CONSTRUCTION, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE; and adopt ORDINANCE NO. 6648 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2022-23 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. Staff requests Council approve a reimbursement agreement with John Mourier Construction, Inc. that will provide advanced funding in the anticipated Reimbursable Cost amount of \$4,067,812 necessary to complete the remaining segment of Westbrook Boulevard to Baseline Road. Construction of this segment of Westbrook Boulevard is the obligation of the adjacent landowner at the time the parcel develops. The developer has indicated no immediate plans to develop the adjacent parcel. In an effort to expediently improve traffic circulation and emergency vehicle response times west of Fiddymont Road, John Mourier Construction, Inc. (JMC) has agreed to build the remaining segment this summer, provided the City advances funding for this public improvement purpose. JMC will be obligated to reimburse the City over a period not to exceed ten (10) years, or sooner as development occurs, as specified in the reimbursement agreement. The improvements are identified in the City's Capital Improvement Program and Sierra Vista Specific Plan. Staff also requests a budget adjustment necessary to appropriate \$4,000,000 from the Strategic Improvement Fund, \$400,000 from the Sierra Vista Traffic Mitigation Set-Aside Fund, \$100,000 from Electric Fund and \$1,040,000 from the Electric Rate Stabilization Fund to the City's Developer Reimbursement account. The project is ultimately a developer-funded obligation and the recommended actions will have no impact to the City's General Fund.

## 10. PUBLIC HEARING

### **NOTICE TO THE PUBLIC**

City Council, when considering the matter scheduled for hearing, will take the following actions:

1. Open the Public Hearing
2. Presentation by Staff
3. Presentation by applicant or Appellant
4. Accept Public Testimony
5. Appellant or Applicant Rebuttal Period
6. Close the Public Hearing
7. City Council Comments and Questions
8. City Council Action

In the future, if you wish to challenge in court any of the matters on this agenda for which a public hearing is to be conducted, you may be limited to raising only those issues, which you, or someone else raised orally at the Public Hearing or in written correspondence received by the City on or before the hearing.

Public Hearings listed for continuance will be continued as noted and posting of this agenda serves as notice of continuation.

#### 10.1. Community Development Block Grant – 2023 Annual Action Plan

Memo from Housing Manager Trisha Isom and Economic Development Director Melissa Anguiano recommending the City Council adopt RESOLUTION NO. 23-143 APPROVING THE 2023 ANNUAL ACTION PLAN AND AUTHORIZING THE CITY MANAGER TO EXECUTE NECESSARY DOCUMENTS AND CERTIFICATIONS ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approval of the City's 2023 Annual Action Plan for the federal Community Development Block

Grant Program and authorization by the City Manager to execute necessary documents and certifications on behalf of the City. This item does not result in any impact to the City's General Fund.

CC #: 2663

CONTACT: Trisha Isom 916-746-1239 [tisom@roseville.ca.us](mailto:tisom@roseville.ca.us)

#### 10.2.Zoning and Sign Ordinance Update

Memo from Senior Planner Lauren Hocker and Development Services Director Mike Isom recommending the City Council adopt the two findings of fact and introduce for first reading the ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE AMENDING ZONING ORDINANCE CHAPTERS 19.08, 19.12, 19.26, 19.28, 19.60, 19.74, AND 19.82 OF TITLE 19 OF THE ROSEVILLE MUNICIPAL CODE REGARDING COMMERCIAL ZONES, PARKING SPACE REQUIREMENTS, DENSITY BONUS REGULATIONS, ACCESSORY DWELLING UNITS, PERMIT REQUIREMENTS, AND MAJOR PROJECT PERMIT PROCESSING; and introduce for first reading the ORDINANCE OF THE COUNCIL OF THE CITY OF ROSEVILLE AMENDING SIGN ORDINANCE CHAPTERS 17.04 AND 17.08 OF TITLE 17 OF THE ROSEVILLE MUNICIPAL CODE REGARDING APPEALS AND DEFINITIONS. The project is a City-initiated update to Title 19 (Zoning Ordinance) of the Roseville Municipal Code (RMC) to reflect changes in state law and implement annual maintenance updates. The project also includes two minor corrections to Title 17 (Sign Ordinance) of the Roseville Municipal Code. The request includes an Ordinance amending Zoning Ordinance Section 19.08.080 (Residential Use Types) to correct errors in the definition of long-term care facilities; Section 19.08.090 (Commercial Use Types) to correct an error in the definition of long-term care facilities, to add a definition for electric vehicle charging facilities, and adjust the definition of gas stations to recognize alternative fuels; Section 19.12.020 (Commercial Zones, Permitted Use Types) to add electric vehicle charging facilities to the permitted use table and carry forward the adjustment to the gas station definition; Section 19.26.030 (Parking Space Requirements by Use Type) to add a religious-use parking reduction in conjunction with a housing project pursuant to Assembly Bill 2244; Chapter 19.28 (Density Bonus) in various places to add shared housing to the density bonus provisions and make other minor clarifications pursuant to Assembly Bill 682; Chapter 19.60 (Accessory Dwelling Units) to adjust the height limitations for "mandatory minimum" accessory dwelling units and make other clarifications pursuant to Assembly Bill 2221; Section 19.74.010 (Permit Requirements) to change the approving authority for a Design Review Permit for a Residential Subdivision (DRRS) from the Planning Commission to the Planning Manager; and Section 19.82 (Major Projects Permit Processing) to clarify the purpose and process description for amendments to a Major Project Permit. The project also includes a minor correction to Title 17 (Sign Ordinance) Section 17.08.510 (Appeals from the decision of the director) to correct an internal inconsistency in which the Design Committee is identified as the appeal authority but a later sentence erroneously refers to a hearing by City Council and to Section 17.04.090 (Building façade definition) to clarify that for the purposes of sign length, the façade is the length of a single, uninterrupted wall plane. The ordinance amendments will have no impact on the City's General Fund.

#### 10.3.2023 Weed Abatement - Public Hearing

Memo from Assistant Fire Chief Jason Rizzi and Fire Chief Rick Bartee recommending the City Council adopt RESOLUTION NO. 23-141 ORDERING THE DESTRUCTION OR REMOVAL OF ALL WEEDS, DIRT, RUBBISH AND RANK GROWTHS IN THE CITY OF ROSEVILLE, AND OVERRULING ANY AND ALL OBJECTIONS THERETO. This item is the second and final step necessary to initiate the 2023 Weed Abatement Program. Owners of private parcels that are abated by the City are responsible for the costs associated with providing abatement services. A bill is sent to each property owner detailing the abatement costs, as well as an administrative fee. If the property owner fails to pay the bill, the City places a lien on the subject property and the monies owed are reimbursed through the property tax collection process.

#### 10.4. Water, Wastewater, and Waste Services - Proposed Utility Rate Adjustments and Municipal Code Revisions for Fiscal Year 2023-24 and Fiscal Year 2024-25

Memo from Assistant Environmental Utilities Director Devin Whittington and Environmental Utilities Director Richard Plecker recommending the City Council conduct a public hearing to receive public comment regarding proposed rate adjustments effective July 1, 2023, and July 1, 2024, for water, wastewater, and waste services utility rates and associated amendments to the Roseville Municipal Code; and introduce for first reading ORDINANCES OF THE COUNCIL OF THE CITY OF ROSEVILLE AMENDING SECTIONS 9.12.030, 9.12.070, AND 9.12.090 OF CHAPTER 9.12 AND AMENDING SECTION 9.17.040 OF CHAPTER 9.17 OF TITLE 9 REGARDING GARBAGE, AMENDING SECTIONS 14.08.090 AND 14.08.100 OF CHAPTER 14.08, AMENDING SECTIONS 14.16.200 OF CHAPTER 14.16, AND AMENDING SECTION 14.17.080 OF CHAPTER 14.17 OF TITLE 14 OF THE ROSEVILLE MUNICIPAL CODE REGARDING PUBLIC UTILITY FEES, CHARGES AND RATES. The proposed rate adjustments will result in additional combined revenue over the next two years of approximately \$4.0 million to the water utility, and \$5.7 million to the wastewater utility. The increased revenue is necessary to maintain current levels of service for Environmental Utilities.

**Contact:** Blair Hutchison 916-774-5266 bmhutchison@roseville.ca.us

Meeting Date: 5/3/2023  
Item #: 5.1.

### RECOMMENDATION TO COUNCIL

Proclaim May 7-13, 2023, as public service recognition week and encourage all citizens to recognize the accomplishments and contributions of government employees at all levels.

### BACKGROUND

Not applicable.

### FISCAL IMPACT

Not applicable.

### ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Ceremonial documents meet the above criteria and are not subject to CEQA. No additional environmental review is required.

### CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Respectfully Submitted,

Blair Hutchison, City Clerk Technician

Carmen Avalos, City Clerk

Proclamation - Public Service Recognition Week

# Proclamation

## PUBLIC SERVICE RECOGNITION WEEK

MAY 7-13, 2023

In honor of the millions of public employees at federal, state, county, and city levels:

**WHEREAS**, Americans are served every day by public servants at the federal, state, county, and city levels, and these unsung heroes do the work that keeps our nation functioning; and

**WHEREAS**, public employees take oaths to perform their jobs; and

**WHEREAS**, many public servants, including police officers, firefighters, military personnel, border patrol officers, embassy employees, and health care professionals, risk their lives each day in service to the people of the United States and around the world; and

**WHEREAS**, public servants include: utility workers, inspectors, engineers, teachers, scientists, social workers, safety inspectors, dispatchers, laborers, parks, recreation and library workers, computer technicians, and countless other occupations, and day in and day out they provide the diverse services demanded by the American people of their government with efficiency and integrity; and

**WHEREAS**, without these public servants at every level, continuity would be impossible in a democracy that regularly changes its leaders and elected officials.

**NOW, THEREFORE, I, BRUCE HOUESHELDT, MAYOR OF THE CITY OF ROSEVILLE, CALIFORNIA**, do hereby proclaim **May 7-13, 2023, as PUBLIC SERVICE RECOGNITION WEEK** and encourage all citizens to recognize the accomplishments and contributions of government employees at all levels.

**SIGNED AND APPROVED this 3rd day of May 2023.**

**BRUCE HOUESHELDT, MAYOR**

Proclamation - Small Business Month

# Proclamation

## SMALL BUSINESS MONTH MAY 2023

**WHEREAS**, since 2019, the U.S. Chamber of Commerce annually declares May as National Small Business Month, recognizing the critical contributions of America's entrepreneurs and small business owners; and

**WHEREAS**, Roseville recognizes the many contributions small businesses bring to our local economy and adds value to the quality of life of our residents while attracting people to our area increasing and supporting growth; and

**WHEREAS**, there are more than 33.2 million small businesses in the U.S. and more than half of Americans either own or work for a small business, and small businesses create about two-thirds of new jobs in the U.S. each year; and

**WHEREAS**, Roseville's small business owners have a passion for what they do. When we support small businesses, jobs are created, and local communities preserve their unique culture; and

**WHEREAS**, Roseville's Economic Development Strategy includes goals to support partnerships, entrepreneurship and small businesses by building a supportive ecosystem that creates reliable pathways for entrepreneurs to confidently start and grow successful businesses; and

**WHEREAS**, the U.S. Chamber of Commerce's goal is to help small businesses and startup owners begin and succeed in their business; and

**WHEREAS**, in recognition of the hard work, ingenuity, and dedication of small businesses and their contribution to the economy, the Roseville Chamber of Commerce and the City of Roseville's Economic Development Department join in this national effort to celebrate small businesses.

**NOW, THEREFORE, I, BRUCE HOUDSHELDT, MAYOR OF THE CITY OF ROSEVILLE, CALIFORNIA**, do hereby proclaim **MAY 2023** as **NATIONAL SMALL BUSINESS MONTH** and encourage support of this national effort so Roseville's small businesses can do what they do best – grow their businesses, create jobs, and ensure that our communities remain as vibrant tomorrow as they are today.

**SIGNED AND APPROVED** this 3<sup>rd</sup> day of May 2023.

### **Bids / Purchases / Services**

#### **6.2. Defibrillator Maintenance - Sole Source Contract Purchase Agreement**

Memo from Battalion Chief Mike Bradley and Fire Chief Rick Bartee recommending the City Council adopt RESOLUTION NO. 23-110 APPROVING A SOLE SOURCE CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND HOWMEDICA OSTEONICS CORPORATION DBA STRYKER SALES, LLC, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002739). Staff requests Council approve a five-year sole source service maintenance agreement for LifePak15 and LifePak1000 defibrillators with Stryker/Howmedica for an estimated total cost of \$150,000. The service agreement will allow Stryker/Howmedica the ability to provide scheduled maintenance and repairs as needed to the Roseville Fire Department's EKG/Defibrillator monitors (LifePak15) and Automated External Defibrillators (LifePak1000). Funding for the agreement is included in the Fire Department's annual budget in the General Fund and the estimated amounts to be paid over the five fiscal year budgets are as follows: FY2022-23 \$30,000; FY2023-24 \$30,000; FY2024-25 \$30,000; FY2025-26 \$30,000; and FY2026-27 \$30,000.

6.4. Play Structure Replacements - Contract Purchase Agreements

Memo from Park Planning & Development Manager Tara Gee and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt RESOLUTION NO. 23-113 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PLAYPOWER LT FARMINGTON, INC. (FKA LITTLE TIKES COMMERCIAL PLAY SYSTEMS) C/O ALL ABOUT PLAY, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002694); and adopt RESOLUTION NO. 23-114 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PLAYPOWER LT FARMINGTON, INC. (FKA LITTLE TIKES COMMERCIAL PLAY SYSTEMS) C/O ALL ABOUT PLAY, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002692); and adopt RESOLUTION NO. 23-115 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PLAYPOWER LT FARMINGTON, INC. (FKA LITTLE TIKES COMMERCIAL PLAY SYSTEMS) C/O ALL ABOUT PLAY, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002762); and adopt RESOLUTION NO. 23-116 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PLAYPOWER LT FARMINGTON, INC. (FKA LITTLE TIKES COMMERCIAL PLAY SYSTEMS) C/O ALL ABOUT PLAY, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002693). Staff requests Council approve four (4) contract purchase agreements with Playpower LT Farmington, Inc. (fka Little Tikes Commercial Play Systems) c/o All About Play for the Blue Oaks Park, Lockridge Park, Mark White Park and Erven Park play structure replacements. In the fall and winter of 2022, staff sought public

feedback for new play structures at the parks. The outreach process included social media and onsite signage with a QR code inviting residents to review, comment and vote on proposed play structure designs. The funding for these play structure replacements was approved by Council in FY2022-23. Blue Oaks, Lockridge and Mark White parks are funded through the Parks, Recreation & Library Capital Projects Fund. Erven Park's play structure replacement is funded through the sinking funds from the Highland Reserve North Community Facilities District No. 2 (Services District). There will be no additional General Fund impacts. The maintenance for Erven Park through the Highland Reserve North Community Facilities District No. 2 (Services District) will not increase.

6.5. Diamond Oaks Golf Course Driving Range Repair - Contract Purchase Agreement

Memo from Parks, Recreation & Libraries Superintendent Rob Nakamura and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt RESOLUTION NO. 23-101 APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND JUDGE NETTING, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002748). Staff requests Council award a contract purchase agreement in the amount of \$151,200 to Judge Netting, Inc. and requests authorization to approve change order requests in an amount not to exceed 10% of the contracted amount. Judge Netting will replace 450 linear feet of netting and install new 40-foot steel poles. This project includes design submittals with California stamped engineering to ensure compliance and safety. The North facing section of the driving range barrier at Diamond Oaks Golf Course was damaged during the winter storms on December 31, 2022. The project was approved as part of the Federal Emergency Management Agency (FEMA) Non-Competitive Procurement Justification due to the 2023 Winter Storm Emergency Response. Funds will be requested for reimbursement through FEMA, but are currently available within the Golf Course Fund.

6.7. Aquifer Storage and Recovery Well Drilling - Campus Oaks (Well 13) and Misty Wood (Well 19) - Award of Construction Contract and Budget Adjustment

Memo from Senior Engineer Janice Gainey and Environmental Utilities Director Richard Plecker recommending the City Council adopt RESOLUTION NO. 23-108 APPROVING AN AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND STONEHOUSE DRILLING & CONSTRUCTION, LLC, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE; and adopt ORDINANCE NO. 6636 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2022-23 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. Staff requests Council approval and award of a Construction Agreement to Stonehouse Drilling & Construction for the Aquifer Storage and Recovery Well Drilling: Campus Oaks (Well 13) and Misty Wood (Well 19) project in the amount of \$1,341,695 and authorization for the City Manager or his designee to approve and pay for contract change orders that could increase the contract amount by no more than 10 percent or \$134,170 for a not-to-exceed total contract amount of \$1,475,865. Staff also requests approval of a budget adjustment to fund the project with \$1,625,865 from available resources in the Water Construction Fund.

CC #: 2619

File #: 0800-02 & 0201-01

CONTACT: Janice Gainey 916-774-5535 jrgainey@roseville.ca.us

Staff requested the item be continued to the meeting of April 19.

6.8. 2022 Sewer Collection System Cured-in-Place Pipe Rehabilitation Project – Award of Construction Contract

Memo from Associate Engineer Jonathan Cummings and Environmental Utilities Director Richard Plecker recommending the City Council adopt RESOLUTION NO. 23-107 APPROVING AN AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND EXPRESS SEWER & DRAIN, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approval and award of a construction contract for the 2022 Sewer Collection System Cured-in-Place Pipe Rehabilitation Project to Express Sewer and Drain, Inc. in the amount of \$2,860,945, and authorization for the City Manager or his designee to approve and pay for contract change orders for the project that could increase the contract amount by no more than 10% or \$286,095. The total cost for this construction project is estimated to be \$3,567,600, which includes the construction cost, contingency for potential change orders, and secondary labor, and is within the existing project budget which is funded through the Wastewater Rehabilitation Fund.

**6.9. Uniform Rental and Cleaning Service - Contract Purchase Agreement Amendment**

Memo from Senior Buyer Joanna Oukrop and Assistant City Manager/Chief Financial Officer Dennis Kauffman recommending the City Council adopt RESOLUTION NO. 23-111 APPROVING CONTRACT PURCHASE AGREEMENT AMENDMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PRUDENTIAL OVERALL SUPPLY, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE (3002553). Staff requests Council approve an amendment to a contract purchase agreement with Prudential Overall Supply to extend the end date to September 30, 2023, increase the contract total from \$74,999 to \$152,000. Funding is included in the respective departments' budgets for FY2022-23 and will be included in the proposed budget for FY2023-24, with spending in FY2023-24 contingent upon Council approval of the proposed budget.

**6.10. Fleet Equipment – Purchase Order and Budget Adjustment**

Memo from Fleet Manager Brandy LeBeau and Public Works Director Jason Shykowski recommending the City Council adopt ORDINANCE NO. 6635 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2022-23 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. Staff requests Council approve a purchase order to Turf Star, Inc. for one (1) TORO Pro Force debris blower, one (1) TORO Sand Pro ballfield groomer, and one (1) TORO ProCore aerator utilizing Sourcewell contract# 031121-TTC in the amount of \$91,494; and approve a budget adjustment amending the FY2022-23 Fleet Replacement Fund budget by \$6,200, with a charge to the Park Maintenance budget in the General Fund, for the additional costs associated with the purchase of the TORO ProCore aerator. The remaining funding for these purchases is included in the FY2022-23 Fleet Replacement Fund budget.

**Resolutions**

**6.11. Dry Creek Greenway East Trail Phase I Project - Right of Way Services and Professional Services Agreement Amendment**

Memo from Associate Engineer Cathy Gosalvez and Public Works Director Jason Shykowski recommending the City Council adopt RESOLUTION NO. 23-106

APPROVING A FIRST AMENDMENT TO PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND PARAGON PARTNERS CONSULTANTS, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve a first amendment to the professional services agreement with Paragon Partners Consultants, Inc. for right of way acquisition services for the Dry Creek Greenway East Phase 1 Trail Project. The project will construct a paved multi-use trail along Dry, Cirby, and Linda Creeks from Darling Way/Riverside Avenue to the existing Maidu Park Trail at Rocky Ridge Drive. The amendment to the agreement is for \$27,035.48. The Dry Creek Greenway East Trail Project is funded by federal, state and local sources: Solutions for Congested Corridors, Active Transportation Program, Congestion Mitigation and Air Quality, and Local Transportation Funds. There are sufficient funds in the existing project budget to cover the cost of the amendment. No General Fund resources will be used for the project.

#### 6.12. California Automated Permit Processing Program - Grant Application

Memo from Development Services Manager Joe Allen and Development Services Director Mike Isom recommending the City Council adopt RESOLUTION NO. 23-109 APPROVING A GRANT APPLICATION TO THE CALIFORNIA ENERGY COMMISSION, AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE ALL RELATED FORMS AND AGREEMENTS ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council authorize the City Manager or his designee to submit a California Automated Permit Processing (CalApp) Program grant application to the California Energy Commission to comply with SB 379, which requires most California cities and counties to establish an online, automated permitting platform for residential solar energy systems. The grant solicitation offers up to \$20 million statewide in grant funding on a first-come, first-serve basis, and the City is eligible to receive \$80,000 to cover the City's costs associated with implementing the state-mandated online solar permitting program. Authorizing staff to submit the grant application is not expected to result in a fiscal impact to the City's General Fund.

#### 6.13. Emergency Operations Plan Update - Professional Services Agreement

Memo from Assistant Fire Chief Jason Rizzi and Fire Chief Rick Bartee recommending the City Council adopt RESOLUTION NO. 23-102 APPROVING A PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND TETRA TECH, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approval of a professional services agreement with Tetra Tech, Inc. for preparation of the City's Emergency

Operations Plan (EOP) with a not-to-exceed amount of \$85,850. Funding for the EOP update will be provided by the General Fund contingency budget.

#### 6.14. Community-Owned Grid Resilience and Innovation Program – Grant Application

Memo from Communications and Marketing Manager Erin Frye and Electric Utility Director Dan Beans recommending the City Council adopt RESOLUTION NO. 23-112 APPROVING A GRANT APPLICATION TO THE U.S. DEPARTMENT OF ENERGY, AND AUTHORIZING THE CITY MANAGER OR HIS DESIGNEE TO EXECUTE ALL RELATED FORMS AND AGREEMENTS ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve the Community-Owned Grid Resilience and Innovation Program (CO-GRIP) grant application, including documents that were already submitted by March 17, 2023 as required to meet application deadlines. Roseville Electric joined Beneficial Electrification League on this grant application to secure funding to upgrade the utility's current Dispatch Center Supervisory Control and Data Acquisition (SCADA) system. If the CO-GRIP application is successful, it will provide up to \$450,000 to be applied towards the Electric Dispatch Center SCADA Upgrade, which was approved in the FY2022-23 Electric Fund budget. Award monies would offset costs that would otherwise come from the Roseville Electric capital improvement project budget.

#### 6.15. Retail Electric Energy - Services Agreement

Memo from Senior Energy Services Account Representative Bill Chaplin and Electric Utility Director Dan Beans recommending the City Council adopt RESOLUTION NO. 23-105 APPROVING A RETAIL ELECTRIC ENERGY SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND THE TSI SEMICONDUCTORS CORPORATION, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve a Retail Electric Energy Services Agreement with TSI Semiconductors Corporation. The Agreement will help stabilize the utility's future revenues, reduce the risk of needing additional rate increases on other customers, and continues an important partnership with a large electric customer. The fiscal impact of the agreement will result in an estimated revenue reduction to the Electric Fund of \$90,000 in FY2022-23 and \$121,000 in FY2023-24. There is no fiscal impact to the General Fund.

6.16. Resolutions of Intention to Form Amoruso Ranch Community Facilities Districts and Resolution of Intention to Annex into Community Facilities District No. 3 (Municipal Services)

Memo from Management Analyst Jeannine Thrash and Assistant City Manager/Chief Financial Officer Dennis Kauffman recommending the City Council adopt RESOLUTION NO. 23-118 A RESOLUTION OF INTENTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE TO FORM A COMMUNITY FACILITIES DISTRICT, DESIGNATE AN IMPROVEMENT AREA THEREIN, ESTABLISH A FUTURE ANNEXATION AREA, PROVIDE FOR ADDITIONAL FUTURE IMPROVEMENT AREAS THEREIN, AND TO AUTHORIZE THE LEVY OF A SPECIAL TAX THEREIN TO FINANCE PUBLIC FACILITIES AND PUBLIC SERVICES IN AND FOR SUCH COMMUNITY FACILITIES DISTRICT; and adopt RESOLUTION NO. 23-119 A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ROSEVILLE OF INTENTION TO INCUR BONDED INDEBTEDNESS TO FINANCE THE ACQUISITION AND CONSTRUCTION OF CERTAIN FACILITIES IN AND FOR THE CITY OF ROSEVILLE AMORUSO RANCH COMMUNITY FACILITIES DISTRICT NO. 1 (PUBLIC FACILITIES) AND IMPROVEMENT AREAS THEREIN; and adopt RESOLUTION NO. 23-120 A RESOLUTION OF INTENTION TO FORM AMORUSO RANCH COMMUNITY FACILITIES DISTRICT NO. 2 (PUBLIC SERVICES); and adopt RESOLUTION NO. 23-121 A RESOLUTION OF INTENTION TO ANNEX TERRITORY TO COMMUNITY FACILITIES DISTRICT AND TO AUTHORIZE THE LEVY OF SPECIAL TAXES THEREIN. Brookfield Properties, the landowner proposed to be included in the public infrastructure district, has requested the City form a Community Facilities District (CFD) under the Mello-Roos Community Facilities Act of 1982 to provide funding for certain authorized public facilities within the property, as detailed in the List of Authorized Facilities and Services (for Amoruso Ranch CFD No. 1, Public Facilities). The landowner is obligated per the Development Agreement to form a Public Services CFD to fund maintenance (Amoruso Ranch CFD No. 2), and annex into CFD No. 3, Municipal Services, prior to the issuance of the first residential building permit. The project is approximately 695 acres and has been approved for development of 2,826 residential units and 45.6 acres of community commercial and commercial/mixed use. The formation, annexation, and administration of the CFDs will not negatively impact the City's General Fund.

6.17. Sales Tax Revenue Consulting Services - Professional Services Agreement Amendment

Memo from Assistant Finance Director Scott Pettingell and Assistant City Manager/Chief Financial Officer Dennis Kauffman recommending the City Council adopt RESOLUTION NO. 23-122 APPROVING A SECOND AMENDMENT TO THE PROFESSIONAL SERVICES AGREEMENT BY AND BETWEEN THE CITY OF ROSEVILLE AND MUNISERVICES, LLC, AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF

ROSEVILLE. Staff requests Council authorize the City Manager to exercise the agreement option to extend the agreement for an additional one-year period commencing on April 8, 2023, and ending on April 7, 2024. MuniServices, LLC provides sales tax and transaction and use tax auditing, projection, recovery, and consultant services. MuniServices, LLC's compensation is based on a portion of quarterly revenues received by the City due to their audit and recovery services. The additional one-year extension will increase the total not-to-exceed amount from \$500,000 to \$750,000. The additional sales and use tax revenues that the City receives for the General Fund from these services more than offsets the cost.

6.18. Generation Piping Integrity Management Consultation and Inspection Services - Professional Services Agreement

Memo from Power Plant Engineer Michael Zasso and Electric Utility Director Daniel Beans recommending the City Council adopt RESOLUTION NO. 23-117 APPROVING A PROFESSIONAL SERVICES AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND HRST, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE. Staff requests Council approve a professional services agreement with HRST, Inc. for inspection, testing, and engineering analysis services for the Roseville Electric Generation Division's high energy mechanical systems. The cost of the agreement will not exceed \$750,000. Funding is included in the Electric Department's FY2022-23 budget in the Electric Fund. Future spending is subject to approval of future year budgets.

6.19. Maidu Softball Restroom Renovation Project - Notice of Completion

Memo from Park Development Project Manager Heather Buck and Parks, Recreation & Libraries Director Jill Geller recommending the City Council adopt RESOLUTION NO. 23-104 ACCEPTING THE PUBLIC WORK KNOWN AS THE MAIDU SOFTBALL RESTROOM RENOVATION PROJECT, APPROVING THE "NOTICE OF COMPLETION", AND AUTHORIZING THE PARKS, RECREATION AND LIBRARIES DIRECTOR TO EXECUTE SAID NOTICE ON BEHALF OF THE CITY OF ROSEVILLE. The Parks, Recreation & Libraries Department has made a final inspection of the Maidu Softball Restroom Renovation Project and has found that all contract work has been completed in accordance with the improvement plans and specifications. The project is now ready for acceptance. The Maidu Softball Fields are located on the 152-acre regional park site located east of Rocky Ridge Drive and south of Douglas Boulevard. The project included minor alterations to the existing restrooms for accessibility and ease of maintenance. These improvements were necessary to replace the aging and deteriorating infrastructure and conform to current building code regulations. In accordance with City specifications, the contractor shall

guarantee the installation of these improvements for a period of twelve (12) months from the date of this Notice of Completion. Maintenance of the existing restrooms is provided by the General Fund and will remain unchanged.

## **Ordinances (for introduction and adoption - appropriation/urgency measures)**

### **6.20.Staffing Changes - Electric Department**

Memo from Human Resources Manager Linda Hampton and Human Resources Director Stacey Peterson recommending the City Council adopt ORDINANCE NO. 6638 AMENDING ORDINANCE NO. 6629, THE SALARY ORDINANCE FOR MANAGEMENT EMPLOYEES, AS AMENDED BY APPENDIX "G" TO BE EFFECTIVE APRIL 8, 2023, AS AN URGENCY MEASURE. The Human Resources Department and the Electric Department have developed recommendations for an Electric Department reorganization that focuses on better positioning the electric utility department for the future by creating organizational and operational efficiencies, supporting succession planning, and offering advancement opportunities to promote employee retention. The recommendations include the addition of three (3) position allocations that will be funded through the elimination of three (3) vacant position allocations, and the addition of four (4) new classifications. The estimated total cost of the recommended position adjustments is \$49,252 for the remainder of FY2022-23 and \$256,110 annually. The Electric Fund will absorb the \$49,252 impact for the remainder of FY2022-23 through salary savings. The ongoing annual impact of \$256,110 will be programmed in future Electric Fund annual budgets.

#### 6.22. Community Facilities Districts - Budget Adjustment

Memo from Management Analyst Jeannine Thrash and Assistant City Manager/Chief Financial Officer Dennis Kauffman recommending the City Council adopt ORDINANCE NO. 6633 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2022-23 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. The City's budget is developed and proposed for adoption prior to the final tax levy budget for each community facilities district (CFD) is determined. The recommended budget adjustment trues up the budgets after the final expenditure estimates, including pay-as-you-go developer reimbursements, are taken into consideration. Also, this budget adjustment will realign the budget for debt service related fees to improve the accounting and financial reporting. There are sufficient fund balances in all the identified CFDs to accommodate the budget adjustments. There is no impact to the General Fund.

## 7. ORDINANCES

### 7.1. Environmental Utilities Fiscal Year 2022-23 Interfund Transfers – Budget Adjustment

Memo from Acting Senior Business Analyst Archana Wagley and Environmental Utilities Director Richard Plecker recommending the City Council adopt ORDINANCE NO. 6634 AUTHORIZING CERTAIN AMENDMENTS TO THE FISCAL YEAR 2022-23 BUDGET AND DECLARING THIS ORDINANCE TO BE IMMEDIATELY EFFECTIVE AS AN APPROPRIATION MEASURE. Staff requests Council approve a budget adjustment for FY2022-23 to transfer remaining year-end funds from various Environmental Utilities' operating funds to their respective rehabilitation and vehicle replacement funds. Transferred funding will be used to offset future infrastructure rehabilitation costs and to prepare for increased vehicle costs as the City prepares for the Advanced Clean Fleet regulations. The recommended interfund transfers have no impact on the General Fund.

## COUNCIL COMMUNICATION

**CC #: 2669**  
**File #: 0203-12**

**Title:** Ammunition - Sole Source Purchase Order  
**Contact:** Mark Peinado 916-774-5021 mcpeinado@roseville.ca.us  
Scott Christian 916-774-5099 schristian@roseville.ca.us

**Meeting Date: 5/3/2023**  
**Item #: 7.2.**

### RECOMMENDATION TO COUNCIL

Staff recommends that the City Council approve a Sole Source Purchase Order to Miwall Corporation for the purchase of ammunition in the amount of \$18,845.48.

### BACKGROUND

The Police Department has an ongoing requirement for ammunition for its Police personnel. The purchase is for pistol, revolver, and rifle caliber rounds of ammunition to be used in Glock Model 22, 23 and 35 pistols, duty pistols, revolvers, AR-15 rifles, and Colt M-4's. These various weapons are used by the City's patrol officers, Regional SWAT team, and Animal Control officers. The Police Department continues to face delays in acquiring ammunition from vendors due to worldwide shortages of raw materials and an unprecedented demand from law enforcement, military, and civilian markets.

The FBI and the International Wound Ballistics Association have established criteria for bullet/ammunition performance. The Hornady Critical Duty handgun ammunition has undergone extensive testing by the FBI and meets and/or exceeds all of their ballistic testing criteria. The testing criteria includes terminal performance into ballistic gelatin after penetrating through establish barriers such as: Auto Glass, Drywall, Plywood, Sheet Metal, and heavy clothing. RPD has conducted the same testing process as described above and agree/concur with the findings and/or performance of the Hornady ammo. Additionally, the Hornady ammo is extremely reliable and rarely malfunctions/jams. Miwall Corporation has distributorship rights to the Hornady ammo for law enforcement in California.

The Police Department has previously purchased ammunition during FY2022-23 from Miwall Corporation at an amount of \$74,961.68. Purchasing additional ammunition from Miwall Corporation will amount to a total spend of \$93,807.16.

Hornady Ammunition has an exclusive distributorship with Miwall Corporation for the Northern California area, and therefore is the City's only available source for the purchase of the Hornady ammunition.

## FISCAL IMPACT

The total estimated cost of the ammunition is \$18,845.48. Funding has been approved in the Police Department's FY2022-23 departmental budget. The Police Department has previously purchased ammunition from Miwall Corporation during FY2022-23 for \$74,961.68. The total spend for ammunition from Miwall Corporation for FY2022-23 will be \$93,807.16.

## ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. The purchase of ammunition meets the above criteria and is not subject to CEQA. No additional environmental review is required.

## CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal C - Maintain a safe and healthy community

Respectfully Submitted,

Mark Peinado, Management Analyst

Troy Bergstrom, Police Chief

---

Dominick Casey, City Manager

RE: Source of Supply

To Whom it may concern:

Thank you for your interest in Hornady Law Enforcement/Military ammunition. This letter is to certify that Sean Riley of MiWall Corporation is the sole authorized distributor of Hornady Manufacturing products to the State of California. Any questions regarding any ammunition contracts, pricing, or bidding details therein can be directed to Sean or to another representative of the MiWall Corporation.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Scott Javins', with a large, stylized 'S' at the end.

Hornady Manufacturing would like to thank you for your service and we look forward to establishing a partnership with your agency to serve as your ammunition supplier for 2023 and beyond.

Scott Javins  
Law Enforcement Military Product Manager  
Hornady Manufacturing Company

## COUNCIL COMMUNICATION

**CC #: 2662**  
**File #: 0203-13**

**Title:** Custodial Services - Contract Purchase Agreement  
**Contact:** Darci Carpenter 916-774-5702 drcarpenter@roseville.ca.us

**Meeting Date: 5/3/2023**  
**Item #: 7.3.**

### RECOMMENDATION TO COUNCIL

Staff recommends that the City Council adopt a resolution to approve Contract Purchase Agreement 3002800 with United Building Maintenance, Inc. for custodial and floor care services and authorize the City Manager to execute it on behalf of the City of Roseville.

Staff further requests the City Council authorize the City Manager or his designee to execute four (4) additional one (1) year renewals without further City Council approval, provided that the applicable budget is approved by the City Council each year or until City staff determines that continuing with the same vendor is not in the City's best interest.

### BACKGROUND

The Facility Services Division released Custodial Services Request For Proposals No. 01-059 to provide the City custodial and floor care services on a scheduled and as-needed basis at several City facilities. Ten (10) companies submitted bid proposals. All proposals were evaluated, and the top five (5) highest-rated proposals moved on to an interview process. Pride Industries One, Inc. was rated the highest, and staff recommended Pride Industries be awarded a Contract Purchase Agreement (CPA) with the City of Roseville. After a short period of time, the City of Roseville decided to terminate the CPA with Pride Industries dated January 18, 2023, and has elected to select United Building Maintenance, Inc.

### FISCAL IMPACT

The total annual value of the initial agreement with United Building Maintenance, Inc. is \$918,615.39, not to exceed annual budgeted amounts. Funding for this agreement is included in the Custodial Services Unit FY2022-23 budget in the Facility Services Funds, and will be included in future year proposed budgets. Projected spending for the four optional renewal years with United Building Maintenance, Inc., is as follows: FY2023-24, \$1,010,476.93; FY2024-25, \$1,111,524.62; FY2025-26, \$1,222,677.08; and FY2026-27, \$1,344,944.79.

## ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) only applies to projects which have the potential to cause a significant effect on the environment. Where it can be seen with certainty that there is no possibility that the activity in question may have a significant effect on the environment, the activity is not subject to CEQA. (CEQA Guidelines §15061(b)(3)).

## CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal A - Remain fiscally responsible in a changing world

Goal C - Maintain a safe and healthy community

Goal E - Deliver exceptional city services

Respectfully Submitted,

Darci Carpenter, Administrative Technician

Jason Shykowski, Public Works Director

---

Dominick Casey, City Manager

### **Description**

Resolution 23-143

3002800 CPA United Building Maintenance

RESOLUTION NO. 23-143

APPROVING A CONTRACT PURCHASE AGREEMENT, BY AND BETWEEN THE CITY OF ROSEVILLE AND UNITED BUILDING MAINTENANCE, INC., AND AUTHORIZING THE CITY MANAGER TO EXECUTE IT ON BEHALF OF THE CITY OF ROSEVILLE

WHEREAS, a contract purchase agreement (3002800) for custodial and floor care services, by and between the City of Roseville and United Building Maintenance, Inc., has been reviewed by the City Council; and

NOW, THEREFORE, BE IT RESOLVED by the Council of the City of Roseville that said agreement is approved and the City Manager is authorized to execute it on behalf of the City of Roseville.

BE IT FURTHER RESOLVED that the City Manager or his designee is authorized to execute four (4) optional renewals years at one (1) year renewals without further City Council approval, provided that the applicable budget is approved by the City Council each year, or until City staff determines that continuing with the same vendor is not in the City's best interest.

This Contract Purchase Agreement is sent for your review and acceptance. Notify the Buyer via email of any needed changes to the company name, address, and contact information. The Buyer will update the agreement prior to you signing the document.

Return signed copies of the agreement to the Buyer noted on the agreement. Alterations or modifications to the agreement are not allowed. Upon receipt of all necessary documents, the City will sign the agreement and return a fully executed copy to you. Receipt of the signed copy will be your notice to proceed with the work in accordance with the terms and conditions of the agreement. Work must not begin until the contract has been fully executed.

The following guidelines must be followed for the signature block on the agreement:

**Sole proprietorship - By owner**

**Partnership - Any general partner**

**Corporation - Two options:**

**(1)** A signature from the President and the corporate seal; **OR**

**(2)** One signature from the Chairman of the Board, President, or any Vice President **AND** one signature from the Secretary, any Assistant Secretary, Chief Financial Officer, or any Treasurer or Assistant Treasurer of the corporation

\*General Manager, Office Manager and/or Sales Manager are not corporate officer titles. The agreement will be rejected if not signed in accordance with these guidelines.

### Insurance requirements:

The City's insurance requirements are referenced on Attachment A of the agreement. By signing the agreement, you are confirming that your company has the minimum insurance limits required.

## Contract Purchase Agreement 3002800

**Contract Terms and Conditions**

1. To the fullest extent allowed by law, Contractor shall defend, indemnify, and save and hold harmless City, its officers, agents, employees and volunteers from any claims, suits or actions of every name, kind and description brought forth, or on account of, injuries to or death of any person (including but not limited to workers and the public), or damage to property, resulting from or arising out of Contractor's willful misconduct or negligent act or omission while engaged in the performance of obligations or exercise of rights created by this Agreement, except those matters arising from City's sole negligence or willful misconduct. The parties intend that this provision shall be broadly construed. Contractor's responsibility for such defense and indemnity obligations shall survive the termination or completion of this Agreement for the full period of time allowed by law. The defense and indemnity obligations of this Agreement are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Agreement.
2. Contractor is an independent contractor, and shall not be considered an officer, agent or employee of the City.
3. Without the written consent of the City, this Agreement is not assignable by Contractor either in whole or in part.
4. Time is of the essence of this Agreement.
5. At any time during the term of this Agreement, the City has the right to terminate this Agreement, provided Contractor is given thirty (30) days written notice. City's termination shall be without further liability to City; however, Contractor shall be entitled to all costs reasonably incurred prior to the date of termination. Contractor acknowledges that City may terminate this Agreement should funds not be appropriated by its governing body to continue services under this Agreement.
6. This Agreement may only be amended or modified in writing. It is integrated and contains the complete understanding of the parties.
7. All equipment, supplies and services sold to the City of Roseville shall conform to the general safety orders of the State of California.
8. Unless notified to the contrary, in writing, the City assumes that the Contractor has accepted the work in accordance with the plans and specifications (if any) and agrees to do the work in compliance with this Agreement.
9. All fair employment practices must be adhered to. In addition, if the project referenced on this service agreement is a Public Works project, all prevailing wage laws must be complied with. For prevailing wage contracts over \$25,000, copies of certified payroll must be submitted with invoices. Prevailing wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: <http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm>.
10. Contractor agrees to the below insurance requirements:
  - a. Unless otherwise specified, the Contractor shall maintain the policies of insurance outlined in Attachment A, incorporated herein by this reference, in full force and effect during the term of this Agreement. The City of Roseville retains sole discretion in determining the types and proper levels of insurance coverage.
  - b. Form. Contractor shall submit a certificate evidencing such coverage for the period covered by this Agreement in a form satisfactory to Risk Management and the City Attorney, prior to undertaking any work hereunder. Any insurance written on a claims made basis is subject to the approval of Risk Management and the City Attorney.
  - c. Additional Insureds. Contractor shall also provide a separate endorsement or

## Contract Purchase Agreement 3002800

section of the policy showing City, its officers, agents, employees, and volunteers as additional insureds for each type of coverage, except for Workers' Compensation. Such insurance shall specifically cover the contractual liability of Contractor. The additional insured coverage under the Contractor's policy shall be primary and noncontributory, as evidenced by a separate endorsement or section of the policy, and shall not seek contribution from City's insurance or self-insurance. In addition, the additional insured coverage shall be at least as broad as the Insurance Services Office (ISO) CG 20 01 Endorsement. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be:

- (1) the minimum coverage and limits specified in this Agreement; or
- (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

- d. Cancellation/Modification. Contractor shall provide thirty (30) days written notice to City prior to cancellation or modification of any insurance required by this Agreement.
  - e. Umbrella/Excess Insurance. The limits of insurance required in this Agreement may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of City (if agreed to in a written contract) before City's own insurance shall be called upon to protect it as a named insured.
  - f. Subcontractors. Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Agreement, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, Contractor shall require its subcontractors to agree to be bound to Contractor and City in the same manner and to the same extent as Contractor is bound to City under this Agreement. Additionally, Contractor shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request.
  - g. Self-Insured Retentions. All self-insured retentions (SIR) must be disclosed to Risk Management for approval and shall not reduce the limits of liability. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.
  - h. Waiver of Subrogation. Contractor hereby agrees to waive subrogation which any insurer of Contractor may acquire from Contractor by virtue of the payment of any loss under a Workers Compensation, Commercial General Liability or Automobile Liability policy. All Workers Compensation, Commercial General Liability and Automobile Liability policies shall be endorsed with a waiver of subrogation in favor of City, its officers, agents, employees and volunteers for all work performed by Contractor, its employees, agents and subcontractors.
  - i. Liability/Remedies. Insurance coverage in the minimum amounts set forth herein shall not be construed to relieve Contractor of liability in excess of such coverage, nor shall it preclude City from taking such other actions as are available to it under any other provisions of this Agreement or law.
11. Contractor shall comply with all federal, state and local laws and ordinances, including but not limited to the City's storm water regulations, as may be applicable to the performance of services under this Agreement. Failure to comply with local ordinances

## Contract Purchase Agreement 3002800

may result in monetary fines and cancellation of this Agreement. Refer to [www.roseville.ca.us/stormwater](http://www.roseville.ca.us/stormwater) for links to more information on the City's storm water regulations.

12. In the event that the terms of any attachment or exhibit conflict with any terms of this Agreement, the terms of this Agreement shall control.
13. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument. In the event that any signature is delivered by facsimile transmission or by e-mail delivery of a ".pdf" format data file, such signature shall create a valid and binding obligation of the party executing (or on whose behalf such signature is executed) with the same force and effect as if such facsimile or ".pdf" signature page were an original hereof.
14. If either party commences any legal action against the other party arising out of this Agreement or the performance thereof, the prevailing party in such action shall be entitled to recover its reasonable litigation expenses, including but not limited to, court costs, expert witness fees, discovery expenses, and attorneys' fees. Any action arising out of this Agreement shall be brought in Placer County, California, regardless of where else venue may lie. This Agreement shall be governed by and construed in accordance with the laws of the State of California.
15. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.
16. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.
17. For purposes of this Agreement, the terms "Contractor," "Consultant," and "Supplier" are used interchangeably.
18. If the project referenced on this agreement is a Public Works project, then the following shall apply: No contractor or subcontractor may work on a public works project unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. During the performance of this agreement, Contractor and its subcontractors shall have a continuing legal obligation to maintain current registration with the Department of Industrial Relations. Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.
19. If the project referenced on this agreement is a Public Works project, then the following shall apply: Contractor must submit all claims as defined in and in accordance with the claim resolution process set forth in Section 9204 of the Public Contract Code. Each such claim must be sent to the City by registered mail or certified mail with return receipt requested and must contain reasonable documentation to support the claim. All claims must be received prior to acceptance of the work.
20. Contractor certifies that Contractor, its employees, directors, officers, agents, subcontractors, vendors, and volunteers are not presently debarred, excluded, suspended, declared ineligible, voluntarily excluded, or proposed for debarment, exclusion, suspension or ineligibility by any federal, state, or local department or agency.
21. This Agreement may be amended via change order, but only if such change order is made in writing, approved by the City, and signed by both parties.
22. CONTRACTOR agrees to defend and indemnify CITY if, despite the parties intent and practice, any venue, agency, or court with competent jurisdiction determines that CONTRACTOR and/or any of its agents, officers, employees, volunteers, independent contractors, or subcontractors, are characterized as employee(s) of CITY.

CONTRACTOR and CITY agree that: (a) CONTRACTOR is free from the control and direction of CITY in connection with the performance of the work; (b) CONTRACTOR is providing services directly to CITY; (c) CONTRACTOR has and will maintain at all relevant times a business license; (d) CONTRACTOR maintains a business location that

Contract Purchase Agreement 3002800

is separate from CITY; (e) CONTRACTOR is customarily engaged in an independently established business of the same nature as that involved in the work performed hereunder; (f) CONTRACTOR actually contracts with other businesses to provide the same or similar services and maintains a clientele without restrictions from CITY; (g) CONTRACTOR advertises and holds itself out to the public as available to provide the same or similar services; (h) CONTRACTOR provides its own tools, vehicles, and equipment to perform the services; (i) CONTRACTOR has negotiated its own rates; (j) CONTRACTOR set its own hours and location of work in accomplishing CITY's on-call needs; and (k) CONTRACTOR has the right to control the manner and means of accomplishing the result desired and exercises its own expert independent judgement.

The supplier named hereon by the acceptance of this order agrees to the provisions of this document titled "Contract Purchase Agreement" and all accompanying terms, conditions, and attachments.

### **Insurance Submission Process**

The City of Roseville Human Resources/Risk Management Department uses a service called EBIX to manage our insurance certificate tracking.

### **How It Works**

- The vendor's contact information is entered into EBIX. EBIX will contact the vendor to request proof of insurance.
- The Vendor can forward the request to their Insurance Agent(s) if necessary.
- Vendor/Insurance Agent submits insurance to EBIX by email to [roseville@ebix.com](mailto:roseville@ebix.com) or by fax to (770) 325-5727. After faxing or emailing the certificate, please DO NOT send the certificate by mail to EBIX. Please do not mail, email or fax any certificates to the City of Roseville.
- Once submitted, EBIX reviews the insurance documentation. If there are deficiencies, EBIX will send a follow up letter or email requesting additional information.

**Questions Regarding Insurance Submission: Contact EBIX at (951) 652-4239**

## COUNCIL COMMUNICATION

**CC #: 6647**

**File #: 0704 & 0201-01**

**Title:** Emergency Repairs - Contract Purchase Agreement Amendment and Budget Adjustment

**Contact:** Rob Nakamura 916-774-5135 [rnakamura@roseville.ca.us](mailto:rnakamura@roseville.ca.us)

**Meeting Date: 5/3/2023**

**Item #: 7.4.**

### RECOMMENDATION TO COUNCIL

Staff recommends that the City Council:

- 1) Adopt a resolution authorizing an amendment to Contract Purchase Agreement 3002638 with ATI HoldCo LLC dba ATI Restoration LLC to increase it by \$170,000 for a new total of \$260,000 for emergency restoration and repair of the Coyote Ridge Adventure Club and potential future citywide facility needs; and
- 2) Adopt an ordinance to approve a budget adjustment of \$315,000 from the Youth Development Fund (6591) for the emergency restoration and repair of the Coyote Ridge Adventure Club and \$166,320 from the Diamond Oaks Golf Course Fund (2591) for the removal and replacement of the Diamond Oaks Golf Course driving range net.

### BACKGROUND

The Parks, Recreation & Libraries Department is requesting a budget adjustment to fund emergency facility repairs at Diamond Oaks Golf Course and Coyote Ridge Adventure Club. Additionally, the department requests an increase to the current agreement with ATI Restoration in order to pay for the restoration and repairs at Coyote Ridge Adventure Club.

On December 31, 2022, the severe rain and wind events caused the north netting barrier on the driving range at Diamond Oaks Golf Course to collapse. Although the area is roped off for safety, the risk of errant golf balls has elevated this project to an emergency repair as a result of further damage from subsequent storms and the California Early Winter Storm State of Emergency which was declared in January of 2023. The repair cost of \$166,320 will come from the Diamond Oaks Golf Course Fund, and will be submitted for potential reimbursement from Federal Emergency Management Agency (FEMA).

Additionally, on February 2, 2023, a water line pipe at one sink at the Coyote Ridge Adventure Club burst and leaked for over 12 hours causing significant water damage to the interior flooring, walls, cabinetry and siding. A restoration company was called out to remove wet material and provide required air quality testing to ensure safety. The repairs are significant and ongoing with

an anticipated completion date of June 2023. Due to the amount of remediation and repairs required, the current agreement with ATI Restoration LLC requires an amendment to increase the contract amount. The current agreement is set at \$90,000 and is used by multiple departments. The ongoing repairs and services performed by ATI Restoration LLC for Coyote Ridge Adventure Club are estimated at approximately \$170,000 to ensure occupancy by our staff and children for Summer Camp starting in June 2023. The new total for the ATI Restoration LLC agreement will be \$260,000 through December 31, 2023. The restoration and repair expenses for the Coyote Ridge Adventure Club flooding is under evaluation for an insurance review by the City's Risk Management staff in the Human Resources Department.

### FISCAL IMPACT

The Diamond Oaks Golf Course driving range project will be funded from the Diamond Oaks Golf Course Fund (Fund 2591). This emergency repair expense will be submitted for potential reimbursement through FEMA. The Coyote Ridge Adventure Club repairs will be funded from the Youth Development Fund (Fund 6591). This expense will be evaluated for potential insurance reimbursement less the deductible. These budget adjustments and the contract amendment have no impact on the General Fund.

### ENVIRONMENTAL REVIEW

The proposed projects involve the replacement and/or repair of existing structures and equipment and will have the same purpose and capacity as the existing structures and equipment. This activity is categorically exempt from CEQA as a Class 2 Exemption (State CEQA Guidelines Section 15302). The Exemption has been prepared and no further CEQA action is required.

### CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal A – Remain fiscally responsible in a changing world  
Goal C – Maintain a safe and healthy community  
Goal D – Enhance economic vitality  
Goal E – Deliver exceptional city services

Respectfully Submitted,

Rob Nakamura, Parks, Recreation & Libraries Superintendent

Jill Geller, Parks, Recreation & Libraries Director

---

Dominick Casey, City Manager

### Justification for Budget Adjustment:

The Parks, Recreation & Libraries Department is requesting a budget adjustment of \$481,320 to increase the budget for Diamond Oaks Golf Course (2591) and Youth Development (6591) to fund significant emergency repairs. During the January winter storms, the Diamond Oaks Golf Course driving range poles and netting were damaged. Repairs require the damaged poles and netting to be removed and replaced for \$166,320. Staff is seeking federal and state funding to offset the cost of the storm damage. The Coyote Ridge Adventure Club building experienced significant flooding from a broken pipe under a sink. Damage impacted all three classrooms causing extensive restoration work and construction to repair the subfloor, insulation, flooring, cabinets, walls, and exterior siding. Costs of repairs to the building are estimated at \$315,000 to ensure the building is ready for occupancy by children attending camps and after-school care. There are adequate funds available in both funds for these recommended repairs. Staff is working to determine whether the City will be eligible for an insurance claim for the flood damage. There is no impact on the General Fund.

Meeting Date: 5/3/2023  
Item #: 7.5.

### RECOMMENDATION TO COUNCIL

#### RFQ 10-3343

Staff recommends that the City Council approve a purchase order to Future Ford Inc. dba Future Ford Lincoln for one (1) Ford F550 truck with a dump body utilizing RFQ 10-3343 as a Fleet addition approved in the FY2022-23 Fleet Replacement budget. The total cost, including options and sales tax, is \$81,735.

#### Sole Source

Staff recommends that the City Council approve a sole source purchase order to Volvo Construction Equipment & Services for one (1) Avant 860GT compact loader with attachments and a Ziemann trailer as a Fleet addition approved in the FY2022-23 Fleet Replacement budget. The total cost, including options and sales tax, is \$159,259.

### BACKGROUND

#### RFQ 10-3343

The Public Works Street Maintenance division is purchasing one Ford F550 truck with a dump body as a new FY2022-23 fleet addition. This truck is assigned to the drainage team to haul spoils from small concrete jobs in the right of way and to access and clean drainage canals and outfall pipes.

A formal bid was issued with the following vendor responses:

| <u>Vendor</u> | <u>Total price (with all potential options)</u> |
|---------------|-------------------------------------------------|
|---------------|-------------------------------------------------|

|                            |                    |
|----------------------------|--------------------|
| <b>Future Ford Lincoln</b> | <b>\$81,734.52</b> |
| <b>Roseville, CA</b>       |                    |

|           |             |
|-----------|-------------|
| Napa Ford | \$88,047.77 |
| Napa, CA  |             |

|                  |             |
|------------------|-------------|
| Towne Ford       | \$97,577.93 |
| Redwood City, CA |             |

### Sole Source

Volvo Construction Equipment & Services is the sole source government distributor of Avant Tecno equipment and attachments. Copyright, trademarks, and service marks protect the Avant Tecno products.

The Parks, Recreation, and Libraries Open Space division is purchasing one (1) Avant 860GT compact loader with attachments and a Zieman trailer as a new FY2022-23 fleet addition. The compact loader and attachments will be used for tree removals, oak mitigation, bike trail mowing, vegetation management, cleaning unsheltered camps, and loading debris. In addition, the machine will be used during storm emergency events. The attachments will be used to perform creek maintenance, auguring holes for tree planting sites, grinding stumps of removed trees, loading materials and supplies into bins, and spreading and loading wood chips for water conservation.

### FISCAL IMPACT

#### RFQ 10-3343

The total cost for one (1) Ford F550 truck with a dump body, including options and sales tax, is \$81,735. Funding is included in the FY2022-23 Fleet Replacement budget.

### Sole Source

The total cost for one (1) Avant 860GT compact loader with attachments and a Zieman trailer, including options and sales tax, is \$159,259. Funding is included in the FY2022-23 Fleet Replacement budget.

### ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. The purchase of a truck and equipment meets the above criteria and is not subject to CEQA. No additional environmental review is required.

### CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal A – Remain fiscally responsible in a changing world.

Goal E – Deliver exceptional city services.

Goal F – Invest in well-planned infrastructure and growth.

Respectfully Submitted,

Brandy LeBeau, Fleet Manager

Jason Shykowski, Public Works Director

## COUNCIL COMMUNICATION

**CC #: 2663**  
**File #: 0800-03**

**Title:** Electric Meter Locking Devices - Sole Source Purchase Order  
**Contact:** Jeff Beaubier 916-774-5611 jbeaubier@roseville.ca.us

**Meeting Date: 5/3/2023**  
**Item #: 7.6.**

### RECOMMENDATION TO COUNCIL

Staff recommends that the City Council approve a sole source purchase order with DeWalch Technologies, Inc. to provide meter locking devices for Roseville Electric Utility.

### BACKGROUND

Roseville Electric uses meter locking devices, also known as meter rings, to safely and securely attach electric meters to panels. DeWalch Technologies, Inc. owns a patent for a one-of-a-kind meter locking device specifically customized for Roseville Electric. When Roseville Electric replaces the traditional meters with AMI (Advanced Meter Infrastructure) meters, these patented secure locking rings will replace any standard rings currently in use.

### FISCAL IMPACT

The total cost will not exceed \$192,500. Funding is included in the Electric Fund budget for FY2022-23.

### ENVIRONMENTAL REVIEW

The California Environmental Quality Act (CEQA) does not apply to activities that will not result in a direct or reasonably foreseeable indirect physical change in the environment, or is otherwise not considered a project as defined by CEQA Statute §21065 and CEQA State Guidelines §15060(c)(3) and §15378. Approval of a purchase order meets the above criteria and is not subject to CEQA. No additional environmental review is required.

Mr. Jeff Beaubier

Electric Operations supervisor  
Roseville Electric Utility  
City of Roseville  
2090 Hilltop Circle  
Roseville, CA 95747

Dear Mr. Beaubier,

Subject: Meter locking rings and proprietary key supplied to City of Roseville Electric Department:

Product description:

The meter locking ring furnished to the City of Roseville is a DeWalch Sentinel-34™ ring made of stainless steel that incorporates an anti-rotation feature and a flush-lock retained-removable lock.

The meter locking ring comes with a short length disk tumbler barrel lock. The lock is also made of stainless steel and has an anti-rotation feature that works with the ring to prevent full rotation and to ease its operation. The lock incorporates a weather seal to improve the lock's reliability. Our disk tumbler lock comes with our patented SNAPLOCK™ technology (keyless insertion). The barrel lock is shipped retained to the ring and can be removed as needed. The disk tumbler lock provided to Roseville Electric Utility has a unique lock combination (identified by product dash 67) and patented keyless insertion feature (US Patent No 10,822,834.)

**Key:** Rotating bit key, high strength stainless steel.

The key provided to Roseville Electric Utility has a unique lock combination (identified by product dash 7211) and cannot be duplicated by molding or hand tools. No other manufacturers' keys will open City of Roseville Electric Department's disk tumbler locks.

The above-described products are protected by United States Patents.

Please let me know if you need us to provide more information.

Regards,

A handwritten signature in black ink that reads 'Ricardo HV'.

## COUNCIL COMMUNICATION

CC #: 2665

File #: 0900-02 & 0203-21

**Title:** Regional Pump Station 26 and Force Main Capacity Improvement Project - Reject All Bids, Approve Plans and Specifications, and Authorize Staff to Call for Bids

**Contact:** Rana Moore 916-774-5581 rcmoore@roseville.ca.us

Meeting Date: 5/3/2023

Item #: 7.7.

### RECOMMENDATION TO COUNCIL

Staff recommends that the City Council:

1. Adopt a resolution to reject the bid received on March 13, 2023; and
2. Approve the Project's revised construction plans and specifications dated April 2023; and
3. Authorize staff to advertise the Project and accept bids from prospective bidders.

### BACKGROUND

The City of Roseville's sewer system hydraulic model indicates that the South Placer Wastewater Authority (SPWA) trunk sewer on Old Auburn Road could be subject to overflows, and that this capacity deficiency will be further exacerbated under buildout development.

Woodard and Curran was commissioned by the City of Roseville to conduct an analysis comparing multiple options to correct the capacity issue. The scope of this project incorporates recommendations from this analysis to improve capacity and dependability of Pump Station 26 and surrounding force mains.

This project is located along Sierra College Boulevard near Old Auburn Road and Eureka Road in Roseville, California. Pump Station 26 is located at 9705 Sierra College Blvd., Roseville, CA 95661. The work to address the capacity deficiency includes upsizing existing 8-inch and 10-inch PVC gravity sewer pipes, and installation of a new weir manhole, pump, and electrical improvements at Pump Station 26.

The majority of the sewer main improvements will be done via trenchless pipe bursting methods, resulting in significant cost savings and a minimization of traffic disruptions.

The Project was advertised on February 2, 2023, (RFQ #08-109). One bid was received and opened on March 13, 2023. The bid results and engineer's estimate are as follows:

| <u>Bidder</u> | <u>Grand Total Bid Price</u> |
|---------------|------------------------------|
|---------------|------------------------------|

Dutch Contracting Inc. \$3,236,101  
Engineer's Estimate \$2,518,500

A strategy to reformat the Schedule of Bid Items was identified, which will allow greater flexibility in awarding only the crucial portions of the Project if the bids come in higher than expected again. The revised (rebid) Project Manual includes this change.

In addition, both the City and the design consultant reached out to a larger group of contractors in an effort to attract additional bidders.

A copy of the revised plans and specifications are included as part of this agenda package.

### FISCAL IMPACT

The total cost for this construction project is estimated to be \$2,940,000, which includes the construction cost, contingency for potential change orders, and secondary labor. Funding is provided by SPWA. If the bids come in above the engineer's estimate again, a request for additional funds will be presented to the SPWA Board in June 2023 prior to the award of the construction contract.

### ENVIRONMENTAL REVIEW

The proposed project involves conversions to a small facility. This activity is categorically exempt from CEQA as a Class 3 Exemption (State CEQA Guidelines Section 15303). The proposed project also involves minor alteration in the condition of the land, which will not remove healthy, mature scenic trees. This activity is categorically exempt from CEQA as a Class 4 Exemption (State CEQA Guidelines Section 15304). The Exemption has been prepared and no further CEQA action is required.

### CITY COUNCIL STRATEGIC PLAN/OVERARCHING GOALS

Goal F - Invest in well-planned infrastructure and growth

Respectfully Submitted,

Rana Moore, Associate Engineer

Richard Plecker, Environmental Utilities Director

CITY OF ROSEVILLE  
DEPARTMENT OF ENVIRONMENTAL UTILITIES  
REGIONAL PUMP STATION 26 AND FORCE MAIN CAPACITY IMPROVEMENT

**NOTICE TO CONTRACTORS**

NOTICE IS HEREBY GIVEN THAT sealed Proposals will be received at the Office of the City Clerk, 311 Vernon Street, Roseville, California, until Tuesday June 13, 2023 at 3:00 p.m. Late Proposals will be rejected. No exceptions.

The Proposals will be publicly opened and read by the City Clerk or designee of the City of Roseville at 3:05 p.m. on Tuesday June 13, 2023 at the Office of the City Clerk located at 311 Vernon Street, Roseville California for the following project: Regional Pump Station 26 and Force Main Capacity Improvement.

An optional pre-bid meeting will be held at 311 Vernon St, Roseville, CA 95678 at 10am on Wednesday May 24, 2023.

A Project Manual, including all Contract Documents and the Proposal forms for bidding this project, may be obtained on-line from the City of Roseville's website at [www.roseville.ca.us/business/procurement\\_services/bids\\_rfps](http://www.roseville.ca.us/business/procurement_services/bids_rfps) or directly at [www.publicpurchase.com](http://www.publicpurchase.com). All communications relative to this project shall be conducted through Public Purchase.

Bids shall be submitted on the City's Proposal Forms included in the Project Manual, plainly endorsed with the Bidder's name together with signed acknowledgement of any and all addenda. Proposal Forms shall be securely sealed in a suitable envelope marked with the name and address of the Bidder, and marked in capital letters on the front and back of the envelope as

follows:

|                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------|
| RFP #08-116<br>Regional Pump Station 26 and Force Main Capacity<br>Improvement<br>(Name of Bidder)<br>(Address of Bidder) |
|---------------------------------------------------------------------------------------------------------------------------|

Whether mailed or personally delivered, all bids shall be addressed to the City of Roseville, Office of the City Clerk, 311 Vernon Street, Roseville, California, 95678.

Each bid must be accompanied by a Bid Guaranty in the form of a Certificate of Deposit, Certified or Cashier's Check, Bidder's Bond or Irrevocable Standby Letter of Credit in an amount equal to at least ten percent (10%) of the Bidder's Grand Total Price. The Bid Guaranty will be retained by the City and applied to any and all damages sustained by the City in the event that the successful Bidder fails or refuses to enter into the Contract awarded to it and to furnish all required bonds and Certificates of Insurance. The City intends to award the Contract to the lowest responsible Bidder based on the Grand Total Bid Price for all components of the Project. To the extent allowed by law, the City reserves the right to reject any and all bids and/or to waive any irregularities or informalities in any bid or in the bidding procedure. The City specifically reserves the right to not award the Contract after the opening of bids.

Any bid may be withdrawn at any time prior to the time fixed in the public notice for the deadline submission of bids only by written request for the withdrawal of the bid filed with the City Clerk. The request shall be executed by the Bidder or his or her duly authorized representative. The withdrawal of a bid does not prejudice the right of the Bidder to file a new bid by the submission deadline. Whether or not bids are opened exactly at the time fixed in the public notice for opening bids, a bid will not be received after the deadline submission of bids nor may any bid be withdrawn after the time fixed in the public notice for deadline for

submission of bids. Immediately following the deadline for submission of bids all bids shall become the property of the City of Roseville and the City is under no obligation to return bids.

Bids will be examined and reported to the City Council within sixty (60) business days after the bid opening. Except as permitted by applicable law, no Bidder may withdraw its bid for a period of sixty (60) business days after the date of bid opening. Each Bidder will be notified of any award of the Contract by the City.

The City will affirmatively ensure non-discrimination on the basis of one or more of the following: race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, genetic information, marital status, sex, age, sexual orientation, or military and veteran status in the award and administration of contracts that it awards.

Pursuant to Public Contract Code Section 22300, the successful Bidder may submit certain securities in lieu of the City withholding retention of payments during the Project.

The City has determined that the Contractor shall possess a valid Class A, General Engineering Contractor's license at the time that the bid is submitted, as well as any other license classification as may be required by the laws of the California for the performance of the work specified in the Contract Documents. Said license shall be maintained during the Contract period. Failure to possess the specified license shall render the bid nonresponsive and will act as a bar to the award of the Contract to any Bidder not possessing such a license at the time of bid submittal. The Contractor shall provide certification of the license, its number and the expiration date on the proposal form.

The work is to be done in Placer County. Pursuant to California Labor Code Section 1773, the City has ascertained the General Prevailing Rate of Wages in the County in which the work is to be done to be as determined by the Director of Industrial Relations of the State of

California. The Contractor is hereby made aware that information regarding prevailing wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: <http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm>. The Contractor is required to post a copy of the applicable wage rates at the job site. Attention is directed to Section 5 “Legal Relations and Responsibility” of the General Conditions.

Pursuant to Labor Code Section 1771.1(b), notice is hereby given that a contractor or subcontractor shall not be qualified to bid on, be listed in a bid proposal, subject to the requirements of Section 4104 of the Public Contract Code, or engage in the performance of any contract for public work, as defined in Labor Code Sections 1720, et seq., unless currently registered and qualified to perform public work pursuant to Labor Code Section 1725.5 or exempt from registration requirements pursuant to Labor Code Section 1725.5(f). It is not a violation of Labor Code Section 1771.1 for an unregistered contractor to submit a bid that is authorized by Section 7029.1 of the Business and Professions Code or by Section 10164 or 20103.5 of the Public Contract Code, provided the contractor is registered to perform work pursuant to Labor Code Section 1725.5 at the time the contract is awarded or is exempt from registration requirements pursuant to Labor Code Section 1725.5(f). The Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

All questions prior to the deadline for bid submissions must be submitted via the Public Purchase website at <https://www.publicpurchase.com>. The deadline for submissions of questions and clarifications regarding the Contract Documents is ten (10) calendar days before the deadline for bid submissions. Only Addenda issued by the City are binding.

## **INSTRUCTIONS TO BIDDERS**

### **SECTION 1. GENERAL**

1-1.01        **GENERAL.** These Instructions to Bidders form a part of the Contract Documents. Capitalized terms are defined in the General Conditions Section 1.

1-1.02        **EXAMINATION OF PLANS, CONTRACT DOCUMENTS AND SITE OF THE WORK.** The Bidder shall examine carefully the site of the Work and all the Contract Documents, including these Instructions to Bidders, and shall inform itself of the conditions relating to the execution of the Work. Failure to do so will not relieve the successful Bidder of its obligation to enter into an Agreement and complete the Work in strict accordance with the Contract Documents. Conditions relating to the execution of the Work include the requirements of federal, state, and local laws, statutes and ordinances relative to the execution of Work, including, but not limited to, applicable regulations concerning prevailing wage rates, non-discrimination in the employment of labor, protection of the public, employee health and safety, and environmental protection.

The submission of a bid shall be conclusive evidence that the Bidder has investigated and is satisfied as to the conditions to be encountered, as to the character, quality, and scope of Work to be performed, the quantities of materials to be furnished, and as to the requirements of all the Contract Documents.

1-1.03        **EXISTING INFORMATION.** Where the Department has made investigations of site conditions, including subsurface conditions in areas where Work is to be performed under the Contract, such investigations are made only for the purpose of study and design. City does not represent that such conditions as found in these investigations or inferences or conclusions drawn as a result of these investigations will represent actual site

conditions and hereby disclaims any liability as a result of Contractor's or Bidder's reliance on such investigations. City will presume that all Bidders have conducted their own site investigations, and reviewed all available supplemental materials. Where such investigations have been made, Bidders or Contractors may, upon written request, inspect the records of the Department as to such investigations subject to the conditions set forth in these Instructions to Bidders. Such inspection of records, if they exist, have been uploaded to the Public Purchase website for this RFP as "supplemental materials". The supplemental materials are not a part of the Contract Documents and are shown solely for the convenience of the Bidder or Contractor. The City assumes no responsibility whatsoever with respect to the sufficiency or accuracy of the investigations made, the records thereof, or of the interpretations set forth therein or made by the City in its use thereof. The City makes no warranty or guarantee, either express or implied, that the conditions indicated by such investigations or records are representative of those existing throughout such areas, or any part thereof, or that unforeseen developments may not occur, or that materials other than, or in proportions different from those indicated, may not be encountered.

No information derived from such inspection of records of investigations or compilation thereof made by the City, the Department or from the Engineer, or his or her assistants, will in any way relieve the Bidder or Contractor from properly examining the site and making such additional investigations as it may elect, or from properly fulfilling the terms of the Contract.

## SECTION 2: BID REQUIREMENTS

2-1.01        **PROPOSAL FORMS.** The Department will furnish to each Bidder standard Proposal Forms (included in this document under section PROP), which, when filled out and executed may be submitted as the bid. Proposals shall include all pages in the Project Manual with page numbers marked “PROP” plus the Addendum acknowledgment form (front sheet) from all Addenda received by the Bidder. Proposals shall be removed from the Project Manual. The full Project Manual shall not be submitted with the proposal. Bids not presented on forms so furnished will be disregarded.

The Proposal and one (1) copy thereof shall be submitted as directed in the “Notice to Contractors” under sealed cover plainly marked as a Proposal, and identifying the project to which the Proposal relates and the date of the bid opening therefor. Proposals which are not properly marked may be disregarded.

All blank spaces in the Proposal must be completed, as required, in ink. All price information shall be shown, clearly legible, in figures where required.

The Bidder shall sign the Proposal in the blank space provided therefor. If the Bidder is the sole owner, the Proposal shall be signed by the owner. If the Bidder is a corporation, the legal name of the corporation and its State of incorporation shall be set forth and the Proposal shall be signed by at least two officers authorized to sign contracts on behalf of the corporation. If the Bidder is a partnership, the true name of the firm shall be set forth, the names and addresses of all partners shall be given and the Proposal shall be signed by a partner in the firm authorized to sign contracts on behalf of the partnership. If the Bidder is a joint venture, the Proposal shall be signed on behalf of each participating company by officers or other individuals who have the full and proper authorization to do so. If the Proposal is signed by an agent of the

Bidder other than an officer of a corporation or a member of a partnership, a notarized Power of Attorney must be on file with the City prior to opening of bids or must be submitted with the Proposal. If requested by the City, the Bidder shall promptly submit evidence satisfactory to the City of the authority of the person signing the Proposal.

2-1.02        **SUBMISSION OF BIDS.** Bids must be submitted at the prescribed time and location specified in the Notice to Contractors. Any submission received after the prescribed time shall be rejected, regardless of whether or not bids are opened exactly at the prescribed time.

Any unauthorized conditions or qualifications entered on, or changes made to, the Proposal may render it invalid and may cause its rejection.

No telegraphic, telephonic, or facsimile or other electronically transmitted bids will be considered.

2-1.03        **REQUIRED LISTING OF PROPOSED SUBCONTRACTORS.** Each Proposal shall list the name, address and Contractor license number of each Subcontractor to whom the Bidder proposes to subcontract portions of the Work in an amount in excess of one-half of one percent (0.5%) of its total bid, in accordance with Section 4100 to 4114, inclusive, of the Public Contract Code for the State of California. The Bidder shall list the Subcontractor's license number and the portion of the Work that will be done by each Subcontractor. If the Bidder fails to specify a Subcontractor for any portion of the Work, the Bidder agrees to perform that portion of the Work itself, and represents that it is qualified to perform that portion of the Work itself. The Bidder's attention is invited to other provisions of the Public Contract Code related to the imposition of penalties for a failure to observe its provisions by using unauthorized Subcontractors or by making unauthorized substitutions.

2-1.04        **CONTRACTOR'S LICENSING LAWS.** Attention is directed to the provisions of Business and Professions Code Chapter 9 of Division 3 concerning the licensing of Contractors.

All Bidders at the time of bid submittal shall be licensed as Contractors in accordance with the laws of this State. Any Bidder or Contractor not so licensed is subject to the penalties imposed by such laws. The form of Contractor's license required is stated in the Notice to Contractors, provided that the City makes no representation as to whether the State may require other or additional licenses. It is the Bidder's and Contractor's responsibility to obtain the correct Contractor's licenses. Bidders shall be skilled and regularly engaged in the general class or type of Work called for under this Contract.

All Bidders and Contractors, including Subcontractors, shall have a current City business license before undertaking any Work.

2-1.05        **NONCOLLUSION DECLARATION.** By submitting a bid, the Bidder represents and warrants that such bid is genuine and not a sham or collusive or made in the interest or on the behalf of any person therein named, and that the Bidder has not, directly or indirectly, included or solicited any other Bidder to put in a sham bid, or any other person, firm, or corporation to refrain from bidding, and that the Bidder has not in any manner sought collusion to secure the Bidder an advantage over any other Bidder.

Bidders shall submit a properly completed and executed "Noncollusion Declaration" in the form required by Public Contract Code Section 7106 and provided with the Proposal (PROP-12).

2-1.06        **DISQUALIFICATION, REMOVAL OR OTHER PREVENTION OF BIDDING.** A bid may be rejected on the basis of a Bidder, any officer of such Bidder, or any

employee of such Bidder who has a proprietary interest in such Bidder, having been disqualified, removed, or otherwise prevented from bidding on, or completing a federal, state, or local project because of a violation of law or a safety regulation.

2-1.07        **PROPOSAL GUARANTY.** All bids shall be accompanied by one of the following forms of Bidder's security: Cash, a cashier's check, a certified check, or a Bidder's bond executed by an admitted California surety insurer, made payable to the City of Roseville, or any other form of security deemed acceptable by the City Attorney. The security shall be in an amount equal to at least ten percent (10%) of the amount bid. A bid will not be considered unless one of the form of Bidder's security is enclosed with it.

A Bidder's bond shall conform to the City's bond form in the Proposal and shall be properly filled out and executed.

2-1.08        **SCHEDULE OF BID PRICES.** Bidders are directed to submit unit and lump sum prices for all Work set forth in the Contract Documents on the Proposal Form entitled "Schedule of Bid Prices."

Unit prices and lump sum prices, as indicated, must be entered in the appropriate spaces provided in the Schedule of Bid Prices. If applicable, unit prices shall be multiplied by the quantities shown, and the total shall be inserted in the Amount column. In the event of any error or discrepancy between the unit price and the calculated amount, the unit prices shall govern. The City may correct any mathematical errors apparent on the face of the bid.

The amounts shown in the Amount column must be added together in arriving at the Grand Total Bid Price.

Amounts for Allowance bid items must be entered in the exact amount in the Amount column.

The prices included within the Schedule of Bid Prices shall include all costs for labor, materials, tools, equipment, services, Subcontractors, suppliers, taxes, insurance, shipment, delivery, overhead, profit, and all other costs necessary to perform the Work in accordance with the Contract Documents.

The Grand Total Bid Price shall be indicated in the Summary table form included with the Schedule of Bid Prices. The Grand Total Bid Price shall be the sum of the amounts bid for each of the designated portions of the Work, as more specifically described on the Schedule of Bid Prices form itself.

Full compensation for complying with the Contract Documents, including requirements of the Standard Specifications, the General Conditions, Supplemental Conditions, and all warranties, shall be considered included in the bid items and no additional compensation shall be allowed therefor.

Full compensation for completion of all work as shown on the plans, as specified in the Specifications, and as directed by the City, shall be considered included in the bid items and no additional compensation shall be allowed.

Bidders are strongly discouraged from submitting unbalanced bids. As used herein, the term “unbalanced bid” is defined as any bid that does not include a reasonable proportionate allocation of indirect costs and profit of each bid item indicated in the Schedule of Bid Prices. The City reserves the right to reject any unbalanced bid if the City determines that there is a reasonable doubt that an acceptance of the bid will not result in the lowest ultimate cost to the City with regard to the work or a disproportionate distribution of contract funds.

The City reserves the right to delete any bid item in its entirety and/or significantly reduce the quantity of Work under a bid item. The City makes no representation that any Work

under a bid item will be performed during the course of the Project or that the Work will be performed at the quantities included in the Schedule of Bid Prices. As provided in the General Conditions, for any deleted Work, Contractor shall not be entitled to payment of the indirect costs and profit included for said bid item. All bid items shall be considered distinct and severable from the remaining bid items, and each Bidder acts at its peril if its bid is unbalanced.

The City shall compare bids on the basis of the Grand Total Bid Price, which includes the base bid and any alternates designated on the Schedule of Bid Prices. Alternates may or may not be awarded, or may be awarded in any combination, at the City's discretion.

2-1.09        **WITHDRAWAL OF PROPOSALS.** Any bid may be withdrawn at any time prior to the time fixed in the Notice to Contractors for the opening of bids, provided that a request in writing, executed by the Bidder or its duly authorized representative, for the withdrawal of such bid is filed with the City Clerk. Facsimile and electronic mail requests are not acceptable. The withdrawal of a bid shall not prejudice the right of a Bidder to file a new bid. The withdrawal of any bid after the time fixed in the Notice to Contractors for the opening of bids will not be permitted.

2-1.10        **ADDENDUM.** Proposals shall include all costs and account for all Addenda issued prior to opening of bids. The Bidder is responsible for verifying that all issued Addenda have been received. An Addendum acknowledgment form for each Addendum shall be included as part of the Proposal submittal.

2-1.11        **PUBLIC OPENING OF PROPOSALS.** Proposals will be publicly opened and read at the time and place indicated in the Notice to Contractors. Bidders or their authorized agents are invited to be present.

2-1.12        **TRENCHING AND EXCAVATION WORK.** In accordance with the

provisions of California Labor Code Section 6707, if the Work involves construction of a pipeline, sewer, sewage disposal system, boring or jacking pits, or similar trenches or open excavations, which are five feet (5') or deeper, each bid submitted shall contain, as a bid item, adequate sheeting, shoring, and bracing, or equivalent method, for the protection of life or limb, which shall conform to all applicable safety orders.

### **SECTION 3: EVALUATION OF BIDS**

3-1.01        **BID EVALUATION PROCESS.** Bids will be evaluated to determine the apparent low Bidder. The apparent low Bidder will be determined as indicated on the Schedule of Bid Prices located in the Proposal Section of this Project Manual.

Any mathematical errors that appear on the face of the bid will be corrected by the City and the City will use the mathematically corrected addition. For example, if the mathematical total of Bidder's individual bid items equals \$1,000,000, but the Bidder has written \$1,250,000 as the total price, the City will consider \$1,000,000 to be the Bidder's actual bid price for purposes of comparison to other Bidders and bid award. The City reserves its rights to reject or accept bids based on discrepancies between the stated total bid price and the actual mathematical total.

3-1.02        **REJECTION OF IRREGULAR PROPOSALS.** Proposals may be rejected in the City's sole discretion if they show any alterations of form, additions not called for, conditional bids, incomplete bids, erasures, or irregularities of any kind. However, the City reserves the right to waive any minor irregularities and informalities in any bid or in the bid procedure for any reason.

3-1.03        **COMPETITIVE BIDDING.** If more than one proposal is offered by any

individual, firm, partnership, corporation, association, or any combination thereof, under the same or different names, all such proposals may be rejected. A party who has quoted prices on materials or Work to a Bidder is not thereby disqualified from quoting prices to other Bidders, or from submitting a bid directly for the materials or Work.

All Bidders are put on notice that any collusive agreement to control or affect the awarding of this Contract is in violation of the competitive bidding requirements of the City Charter, State Contract Act and the Business and Professions Code and may render void any Contract let under such circumstances.

3-1.04        **RELIEF OF BIDDERS.** If the Bidder claims a mistake was made in its bid, the Bidder shall give the Department written notice within five (5) Days after the opening of the bids of the alleged mistake, specifying in the notice in detail how the mistake occurred. No relief from a claimed mistaken bid shall be granted unless such mistake clearly appears on the face of the bid submitted to the City. Claimed mistakes on backup worksheets, spreadsheets, computerized bidding programs, or any other similar calculative bidding mistake which is not apparent on the face of the bid shall not under any circumstance be considered as a basis for relief. The burden of proving the occurrence of a mistake entitling a Bidder to relief from its bid rests entirely on the Bidder. Relief from bids shall be in the City's sole discretion.

## **SECTION 4: AWARD AND EXECUTION OF CONTRACT**

4-1.01        **AWARD OF CONTRACT.** The City reserves the right to reject any and all proposals and to award (or not award) any combination of bid items at its option. Any such award will be to the lowest responsible Bidder whose proposal complies with the requirements prescribed for the bid items awarded. Such award, if made, will be made within sixty (60) business days after the opening of the proposals. If the lowest responsible Bidder refuses or fails to execute the Contract, or provide an acceptable Performance Bond, Payment Bond, and insurance certificate(s), the City may award the Contract to the second lowest responsible Bidder. Such award, if made, will be made within eighty-two (82) business days after the opening of proposals. If the second lowest responsible Bidder refuses or fails to execute the Contract, or provide an acceptable Performance Bond, Payment Bond, and insurance certificate(s), the City may award the Contract to the third lowest responsible Bidder. Such award, if made, will be made within one hundred four (104) business days after the opening of the proposals. The above time periods within which the award of Contract may be made are subject to extension for such further period as may be agreed upon in writing between the City and the Bidder concerned.

4-1.02        **RETURN OF BIDDER'S SECURITIES.** Within ten (10) Days after the award of the Contract, the City Clerk will return all Bidders' securities, other than Bidders' bonds, accompanying the proposals that are not to be further considered in making the award. Retained Bidders' securities will be held until the Contract has been fully executed, after which all Bidders' securities, except Bidders' bonds and any Bidders' securities that have been forfeited, will be returned.

4-1.03        **CONTRACT BONDS.** The successful Bidder shall furnish two (2)

bonds in the form contained in the section entitled Insurance Broker Information Packet and Bonds. One (1) bond shall secure the payment of the claims of laborers, mechanics or materialmen employed on the Work under the Contract, and the other bond shall guarantee the faithful performance of the Contract.

Each of the two (2) bonds shall be in a sum equal to one hundred percent (100%) of the Contract Price. If the Contract Price increases by the issuance of Change Orders, the penal amounts of the bonds required shall increase accordingly. Sureties on each of said bonds shall be satisfactory to the City.

All alterations, extensions of time, extra and additional Work, and other changes authorized by the Standard Specifications, the General Conditions, the Supplemental Conditions or any part of the Contract may be made without securing the consent of the surety or sureties on the Contract bonds.

Furthermore, the successful Bidder shall furnish a certificate from the County Clerk as required by California Civil Code of Procedure Section 995.660(a)(3).

4-1.04        **INSURANCE.** At the time of the execution of the Contract, the Contractor shall, at its own expense, procure, and at all times during the prosecution of the Work maintain in full force and effect Worker's Compensation Insurance, and Liability Insurance as specified in the General Conditions. The Contractor shall provide a Certificate of Insurance in the form contained in the section entitled Insurance Broker Information Packet.

4-1.05        **EXECUTION OF CONTRACT.** The Contract shall be signed by the successful Bidder and returned, together with all the required Contract bonds and insurance certificates, within fifteen (15) Days after the Contract has been awarded, or as otherwise directed, in writing, by the City.

If the Bidder is an individual, the Contract shall be executed personally by the Bidder. If the Bidder is a partnership, it is desirable that the Contract be executed by all of the partners, but it may be executed by one of them. If the Bidder is a corporation, it must be executed by two officers of the corporation consisting of (1) the chairman of the board, president or vice president; and (2) the secretary, assistant secretary, chief financial officer, treasurer or assistant treasurer, or by a person authorized by the corporation to execute written contracts on its behalf, and the corporate seal affixed thereto. In the alternative, a person other than an officer may sign the Contract, provided evidence satisfactory to the City is provided indicating the individual's authority to bind the corporation. If the corporate seal is not affixed to the Contract, or if it is executed by a person other than officers, or only by one officer, there must be attached to the Contract a certified copy of a resolution of the corporation authorizing such officer or person to execute written contracts for and on behalf of the corporation. If the Bidder is a joint venture, the Contract must be executed on behalf of each participating firm by officers or other individuals who have the full and proper authorization to do so.

4-1.06            **FAILURE TO EXECUTE CONTRACT.** Failure of the lowest responsible Bidder, the second lowest responsible Bidder, or the third lowest responsible Bidder to execute the Contract and file acceptable bonds and insurance as provided within fifteen (15) Days after the Contract has been awarded, or as otherwise directed, in writing, by the City, shall be just cause for annulment of the award and forfeiture of the Bidder's security. The successful Bidder may file with the City Clerk a written notice, signed by the Bidder or Bidder's authorized representative, specifying that the Bidder will refuse to execute the Contract if presented to Bidder. The filing of such notice shall have the same force and effect as the failure of the Bidder to execute the Contract and furnish acceptable bonds within the time prescribed.

## **SECTION 5: BID PROTEST PROCEDURES**

5-1.01        **POLICY/PROCEDURES.** It is the policy of the City to consider fully and adjudicate promptly protests filed by prospective Bidders relating to the City's bidding procedure or award of the Contract. Protests shall be filed and processed in accordance with Section 4.12.150 of the Roseville Municipal Code. A Bidder's failure to follow the bid protest procedures may result in rejection of the protest by the City.

**PROPOSAL**

**PROPOSAL TO THE DEPARTMENT OF ENVIRONMENTAL UTILITIES**

for

**Regional Pump Station 26 and Force Main Capacity Improvement**

Name of Bidder \_\_\_\_\_ Business Phone \_\_\_\_\_

Business Address \_\_\_\_\_

Place of Business \_\_\_\_\_

Contractor's License No. \_\_\_\_\_

License Expiration Date \_\_\_\_\_

License Classification Type \_\_\_\_\_

DIR Registration No. \_\_\_\_\_

Type of business organization: \_\_\_\_\_

\*If a Corporation, incorporated under the laws of the State of: \_\_\_\_\_

City of Roseville Business License No. \_\_\_\_\_

The undersigned Bidder herewith submits this Proposal and binds itself on award by the City of Roseville under this bid to execute a Contract in accordance with its bid and the Contract Documents.

The Notice to Contractors, Instructions to Bidders, Form of Agreement, Specifications, General Conditions, Supplemental Conditions, Contract Drawings, and Addenda, if any, are

made part of this bid and all provisions thereof are hereby accepted, and all representations and warranties are required thereby are hereby affirmed.

The work to be done is described in the Bidding Documents entitled Regional Pump Station 26 and Force Main Capacity Improvement, City of Roseville, California.

This offer shall be irrevocable for a period of sixty (60) Days after the date on which bids are opened.

The undersigned Bidder understands that any clarification made to the above or any new and different conditions or information submitted on or with its Proposal, other than that requested, may render the bid non-responsive.

The undersigned, as Bidder, declares that the only persons or parties interested in this Proposal as principals are those named herein; that this Proposal is made without collusion with any other person, firm, or corporation; that the Bidder has carefully examined the location of the proposed Work, the attached Form of Agreement, and the plans, Specifications, and other Contract Documents; and agrees if this Proposal is accepted, that it will contract with the City of Roseville, in the form of a copy of the Agreement contained in the Project Manual, to provide all necessary machinery, tools, apparatus and other means of construction, and to do all the work and furnish all the materials specified in the Contract Documents, in the manner and time therein prescribed, and according to the requirements of the Director, as therein set forth, and that the Bidder will take in full payment therefore prices indicated in the Schedule of Bid Items, including all work modified by addendum numbers \_\_\_\_\_. (IF NONE, STATE NONE).

Bids are required for all Bid Items. The amount of the Bid for comparison purposes will be the total of all items awarded.

The Bidder shall set forth for each item of work, in clearly legible figures, an item (“unit”) price and a total for the item in the respective spaces provided for this purpose in the Schedule of Bid Items.

The prices included within the Schedule of Bid Items include all costs for labor, materials, tools, equipment, services, Subcontractors, suppliers, taxes, insurance, shipment, delivery, overhead, profit, and for all other costs necessary to perform the Work in accordance with the Contract Documents.

Accompanying this Proposal is \_\_\_\_\_.

(Notice: Insert the words “Cash \$ \_\_\_\_\_,” “Cashier's Check,” “Certified Check,” or “Bidder's Bond,” as the case may be, in an amount equal to at least ten percent (10%) of the total of the Bid.)

If Bidder is a corporation, two signatures are required as follows: (1) the Chairman, President, or Vice-President and (2) the Secretary, Assistant Secretary, Chief Financial Officer, Treasurer, or Assistant Treasurer. In the alternative, this Agreement may be executed by a single officer or a person other than an officer provided that evidence satisfactory to City is provided demonstrating that such individual is authorized to bind the corporation (example, a copy of a certified resolution from the corporation's board or a copy of the corporation's bylaws).

## **STATEMENT OF QUALIFICATIONS AND EXPERIENCE**

Provide a summary of your firm's experience in providing these or similar services.

Provide a minimum of three (3) references for projects or services similar in nature and scope that your firm's team members have completed in the last five (5) years. Include brief descriptions of the projects, dates, a list of proposed staff that were part of the project, client names and contact persons' names, addresses and telephone numbers. Public sector references are preferred.

## LIST OF SUBCONTRACTORS

Contractor's Name: \_\_\_\_\_

The Bidder is required to furnish the following information in accordance with the provisions of Section 4100 and 4114, inclusive, of the Public Contract Code of the State of California. This list and information shall include all Subcontractors that perform work, provide labor or render services to the Bidder in connection with the Project in an amount in excess of one-half of one percent (0.5%) of the total amount of the Bidder Grand Total Price.

## SECURITY FOR COMPENSATION CERTIFICATE

(Required by California Labor Code Section 1861)

TO: City Council

City of Roseville

I am aware of the provisions of Section 3700 of the Labor Code which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the work of this Contract.

## BIDDER'S BOND

City Council of the City of Roseville

KNOW ALL MEN BY THESE PRESENTS:

That we \_\_\_\_\_  
\_\_\_\_\_, as PRINCIPAL, and  
\_\_\_\_\_  
a, \_\_\_\_\_ and duly authorized to transact business  
under the laws of the State of California, as SURETY, are held and firmly bound unto the City of  
Roseville in the penal sum of \_\_\_\_\_ dollars  
(\$ \_\_\_\_\_), being at least TEN PERCENT (10%) OF THE TOTAL AMOUNT OF  
THE BID of the Principal above named, submitted by said Principal to the City of Roseville,  
acting by and through the Public Works Director, for the work described below, for the payment  
of which sum in lawful money of the United States, well and truly to be made, to the Director of  
the Department to which said Bid was submitted, we bind ourselves, our heirs, executors,  
administrators and successors, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION IS SUCH,

That whereas the Principal has submitted the above-mentioned Bid to the City Council of  
the City of Roseville, as aforesaid, for certain construction specifically described as follows, for  
which Bids are to be opened at the Office of the City Clerk located at 311 Vernon Street,  
Roseville, California, on \_\_\_\_\_, 20\_\_ FOR

---

(Copy here the exact title of work as it appears on the Proposal.)

NOW, THEREFORE, IF THE AFORESAID PRINCIPAL is awarded the Contract and, within the time and manner required under the Contract Documents, after the prescribed forms are presented for signature, enters into a written Contract, in the prescribed form, in accordance with the Bid, and files all insurance and two (2) Bonds with the Department, one (1) to guarantee Faithful Performance and the other to guarantee Payment for Labor and Materials, as required by law, then this obligation shall be null and void; otherwise, it shall be and remain in full force and effect.

IN WITNESS WHEREOF, we have hereunto set our hands and seals on this \_\_\_\_\_ day of \_\_\_\_\_, 20\_\_\_\_.

## NONCOLLUSION DECLARATION

### TO BE EXECUTED BY BIDDER AND SUBMITTED WITH BID

The undersigned declares:

I am the \_\_\_\_\_ of \_\_\_\_\_, the party making the foregoing bid.

The bid is not made in the interest of, or on behalf of, any undisclosed person, partnership, company, association, organization, or corporation. The bid is genuine and not collusive or sham. The Bidder has not directly or indirectly induced or solicited any other Bidder to put in a false or sham bid. The Bidder has not directly or indirectly colluded, conspired, connived, or agreed with any Bidder or anyone else to put in a sham bid, or to refrain from bidding. The Bidder has not in any manner, directly or indirectly, sought by agreement, communication, or conference with anyone to fix the bid price of the Bidder or any other Bidder, or to fix any overhead, profit, or cost element of the bid price, or of that of any other Bidder. All statements contained in the bid are true. The Bidder has not, directly or indirectly, submitted his or her bid price or any breakdown thereof, or the contents thereof, or divulged information or data relative thereto, to any corporation, partnership, company, association, organization, bid depository, or to any member or agent thereof, to effectuate a collusive or sham bid, and has not paid, and will not pay, any person or entity for such purpose.

Any person executing this declaration on behalf of a Bidder that is a corporation, partnership, joint venture, limited liability company, limited liability partnership, or any other entity, hereby represents that he or she has full power to execute, and does execute, this declaration on behalf of the Bidder.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this declaration is executed on \_\_\_\_\_ [date], at \_\_\_\_\_ [city], \_\_\_\_\_ [state].

---

(Signature of Declarant)

## DISQUALIFICATION QUESTIONNAIRE

The Bidder shall complete, under the penalty of perjury, the following questionnaire:

Has the Bidder, any officer of the Bidder, or any employee of the Bidder who has proprietary interest in the Bidder, ever been disqualified, removed, or otherwise prevented from bidding on, or completing a federal, state, or local government project because of a violation of law or a safety regulation?

Yes \_\_\_\_\_

No \_\_\_\_\_

If the answer is yes, explain the circumstances in the following space.

**END OF PROPOSAL**

## AGREEMENT

THIS AGREEMENT, is made and entered into this \_\_\_\_ day of \_\_\_\_\_, 20\_\_\_\_, by and between the City of Roseville, a municipal corporation, (“CITY”), and \_\_\_\_\_, a \_\_\_\_\_, (“CONTRACTOR”); and

## W I T N E S S E T H:

--

WHEREAS, the City Council of the CITY, at a meeting held on the \_\_\_\_ day of \_\_\_\_\_, 20\_\_\_\_, approved plans and specifications for the Regional Pump Station 26 and Force Main Capacity Improvement Project and directed the City Clerk to advertise for sealed proposals for doing said work and providing that bids be submitted on the \_\_\_\_ day of \_\_\_\_\_, 20\_\_\_\_; and

WHEREAS, the City Clerk, thereafter duly and regularly caused a notice to be published in the manner and for the time prescribed by law; and

WHEREAS, CONTRACTOR, pursuant to the provisions of said notice duly filed a bid with the City Clerk, a true copy of which bid is now on file in the office of the City Clerk, and is hereby referred to and by this reference made a part hereof as fully as if set forth at length herein; and

WHEREAS, all bids received pursuant to said notice were opened and examined and publicly declared at the time specified in said advertisement for bids and at a meeting of the City Council held on the \_\_\_\_ day of \_\_\_\_\_, 20\_\_\_\_, the Council found and declared the bid of CONTRACTOR to be the lowest responsible bid and thereupon awarded a

contract to CONTRACTOR to do the work referred to in the aforementioned specifications.

NOW, THEREFORE, the parties agree as follows:

1. THE WORK. CONTRACTOR agrees:

a. To do the work and furnish all the labor, materials, tools, supplies, equipment, superintendence, insurance, and bonds required for the

---

in accordance with the Contract Documents (the Work).

b. To do and perform the Work contemplated hereby in a good and workmanlike manner under the direction of and to the satisfaction of the Director of Public Works of the City of Roseville.

2. PAYMENT. CITY shall pay CONTRACTOR \_\_\_\_\_

\_\_\_\_\_ dollars (\$ \_\_\_\_\_) for the Work to be done under this Agreement in accordance with the Contract Documents.

3. CONTRACT DOCUMENTS. The complete Agreement between the parties hereto consists of the following documents:

a. The advertisement for bids (including the notice to bidders, instructions to bidders and proposals);

b. The accepted bid;

c. Plans and specifications (including general conditions, supplemental conditions, special provisions and construction details);

d. Bonds and insurance required by the Insurance Broker Information Packet section of this document; and

e. This contract.

All documents specified above are intended to operate so that any work called for in any one and not mentioned in the other, or vice versa, is to be executed the same as if mentioned in all said documents.

4. LIQUIDATED DAMAGES. In the event CONTRACTOR does not complete the Work within the time specified, CONTRACTOR agrees that CITY will suffer damages. Inasmuch as the actual damages which would result from such breach by CONTRACTOR under this Agreement are uncertain, and would be impractical or extremely difficult to fix, CONTRACTOR agrees that it shall pay, or CITY shall deduct from CONTRACTOR's fee, the amount of \$ \_\_\_\_\_ per day as liquidated damages, in the event of such delay.

5. TIME OF COMPLETION. Time is of the essence of this Agreement. CONTRACTOR shall complete all Work under the Contract Documents within \_\_\_\_\_ Days of the date of this Contract. CONTRACTOR shall begin work by the date specified in the "Notice to Proceed" letter and shall diligently prosecute all of the Work under this Contract in all parts and requirements as defined in the Contract Documents.

6. SERVICE OF NOTICE. Any notice required or permitted to be given under this Agreement shall be deemed given when (a) personally delivered to the recipient identified below; (b) mailed by registered or certified mail, return receipt requested, postage pre-paid, to the address specified below; or (c) sent by facsimile, with confirmation of receipt, to the facsimile number identified below.

CITY OF ROSEVILLE

CONTRACTOR

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

CITY may also act through either its architect or construction manager if CITY expressly gives notice to CONTRACTOR, in writing, that CITY's designee has authority to act for CITY in a specific capacity.

7. DISPUTES. Disputes arising from this Agreement will be determined in accordance with the Contract Documents and Public Contract Code Sections 10240-10240.13.

8. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

9. INDEPENDENT CONTRACTOR. CONTRACTOR shall act as an independent contractor, and covenants and agrees that it will conduct itself consistent with such status, that it will neither hold itself out as, nor claim to be, an officer or employee of CITY by reason of this Agreement.

10. SUCCESSORS IN INTEREST. This Agreement shall be binding upon the heirs, successors, executors, administrators and assigns of the respective parties hereto.

11. MODIFICATION. This Agreement and each provision contained herein may be waived, amended, supplemented or eliminated only by mutual written agreement of the parties.

12. SEVERABILITY. If any of the provisions contained in this Agreement are for any reason held invalid or unenforceable, such holding shall not affect the remaining provisions or the validity and enforceability of the Agreement as a whole.

13. INTEGRATED AGREEMENT. This is an integrated agreement and contains all of the terms, considerations, understanding and promises of the parties. It shall be read as a whole.

14. CONTRACTORS LICENSE LAW. CONTRACTORS ARE REQUIRED BY LAW TO BE LICENSED AND REGULATED BY THE CONTRACTORS' STATE LICENSE

BOARD WHICH HAS JURISDICTION TO INVESTIGATE COMPLAINTS AGAINST CONTRACTORS IF A COMPLAINT REGARDING A PATENT ACT OR OMISSION IS FILED WITHIN FOUR (4) YEARS OF THE DATE OF THE ALLEGED VIOLATION. A COMPLAINT REGARDING A LATENT ACT OR OMISSION PERTAINING TO STRUCTURAL DEFECTS MUST BE FILED WITHIN TEN (10) YEARS OF THE DATE OF THE ALLEGED VIOLATION. ANY QUESTIONS CONCERNING A CONTRACTOR MAY BE REFERRED TO THE REGISTRAR, CONTRACTORS' STATE LICENSE BOARD, P.O. BOX 26000, SACRAMENTO, CALIFORNIA 95826.

IN WITNESS WHEREOF, the City of Roseville, a municipal corporation, has authorized the execution of this Agreement in duplicate by its City Manager and attestation by its City Clerk under authority of Resolution No. \_\_\_\_\_, adopted by the Council of the City of Roseville on the \_\_\_\_ day of \_\_\_\_\_, 20\_\_\_\_, and CONTRACTOR has caused this Agreement to be duly executed.

## NOTICE TO CONTRACTOR

For your convenience, this package contains the Requirements for Insurance and Bonds for this project, including the necessary City forms. You are required to return these forms in addition to the executed Contract within fifteen (15) calendar days after the award of the Bid, unless otherwise directed by City in writing. (See the Instructions to Bidders.)

Please insert the dollar amount of your accepted Bid into the blank on page INS-1 and present this entire package to your insurance broker if you are awarded the Bid.

## NOTICE TO INSURANCE BROKER

Your client has been awarded a bid by the City Council of the City of Roseville to perform a public works project known as Regional Pump Station 26 and Force Main Capacity Improvement Project. The Contract Amount is \$\_\_\_\_\_

The Contract Conditions for this project require your client (“the Contractor”) to return certain evidence of insurance and bonds to the City Attorney of the City within fifteen (15) days after the Bid award, unless otherwise directed by the City in writing, or else the Bid award may be terminated and awarded to another company.

This package contains the information you will need as an insurance broker to provide the appropriate insurance and bonds to the City. The insurance coverages the Contractor needs are specified in the section entitled “Insurance Requirements.” Please note that, in addition to the insurance certificate itself, copies of several endorsements must be actually furnished.

Please refer to the Supplemental Conditions for modifications of the General Conditions, if any, and the requirements of this insurance packet.

Please use the standard City of Roseville Bond Forms provided in this package.

The Bonds required must each be in the penal amount of: \$\_\_\_\_\_.

Bonds must be sent to the following staff person:

Rana Moore  
2005 Hilltop Circle  
Roseville, CA 95747

Insurance documents must be provided using one of the following methods:

- a. By email to [roseville@ebix.com](mailto:roseville@ebix.com) and [riskmanagement@roseville.ca.us](mailto:riskmanagement@roseville.ca.us)
- b. By fax to (770) 335-5727 and (916) 774-5461

After using one of these methods, please **DO NOT** send the insurance certificate(s) by mail.

When forwarding the documents, please refer to the project name so that the documents can be matched with the Contract for which they are submitted.

Thank you.

## **INSURANCE REQUIREMENTS**

The following sections are quoted from the General Conditions:

### **5-1.23        INSURANCE COVERAGE.**

A.     Evidence of Maintenance Required. The Contractor shall, at its expense, procure and at all times maintain in full force and effect at a minimum the insurance required by this section on all of its operations; and the Contractor shall not allow any Subcontractor to commence work until similar insurance required of the Subcontractor has been obtained and filed. An original Certificate of Insurance, and copies of all required endorsements, all in a form approved by the Risk Manager, evidencing all required coverage or policies shall be filed after the award of the bid and prior to approval of the Contract by the City Council. Contractor shall provide ten (10) days prior written notice to the City of any reduction of coverage limits or cancellation of the coverage or policies shall be given to the City of Roseville as Certificate holder.

B.     Qualifying Insurers. With the exception of the State Compensation Insurance Fund, all required insurance policies shall be issued by companies acceptable to the City and licensed to do business in the State of California and who hold a current policy holders alphabetic and financial size category rating of not less than AVII according to the most recent issue of Best's Insurance Reports.

#### C.     Insurance Required.

1.     **Commercial General Liability (CGL):** Insurance Services Office Form CG 00 01 covering CGL on an “occurrence” basis, including products and completed operations with limits of no less than Two Million Dollars (\$2,000,000) per occurrence for bodily injury,

personal injury and property damage for projects under One Million Dollars (\$1,000,000) and limits of no less than Five Million Dollars (\$5,000,000) per occurrence for bodily injury, personal injury and property damage for projects over One Million Dollars (\$1,000,000). If a general aggregate limit applies, either the aggregate limit shall apply separately to this project or the general aggregate limit shall be twice the required occurrence limit.

The Commercial General Liability insurance shall include the following, copies of which shall be provided:

a. Inclusion of the City of Roseville, and its officers, agents, employees, and volunteers, as additional insureds (except for workers' compensation) as respects services or operations under the Contract. The additional insured endorsement for the general liability policy shall be at least as broad as the ISO CG 2010 10 01 combined with ISO CGL Endorsement CG 2037 10 01. Any other endorsement must be approved in writing by the City. Endorsements must include coverage for on-going and completed operations, which coverage shall be maintained for four (4) years following completion of the Project. Endorsements shall cover the City of Roseville, its officers, agents, employees, and volunteers.

b. The insurance shall provide coverage for claims by one insured against another insured and the policies shall not contain any cross-suits exclusions, cross-liability exclusions, or insured versus insured exclusions. The policies shall not contain any classification exclusions purporting to deny coverage for any work to be performed by Contractor or any of its Subcontractors.

c. Stipulation that the insurance is primary and noncontributory, as evidenced by a separate endorsement (CG 20 01 04 13 or an equivalent) or section of the policy, and that neither the City nor its insurers will be called upon to contribute to a loss.

d. Such insurance shall specifically cover the contractual liability of the Contractor.

e. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

f. Waiver of subrogation endorsement.

g. The Contractor shall furnish a certificate for the period covered.

2. **Automobile Liability:** Insurance Services Office Form Number CA 0001 covering Code 1 (any auto), or if Contractor has no owned autos, Code 8 (hired) and Code 9 (non-owned), with limits of no less than One Million Dollars (\$1,000,000) per accident for bodily injury and property damage.

3. **Workers' Compensation:** In accordance with the provisions of the California Labor Code, Contractor is required to be insured against liability for Workers' Compensation or to undertake self-insurance. Statutory Workers' Compensation and Employers' Liability of at least One Million Dollars (\$1,000,000) shall cover all Contractors staff while performing any work incidental to the performance of this Agreement.

4. **Professional Liability:** Professional Liability (Errors and Omission) Insurance appropriate to Contractor's profession, with a limit of liability not less than One Million Dollars (\$1,000,000) per occurrence or claim and Two Million Dollars (\$2,000,000) aggregate to cover all design and engineering services rendered by Contractor pursuant to the Agreement. Coverage must commence from the first day that Contractor or any of its

Subcontractors provided any design or engineering services in connection with the Project.

5. **Builder's Risk/Course of Construction Insurance Is X OR Is Not \_\_\_\_\_ Required by Risk Management:** The Contractor shall be responsible for all loss, damage or destruction whatsoever to the work called for by this Contract until the approval of a Notice of Completion or acceptance of the Work if no Notice of Completion is to be recorded.

The Contractor shall secure "All Risk" type of Builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the work performed under this Contract (the value is presumed to be the Contract amount unless otherwise stated in Supplemental Conditions) and all materials, equipment, or other items to be incorporated therein while the same are located at the construction site, a bonded warehouse, or its place of manufacture. At any time, the policy shall cover the value of the work completed. The policy shall cover hazards including the losses due to fire, explosion, hail, rain, lightning, flood (separate insurance as needed), vandalism, malicious mischief, wind, collapse, aircraft, and smoke.

The policies providing such insurance shall name the City as a loss payee as its respective interests may appear, and certified copies of such policies shall be filed with the City. The maximum deductible allowable under the Builder's All Risk policy shall be five percent (5%) of the Contract amount.

Builder's Risk Insurance is not required for coverage of losses in excess of five percent (5%) of the Contract amount for damages resulting from earthquake in excess of a magnitude of 3.5 on the Richter scale, or tidal waves. Coverage in the amount of five percent (5%) of the Contract amount for such losses is required.

6. **Pollution Coverage:** Contractor shall procure pollution liability coverage or other insurance covering claims for bodily injury or property damage arising out of the

abatement, removal, storage, transportation, or other exposure to hazardous materials or pollutants, in limits not less than Two Million Dollars (\$2,000,000). Contractor shall add the City and all parties required to be indemnified by Contractor as additional insured on all pollution liability policies.

7. **Higher Coverage Limits:** If Contractor maintains higher coverage limits than the amounts shown above, then the City requires and shall be entitled to coverage for the higher coverage limits maintained by Contractor. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

8. **Claims Made Coverage:** Liability insurance coverage may not be written on a “claims made” or modified occurrence basis. The Certificate of Insurance must clearly provide that the coverage is on an “occurrence” basis.

5-1.24 **OTHER INSURANCE PROVISIONS.**

A. The requirements of the Standard Specifications as to types and limits of insurance coverage to be maintained by the Contractor, and any approval of insurance by the City, are not intended to, and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Contractor pursuant to the Contract, including, but not limited to, the provisions concerning indemnification, nor preclude the City from taking any other action available to it under any other provision of the Contract or law.

B. The City acknowledges that some insurance requirements contained in these Standard Specifications may be fulfilled by self-insurance on the part of the Contractor. However, this shall not in any way limit liabilities assumed by Contractor under the Contract. Any self-insurance must be approved in writing by the City, in its sole discretion and shall not reduce the limits of liability. Any deductibles or self-insured retentions (“SIR”) must be

declared on the certificate of insurance and approved by City in writing. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

C. The Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Contract, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor's work. Furthermore, the Contractor shall require its subcontractors to agree to be bound to the Contractor and the City in the same manner and to the same extent as the Contractor is bound to the City under this Contract. Additionally, the Contractor shall obligate its subcontractors to comply with these same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of the City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request. Alternatively, the Contractor may insure subcontractor(s) under its own policy.

D. The City, its officers, agents, employees, and volunteers are to be covered as insureds with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the Contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under California Insurance Code Section 11580.04.

E. The limits of insurance required in this Contract may be satisfied by a

combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of the City (if agreed to in a written contract) before the City's own insurance shall be called upon to protect it as a named insured.

F. The insurance procured by Contractor shall be subject to the approval of the City, but any acceptance of insurance certificates by the City shall in no way limit or relieve Contractor of its duties and responsibilities under the Agreement.

G. Contractor shall be responsible for all premiums, deductibles, and self-insured retention applicable to the insurance it is required to procure under the Contract. All deductibles or self-insured retentions over five hundred thousand dollars (\$500,000) must be approved by the City, in writing. Contractor shall be responsible for all deductibles, self-insured retention payments, and/or increased premiums incurred if the City's policies of insurance are forced to cover damages or respond to claims for which Contractor or its Subcontractors were obligated to provide insurance under the Contract.

H. Failure of the City to enforce in a timely manner any of the requirements of these insurance provisions shall not act as a waiver to enforcement of any of these provisions at a later date.

I. Contractor's indemnity obligations shall not be limited by these insurance provisions and shall survive the expiration of the Contract and the insurance provisions of the Contract shall likewise not be limited by the indemnity provisions of the Contract.

**J. THE CITY RESERVES THE RIGHT TO WITHHOLD ANY  
PROGRESS PAYMENTS TO THE CONTRACTOR IN THE EVENT OF  
NONCOMPLIANCE WITH ANY INSURANCE REQUIREMENTS.**

**PUBLIC WORKS**

**FAITHFUL PERFORMANCE BOND**

(Project: Regional Pump Station 26 and Force Main Capacity Improvement)

---

WHEREAS, the City of Roseville ("CITY") has awarded a bid and contract to

\_\_\_\_\_  
as contractor ("PRINCIPAL") for the public work described as Regional Pump Station 26 and Force Main Capacity Improvement (the "WORK").

The contract ("AGREEMENT"), for the public work described above, and all of its terms and conditions are incorporated by reference and made a part hereof; and

WHEREAS, the PRINCIPAL is required to furnish a bond in connection with the AGREEMENT guaranteeing its faithful performance; and

NOW, THEREFORE, we the undersigned PRINCIPAL and \_\_\_\_\_  
\_\_\_\_\_, a \_\_\_\_\_, admitted  
and duly authorized to transact business under the laws of the State of California, as SURETY ("SURETY"), are held and firmly bound unto the CITY or its successors and assigns in the sum of \_\_\_\_\_  
dollars (\$\_\_\_\_\_) (which amount is not less than 100% of the

AGREEMENT price) to be paid to the CITY or its successors and assigns; and for which payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors or assigns jointly and severally, firmly by these presents.

The condition of this obligation is such that if the PRINCIPAL, or its heirs, executors, administrators, successors or assigns, shall abide by, and in all respects promptly and faithfully perform the covenants, conditions and provisions in said AGREEMENT and any alteration thereof made as therein provided, notice of which alterations to Surety being hereby waived, on its part to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless CITY, its officers, agents, employees, volunteers as therein stipulated, then this obligation shall be null and void; otherwise, this obligation shall be and remain in full force and effect.

As condition precedent to the satisfactory completion of the contract, the obligation of the PRINCIPAL and SURETY under this Bond shall remain in effect for a period of one (1) year after the completion and acceptance of the WORK. During that time, if the PRINCIPAL, its heirs, executors, administrators, successors or assigns fails to make full, complete and satisfactory repair and replacement or totally protect the CITY from any loss or damage made evident during that year which results from or is caused by either defective materials or faulty workmanship in the prosecution of the WORK, then the obligation shall remain in full force and effect. However, anything in this paragraph to the contrary notwithstanding, the obligation of the SURETY shall

continue so long as any obligation of the PRINCIPAL remains.

No prepayment or delay in payments, and no change, extension, addition or alteration of any provision of the AGREEMENT or in the specifications agreed to between the PRINCIPAL and the CITY, or any forbearance on the part of the CITY shall operate to relieve the SURETY. The SURETY hereby waives the provisions of Section 2819 of the California Civil Code. The SURETY waives all rights of subrogation against the CITY or any person employed by the CITY. If the contract price increases by the issuance of change orders, the amount specified in this bond shall increase by the same amount.

Whenever PRINCIPAL shall be and declared by CITY to be in default under the AGREEMENT, SURETY shall promptly remedy the default, or shall promptly do one of the follow at CITY's election:

1. Undertake through its agents or independent contractors, reasonably acceptable to CITY, to complete the AGREEMENT in accordance with its terms and conditions and to pay and perform all obligations of PRINCIPAL under the AGREEMENT, including without limitation, all obligations with respect to warranties, guarantees, and the payment of liquidated damages.
2. Reimburse CITY for all costs CITY incurs in completing the AGREEMENT, and in correcting, repairing or replacing defects in materials or workmanship

and/or materials and workmanship which do not conform to the specifications in the AGREEMENT.

SURETY's obligations hereunder are independent of the obligations of any other surety for the performance of the AGREEMENT, and suit may be brought against SURETY and such other sureties, jointly and severally, or against any one or more of them, or against less than all of them without impairing CITY's rights against the others.

No right of action shall accrue on this bond to or for the use of any person or corporation other than CITY or its successors or assigns.

As part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by CITY in successfully enforcing such obligation, all to be taxed as costs and included in any judgment rendered.

[SIGNATURES NEXT PAGE]

IN WITNESS WHEREOF, this instrument has been duly executed by the  
PRINCIPAL and SURETY above-named, on the \_\_\_\_ day of \_\_\_\_\_,

(Project: Regional Pump Station 26 and Force Main Capacity Improvement)

---

WHEREAS, the City of Roseville ("CITY"), has awarded a bid and contract to \_\_\_\_\_  
as contractor ("PRINCIPAL"), for the public work described as Regional Pump Station  
26 and Force Main Capacity Improvement (the "WORK"). The contract  
("AGREEMENT"), for the public work described above, and all of its terms and  
conditions are incorporated by reference and made a part hereof; and

WHEREAS, the PRINCIPAL is required to furnish a bond in connection with the  
AGREEMENT guaranteeing payment of persons who provide labor and material; and

NOW, THEREFORE, we the undersigned PRINCIPAL and \_\_\_\_\_  
\_\_\_\_\_, a \_\_\_\_\_, admitted  
and duly authorized to transact business under the laws of the State of California, as  
SURETY ("SURETY"), are held and firmly bound unto the CITY or its successors and  
assigns in the sum of \_\_\_\_\_  
dollars (\$ \_\_\_\_\_) (which amount is not less than 100% of the  
AGREEMENT price) to be paid to the CITY or its successors and assigns; and for which

payment, well and truly to be made, we bind ourselves, our heirs, executors and administrators, successors or assigns jointly and severally, firmly by these presents.

The condition of the obligation is such that if the PRINCIPAL, its subcontractors, heirs, executors, administrators, successors or assigns fails to pay any of the persons named in Section 8004 or 9100 of the Civil Code of the State of California, or the amounts due under the Unemployment Insurance Code of the State of California, or any amounts required to be deducted, withheld and paid over to the Employment Development Department from the wages of employees of the PRINCIPAL and its subcontractors pursuant to Section 13020 of the Unemployment Insurance Code, with respect to work or labor performed by any such claimant, that the SURETY will pay for the same, in an amount not exceeding the sum specified in this bond, and also, in case suit is brought upon the bond, shall pay reasonable attorneys' fees, to be fixed by the Court.

This bond shall inure to the benefit of any and all persons, companies, and corporations entitled to file a Stop Payment Notice pursuant to the provisions of Section 9350 et seq. of the Civil Code of the State of California, so as to give a right of action to them or their assigns in any suit brought upon this bond.

No prepayment or delay in payments, and no change, extension, addition or alteration of any provision of the AGREEMENT or in the specifications agreed to between the PRINCIPAL and the CITY, or any forbearance on the part of the CITY shall

operate to relieve the SURETY. The SURETY hereby waives the provisions of Section 2819 of the California Civil Code. The SURETY waives all rights of subrogation against the CITY or any person employed by the CITY. If the contract price increases by the issuance of change orders, the amount specified in this bond shall increase by the same amount.

As part of the obligation secured hereby and in addition to the face amount specified therefore, there shall be included costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by CITY in successfully enforcing such obligation, all to be taxed as costs and included in any judgment rendered.

IN WITNESS WHEREOF, this instrument has been duly executed by the PRINCIPAL and SURETY above-named, on the \_\_\_\_ day of \_\_\_\_\_, 20\_\_.

## SECTION 1

### DEFINITIONS AND TERMS

1-1.01        **GENERAL.** When the following abbreviations and terms or pronouns in place of them appear in the Contract Documents, the intent and meaning shall be interpreted as provided in this Section 1.

1-1.02        **ACCEPTANCE.** Formal Acceptance by resolution by the Roseville City Council of the Contract when completed in all respects in accordance with the Contract Documents and any modifications previously approved.

1-1.03        **ADDENDUM.** Written interpretation or revision to any of the Contract Documents issued by the City before the bid opening.

1-1.04        **AS-BUILT DOCUMENTS, AS-BUILT DRAWINGS AND RECORD DOCUMENTS.** As-Built Documents, As-Built Drawings and Record Documents are all contract documents modified to reflect changes during the construction phase. Specifically, As-Built Documents/Drawings are a revised set of drawings submitted by the Contractor upon Final Completion of a project. They reflect changes made in the Specifications and Working Drawings during the construction process, and show the exact dimensions, geometry, and location of all elements of the work completed under the Contract. Record Documents, on the other hand, are compiled by the Engineer or Architect based on the As-Built Documents/Drawings submitted by the Contractor. They reflect the Engineer or Architect's concurring review of what changes were denoted, why they were made and where they occurred and create a record set of drawings.

1-1.05        **ASSESSMENT.** A cost imposed on the Contractor for non-compliance

with certain contractual requirements.

1-1.06        **BENEFICIAL OCCUPANCY.** The taking possession of a portion of the Work by the City for its use and/or occupancy on other than a temporary or emergency basis.

1-1.07        **BID GUARANTY.** The cashier's, certified check, irrevocable standby letter of credit, deposit of securities, or Bidder's Bond, accompanying the bid submitted by the Bidder, as a guaranty that the Bidder will enter into an agreement with the City for the performance of the Work, if the Agreement is awarded to Bidder, and the Bidder will submit the required Contract Bonds and Certificate of Insurance. Also referred to as the Bidder's Security.

1-1.08        **BIDDER.** Individual, firm, partnership, limited liability company, corporation, joint venture, or any combination thereof, submitting a Proposal for the Work, acting directly, or through a duly authorized representative.

1-1.09        **BIDDING DOCUMENTS.** Includes the Notice to Bidders, Bidding Requirements, Contract Conditions, Drawings, and Addenda.

1-1.10        **CHANGE ORDER.** Any written order to the Contractor directing an addition, deletion, or modification of the Work, or an adjustment in the Contract Price or Contract Time provided in the Contract Documents and issued after the Agreement has been signed.

1-1.11        **CITY.** The City of Roseville.

1-1.12        **CITY ATTORNEY.** The City Attorney of the City.

1-1.13        **CITY CLERK.** The City Clerk of the City.

1-1.14        **CLAIM.** A separate demand by Contractor sent by registered mail or certified mail with return receipt requested, for one or more of the following: (a) a time extension, including, without limitation, for relief for damages or penalties for delay assessed by

the City; (b) payment by the City of money or damages arising from work done by, or on behalf of, Contractor pursuant to the Contract Documents and payment for which is not otherwise expressly provided or to which Contractor is not otherwise entitled; and (c) payment of an amount that is disputed by the City.

1-1.15        **CONSTRUCTION SCHEDULE.** A list or graphic display of construction activities required for completing the Work, in a format required by the Contract Documents. The duration, start and finish date, and sequence of significant activities, critical path, float and milestones must be indicated in the Construction Schedule.

1-1.16        **CONTRACT OR AGREEMENT.** The written agreement relating to the Work to be performed, the labor, materials, and equipment to be furnished, and the payment to be made therefor. The Agreement/Contract is part of and incorporates all of the Contract Documents.

1-1.17        **CONTRACT CONDITIONS.** Includes the General Conditions, Supplemental Conditions, and Specifications.

1-1.18        **CONTRACT DOCUMENTS.** Includes those documents that form the basis of the Contract, including but not limited to, Bidding Documents, the Bid or Proposal, Contract Bonds, the Contract, all required insurance certificates or endorsements, all bonds, all required certifications or statements, Change Orders, any Contract Amendment, any City Standard which is incorporated by reference and these City of Roseville General Conditions for Buildings and Grounds.

1-1.19        **CONTRACT DRAWINGS.** The official drawings including plans, elevations, sections, detail drawings, diagrams, plated, General Notes, information and schedules thereon, or exact reproductions thereof, showing the location, character, dimension, and details

of the Work. The Contract Drawings include any drawings or plates bound within the Supplemental Conditions.

1-1.20        **CONTRACT PRICE.** The total compensation to be paid to the Contractor in accordance with the terms of the Agreement.

1-1.21        **CONTRACT TIME.** The number of Days, or portion thereof, allowed for completion of the Work, including all authorized time extensions. The effective date for commencement of the Work specified in the Notice to Proceed shall define the beginning of the Contract Time.

1-1.22        **CONTRACTOR.** Individual, firm, partnership, limited liability company, corporation, joint venture, or any combination thereof, who has entered into the Agreement with City.

1-1.23        **DAY OR DAYS.** Unless otherwise designated, Day or Days as used in the Contract Documents will be understood to mean calendar Day or Days.

1-1.24        **DEPARTMENT.** The Department for Contract Administration, as identified in the Supplemental Conditions.

1-1.25        **DIRECT COSTS.** Those cost items (including labor, materials, equipment and any subcontractor's work) that are used in the actual performance of, and are specifically and uniquely attributable to the Work or changed Work. Direct Costs do not include Overhead. Direct Costs only include the following:

A.        Payroll costs for employees in the direct employ of Contractor in the performance of the Work under schedules of job classifications agreed upon by City and Contractor. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include salaries and

wages plus the cost of fringe benefits which shall include social security contributions, unemployment, excise and payroll taxes, workers' compensation, health and retirement benefits, sick leave, vacation and holiday pay applicable thereto. Such employees may include superintendents and foremen at the site. The expenses of performing work after regular working hours, on Saturday, Sunday or legal holidays shall be included in the above only to the extent authorized by City in writing.

B. Cost of all materials and equipment furnished and incorporated in the Work, including costs of transportation and storage thereof, and suppliers' field services required in connection therewith. All trade discounts, rebates and refunds and all returns from sale of surplus materials and equipment shall accrue to City, and Contractor shall make provisions so that they may be obtained.

C. Payments made by Contractor to the subcontractors for work performed by subcontractors. If required by City, Contractor shall obtain competitive bids from subcontractors acceptable to Contractor and shall deliver such bids to City who will then determine which bids will be accepted. If a subcontract provides that the subcontractor is to be paid on the basis of cost of the work plus a fee, the subcontractor's cost of the work shall be determined in the same manner as Contractor's cost of the work. All subcontracts shall be subject to the other provisions of the Contract Documents insofar as applicable.

D. Costs of special consultants (including engineers, architects, testing laboratories, surveyors, and accountants) employed for services specifically, and only, related to the Work.

E. Supplemental costs including the following:

1. The proportion of necessary transportation, travel and subsistence

expenses of Contractor's employees incurred in discharge of duties connected with the Work.

2. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office and temporary facilities at the site and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value of such items used but not consumed which remain the property of Contractor.

3. Rentals of all construction equipment and machinery and the parts thereof whether rented from Contractor or others in accordance with rental agreements approved by City, and the costs of transportation, loading, unloading, installation, dismantling and removal thereof, all in accordance with terms of said rental agreements. The rental of any such equipment, machinery or parts shall cease when the use thereof is no longer necessary for the Work.

4. Sales, consumer, use or similar taxes related to the Work, and for which Contractor is liable, imposed by laws and regulations.

5. The cost of utilities (including the meter and all associated installation costs), fuel and sanitary facilities at the site.

6. Cost of premiums for additional bonds and insurance required because of changes in the Work.

1-1-26 **DIRECTOR.** Director of the Department for Contract Administration or his or her designee.

1-1.27 **EMERGENCY.** Any sudden generally unforeseen occurrence (such as a fire, flood, storm, earthquake, civil disorder, or other natural and/or man-made disaster) that has the potential to adversely affect the safety of life, the Work, and/or adjacent property; to interrupt contracts essential to the performance of the Work; and/or to cause catastrophic failure of City

equipment and/or facilities.

1-1.28        **ENGINEER OR ARCHITECT.** Professional Engineer or Architect designated for a particular project responsible for signing and sealing the permit drawings, interpretation of the drawings where ambiguities exist, review of requests for information, design Change requests and Shop Drawings, resolution of errors and omissions, and finalization of Record Documents.

1-1.29        **FINAL COMPLETION.** When the project has been completed according to the terms and conditions set forth in the Contract Documents. Final Completion is not the same as Acceptance.

1-1.30        **FORCE ACCOUNT.** Payment by force account shall mean payment on the basis of the Contractor's time and materials.

1-1.31        **GENERAL NOTES.** The written instructions, provisions, conditions or other requirements appearing on the Contract Drawings and so identified thereon, which pertain to the performance of the Work.

1-1.32        **INSTALLATION, INSTALL.** Completely assembling, erecting, and/or connecting materials, parts, components, supplies, and related equipment specified or required for the completion of the Work.

1-1.33        **LABORATORY.** Established professional laboratories authorized by the City to test materials and Work involved in the Contract.

1-1.34        **LEGAL HOLIDAYS.** Those days designated as Federal holidays or declared by the City, or otherwise specified in the Contract Documents.

1-1.35        **LIQUIDATED DAMAGES.** The amount prescribed in the Contract Documents to be paid to the City or to be deducted from any payments due or to become due the

Contractor for each day's delay in completing the whole or any specified portion of the Work beyond the time allowed in the Supplemental Conditions.

1-1.36        **NOTICE OF COMPLETION.** A legal notice filed by the City with the Placer County Recorder's Office stating that construction has been completed and accepted by the City.

1-1.37        **NOTICE TO PROCEED.** A written notice given by the City to the Contractor fixing the date on which the Contract Time will commence to run.

1-1.38        **NOTICE OF TERMINATION.** Written notice from the City to the Contractor and/or its Surety terminating the Agreement, or a portion thereof, either for convenience of the City or for default due to the Contractor's failure to perform its contractual obligations.

1-1.39        **OVERHEAD.** Business or administrative expenses (including but not limited to office expenses, administrative staff, rent, insurance, utilities) not chargeable to a particular part of the Work. The term "Overhead" shall include all of the following:

A.        Payroll costs and other compensation of Contractor's officers, executives, principals (of partnerships and sole proprietorships), general managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expeditors, timekeepers, clerks, and other personnel employed by Contractor whether at the Work Site or in Contractor's principal or a branch office for general administration of the Work and not specifically included in the agreed upon schedule of job classifications, all of which are to be considered administrative costs covered by the Contractor's fee.

B.        Expenses of Contractor's principal and branch offices other than Contractor's office at the site.

C. Any part of Contractor's capital expenses, including interest on Contractor's capital employed for the Work and charges against Contractor for delinquent payments.

D. Cost of premiums for all bonds and for all insurance whether or not Contractor is required by the Contract Documents to purchase and maintain the same, except as provided in section 1-1.25.

E. Other overhead or general expense costs of any kind.

1-1.40 **PREMISES.** Shall mean the area within construction easements, easements, rights of entry and City owned property which surrounds the Work Site, limited by the property lines thereof. In some cases Premises may coincide with the Work Site.

1-1.41 **PROFESSIONAL ENGINEER.** An engineer licensed by the Board of Registration for Professional Engineers, State of California.

1-1.42 **PROJECT MANUAL.** A book containing all Contract Documents.

1-1.43 **PROPOSAL FORMS.** The approved forms upon which the City requires that each Bidder submit its bid with regard to the Agreement.

1-1.44 **REQUEST FOR INFORMATION (RFI).** A document issued by the Contractor requesting information concerning the Contract Documents.

1-1.45 **SAFETY.** Includes the practice of identifying potential hazards, assessing their risk, taking corrective action where possible, including and providing control measures such as engineering design, written procedures, and the personal protective equipment for workers in order to eliminate or reduce the risk for exposure in the workplace.

1-1.46 **SCHEDULE OF VALUES.** The breakdown of the Contract Price that will serve as the basis for Contractor's Applications of Payment. Any lump sum bid item

included within the Contract Price will be apportioned among values relating to specific components of the Work covered by said lump sum.

1-1.47        **SHOP DRAWINGS.** Drawings, plans, diagrams, schedules, and other data specifically prepared and submitted to the City by the Contractor, showing in detail: (a) the proposed fabrication and assembly of a special component of the Work; and (b) the Installation (form, fit and attachment details) of a special component of the Work. Shop Drawings shall be deemed to include Working Drawings, Product Data, literature, and applicable performance and test data.

1-1.48        **SPECIFICATIONS.** The technical Specifications for the Work prepared by the Director or an Engineer or Architect describing in detail the nature of the Work, its components, any performance standards, and how the Work is to be constructed.

1-1.49        **SUBCONTRACTOR.** Any individual, firm, partnership, limited liability company, corporation, joint venture, or combination thereof, other than employees of the Contractor, engaged by the Contractor to furnish services, labor, equipment and materials for a portion of the Work.

1-1.50        **SUBMITTALS.** Those documents required to be submitted by the Contractor for review by the City in accordance with the Contract Documents.

1-1.51        **SUPPLEMENTAL CONDITIONS.** The Supplemental Conditions are specific clauses modifying or supplementing these General Conditions.

1-1.52        **SUPPLIER.** Any individual, firm, partnership, limited liability company, corporation, joint venture, or combination thereof, other than employees of the Contractor, that supplies a tangible product as a portion of the Work, with services usually limited to delivery and/or required testing, and with manufacturing, fabrication, or production facilities located off

the Work Site.

1-1.53        **WORK.** The furnishing of all labor, and the furnishing and Installing of all materials, articles, supplies and equipment as specified, designated, or required by the Contract Documents.

1-1.54        **WORK SITE.** All or portion of the Premises that the Work is limited to as shown on the Contract Drawings or designated by the Director. Public streets are not included unless Work is being done within the street right-of-way.

1-1.55        **WORKING DRAWINGS.** Original drawings prepared by the Contractor and/or its Subcontractors or Suppliers, of any tier, illustrating Work required for construction that will not become an integral part of the completed Work. This includes, but is not limited to, drawings for temporary structures such as decking, bulkheads, excavation supports, utility support, groundwater control, forming, falsework, access roads, staging areas, staging plans, and diversion plans. A Working Drawing is one type of a Shop Drawing.

## SECTION 2

### CONTROL AND SCOPE OF THE WORK

2-1.01      **AUTHORITY OF DIRECTOR.** The Contract shall be performed in a manner satisfactory to the Director who shall decide all questions which may arise as to the quality or acceptability of materials furnished and Work performed and as to the manner of performance and rate of progress of the Work; all questions which may arise as to the interpretation of the Contract Documents; all questions as to the acceptable fulfillment of the Contract on the part of the Contractor; and all questions as to compensation. The Director shall have authority to enforce and make effective such decisions and orders in the event the Contractor fails to promptly carry out the same.

2-1.02      **INTENT OF CONTRACT DOCUMENTS.** The Contract Documents are complementary, and what is called for by one shall be as binding as if called for by all. The intent of the Contract Documents is to describe the details for the construction and completion of the Work. Where the Contract Documents describe portions of the Work in general terms, but not in complete detail, it is understood that only the best general practice shall be followed and that only materials and workmanship of the best quality are to be used. Any Work, materials, or equipment that are customarily provided, or that are reasonably inferable from the Contract Documents as being required to produce the intended result, shall be supplied, whether or not specifically called for. When words, which have a well-known technical or trade meaning are used to describe work, materials, or equipment, such words shall be interpreted in accordance with that meaning. Unless otherwise specified, the Contractor shall furnish all labor, materials, tools, equipment, and incidentals, and do all the Work involved in executing the Contract in a

satisfactory and workmanlike manner.

Reference to standard specifications, manuals or codes of any technical society, organization or association, or to the laws or regulations of any governmental authority, whether such reference be specific or by implication, shall mean the latest standard specification, manual, code, laws, or regulations in effect on the first published date of the Notice to Contractors, except as may be otherwise specifically stated. However, no provision of any referenced standard specification, manual or code (whether or not specifically incorporated by reference in the Contract Documents) shall be effective to change the duties and responsibilities of City or Contractor, or any of their consultants, agents, or employees from those set forth in the Contract Documents, nor shall it be effective to assign to City, or City's designated representative, any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility contrary to other provisions of the Contract Documents.

The Contract Documents are divided into parts, divisions, sections and articles for convenience, organization and reference. Generally, there has been no attempt to divide the Specifications sections into work performed by the various building trades, work by separate Subcontractors, or work required for separate facilities in the project.

#### 2-1.03      **EXAMINATION AND VERIFICATION OF CONTRACT**

**DOCUMENTS.** The Contractor shall thoroughly examine and become familiar with all of the various parts of the Contract Documents and shall determine the nature and location of the Work, the general and local conditions (including applicable laws) and all other matters which can in any way affect the cost, progress or performance of the Work under this Agreement. Failure to make an examination necessary for this determination shall not release the Contractor from the obligations of the Agreement. No oral agreement or conversation with any officer, or employee

of the City, or with the City's designated representative either before or after the execution of the Agreement, shall affect or modify any of the terms or obligations contained in the Contract Documents.

2-1.04        **CONTRACT DRAWINGS.** The Contract Drawings consist of general drawings and show such plans, elevations, sections, details and schedules as are necessary to give a graphic and pictorial description of the contemplated construction. All authorized alterations affecting the requirements and information given on the Contract Drawings shall be in writing.

2-1.05        **COORDINATION AND INTERPRETATION OF CONTRACT DOCUMENTS.** All Contract Documents are essential parts of the Contract, and a requirement occurring in one is as binding as though occurring in all. They are intended to be complementary, and to describe and provide for a complete Work.

In the event of inconsistencies between requirements contained in different components of the Contract Documents, the precedence of the Contract Documents shall be as follows to resolve conflicts:

1.        Change Orders
2.        The Contract (including Addenda)
3.        The Supplemental Conditions
4.        Specifications
5.        Contract Drawings
6.        The General Conditions

Should it appear that the Work to be done or any of the matters relative thereto are not sufficiently detailed or explained in the Contract Documents, the Contractor shall submit a

Request for Information (“RFI”) to the Director for such further explanations as may be necessary and shall conform to the written explanation given as if part of the Contract Documents. The decisions of the Director shall be final.

Contractor shall anticipate that it will be necessary to prepare and submit RFIs regarding the Contract Documents. The City will respond to each RFI by no later than fourteen (14) Days after receipt of the RFI, unless the RFI is of significant complexity. Furthermore, in the event that there are numerous RFIs pending, Contractor shall cooperate with the City in establishing a priority for responding to the RFIs, and potentially some RFIs may be responded to beyond the fourteen (14) Day period.

Each RFI prepared by Contractor shall be full and complete. Contractor shall prepare RFIs so as to not cause any delay to the progress of the Work and to not cause any impact to Contractor’s labor productivity in the field. Contractor shall not assert any Claims for delay or interference against the City if Contractor fails to timely submit any RFI to the City, after consideration of the response period allowed for by the City.

The response to an RFI shall not, by itself, constitute a writing that authorizes Contractor to perform any Work that causes an adjustment to either the Contract Price or the Contract Time. If Contractor believes that any response to any RFI should constitute a compensable change, Contractor shall provide a Notice of Potential Claim as provided in Section 7-1.03, below. Contractor’s failure to provide the required written notice shall constitute a waiver of the Contractor’s right to seek a compensable change based on the RFI response.

The Contractor shall examine all Contract Documents; shall verify all figures in the Contract Documents before laying out the Work; shall promptly notify the City of all errors, inconsistencies, and/or omissions that it discovers; and, in instances where such non-

conformities are discovered, shall obtain specific instructions in writing from the City before proceeding with the Work. Contractor's performance of any Work affected by such non-conformities prior to the City's decision shall be at the Contractor's risk. Any Work that is customarily provided or that is reasonably inferable shall not relieve the Contractor from performing such work at no additional expense and/or delay, and such Work shall be performed as if fully set forth in the Contract Documents.

2-1.06        **INDEPENDENT CONTRACTOR STATUS.** The Contractor shall independently perform all Work required by the Contract Documents and shall not be considered as an agent or employee of the City, nor shall the Contractor's Subcontractors or employees be considered as subagents of the City.

The Contractor and Contractor's Subcontractors shall be licensed in accordance with the laws of the State of California and as more particularly described in the bidding documents or elsewhere in the Contract Documents.

2-1.07        **ORDER OF WORK.** When required by the Contract Documents, the Contractor shall follow the sequence of operations set forth therein. Full compensation for conforming to such requirements will be considered as included in the prices paid for the various Contract items of work, and no additional compensation will be allowed therefor.

2-1.08        **SUBMITTALS.** It shall be the Contractor's responsibility to timely submit, so as to cause no delay in the Work, all Shop Drawings, descriptive data, manuals, instructions, affidavits, samples for the various trades as required by the Supplemental Conditions and Specifications, and offers of alternatives, if any. Such Submittals shall be checked and coordinated by the Contractor with the Work of other trades involved before they are submitted to the Director for examination.

The Contractor shall deliver at least one (1) electronic copy of the Submittals to the Director, and one (1) hard copy if requested. Work requiring the submittal of working drawings, descriptive data or samples shall not begin prior to approval of said Submittal by the Director.

The time allowed for review of each Submittal will be as indicated in the Supplemental Conditions. Review time will start upon receipt of the Submittal by the Director and will end upon the Director's mailing of the Submittals to the Contractor. Defective, incomplete or partial Submittals will be returned to the Contractor unreviewed.

Submittals shall be made by a letter of transmittal that shall contain a list of all matter submitted and identification of all variations from the Contract Documents contained in the Submittal. The letter and all items accompanying the same shall be fully identified as to project name and location, Contractor's name, district, county, and Contract number, with ample cross-references to the Contract Documents, to facilitate identification of items and their location in the Work.

All Shop Drawings and supporting data, catalogs, schedules, shall be submitted as the instruments of the Contractor, who shall be responsible for their accuracy and completeness. These Submittals may be prepared by the Contractor, Subcontractors, or Suppliers, but the Contractor shall ascertain that Submittals meet all of the requirements of the Contract Documents, while conforming to structural, space, and access conditions at the point of Installation. The Contractor shall check all Submittals before submitting them to the Director.

2-1.08A      **SHOP DRAWINGS.** The Contractor shall submit an electronic copy (searchable PDF) of all Shop Drawings required by the Supplemental Conditions or Specifications, and one (1) hard copy, if requested by the Director. Shop Drawings shall also be provided separately in AutoCAD format using the latest version of AutoCAD. An electronic

copy will be returned to the Contractor either approved for use, as demonstrated by a stamp, or returned for correction and resubmittal. Materials, colors and/or samples will not be returned to the Contractor. Shop Drawings include any drawing, which requires execution by a draftsman as distinguished from printed matter. The size of Shop Drawings shall not exceed twenty-four inches (24”) by thirty-six inches (36”).

2-1.08B      **DESCRIPTIVE DATA.** The Contractor shall submit an electronic copy (searchable PDF) of each set of manufacturer's brochures or other data required by the Supplemental Conditions or Specifications, and one (1) hard copy, if requested by the Director. The City will examine such Submittals and return either an electronic copy or a hard copy approved for use or returned for correction and resubmittal.

2-1.08C      **SAMPLES.** The Contractor shall submit samples of articles, materials or equipment as required by the Supplemental Conditions or Specifications. The Work shall be in accordance with the approved samples. Samples shall be removed from City property when directed or may be incorporated in the Work if approved by the Director. Samples not removed by the Contractor will become the property of the City or, at the City's option, will be removed or disposed of by the City at the Contractor's expense.

2-1.08D      **MANUALS, INSTRUCTIONS AND AFFIDAVIT.**

A.      **Manuals and Instructions.** Where operation and maintenance manuals are required by the Supplemental Conditions, the Contractor shall submit two (2) sets of manuals, suitably bound, along with two (2) electronic copies in an approved format, to the Director within forty-five (45) Days after favorable review of the equipment or facilities. If operation and maintenance manuals are approved to be provided in PDF format, text shall be provided in searchable PDF format, making proper use of PDF for headings and heading levels,

paragraphs, tables, and lists. Submitted operation and maintenance manuals shall be a collected, organized, and indexed set of bookmarked PDF documents comprising each operation and maintenance manual that corresponds to a hardcopy binder. All manuals shall be marked to indicate the specific equipment furnished for this project and shall include at a minimum:

1. Equipment summary form
2. Cover/Title page
3. Table of contents
4. Operating procedures including start-up, shutdown, normal operation, all operating modes, emergency shutdown, and safety precautions
5. Lubrication instructions (if required)
6. Preventative maintenance procedures
7. Troubleshooting and corrective maintenance procedures
8. Reinstallation instructions
9. Overhaul instructions (if applicable)
10. Parts identification list with exploded view and associated cross references
11. Recommended spare parts list
12. Operator safety requirements
13. Electrical and control system wiring drawings, including panel wiring control (ladder) diagrams, logic diagrams, loop diagrams, and interconnection diagrams
14. Panel layout and assembly drawings

15. Mechanical drawings
16. Printouts of all software programs and configuration files
17. Factory and field test procedures and results

Operation and maintenance manuals for complex equipment shall also include:

18. Alternate specified operating modes
19. Emergency shutdown instructions
20. Normal shutdown instructions
21. Long term shutdown instructions

Operation and maintenance manuals for systems comprised of separate pieces of equipment shall include a system explanation of items 4, 7, 18, 19, 20, and 21 as well as the instructions for the separate pieces of equipment.

B. Affidavits. Where required in the Supplemental Conditions or Specifications, manufacturers of equipment shall provide field service as a part of this project. Equipment shall not be considered ready for full time operation until after the authorized factory-trained and qualified manufacturer's representative for the specific equipment has checked and adjusted the equipment and certified by written affidavit that the equipment has been properly Installed, tested, adjusted, lubricated, and calibrated, and is ready for full time operation. Acceptable affidavits shall be submitted prior to completion of the Work. Affidavits shall contain the following specific wording:

“The (Name of Equipment) has been properly installed, tested, adjusted, lubricated, and calibrated, and is ready for full time operation. The installation has been inspected and has been found to be in conformance with our (the manufacturer's) standards and requirements.”

No amplification, dilution, or modification of this specific wording will be permitted.

2-1.08E      **ALTERNATIVES.** For convenience in designation in the Contract Documents, certain materials, articles, or equipment may be designated by a brand or a trade name or the name of the manufacturer together with catalog designation or other identifying information, hereinafter referred to generically as “designated by brand name.” Except in those instances where the product is designated to match others in use in a particular improvement, either completed or in the course of completion, an alternative material, article, or equipment which is of equal quality and of the required characteristics for the purpose intended may be proposed for use provided the Contractor complies with the following requirements:

A.      The Contractor shall submit its proposal for an alternative in writing. Such request shall be made in ample time to permit review and approval without delaying the Work. The Contractor shall not be entitled to an adjustment of the Contract Time or an increase in the Contract Price based on any Contractor-proposed substitution.

B.      No such proposal will be considered unless accompanied by complete information and descriptive data, necessary to determine the equality of the offered materials. The Contractor shall satisfy the Director as to the comparative quality, suitability, or performance of the offered material, articles, or equipment. In the event that the Director rejects the use of such alternative materials, articles, or equipment, then one of the particular products designated by brand name shall be furnished.

C.      The burden of proof as to the quality and suitability of alternatives shall be upon the Contractor and it shall furnish all information necessary as required by the Director. The Director shall be the sole judge as to the quality and suitability of alternative articles or materials and such decisions shall be final. Where use of an alternative material

involves redesign of, or changes to, other parts of the Work, the cost and time required to effect such redesign or changes will be considered in evaluating the suitability of the alternative material. Cost of redesign by the City will be borne by the Contractor.

D. Whenever classification, rating or other certification by a body such as Underwriters Laboratories (UL) or the National Electrical Manufacturers Association (NEMA) is a part of the specification for any material, Contractor's request for use of alternative articles or materials shall be accompanied by reports from the listed or equivalent independent testing Laboratory indicating compliance with the Contract Documents. The cost of all testing required to prove equality of the material proposed shall be borne by the Contractor. Approval of an alternative shall be only for the characteristics or use named in such approval, and shall not be used to change or modify any requirement of the Contract Documents.

E. At its election, the City reserves the right to consider any Contractor proposed substitution as a Cost Reduction Proposal under Section 3-1.07 of these General Conditions in the event that there is a significant savings resulting from the substitution.

The Director will examine, with reasonable promptness, such Submittals, and return of Submittals to the Contractor shall not relieve the Contractor from responsibility for deviations and alternatives from the Contract Documents, nor shall it relieve the Contractor from responsibility for errors in the Submittals. A failure by the Contractor to identify in its letter of transmittal material deviations from the Contract Documents shall void the Submittal and any action taken thereon by the Director. When specifically requested by the Director, the Contractor shall resubmit such Shop Drawings, descriptive data and samples as may be required.

If any mechanical, electrical, structural, or other changes are required for the proper Installation and fit of alternative materials, articles, or equipment, or because of deviations from

the Contract, such changes shall not be made without the approval of the Director and shall be made without additional cost to the City.

2-1.09        **DISPOSAL OF MATERIAL OUTSIDE THE WORK SITE.** Unless otherwise stated elsewhere in the Contract Documents, the Contractor shall, at its own cost and expense, make its own arrangements for disposing of materials outside the Work Site.

Except when material is to be disposed of at a landfill or recycling center, when any material is to be disposed of outside the Work Site, the Contractor shall first obtain written permission from the City to dispose of the material at the intended location. The City's approval will be contingent upon the Contractor obtaining a written permit from the property owner on whose property the disposal is to be made. Prior to the disposal of any material at the intended location, the Contractor shall submit such permit or a certified copy thereof to the City, together with a written release from the property owner absolving the City from any and all responsibility related to the disposal of material on said property.

Disposal of Hazardous Materials must be done in accordance with all laws and regulations. Copies of all required regulatory documentation including copies of final manifests shall be supplied to the City.

2-1.10        **ACCESS TO THE WORK.** The Contractor shall satisfy itself that the jurisdictions through which its operations and haul routes pass will permit such operations with respect to the type of vehicle, laden weights, frequency and dimensions of loads, hours of operation and required traffic control. All necessary permits, licenses or bonds shall be obtained and paid for by the Contractor.

2-1.11        **TEMPORARY UTILITIES.** The Contractor shall make its own arrangements with utility companies for any temporary services it may require in performance of

the Work and shall pay all costs of these services directly to these utility organizations.

2-1.12            **UTILITY FACILITIES.** The Contractor shall protect from damage those utility facilities that are to remain in place, be Installed, relocated or otherwise arranged.

The Contractor's attention is directed to the possible existence of facilities not shown, and of facilities in a location different from that, which is indicated. The Contractor shall take steps to ascertain the exact location of all facilities prior to doing any Work, which may damage such facilities or interfere with their service. Where the location of a facility is indicated or inferred from the presence of visible facilities such as buildings, meters, and junction boxes, the Contractor shall make such excavations and explorations as are necessary to ascertain the correct location. Unless provided for elsewhere in the Contract Documents, the cost of such excavations and explorations will be considered as a part of the cost of other items of Work and no additional payment will be made. Such excavations and exploratory Work shall not entitle the Contractor to an extension of time.

If the Contractor discovers underground facilities not indicated or inferred from the Contract Documents, the Contractor shall immediately give the Director written notification of the existence of those facilities. The Contractor shall determine the exact location of the underground facilities and the cost of the work will be paid for in accordance with the Contract Documents. The underground facilities shall be protected from damage as directed by the Director and the cost of that work will be paid for as extra work. The Contractor shall, if directed by the Director, repair any damage, which may occur to the underground facilities. The cost of that repair work, not due to the failure of the Contractor to exercise reasonable care, will be paid for as extra work. Damage due to the Contractor's failure to exercise reasonable care shall be repaired at the Contractor's cost and expense.

Where it is determined by the City that the rearrangement of an underground facility, the existence of which is not shown on the Contract Drawings, is essential in order to accommodate the Work, the City will provide for the rearrangement of such facility by other forces or, when so ordered by Change Order, such rearrangement shall be performed by the Contractor and will be paid for as provided under a Change Order.

The Contractor shall be responsible for the maintenance of all utility facilities placed by the Contractor in temporary locations, and all utilities within the construction area not required to be relocated but which are required to be shored or supported during the construction period. The cost of such maintenance shall be borne by the Contractor, and no other compensation shall be due the Contractor for this Work.

The cost of providing and maintaining all necessary or required temporary structures, of making any necessary repairs, replacements, or similar operations, or furnishing indemnity or other bonds, if required, and all costs required by this Section shall be paid by the Contractor and shall be included in the prices bid in the schedule for other items of work.

2-1.13        **PRESERVATION AND CLEANING.** The Contractor shall clean up the Work at frequent intervals and at other times when directed by the Director. While finish Work is being accomplished, floors, Work areas and finished areas shall be kept clean, free of dust, construction debris and trash. Upon completion of the Work, the Contractor shall remove from the Premises its construction equipment and any waste materials not previously disposed of, leaving the Premises thoroughly clean and ready for final inspection.

2-1.14        **LIMITATIONS ON WORK SITE AND PREMISES.** The Contractor shall limit its construction operations to the Work Site unless otherwise shown on the Contract Drawings or specified. The Contractor shall perform no operation of any nature over or on the

Premises except such operations as are authorized by the Contract Documents or as authorized by the Director.

2-1.15        **DUST CONTROL.** During the performance of all Work under this Contract, the Contractor shall assume all responsibility for dust control and shall furnish all labor, equipment, and means required to carry out proper and efficient measures wherever and whenever dust control is necessary to prevent the operations from producing dust damage and nuisance to persons and property. Any claims resulting from dust damage or nuisance shall be borne solely by the Contractor. The Contractor shall comply with all applicable Air Quality Act requirements.

2-1.16        **SANITATION.** The Contractor shall provide sanitary facilities for all persons working on the Work.

2-1.17        **NIGHT WORK AND NORMAL WORKING HOURS.** Normal working hours at the construction site shall be between the hours of 7:00 a.m. and 7:00 p.m. Monday through Friday. Legal holidays are excluded. Certain utility connections and street operations are anticipated to require night Work by the Contractor during low usage periods. The Contractor may also be required to prosecute the Work at night if, at any time, the Director shall deem it necessary for the progress of the Work, or if emergencies arise. The Contractor shall promptly comply with any such requirements made in writing by the Director. The Contractor will also be permitted to Work at night if Contractor satisfies the Director of the need therefor, in order to maintain the required progress or protect the Work from the elements. Certain activities are required to be performed at night for nominal progress of the Work and/or are specified to be performed at night by other portions of the Supplemental Conditions. When required, ordered, or permitted to Work at night, the Contractor shall provide sufficient and

satisfactory lighting and other facilities therefor. The Contractor shall receive no extra payment for night Work, if specified or if required to be performed during the normal progress of the Work, but compensation shall be considered as having been included in the price stipulated for the Work.

If Contractor performs work during weekends, holidays or any non-normal work hours, Contractor shall pay for required City Inspectors.

2-1.18        **LINES AND GRADES.** Unless otherwise provided in the Supplemental Conditions, the Contractor shall lay out all Work, including structures and pipelines, and shall be responsible for any errors resulting therefrom. In all questions arising as to proper location of lines and grades, the Director's decision will be final.

As part of the bid price for the construction of the improvements, the Contractor shall provide and be responsible for the layout of all Work on this project. The Contractor shall provide all necessary surveys, field staking, and positioning for the construction of all components at the proper alignment, elevations, grades, and positions, as indicated on the Contract Drawings and as required for the proper operation and function. The Contractor shall stake its Work area limits. Contractor shall perform all construction staking using a land surveyor licensed in the State of California. Contractor shall provide a staking plan prior to commencement of Work for the City's review and maintain monuments, stakes, and marks, and shall update the plan as necessary. Director, or Director's designated representative, may verify the field condition. Errors or inconsistencies in the Contract Documents discovered by the Contractor shall be reported to the Director within twenty-four (24) hours and prior to constructive forms or related improvements. Any work Installed with this requirement shall be subject to removal and replacement at the Contractor's expense.

The Contractor's lay-out shall be based on existing structures, property lines, survey control, and bench marks established by the City. All structures and pipeline connections shall be Installed based on actual elevation of existing structures to which connections are made.

The Contractor shall supply such labor as required, at no extra charge, to aid and assist the Director in checking location and grades of the Work as set by the Contractor if the Director desires to perform this checking. This shall include moving materials and equipment located between monuments and the construction Work.

2-1.19        **ARCHEOLOGICAL DISCOVERIES.** Upon discovery of prehistoric or historic artifacts, or other indicators or examples of cultural resources discovered during the course of site preparation, grading, excavation, construction or other development activities, all operations within fifty feet (50') of the find shall cease until such time as the City provides the services of a qualified archeologist to evaluate the finds and recommend appropriate action.

Prehistoric materials can include flaked stone tools (e.g., projectile points, knives and choppers) or tool making debris of obsidian, chert, quartzite and other materials, culturally darkened soil (i.e., midden, which often contains heat affected rock, ash and charcoal, shellfish remains, and cultural materials), and stone milling equipment such as mortars, pestles and hand stones. Historic material may include wood, stone, concrete or adobe footings, walls and other structural remains; debris filled wells or privies; and deposits of wood, metal, glass, ceramics and other refuse.

2-1.20        **PRESERVATION OF MONUMENTS.** Any monuments or bench marks disturbed by construction operations shall be repaired per the City's standard and promptly re-established by a registered land surveyor or civil engineer. A plat for each monument shall be furnished to the Director after the plat has been recorded with the Placer

County Recorder's Office at no additional cost to the City. The recorded plat shall serve as a record of the re-establishment of said existing survey points.

2-1.21        **CONFORMITY WITH CONTRACT DOCUMENTS.** Work and materials shall conform to the lines, grades, cross sections, dimensions and material requirements, including tolerances, required by the Contract Documents. Although measurement, sampling and testing may be considered evidence as to such conformity, the City shall be the sole judge as to whether the Work or materials deviate from the Contract Documents. At its option, the City may elect to accept deviations from the Contract Documents with appropriate backcharge Assessments against the Contractor, and, if such an election is made, the City will provide written notice to the Contractor of such acceptance.

2-1.22        **FINAL CLEANUP.** Prior to final Acceptance of the Work, the Contractor shall thoroughly clean the Premises, remove all temporary structures built by or for the Contractor, and remove all equipment and surplus construction material and debris from the area. The entire project, before Acceptance by the City, shall be left in a neat and clean condition. All Work areas and temporary construction areas shall be returned to essentially the same conditions existing before the commencing of project construction.

2-1.23        **AS-BUILT DOCUMENTS AND DRAWINGS.** The Contractor shall maintain one set of the full size prints furnished by the City and mark thereon in color any deviations from plan dimensions, elevations, or orientations. Also, the Contractor shall locate on said prints, all underground facilities, such as piping, conduits and tanks by accurate field measurement from structure walls, corners, etc. The Contractor shall submit the prints and an electronic CD (searchable PDF or source file format such as AutoCAD) in good condition to the Director upon completion of the job as a condition of Acceptance of the project. Marked prints

shall be updated at least once each week and shall be available to the Director for review as to currency prior to developing partial payment estimates. After the completion of testing, but prior to Acceptance, the Contractor shall submit As-Built electrical drawings in color and an electronic CD showing all components and their wiring, and as specified in the Supplemental Conditions.

2-1.24        **SUPERINTENDENCE.** The Contractor shall supervise and direct the Work, which shall be performed in accordance with the requirements of the Contract Documents. The Contractor shall be solely responsible for implementation of all construction means, methods, techniques, sequences, and procedures and for coordination of all portions of the Work under the Agreement. The Contractor shall be solely responsible for the safety of its employees, Subcontractors of any tier, Suppliers, visitors to the Contractor, and other third parties associated with the Contractor.

The Contractor shall designate in writing before starting Work, an authorized representative who shall have the authority to represent and act for the Contractor.

When the Contractor is comprised of two (2) or more persons, firms, partnerships, or corporations functioning on a joint venture basis, said Contractor shall designate in writing before starting Work, the name of one authorized representative who shall have the authority to represent and act for the Contractor. Instances of misconduct, contract non-compliance, unsatisfactory performance, or incompetence by these personnel shall be grounds for the City to direct Contractor to dismiss them from the Project. Contractor shall immediately comply with the City's request for dismissal, at no cost to the City, and shall designate a replacement, which shall be subject to approval by the City.

Said authorized representative shall be present at the site of the Work at all times while Work is actually in progress on the Contract. When Work is not in progress and during periods

when Work is suspended, arrangements acceptable to the Director shall be made for any Emergency Work that may be required.

Whenever the Contractor or its authorized representative is not present on any particular part of the Work where it may be desired to give direction, orders will be given by the Director, which shall be received and obeyed by the superintendent or foremen who may have charge of the particular Work in reference to which the orders are given.

Any order given by the Director, not otherwise required by the Supplemental Conditions to be in writing, will on request of the Contractor, be given or confirmed by the Director in writing.

2-1.25        **CHARACTER OF WORKER.** If any Subcontractor or person employed by the Contractor shall appear to the Director to be incompetent or to act in a disorderly or improper manner, he or she shall be removed immediately on the requisition of the Director, and such person shall not again be employed on the Work.

2-1.26        **INSPECTION.** The Contractor shall at all times permit the Director to inspect the Work or any part thereof. The Contractor shall maintain proper facilities and provide safe access for such inspection by the Director to all parts of the Work, and to the shops where the Work is in preparation. Work shall not be covered up until authorized by the Director and the Contractor shall be solely responsible for notifying the Director where and when such Work is in readiness for inspection and testing. Should any such Work be covered without authorization, it shall, if so ordered, be uncovered at the Contractor's expense.

Unless otherwise designated as normal working hours, whenever the Contractor intends to perform Work on Saturday, Sunday, or a Legal Holiday, the Contractor shall give notice to the Director of such intention forty-eight (48) hours prior to performing such Work, or such longer

period as may be specified so that the Director may make necessary arrangements.

The observation and/or approval of the workmanship or materials by the City shall not relieve the Contractor of any obligations to fulfill the requirements of the Contract Documents. Workmanship and materials not meeting such requirements shall be corrected and unsuitable Work or material may be rejected, notwithstanding that such Work or materials have been previously observed and/or approved by the City, or payment therefor has been included in a progress estimate.

The City may order re-examination of questioned Work at any time before final Acceptance. If so ordered, the Contractor shall uncover the Work. If such work is found to be in accordance with the Contract Documents, the City will pay for the cost of uncovering, removing, recovering and replacing the parts removed; but if such Work so exposed or examined is not in accordance with the Contract Documents, the uncovering, removal, recovering and replacement shall be at the Contractor's expense. Work that has been covered prior to observation by the City does not qualify as re-examined work; the City may order such work uncovered for observation without payment of any costs.

2-1.27      **REMOVAL OF REJECTED AND UNAUTHORIZED WORK.** All Work which has been rejected shall be remedied, or removed and replaced by the Contractor in a manner acceptable to the Director and no compensation will be allowed the Contractor for such removal, replacement, or remedial Work.

Any Work done beyond the lines shown on the Contract Drawings or established by the Director, or any Work done without written authority will be considered as unauthorized Work and will not be paid for. Upon order of the Director, unauthorized Work shall be remedied, removed, or replaced at the Contractor's expense.

Upon failure of the Contractor to comply promptly with any order of the Director made under this section, the Director may cause rejected or unauthorized Work to be remedied, removed, or replaced, and the costs thereof will be deducted from any moneys due or to become due the Contractor.

## SECTION 3

### CHANGES IN THE WORK

3-1.01        **CHANGES.** The Director, without invalidating this Agreement and without notice to Contractor's surety, may order changes in the Work, consisting of additions or deletions, or other revisions. The Contract Price and the Contract Time shall be adjusted accordingly. All such changes in the Work, including in the Contract Price and the Contract Time, shall be authorized only by Contract Change Order, signed by the Director.

If Contractor claims that performance of any work entitles it to additional compensation or to an extension of time for performance of the Work, Contractor shall provide written notice to the City of any such claim prior to undertaking such work. Contractor shall provide written notice of any anticipated impacts to the Contract Price or Contract Time within three (3) Days of discovering such impact, by submitting a Notice of Potential Claim described in Section 7-1.03 below, or notice of delay as described in Section 6-1.09 below. If the Director refuses to issue a Change Order for such work, Contractor shall perform that work if directed or obligated to do so and shall submit a complete and specific Claim for additional compensation and/or extension of time for performance within fifteen (15) Days after such work is performed, as described in Section 7-1.03 below. Failure to provide written notice of claims prior to undertaking such work, failure to provide a timely Notice of Potential Claim, or failure to submit timely a complete and specific Claim for additional compensation and/or extension of the time for performance, shall be deemed a waiver and abandonment of any such Claim. No Claim, dispute or controversy shall interfere with the progress or performance of the Work and the Contractor shall proceed with the Work as directed by the Director. Failure to so proceed shall amount to a

default under this Agreement.

3-1.02        **PROPOSED CHANGE ORDERS.** The Contractor will be notified in writing of a proposed Change Order describing the intended change. Within fifteen (15) Days after receipt of a written request, the Contractor shall submit its proposed price to be added or deducted from the Contract Price due to the change and its estimate of the extent of the adjustment in the Contract Time, if any. The Contractor's proposed price to be added to or deducted from the Contract Price shall be supported by a detailed estimate of cost prepared by the Contractor, vendor or Supplier. The Contractor's proposed price submittal shall be accompanied by a statement of the time necessary for the changed Work, together with a description of how this time will be incorporated into the current Construction Schedule. The Contractor shall upon request by the Director permit inspection of its original Contract estimate, subcontract agreements or purchase orders relating to the change.

If agreement is reached on the adjustment in compensation as provided in Section 3-1.05, "Contract Price Adjustment," of these General Conditions, the Contractor shall proceed with the Work as changed at the agreed price.

If the Contractor and the Director fail to agree as to the adjustment in compensation for the performance of the changed Work, the Contractor, upon written order from the Director, shall proceed immediately with the changed Work and the Contract Price shall be adjusted in accordance with Section 3-1.06, "Force Account Payment," of these General Conditions.

If the Contractor fails to submit its cost estimate within such fifteen (15) Day period, the Contractor shall commence the Work as changed immediately upon receipt of written order of the Director, and the Contract Price will be adjusted in accordance with the Director's cost estimate for the changed Work.

3-1.03

**EMERGENCY AND INDETERMINATE TYPE CHANGE**

**ORDERS.** Changes in the Work made necessary by an Emergency, as determined by the Director, or changes of a kind where the extent of the Work cannot be determined until completed, may be authorized by the Director in writing. The Change Order shall state that it is issued pursuant to this Section 3-1.03. Upon receipt of an authorized Change Order or other written order of the Director, the Contractor shall proceed with the ordered Work and the Director will maintain a daily job record containing a detailed summary of all labor, materials and equipment required for the changed Work.

Within fifteen (15) Days after receiving a written request, the Contractor shall submit a detailed estimate of cost for the change and any requested change in Contract Time in the same manner as required for proposed Change Orders in Section 3-1.02 of these General Conditions.

3-1.04

**EXECUTED CHANGE ORDER.** A Contract Change Order signed by

both the Director and the Contractor is an “executed Contract Change Order.” By signing the Contract Change Order, the Contractor agrees that the specified compensation constitutes full compensation for the changed Work, including payment for interruption, disruption, acceleration, extended Overhead, delay or any other “impact” claim or “ripple effect” claim. The Contractor specifically understands and agrees that its execution of the Contract Change Order shall constitute a waiver of any right for the Contractor to claim any additional compensation with respect to the subject matter of the Contract Change Order.

3-1.05

**CONTRACT PRICE ADJUSTMENT.** If a Contract Change Order

provides for an adjustment to the Contract Price, the amount of such adjustment shall be determined by one of the following methods, or a combination thereof, as determined by the City and in its sole discretion:

A. Lump sum. The Contractor and the City may agree on a lump sum amount for the Change Order. At the City's request, the Contractor will provide pricing for the work. Maximum markups for Contract Change Orders paid for using lump sum pricing shall be paid for in the same manner and in the same amounts as markups for Force Account work, as described in Section 3-1.06 below.

B. Unit Prices. The unit prices set forth in the Contractor's Schedule of Bid Prices will be utilized where they are applicable and acceptable to the City. The Contractor's unit prices shall remain firm and shall not be subject to adjustment unless and until the actual quantity of work is increased or decreased by Contract Change Order in an amount greater than twenty-five percent (25%) from the estimated quantity indicated for such item. No markups will be given for Contract Change Orders paid for using unit prices.

Unit prices for new items included in the Contract Change Order but not included in the original bid shall be as mutually agreed upon or, in the absence of agreement, as determined by the City in the same manner as if the work were to be paid for on a Force Account basis, as described in Section 3-1.06 below.

C. Force Account. Where the City and the Contractor are unable to agree on lump sum pricing and if the City does not elect to utilize the unit prices in Contractor's bid, or such unit prices are not applicable, the changed work will be performed and tracked by the Contractor as Force Account work, as described in Section 3-1.06 below. The City will pay for such work, including markups, properly attributable to the change in accordance with those Force Account provisions.

D. Eliminated Items. The City reserves the right to delete any bid item of Work in its entirety. The City makes no representation that any work under a bid item of Work

will be performed, and all work may be subject to a Contract Change Order that deletes such work. Bid items are distinct and severable from the other bid items, and the Contractor shall not be entitled to any anticipated profit, unabsorbed Overhead, or other indirect expense attributable to the deleted item, except as provided immediately below with regard to Force Account mark-ups on the direct and verifiable costs incurred prior to the City's order that deletes the work.

Should any bid item of Work be eliminated in its entirety and not accounted for as described immediately above and, in the absence of an executed Contract Change Order covering such elimination, payment will be made to the Contractor for actual direct and verifiable costs incurred in connection with such eliminated bid item if incurred prior to the date of notification in writing by the City of such elimination. If acceptable material is ordered by the Contractor for the eliminated item prior to the date of notification of such elimination by the City, and if orders for such material cannot be canceled, it will be paid for at the actual direct and verifiable cost to the Contractor. Actual direct costs shall include documented vendor shipping fees, Supplier restocking fees, if applicable, and Contractor handling costs directly related to the eliminated item(s). In such case, the material paid for shall become the property of the City and the actual cost of any further handling will be paid for by the City. If the material is returnable to the vendor and if the City so directs, the material shall be returned and the Contractor will be paid for the actual direct cost of charges made by the vendor for returning the material. The actual direct cost of handling returned materials will also be paid for by the City. The actual direct and verifiable costs to be paid by the City as provided herein will be computed in the same manner as if the work were to be paid for on a Force Account basis, including the application of Force Account mark-ups to said costs.

3-1.06      **FORCE ACCOUNT PAYMENT.** When Work performed pursuant to a

Change Order is to be paid for on a Force Account basis, the Contractor's labor, materials and equipment used in the performance of such Work shall be subject to the approval of the City, and the compensation will be determined as set forth below in this section.

3-1.06A        **LABOR.** The Contractor will be paid an amount based on the actual cost for the workers (including foremen when authorized by the Director) used in the actual and direct performance of the Work. All labor costs associated with Overhead, whether field or home office, are specifically excluded herein, as those labor costs are covered by the below mark-ups. The cost of labor, whether the employer is the Contractor, Subcontractor or other forces, shall include employer payments; assessment of benefits required by lawful labor union collective bargaining agreements; compensation insurance payments; contributions made to the State pursuant to the Unemployment Insurance Code; and for taxes paid to the Federal Government pursuant to the Social Security Act of August 14, 1935, as amended. No labor cost will be recognized at a rate in excess of the wages prevailing in the locality at the time the Work is performed, nor will the use of a labor classification, which would increase the cost, be permitted unless the Contractor establishes to the complete satisfaction of the Director the necessity for payment at a higher rate.

3-1.06B        **MATERIALS.** Only materials furnished by the Contractor and necessarily used in the performance of the Work will be paid for. Such cost of materials may include the costs of procurement, transportation and delivery if necessarily incurred. If a cash or trade discount by the actual supplier is available to the Contractor, it shall be credited to the City. If materials are procured by the purchaser by any method which is not a direct purchase from and a direct billing by the actual supplier to such purchaser, the cost of such materials shall be deemed to be the price paid to the actual supplier plus the actual costs, if any, incurred in the

handling of such materials. If the materials are obtained from a supply or source owned wholly or in part by the purchaser, the cost of such materials shall not exceed the price paid by the purchaser for similar materials furnished from said source on Bid items or the current wholesale price for such materials delivered to the job site, less any discounts as provided herein, whichever is lower. If, in the opinion of the Director, the cost of materials is excessive, or if the Contractor fails to furnish satisfactory evidence of the cost to it from the actual supplier within sixty (60) Days after the date of delivery of the materials or within fifteen (15) Days after Acceptance of the Agreement, whichever occurs first, the cost of the materials shall be deemed to be the lowest current wholesale price at which similar materials are available in the quantities required, less any discounts provided herein. The Department reserves the right to furnish such materials required by the Change Order as it deems advisable, and the Contractor shall have no claim for cost or markups on material furnished by the Department.

3-1.06C        **EQUIPMENT.** The Contractor will be paid an amount based on the actual cost for the use of equipment directly required and approved by the Director in the performance of the changed Work. No payment will be made for time while equipment is inoperative due to breakdowns or on Days when no Work is performed. In addition, the rental time shall include the time required to move the equipment to the Work from the nearest available source of such equipment, and to return it to the source. If such equipment is not moved by its own power, then loading and transportation costs will be paid. Moving time, loading and transportation costs will only be paid if the equipment is used exclusively on the changed Work during the time between move in and move out. Individual pieces of equipment having a replacement value of One Thousand Dollars (\$1000) or less shall be considered to be tools or small equipment, and no payment will be made therefore. For equipment owned,

furnished, or rented by the Contractor, no cost therefore shall be recognized in excess of the equipment rental rates published by Caltrans at the following website address:

<http://www.dot.ca.gov/hq/construc/equipmnt.html>. Equipment located at a Work Site and utilized on non-Force Account work shall not be eligible for standby payment, and shall be charged on a Force Account basis only when solely performing pre-approved Force Account work tasks.

3-1.06D      **MARKUPS.** When a Change Order increases the cost of the Work, the Contractor may add the following maximum markups to its actual costs of labor, materials, or equipment rental:

- 15 percent for labor;
- 10 percent for materials; and
- 5 percent for equipment rental.

The above markups include full compensation, covering the costs of all supervision, bonds, profit, Overhead, and other general expenses not specifically designated as a direct cost in Sections 3-1.06A through 3-1.06C above. The total payment (i.e., direct cost plus applicable markups) shall be deemed to be the actual cost of such work and shall constitute full compensation therefor. The Contractor specifically understands and agrees that such payment shall include any Contractor costs for interruption, disruption, and acceleration, extended Overhead, Change Order management, delay or other “impact” claim or “ripple effect” claim.

When work paid for on a Force Account basis is performed by forces other than the Contractor’s own forces, the maximum allowable mark-ups for the Subcontractors’ costs shall be fifteen percent (15%) for the cost of labor, ten percent (10%) for the cost of materials, and five percent (5%) for the cost of rented equipment. In these situations where the work is being performed by Subcontractors, the Contractor will only be entitled to an additional five percent

(5%) mark-up and will not be entitled to receive the additional mark-ups specified in this section.

When a Change Order decreases the cost of the Work, the reduction in cost shall include a five percent (5%) markup on the estimated cost for furnishing the labor, materials and equipment, which would have been used on such Work, had the Change Order not been issued.

When a Change Order involves both added Work and deleted Work, the markup or markups to be used shall be as follows:

The actual costs of labor, materials, and equipment rental for added and deleted Work shall be calculated separately without adding markups. If the difference between the calculated costs for labor results in an increased cost, a markup of fifteen percent (15%) shall be applied to the increased cost. If the difference between the calculated costs of materials or equipment rental results in an increased cost, a markup of ten percent (10%) and five percent (5%) respectively, shall be applied to the increased costs of materials or equipment rental, as the case may be. If the difference between the calculated costs for labor, materials or equipment rental results in a decreased cost, a markup of five percent (5%) shall be applied to the decreased costs of labor, materials or equipment rental, as the case may be.

Contractor shall not add mark-ups on work performed and billed by City staff nor add mark-ups to successive iterations of proposed Change Order cost proposals returned to Contractor by the City due to incomplete or inaccurate information being originally submitted by the Contractor. If the Contract Price increases by the issuance of Change Orders, the penal amounts of the bonds required shall increase accordingly.

3-1.06E        **RECORDS.** The Contractor shall maintain its records in such a manner as to provide a clear distinction between the direct costs of extra work paid for on a Force Account basis and the costs of other operations.

From the above records, the Contractor shall furnish the City completed daily extra work reports, on forms acceptable to the City, for each Day's extra work to be paid for on a Force Account basis. The daily extra work reports shall itemize the materials used, and shall cover the direct cost of labor and the charges for equipment rental, whether furnished by the Contractor, Subcontractor, or other forces. The daily extra work reports shall provide names and identifications and classifications of workers, the hourly rate of pay and hours worked, and also the size, type, and identification number of equipment, and hours operated. Daily extra work and Force Account reports (actual or claimed) shall be signed by both the City's and the Contractor's representatives within twenty-four (24) hours of the performance of the work.

Valid copies of vendor's invoices shall substantiate material charges. Such invoices shall be submitted with the daily extra work reports, or if not available, they shall be submitted with subsequent daily extra work reports. Should said vendor's invoices not be submitted within sixty (60) Days after the date of delivery of the material or within fifteen (15) Days after the Acceptance of the Agreement, whichever occurs first, the City reserves the right to establish the cost of such materials at the lowest current wholesale prices at which said materials were available in the quantities, less any discounts.

The City will compare its records with the completed daily extra work reports furnished by the Contractor and make any necessary adjustments. When these daily extra work reports are agreed upon and signed by both parties, said reports shall become the basis of payment for the work performed, but shall not preclude subsequent adjustment based on a later audit by the City.

The Contractor's cost records pertaining to Work paid for on a Force Account basis shall be open to inspection or audit by representatives of the City during the life of the Agreement and for a period of not less than three (3) years after the date of Agreement completion and the

Contractor shall retain such records for that period. Where payment for materials or labor is based on the cost thereof to forces other than the Contractor, the Contractor shall make every reasonable effort to insure that the cost records of such other forces will be open to inspection and audit by representatives of the City on the same terms and conditions as the cost records of the Contractor. If an audit is to be commenced more than sixty (60) Days after the date of Acceptance of the Agreement, the Contractor will be given fifteen (15) Days' notice of the time when such audit is to begin.

3-1.07            **COST REDUCTION PROPOSALS.** The City encourages the Contractor to submit Cost Reduction Proposals whenever the Contractor identifies areas and/or instances in which there can be savings to the Work. Contractor may submit to the City, in writing, proposals for modifying the plans, Specifications or other requirements of the Agreement for the sole purpose of reducing the total cost of construction, including the time for completion of the Work. The City may consider such Cost Reduction Proposals and, if accepted, the Agreement will be equitably adjusted. The City has no obligation to consider or accept Cost Reduction Proposals.

## SECTION 4

### CONTROL OF MATERIALS

4-1.01        **MATERIALS.** The Contractor shall furnish all materials required to complete the Work, except materials that are designated in the Supplemental Conditions to be furnished by the City and materials furnished by the City in accordance with Section 3, “Changes in the Work,” of these General Conditions.

Unless otherwise specified in the Supplemental Conditions, materials furnished by the Contractor for incorporation into the Work shall be new. When the quality or kind of materials, articles, or equipment is not particularly indicated, then the quality or kind thereof shall be similar to those that are indicated.

Articles or materials to be incorporated in the Work shall be stored in such a manner as to insure the preservation of their quality and fitness for the Work, and to facilitate inspection.

All materials which do not conform to the requirements of the Contract Documents as determined by the Director, will be rejected whether in place or not. Rejected material shall be removed immediately from the site of the Work, unless otherwise permitted by the Director. No rejected material, the defects of which have been subsequently corrected, shall be used in the Work, unless approval in writing has been given by the Director. Upon failure of the Contractor to comply promptly with any order of the Director made under these provisions, the Director shall have the authority to cause the removal and replacement of rejected material and to deduct the cost thereof from any moneys due or to become due the Contractor.

Manufacturer's warranties, guaranties, instruction sheets and parts lists, which are furnished with certain materials incorporated in the Work, shall be delivered to the Director

before Acceptance of the Contract.

Unless otherwise designated in the Supplemental Conditions or Specifications, materials furnished by the City will be delivered to the job site. Materials furnished by the City that are designated in the Supplemental Conditions as available at locations other than the job site shall be hauled to the site of the Work by the Contractor at its expense, including any necessary loading and unloading that may be involved.

The Contractor will be held responsible for all materials furnished to it, and shall pay all demurrage and storage charges. City-furnished materials lost or damaged from any cause whatsoever shall be replaced by the Contractor. The Contractor will be liable to the Department for the cost of replacing City-furnished material and such costs may be deducted from any moneys due or to become due the Contractor.

4-1.02        **PRODUCT AND REFERENCE STANDARDS.** When descriptive catalog designations, including manufacturer's name, product brand name, or model number are referred to in the Contract Documents, such designations shall be considered as being those found in industry publications in effect on the day the Notice to Contractors for the Work is dated, except as may be otherwise stated.

When standards or test designations of the Federal Government, trade societies, or trade associations are referred to in the Contract Documents by specific date of issue, these shall be considered as part of the Contract. When such references do not bear a date of issue, the edition in effect on the day the Notice to Contractors for the Work is dated shall be considered as part of the Contract.

4-1.03        **SAMPLING AND TESTING OF MATERIALS.** Unless otherwise specified, all tests shall be performed in accordance with the methods used by the State

Department of Transportation (Caltrans) and shall be made by the Director or his or her designated representative.

The State Department of Transportation has developed test methods for testing the quality of materials and Work. These test methods are identified by a California Test followed by the serial number. Copies of individual tests are available at the State Department of Transportation Laboratory, Sacramento, California, and will be furnished to interested persons upon request.

Whenever a reference is made in the Supplemental Conditions to a California Test by number, it shall mean the California test in effect on the day the Notice to Contractors for the Work is dated.

Whenever the Supplemental Conditions provide an option between two (2) or more test methods, the Director will determine the test method to be used.

Whenever a Supplemental Condition, manual, or test designation provides for test reports (such as certified mill test reports) from the manufacturer, copies of such reports, identified as to the lot of material, shall be furnished to the Director. The manufacturer's test reports shall supplement the inspection, sampling and testing provisions of this Section 4-1.03 and shall not constitute a waiver of the City's right to inspect. When material which cannot be identified with specific test reports is proposed for use, the Director may at his or her discretion, select random samples from the lot for testing. Testing specimens from the random samples, including those required for retest, shall be prepared in accordance with the referenced Supplemental Conditions and furnished by the Contractor at its expense. The number of such samples and test specimens shall be entirely at the discretion of the Director.

When requested by the Director, the Contractor shall furnish, without charge, samples of

all material entering into the Work, and no material shall be used prior to approval by the Director, except as provided in Section 4-1.04, "Certificates of Compliance," of these General Conditions.

A. Inspection and Access for Testing. The Contractor shall provide safe access for the Director and his or her inspectors to adequately inspect the quality of Work and conformance with the General and Supplemental Conditions. The Contractor shall provide adequate lighting, ventilation, ladders and other protective facilities as may be necessary for the safe performance of inspections.

The Contractor shall submit samples or specimens of such materials to be furnished or used in the Work as the Director may require. The Contractor shall furnish the Director all necessary labor and facilities for such things as excavation in the compacted fill to depths required to take samples.

Inspections, tests, or favorable review by the Director or others shall not relieve the Contractor from its obligations to perform the Work in accordance with the requirements of the Contract Documents.

Work covered without the favorable review or consent of the Director shall, if required by the Director, be uncovered for examination at the Contractor's expense.

If the Engineer, Architect, or Director considers it necessary or advisable that covered Work be inspected or tested by others, the Contractor, at the Director's request, will uncover, expose or otherwise make available for observation, inspection or testing as the Director may require, that portion of the Work in question, furnishing all necessary labor, materials, tools, and equipment. If it is found that such Work is defective, the Contractor will bear all the expenses of such uncovering, exposure, observation, inspection and testing and of

satisfactory reconstruction. If, however, such Work is not found to be defective and the Work was not covered without favorable review of the Director, the Contractor will be allowed an increase in the Contract Price or an extension of the Contract Time, or both, to cover its costs directly attributable to such uncovering, exposure, observation, inspection, testing, and reconstruction and an appropriate Change Order shall be issued.

Whenever the Contractor varies the period during which Work is carried on each Day, the Contractor shall give due notice to the Director so that proper inspection may be provided. Any Work done in the absence of the Director may be subject to rejection. Proper facilities for safe access for inspection to all parts of the Work shall at all times be maintained for the necessary use of the Director and other agents of the City. Authorized representatives and agents of the Director shall be permitted access to inspect all Work and materials wherever it is required for preparation of progress reports, and the Contractor shall provide proper facilities for such access and inspection.

It is the Contractor's responsibility to supervise the Work and complete the project in accordance with the Contract Documents. In the course of managing that effort, the Contractor shall generate its own punch lists as deemed necessary. The Director may prepare punch lists for the Director's own use in communicating with the Contractor; however, the Director shall be under no obligation to prepare punch lists for the Contractor. In general, the Director will prepare punch lists only after the Contractor has given the Director written notice that the subject Work is completed and tested in accordance with the Contract Documents and is ready for operation and/or use and/or occupancy. Failure of the Director to include an item in a punch list shall not relieve the Contractor of its duty to satisfactorily complete all Work required by the Contract Documents.

Upon Final Completion of the construction Work and request by the Contractor, the Director will conduct a final inspection as a basis for recommending to the City that the Work be accepted.

B. Field and Materials Testing. Where the Supplemental Conditions require Work to be specially field tested or approved, it shall be tested only in the presence of the Director after timely notice of its readiness for inspection and test, and the Work after testing shall be covered up only upon the consent thereto of the Director.

The results of any tests made are for the information of the Director. Regardless of any test results, the Contractor is solely responsible for the quality of workmanship and materials and for compliance with the requirements of the Contract Drawings and Supplemental Conditions.

Except as specifically required under the Supplemental Conditions, all tests by the Director of materials furnished by the Contractor will be done in accordance with commonly recognized standards of national organizations. The Contractor shall furnish such samples of all materials as required by the Director without charge. No material shall be used unless it has been favorably reviewed by the Director.

Where such inspection and testing are to be conducted by an independent Laboratory or agency, the sample or samples of materials to be tested shall be selected by such Laboratory or agency, or the Director, and not by the Contractor.

C. Costs of Testing.

1. Initial Services: The City shall furnish and pay for all initial testing services required by the Contract Documents. When initial tests indicate non-compliance with the Contract Documents, the cost of initial tests associated with that non-compliance will be

deducted by the City from the balance owed the Contractor. The Contractor shall furnish samples of materials for testing as may be required by the Director. Such samples shall be furnished without cost to the City.

2. Retesting: When initial tests indicate non-compliance with the Contract Documents, all subsequent retesting occasioned by the non-compliance shall be performed by the same testing Laboratory and the cost thereof will be deducted by the City from the balance owed the Contractor. Contractor shall be billed for each additional test.

3. Contractor Convenience Testing: Inspection or testing performed exclusively for the Contractor's convenience shall be the sole responsibility of the Contractor.

4. Additional Tests and Inspections: When in the opinion of the Director additional tests or inspections are required because of the manner in which the Contractor executes its Work, such tests and inspections shall be paid for by the City, but will be deducted from the Contract Price. Examples of such tests and inspections are tests of materials substituted for previously accepted materials or substituted for specified materials, retests made necessary by failure of material to comply with the requirements of the Specifications, load tests made necessary because of portions of the structure not fully meeting Specifications or plan requirements, etc.

4-1.04        **CERTIFICATES OF COMPLIANCE.** A Certificate of Compliance shall be furnished prior to the use of any materials for which the Supplemental Conditions require that such a Certificate be furnished. In addition, the Director may permit the use of certain materials or assemblies prior to sampling and testing if accompanied by a Certificate of Compliance. The Certificate shall be signed by the manufacturer of the material or the manufacturer of assembled materials and shall state that the materials involved comply in all

respects with the requirements of the Supplemental Conditions. A Certificate of Compliance shall be furnished with each lot of such materials delivered to the Work and the lot so certified shall be clearly identified in the Certificate.

All materials used on the basis of a Certificate of Compliance may be sampled and tested at any time. The fact that material is used on the basis of a Certificate of Compliance shall not relieve the Contractor of responsibility for incorporating material in the Work which conforms to the requirements of the Contract Documents and any such material not conforming to such requirements will be subject to rejection whether in place or not.

The Department reserves the right to refuse to permit the use of material on the basis of a Certificate of Compliance.

The form of the Certificate of Compliance and its disposition shall be as directed by the Director.

## SECTION 5

### LEGAL RELATIONS AND RESPONSIBILITY

5-1.01        **LAWS TO BE OBSERVED.** The Contractor shall keep informed of and observe, and comply with and cause all of its agents and employees to observe and comply with, all prevailing Federal and State laws, and rules and regulations made pursuant to said Federal and State laws, and county and municipal ordinances, and regulations, which in any way affect the conduct of the Contract. If any conflict arises between provisions of the Contract and any such law above referred to, the Contractor shall notify the Director at once in writing. To the fullest extent allowed by law, the Contractor shall defend, indemnify, and save and hold harmless the City or any of its officers, agents, employees, and volunteers against any claim or liability arising from or based on the violation of any such law, rule, or regulation, whether by itself or its agents or employees.

5-1.02        **HOURS OF LABOR.** Eight (8) hours labor constitutes a legal Day's work. The Contractor or Subcontractor shall, as a penalty to City, forfeit Twenty-five Dollars (\$25) for each worker employed in the execution of the contract by the respective Contractor or Subcontractor for each calendar day during which such worker is required or permitted to work more than eight (8) hours in any one (1) calendar day and forty (40) hours in any one (1) calendar week in violation of the provisions of the Labor Code, and in particular, Section 1810 to Section 1815, thereof, inclusive, except that Work performed by employees of Contractors in excess of eight (8) hours per day, and forty (40) hours during any one (1) week, shall be permitted upon public work upon compensation for all hours worked in excess of eight (8) hours per day at not less than one and one-half (1-1/2) times the basic rate of pay, as provided in said

Section 1815. In addition, Contractor and/or its Subcontractors may be required to pay double the basic rate of pay for all hours worked in excess of twelve (12) hours in any workday and under other circumstances. (See California Code of Regulations, Title 8, Sections 16100(c)(6) and (16200(a)(3)(F) and applicable Department of Industrial Relations prevailing wage determinations.)

5-1.03        **NONDISCRIMINATION.**

A.        Attention is directed to Labor Code Section 1735, which reads as follows:

“A contractor shall not discriminate in the employment of persons upon public works on any basis listed in subdivision (a) of Section 12940 of the Government Code, as those bases are defined in Sections 12926 and 12926.1 of the Government Code, except as otherwise provided in Section 12940 of the Government Code. Every Contractor for public works who violates this section is subject to all the penalties imposed for a violation of this chapter.”

B.        During the performance of this Contract, Contractor and its Subcontractors shall not unlawfully discriminate against any employee or applicant for employment because of race, religious creed, color, national origin, ancestry, physical disability, mental disability, medical condition, genetic information, marital status, sex, gender, gender identity, gender expression, age, sexual orientation, or military and veteran status. The Contractor and Subcontractors shall insure that the evaluation and treatment of their employees and applicants for employment are free of such discrimination. The Contractor and Subcontractors shall comply with the provisions of the California Fair Employment and Housing Act (Government Code §12900, et seq.) and the applicable regulations promulgated thereunder (California Code of Regulations, Title 2, §7285.0 et seq.) and other applicable State and Federal regulations and City

policies pertaining to nondiscrimination and affirmative action which are incorporated into this Agreement by reference and made a part hereof as if set forth in full. The Contractor and its Subcontractors shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.

C. Contractor shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform Work under the agreement.

5-1.04        **PREVAILING WAGE.** The Contractor and any Subcontractor shall comply with Labor Code Sections 1770 et seq. In accordance with said Section 1775 the Contractor and any Subcontractor under the Contractor shall, as a penalty, forfeit to the state or City not more than \$200 for each calendar day or portion thereof, for each worker paid less than the prevailing rate as determined by the Director of Industrial Relations for the work or craft in which such worker is employed for under the Contract by the Contractor or by any Subcontractor under the Contractor.

The amount of the penalty shall be determined by the Labor Commissioner based on consideration of both of the following: (a) whether the failure to pay the correct rate of per diem wages was a good-faith mistake and, if so, whether the error was promptly and voluntarily corrected when brought to the attention of the Contractor or Subcontractor; and (b) whether the Contractor or Subcontractor has a prior record of failing to meet its prevailing wage obligations.

The penalty may not be less than forty dollars (\$40) for each calendar day, or portion thereof, for each worker paid less than the prevailing wage rate, unless the failure of the Contractor or Subcontractor to pay the correct rate of per diem wages was a good faith mistake and, if so, the error was promptly and voluntarily corrected when brought to the attention of the Contractor or Subcontractor.

The penalty may not be less than eighty dollars (\$80) for each calendar day, or portion thereof, for each worker paid less than the prevailing wage rate, if the Contractor or Subcontractor has been assessed penalties within the previous three (3) years for failing to meet its prevailing wage obligations on a separate contract, unless those penalties were subsequently withdrawn or overturned.

The penalty may not be less than one hundred twenty dollars (\$120) for each calendar day, or portion thereof, for each worker paid less than the prevailing wage rate, if the Labor Commissioner determines that the violation was willful, as defined in subdivision (c) of Section 1777.1 of the Labor Code.

If the amount due under this section is collected from the Contractor or Subcontractor, any outstanding wage claim under Chapter 1 (commencing with Section 1720) of Part 7 of Division 2 of the Labor Code against the Contractor or Subcontractor shall be satisfied before applying that amount to the penalty imposed on that Contractor or Subcontractor pursuant to this section.

The determination of the Labor Commissioner as to the amount of the penalty shall be reviewable only for an abuse of discretion.

In addition to said penalty, the difference between such stipulated prevailing wage rates and the amount paid to each worker for each calendar day or portion thereof for which each worker was paid less than the stipulated prevailing wage shall be paid to each worker by the Contractor or Subcontractor.

If a worker employed by a Subcontractor on a public works project is not paid the general prevailing per diem wages by the Subcontractor, the Contractor is not liable for any penalties described above unless the Contractor had knowledge of that failure of the Subcontractor to pay

the specified prevailing rate of wages to those workers or unless the Contractor fails to comply with all of the following requirements:

1. The contract executed between the Contractor and the Subcontractor for the performance of work on the public works project shall include a copy of the provisions of Sections 1771, 1776, 177.5, 1813, and 1815 of the Labor Code.
2. The Contractor shall monitor the payment of the specified general prevailing rate of per diem wages by the Subcontractor to the employees, by periodic review of the certified payroll records of the Subcontractor.
3. Upon become aware of the Subcontractor's failure to pay its workers the specified prevailing rate of wages, the Contractor shall diligently take corrective action to halt or rectify the failure, including, but not limited to, retaining sufficient funds due the Subcontractor for work performed on the public works project.
4. Prior to making final payment to the Subcontractor for work performed on the public works project, the Contractor shall obtain an affidavit signed under penalty of perjury from the Subcontractor that the Subcontractor has paid the specified general prevailing rate of per diem wages to its employees on the public works project and any amount due pursuant to 1813 of the Labor Code.

Pursuant to Section 1775 of the Labor Code, the Division of Labor Standards Enforcement shall notify the Contractor on a public works project within fifteen (15) Days of the receipt by the Division of Labor Standards Enforcement of a complaint of the failure of a Subcontractor on that public works project to pay workers the general prevailing rate per diem wages.

Pursuant to the provisions of California Labor Code Section 1773, the City has obtained

the general prevailing rate of wages applicable to the categories of workers the City anticipates will be utilized for this project for straight time, overtime, Saturday, Sunday, and holiday Work. The holiday wage rate listed shall be applicable to all holidays recognized in the collective bargaining agreement of the particular craft, classification or type of worker concerned or, if no collective bargaining applies, those holidays identified in Government Code Section 6700. These wage rates may be obtained from the State Department of Industrial Relations and/or the following website address: <http://www.dir.ca.gov/dlsr/DPreWageDetermination.htm>, which is incorporated herein as a part of this Contract.

Pursuant to Labor Code Section 1773.2, the general prevailing wage rates set forth above, which forms a part of this Contract, shall be posted by the Contractor at a prominent place at the site of the Work.

Pursuant to Labor Code Section 1773.6 and California Code of Regulations Section 16204, Title 8, changes in general prevailing wage determinations shall apply to the project only if issued by the Director of Industrial Relations prior to the City's bid issuance date.

The City will not recognize any claim for additional compensation because of the payment by the Contractor of any wage rate in excess of the prevailing wage rate set forth in the Contract. The possibility of wage increases is one of the elements to be considered by the Contractor in determining its Bid, and will not under any circumstances be considered as the basis of a claim against the City or Contract.

When both California and Federal prevailing wage rates apply, the Contractor and any Subcontractors shall pay their workers the higher of the two rates. The Contractor and any Subcontractors shall insert this clause in any lower tier contract.

5-1.05      **REGISTRATION REQUIRED AS QUALIFICATION TO BID.**

Pursuant to Labor Code Section 1771.1(b), notice is hereby given that a Contractor or Subcontractor shall not be qualified to bid on, be listed in a bid proposal, subject to the requirements of Section 4104 of the Public Contract Code, or engage in the performance of any contractor for public work, as defined in Labor Code Sections 1720, et seq., unless currently registered and qualified to perform public work pursuant to Labor Code Section 1725.5. It is not a violation of Labor Code Section 1771.1 for an unregistered contractor to submit a bid that is authorized by Section 7029.1 of the Business and Professions Code or by Section 10164 or 20103.5 of the Public Contract Code, provided the contractor is registered to perform public work pursuant to Section 1725.5.

5-1.06        **PAYROLL RECORDS.** The Contractor's attention is directed to the following provisions of Labor Code Section 1776. The Contractor shall be responsible for the compliance with these provisions by its Subcontractors.

A.        The Contractor and each Subcontractor shall keep accurate and current payroll records, showing the name, address, social security number, work classification, straight time and overtime hours worked each day and week, and the actual per diem wages paid to each journeyman, apprentice, worker, or other employee employed by it in connection with the public work. Each payroll record shall contain or be verified by a written declaration that is made under penalty of perjury, stating both of the following:

1.        The information contained in the payroll record is true and correct.
2.        The employer has complied with the requirements of Section 1771, 1811, and 1815 for any work performed by his or her employees on the public works project.

B.        The payroll records enumerated under subdivision (A) shall be available for inspection at all reasonable hours at the principal office of the Contractor on the following

basis:

1. A certified copy of an employee's payroll record shall be made available for inspection or furnished to such employee or his or her authorized representative on request.

2. A certified copy of all payroll records enumerated in subdivision (A) shall be made available for inspection or furnished upon request to a representative of the City, the Division of Labor Standards Enforcement, and the Division of Apprenticeship Standards of the Department of Industrial Relations. The City reserves the right to withhold any progress payments to the Contractor in the event of noncompliance with the subsection.

3. A certified copy of all payroll records enumerated in subdivision (A) shall be made available upon request by the public for inspection or for copies thereof. However, a request by the public shall be made through either the City, the Division of Apprenticeship Standards, or the Division of Labor Standards Enforcement. The public shall not be given access to such records at the principal office of the Contractor.

C. The certified payroll records shall be on forms provided by the Division of Labor Standards Enforcement or shall contain the same information as the forms provided by the Division.

D. Each Contractor shall file a certified copy of the records enumerated in subdivision (A) with the entity that requested the records within ten (10) Days after receipt of a written request.

E. Any copy of the records made available for inspection as copies and furnished upon request to the public or any public agency by the City, the Division of Apprenticeship Standards or the Division of Labor Standards Enforcement shall be marked or

obliterated to prevent disclosure of an individual's name, address and social security number.

The name and address of the Contractor awarded the Contract or Subcontractor performing the Contract shall not be marked or obliterated. Any copy of records made available for inspection by, or furnished to, a joint labor-management committee established pursuant to the federal Labor Management Cooperation Act of 1978 (Section 175a of Title 29 of the United States Code) shall be marked or obliterated only to prevent the disclosure of an individual's name and social security number. A joint labor-management committee may maintain an action in a court of competent jurisdiction against an employer who fails to comply with Section 1774. The court may award restitution to an employee for unpaid wages and may award the joint labor-management committee reasonable attorneys' fees and costs incurred in maintaining the action. An action under this subdivision may not be based on the employer's misclassification of the craft of a worker on its certified payroll records. Nothing in this subdivision limits any other available remedies for a violation of this section.

F. The Contractor shall inform the City of the location of the records enumerated under subdivision (A), including the street address, city and county, and shall, within five (5) business days, provide a notice of a change of location and address.

G. The Contractor shall have ten (10) Days in which to comply subsequent to receipt of written notice requesting the records enumerated in subdivision (A). In the event that the Contractor or Subcontractor fails to comply within the ten (10) Day period, the Contractor shall, as a penalty to the State or City, forfeit twenty-five (\$25) Dollars for each calendar day, or portion thereof, for each worker, until strict compliance is effectuated. Upon the request of the Division of Apprenticeship Standards or the Division of Labor Standards Enforcement, these penalties shall be withheld from any progress payment or final payment then due. A contractor

is not subject to a penalty assessment pursuant to this section due to the failure of a Subcontractor to comply with this section.

5-1.07        **SAFETY REQUIREMENTS.** It is the intent of the parties that the City is not an exposing, creating, controlling, or correcting employer under California Labor Code Section 6400. In accordance with generally accepted construction practices and State law, the Contractor shall have the authority and be solely and completely responsible for conditions on the Work Site, including safety of all persons and property during performance of the Work. Moreover, the Contractor shall be the controlling employer and has the authority and responsibility to enforce Work Site safety. The Contractor shall be responsible for conducting daily safety inspections and assuring all hazards and violations are abated. The Contractor is responsible for assuring that all Subcontractors adhere to the minimum Cal/OSHA safety requirements and that each Subcontractor has an effective Cal/OSHA IIPP (Illness and Injury Prevention Program) in place that specifically addresses all potential exposures, such as, but not limited to, fall protection, confined space, and trenching/shoring. These requirements shall apply continuously and not be limited to normal working hours. The Contractor shall be responsible for any delay costs or damages in the event the progress of Work is slowed or stopped due to a safety violation.

The Contractor shall designate a safety officer and have in place a health and safety plan in accordance with the laws of State of California and conduct safety meetings and document them in accordance with the law. The Contractor shall have the safety record available for inspection during working hours and shall submit job site safety meeting reports with each Application for Payment.

Prior to Contractor commencing construction project work on City property, Contractor

shall make available copies of its Health and Safety Plan (HASP) that meets or exceeds applicable Cal/OSHA regulations. The Contractor's HASP shall also meet or exceed the requirements of any applicable City-wide or departmental specific Injury and Illness Prevention Programs (IIPP) and other HASP programs, procedures, and plans. Potentially applicable HASP programs, procedures, and plans include, but are not limited to, the following:

1. Bloodborne Pathogens Exposure Control Plan;
2. Confined Space Entry Procedure;
3. Electrical Safety Program (Lockout/Tagout);
4. Emergency Action Plans (Site Specific);
5. Fire Prevention Plans (Site Specific);
6. Hazardous Waste Operations Emergency Response Plan (or Equivalent);
7. Hazard Communication Program (SDS's and Right-to-Know training);
8. Heat Illness & Prevention Plan;
9. Hearing Conservation Program;
10. Hot Work/Welding Procedure;
11. Job Hazard Analyses/Standard Operating Procedures;
12. Traffic Control & Flagging;
13. Excavation/Dig Safe Procedure;
14. Fall Protection Plan;
15. Personal Protective Equipment Plan;
16. Respirable Crystalline Silica Exposure Control Plan;
17. Respirator Program;
18. Soils Management Plan (for contaminated soils); and

19. Transite (Asbestos) Pipe Work Procedure.

Additionally, Contractor shall be responsible for complying with all City-wide and departmental specific safety requirements as identified in the Supplemental Conditions or presented at a pre-construction meeting.

Contractor shall inform City in advance of the quantity of chemical(s) to be used for the project and the total quantity of chemical(s) that will be brought onto City property. In addition, Contractor shall provide City with one copy of the Safety Data Sheet (SDS) for each chemical expected to be used to complete the project and for each chemical brought to the Work Site, regardless of whether such chemicals are ultimately used for the project.

The services of the Director in conducting construction review of the Contractor's performance is not intended to include review of the adequacy of the Contractor's Work methods, equipment, bracing or scaffolding, or safety measures, in, on, or near the construction site. If a City employee observes a safety violation, the City employee will report the violation to the Contractor who is then responsible for assuring the violation is abated.

The Contractor is hereby informed that Work on this project could be hazardous. The Contractor shall carefully instruct all personnel working in potentially hazardous Work areas as to potential dangers and shall provide such necessary safety equipment and instructions as are necessary to prevent injury to personnel and damage to property. Special care shall be exercised relative to Work underground.

All Work and materials shall be in strict accordance with all applicable State, City, County, and Federal Rules, Regulations, and Codes, and attention is drawn to the requirements of Cal/OSHA. The Contractor shall be solely responsible for compliance with all City, County and State blasting requirements and for any damages caused by its operations.

To ensure compliance with California Labor Code Section 6705, the Contractor shall submit to the City, at least five (5) Days in advance of excavation of any trench five feet (5') or more in depth, Working Drawings to the Director showing the design of shoring, bracing, sloping and other provisions to be made for worker protection from the hazard of caving ground during the excavation of such trench or trenches. If such Working Drawings vary from the shoring system standards established by the Cal/OSHA Construction Safety Orders of the Division of Industrial Safety, the plan shall be prepared and signed by a registered civil or structural engineer in the State of California. This in no way relieves the Contractor from the requirement of maintaining safety in all operations performed by the Contractor or the Contractor's Subcontractors and nothing in this section shall be deemed to allow the use of a shoring, sloping or protective system less effective than that required by the Cal/OSHA Construction Safety Orders of the Division of Industrial Safety Contractor's Working Drawings shall be subject to approval insofar as the details affect the character of the finished Work and for compliance with design requirements applicable to the construction when specified or called for, but details of the design will be left to Contractor who shall be responsible for the successful construction of the Work. The City shall approve Working Drawings before any Work involving such drawings is performed. Approval and/or acceptance by the City or its designated agent only constitutes acknowledgment of the submission and does not constitute review or approval of the designs, design assumptions or criteria, completeness of submissions, applicability to areas of intended use, nor implementation of the plans, which are solely the responsibility of the Contractor and its registered engineer.

The Contractor shall perform its Work as not to expose personnel to, or to discharge into the atmosphere from any source whatever, smoke, dust, asbestos, toxic chemicals or other air

contaminants in violation of the laws, rules, and regulations of the governmental entities having jurisdiction and shall bear full and exclusive responsibility for any release of hazardous or non-hazardous chemicals or substances during the course of the Work. The Contractor shall immediately report any such release to the City. The Contractor shall be solely responsible for all claims and expenses associated with the response to, removal and remediation of the release, including, without limitation, payment of any fines or penalties levied against the City by any agency as a result of such release and shall defend, indemnify, and save and hold harmless the City, its officers, agents, employees, and volunteers from any claims arising from such release. For purposes of this section only, the term “claims” shall include:

1. All notices, orders, directives, administrative or judicial proceedings, fines, penalties, fees, or charges imposed by any governmental agency with jurisdiction; and
2. Any claim, cause of action, or administrative or judicial proceeding brought against the City, its officers, agents, employees, and volunteers for any loss, cost (including reasonable attorneys’ fees), damage or liability, sustained or suffered by any person or entity, including the City.

If the performance of the Work creates any hazardous wastes, those wastes shall be properly disposed of according to federal, state, and local laws, at the expense of the Contractor. The Contractor shall dispose of the wastes under its own EPA Generator Number. In no event shall the City be identified as the generator. The Contractor shall notify the City of any such hazardous wastes and the City reserves the right to a copy of the results of any tests conducted on the wastes, and, at its cost, to perform additional tests or examine those wastes, prior to disposition. The Contractor shall defend, indemnify, and save and hold harmless the City, its

officers, agents, employees, and volunteers from any claims arising from the disposal of the hazardous wastes, regardless of the absence of negligence or other malfeasance by the Contractor. Disposal of all Hazardous Materials must be done in accordance with all laws and regulations. Copies of required regulatory documentation including copies of final manifests shall be supplied to the City.

Contractors or Subcontractors removing one hundred or more square feet (100') of asbestos must be "Certified" in accordance with State law. All Work involving exposure to asbestos and all other hazardous materials shall be performed with protection of personnel in compliance with all applicable regulations and safety requirements including, but not limited to, California Code of Regulations Section 1529, Title 8.

Nothing in these General Conditions is to be construed to permit Work not conforming to governing codes. When Contract Documents differ from governing codes, the Contractor shall furnish and Install the higher standards called for without extra charge.

5-1.08        **SUBSURFACE EXCAVATIONS, NOTIFICATION.** The Contractor shall contact the regional notification center, "Underground Service Alert," and schedule its Work to allow ample time for the center to notify its members and, if necessary, for any member to field locate and mark its facilities. Without limiting the foregoing, the Contractor's attention is directed to Government Code Sections 4216 to 4216.9, and in particular Section 4216.2.

5-1.09        **PUBLIC SAFETY.** The Contractor shall assume all responsibility for public safety during the performance of its Work, and all costs arising therefrom shall be included in the Contract Price. Whenever the Contractor's operations create a condition hazardous to traffic or to the public, it shall furnish, erect and maintain, at its expense, such fences, barricades, lights, signs, and other devices and take such other protective measures as are

necessary to prevent accidents or damage or injury to the public. The Contractor shall establish the pedestrian detours with comparable lighting to the original pedestrian areas. The Contractor shall arrange for such flaggers as are necessary to give adequate warning to traffic or to the public of any dangerous conditions affecting traffic. For Work in a public right-of-way, the Contractor shall comply with the rules and regulations of the State, County, or local agency that owns the right-of-way.

The Contractor shall promptly and fully comply with and carry out, and shall without separate charge therefor to the City, all safety and first aid requirements prescribed by all applicable Federal, State, and local laws and regulations, rules, and orders. The Work shall be done in a safe manner; and the Contractor shall safeguard the safety and health of its employees, Subcontractors, and the people of local communities. The Contractor shall also be reasonable for ensuring that its Subcontractors comply with the provisions of this section.

Upon the failure of the Contractor to comply with any of the requirements of this section, the City shall have the authority, but not the duty, to stop the Work until such failure is remedied. The Contractor shall not be entitled to an adjustment of the Contract Time or an increase in the Contract Price due to any such suspensions.

When required by the Contract Documents, the Contractor shall construct, maintain, and remove detours for use of public traffic, without additional cost to the City, unless separate payment is specified in the Special Provisions.

The failure or refusal of the Contractor to construct and maintain detours at the proper time shall be sufficient cause for closing down the work until such detours are in satisfactory condition for use by public traffic.

Due care shall be exercised to avoid injury to existing improvements or facilities, utility

facilities, adjacent property and trees, shrubs, and other plants that are not to be removed.

Trees, shrubs and other plants that are not to be removed, and pole lines, fences, signs, survey markers and monuments, buildings and structures, conduits, pipe lines, sewer and waterlines, highway facilities, and any other improvements or facilities, under or above ground, that are within or adjacent to the work limit line shall be protected from injury or damage, and the Contractor shall provide and Install suitable safeguards to protect such objects from injury or damage. If such objects are injured or damaged by reason of the Contractor's operations, they shall be replaced or restored at the Contractor's expense. The facilities shall be replaced or restored to a condition as good as when the Contractor entered upon the Work Site, or as good as required by the Contract Documents if any such objects are part of the Work. The City may make or cause to be made such temporary repairs as are necessary to restore to service any damaged facility. The cost of such repairs shall be borne by the Contractor, and the costs may be deducted from any monies due or to become due to the Contractor under the Agreement.

The fact that any underground facilities is not shown on the Contract Drawings shall not relieve the Contractor of its responsibility pursuant to "Utility Facilities" in Section 2-1.12 elsewhere in the Contract Documents. It shall be the Contractor's responsibility, pursuant thereto, to ascertain the location of such underground improvements or facilities, which may be subject to damage by reason of its operations.

Full compensation for furnishing all labor, materials, tools, equipment and incidentals, and for doing all the Work involved in protecting or repairing property as specified in this section, shall be considered as included in the prices paid for the various Contract items of work and no additional compensation will be allowed therefor.

5-1.10        **EMERGENCIES.** In an Emergency affecting the safety of life, the

Work, or adjoining property, the Contractor, without special instructions or authorization from the City, shall act at its discretion to prevent such threatened loss or injury. In such an Emergency, the Contractor may perform such additional work as is reasonably required. Any compensation claimed by the Contractor on account of Work performed to an Emergency shall be determined in accordance with the provisions relating to Force Account payment contained elsewhere in the Contract Documents.

5-1.11        **APPRENTICES.** Attention is directed to Labor Code Sections 1777.5, 1777.6 and 1777.7 and Title 8, California Code of Regulations Section 200 et seq. In accordance with Section 1777.5, the Contractor shall secure the necessary certificates and shall contribute to the apprenticeship fund or funds, as provided therein. The Contractor shall require each Subcontractor who will perform work or labor or render service to the Contractor in or about the construction of the work to fully comply with Sections 1777.5 and 1777.6 of the Labor Code. To insure compliance and complete understanding of the law regarding apprentices, and specifically the required ratio thereunder, each Contractor or Subcontractor should, where some questions exist, contact the Division of Apprenticeship Standards, , or one of its branch offices prior to commencement of Work on the public works Contract. Responsibility for compliance with this section lies with the prime Contractor.

It is State and City policy to encourage the employment and training of apprentices on public works Contracts as may be permitted under local apprenticeship standards.

5-1.12        **FAIR LABOR STANDARDS ACT.** Attention is invited to the fact that the City has been advised by the Wage and Hour Division, U.S. Department of Labor, that Contractors engaged in construction Work are required to meet the provisions of the Fair Labor Standards Act of 1958 and as amended (52 Stat. 1060).

5-1.13        **WORKERS' COMPENSATION.** Pursuant to the requirements of Labor Code Section 1860, the Contractor will be required to secure the payment of workers' compensation to its employees in accordance with the provisions of Labor Code Section 3700.

Prior to the commencement of Work, the Contractor shall sign and file with the Director a certification in the following form:

“I am aware of the provisions of Labor Code Section 3700 which require every employer to be insured against liability for workers' compensation or to undertake self-insurance in accordance with the provisions of that code, and I will comply with such provisions before commencing the performance of the Work of this Contract.”

5-1.14        **AIR POLLUTION CONTROL AND ASBESTOS.** The Contractor shall comply with all air pollution control rules, regulations, ordinances and statutes which apply to any Work performed pursuant to the Contract, including any air pollution control rules, regulations, ordinances and statutes, specified in Government Code Section 11017.

In the absence of any applicable air pollution control rules, regulations, ordinances or statutes governing solvents, all solvents, including but not limited to the solvent portions of paints, thinners, curing compounds, and liquid asphalt used on the project shall comply with the applicable material requirements of the applicable Air Quality Management District. All containers of solvent, paint, thinner, curing compound, or liquid asphalt shall be labeled to indicate that the contents fully comply with said requirements.

Unless otherwise provided in the Supplemental Conditions, material to be disposed of shall not be burned, either inside or outside the Premises.

The Contractor shall also comply with all rules, regulations, statutes and ordinances

regarding asbestos removal and disposal, including but not limited to, 42 U.S.C. Sections 7401, 7412 and 7601, 40 C.F.R. Part 61, Subpart M, and California Code of Regulations Section 1529, Title 8.

If the Contractor discovers that a building to be demolished or renovated contains asbestos containing material, the Contractor shall immediately cease Work and notify the City.

5-1.15        **USE OF PESTICIDES.** The Contractor shall comply with all local, state and federal rules and regulations of the Department of Food and Agriculture, the Department of Health, the Department of Industrial Relations and all other agencies which govern the use of pesticides required in the performance of the Work.

Pesticides shall include but shall not be limited to herbicides, insecticides, fungicides, rodenticides, germicides, nematocides, bactericides, inhibitors, fumigants, defoliants, desiccants, soil sterilants, and repellents.

Any substance or mixture of substances intended for preventing, repelling, mitigating, or destroying weed, insects, diseases, rodents, or nematodes and any substance or mixture of substances intended for use as a plant regulator, defoliant or desiccant shall be considered as pesticide.

5-1.16        **SOUND AND LIGHT CONTROL REQUIREMENTS.** The Contractor shall comply with all local sound control, light control, and noise level rules, regulations and ordinances which apply to any Work performed pursuant to the Contract. Work shall not begin before 7 a.m. nor occur after 7 p.m., unless otherwise permitted by the City.

Each internal combustion engine, used for any purpose on the Work or related to the Work, shall be equipped with a muffler, in good working order, of a type recommended by the manufacturer. No internal combustion engine shall be operated on the project without said

muffler.

5-1.17        **WEIGHT LIMITATIONS.** Unless expressly permitted elsewhere in the Contract Documents, the Contractor shall not operate construction equipment or vehicles of any kind which, laden or unladen, exceed the maximum weight limits set forth in Division 15 of the Vehicle Code over completed or existing base, surfacing, pavement or structures.

5-1.18        **ENVIRONMENTAL CLEARANCES; MITIGATION MONITORING PROGRAMS; AND REGULATORY AGENCY PERMIT REQUIREMENTS.** The Department will obtain all environmental clearances and other authorizations necessary for this project as set forth in the Contract Documents. The Contractor shall comply with the provisions, including giving notices during construction when required, of said authorizations. In the event the obtaining of said authorizations delays completion of all or any portion of the Work, an extension of time determined pursuant to the provisions in Section 6-1.08, "Liquidated Damages," of these General Conditions will be granted.

Contractor shall comply with: (1) all mitigation identified in the mitigation monitoring program (attached to and adopted as a component of the mitigated negative declaration or Environmental Impact Report) to mitigate impacts to protected natural resources; and (2) all related permit requirements issued by the regulatory agencies authorizing the project. Contractor shall defend, indemnify, and save and hold harmless the City, its officers, agents, employees, and volunteers from any fines, claims, suits, actions or regulatory sanctions of every name, kind and description brought forth, or on account of, damage to protected natural resources from or arising out of Contractor's negligence or willful misconduct in the performance of this Agreement.

5-1.19        **PERMITS AND LICENSES.** The Contractor acknowledges and agrees that, prior to the submission of its bid for the Work, it fully familiarized itself with the

requirements of all applicable federal, state, county and municipal laws, codes, rules, and regulations, as well as the conditions of any required licenses and permits.

The Contractor shall procure all permits and licenses, including any applicable building permits (except those procured or to be procured by the City which are listed elsewhere in the Contract Documents), in coordination with the Director, pay all charges and fees, and give all notices necessary and incident to the due and lawful prosecution of the Work. Contractor shall be responsible for applying, paying all fees, and coordination for obtaining all permits for completion of the Work. All permits and licenses shall be obtained in sufficient time to prevent delays to the Work. Contractor will apply to the City for reimbursement for such permits costs. Accordingly, Contractor should not include the anticipated costs for permits in its bid, as the necessary permit costs will be reimbursed by the City.

The California Environmental Quality Act (Public Resources Code, Section 21000 to 21177) may be applicable to permits, licenses and other authorizations which the Contractor must obtain from State or local agencies in connection with performing the Work. The Contractor shall comply with the provisions of that Act in obtaining such permits, licenses and other authorizations, and all permits, licenses and other authorizations shall be obtained in sufficient time to prevent delays to the Work.

The Contractor shall maintain the applicable Contractor's license as identified in the Notice to Contractors and City business license for the duration of the Work.

5-1.20        **WATER POLLUTION.** The Contractor shall comply with all water pollution control rules, regulations, ordinances and statutes which apply to any Work performed pursuant to the Contract, including any water pollution control rules, regulations, and statutes, specified by the most current State of California NPDES General Permit for Stormwater

## Discharges Associated with Construction Activity.

The Contractor shall take all necessary precaution to protect streams, vernal pools, ponds, reservoirs, and lakes from pollution with fuels, oils, bitumen, calcium chloride, and other harmful materials as consistent with the law. Also, the Contractor shall conduct and schedule operations so as to avoid discharging pollutants, such as but not limited to: sediment and silt to the storm drain system. The storm drain system consists of all facilities that are designed to convey stormwater to the Waters of the State as defined in the California Water Code. The storm drain system includes, but is not limited to, all streets, gutters, drain inlets, roadside ditches, streams, vernal pools, ponds, and lakes. Care shall be exercised to preserve roadside vegetation beyond the limits of construction.

5-1.21        **PROTECTION AND USE OF PROPERTY.** The Contractor shall be responsible for and provide and maintain all proper temporary walkways, covered walkways, barriers, roads, guards, railings, lights, warning signs, and take precaution at all times to avoid injury or damage to any person or any property, and upon completion of the Work, or at other times as directed, restore Premises and adjacent property to a proper condition. In the event of such injury or damage, Contractor shall report such injury and damage to City within forty-eight (48) hours of occurrence.

The Contractor shall protect adjoining property and nearby buildings, including City buildings, City roads, and public streets or roads, from dust, dirt, debris, or the nuisance arising out of the Contractor's operations or storage practices, and, if ordered by the Director, the Contractor shall provide and Install suitable safeguards, approved by the Director, to protect such objects from damage. If such objects are damaged by reason of the Contractor's operations, they shall be replaced or restored at the Contractor's expense.

If the Contractor damages any buildings, roads, utilities, or other property which belong to the City, or any Department or agency thereof, then the Director, at his or her option, may retain from the money due under the Contract an amount sufficient to insure repair of the damage.

The Director may make or cause to be made such temporary repairs as are necessary to restore to service any such damaged facility. The cost of such repairs shall be borne by the Contractor and may be deducted from any moneys due or to become due the Contractor under the Contract.

5-1.22        **RESPONSIBILITY FOR DAMAGE AND INDEMNIFICATION.**

The City of Roseville, its officers, agents, employees, and volunteers, including but not limited to the Director and his or her designee, shall not be answerable or accountable in any manner: for any loss or damage that may happen to the Work or any part thereof; for any loss or damage to any of the materials or other things used or employed in performing the Work; for injury to or death of any person, either workers or the public; or for damage to property from any cause which might have been prevented by the Contractor, its workers, or anyone employed by the Contractor or the Contractor's Subcontractors.

The Contractor shall be responsible for any liability imposed by law and for injuries to, or death of, any person including, but not limited to, workers and the public, or damage to property resulting from defects or obstructions, or from any cause whatsoever during the progress of the Work or at any time before its completion and final Acceptance.

To the fullest extent allowed by law, the Contractor shall defend (through counsel acceptable to the City), indemnify, and save and hold harmless the City, and its respective officers, agents, Subcontractors, employees, and volunteers, and the successors and assigns of

any of them, (hereinafter referred to as “Indemnitees”) from and against all claims, demands, liability, suits, actions, costs or expenses for any and all loss or damage, including but not limited to, personal injury, property damage, or economic loss, arising out of or resulting from allegations of (1) Contractor’s use of the City’s property or any activities or Work performed hereunder by the Contractor; (2) the Contractor’s performance of the Work under the Agreement; or (3) the Contractor’s breach of any provision of the Agreement. The duty of the Contractor to indemnify and save harmless includes the duties to defend as set forth in Civil Code Section 2778. The only exception to these provisions is that the Contractor’s obligations under this section will not apply to the extent that the claims, demands, liability, suits, actions, costs or expenses are caused by Indemnitees’ active negligence, willful misconduct, criminal acts, or for defects in design furnished by the Indemnitees, misconduct, criminal acts, or for defects in design furnished by the Indemnitees.

The Contractor waives any and all rights to any type of express or implied indemnity against the City, its officers, agents, employees, or volunteers.

The Contractor’s responsibility for such defense and indemnity obligations shall survive the termination or completion of this Contract for the full period of time allowed by law. The defense and indemnity obligations of this Contract are undertaken in addition to, and shall not in any way be limited by, the insurance obligations contained in this Contract. The parties intend that the defense and indemnity obligations in this Contract shall be broadly construed.

Any person, firm or corporation that Contractor authorizes to Work on the City’s property including Subcontractors, shall be deemed to be an agent of the Contractor for purposes herein, shall be subject to all the applicable terms herein, and shall be within the scope of the Contractor’s indemnity obligation described herein.

In addition to any remedy authorized by law, so much of the money due the Contractor under and by virtue of the Contract as shall be considered necessary by the Department may be retained by the City until disposition has been made of such suits or claims for damages.

The retention of money due the Contractor shall be subject to the following:

A. The City will give the Contractor thirty (30) Days' notice of its intention to retain funds from any partial payment which may become due to the Contractor prior to Acceptance of the Contract. Retention of funds from any payment made after Acceptance of the Contract may be made without such prior notice to the Contractor.

B. No retention of additional amounts out of partial payments will be made if the amount to be retained does not exceed the amount being withheld from partial payments pursuant to Section 7-1.07, "Progress Payments," of these General Conditions.

C. If the City has retained funds and it is subsequently determined that the City is not entitled to be indemnified and saved harmless by the Contractor in connection with matter for which such retention was made, the Department shall be liable for interest on the amount retained at the legal rate of interest for the period of such retention.

#### 5-1.23 **INSURANCE COVERAGE.**

A. Evidence of Maintenance Required. The Contractor shall, at its expense, procure and at all times maintain in full force and effect at a minimum the insurance required by this section on all of its operations; and the Contractor shall not allow any Subcontractor to commence work until similar insurance required of the Subcontractor has been obtained and filed. An original Certificate of Insurance, and copies of all required endorsements, all in a form approved by the Risk Manager, evidencing all required coverage or policies shall be filed after the award of the bid and prior to approval of the Contract by the City Council. Contractor shall

provide ten (10) days prior written notice to the City of any reduction of coverage limits or cancellation of the coverage or policies shall be given to the City of Roseville as Certificate holder.

B. Qualifying Insurers. With the exception of the State Compensation Insurance Fund, all required insurance policies shall be issued by companies acceptable to the City and licensed to do business in the State of California and who hold a current policy holders alphabetic and financial size category rating of not less than AVII according to the most recent issue of Best's Insurance Reports.

C. Insurance Required.

1. Commercial General Liability (CGL): Insurance Services Office Form CG 00 01 covering CGL on an “occurrence” basis, including products and completed operations with limits of no less than Two Million Dollars (\$2,000,000) per occurrence for bodily injury, personal injury and property damage for projects under One Million Dollars (\$1,000,000) and limits of no less than Five Million Dollars (\$5,000,000) per occurrence for bodily injury, personal injury and property damage for projects over One Million Dollars (\$1,000,000). If a general aggregate limit applies, either the aggregate limit shall apply separately to this project or the general aggregate limit shall be twice the required occurrence limit.

The Commercial General Liability insurance shall include the following, copies of which shall be provided:

a. Inclusion of the City of Roseville, and its officers, agents, employees, and volunteers, as additional insureds (except for workers’ compensation) as respects services or operations under the Contract. The additional insured endorsement for the general liability policy shall be at least as broad as the ISO CG 2010 10 01 combined with ISO CGL

Endorsement CG 2037 10 01. Any other endorsement must be approved in writing by the City. Endorsements must include coverage for on-going and completed operations, which coverage shall be maintained for four (4) years following completion of the Project. Endorsements shall cover the City of Roseville, its officers, agents, employees, and volunteers.

b. The insurance shall provide coverage for claims by one insured against another insured and the policies shall not contain any cross-suits exclusions, cross-liability exclusions, or insured versus insured exclusions. The policies shall not contain any classification exclusions purporting to deny coverage for any work to be performed by Contractor or any of its Subcontractors.

c. Stipulation that the insurance is primary and noncontributory, as evidenced by a separate endorsement (CG 20 01 04 13 or an equivalent) or section of the policy, and that neither the City nor its insurers will be called upon to contribute to a loss.

d. Such insurance shall specifically cover the contractual liability of the Contractor.

e. Any available insurance proceeds in excess of the specified minimum insurance coverage requirements and limits shall be available to the additional insureds. Furthermore, the requirements for coverage and limits shall be: (1) the minimum coverage and limits specified in this Agreement; or (2) the full coverage and maximum limits of any insurance proceeds available to the named insureds, whichever is greater.

f. Waiver of subrogation endorsement.

g. The Contractor shall furnish a certificate for the period covered.

2. Automobile Liability: Insurance Services Office Form Number CA 0001 covering Code 1 (any auto), or if Contractor has no owned autos, Code 8 (hired) and Code 9

(non-owned), with limits of no less than One Million Dollars (\$1,000,000) per accident for bodily injury and property damage.

3.      Workers' Compensation: In accordance with the provisions of the California Labor Code, Contractor is required to be insured against liability for Workers' Compensation or to undertake self-insurance. Statutory Workers' Compensation and Employers' Liability of at least One Million Dollars (\$1,000,000) shall cover all Contractors staff while performing any work incidental to the performance of this Agreement.

4.      Professional Liability: Professional Liability (Errors and Omission) Insurance appropriate to Contractor's profession, with a limit of liability not less than One Million Dollars (\$1,000,000) per occurrence or claim and Two Million Dollars (\$2,000,000) aggregate to cover all design and engineering services rendered by Contractor pursuant to the Agreement. Coverage must commence from the first day that Contractor or any of its Subcontractors provided any design or engineering services in connection with the Project.

5.      Builder's Risk/Course of Construction Insurance (If Required by Risk Management): The Contractor shall be responsible for all loss, damage or destruction whatsoever to the work called for by this Contract until the approval of a Notice of Completion or acceptance of the Work if no Notice of Completion is to be recorded.

The Contractor shall secure "All Risk" type of builder's Risk Insurance of the type covering one hundred percent (100%) of the value of the work performed under this Contract (the value is presumed to be the Contract amount unless otherwise stated in Supplemental Conditions) and all materials, equipment, or other items to be incorporated therein while the same are located at the construction site, a bonded warehouse, or its place of manufacture. At any time, the policy shall cover the value of the work completed. The policy shall cover hazards

including the losses due to fire, explosion, hail, rain, lightning, flood (separate insurance as needed), vandalism, malicious mischief, wind, collapse, aircraft, and smoke.

The policies providing such insurance shall name the City as a loss payee as its respective interests may appear, and certified copies of such policies shall be filed with the City. The maximum deductible allowable under the Builder's All Risk policy shall be five percent (5%) of the Contract amount.

Builder's Risk Insurance is not required for coverage of losses in excess of five percent (5%) of the Contract amount for damages resulting from earthquake in excess of a magnitude of 3.5 on the Richter scale, or tidal waves. Coverage in the amount of five percent (5%) of the Contract amount for such losses is required.

6.      Pollution Coverage: Contractor shall procure pollution liability coverage or other insurance covering claims for bodily injury or property damage arising out of the abatement, removal, storage, transportation, or other exposure to hazardous materials or pollutants, in limits not less than Two Million Dollars (\$2,000,000). Contractor shall add the City and all parties required to be indemnified by Contractor as additional insured on all pollution liability policies.

7.      Higher Coverage Limits: If Contractor maintains higher coverage limits than the amounts shown above, then the City requires and shall be entitled to coverage for the higher coverage limits maintained by Contractor. Any available insurance proceeds in excess of the specified minimum limits of insurance and coverage shall be available to the City.

8.      Claims Made Coverage: Liability insurance coverage may not be written on a "claims made" or modified occurrence basis. The Certificate of Insurance must clearly provide that the coverage is on an "occurrence" basis.

5-1.24      **OTHER INSURANCE PROVISIONS.**

A.      The requirements of the Standard Specifications as to types and limits of insurance coverage to be maintained by the Contractor, and any approval of insurance by the City, are not intended to, and shall not in any manner limit or qualify the liabilities and obligations otherwise assumed by the Contractor pursuant to the Contract, including, but not limited to, the provisions concerning indemnification, nor preclude the City from taking any other action available to it under any other provision of the Contract or law.

B.      The City acknowledges that some insurance requirements contained in these Standard Specifications may be fulfilled by self-insurance on the part of the Contractor. However, this shall not in any way limit liabilities assumed by Contractor under the Contract. Any self-insurance must be approved in writing by the City, in its sole discretion and shall not reduce the limits of liability. Any deductibles or self-insured retentions (“SIR”) must be declared on the certificate of insurance and approved by City in writing. Policies containing any SIR provision shall provide or be endorsed to provide that the SIR may be satisfied by either the named insured or City. City reserves the right to obtain a full certified copy of any insurance policy and endorsements. The failure to exercise this right shall not constitute a waiver of such right.

C.      The Contractor agrees to include in its contracts with all subcontractors the same requirements and provisions of this Contract, including the indemnity and insurance requirements, to the extent they apply to the scope of the subcontractor’s work. Furthermore, the Contractor shall require its subcontractors to agree to be bound to the Contractor and the City in the same manner and to the same extent as the Contractor is bound to the City under this Contract. Additionally, the Contractor shall obligate its subcontractors to comply with these

same provisions with respect to any tertiary subcontractor, regardless of tier. A copy of the City's indemnity and insurance provisions will be furnished to the subcontractor or tertiary subcontractor upon request. Alternatively, the Contractor may insure subcontractor(s) under its own policy.

D. The City, its officers, agents, employees, and volunteers are to be covered as insureds with respect to liability arising out of automobiles owned, leased, hired or borrowed by or on behalf of the Contractor; and with respect to liability arising out of work or operations performed by or on behalf of the Contractor including materials, parts or equipment furnished in connection with such work or operations. Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under California Insurance Code Section 11580.04.

E. The limits of insurance required in this Contract may be satisfied by a combination of primary and excess insurance. Any excess insurance shall contain or be endorsed to contain a provision that such coverage shall also apply on a primary and noncontributory basis for the benefit of the City (if agreed to in a written contract) before the City's own insurance shall be called upon to protect it as a named insured.

F. The insurance procured by Contractor shall be subject to the approval of the City, but any acceptance of insurance certificates by the City shall in no way limit or relieve Contractor of its duties and responsibilities under the Agreement.

G. Contractor shall be responsible for all premiums, deductibles, and self-insured retention applicable to the insurance it is required to procure under the Contract. All deductibles or self-insured retentions over five hundred thousand dollars (\$500,000) must be approved by the City, in writing. Contractor shall be responsible for all deductibles, self-insured

retention payments, and/or increased premiums incurred if the City's policies of insurance are forced to cover damages or respond to claims for which Contractor or its Subcontractors were obligated to provide insurance under the Contract.

H. Failure of the City to enforce in a timely manner any of the requirements of these insurance provisions shall not act as a waiver to enforcement of any of these provisions at a later date.

I. Contractor's indemnity obligations shall not be limited by these insurance provisions and shall survive the expiration of the Contract and the insurance provisions of the Contract shall likewise not be limited by the indemnity provisions of the Contract.

J. THE CITY RESERVES THE RIGHT TO WITHHOLD ANY PROGRESS PAYMENTS TO THE CONTRACTOR IN THE EVENT OF NONCOMPLIANCE WITH ANY INSURANCE REQUIREMENTS.

5-1.25 **THIRD PARTY BENEFICIARY.** No provisions in the Contract Documents shall in any way inure to the benefit any third party (including the public at large or any member thereof) so as to constitute such person a third party beneficiary of the Contract, or of any term or condition or other provision of the Contract or otherwise give rise to any cause of action in any person not a party to the Agreement, except as expressly provided elsewhere in the Contract Documents.

5-1.26 **COORDINATION AND ACCESS.** The Contractor acknowledges that the City may award, or has already awarded, other construction contracts for additional work or may perform additional work with its own forces and that such work may affect the Work under this Agreement. Additionally, the Contractor acknowledges that the State and other public and private agencies may be granted a right-of-entry by the City for the purpose of constructing

facilities within and adjacent to the Work Site. It is the obligation of the Contractor to coordinate its Work with the work of others working within or adjacent to the City's property.

During performance of its Work, the Contractor shall not have exclusive access to or use of the work areas. The City may also require that certain facilities and areas be used concurrently by the Contractor and by other contractors working in the area. When two (2) or more contractors are employed on related or adjacent City work, each shall conduct its operations in such a manner as not to cause any unnecessary delay or hindrance to the other. Each contractor shall be responsible to the other for all damage to any work, to persons or property caused to the other by its operations, and for loss caused the other due to any unnecessary delays or failure to finish the work within the time specified for completion.

If any party of the Contractor's Work depends on the work of any other contractor and/or the City for proper execution and/or results, the Contractor shall promptly notify the City of any discrepancies and/or defects in said other work that would render its work unsuitable for proper execution and/or results prior to proceeding with the Contractor's own Work. If it becomes necessary, the City will resolve coordination and access problems.

The Contractor and its representative in charge of the Work shall familiarize themselves with the City's property and Work Site, and adjacent surroundings in the vicinity of said Work, and any private or public operations on adjoining properties.

#### 5-1.27      **OCCUPANCY BY THE DEPARTMENT PRIOR TO**

**ACCEPTANCE.** The City may at any time notify the Contractor in writing that it intends to take Beneficial Occupancy of any portion of the Work even though the Work may not be substantially complete. Unless the reason for the City's taking Beneficial Occupancy is that the Contractor has not completed the Work (or portions thereof) in accordance with the Contract

Time, the City's Beneficial Occupancy shall relieve the Contractor from its responsibility for maintenance, loss or damage to that portion of the Work for which the City has taken Beneficial Occupancy other than that resulting from the Contractor's act or omission, negligence, willful misconduct or breach of warranty.

Should the Work (or portion thereof) not be completed in accordance with the Construction Schedule within the Contract Time (as adjusted under the terms of the Contract Documents), the City shall have the right, but not the obligation, to take Beneficial Occupancy of the Work. In such event, the Contractor shall not be entitled to any additional compensation on account of said occupancy by the City, nor shall the Contractor be relieved of any of its responsibilities under the Contract Documents, including, without limitation, Contractor's obligation to complete the Work in accordance with the Construction Schedule.

Beneficial Occupancy shall not be deemed an Acceptance by the City either of the Work or of any portion thereof, nor will it relieve the Contractor of full responsibility for correcting defective Work or materials found at any time before the formal written Acceptance of the entire Contract by the Director or during the full warranty period after such Acceptance, as provided in Section 7-1.12, "Warranty," of these General Conditions.

The City's Beneficial Occupancy shall not relieve the Contractor of its responsibility to maintain all insurance and bonds required under the Contract Documents until the entire project is accepted by the City.

5-1.28        **RIGHT TO OPERATE UNSATISFACTORY FACILITIES AND EQUIPMENT.** If, after Installation, the operation or use of the facilities or equipment to be furnished under this Contract proves to be unsatisfactory to the Director, the City shall have the right to operate and use such facilities or equipment until they can, without damage to the City,

be taken out of service for correction or replacement. Such period of use of the defective facilities or equipment, pending correction or replacement, shall in no way decrease the warranty period required for the acceptable corrected or replaced facilities or equipment.

5-1.29        **CONTRACTOR'S RESPONSIBILITY FOR THE WORK.** Except as otherwise provided herein, the Contractor shall have the charge and care of the Work and shall bear the risk of injury or damage to any part of the Work by the action of the elements or from any other cause whether arising from the execution or from the nonexecution of the Work until the Acceptance of the Contract by the Director. The Contractor shall rebuild, repair, restore, and make good all injuries or damages to any portion of the Work occasioned by any cause before its completion and Acceptance, and shall bear the expense thereof. In case of suspension of Work from any cause whatever, the Contractor shall be responsible for the Work and it shall also be responsible for all materials, and shall properly store them if necessary, and shall provide suitable drainage and erect temporary structures where necessary.

The Contractor will be relieved of responsibility for any injury or damage to the Work caused by the following:

- A.        An earthquake in excess of a magnitude of 3.5 on the Richter Scale or a tidal wave, when the effect of such has been proclaimed a disaster or state of emergency by the Governor of the State of California or by the President of the United States, or was of such magnitude at the site of the Work as to have been sufficient to have caused a proclamation of disaster or state of emergency, had it occurred in a populated area.
- B.        Occupancy and use by the Department or the public prior to the completion of the entire project.
- C.        Acts of the Federal Government or the public enemy.

5-1.30      **RESPONSIBILITY FOR UTILITIES.** The Contractor shall be responsible at its own cost for any and all Work, expense or special precautions caused or required by the existence or proximity of utilities encountered in performing the Work, including without limitation, repair of any or all damage and all hand or exploratory excavation required. The Contractor is cautioned that such utilities may include communication cables or electrical cables which may be high voltage, and when working or excavating in the vicinity of such cables, or the ducts enclosing such cables, the Contractor shall undertake at its own cost any special precautions required. Suitable warning signs, barricades, and safety devices shall be erected as necessary or required.

However, if during the course of the Work the Contractor encounters utility Installations which are not shown or indicated in the Contract Documents or which are found in a location substantially different from that shown, and such utilities are not reasonably apparent from visual examination, then the Contractor shall promptly notify the Director in writing. Where necessary for the Work of the Contract, the Director shall issue a written order to the Contractor to make such adjustments, rearrangement, repair, removal, alteration, or special handling of such utility, including repair of the damaged utility. The Contractor shall perform the Work described in such written order, and compensation therefor will be made in accordance with Section 3 of these General Conditions relating to changes in the Work. Except for the items of cost specified in said Section 3, the Contractor shall receive no compensation for any other cost, damage, delay, interference, or hindrance to him or her due to the presence of such utility. If the Contractor fails to give the notice specified above and thereafter acts without instructions for the Director, then the Contractor shall be liable for any or subsequent to discovery thereof, and the Contractor shall repair and make good such damage at its own cost.

The precise location of underground facilities can only be determined by careful probing or hand digging in compliance with Article 6 of the Cal/OSHA Construction Safety Orders which states in part:

“Prior to opening an excavation, effort shall be made to determine whether underground installations, i.e., sewer, water, fuel, electric lines, etc., will be encountered, and if so, where such underground installations are located. When the excavation approaches the approximate location of such an installation, the exact location shall be determined by careful probing or hand digging, and, when it is uncovered, adequate protection shall be provided for the existing installation.”

The location of known existing utilities and pipelines are shown on the Contract Drawings in their approximate locations. Some of the locations include multiple conduits. The Contractor shall exercise care in avoiding damage to those facilities which are to remain in service subsequent to the construction of the particular new facility involved and the Contractor will be held responsible for any repairs if damaged. The Contractor shall also exercise care in maintaining those pipes and facilities required for continuing operation of the existing facilities until such time as they can be abandoned. There is no guarantee that all utilities or obstructions are shown on the Contract Drawings or that the locations indicated are accurate.

The Contractor shall exercise extreme caution in working in the area adjacent to the existing pipelines and utility services. It is essential that all the existing facilities be maintained in service. Construction of the connections between the existing facilities and the new facilities shall be at times and during periods acceptable to the City. The Contractor shall advise the Director in writing of its proposed Construction Schedule for these connections at least forty-eight (48) hours in advance.

The Contractor shall uncover all piping and conduits, to a point one foot (1') below the pipe, where crossings, interferences, or connections are shown on the Contract Drawings, prior to trenching or excavating for any pipe or structures, to determine actual elevations. New pipelines shall be laid to such grade as to clear all existing facilities which are to remain in service. If the Contractor does not expose all required utilities, it shall not be entitled to additional compensation for Work necessary to avoid interferences nor for repair to damaged utilities. Excavations around underground electrical ducts and conduits shall be performed using extreme caution to prevent injury or damage to workers and to the electrical ducts or conduits.

5-1.31        **PROPERTY RIGHTS IN MATERIALS.** Nothing in the Contract shall be construed as vesting in the Contractor any right of property in the materials used after they have been attached or affixed to the Work or soil or after partial payment has been made as provided in Section 7-1.07, "Progress Payments," of these General Conditions for material delivered on the ground or stored subject to or under the control of the City and unused. All such material shall become the property of the City upon being so attached or affixed or upon payment for materials delivered on the ground or stored subject to or under the control of the City and unused, as provided in said Section 7-1.07.

5-1.32        **COURT ORDERED DELAY.** If, pursuant to court order, the Department temporarily suspends performance of all or any portion of the Work, an extension of time determined pursuant to the provisions in Section 6-1.08, "Liquidated Damages," of these General Conditions will be granted.

5-1.33        **NO PERSONAL LIABILITY.** Neither the Director, nor any other officer or authorized employee of the City, shall be personally responsible for any liability arising under or by virtue of the Contract.

5-1.34        **RIGHTS IN LAND AND IMPROVEMENTS.** The Contractor shall make no arrangements with any person or entity to permit occupancy or use of any land, structure or building within the limits of the Work, for any purpose whatsoever, either with or without compensation, in conflict with any agreement between the City and any third party owner, former owner, or tenant of such land, structure or buildings. The Contractor shall not occupy City-owned property outside the limit of the Work shown on the Contract Drawings unless it obtains prior approval.

5-1.35        **ANTITRUST CLAIMS.** The Contractor's attention is directed to the following provision of Public Contract Code Section 7103.5(b), which is applicable to the Contractor and its Subcontractors:

“ In entering into a public works contract or a subcontract to supply goods, services, or materials pursuant to a public works contract, the contractor or subcontractor offers and agrees to assign to the awarding body all rights, title, and interest in and to all causes of action it may have under Section 4 of the Clayton Act (15 U.S.C. Sec. 15) or under the Cartwright Act (Chapter 2 [commencing with Section 16700] of Part 2 of Division 7 of the Business and Professions Code), arising from purchases of goods, services, or materials pursuant to the public works contract or the subcontract. This assignment shall be made and become effective at the time the awarding body tenders final payment to the contractor, without further acknowledgement by the parties.”

5-1.36        **RIGHTS TO DRAWINGS, TECHNICAL DATA PATENTS.** Shop

Drawings and Working Drawings submitted to the City by the Contractor, Subcontractor or any lower tier Subcontractor pursuant to the Agreement, are the property of the City and the City may use, and disclose in any manner and for any purpose, Shop Drawings and Working Drawings delivered under the Contract.

Technical Data including manuals or instructional materials, computer or microprocessor software which are delivered or submitted to the City by the Contractor, Subcontractor, or any lower tier Subcontract pursuant to the Contract are the property of the City, and the City may use or disclose same in any manner and for any purpose.

The Contractor shall assume all costs arising from the use of patented materials, equipment, devices, or processes used on or incorporated in the Work, and shall defend, indemnify and save and hold harmless the City, and its duly authorized representatives, from all suits at law, or in equity, and actions of every nature for, or on account of the use of any patented materials, equipment, devices or processes. In case some materials, equipment, devices or processes are held to constitute an infringement and their use enjoined, the Contractor, at its expense, shall:

1. Secure for the City the right to continue using said materials, equipment, devices or processes by suspension of the injunction or by procuring a license or licenses; or
2. Replace such materials, equipment, devices, processes; or
3. Modify them so that they become non-infringing or remove the enjoined materials, equipment, devices or processes and refund the sums paid therefor without prejudice to any other rights of the City.

5-1.37        **PAYMENT OF TAXES.** Contractor shall pay all taxes and duties applicable to and assessable against any Work, equipment, materials, services, processes, and

operations incidental to or involved in the Agreement, including but not limited to, retail sales and use, transportation, export, import, business, and special taxes. The Contractor is responsible for ascertaining and acquainting itself with such taxes and making all necessary arrangements to pay them. The Contractor will maintain records that are auditable records, and these records shall be subject to the City's review to verify that Contractor's tax payments are current at all times.

The Contract Price paid for the Work shall include full compensation for all taxes which the Contractor is required to pay, whether imposed by Federal, State or local government, including, without being limited to, Federal excise tax. No tax exemption certificate nor any document designed to exempt the Contractor from payment of any tax will be furnished to the Contractor by the Department, as to any tax on labor, services, materials, transportation, or any other items furnished pursuant to the Contract.

The Contractor shall withhold and pay any and all sales and use taxes, withholding taxes, whether Federal, State, or local, Social Security taxes, State Unemployment Insurance charges and all other taxes which are now or hereafter may be required to be paid or withheld under any laws.

5-1.38        **GRATUITIES AND CONFLICT OF INTEREST.** The Contractor shall not offer or provide gratuities in the form of gifts, entertainment, loans, meals, rewards, and/or services to representatives of the City, including but not limited to, officers, employees, agents, Engineering Service Consultants, Consulting Engineers and Architects, Inspectors and/or Testing Agencies retained by the City. If it is found that the Contractor has violated this provision, the Contract may be subject to termination for default as defined elsewhere in these General Conditions.

During the term of the Contract and until the final payment has been made to the Contractor, the Contractor shall not employ or compensate in any manner whatsoever, the City's officers, employees and authorized representatives, agents, and any Engineering Service Consultants, Consulting Engineers and Architects, Inspectors, and/or Testing Agencies retained by the City. Any exception to the employment or compensation to any of the above named parties must be made in writing by the City. If the Contractor offers or provides employment or compensation to those named above during the term of the Contract, the Contract may be subject to termination for default.

5-1.39        **COOPERATION.** Should construction be under way by City forces or other forces or by other Contractors within or adjacent to the limits of the Work or should Work of any other nature be under way by such forces within or adjacent to said limits, the Contractor shall cooperate with all such forces to the end that any delay, interference or hindrance to their Work will be avoided. The right is reserved to perform other or additional Work at or near the site at any time, by the use of such forces.

5-1.40        **DIGGING TRENCHES OR OTHER EXCAVATIONS.** In the event any work involves digging trenches or other excavations that extend deeper than four feet (4') below the surface, City and Contractor shall comply with the following:

A.        The Contractor shall promptly, and before the following conditions are disturbed, notify City in writing of any:

1.        Material that the Contractor believes may be material that is hazardous waste, as defined in Section 25117 of the Health and Safety Code, that is required to be removed to a Class I, Class II, or Class III disposal site in accordance with provisions of existing law.

2. Subsurface or latent physical conditions at the site differing from those made available to Contractor for inspection as provided in the project proposal.

3. Unknown physical conditions at the site of any unusual nature, different materially from those ordinarily encountered and generally recognized as inherent in Work of the character provided for in the Contract.

B. The City shall promptly investigate the conditions, and if it finds that the conditions do materially so differ, or do involve hazardous waste, and cause a decrease or increase in the Contractor's cost of, or the time required for, performance of any part of the Work shall issue a Change Order under the procedures described in the Contract.

C. In the event that a dispute arises between the City and the Contractor whether the conditions materially differ, or involve hazardous waste, or cause a decrease or increase in the Contractor's cost of, or time required for, performance of any part of the Work, the Contractor shall not be excused from any scheduled completion date provided for by the Contract, but shall proceed with all work to be performed under the Contract. The Contractor shall retain any and all rights provided either by contract or by law which pertain to the resolution of disputes and protests between the contracting parties. However, no claim of the Contractor under this clause shall be allowed unless the Contractor has given the notice required by this Section. No claim by the Contractor for an equitable adjustment hereunder shall be allowed if asserted after final payment under this Contract.

5-1.41 **CONTRACTOR REGISTRATION.** No contractor or subcontractor may work on a public works project unless registered with the Department of Industrial Relations pursuant to Labor Code section 1725.5. During the performance of this Contract, the Contractor and its subcontractors shall have a continuing legal obligation to maintain current

registration with the Department of Industrial Relations. The Contractor is hereby notified that this project is subject to compliance monitoring and enforcement by the Department of Industrial Relations.

5-1.42            **CITY OF ROSEVILLE ENCROACHMENT PERMITS AND RIGHTS-OF-WAY.** The Contractor need not obtain a separate encroachment permit from the City prior to construction within street rights-of-way or other City rights-of-way. Execution of the Contract by the City shall be deemed an encroachment permit for work required by the Contract within rights-of-way. All work shall conform to the rules and regulations of encroachment permits and shall be subject to the inspection and approval of the Director and City Engineer.

To the extent indicated in the Contract Drawings, the City will provide the rights-of-way over private lands or the site to enable the Contractor to perform its work. The Contractor shall be solely responsible for securing any additional rights-of-way desired by the Contractor. The City will not be a party to nor assume any liability for any separate agreements reached between the Contractor and any third parties with respect to these additional rights-of-way. The Contractor shall procure evidence that agreements are in place with said third parties before the Contractor uses those areas covered by the agreements. Any damage to such private lands caused by the Contractor's operations shall be the sole responsibility of the Contractor.

## **SECTION 6**

### **PROSECUTION AND PROGRESS**

6-1.01            **SUBLETTING AND SUBCONTRACTING.** The Contractor shall be

responsible for all Work performed under the Contract. The Contractor shall give its personal attention to the fulfillment of the Contract and shall keep the Work under its control. Nothing in the Contract Documents shall create any contractual relationship between the City and any Subcontractor. The Contractor is fully responsible to the City for the acts and omissions of its Subcontractors of any tier. When any Subcontractor fails to prosecute a portion of the Work in a manner satisfactory to the Director, that Subcontractor shall not again be employed on the Work. Although the sections of the Contract may be arranged according to various trades, or general grouping of the Work, the Contractor is not obligated to sublet the Work in such manner. The Director will not arbitrate disputes among Subcontractors or between Contractor and one or more Subcontractors concerning responsibility for performing any part of the Work.

The on-site production of materials produced by other than the Contractor's own forces shall be considered as subcontracted. The erection, establishment or reopening of on-site plants for production of materials and the operation thereof in the production of materials for use on the Work shall conform to the requirements relating to labor set forth in the Contract Documents.

The Contractor shall also be responsible for coordinating the Work performed by Subcontractors and Suppliers.

The Contractor shall not substitute any person as Subcontractor in place of a Subcontractor listed on its bid proposal without the written approval of the Director. Substitutions must be in accordance with the provisions of the "Subletting and Subcontracting Fair Practices Act" beginning with Public Contract Code Section 4100. Violations of this Act by the Contractor may subject it to penalties which may include cancellation of Contract, Assessment of ten percent (10%) of the Subcontractor's bid, and disciplinary action by the Contractors State License Board.

The Contractor shall pay any Subcontractors approved by the City for work that has been satisfactorily performed no later than seven (7) Days from the date of Contractor's receipt of progress payments by the City. Within seven (7) Days after receipt from the City of funds attributable to work performed by a Subcontractor, Contractor shall release any retainage payments withheld to the Subcontractor. In the event Contractor does not make progress payments or release retention to Subcontractors in accordance with the time period specified herein, Contractor may be subject to prompt payment penalties per statute.

6-1.02        **ASSIGNMENT.** The performance of this Contract may not be assigned, except upon the written consent of the City Council of the City of Roseville. Consent will not be given to any proposed assignment which would relieve the original Contractor or its surety of their responsibilities under the Contract nor will the City consent to any assignment of a part of the Work under the Contract.

The Contractor may assign moneys due or to become due to it under the Contract and such assignment will be recognized by the City, if given proper notice thereof, to the extent permitted by law, but any assignment of moneys shall be subject to all proper set-offs in favor of the City and to all deductions provided for in the Contract and particularly all money withheld, whether assigned or not, shall be subject to being used by the City for the completion of the Work in the event that the Contractor should be in default therein.

6-1.03        **BEGINNING OF WORK.** After the execution of the Contract by both parties, the City will issue the Notice to Proceed upon its determination that it is appropriate for the Contract Time to commence.

The Contractor shall begin Work within fifteen (15) Days after receiving the Notice to Proceed from the Director, subject to the requirements stated elsewhere in the Contract

Documents regarding, among other things, the submittal of Baseline Schedule, and shall diligently prosecute the same to completion within the time limit provided in the Supplemental Conditions. Contractor shall also achieve any and all Contract milestones as described elsewhere in the Contract Documents.

The Contractor shall notify the Director, in writing, of its intent to begin Work at least seventy-two (72) hours before Work is begun. The notice shall be delivered to the Director and shall specify the date the Contractor intends to start. If the project has more than one (1) location of Work, a separate notice shall be given for each location.

The Contractor is not authorized to perform any Work until it has received a Notice to Proceed from the City. Should the Contractor begin Work in advance of receiving notice that the Contract has been approved as above provided, any Work performed by it in advance of the said date of approval shall be considered as having been done by the Contractor at its own risk and as a volunteer unless said Contract is so approved thereafter.

6-1.04        **PROGRESS SCHEDULE.**

A.        **Preliminary Progress Schedule.** The Contractor shall submit to the Director, within twenty (20) Days after date of the Notice to Proceed, a Preliminary Progress Schedule covering the Contractor's activities over the first three (3) months of operation in detail and the remainder of the project in summary. The Preliminary Progress Schedule shall schedule the project within the Contract Time for completion of the Work, and shall be subject to favorable review by the Director.

B.        **CPM Schedule.** The Contractor shall submit an acceptable Critical Path Method (CPM) Schedule to the Director within thirty (30) Days after the receipt of the Notice to Proceed. Subsequent revisions to said schedule shall be submitted as set forth hereinafter. The

requirement for the CPM schedule is included to allow for adequate planning and execution of the Work, to determine the critical nature of delays, and to assist the Director in appraising the reasonableness of the proposed schedule and evaluating progress of the Work. The CPM schedule submitted under this Section shall utilize a CPM format, either the precedence or arrow diagramming method. The definitions of CPM terms and functions shall be as provided in the Associated General Contractors of America book *CPM in Construction, A Manual for General Contractors*, or a favorably reviewed alternative publication or reference. No progress payment will be made prior to submission and acceptance of the CPM Schedule.

1. The CPM schedule system shall consist of diagrams and accompanying mathematical analyses. The diagrams shall show elements of the project in detail and an entire project summary. Diagrams shall show the order and interdependence of activities and sequence in which the Work is to be accomplished as planned by the Contractor. The basic concept of a network analysis diagram shall be followed to show how the start of a given activity is dependent on the completion of preceding activities and its completion restricts the start of following activities. Detailed network activities shall include, in addition to construction activities, the submittal and favorable review of samples of material and Shop Drawings, the procurement of critical materials and equipment, fabrication of special material and equipment, and their Installation and testing. All activities of the City and the Director that affect progress and required Contract dates for completion of all or parts of the Work shall be shown. The selection and number of activities shall be subject to favorable review by the Director. Summary networks shall be time scaled. Durations shall be in Days and shall not exceed fifteen (15) Days, except for submittal and delivery items. Where the duration of continuous Work exceeds fifteen (15) Days, Work items in the Construction Schedule shall be subdivided by location,

approximate stationing or other sub-element of the Work.

The graphic network diagram shall include for each activity, the description, activity number, the estimated duration in Days, and all activity relationship lines. The network diagram shall be drawn for the early start of activities. All significant Submittals shall be scheduled along with manual Submittals and training on all large or critical pieces of equipment. If the precedence technique is utilized, the schedule project shall include a calendar in Work Days, a network report sorted by early start and a logic table report sorted by preceding Work item. If the arrow technique is utilized, the schedule report shall include a calendar in Work Days, a network report sorted by early start, a network report sorted by I-J numbers, and a network sorted by slack time and I-J numbers.

2. The critical path shall be shown on all reports and on the graphic network diagram. The activities which constitute the critical path shall be identified.

3. The mathematical analysis of the network diagram shall include a tabulation of each activity. The following information shall be furnished as a minimum for each activity:

- (a) preceding and following event numbers
- (b) activity description and number
- (c) estimated duration of activities
- (d) earliest start date (by calendar date)
- (e) earliest finish date (by calendar date)
- (f) actual start date (by calendar date)
- (g) actual finish date (by calendar date)
- (h) latest start date (by calendar date)

- (i) latest finish date (by calendar date)
- (j) slack or float
- (k) percentage of activity completed

4. The program shall be capable of accepting revised completion dates as modified by approved time adjustments and recomputations of all tabulation dates and float accordingly.

5. Submission and review of the system shall be as follows:

(a) The complete network analysis system, consisting of the detailed network mathematical analysis and network diagrams, shall be submitted within thirty (30) Days after receipt of the Notice to Proceed.

(b) The Contractor shall participate in a review and evaluation of the proposed network diagrams and analysis by the Director. Any revisions necessary as a result of this review shall be resubmitted for review by the Director within ten (10) Days. When completed, the favorably reviewed schedule shall then be the schedule to be used by the Contractor for planning, organizing and directing the Work and for reporting progress. If the Contractor thereafter desires to make significant changes in its method of operating and scheduling, the Contractor shall notify the Director in writing stating the reasons for the change.

(c) The Contractor shall submit at monthly intervals a report of the actual construction progress. Each monthly report shall cover a period of approximately thirty (30) Days ending around the 20th of each month. The monthly reports shall be submitted within ten (10) Days of the end of the reporting period.

(1) If the project is proceeding on schedule, the monthly update report may consist of a marked-up copy of the graphical network diagram. This

submittal shall clearly indicate the status of any minor shifts in sequence or schedule and the estimated completion date or percent complete of all activities currently in progress. The Contract completion date shall also be indicated. The Contractor shall submit a narrative report relating to status of construction, the schedule, and factors which may affect the remainder of the schedule. The report shall show the activities or portions of activities completed during the reporting period. The report shall state the percentage of the Work actually completed and scheduled as of the report date and the progress along the critical path in terms of Days ahead or behind the allowable dates.

(2) If, in the opinion of the Director, the project is behind schedule, the monthly report shall include a revised network diagram and/or mathematical analysis showing the Contractor's proposed revised schedule. An analysis of the effect that the delay has on progress along other paths shall also be included in the report. The Contractor shall also submit a narrative report with each updated analysis which shall include but not to be limited to a description of current and anticipated problem areas, delaying factors and their impact, and an explanation of corrective actions taken or proposed.

(3) Periodic report shall be submitted in sufficient copies to cover Contractor needs plus five (5) copies and an available electronic copy to be retained by the Director.

6. To the extent that the favorably reviewed initial Construction Schedule, or revisions thereto, indicate anything not jointly agreed upon, it shall be deemed to be not favorably reviewed by the Director. Any omission of Work from the detailed schedule, otherwise required for Contract compliance, will not excuse the Contractor from completing

such Work within any applicable completion date. The CPM schedule shall be generated by computer methods.

C. Schedule Review. Once each month, on a date mutually agreed upon, but no later than seven (7) business days after the monthly schedule progress report date, a Work Site meeting will be held to review the Construction Schedule and job progress. The Contractor shall also attend weekly meetings scheduled by the Director to review the progress of the Work in the preceding week and in the subsequent week, coordinate the Work with public agencies or other Contractors as required, and allow the Director to plan his or her activities for testing, inspection, etc.

D. Schedule Revisions. The conditions under which the Director will require revisions of the Construction Schedule include the following:

1. When delay in completion of any Work item or sequence of Work items results in an estimated extension of project completion by either twenty (20) business days or by ten percent (10%) of the remaining duration of time to complete the Contract, whichever is less.
2. When delays in Submittals or deliveries make replanning or rescheduling of the Work necessary.
3. When the schedule does not represent actual prosecution and progress of the Work.
4. When any change to the sequence of activities, the completion date for major portions of the Work, or when changes occur which affect the critical path.
5. When Contract Amendments or a Change Order necessitates schedule revision, the Contractor shall submit a schedule analysis of all Change Order Work

with its proposal.

E. Cash Flow Projection. A cash flow projection shall be submitted with the Construction Schedule. This cash flow projection shall be revised and resubmitted when revisions of the Construction Schedule will result in changes to the projected cash flow.

F. Schedules showing project completion dates earlier than specified in the Supplemental Conditions will be rejected unless justification can be provided for early completion.

6-1.05 **SCHEDULE OF VALUES.** Prior to preparation of the first estimate for a progress payment, the Contractor shall submit for favorable review by the Director a detailed Schedule of Values or cost breakdown of the Work under each bid item awarded. The breakdown will then become the basis for partial payment determination. Elements of Work shall be grouped by structure, pipeline, system, etc. Within each grouping, Work should be itemized by readily measurable quantities of Work complete in place. For example, concrete should be in units of cubic yards including form Work and reinforcing steel. Move-on costs, bond and insurance costs, and Overhead costs shall not be considered an item of cost for this purpose but shall be prorated over items of Work. In the event the Schedule of Values is not favorable reviewed by the Director, another Schedule of Values shall be submitted that is mutually acceptable to the Contractor and the Director.

6-1.06 **CITY'S RIGHT TO STOP WORK.** The Director shall have the authority to order the Contractor, in writing, to suspend the Work wholly or in part, for such period as the Director may deem necessary due to the failure on the part of the Contractor to correct Work that is not in accordance with the requirements of the Contract Documents or if Contractor persistently fails to carry out Work in accordance with the Contract Documents.

The Contractor shall immediately comply with the written order of the Director to suspend the Work wholly or in part. The suspended Work shall be resumed when conditions are favorable and methods are corrected, as ordered or approved in writing by the Director.

Any stoppage of work under this section shall be at the Contractor's sole expense, and the Contractor shall have no claim against the City based on the Contractor's failure to perform the Work in accordance with the Contract Documents.

In addition to the City's right to stop Work, the City may order the Contractor to submit to the City at no additional cost to the City, additional information concerning Contractor's planned Work if the Contractor fails to promptly correct Work that is not in accordance with the requirements of the Contract Documents or persistently fails to carry out Work in accordance with the Contract Documents. The additional information ordered by the City may include, but is not limited to, preparation of Submittals or Working Drawings not otherwise required to be submitted under the Contract Documents.

In the event the City discovers that the Contractor has created an unsafe condition the City may arrange for other work forces to remedy the condition. Such remedial work shall be at the sole discretion of the City. If this action is required, the City may unilaterally terminate Work under the Contract, and will pay only for the quantities of Work actually performed, less the cost of the City's remedial Work. In the event that Work is not halted, the Contractor must take immediate steps to correct the situation. There will be no extra payment for Work required to correct unsafe conditions.

The right of the City to suspend the Work shall not give rise to a duty on the part of the City to exercise this right for the benefit of the Contractor or any other person or entity. This right shall be in addition to and not in restriction or derogation of the City's other rights under

the Contract Documents.

In the event of a suspension of Work under any of the conditions set forth in this Section 6-1.06, such suspension of Work shall not relieve the Contractor of its legal responsibilities as set forth in these General Conditions.

6-1.07        **TIME OF COMPLETION.** The Contractor shall complete the entire Work, including Installation, repairs, startup, troubleshooting, painting, and touchup, training, submittal or record drawings, and manuals, cleanup, demobilization, and all other Work within the number of Days set forth in the Supplemental Conditions. The time for completion includes an allowance for working time lost due to normal inclement weather.

Extensions of time may be allowed for unusual inclement weather under the provisions hereinafter described. Unusual inclement weather is weather which adversely affects “controlling” operations or the critical path of construction and which meets one of the following criteria:

A.        For the particular calendar month in question, the number of individual Days with rainfall exceeding 0.10 inches exceeds the average number of such Days for that month over the immediately preceding five (5) years of record by at least three (3) Days.

B.        For the particular calendar month in question, the total cumulative rainfall for that month exceeds the average cumulative rainfall for that month over the immediately preceding five (5) years of record by at least two inches (2”).

Rainfall shall be measured at a publicly operated, maintained, and reported station in reasonable proximity to the construction site. A claim for delay shall indicate the period of rainfall which is claimed as “unusual,” the specific dates during which the unusual rainfall and subsequent wet soil conditions prevented Work, and the specific critical path tasks adversely

affected by such unusual weather. A claim for delay due to unusual inclement weather shall be filed within ten (10) Days of the apparent end of the unusual inclement rainfall period, whether or not the monthly totals are available at that time. The burden of proof that weather meets the criteria for unusual weather shall be solely the responsibility of the Contractor.

It is the responsibility of the Contractor to order materials required for the Work properly and promptly on a Notice to Proceed. If evidence presented demonstrates that, in spite of the Contractor's efforts, government-established priorities controls delay material deliveries, suitable extension of time will be made.

If performance of extra Work ordered by the City or failure of the City to provide the necessary site for Installation affects construction tasks which are “controlling” or which are on the “critical path” of the Construction Schedule, suitable extensions of time will be made.

The Contractor shall not be entitled to a time extension for delays in activities on non-critical paths of the favorably reviewed schedule unless the duration of the excusable delay exceeds the total float of the activities being delayed. If the duration of an excusable delay does exceed the total float of the activities affected by the delay, the Contractor shall be entitled to an extension equal to the difference.

C. Determination that a day is a non-working day by reason of inclement weather or conditions resulting immediately therefrom, shall be made by the Director.

6-1.08        **LIQUIDATED DAMAGES.** It is agreed by the parties to the Contract that in case all the Work called for under the Contract in all parts and requirements is not completed within the number of Days as set forth in the Supplemental Conditions, damage will be sustained by the City and that it is and will be impracticable and extremely difficult to ascertain and determine the actual damage which the City will sustain in the event of and by

reason of such delay; and it is therefore agreed that the Contractor will pay to the City, the monetary amount indicated in the Supplemental Conditions in dollars (U.S.) per day for each and every calendar day of delay in completing the Work in excess of the number of Days prescribed and the number of additional calendar days, if any, authorized by Contract Change Order; and the Contractor agrees to pay said Liquidated Damages herein provided for, and further agrees that the City may deduct the amount thereof from any moneys due or that may become due the Contractor under the Contract.

It is further agreed that in case the Work is not finished and completed in all parts and requirements within the number of Days specified, the City shall have the right to increase the number of Days or not, as it may deem best to serve the interest of the City, and if it decides to increase the said number of Days, it shall further have the right to charge to the Contractor, its heirs, assigns or sureties and to deduct from the final payment for the Work all of any part, as it may deem proper, of the actual cost of engineering, inspection, superintendence, and other Overhead expenses which are directly chargeable to the Contract, and which accrue during the period of such extension, except that cost of preparation of final statement shall not be included in such charges.

6-1.09        **DELAYS AND EXTENSIONS TO THE WORK.** The Contractor must complete all Work within the time specified in the Agreement. The Contractor will be granted an extension of time and will not be assessed with liquidated damages or the cost of engineering and inspection for any delay in substantially completing the Work (or parts thereof) beyond the time set forth in the Agreement, provided that such delay was caused by unforeseeable causes beyond the control and without the fault or negligence of the Contractor. Examples of such causes include acts of public enemy, fire, floods, abnormal weather (as described below),

earthquakes, epidemics, quarantine restrictions, strikes, labor disputes and freight embargoes, fire, changes made pursuant to the provisions of “Changes in the Work” under Section 3 of these General Conditions or acts or neglect of the City not contemplated by the Contract Documents.

In all cases, any extension of time is conditioned on the following:

1. That the cause is not due to the fault or negligence of the Contractor, and the Contractor has taken reasonable precautions to prevent and minimize the effects thereof; and
2. That the Contractor notifies the Director in writing within three (3) Days from the beginning of such delay specifying the nature of the delay and the measures that have been or will be taken to prevent or minimize the delay. Failure to submit written notice within this time period shall constitute an absolute waiver of any claim for a time extension.

No extension of time will be granted for a delay caused by a shortage of materials, unless the Contractor furnishes to the City documentary proof that it has diligently made every effort to obtain such materials from all known sources within reasonable reach of the work and further proof, as acceptable to the Director, that the inability to obtain such materials when originally planned did in fact cause a delay in Final Completion of the entire Work which could not be compensated for by revising the sequence of the Contractor’s operations. Only the physical shortage of material will be considered as a cause for extension of time, and no consideration will be given to any claim that material could not be obtained at a reasonable, practical or economical cost or price, unless it is shown to the satisfaction of the City that such material could have been obtained only at exorbitant prices entirely out of line with current rates, taking into account the quantities involved and the usual practices in obtaining such quantities.

No extension of time will be granted for a delay caused by Contractor's staff turnovers, understaffing or insufficient quantity of qualified staff able to perform the necessary work.

The term "shortage of materials," as used in this section, shall apply only to materials, articles, parts or equipment which are standard items and shall not apply to materials, parts, articles or equipment which are processed, made, constructed, fabricated or manufactured to meet the specific requirements of the Contract Documents.

No extensions of time will be granted for delays that have no measureable impact on the completion of the Work (or parts thereof) under the Contract Documents. When extensions of time are granted, they will be limited to the period equivalent to the actual number of Days lost on the critical path or controlling operations of the Construction Schedule, taking into account the extent to which that delay could be decreased by reasonable mitigation measures by the Contractor. All requests for extensions of time must be supported with a critical path analysis showing the critical path and impacts to it. Contractor's failure to submit this analysis will be sufficient cause for denial of any request for a time extension.

Within a reasonable period of time after the Contractor submits the notice and information required by this section, the City will determine whether an extension of time is justified and, if so, the number of days for the extension.

Abnormal weather may be a valid basis for a time extension under the Agreement. "Abnormal Weather" occurs when the number of days of rain above 0.5 inches in a 24 hour period exceeds the average for such rainfall in a particular month as determined by the National Weather Service. The Contractor will only be entitled to, at most, a time extension for the number of days of rain exceeding the average for that month in the locale where the Work is to be performed. If delays are caused by the Contractor or those for whom the Contractor is

responsible, the Contractor will only be entitled to, at most, a time extension for the number of rain days exceeding the average for the month when the Work should have been performed.

In addition, before a time extension may be granted for abnormal weather, the Contractor must establish that the rain either significantly impacted at least sixty percent (60%) of the planned work of the controlling operations for a particular day or prohibited at least five (5) hours of work on the controlling operations planned for that day. Contractor shall employ reasonably methods to mitigate the impact of abnormal weather (i.e., dewatering, protection of site, etc.) The occurrence of rain during non-work hours or having minimal impact to work on the controlling operation shall not constitute a day of abnormal weather.

In the event that the project experiences favorable weather for a particular month (e.g., the number of actual rain days in a month less than that indicated above for allowable rain days per months), the additional float resulting from such favorable weather shall accrue to the project.

Any Contractor claim for damages or additional compensation based on delay shall be limited to only those circumstances where the Contractor has fulfilled each of the following three (3) requirements:

1. Contractor has established its entitlement to a time extension pursuant to the provisions described above regarding delay and extensions to the Work.
2. The delay was caused solely by the City's issuance of changes made pursuant to the provisions of "Changes in the Work" under Section 3 of these General Conditions or by acts or neglect of the City.
3. The delay was unreasonable under the circumstances and not within the contemplation of the parties.

It is expressly understood and agreed that delays caused by the City will be non-compensable when there are concurrent delays caused by the Contractor. Also, the Contractor shall have no entitlement to additional compensation for any delay where there have been concurrent delays caused by non-compensable delays, including, but not limited to, fire, floods, earthquakes, epidemics, quarantine restrictions, strikes, labor disputes, and freight embargoes.

Contractor's damages and/or additional compensation for delays will consist solely of the extended costs of maintaining the Contractor's Work Site presence. The Contractor will not be entitled to any extended home office overhead.

Compensation for idle time of equipment will be determined in the same manner as determinations are made for equipment used in the performance of extra work paid for on a Force Account basis with the following exceptions:

1. The time for which compensation will be paid will be the actual normal working hours during which such delay conditions exists, but in no case will exceed eight (8) hours in any one day.
2. The days for which compensation will be paid will be each calendar day of the work week (defined elsewhere in the Contract Documents) and Legal Holidays, during the existence of such delay, except that when rental of the equipment is paid for under the provisions in Section 3-1.06C, "Force Account Payment – Equipment," of these General Conditions, no payment will be made for delays in accordance with the provisions of this section.

Actual loss shall be understood to include no items of expense other than idle time of personnel, cost of extra moving of equipment, and cost of longer hauls. Compensation for idle time of equipment will be determined as provided in this section and compensation for idle time

of personnel will be determined pursuant to Section 3-1.06A, “Force Account Payment – Labor,” of these General Conditions. No markup will be added in either case for Overhead and profit. The cost of extra moving of equipment and the cost of longer hauls will be paid for as extra work as provided pursuant to “Changes to the Work” elsewhere in the Contract Documents.

6-1.10            **TERMINATION.**

6-1.10A           **TERMINATION OF AGREEMENT – CONVENIENCE OF**

**CITY.** The Department reserves the right to terminate the Contract at any time and for any reason if the Director determines that to do so would be in the best interest of the City. Any termination which is not based on the circumstances set forth in Section 6.1-10B below shall be effected by delivery to the Contractor of a Notice of Termination specifying the extent to which performance of Work under the Contract is terminated, and the date upon which such termination becomes effective.

Upon the Contractor’s receipt of a written Notice of Termination for convenience, the Contractor shall cease Work as to those portions of the project so terminated and shall undertake the steps outlined in Section 6-1.10B below.

1.        Acceptance of the Contract as hereinafter specified shall not relieve the Contractor of responsibility for damage to materials except as follows:
  - a.        The Contractor's responsibility for damage to materials for which partial payment has been made as provided in Section 7-1.07, “Progress Payments,” of these General Conditions and for materials furnished by the City for use in the Work and unused shall terminate when the Director certifies that such materials have been stored in the manner and at the locations he or she has directed.

- b. The Contractor's responsibility for damage to materials purchased by the City subsequent to the issuance of the notice that the Contract is to be terminated shall terminate when title and delivery of such materials has been taken by the City.
- c. When the Director determines that the Contractor has completed the Work under the Contract directed to be completed prior to termination and such other Work as may have been ordered to secure the project for termination, the Contractor will recommend that the City formally accept the Work, and immediately upon and after such Acceptance by the City, the Contractor will not be required to perform any further Work thereon and shall be relieved of its contractual responsibilities for injury to persons or damage to property which occurs after the formal Acceptance of the project by the City.

2. The total compensation to be paid to the Contractor shall be determined by the Director on the basis of the following:

- a. The reasonable cost to the Contractor, without profit, for all Work performed under the Contract, including mobilization, demobilization and Work done to secure the project for termination. Reasonable cost will include a reasonable allowance for project Overhead and general administrative Overhead not to exceed a total of seven percent (7%) of Direct Costs of such Work.
- b. A reasonable allowance for profit on the cost of the Work performed as determined under subsection (a), provided the Contractor establishes to the

satisfaction of the Director that it is reasonably probable that it would have made a profit had the Contract be completed and provided further, that the profit allowed shall in no event exceed four percent (4%) of said cost.

- c. The reasonable cost to the Contractor of handling material returned to the vendor, delivered to the Department or otherwise disposed of as directed by the Director.
- d. A reasonable allowance for the Contractor's administrative costs in determining the amount payable due to termination of the Contract.

All records of the Contractor and the Contractor's Subcontractors, necessary to determine compensation in accordance with this Section, shall be open to inspection or audit by representatives of the Department at all times after issuance of the notice that the Contract is to be terminated and for a period of three (3) years, and such records shall be retained for that period.

After Acceptance of the Work by the Director, the Director may make payments on the basis of interim estimates pending issuance of the Final Statement, when in his or her opinion the amount thus paid, together with all amounts previously paid or allowed, will not result in total compensation in excess of that to which the Contractor will be entitled. All payments, including payment upon the Final Statement, shall be subject to deduction for prior payments and amounts, if any, to be kept or retained under the provisions of the Contract.

In the event that the City terminates this Contract under Section 6-1.10B below and it is determined for any reason that there was not sufficient cause to do so, the City's termination automatically will convert to a termination for convenience under this section and the terms and conditions outlined in this section automatically will be applied to effectuate the Contract

termination. Thus, damages to which a Contractor may be entitled as a result of an improper default termination will be limited to the amounts provided for in this section.

The provisions of this section shall be included in all subcontracts.

6-1.10B **TERMINATION OF AGREEMENT - FOR CAUSE.** An

“Event of Default” as referred to in this section shall occur if the Contractor:

1. Fails to maintain progress of the Work in accordance with the requirements of the Contract Documents; or
2. Fails to prosecute the Work or any of its components in accordance with the Contract Documents; or
3. Persistently or repeatedly fails or refuses to supply sufficient properly skilled workers or proper material to permit the performance of the Work in accordance with the Contract Documents; or
4. Fails to make prompt payment to Subcontractors or Suppliers in accordance with the respective agreements between the Contractor and the Subcontractor and Contractor and Supplier; or
5. Fails to comply with applicable laws, ordinances or rules, regulations or orders of a public authority having jurisdiction over the Work; or
6. Abandons, assigns or sublets the Contract without approval of the City; or
7. Becomes bankrupt or is subject to appointment of a receiver on behalf of the Contractor; or
8. Otherwise is guilty of a substantial breach of a provision of the Contract Documents.

Upon the City’s reasonable belief that there has been an Event of Default by the Contractor, the City may elect to give the Contractor written notice thereof. The Contractor

thereafter shall cure the default as soon as possible and in no event after ten (10) Days from the Contractor's receipt of the City's written notice.

If the Contractor does not timely cure its default, the City may, without waiver of any of its other rights and remedies, elect to terminate the Contract, or portion thereof.

Upon the City's election to terminate the Contract, or portion thereof, the City shall have the right to complete the Work, or portion involved, by whatever means and methods it deems expedient, including the hiring of others on such terms as the City deems advisable. The City shall have the right to take possession of the Contractor's materials, plant, tools, equipment and property of any kind provided by or on behalf of the Contractor for the purpose of the Work, or a portion of them, without being responsible to the Contractor for wear and tear. The Contractor shall have no rights in such property during its use by the City. The City shall not be required to obtain the lowest prices for completing the Work or a portion of it but shall make such expenditures as, in the City's sole judgment, best accomplish such completion.

The expense of completing such Work or portion thereof, together with a reasonable charge for engineering, managerial and administrative services, as certified by the City, shall be charged to the Contractor, and the expense so charged shall be deducted by the City out of such monies as may be due or may at any time thereafter become due to the Contractor. In case such expense is more than the sum which otherwise would have been payable to the Contractor under the Agreement, then the Contractor or its surety or sureties shall promptly pay the amount of such excess so due. When the City terminates the Contract under this section, the Contractor shall not be entitled to receive any further payments until the Work is completed and there has been a final settlement of costs of completing the Work covered by such notice of default.

The City will issue to the Contractor a written notice specifying that the Contract, or

portion thereof, is terminated. Upon receipt of said written notice and, except as otherwise directed in writing by the City, the Contractor shall:

1. Stop all Work under the Contract; or if partial termination, stop Work relating to the terminated portion of the Agreement;
2. Perform Work the City deems necessary to secure the Work Site for termination including measures to leave the Work Site in a safe condition;
3. Remove equipment from the site of Work, as specified by the City;
4. Take such action as is reasonably necessary to protect materials from damage;
5. Notify all Subcontractors and Suppliers that the Contract or portion thereof is being terminated and that their contracts or orders are not to be further performed unless otherwise authorized in writing by the City;
6. Provide the City with an inventory list of all materials previously produced, purchased or ordered from Suppliers for use in the Work and not yet used in the Work, including its storage location, and such other information as the City may request;
7. Dispose of materials not used in the Work as directed by the Director. It shall be the Contractor's responsibility to provide the City (a) with good title to all materials purchased by the City hereunder, including materials for which partial payment has been made by the City and (b) with bills of sale or other documents of title for such materials;
8. Subject to the prior written approval of the City, settle all outstanding liabilities and all claims arising out of Subcontractors or orders for materials terminated hereunder.

To the extent directed by the City, the Contractor shall assign to the City all rights,

- title and interests of the Contractor under subcontracts or orders for materials terminated hereunder. The City shall be at liberty to negotiate with and engage any Subcontractors who had contracted with the Contractor for the Work;
9. Furnish the City with the documentation required to be furnished by the Contractor under the provisions of the Contract Documents, including, on projects as to which Federal funds are involved, all documentation required under the Federal requirements included in the Agreement; and
  10. Take such other actions as the City may direct.

If only a portion of the Work has been terminated, the Contractor shall perform the remainder of the Work in conformity with the Contract Documents and in such a manner as not to interfere with the City or others in their performance and completion of the portion of the Work which was terminated.

The City may recover from the Contractor the amount of any loss or damage, including consequential damages, suffered or incurred as a result of the Contractor's default.

## SECTION 7

### ACCEPTANCE AND PAYMENT

7-1.01        **ACCEPTANCE.** When the Contractor believes that the entire Work is fully and finally completed, including the satisfactory completion of inspections, tests, and documentation specified in the Contract Documents and completion of all punch list and clean-up items, the Contractor shall submit to the City a written request for final Acceptance within fifteen (15) Days thereafter, specifying that the Work is fully and finally completed and the date on which it was completed. Within thirty (30) Days after receipt of the request for final Acceptance, the City will inspect the Work and will either:

1. Reject the request for final Acceptance, specifying the defective and/or uncompleted portions of the Work; or
2. Notify the Contractor that the Work will be accepted by Resolution of the City Council of the City of Roseville, and a Notice of Completion will be caused to be recorded by the City Clerk; or
3. Notify the Contractor that the Work has been accepted by the City but no Notice of Completion will be recorded.

If the City rejects the request for final Acceptance, the Contractor shall promptly remedy the defective and/or uncompleted portions of the Work. Thereafter, the Contractor shall again submit a written request for final Acceptance of the Work, specifying a new date based on the date the defective and/or uncompleted portions of the Work were corrected. Thereafter, the foregoing procedure shall apply successively until the City has verified that the Work is fully and finally completed and accepted the Work by Resolution of the City Council or by written

notification from the Director. Immediately upon such Acceptance, the Contractor shall be relieved of the duty of maintaining the Work as a whole.

All warranties commence upon final Acceptance of the Work. The City's final Acceptance of the Work shall not be construed as an acceptance by the City of any latent defects discovered with regard to the Contractor's work. Furthermore, Contractor's obligations under Section 5-1.22 "Responsibility for Damage and Indemnification" shall still remain applicable after the City's grant of final Acceptance of the Work.

Prior to final Acceptance, the Contractor shall submit to the City the Record Documents and Operation and Maintenance Manuals as specified in the Contract Documents.

7-1.02        **SCOPE OF PAYMENT.** The Contractor shall accept the compensation provided in the Contract as full payment for furnishing all labor, materials, tools, equipment, and incidentals necessary to the completed Work and for performing all Work contemplated and embraced under the Contract; also for loss or damage arising from the nature of the Work, or from the action of the elements, or from any unforeseen difficulties which may be encountered during the prosecution of the Work until the Acceptance by the Director and for all risks of every description connected with the prosecution of the Work, also for all expenses incurred in consequence of the suspension or discontinuance of the Work as provided in the Contract; and for completing the Work according to the Contract. Neither the payment of any estimate nor of any retained percentage shall relieve the Contractor of any obligation to make good any defective Work or material.

No compensation will be made in any case for loss of anticipated profits.

7-1.03        **NOTICE OF POTENTIAL CLAIM.** The Contractor shall not be entitled to the payment of any additional compensation for any act or failure to act by the City,

including failure or refusal to issue a Change Order, or for the happening of any event, thing, occurrence or other cause unless the Contractor has given the City due written Notice of Potential Claim as hereinafter specified, provided, however, that compliance with this Section 7-1.03 shall not be a prerequisite as to matters within the scope of the notice provisions in Section 6-1.07, "Time of Completion," or the notice provisions in Section 6-1.08, "Liquidated Damages," of these General Conditions, nor to any claim which is based on differences in measurement or errors of computation as to correct quantities.

The written Notice of Potential Claim shall set forth the reasons for which the Contractor believes additional compensation will or may be due, the nature of the costs involved, and, insofar as possible, the amount of the potential claim. The said Notice as above required must have been given to the Director prior to the time that the Contractor shall have performed the Work giving rise to the potential claim for additional compensation, if based on an act or failure to act by the Director, or in all other cases within seven (7) Days after the happening of the event, thing, occurrence or other cause giving rise to the potential claim.

If the Notice of Potential Claim does not include complete information about the claim or the parties do not execute a Contract Change Order in connection with the Notice of Potential Claim, Contractor shall submit complete information about its claim for additional compensation and/or extension of time for performance within fifteen (15) Days after such work is performed. Failure to provide written notice of claim prior to undertaking such work or failure to timely submit a complete and specific information about the claim for additional compensation and/or extension of the time for performance shall be deemed a waiver and abandonment of such claim.

If there is a dispute over any claim, the Contractor shall continue to Work during the dispute resolution process in a diligent and timely manner as directed by the City, and shall be

governed by all applicable provision of the Agreement.

The Contractor shall maintain cost records of all Work that is the basis of any dispute. On a daily basis, Contractor shall submit to City completed daily forms, the format of which will be acceptable to the City, with respect to the Contractor's costs of performing the disputed work. These daily forms shall itemize all of Contractor's costs in performing the disputed work, including, but not limited to, all costs relating to materials, labor and equipment with respect to the disputed work. These daily forms shall provide names or identification and classification of affected workers, the hourly rate of pay and hours worked, and also the size, type, and identification number of equipment and hours operated. Said daily work forms shall be duly signed and verified by the Contractor or its authorized representative. The City's receipt of the Contractors' daily forms shall not constitute an approval of the Contractor's claim. Contractor's failure to submit the daily forms on a daily basis shall constitute a waiver of the Contractor's right to claim any additional compensation for the disputed work.

Each Contractor claim shall include full and complete information concerning the Claim. Contractor shall provide a clear, concise recital of the basis, upon which the claim is asserted, including a designation of the provisions of the Contract Documents upon which the claim is based. Contractor shall also include a statement as to the amount of time and/or compensation sought pursuant to the claim; if Contractor's claim arises from an ongoing occurrence, Contractor shall so state in its claim, including a description of the specific Work activities affected by the claim. All costs, expenses or damages and extensions of time claimed shall be described in reasonable detail under the circumstances together with complete supporting documentation.

The City will review any timely Notice of Potential Claim and supporting information

submitted by Contractor. In conducting this review, the City shall have the right to require the Contractor to submit such additional or supporting documents, data and other information as the City may require.

If an agreement can be reached which resolves the Contractor's claim, the parties will execute a Contract Change Order to document the resolution of the claim. If the parties cannot reach agreement with respect to the Contractor's claim, the Contractor shall still be obligated to comply with the claim identification provisions identified in these General Conditions, including but not limited to Section 7-1.04.

It is the intention of this Section 7-1.03 that differences between the parties arising under and by virtue of the Contract be brought to the attention of the Director at the earliest possible time in order that such matters may be settled, if possible, or other appropriate action promptly taken. The Contractor hereby agrees that it shall have no right to additional compensation for any Claim that may be based on any such act, failure to act, event, thing or occurrence for which no timely written Notice of Potential Claim as herein required was filed.

7-1.04        **CLAIMS.** Contractor must submit all Claims, for which it has previously submitted a Notice of Potential Claim, prior to Acceptance of the Work. Each such Claim must be sent to the City by registered mail or certified mail with return receipt requested and must contain reasonable documentation to support the Claim.

Upon receipt of a Claim, the City shall conduct a reasonable review of the Claim and, within a period not to exceed forty-five (45) Days, or such further time as mutually agreed upon or necessary pursuant to Public Contract Code Section 9204, the City shall provide the Contractor a written statement identifying what portion of the Claim is disputed and what portion is undisputed. If the City does not respond to a Claim from the Contractor within the time

specified herein, such Claim shall be deemed rejected in its entirety.

Any payment due on an undisputed portion of the Claim shall be processed and made within sixty (60) Days after the City issues its written statement.

If the Contractor disputes the City's written response, or if the City does not respond within the time specified herein, the Contractor may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the City shall schedule a meet and confer conference within thirty (30) Days for settlement of the dispute.

Within ten (10) business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the City shall provide the Contractor a written statement identifying the portion of the Claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the Claim shall be processed and made within sixty (60) Days after the City issues its written statement. Any disputed portion of the Claim, as identified by the Contractor in writing, shall be submitted to nonbinding mediation, with the City and the Contractor sharing the associated costs equally. The City and the Contractor shall mutually agree to a mediator within ten (10) business days after the disputed portion of the Claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the Claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the Claim remaining in dispute shall be resolved in accordance with Section 7-1.05 below.

7-1.05      **DISPUTE RESOLUTION PROCEDURE.** All Claims not resolved

pursuant to Section 7-1.04, shall be resolved pursuant to Public Contract Code Section 10240, et seq.

7-1.06            **STOP PAYMENT NOTICES.** The City, by and through the Department or other appropriate office or officers, may at its option and at any time retain out of any amounts due the Contractor, sums sufficient to cover claims, filed pursuant to Civil Code Section 9350, et seq., including an amount to provide for the reasonable cost of any litigation thereunder.

7-1.07            **PROGRESS PAYMENTS.** Within fifteen (15) Days after the effective date in the Notice to Proceed, but in any event prior to Contractor's first Application for Payment, the Contractor shall submit to the City a detailed Schedule of Values.

Upon its approval, the Schedule of Values will form a basis for determining the compensation payable to the Contractor based on its actual progress of Work with respect to each Lump Sum bid item. The City, prior to any progress payment being made, must approve the Schedule of Values.

At the Director's discretion the approved Schedule of Values may be used as the basis for calculating the adjustment in compensation for a lump sum bid item due to changes ordered by the Director. When an ordered change increases or decreases the quantities shown in an approved Schedule of Values, at the Director's discretion, the adjustment in compensation may be determined in the same manner specified for increases and decreases in the quantity of a bid item of work in accordance with Section 3-1.05(B), "Contract Price Adjustment," of these General Conditions.

The Contractor once in each month shall submit an Application for Payment, for approval by the Director. Contractor's Applications shall be based on the Schedule of Values submitted to the City. These applications shall be supported by: (1) documentation requested by the City to

substantiate the payment request; (2) statutory releases from Contractor and all Subcontractors and suppliers pursuant to Civil Code Sections 8132 and 8138; and (3) certified payroll records for the period for which payment is requested. Specifically, the Contractor will submit conditional waivers upon progress payment executed by all contractors and suppliers that will be receiving sums sought in the instant payment request and also submit unconditional waivers upon progress payment executed by all contractors and suppliers that have been paid to the date of the payment request. The Contractor shall certify that the Work for which payment is requested has been accomplished. When requested by the City, the Contractor shall submit receipts, invoices and other documentation that the City requires to be furnished for purpose of evaluating the application.

The City will pay the Contractor within thirty (30) Days after its receipt of an undisputed and properly submitted Application for Payment, after deducting all previous payments, retention, and other sums as described in the Contract Documents. Within seven (7) Days of its receipt of the Contractor's Application for Payment, the City will determine whether it complies with the provisions of the Contract Documents. As appropriate, the City will return the application to the Contractor accompanied by a document prepared by the City setting forth the reasons for the rejection. Thereafter, the Contractor shall correct and resubmit the Application for Payment. Progress payments may be withheld for Work that is not performed in accordance with the Contract Documents.

The City may deduct the following from each progress payment:

1. An amount equal to one hundred and twenty-five percent (125%) of the amount claimed under any stop payment notice or other lien filed against the Contractor, which includes an amount to provide for the reasonable cost of any litigation

thereunder.

2. Any Liquidated Damages or Assessments that have accrued as of the date of the Application for Payment.
3. Any sums expended by the City in performing any of the Contractor's obligations under the Agreement that the Contractor has failed to perform.
4. Any other sums that the City is entitled to recover from the Contractor under the terms of the Contract including damages to the City's property.
5. The failure of the City to deduct any of the above identified sums from a progress payment shall not constitute a waiver of the City's right to such sums.

No such estimate or payment shall be construed to be an acceptance of any defective Work or improper materials.

Under no circumstances will the City make payment to unlicensed Contractors. As a condition of payment, the Contractor is required to maintain the applicable Contractor's license as identified in the Notice to Contractors for the duration of the Work.

7-1.08        **PAYMENT FOR MATERIALS AND EQUIPMENT ON HAND.**

Partial payments may be made to the extent of seventy-five percent (75%) of the cost of materials and equipment plus delivery to be incorporated in the Work, provided that such materials and equipment meet the requirements of the Contract Documents and are delivered to acceptable sites on the plant site or at other sites in the vicinity that are acceptable to the City and only with the prior written approval by the City. Such delivered costs of stored or stockpiled materials and equipment may be included in the next progress payment after the following conditions are met:

- A.        Equipment and materials will only be eligible if given conditional or final

Acceptance by the Director and are in apparent compliance with favorably reviewed Submittals.

B. Only equipment or materials which have received favorable review of Shop Drawings will qualify.

C. The material or equipment has been stored or stockpiled adequately protected against damage in a manner acceptable to the Director at an approved site.

D. The Contractor has furnished the Director with acceptable evidence of the quantity and the quality of such stored or stockpiled materials or equipment with identification of where they will be incorporated into the project with Specification reference.

E. The Contractor has furnished the Director with satisfactory evidence that the material or equipment and transportation costs have been paid.

F. The Contractor has furnished the City legal title (free of liens or encumbrances of any kind) and lien releases to the material or equipment so stored or stockpiled.

G. The Contractor has furnished the City evidence that the material or equipment so stored or stockpiled is insured against loss by damage to or disappearance of such materials at any time prior to use in the Work.

It is understood and agreed that the transfer of title and the City payment for such stored or stockpiled materials or equipment shall in no way relieve the Contractor of its responsibility for furnishing and placing such materials or equipment in accordance with the requirements of the Contract Documents.

In no case will the amount of progress payments for materials or equipment on hand exceed the Contract Price for such materials or equipment or the Contract Price for the Contract item in which the material is intended to be used.

No partial payment will be made for stored or stockpiled living or perishable plant

materials.

The Contractor shall bear all costs associated with the progress payment of stored or stockpiled materials or equipment in accordance with the provisions of this Section.

7-1.09        **RETENTION ON PROGRESS PAYMENTS.** From each progress payment estimate, five percent (5%) will be deducted and held in retention by the City. The remainder, less any deductions described in Section 7-1.07, “Progress Payments,” of these General Conditions, will be paid to the Contractor as progress payments.

Pursuant to Public Contract Code Section 22300, the successful Bidder may submit Securities in lieu of retention payments by the City. Upon the Contractor’s request, the City will make payment of funds withheld from progress payments, pursuant to the requirements of California Public Contract Code Section 22300, if the Contractor deposits in escrow with the City or with a bank acceptable to the City, securities eligible for investment under California Government Code Section 16430, bank or savings and loan certificates of deposit, interest bearing demand deposit accounts, standby letters of credit, or any other security mutually agreed to by the Contractor and the City, upon the following conditions:

1.        The Contractor shall bear the expenses of the City and the escrow agent in connection with the escrow deposit made.
2.        Securities or certificates of deposit to be placed in escrow shall be of a value at least equivalent to the amounts of retention to be paid to the Contractor pursuant to this section.
3.        Contractor shall enter into an escrow agreement satisfactory to the City, which agreement shall be substantially similar to the form provided in California Public Contract Code section 22300.

4. The Contractor shall obtain the written consent of the surety to such agreement.

7-1.10 **FINAL PAYMENT.** Final payment will be made only after Contractor has achieved Final Completion of the Work pursuant to the provisions of Section 7-1.01, “Acceptance,” of these General Conditions. Before final payment can be made, the Contractor shall have furnished the City with the following:

1. All Record Documents, catalogues, instruction sheets and information as required by the Contract Documents.
2. Conditional Waivers and Releases Upon Final Payment executed by Contractor and all Subcontractors and Suppliers, as provided by Civil Code Section 8136. Unconditional Waivers and Releases Upon Final Payment, as provided in Civil Code Section 8138, executed by Contractor and all Subcontractors and Suppliers, must be provided for all Subcontractors and Suppliers that have been paid in full.

Within thirty (30) Days of the date of the City’s Acceptance of the Work, the Contractor shall prepare and submit a Final Invoice, showing the proposed total amount due the Contractor, segregated by Bid item quantities, Change Order Work, and other basis for payments; deductions made or to be made for prior payment; and amounts previously retained. Prior invoices and payments shall be subject to correction in the proposed Invoice for Final Payment. Payments to the Contractor will be made only for actual quantities of the Contract items of work constructed in accordance with the Contract Documents.

The City will review the Contractor’s proposed Final Invoice and necessary changes or corrections will be forwarded to the Contractor. Within ten (10) Days thereafter, the Contractor

shall submit a revised proposed Final Invoice incorporating changes or corrections made by the City together with any new claims resulting therefrom. Upon approval by the City, the corrected proposed Final Invoice will become the approval Final Invoice.

If agreements are reached on all questions regarding the Final Invoice, the City will pay the entire sum found due on the approved application. However, the City will withhold sums sufficient to pay all unsettled claims for which stop payment notices have been filed pursuant to Section 9350, et seq. of the California Civil Code, together with the reasonable cost of any litigation thereunder.

Final payment will be made within thirty (30) Days after receipt of an approved Final Invoice and other required Submittals referenced above or within sixty (60) Days after Acceptance of the work by the City, whichever is later, provided, however, that if an approved Final Invoice has not been submitted within sixty (60) Days after Acceptance of the Work by the City, the City may elect to make payment of sums not in dispute without prejudice to the right of either the City or the Contractor in connection with such disputed sums. Notwithstanding the foregoing, if a Notice of Completion is recorded, final payment shall not be made prior to the expiration of the thirty-five (35) calendar day lien period. The start of this lien period is the date the Placer County Recorder's Office records the Notice of Completion.

The City may withhold from the Final Payment an amount not to exceed one hundred fifty percent (150%) of any amount in dispute between the City and the Contractor.

The making of Final Payment shall not operate to release the Contractor or its sureties from obligations arising under the Contract, the Contract bonds and warranties as herein provided. Specifically, the making of final payment shall not constitute a waiver and release of claims by the City arising from:

1. Unsettled or future liens;
2. Failure of the Work to comply with the requirements of the Contract Documents;
3. The terms of any warranties required by or contained in the Contract Documents;
4. The right to any insurance proceeds or the right to make any insurance or bond claims;
5. Any claims with respect to Contractor's obligations of indemnity with respect to claims asserted by third parties; or
6. Any latent deficiencies with the Work or Contractor's fraud.

7-1.11        **CLERICAL ERRORS.** Notwithstanding the provisions of Section 7-1.10, "Final Payment," of these General Conditions, for a period of three (3) years after Acceptance of the Work, all estimates and payments made pursuant to said Section 7-1.10, are subject to correction for clerical errors in the calculations involved in the determination of quantities and payments. The Contractor and the City agree to pay to the other any sum due under the provisions of this Section 7-1.11, provided, however, if the total sum to be paid is less than \$100, no such payment shall be made.

7-1.12        **WARRANTY.** Notwithstanding inspections and Acceptance by the City of Work furnished under the Contract Documents, the Contractor hereby unconditionally guarantees that all materials and equipment furnished will be of good quality and new, that the Work will be free from defects in workmanship and materials and that the Work will conform to the requirements of the Contract Documents. Work not conforming to these requirements, including substitutions not properly approved and authorized, may be considered defective.

This warranty by the Contractor is in addition to any warranties or guarantees required elsewhere in the Contract Documents. This warranty shall be in effect notwithstanding any disclaimers, or limiting or conditional terms contained in such separate warranties furnished by manufacturers or suppliers.

The Contractor hereby agrees to repair or replace any and all Work, together with any other adjacent Work which may be displaced in so doing, that may prove to be not in accordance with the requirements of the Contract or that may be defective in its workmanship or material during the greater of a period of one (1) year after Acceptance of the Work by the City or the period specified in the Special Conditions, without any expense whatsoever to the City, ordinary wear and tear and unusual abuse or neglect excepted.

The Contractor further agrees, that within ten (10) Days after being notified in writing by the Department of any Work not in accordance with the requirements of the Contract Documents or of any defects in the Work, the Contractor will commence and prosecute with due diligence all Work necessary to fulfill the terms of this warranty, and to complete such Work within a reasonable period of time. In the event Contractor fails to comply, it does hereby authorize the Department to proceed to have such Work done at the Contractor's expense and the Contractor will honor and pay the cost and charges therefore upon demand. The Department shall be entitled to all costs and expenses, including reasonable attorneys' fees, necessarily incurred upon the Contractor's refusal to honor and pay the above costs and charges.

All warranties set forth in the Contract Documents shall be deemed cumulative and not alternative or exclusive. Nothing contained in this section shall be construed to establish a period of limitation with respect to any other obligation, which Contractor has under the Contract Documents or under any separate warranty or guaranty required thereby. The establishment of a

specific warranty period relates only to the specific obligation of Contractor to correct defective Work, and it has no relationship to the time within which its obligation to comply with the Contract Documents or applicable provision of law may be sought to be enforced, nor to the time within which proceedings may be commenced to establish Contractor's liability with respect to its obligations other than specifically to correct the Work. Without limiting the foregoing, it is understood and agreed that Contractor shall remain responsible for latent defects with its work, regardless of the expiration of any warranty period set forth in the Contract Documents.

7-1.13            **WARRANTY OF TITLE.** No material, supplies, or equipment for the Work under this Contract shall be purchased subject to any chattel mortgage, security agreement, or under a conditional sale or other agreement by which an interest therein or any part thereof is retained by the seller or supplier. The Contractor warrants good title to all material, supplies, and equipment Installed or incorporated in the Work and agrees upon completion of all Work to deliver the Premises, together with all improvements and appurtenances constructed or placed thereon by it, to the City free from any claim, liens, security interest, or charges, and further agrees that neither the Contractor nor any person, firm, or corporation furnishing any materials or labor for any Work covered by this Contract shall have any right to a lien upon the Premises or any improvement or appurtenances thereon. Provided, that this shall not preclude the Contractor from Installing metering devices and other equipment of utility companies, the title of which is commonly retained by the utility company. In the event of the Installation of any such metering device or equipment, the Contractor shall advise the City as to the legal owner thereof. Nothing contained in this paragraph, however, shall defeat or impair the right of such persons furnishing materials or labor under any bond given by the Contractor for their protection or any rights under any law permitting such persons to look to funds due the Contractor in the hands of the City.

The provisions of this paragraph shall be inserted in all subcontracts and material Contracts, and notice of its provisions shall be given to all persons furnishing materials for the Work when no formal Contract is entered into for such materials.

[END OF GENERAL CONDITIONS]

**TEXT OF AB 626**

**Assembly Bill No. 626**

***CHAPTER 810***

***An act to add and repeal Section 9204 of the Public Contract Code, relating to public contracts.***

[Approved by Governor September 29, 2016. Filed with Secretary of  
State September 29, 2016.]

***LEGISLATIVE COUNSEL'S DIGEST***

AB 626, Chiu. Public contracts: claim resolution.

Existing law prescribes various requirements regarding the formation, content, and enforcement of state and local public contracts. Existing law applicable to state public contracts generally requires that the resolution of claims related to those contracts be subject to arbitration. Existing law applicable to local agency contracts prescribes a process for the resolution of claims related to those contracts of \$375,000 or less.

This bill would establish, for contracts entered into on or after January 1, 2017, a claim resolution process applicable to any claim by a contractor in connection with a public works project. The bill would define a claim as a separate demand by the contractor for one or more of the following: a time extension for relief from damages or penalties for delay, payment of money or damages arising from work done pursuant to the contract for a public work, or payment of an amount disputed by the public entity, as specified.

This bill would require a public entity, defined to exclude certain state entities, upon receipt

of a claim sent by registered or certified mail, to review it and, within 45 days, provide a written statement identifying the disputed and undisputed portions of the claim. The bill would authorize the 45-day period to be extended by mutual agreement. The bill would require any payment due on an undisputed portion of the claim to be processed within 60 days, as specified. The bill would require that the claim be deemed rejected in its entirety if the public entity fails to issue the written statement.

This bill would authorize, if the claimant disputes the public entity's written response or if the public entity fails to respond to a claim within the time prescribed, the claimant to demand to meet and confer for settlement of the issues in dispute. The bill would require any disputed portion of the claim that remains in dispute after the meet and confer conference to be subject to nonbinding mediation, as specified. The bill would provide that unpaid claim amounts accrue interest at 7% per annum. The bill would prescribe a procedure by which a subcontractor or lower tier contractor may make a claim through the contractor.

This bill would require the text of these provisions, or a summary, to be set forth in the plans or specifications for any public work which may give rise to a claim. The bill would specify that a waiver of these rights is void and contrary to public policy, except as specified. The bill would also specify that it does not impose liability on a public entity that makes loans or grants available through a competitive application process, for the failure of an awardee to meet its contractual obligations.

By increasing the duties of local agencies and officials, this bill would impose a state-mandated local program.

This bill would, on January 1, 2020, repeal the provision establishing the claim resolution

process.

This bill would specify that these provisions constitute a matter of statewide concern.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that, if the Commission on State Mandates determines that the bill contains costs mandated by the state, reimbursement for those costs shall be made pursuant to these statutory provisions.

The people of the State of California do enact as follows:

**SECTION 1.** Section 9204 is added to the Public Contract Code, to read:

**9204. (a) The Legislature finds and declares that it is in the best interests of the state and its citizens to ensure that all construction business performed on a public works project in the state that is complete and not in dispute is paid in full and in a timely manner.**

(b) Notwithstanding any other law, including, but not limited to, Article 7.1 (commencing with Section 10240) of Chapter 1 of Part 2, Chapter 10 (commencing with Section 19100) of Part 2, and Article 1.5 (commencing with Section 20104) of Chapter 1 of Part 3, this section shall apply to any claim by a contractor in connection with a public works project.

(c) For purposes of this section:

(1) "Claim" means a separate demand by a contractor sent by registered mail or certified mail with return receipt requested, for one or more of the following:

(A) A time extension, including, without limitation, for relief from damages or penalties for

delay assessed by a public entity under a contract for a public works project.

(B) Payment by the public entity of money or damages arising from work done by, or on behalf of, the contractor pursuant to the contract for a public works project and payment for which is not otherwise expressly provided or to which the claimant is not otherwise entitled.

(C) Payment of an amount that is disputed by the public entity.

(2) "Contractor" means any type of contractor within the meaning of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code who has entered into a direct contract with a public entity for a public works project.

(3) (A) "Public entity" means, without limitation, except as provided in subparagraph (B), a state agency, department, office, division, bureau, board, or commission, the California State University, the University of California, a city, including a charter city, county, including a charter county, city and county, including a charter city and county, district, special district, public authority, political subdivision, public corporation, or nonprofit transit corporation wholly owned by a public agency and formed to carry out the purposes of the public agency.

(B) "Public entity" shall not include the following:

(i) The Department of Water Resources as to any project under the jurisdiction of that department.

(ii) The Department of Transportation as to any project under the jurisdiction of that department.

(iii) The Department of Parks and Recreation as to any project under the jurisdiction of that department.

(iv) The Department of Corrections and Rehabilitation with respect to any project under its jurisdiction pursuant to Chapter 11 (commencing with Section 7000) of Title 7 of Part 3 of the

Penal Code.

(v) The Military Department as to any project under the jurisdiction of that department.

(vi) The Department of General Services as to all other projects.

(vii) The High-Speed Rail Authority.

(4) "Public works project" means the erection, construction, alteration, repair, or improvement of any public structure, building, road, or other public improvement of any kind.

(5) "Subcontractor" means any type of contractor within the meaning of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code who either is in direct contract with a contractor or is a lower tier subcontractor.

(d) (1) (A) Upon receipt of a claim pursuant to this section, the public entity to which the claim applies shall conduct a reasonable review of the claim and, within a period not to exceed 45 days, shall provide the claimant a written statement identifying what portion of the claim is disputed and what portion is undisputed. Upon receipt of a claim, a public entity and a contractor may, by mutual agreement, extend the time period provided in this subdivision.

(B) The claimant shall furnish reasonable documentation to support the claim.

(C) If the public entity needs approval from its governing body to provide the claimant a written statement identifying the disputed portion and the undisputed portion of the claim, and the governing body does not meet within the 45 days or within the mutually agreed to extension of time following receipt of a claim sent by registered mail or certified mail, return receipt requested, the public entity shall have up to three days following the next duly publicly noticed meeting of the governing body after the 45-day period, or extension, expires to provide the claimant a written statement identifying the disputed portion and the undisputed portion.

(D) Any payment due on an undisputed portion of the claim shall be processed and made

within 60 days after the public entity issues its written statement. If the public entity fails to issue a written statement, paragraph (3) shall apply.

(2) (A) If the claimant disputes the public entity's written response, or if the public entity fails to respond to a claim issued pursuant to this section within the time prescribed, the claimant may demand in writing an informal conference to meet and confer for settlement of the issues in dispute. Upon receipt of a demand in writing sent by registered mail or certified mail, return receipt requested, the public entity shall schedule a meet and confer conference within 30 days for settlement of the dispute.

(B) Within 10 business days following the conclusion of the meet and confer conference, if the claim or any portion of the claim remains in dispute, the public entity shall provide the claimant a written statement identifying the portion of the claim that remains in dispute and the portion that is undisputed. Any payment due on an undisputed portion of the claim shall be processed and made within 60 days after the public entity issues its written statement. Any disputed portion of the claim, as identified by the contractor in writing, shall be submitted to nonbinding mediation, with the public entity and the claimant sharing the associated costs equally. The public entity and claimant shall mutually agree to a mediator within 10 business days after the disputed portion of the claim has been identified in writing. If the parties cannot agree upon a mediator, each party shall select a mediator and those mediators shall select a qualified neutral third party to mediate with regard to the disputed portion of the claim. Each party shall bear the fees and costs charged by its respective mediator in connection with the selection of the neutral mediator. If mediation is unsuccessful, the parts of the claim remaining in dispute shall be subject to applicable procedures outside this section.

(C) For purposes of this section, mediation includes any nonbinding process, including, but

not limited to, neutral evaluation or a dispute review board, in which an independent third party or board assists the parties in dispute resolution through negotiation or by issuance of an evaluation. Any mediation utilized shall conform to the timeframes in this section.

(D) Unless otherwise agreed to by the public entity and the contractor in writing, the mediation conducted pursuant to this section shall excuse any further obligation under Section 20104.4 to mediate after litigation has been commenced.

(E) This section does not preclude a public entity from requiring arbitration of disputes under private arbitration or the Public Works Contract Arbitration Program, if mediation under this section does not resolve the parties' dispute.

(3) Failure by the public entity to respond to a claim from a contractor within the time periods described in this subdivision or to otherwise meet the time requirements of this section shall result in the claim being deemed rejected in its entirety. A claim that is denied by reason of the public entity's failure to have responded to a claim, or its failure to otherwise meet the time requirements of this section, shall not constitute an adverse finding with regard to the merits of the claim or the responsibility or qualifications of the claimant.

(4) Amounts not paid in a timely manner as required by this section shall bear interest at 7 percent per annum.

(5) If a subcontractor or a lower tier subcontractor lacks legal standing to assert a claim against a public entity because privity of contract does not exist, the contractor may present to the public entity a claim on behalf of a subcontractor or lower tier subcontractor. A subcontractor may request in writing, either on his or her own behalf or on behalf of a lower tier subcontractor, that the contractor present a claim for work which was performed by the subcontractor or by a lower tier subcontractor on behalf of the subcontractor. The subcontractor requesting that the

claim be presented to the public entity shall furnish reasonable documentation to support the claim. Within 45 days of receipt of this written request, the contractor shall notify the subcontractor in writing as to whether the contractor presented the claim to the public entity and, if the original contractor did not present the claim, provide the subcontractor with a statement of the reasons for not having done so.

(e) The text of this section or a summary of it shall be set forth in the plans or specifications for any public works project that may give rise to a claim under this section.

(f) A waiver of the rights granted by this section is void and contrary to public policy, provided, however, that (1) upon receipt of a claim, the parties may mutually agree to waive, in writing, mediation and proceed directly to the commencement of a civil action or binding arbitration, as applicable; and (2) a public entity may prescribe reasonable change order, claim, and dispute resolution procedures and requirements in addition to the provisions of this section, so long as the contractual provisions do not conflict with or otherwise impair the timeframes and procedures set forth in this section.

(g) This section applies to contracts entered into on or after January 1, 2017.

(h) Nothing in this section shall impose liability upon a public entity that makes loans or grants available through a competitive application process, for the failure of an awardee to meet its contractual obligations.

(i) This section shall remain in effect only until January 1, 2020, and as of that date is repealed, unless a later enacted statute, that is enacted before January 1, 2020, deletes or extends that date.

## **SECTION 2.**

The Legislature finds and declares that it is of statewide concern to require a charter city, charter county, or charter city and county to follow a prescribed claims resolution process to ensure there are uniform and equitable procurement practices.

### **SECTION 3.**

If the Commission on State Mandates determines that this act contains costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code.

## **SUPPLEMENTAL CONDITIONS**

2. Numbering in these Supplemental Conditions conforms to that in the General Conditions. The existence of a section in these Supplemental Conditions means that the corresponding section in the General Conditions is modified in some respect. Unless otherwise specified, the modified General Condition is deleted entirely and the provisions of these Supplemental Conditions are substituted.

## SECTION 1. DEFINITIONS AND TERMS

1-1.24        **DEPARTMENT.** Section 1-1.24 of the General Conditions is amended to include the following:

The Department for Contract Administration is the Environmental Utilities Department of the City of Roseville.

1-1.28        **ENGINEER OR ARCHITECT.** Section 1-1.28 of the General Conditions is amended to include the following:

ENGINEER's Consultant(s): The person, firm(s) or corporation(s) named as such below:

1-1.28.a. Bajada Geosciences, Inc.; 1300 Market Street, Suite 201, Redding, CA 96001.

1-1.28.b. Control Point Engineering, Inc.; 3941 Park Drive, Unit 20, El Dorado Hills, CA 95762.

**SECTION 1. DEFINITIONS AND TERMS** is amended to include the following:

**OWNER.** Owner is defined as the individual or entity with whom Contractor has entered into the Agreement and for whom the Work is to be performed (City).

**SUBSTANTIAL COMPLETION.** Substantial Completion is defined as (i) that degree of completion of the Project's operating facilities or systems sufficient to provide OWNER the full time, uninterrupted, and continuous beneficial operation of the Work; and (ii) all required functional, performance and acceptance or startup testing has been successfully demonstrated for all components, devices, equipment, and instrumentation and control to the satisfaction of ENGINEER in accordance with the requirements of the Specifications.

## **SECTION 2. CONTROL AND SCOPE OF THE WORK**

### **2-1.05        COORDINATION AND INTERPRETATION OF CONTRACT**

**DOCUMENTS.** Section 2-1.05 of the General Conditions is amended to include the following:

Figure dimensions on Drawings will take precedence over scale dimensions.

Detailed Drawings will take precedence over general Drawings.

**2-1.08        SUBMITTALS.** Section 2-1.08 of the General Conditions is amended to include the following:

The time allowed for review of each submittal is (10) ten Days after receipt of the submittal by the Director.

### **SECTION 3. CHANGES IN THE WORK**

There are no amendments to the General Conditions.

## **SECTION 4. CONTROL OF MATERIALS**

There are no amendments to the General Conditions.

## SECTION 5. LEGAL RELATIONS AND RESPONSIBILITY

5-1.14        **AIR POLLUTION CONTROL AND ASBESTOS.** Section 5-1.14 of the General Conditions is amended to include the following:

To the best of the City's knowledge, asbestos is present in the vicinity of the Project.

Per As-Built, there is a parallel 12 inch asbestos cement pipe (ACP) water main located north of East Roseville Parkway. The ACP water main is offset approximately 50 feet to the west of a 10 inch sewer main which will be improved on this project. We do not anticipate this project will affect the aforementioned ACP water main, but are providing the information for the Contractor's convenience.

Additional information shall be made available to Contractor upon request.

## SECTION 6. PROSECUTION AND PROGRESS

6-1.04        **PROGRESS SCHEDULE.** Section 6-1.04F of the General Conditions is amended to include the following:

Progress schedules showing project completion dates more than 30 Days earlier than specified in Section 6-1.07 shall be rejected.

6-1.07        **TIME OF COMPLETION.** Section 6-1.07 of the General Conditions is amended to include the following:

The Contractor shall begin Work within 21 business days after receiving a Notice to Proceed and shall diligently prosecute the Work to completion. The Work shall be completed within 300 business days of the Notice to Proceed. Construction activities must be limited to between April 15<sup>th</sup> and October 15<sup>th</sup> to avoid the rainy season. Work that cannot be completed prior to October 15<sup>th</sup>, 2024, due to supply issues outside of the Contractor's reasonable control, must be negotiated with the City and the City, in its sole discretion, may extend the timelines.

If landscaping plants require an establishment period, that period will be 60 calendar days. Start of the establishment should be as outlined in the Specifications.

6-1.08        **LIQUIDATED DAMAGES.** Section 6-1.08 of the General Conditions is amended to include the following:

The amount of Liquidated Damages is the sum of \$1,500.00 per Day.

## **SECTION 7: ACCEPTANCE AND PAYMENT**

Section 7-1.02 of the General Conditions is amended to include the following:

Unless special payment is specifically provided in the Measurement and Payment Section, all incidental work and expense in connection with the Completion of Work Under the Contract will be considered a subsidiary obligation of the Contractor and all such costs shall be included in the appropriate items in the Schedule of Bid Items in connection with which costs are incurred.

[END OF SUPPLEMENTAL CONDITIONS]

## **SPECIAL PROVISIONS**

### **Table of Contents for Special Provisions**

|                                                   |                |
|---------------------------------------------------|----------------|
| Section 1: Governor’s Executive Order N-6-22 (EO) | <u>SP</u><br>1 |
|---------------------------------------------------|----------------|

## SECTION 1. GOVERNOR NEWSOM EXECUTIVE ORDER N-6-22 (EO)

April, 2022

**RE: Contractor and Grantee Compliance with Economic Sanctions Imposed in Response to Russia's Actions in Ukraine**

Dear Vendor:

On March 4, 2022, Governor Gavin Newsom issued Executive Order N-6-22 (EO) regarding sanctions in response to Russian aggression in Ukraine. The EO is located at <https://www.gov.ca.gov/wp-content/uploads/2022/03/3.4.22-Russia-Ukraine-Executive-Order.pdf>.

The EO directs all agencies and departments that are subject to the Governor's authority to take certain immediate steps, including notifying all contractors and grantees of their obligations to comply with existing economic sanctions imposed by the U.S. government in response to Russia's actions in Ukraine, as well as any sanctions imposed under state law.

This correspondence serves as a notice under the EO that as a contractor or grantee, compliance with the economic sanctions imposed in response to Russia's actions in Ukraine is required, including with respect to, but not limited to, the federal executive orders identified in the EO and the sanctions identified on the U.S. Department of the Treasury website (<https://home.treasury.gov/policy-issues/financial-sanctions/sanctions-programs-and-country-information/ukraine-russia-related-sanctions>). Failure to comply may result in the termination of contracts or grants, as applicable.

Please note that for any agreements or grants valued at \$5 million or more you must report to the City of Roseville your compliance with economic sanctions including steps you have taken in response to Russia's actions in Ukraine, including, but not limited to, desisting from making new investments in, or engaging in financial transactions with, Russian entities, not transferring technology to Russia or Russian entities, and directly providing support to the government and people of Ukraine.

Sincerely,

DocuSigned by:

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **SECTION 01 11 03**

### **SUMMARY OF WORK**

#### **PART 1 - GENERAL**

##### **1.1 LOCATION AND DESCRIPTION OF WORK**

- A. The Work is located along Sierra College Boulevard and Rockwood Court and Eureka Road and just past Old Auburn Road in Roseville, California 95661. The Work covers the replacement of existing 8" and 10" PVC gravity sewer pipes via pipe bursting and open cut methods as well as improvements to Pump Station #26 located at 9705 Sierra College Blvd., Roseville, CA 95661.
1. Work Zone 1:
    - a. Open cut replacement of approximately 21 LF of 10" DIP gravity sewer line with 12" VCP
    - b. Pipe bursting of approximately 172 LF of existing 10" DIP gravity sewer line with 12" HDPE pipe
    - c. Construction of a weir manhole
  2. Work Zone 2
    - a. Pipe bursting of approximately 538 LF of existing 8" DIP gravity sewer line with 10" HDPE pipe to be done in segments delineated by manholes A08-010 and B08-196.
  3. Work Zone 3
    - a. Open Cut replacement of approximately 236 LF of existing 8" DIP gravity sewer line with 10" VCP to be done manhole B08-196 to manhole B08-113.
  4. Work Zone 4
    - a. Pipe bursting of approximately 1204 LF of existing 10" VCP gravity sewer line with 12" HDPE pipe to be done in segments delineated by manholes B08-105, B08-083, and B08-077.
  5. Work Zone 5
    - a. Pipe bursting of approximately 415 LF of existing 10" VCP gravity sewer line with 12" HDPE pipe to be done in segments delineated by manholes B08-077 and B08-062.
  6. Pump Station #26:
    - a. Open cut replacement of approximately 36 LF of 10" DIP gravity sewer line with 12" VCP
    - b. Removal and Replacement of existing pumps and discharge piping.
    - c. Electrical:
      - 1) All Electrical Contractor work, including coordination with electric utility and installation of electric service to site including conduit and wiring.
      - 2) Installation of all conduit, wire, supports, pullboxes, etc. to support the new system.
    - d. The Electrical Contractor shall furnish and install all of the systems shown in the Contract Documents, including but not limited to the following:
      - 1) Standby Generator with concrete pad.
      - 2) New Meter/Main Switchboard (MSB) with Main Disconnect and concrete pad.
      - 3) New Motor Control Center (MCC) with concrete pad, Automatic Transfer Switch (ATS), Lighting Panel, Transformer, and Reduced Voltage Soft Starter (RVSS) pump controls with motor overtemperature and seal leakage

---

01 11 03-1  
Summary of Work

Pump Station No. 26 Improvements

- detection, forward/reversing contactors, and automatic de-ragging functionality.
- 4) New PLC Control Panel with air conditioner.
- 5) Associated conduit, wire, fiber optic cabling, pullboxes, supports, field terminal enclosures, and site lighting to support the new system.
- 6) Wetwell level transducer, three (3) level floats, and associated isolation barriers.
- e. Instrumentation and Controls:
  - 1) PLC programming, local Operator Interface Terminal programming, and SCADA application programming shall be performed by OTHERS and is excluded from Contractor's Scope of Supply. The Contractor shall coordinate equipment testing as required by the Contract Documents and with the City's Applications Programmer to complete Start-up and Testing requirements.
- 7. Project Management and Administration:
  - a. Preparing and providing submittals.
  - b. Maintaining project schedule.
  - c. Maintaining As-Built Contract Drawings on a continuous basis.
  - d. Preparing Requests for Information.
  - e. Startup, testing, training and project closeout tasks to provide a complete and functional system.
- B. The Project features sole-source pre-purchase by the OWNER of some of the major equipment. The CONTRACTOR shall be responsible for the acceptance, handling, installation and startup of this and all other equipment for the Project.
- C. The Project has a Base Bid Schedule and an Additive Bid Schedule:
  - 1. The Base Bid includes the improvements described at Pump Station #26
  - 2. The Additive Bid includes the work described in Work Zones 1-5

## 1.2 PROJECT DOCUMENTS

- A. The Work is described in the following project documents:
  - 1. Volume 1 – City of Roseville Buildings & Grounds Project Manual
  - 2. Volume 2 – Technical Specifications
  - 3. Volume 3 – Drawings
- B. Refer to the Contract Documents for the following supplemental information referenced from the Drawings and Specifications:
  - 1. Geotechnical Report

## 1.3 COORDINATION

- A. The CONTRACTOR shall be solely responsible for coordination of all of the Work of this Contract.
- B. The CONTRACTOR shall supervise, direct and cooperate fully with all Subcontractors, manufacturers, fabricators, suppliers, distributors, installers, testing agencies and all others whose services, materials or equipment are required to ensure completion of the Work within the Contract Time.

---

01 11 03-2  
Summary of Work

Pump Station No. 26 Improvements

C. Work of Others:

1. The CONTRACTOR shall cooperate with and coordinate CONTRACTOR's Work with the work of any other contractor, utility service companies, or CITY's representatives performing work at the site.
2. The CONTRACTOR shall also coordinate their Work with the work of others to assure compliance with schedules.
3. The CONTRACTOR shall attend and participate in all project coordination or progress meetings and report on the progress of all Work and compliance with schedules.
4. If any part of the work depends upon the work of others for proper execution or results, the CONTRACTOR shall inspect and promptly report to the ENGINEER any apparent discrepancies or defects in such work of others that render it unsuitable for such proper execution and results.
5. Failure of the CONTRACTOR to so inspect and report shall constitute an acceptance of the work of others as fit and proper except as to defects which may develop in the work of others after execution of the work by the CONTRACTOR.

D. Interference with work on utilities:

1. The CONTRACTOR shall cooperate fully with all utility forces of the CITY or forces of other public or private agencies engaged in the relocation, altering, repair, or otherwise rearranging of any facilities which interfere with the progress of the work.
2. The CONTRACTOR shall schedule the work so as to minimize interference with said relocation, altering, repair, or other rearranging of facilities.

E. Responsibility for Damage:

1. The CONTRACTOR shall not be responsible for damage done by CONTRACTORS not under their jurisdiction.
2. The CONTRACTOR will not be liable for any such loss or damage, unless it is through the negligence of the CONTRACTOR.

#### 1.4 WORK BY OTHERS

A. The CITY will perform the following work:

1. Operation of all existing system valves and equipment, unless specified otherwise.
2. PLC and SCADA programming.
3. Installation of bells at existing manholes and structures.
4. Roseville Electric to install transformer at PS-26 prior to project commencement.

B. PG&E

1. PG&E to hold PG&E pole in front of PS-26 during pipe bursting operations.
2. PG&E to relocate gas line at Sierra College and East Roseville Parkway prior to project commencement.

#### 1.5 SITE CONDITIONS

A. Site Investigation and Representation

1. The CONTRACTOR acknowledges that it has satisfied itself as to the nature and location of the work, the general and local conditions, particularly those bearing upon availability of transportation, disposal, handling and storage of materials, availability of labor, water, electric power, roads, and uncertainties of weather, or similar physical conditions at the site, the conformation and conditions of the ground, the character of equipment and facilities needed preliminary to and during the

---

01 11 03-3  
Summary of Work

Pump Station No. 26 Improvements

prosecution of the work and all other matters which can in any way affect the work or the cost thereof under this Contract.

2. The CONTRACTOR further acknowledges that it has satisfied itself as to the character, quality, and quantity of surface and subsurface materials to be encountered from inspecting the site and from evaluating information derived from exploratory work that may have been done by the CITY or included in these Contract Documents. Any failure by the CONTRACTOR to become acquainted with all the available information will not relieve the CONTRACTOR from responsibility for properly estimating the difficulty or cost of successfully performing the work or for properly installing the Work.
3. Field Verification:
  - a. Before undertaking each part of the work, the CONTRACTOR shall carefully study and compare the Contract Documents and check and verify pertinent figures shown thereon and all applicable field measurements.
  - b. As the work proceeds, the CONTRACTOR shall field verify the depth and location of all buried utilities, and existing systems, and location of hazardous waste and contaminants.
  - c. The CONTRACTOR shall promptly report in writing to the ENGINEER any conflict, error, or discrepancy which the CONTRACTOR may discover and shall obtain a written interpretation or clarification from the ENGINEER before proceeding with any work affected thereby.

B. Existing Utilities and Improvements

1. Location of Underground Utilities:
  - a. Known existing underground conduits, pipelines and other utilities have been shown on the contract drawings in their approximate locations (within 3 feet of actual location). However, the accuracy or completeness of utilities indicated on the drawings is not guaranteed.
  - b. It shall be the responsibility of the CONTRACTOR to determine the exact location of all utilities and their service connections.
  - c. All potholing or other procedures for verifying utility location shall be performed by the CONTRACTOR as necessary to prepare for excavation at least 4 working days in advance of scheduled excavation.
  - d. The CONTRACTOR shall immediately notify the ENGINEER as to any utility located by him which has been incorrectly shown or omitted from the Drawings.
  - e. If the CONTRACTOR cannot locate an underground utility whose presence is indicated on the Drawings, the ENGINEER shall be notified in writing.
  - f. The CONTRACTOR shall ascertain the exact locations of underground utilities whose presence is indicated on the Drawings. The locations of their service laterals work and of service laterals or appurtenances of any other underground utilities which can be inferred from the presence of visible facilities such as buildings, meters and junction boxes shall be obtained prior to doing work that may damage such utilities or interfere with their service.
- g. Utilities Not Shown on Drawings:
  - 1) Attention is directed to the possible existence of underground utilities not indicated on the Drawings and to the possibility that underground utilities may be in a location different from that indicated on the Drawings.
  - 2) If the ENGINEER determines that the underground utility for which such notice has been given has not been depicted on the Drawings with reasonable accuracy (within 3 feet of actual location), the additional cost incurred in

---

01 11 03-4  
Summary of Work

Pump Station No. 26 Improvements

- locating the utility will be paid for as extra work as provided in the Agreement.
- 3) If the CONTRACTOR discovers a buried utility not indicated on the Drawings, the CONTRACTOR shall immediately give the ENGINEER and the Utility Company written notification of the existence of such utility.
  - 4) Such utilities shall be located and protected from damages as directed by the ENGINEER and the cost of such work will be paid for as extra work as provided in the Agreement.
2. Utility Coordination:
- a. The CONTRACTOR shall notify Underground Service Alert (USA) at least 4 days prior to excavation, telephone (800) 642-2444.
  - b. The CONTRACTOR shall also contact all utility owners not registered with USA but known to have utilities in the project area to field locate underground utilities at least 4 days prior to excavation.
  - c. The CONTRACTOR shall notify all owners of utilities when the Work is in progress and shall make arrangements as are necessary to coordinate outages or make any emergency repairs.
  - d. Existing utilities that are shown or that are made known and located to the CONTRACTOR prior to excavation, and that are to be retained; and all utilities that are constructed during excavation operations shall be properly supported and protected from damage during the progress of the work.
3. Utility Protection and Damage:
- a. Existing utilities that are shown or that are made known and located to the CONTRACTOR prior to excavation, and that are to be retained, and all utilities that are constructed during excavation operations shall be properly supported and protected from damage during the progress of the work.
  - b. Should any damage to a utility occur during the progress of the work, the CONTRACTOR shall notify the CITY or the utility owner at once and render all assistance possible to repair the damage and restore the service.
  - c. No extra compensation will be made for the repair of any services or utility damaged by the CONTRACTOR nor for any damage incurred through neglect or failure to provide adequate protection to existing utilities.
  - d. The provisions of this Section shall not be abated even in the event such damage occurs after backfilling or is not discovered until after completion of the backfilling.
  - e. Damage Report:
    - 1) If the CONTRACTOR damages any underground utilities not shown on the Drawings or not depicted on the Drawings with reasonable accuracy (within 3 feet of actual location) or any lateral service the location of which could not be inferred by the CONTRACTOR, a written report thereof shall be made immediately to the ENGINEER by CONTRACTOR.
    - 2) The CONTRACTOR's report shall also advise the ENGINEER of any schedule delays as a result of utility damages. Compensation for such delays will be determined in accordance with the Agreement. The CONTRACTOR shall be entitled to no other compensation for any such damage.
4. All utilities encountered along the line of the work shall remain continuously in service during all work under the Contract, unless otherwise shown on the drawings, or unless other arrangements satisfactory to the ENGINEER are made with the owner of said utilities.

C. CONTRACTOR's Responsibility for Utility Facilities and Service

---

01 11 03-5  
Summary of Work

Pump Station No. 26 Improvements

1. Where the CONTRACTOR's operations could cause damage or inconvenience to railway, telephone, television, power, oil, gas, water, sewer, or irrigation systems, the CONTRACTOR shall make all arrangements necessary for the protection of these utilities and services.
2. The CONTRACTOR shall be solely and directly responsible to the owner and operators of such properties for any damage, injury, expense, loss, inconvenience, delay, suits, actions, or claims of any character brought because of any injuries or damage which may result from the construction operations under this Contract.
3. Neither the CITY nor its officers or agents shall be responsible to the CONTRACTOR for damages because of the CONTRACTOR's failure to protect utilities encountered in the Work.
4. In no event shall interruption of any utility service be allowed outside working hours unless granted by the owner of the utility.
5. No sand, mud, rocks or other construction debris shall be disposed of in the sanitary sewers or storm sewers.
6. Any discharge of construction water to the sewer or storm drain systems requires a City of Roseville discharge permit a minimum of 7 calendar days prior to planned discharge, as approved by ENGINEER.
7. Where bypassing of sewage is required to perform sewer repairs or service relocations and where temporary pumps are required to bypass any sewage across traffic lanes, the discharge lines crossing the traffic lanes shall be buried a minimum of 4 inches below the pavement surface and backfilled with temporary asphalt concrete surfacing. The CONTRACTOR shall take all necessary steps to assure continuous flow of sewage. Bypassing of untreated wastewater to surface waters or courses will not be permitted.
8. The CONTRACTOR shall replace, at its own expense, any and all existing utilities or structures removed or damaged during construction, to their existing condition unless otherwise provided for in these Contract Documents.
9. The CONTRACTOR shall repair or replace, at its own expense, all pavement damaged during the construction, to its existing condition unless otherwise provided for in these Contract Documents.

D. Names of Known Utilities Serving the Area

1. The following is a list of the known public utilities serving the area:
  - a. City of Roseville:
    - 1) Water – (916) 774-5750
    - 2) Storm Water – (916) 774-5790
    - 3) Recycled Water – (916) 774-5750
    - 4) Sewer – (916) 774-5750
    - 5) Electric – (916) 797-6937
    - 6) Traffic Signals – (916) 746-1760
  - b. Pacific Gas and Electric (PG&E):
    - 1) Gas – (530) 320-2908
    - 2) Electric – (530) 320-2908

E. Interfering Structures

1. The CONTRACTOR shall take necessary precautions to prevent damage to existing structures whether on the surface, aboveground, or underground. An attempt has been made to show major structures on the Drawings. While the information has been compiled from the best available sources, its completeness and accuracy cannot be guaranteed, and it is presented as a guide to avoid possible difficulties.

---

01 11 03-6  
Summary of Work

Pump Station No. 26 Improvements

2. The CONTRACTOR shall protect all existing structures, trees, shrubs, and other items on the project site that are to be preserved, by substantial barricades or other devices commensurate with the hazard, from injury or destruction by vehicles, equipment, workmen, or other agents.
  3. Where existing fences, gates, buildings, or any other structure must be removed to properly carry out the work, or are damaged during the work, they shall be restored at the CONTRACTOR's expense to their original condition or better.
  4. Without additional compensation, the CONTRACTOR may remove and replace in a condition as good as or better than original, any small structures such as fences, and signposts that interfere with the CONTRACTOR's operations.
- F. Field Relocation
1. During the progress of construction, it is expected that minor relocations of the work will be necessary.
  2. Such relocations shall be made only by direction of the ENGINEER.
  3. If existing structures are encountered that will prevent construction as shown, notify the ENGINEER before continuing with the work in order that the ENGINEER may make such field revisions as necessary to avoid conflict with the existing structures.
  4. Any CONTRACTOR request(s) for additional compensation or contract time resulting from necessary field relocations will be considered as set forth in the Agreement.
  5. If the CONTRACTOR fails to notify the ENGINEER when a structure which interferes with construction is encountered, and proceeds with the work despite this obstruction, the CONTRACTOR shall do so at their own risk and at no additional cost to the CITY.
- G. Traffic Control shall be per City of Roseville Design Standards. All traffic control plans (including signage) shall be per the current CAMUTCD (California Manual on Uniform Traffic Control Devices).

#### 1.6 REFERENCE POINTS AND SURVEYS

- A. Locations and elevations of benchmarks are shown on Drawings.
- B. Dimensions for lines and elevations for grades of structures, appurtenances, and utilities are indicated on Drawings, together with other pertinent information required for laying out Work. If conditions vary from those indicated, notify CITY immediately, who will make or approve minor adjustments, as required.
- C. CITY may perform checks to verify accuracy of CONTRACTOR's layout Work and that completed Work complies with Contract Documents.
- D. Any existing survey points or other control markers destroyed without proper authorization will be replaced by owner of the survey points or control markers at CONTRACTOR's expense.
- E. CONTRACTOR's Responsibilities:
1. Provide all survey and layout required.
  2. Locate and protect reference points prior to starting site preparation.
  3. Notify CITY at least 3 working days in advance when grade and line surveying will be performed by CONTRACTOR.
  4. Check and establish exact location of existing facilities prior to construction of new facilities and any connections thereto.

---

01 11 03-7  
Summary of Work

Pump Station No. 26 Improvements

5. In event of discrepancy in data provided by CITY, request clarification before proceeding with Work.
6. Provide cut sheets for all staking.
7. Preserve and leave undisturbed control staking until ENGINEER has completed checks it deems necessary.
8. Re-establish reference points resulting from destruction by CONTRACTOR's operations.
9. Cooperate with ENGINEER so that checking and measuring may be accomplished with least interference to CONTRACTOR's operations.

#### 1.7 SEQUENCE AND PROGRESS OF WORK

- A. The CONTRACTOR shall submit a Construction Schedule covering the entire Work in accordance with Section 01 32 13, Progress Schedule.
- B. The CONTRACTOR shall incorporate the requirements of Section 01 14 03, Special Project Constraints, into the Construction Schedule.
- C. Alternate Sequence:
  1. The CONTRACTOR's schedule may use a different sequence from that shown or specified, if techniques and methods known to the CONTRACTOR will result in cost and time savings to the CITY and still achieve the required objectives.
  2. The ENGINEER's determination on the acceptability of any alternative sequence from that shown or specified shall be final.

#### 1.8 CONTRACTOR'S USE OF PREMISES

- A. The CONTRACTOR shall coordinate use of the premises, for the CONTRACTOR's storage and the operations of the CONTRACTOR's workmen, with CITY and utility service companies.
- B. Restriction of Work Area:
  1. The full use of the premises for storage, the operations of workmen and for all other construction activities will not be available to the CONTRACTOR.
  2. The CONTRACTOR must operate entirely within the space allowed to the CONTRACTOR.
  3. The Drawings defines the area allocated to the CONTRACTOR.
- C. The CONTRACTOR shall be solely responsible for obtaining and paying all costs in connection with any additional work area, storage sites, access to the site or temporary right-of-way, which may be required for proper completion of the Work.
- D. Limitations on Use of Work Area:
  1. It shall be understood that responsibility for protection and safe-keeping of equipment and materials on or near the site will be entirely that of the CONTRACTOR and that no claim shall be made against the CITY or their authorized representatives by reason of any act.
  2. It shall be further understood that should any occasion arise necessitating access to the sites occupied by these stored materials or equipment, the ENGINEER shall direct the CONTRACTOR owning or responsible for the stored materials and equipment to immediately move the same.

---

01 11 03-8  
Summary of Work

Pump Station No. 26 Improvements

3. No materials or equipment may be placed upon the property of the CITY, other than in the designated areas as shown on the Drawings, unless the ENGINEER has agreed to the location contemplated by the CONTRACTOR to be used for storage.
  4. All stored materials shall be labeled according to the appropriate contractor or Subcontractor with the manufacturer's label as well.
  5. Appropriate material safety data sheets (e.g., MSDS) shall be provided.
- E. The CONTRACTOR shall be required to share use of the premises with other Contractors whose services the CITY has obtained or will obtain for construction of other facilities on the site.

#### **1.9 USE OF OWNER'S FACILITIES**

- A. The CONTRACTOR may use existing facilities or equipment in the Work for construction purposes, only if the CITY's written permission is obtained.
- B. Restore existing facilities and equipment used for temporary purposes to original condition in a manner satisfactory to CITY.
- C. The full use of the premises for storage, the operations of workmen, and for all other construction activities, will not be available for the CONTRACTOR.
- D. The CONTRACTOR must operate entirely within the space allowed to the CONTRACTOR.
- E. The Drawings define the Work Zone area allocated to the CONTRACTOR.

#### **PART 2 - PRODUCTS (NOT USED)**

#### **PART 3 - EXECUTION (NOT USED)**

Summary of Work

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 01 14 03**

### **SPECIAL PROJECT CONSTRAINTS**

#### **PART 1 - GENERAL**

##### **1.1 LIMIT OF CONSTRUCTION ACTIVITIES ON WORK SITE**

- A. Work Months:
  - 1. Construction activities may only occur between April 15<sup>th</sup> and October 15<sup>th</sup> to avoid the rainy season. Work that cannot be completed prior to October 15<sup>th</sup>, 2023 due to supply issues outside of the Contractor's control must be negotiated with the City.
- B. Traffic Control:
  - 1. During non-work hours, the CONTRACTOR shall keep all lanes of traffic open and clear. All trenches shall be backfilled or covered with suitable steel plates and open to traffic. Steel plates shall sit flush with the existing pavement and shall be pinned and staked. Plates cannot be installed on top of AC.
  - 2. No equipment, construction material or excavated material that will interfere with traffic shall be stored on streets or roadways at any time.
- C. Bypass Pumping
  - 1. See Section 01 57 03

##### **1.2 SEQUENCE OF WORK**

- A. General:
  - 1. The CONTRACTOR shall schedule and sequence their work to complete the Work by the specified completion date.
  - 2. The CITY's wastewater collection system must remain operational at all times, with scheduled shutdowns as necessary to complete the Work and with prior approval of CITY, as described herein.
  - 3. Re-vegetation of graded areas shall take place as quickly as possible as weather permits.
- B. Delivery of OWNER-Furnished Equipment:
  - 1. The OWNER-furnished equipment will be delivered to the site within the following periods. The CONTRACTOR shall be prepared to inspect, unload and store the equipment during that period, in accordance with the requirements of Section 01 64 03, Owner-Furnished Equipment.
    - a. Two (2) Flygt Model NP-3202 Submersible Pumps and accessories: PMP101, PMP102

##### **1.3 PROJECT CONSTRAINTS**

- A. Maintenance of CITY's Operations:
  - 1. Constraints listed herein involve limits on activities during construction. These limits relate to the critical nature of the existing sewer system.
  - 2. Continuous operation of CITY's facilities is of critical importance. Schedule and conduct activities to enable existing facilities to operate continuously, unless otherwise specified.

---

01 14 03-1

Special Project Constraints

Pump Station No. 26 Improvements

3. Work Plan:
    - a. The CONTRACTOR shall submit a detailed Work Plan and time schedule for all construction activities that will make it necessary to remove a pipeline, electrical circuit, equipment, structure, road or other facilities from service, including the critical outages identified herein.
    - b. The Work Plan shall, at a minimum, identify:
      - 1) the date and time when each activity will occur;
      - 2) what equipment will be present including standby equipment;
      - 3) what assistance will be required by CITY's operating personnel;
      - 4) an emergency backup plan identifying what action will be taken if Work cannot be completed within the allotted time; and
      - 5) what individual will be in charge of the activity.
    - c. Submit Work Plan 10 working days prior to the scheduled activity.
  4. Perform Work continuously during critical connections and changeovers, and as required to prevent interruption of CITY's operations.
  5. Shutdowns:
    - a. Coordinate proposed Work with CITY and facility operations personnel before affecting unit shutdowns. The CONTRACTOR shall provide written confirmation of the shutdown date and time five (5) working days prior to the actual shutdown.
    - b. Under no circumstances shall the CONTRACTOR cease Work at the end of a normal working day or at the end of a working week if such actions may inadvertently cause a cessation of any facility operating process, in which case, remain onsite until necessary repairs are complete.
  6. Do not close lines, open valves or gates, shut down equipment, or take other action which would affect the operation of existing systems, except as specifically required by the Contract Documents and after approval of CITY.
  7. Do not proceed with Work affecting a facility's operation without obtaining CITY's advance approval of the need for and duration of such Work.
- B. Relocation of Existing Facilities:
1. During construction, it is expected that minor relocations of Work will be necessary.
  2. Provide complete relocation of existing structures and Underground Facilities, including piping, utilities, equipment, structures, electrical conduit wiring, electrical duct bank, and other necessary items.
  3. Use only new materials for relocated facility. Match materials of existing facility, unless otherwise shown or specified.
  4. Perform relocations to minimize downtime of existing facilities.
  5. Install new portions of existing facilities in their relocated position prior to removal of existing facilities, unless otherwise accepted by CITY.
- C. Hours of Work and Overtime:
1. Normal working hours at the Construction Site for the project shall be 7A.M. to 5P.M., weekdays, no work during the weekend nor during CITY observed holidays.
    - a. Conduct Work outside normal working hours only after obtaining prior written consent and approval from the CITY.
      - 1) Contractor shall request work-hour variations in writing, a minimum of ten (10) days prior to the start of the proposed work period.
      - 2) Contractor shall not rely on approval of work outside of normal working hours without prior consent of the CITY. Approval shall be at the sole discretion of the CITY.

- b. Contractor will develop Project Schedule assuming work during normal working hours only.
- 2. All overtime Work by the CONTRACTOR necessary to conform to the requirements of this Section and related Sections shall be performed by the CONTRACTOR, at no cost to the CITY and shall be performed in accordance with the Agreement. The CONTRACTOR shall make no claims for extra compensation as a result thereof.

#### 1.4 CONSTRUCTION SEQUENCING CONSTRAINTS

- A. No specific construction sequencing constraints other than those listed in this or other Specification sections have been determined at the time of Final Design.
- B. Construction sequencing constraints will be developed by Design-Assist Team as necessary.

REVISED BID SET

## SECTION 01 29 03

### MEASUREMENT AND PAYMENT

#### **PART 1 - MEASUREMENT**

##### **1.1 BASE BID SCHEDULE DESCRIPTIONS**

###### **Bid Schedule Item No. 1 – Mobilization and Demobilization**

The LUMP SUM price paid shall include full compensation for bonds, insurance, required permits and fees, shop drawings, project phasing, supervision, coordination of concurrent work with other contractors, meetings, pre-construction documentation of project area (photos and HD video), "as-built" plans or record drawings, clean-up of the work area including removal of USA markings at project completion, movement of personnel, equipment, supplies, and incidentals to and from the project site, surveying, and resetting survey monuments; for the establishment of all other facilities necessary for work on the project, including temporary sanitation facilities for the workers; for all other work and operations which must be performed or costs incurred prior to beginning work on the various contract items of work on the project site; for work and improvements called for or implied by the Contract Documents, which are not included in the other bid items but are required to complete the Work. Payment for mobilization at 10% of the lump sum bid price shall be made at the time of the first progress payment after the Contractor has purchased bonds and insurance. Fifty percent shall be paid when the Contractor has mobilized to the project site and initiated work. The remainder of 40% shall be paid at the time of last progress payment after all cleanup and demobilization is completed.

###### **Bid Schedule Item No. 2 – Worker Protection and Trench Safety/Shoring**

This item includes all labor, materials, equipment, and supplies required for providing a detailed plan of worker safety and maintaining safety during construction, including conforming to Labor Code Sections 6700-6708, all applicable safety orders and permits.

The Contractor shall be responsible for the design, construction, and effects of sloping and shoring systems for the project. The Contractor shall submit to the Owner's Representative a detailed plan stamped and signed by a Professional Civil Engineer, licensed in the State of California, showing the design of shoring, bracing, sloping, or other provisions for worker protection as required by General Provisions 5-1.07 Safety Requirements. The shoring bracing, shielding, and sheeting plan shall contain alternative (i.e., contingent) systems should the initial systems not achieve the following minimum performance requirements.

1. Protect personnel that enter the excavation.
2. Protect existing utilities, pavements, and structures.
3. Excavation of slopes and/or installation of the shoring system must be done in a manner that does not damage existing structures, pavements, and utilities including through settlement, heave, or vibrations.
4. Prevent caving of lateral movement of excavation walls and associated loss of adjacent ground and adjacent ground surface settlement, even when subjected to construction vibrations.
5. Provide stable excavation walls, slopes, and bottom.
6. Allow for removal of shoring and excavation backfilling in a manner that does not damage the finished pipeline or existing structures, pavements, and utilities including

---

01 29 03-1

Measurement and Payment

Pump Station No. 26 Improvements

- through settlement, heave, or vibrations. Any void space created by shoring removal should be completely filled with controlled density fill.
7. Resist lateral loads from vehicular traffic, construction equipment and spoils, and hydrostatic pressures, if any.

Site specific shoring design submittal shall be required when excavations fall within an imaginary plane projected downward at an inclination of 1H:1V from the nearest edge of adjacent structures and utilities.

The Contractor shall monitor and evaluate subsurface soil conditions encountered in project excavations. Contractors and their excavation designers shall acknowledge Cal/OSHA requirements to develop their own assessment of safe slopes for the project. The responsibility for soil type classification and determination of safe temporary slope inclinations is a field decision to be made at the time of excavation by the Contractor's "competent person".

In the interest of public safety and convenience, the entire open trench and all excavations shall be plated and equipment relocated as directed to minimize public impact at the end of each working day. The completed sections of trench shall be backfilled and compacted, and when in streets, opened to traffic as soon as possible.

### **Bid Schedule Item No. 3 – PS26 Improvements**

The LUMP SUM price shall include all necessary equipment, materials, labor, and miscellaneous items to complete the following work:

- Demolish existing electrical control panel pad and switch board;
- Install and connect new Control Panel and pad, Emergency Generator and pad, Electrical Instrumentation and Controls;
- Demolish existing fencing;
- Install new fencing and connect to existing fencing;
- PS26 bypass pumping;
- Remove and salvage existing PS26 submersible pumps, chains, guide rails, discharge elbows and DIP;
- Install new City-furnished submersible pumps and accessories, stainless steel and DIP piping in wet well;

Replace 12" DIP between MH No. 1 and PS26 Wet Well with 12" VCP via open cut installation. Open cut installation shall include the cost of, but is not limited to:

- Identifying the locations of existing subsurface utilities and connection points;
- All pavement, curb, gutter and sidewalk saw-cutting, removal and replacement;
- Trench excavation, backfill, compaction and safety;
- Imported bedding material;
- Sub-grade preparation and all compaction;
- Furnishing and installing VCP sewer pipe as indicated on the Drawings, including fittings and appurtenances;
- Disposal of excess excavated material;
- Removal and replacement where necessary of interfering portions of existing sewer pipes and improvements;
- Placing, joining, and retaining pipe, bends, adapters, couplings, vertical and horizontal offsets, restrained or harnessed joints, end caps, and other fittings not included in other bid items;
- Erosion and sediment control;
- Restoration of damaged and disturbed street improvements; and

---

01 29 03-2

Measurement and Payment

Pump Station No. 26 Improvements

- Temporary resurfacing, permanent asphalt concrete and concrete resurfacing as needed; and
- Concrete cross gutter repair.
- All other labor, equipment and material incidental to the installation of the pipe, complete in place.

Full compensation for installing VCP including all labor, equipment, materials, tools and incidentals, and for conforming to all applicable provisions of the Standard Specifications, these Special Provisions, and the requirements of the City, shall be considered as included in the unit prices paid per linear foot of pipe installed, complete and in place, and no additional compensation will be allowed therefor.

City shall install bell at existing PS26. Work to make connections to the City-installed bell shall be included in this bid item.

## 1.2 ADDITIVE BID SCHEDULE DESCRIPTIONS

### **Additive Bid Schedule Item No. 1A – Mobilization and Demobilization**

The LUMP SUM price paid shall include full compensation for bonds, insurance, required permits and fees, shop drawings, project phasing, supervision, coordination of concurrent work with other contractors, meetings, pre-construction documentation of project area (photos and HD video), "as-built" plans or record drawings, clean-up of the work area including removal of USA markings at project completion, movement of personnel, equipment, supplies, and incidentals to and from the project site, surveying, and resetting survey monuments; for the establishment of all other facilities necessary for work on the project, including temporary sanitation facilities for the workers; for all other work and operations which must be performed or costs incurred prior to beginning work on the various contract items of work on the project site; for work and improvements called for or implied by the Contract Documents, which are not included in the other bid items but are required to complete the Work. Payment for mobilization at 10% of the lump sum bid price shall be made at the time of the first progress payment after the Contractor has purchased bonds and insurance. Fifty percent shall be paid when the Contractor has mobilized to the project site and initiated work. The remainder of 40% shall be paid at the time of last progress payment after all cleanup and demobilization is completed.

### **Additive Bid Schedule Item No. 2A – Worker Protection and Trench Safety/Shoring**

This LUMP SUM item includes all labor, materials, equipment, and supplies required for providing a detailed plan of worker safety and maintaining safety during construction, including conforming to Labor Code Sections 6700-6708, all applicable safety orders and permits.

The Contractor shall be responsible for the design, construction, and effects of sloping and shoring systems for the project. The Contractor shall submit to the Owner's Representative a detailed plan stamped and signed by a Professional Civil Engineer, licensed in the State of California, showing the design of shoring, bracing, sloping, or other provisions for worker protection as required by General Provisions 5-1.07 Safety Requirements. The shoring bracing, shielding, and sheeting plan shall contain alternative (i.e., contingent) systems should the initial systems not achieve the following minimum performance requirements.

1. Protect personnel that enter the excavation.
2. Protect existing utilities, pavements, and structures.

---

01 29 03-3

Measurement and Payment

Pump Station No. 26 Improvements

3. Excavation of slopes and/or installation of the shoring system must be done in a manner that does not damage existing structures, pavements, and utilities including through settlement, heave, or vibrations.
4. Prevent caving of lateral movement of excavation walls and associated loss of adjacent ground and adjacent ground surface settlement, even when subjected to construction vibrations.
5. Provide stable excavation walls, slopes, and bottom.
6. Allow for removal of shoring and excavation backfilling in a manner that does not damage the finished pipeline or existing structures, pavements, and utilities including through settlement, heave, or vibrations. Any void space created by shoring removal should be completely filled with controlled density fill.
7. Resist lateral loads from vehicular traffic, construction equipment and spoils, and hydrostatic pressures, if any.

Site specific shoring design submittal shall be required when excavations fall within an imaginary plane projected downward at an inclination of 1H:1V from the nearest edge of adjacent structures and utilities.

The Contractor shall monitor and evaluate subsurface soil conditions encountered in project excavations. Contractors and their excavation designers shall acknowledge Cal/OSHA requirements to develop their own assessment of safe slopes for the project. The responsibility for soil type classification and determination of safe temporary slope inclinations is a field decision to be made at the time of excavation by the Contractor's "competent person".

In the interest of public safety and convenience, the entire open trench and all excavations shall be plated and equipment relocated as directed to minimize public impact at the end of each working day. The completed sections of trench shall be backfilled and compacted, and when in streets, opened to traffic as soon as possible.

**Additive Bid Schedule Item No. 3A – Bypass Pumping**

The LUMP SUM price for this work shall include all necessary equipment, materials, and labor needed to provide bypass pumping on Sierra College Boulevard during construction.

**Additive Bid Schedule Item No. 4A – Traffic Control**

The LUMP SUM price shall include all necessary equipment, materials, labor, and miscellaneous items. Flagger must be dedicated solely to traffic control purposes and shall not be pulled to perform other work while an active flagger is required. Traffic control is to be in accordance with California Traffic Manual minimum recommended channelizer and sign spacing. This work shall include routing of pedestrian, vehicular, and construction traffic; furnishing labor, tools, equipment, materials and incidentals for implementing and providing the traffic control devices, phasing, signage, striping, and personnel in accordance with the Contract Documents.

Full compensation for Traffic Control, including all services, permits (Caltrans), material costs, delivery, installation, and for conforming to all applicable provisions of the Standard Specifications, these Special Provisions, and the requirements of the City shall be considered as included in the lump sum price paid for Bid Item 5, Traffic Control, complete and in-place, and no additional compensation will be allowed therefor.

---

01 29 03-4  
Measurement and Payment

Pump Station No. 26 Improvements

**Additive Bid Schedule Item No. 5A – Pipe Installation Upstream of PS26 (Work Zone 1)**

The LUMP SUM price is for this work shall include all necessary equipment, materials, and labor needed to install the 12" SS between MH No. 2 and MH No. 1 in Work Zone 1: pipe bursting during construction, including excavation, , and inspections during pipe bursting process. Open cut installation shall include the cost of, but is not limited to:

- Identifying the locations of existing subsurface utilities and connection points;
- All pavement, curb, gutter and sidewalk saw-cutting, removal and replacement;
- Trench excavation, backfill, compaction and safety;
- Imported bedding material;
- Sub-grade preparation and all compaction;
- Furnishing and installing VCP sewer pipe as indicated on the Drawings, including fittings and appurtenances;
- Disposal of excess excavated material;
- Removal and replacement where necessary of interfering portions of existing sewer pipes and improvements;
- Placing, joining, and retaining pipe, bends, adapters, couplings, vertical and horizontal offsets, restrained or harnessed joints, end caps, and other fittings not included in other bid items;
- Erosion and sediment control;
- Restoration of damaged and disturbed street improvements; and
- Temporary resurfacing, permanent asphalt concrete and concrete resurfacing as needed; and
- Concrete cross gutter repair.
- All other labor, equipment and material incidental to the installation of the pipe, complete in place.

Full compensation for installing VCP and HDPE Pipe including all labor, equipment, materials, tools and incidentals, and for conforming to all applicable provisions of the Standard Specifications, these Special Provisions, and the requirements of the City, shall be considered as included in the unit prices paid per linear foot of pipe installed, complete and in place, and no additional compensation will be allowed therefor.

City shall install bells at existing structures. Work to make connections to the City-installed bells shall be included in this bid item.

**Additive Bid Schedule Item No. 6A – Furnish and Install New Weir Manhole (Work Zone 1)**

The UNIT PRICE is for this work includes furnishing and installation of new hybrid PVC weir manhole as detailed in Drawing C-10. Included in the cost is pavement cutting removal, excavating, furnishing and installing the new weir manhole with slide gate and weir blocks.

**Additive Bid Schedule Item No. 7A – Pipe Installation Between MH A08-010 to MH B08-196 (Work Zone 2)**

The LUMP SUM price is for this work shall include all necessary equipment, materials, and labor needed to install the 10" HDPE pipe between and connect to MH A08-010 and MH B08-196 in Work Zone 2: pipe bursting during construction, including excavation, and inspections during pipe bursting process.

Full compensation for installing HDPE Pipe including all labor, equipment, materials, tools and incidentals, and for conforming to all applicable provisions of the Standard Specifications, these Special Provisions, and the requirements of the City, shall be

---

01 29 03-5

Measurement and Payment

Pump Station No. 26 Improvements

considered as included in the unit prices paid per linear foot of pipe installed, complete and in place, and no additional compensation will be allowed therefor.

**Additive Bid Schedule Item No. 8A – Pipe Installation Between MH B08-196 to B08-113 (Work Zone 3)**

The LUMP SUM price is for this work shall include all necessary equipment, materials, and labor needed to install the 12" SS between MH B08-196 and B08-113 in Work Zone 3: pipe bursting during construction, including excavation, and inspections during pipe bursting process. Open cut installation shall include the costs described in Bid Schedule Item No. 5A.

Full compensation for installing VCP and/or HDPE Pipe including all labor, equipment, materials, tools and incidentals, and for conforming to all applicable provisions of the Standard Specifications, these Special Provisions, and the requirements of the City, shall be considered as included in the unit prices paid per linear foot of pipe installed, complete and in place, and no additional compensation will be allowed therefor.

City shall install bells at existing structures where open cut is utilized. Work to make connections to the City-installed bells shall be included in this bid item.

**Additive Bid Schedule Item No. 9A – Pipe Installation Between MH B08-113 to MH B08-077 (Work Zone 4)**

The LUMP SUM price is for this work shall include all necessary equipment, materials, and labor needed to install the 12" HDPE pipe between and connect to MH B08-113 and MH B08-077 in Work Zone 4: pipe bursting during construction, including excavation, and inspections during pipe bursting process.

Full compensation for installing HDPE Pipe including all labor, equipment, materials, tools and incidentals, and for conforming to all applicable provisions of the Standard Specifications, these Special Provisions, and the requirements of the City, shall be considered as included in the unit prices paid per linear foot of pipe installed, complete and in place, and no additional compensation will be allowed therefor.

**Additive Bid Schedule Item No. 10A – Pipe Installation Between MH B08-077 to MH B08-062 (Work Zone 5)**

The LUMP SUM price is for this work shall include all necessary equipment, materials, and labor needed to install the 12" HDPE pipe between and connect to MH B08-077 and MH B08-062 in Work Zone 5: pipe bursting during construction, including excavation, and inspections during pipe bursting process.

Full compensation for installing HDPE Pipe including all labor, equipment, materials, tools and incidentals, and for conforming to all applicable provisions of the Standard Specifications, these Special Provisions, and the requirements of the City, shall be considered as included in the unit prices paid per linear foot of pipe installed, complete and in place, and no additional compensation will be allowed therefor.

---

01 29 03-6

Measurement and Payment

Pump Station No. 26 Improvements

## **PART 2 - GENERAL**

### **2.1 GENERAL**

- A. Payment will be made at the price bid for each item listed on the bidding form or as extra work as provided in the General Conditions.
- B. No initial progress payment (other than a single mobilization payment as described in Article 1.3 below) will be made prior to acceptance by the ENGINEER of the CPM Construction Schedule, the associated Schedule of Costs, and the list of anticipated submittals.
- C. No subsequent progress payment will be made prior to receipt by the ENGINEER of the monthly update of the Construction Progress Schedule, as specified in Sections 01 31 19, Project Meetings and 01 32 16, Progress Schedule.
- D. No subsequent progress payment will be made prior to receipt by the ENGINEER of Certified Payroll for the previous month.

### **2.2 SCHEDULE OF COSTS FOR PAYMENTS**

- A. Submit to the ENGINEER, within 5 days of acceptance of the Construction Schedule, five (5) copies of a Schedule of Costs. The Schedule of Costs shall be a form showing a detailed breakdown of quantities and prices of work and materials required to perform and complete the contract.
- B. The Schedule of Costs shall provide a cost breakdown for each element detailed in the approved Construction Schedule. The total of the price breakdown must agree with the lump-sum price bid. The elements listed and price breakdown shall not be front end loaded or unbalanced, shall be subject to adjustment between the ENGINEER and the CONTRACTOR, and will be used as a basis for progress payments.
- C. The Schedule of Costs will be used as a basis for determining the amount of the monthly progress payments.
- D. Acceptance of the Schedule of Costs by the ENGINEER shall not relieve the CONTRACTOR of the responsibility of performing all the work needed to complete the project at the lump-sum price bid.

### **2.3 PAYMENT FOR MOBILIZATION**

- A. Mobilization Cost Breakdown:
  - 1. As soon as practicable after receipt of the Notice to Proceed, the CONTRACTOR shall submit a breakdown to the ENGINEER for approval, which shall show the estimated value of each major component of mobilization.
  - 2. When approved by the ENGINEER, the breakdown will be the basis for initial progress payments in which mobilization is included.
  - 3. Said breakdown shall not be "front end loaded" or unbalanced.
- B. One CONTRACTOR payment may be made prior to acceptance of the Construction Schedule, Schedule of Costs, and list of anticipated submittals.

---

01 29 03-7

Measurement and Payment

Pump Station No. 26 Improvements

1. Payment shall be limited to mobilization items only.
2. The Construction Schedule is described in Section 01 32 13, Simplified Project Schedule
3. Mobilization items are described in Section 01 71 13, Mobilization.
4. The Schedule of Costs is described in Paragraph 1.2 of this Section.
5. The list of anticipated submittals is described in Section 01 33 03, Submittal Procedures.

## 2.4 PROGRESS PAYMENTS

- A. Progress Payment Request Submittal:
  1. Unless otherwise mutually agreed, by the 25th of each month, the CONTRACTOR shall prepare and submit monthly progress payment requests for work completed through the 25th day of the month.
  2. Said payment request shall be based on the breakdown of activities as specified in the Schedule of Costs described in Paragraph 1.2 above.
  3. The monthly schedule update shall be submitted as part of the monthly progress payment report.
- B. The ENGINEER will review progress payment requests and make a determination of the percent completion of all activities (rounded to the nearest whole percent) based on an approximate measurement of all materials supplied and work performed.
- C. In the event that the CONTRACTOR fails to provide the OWNER with an acceptable Monthly Contract Record Drawing Submittal in accordance with Section 01 33 03, Submittal Procedures the OWNER shall deduct compensation for such monthly submittal as provided in Section 01 32 13, Simplified Project Schedule. Said deduction shall become the sole property of the OWNER.
- D. Retention:
  1. From the amount thus determined, five percent thereof will be deducted as retention by OWNER for performance security.
  2. Acceptance of separate components shall not operate to release performance retention.
  3. The amount of all payments previously made to the CONTRACTOR and any amounts due the OWNER from the CONTRACTOR for supplies, materials, services, damages, or otherwise deductible under the terms of the contract will be deducted from the remainder.
  4. The remaining amount will be paid as a progress payment by the OWNER to the CONTRACTOR on the third Friday of the succeeding month or as soon thereafter as is practical.
- E. In addition to the retention under Paragraph D above, the whole or part of any payment of the estimated amount due the CONTRACTOR may be withheld as an additional retention if such course be deemed necessary to protect the OWNER from loss due to the CONTRACTOR's failure to perform any of the following: (1) meet CONTRACTOR's payment obligations; (2) execute the work; (3) correct defective work; (4) settle damages as provided; or (5) produce substantial evidence that no stop notices will or have been filed, and/or if it has been determined that unpaid balances may be insufficient to complete the work.

---

01 29 03-8

Measurement and Payment

Pump Station No. 26 Improvements

F. All material and work covered by progress payments thereupon become the sole property of the OWNER, but this provision shall not be construed as relieving the CONTRACTOR from sole responsibility for all materials and work upon which payments have been made or the restoration of any damaged work or as a waiver of the OWNER's right to require fulfillment of all of the contract terms. Said CONTRACTOR's obligation extends through the close of the warranty period.

G. Payment for Materials:

1. No payment shall be made for materials stored offsite.
2. Payment may be made for those materials delivered to the site but not incorporated in the work to the extent that the materials are included in the Construction Schedule as cost-loaded material delivery activities.
3. Only material items manufactured specifically for this project and that cost individually in excess of \$20,000 will be considered for partial payment as stored materials.
4. Partial payment for materials delivered will not be made before the respective shop drawings, installation instructions and O&M manuals have been submitted, reviewed, and accepted in accordance with Section 01 33 03, Submittal Procedures.
5. To receive partial payment for materials delivered to the site, but not incorporated in the work, it shall be necessary for the CONTRACTOR to submit to the ENGINEER, at least 7 days prior to the end of said month, a list of such materials.
6. At their sole discretion, the ENGINEER will approve items for which partial payment is to be made.
7. The list of materials and invoices shall be clearly identified by referencing the associated activity or item on the price breakdown.
8. Partial payment for materials delivered to the site or a bonded warehouse will be made in an amount equal to 75% of the respective suppliers' invoices(s) for the actual net cost for the item(s) delivered plus delivery charges.
9. The CONTRACTOR's actual net cost for the materials must be supported by invoices of suppliers.
10. Proper storage and protection of materials shall be provided by the CONTRACTOR. Final payment shall be made only for materials actually incorporated in the work and, upon acceptance of the work, all materials remaining for which advance payments had been made shall revert to the CONTRACTOR, unless otherwise agreed, and partial payments made for these items shall be deducted from the final payment for the work.

## 2.5 FINAL PAYMENT AND RELEASE OF CLAIMS

1. Upon the completion of the work as determined by the ENGINEER, a Notice of Acceptance will be issued and recorded with the County.
2. The OWNER will pay to the CONTRACTOR within 35 days after filing of the Notice of Acceptance, or as soon thereafter as practicable, the remaining amount due the CONTRACTOR including retainage, less all prior payments and advances whatsoever to or for the account of the CONTRACTOR for supplies, materials, services, damages, stop notices, or otherwise deductible under the terms of the contract.
3. All prior estimates and payments including those relating to extra work shall be subject to correction by this payment, which throughout this contract is called "Final Payment".

---

01 29 03-9

Measurement and Payment

Pump Station No. 26 Improvements

## 2.6 RELEASE OF CLAIMS:

- A. Neither the final payment nor any part of the retained percentage shall become due until the CONTRACTOR shall have delivered to the OWNER a complete release of all claims against the OWNER arising under and by virtue of this contract and related to undisputed amounts, including claims of Subcontractors and suppliers of either materials or labor.
- B. If disputed contract claims in stated amounts are unresolved 35 days after issuance of the Notice of Acceptance, a progress payment of undisputed amounts and retained funds will be made by OWNER upon receipt of a release specifically excluding the disputed contract claims.
- C. Claims by the OWNER against the CONTRACTOR for liquidated damages or actual damages or other causes will be a valid basis for withholding of funds by the OWNER.
- D. Upon resolution of disputed claims the CONTRACTOR shall execute a supplemental release and, upon delivery the OWNER will make final payment.

Pump Station No. 26 Improvements

## **SECTION 01 31 19**

### **PROJECT MEETINGS**

#### **PART 1 - GENERAL**

##### **1.1 PRE-CONSTRUCTION CONFERENCE**

- A. Upon receipt of the Notice to Proceed, or at an earlier time if mutually agreeable, the ENGINEER will arrange a preconstruction conference to be attended by the CONTRACTOR's superintendent or other project representative authorized to commit on the behalf of the CONTRACTOR and to direct the performance of the work by others, the CITY, the ENGINEER or ENGINEER's representative, and representatives of utilities, major subcontractors, and others involved in the execution of the Work.
- B. The purpose of this conference will be to establish a working relationship and understanding between the parties and to discuss subjects as may be pertinent for the execution of the work.
- C. CONTRACTOR shall be prepared to discuss the following subjects, as a minimum:
  - 1. Required schedules.
  - 2. Status of Bonds and insurance.
  - 3. Sequencing of critical path work items.
  - 4. Progress payment procedures.
  - 5. Project changes and clarification procedures.
  - 6. Use of site, access, and storage areas, security and temporary facilities.

##### **1.2 PROGRESS MEETINGS**

- A. The ENGINEER will arrange and conduct progress meetings. The ENGINEER will prepare and circulate a draft agenda of each meeting. The CONTRACTOR may add items as appropriate to the draft agenda.
- B. Progress meetings will be conducted on a regular basis, at such frequency as the CITY and CONTRACTOR may mutually agree. Progress meetings shall be attended by the ENGINEER, CITY Operations personnel, CONTRACTOR's superintendent or other project representative, and representatives of all subcontractors involved in the work at the time of the meeting, required by the CONTRACTOR, or requested by the CITY.
- C. The purpose of the meetings will be to facilitate the work of the CONTRACTOR and any subcontractor or other organization that is not up to schedule, resolve conflicts, identify and resolve any potential delays or necessary changes in the work and in general, coordinate and facilitate the execution of the Work.
- D. The agenda of progress meetings shall include review of work progress, the latest Construction Schedule submittal (monthly), potential project delays, the status of key shop drawings, submittal reviews, information requests, safety concerns, record drawings, and extra work items.

---

01 31 19-1  
Project Meetings

Pump Station No. 26 Improvements

### 1.3 CONSTRUCTION SCHEDULE REVIEW

- A. The Construction Schedule will be reviewed weekly during an agreed upon progress meeting to verify at a minimum:
  - 1. Actual start and finish dates of completed activities since the last progress meeting.
  - 2. Durations and progress of all activities not completed.
  - 3. Critical submittals/materials delivery problems.
  - 4. Potential project delays.
  - 5. Any activity behind schedule and CONTRACTOR's plan to bring it back on schedule.
  - 6. Reason, logic, time, and cost data for Change Order work that is to be incorporated into the Construction Schedule or payment request form.
  - 7. Payment due to the CONTRACTOR based on percentage complete of items in the submittal payment request form.
- B. At the progress meeting, the CONTRACTOR shall provide an update of the Construction Schedule as described in Section 01 32 13, Progress Schedule.

### **PART 2 - PRODUCTS (NOT USED)**

### **PART 3 - EXECUTION (NOT USED)**

++ END OF SECTION ++

---

01 31 19-2  
Project Meetings

Pump Station No. 26 Improvements

**SECTION 01 32 13**  
**PROGRESS SCHEDULE**

**PART 1 - GENERAL**

**1.1 WORK INCLUDED**

- A. The work specified in this Section includes the CONTRACTOR's preparation, submittal, maintenance and use of a Critical Path Method (CPM) Construction Schedule to plan and monitor construction progress for the project.
- B. The requirements specified under Section 01 33 03, Submittal Procedures, also apply to the Construction Schedule initial submittal(s) and subsequent updates and revisions.

**1.2 PREPARATION AND SUBMITTAL PROCEDURE**

- A. Schedule Preparation and Submittal:
  - 1. The CONTRACTOR's on-site construction supervisor (superintendent, project manager, etc.) shall be directly involved in preparation of the Construction Schedule.
  - 2. The Construction Schedule shall be completed and submitted to the ENGINEER within 30 days after Notice to Proceed.
    - a. By preparing and submitting the Construction Schedule the CONTRACTOR represents that the CONTRACTOR can and intends to execute the work and portions thereof within the specified times and constraints and that the CONTRACTOR's bid covers the costs associated with the execution of work in accordance with the Construction Schedule.
  - 3. At the time of submittal of the Construction Schedule, CONTRACTOR's on-site construction supervisor shall review the schedule with ENGINEER's construction project representative.
  - 4. If the initial Construction Schedule submittal is not acceptable to the ENGINEER, it shall be revised in coordination with observations and comments from the ENGINEER and resubmitted within 7 days of the return of the schedule to the CONTRACTOR.

**1.3 CONSTRUCTION SCHEDULE CONTENT**

- A. The Construction Schedule shall be calendar-based, time-scaled, and show the durations of and relationships between the various work activities.
- B. Work activities shall be selected which reflect actual work to be performed for this specific project. No generic work activities shall be allowed.
  - 1. Work activities shall include non-construction activities such as submittal preparation and review, manufacturing, equipment delivery, mobilization, preparation of Contract Record Drawings, etc. for a complete picture of the CONTRACTOR's plan for project execution.
  - 2. Information on each activity shall include:
    - a. Concise description of the activity.
    - b. Duration in working days.

---

01 32 13-1  
Project Schedule

Pump Station No. 26 Improvements

- c. The dates for the beginning and completion of each activity.
  - d. The relationship of each activity to other activities.
  - 3. No work activity shall be longer than 10 working days.
    - a. Work tasks which will take longer than 10 working days shall be broken down into several work activities which are no longer than 10 working days.
    - b. Each work activity must be defined clearly and measurable. For example, a series of work activities such as "Building 1, east wall piping; Building 1, west wall piping; Building 1, north and south wall piping", each with a duration less than 10 days would be acceptable. A series of work activities all labeled "Building 1 Piping", even if each had a duration less than 10 days, would not be acceptable because the tasks are not defined clearly or measurable.
  - 4. Provide a monthly activity for preparation of Contract Record Drawings, in accordance with Section 01 33 03, Submittal Procedures with a minimum monthly cost of \$2,500.
- C. The schedule shall be referenced to calendar dates, and the beginning of the contract time shall be the date of receipt of the Notice to Proceed.
- D. Failure to include an activity required for the execution of the work shall not excuse the CONTRACTOR from completing the work and portions thereof within the specified times and at the price specified in the Agreement, and from meeting the constraints specified for sequence of work and control dates.

#### 1.4 UPDATING THE CONSTRUCTION SCHEDULE

- A. The CONTRACTOR shall review and discuss the project progress relative to the most up to date Construction Schedule (updated monthly) at the weekly progress meetings, as specified in Section 01 31 19, Project Meetings.
- B. The schedule update shall reflect progress to date. The schedule update shall incorporate all revisions to logic and duration.

#### 1.5 ADJUSTMENT OF THE CONTRACT TIME AND CHANGE ORDERS

- A. Adjustments of the contract time due to delays, additional work, or any other cause will only be issued through a contract change order in accordance with the General Conditions.
  - 1. The CONTRACTOR shall include, as part of each change order proposal for which the CONTRACTOR is requesting an adjustment in the contract duration, a proposed revised Construction Schedule.
  - 2. The proposed revised Construction Schedule shall be compared to the most recent Construction Schedule to assess overall schedule impact.
  - 3. If a Change Order is issued by the OWNER, the CONTRACTOR shall incorporate the Change Order into the Construction Schedule.

## **SECTION 01330**

### **SUBMITTAL PROCEDURES**

#### **PART 1 - GENERAL**

##### **1.1 GENERAL**

**A. General:**

1. This Section outlines in general the items that the CONTRACTOR must prepare or assemble for submittal during the progress of the Work.
2. There is no attempt herein to state in detail all of the procedures and requirements for each submittal.
3. The CONTRACTOR's attention is directed to the individual Specification Sections in these Contract Documents, which may contain additional and special submittal requirements.
4. The CITY reserves the right to direct and modify the procedures and requirements for submittals as necessary to accomplish the specific purpose of each submittal.
5. The CONTRACTOR shall anticipate resubmitting submittals for major pieces of equipment and for control systems.
6. Should the CONTRACTOR be in doubt as to the procedure, purpose, or extent of any submittal, inquiries shall be directed to the ENGINEER.

**B. Schedule of Submittals:**

1. Within 30 working days after the Notice to Proceed, CONTRACTOR shall submit all submittals to start construction including, but not limited to, any priority submittals identified during the Design-Assist process.
2. This list shall be updated with "late start" submittal dates within 15 working days of submittal of the CONTRACTOR's Construction Schedule.
3. The submittal dates shall be updated upon approval of the Construction Schedule and periodically thereafter.
4. Any additional submittals shall also be included in updates.
5. Additional submittals and resubmittals shall be provided in a timely manner without delaying the project.

##### **1.2 ADMINISTRATIVE SUBMITTALS**

- A.** The CONTRACTOR is reminded of their obligation as required by law to make required submittals promptly to the applicable federal, state, or local agency. Failure to comply with this requirement may result in the withholding of progress payments and make the CONTRACTOR liable for other prescribed action and sanctions.
- B.** The CONTRACTOR shall submit to the ENGINEER a copy of all letters relative to the Contract, transmitting notifications, reports, certifications, certified payrolls, and the like, that the CONTRACTOR submits directly to a federal, state, or other governing agency.
- C.** During the performance of the Contract, the CONTRACTOR shall maintain on a daily basis, and submit to the ENGINEER as requested, full and correct information as to the number of persons employed in connection with each subdivision of the work, the classification, rate of pay, citizenship status, and address of each person, and the cost,

---

01 33 03-1  
Submittal Procedures

Pump Station No. 26 Improvements

source, and amount of each class of materials delivered, equipment received, and major construction equipment used in each subdivision of the work.

D. Certified Payroll:

1. No later than the 25th day of each month, the CONTRACTOR shall submit to the ENGINEER a copy of the CONTRACTOR's certified payroll for the previous month, and if requested, copies of certified payrolls for Subcontractors.
2. The payrolls shall include for each employee the full name, address and social security number; the correct classification and rate of pay (including rates of contributions for, or costs assumed to provide various fringe benefits); daily and weekly hours worked; itemized deductions and actual wages paid.
3. The certified payrolls shall be on State of California forms.

### 1.3 TECHNICAL SUBMITTALS

A. General:

1. Requirements in this Section are in addition to any specific requirements for submittals specified in other divisions and Sections of these Contract Documents.
2. Submittal Contents and Numbering:
  - a. Each submittal shall have the specification Section and applicable paragraph number clearly identified on the front of the submittal transmittal form for each item submitted. The number shown on the transmittal form for each item shall be labeled in the content of the submittal. For example, if Item 1 is a ball Valve and Item 2 is a gate valve then the cut sheets for each respective valve shall be labeled Item 1 and Item 2.
  - b. Each submittal shall be sequentially numbered starting with the first one delivered for each spec section. For example, the first submittal for Section 02 41 03 should be 02 41 03-1-0.
  - c. Resubmittals shall include the number of the original submittal plus the suffix "-1" for the first resubmittal, "-2" for the second resubmittal. For example, a second resubmittal would be shown as 02 41 03-1-1. Each resubmittal shall be the whole version of the corrected submittal, and shall not reference past versions. Each resubmittal shall include all items including items previously marked as NET.
  - d. Submittals not conforming to these requirements will be rejected.
  - e. If several items (i.e. different types of valves) are combined into the same submittal, none of the items will be approved for installation until the entire submittal is accepted.
3. Submitted data shall be fully sufficient in detail for determination of compliance with the provisions and intent of the Contract Documents.
4. Coordination Responsibilities:
  - a. Shop drawing submittal and coordination are the responsibility of the CONTRACTOR; this responsibility shall not be delegated in whole or in part to Subcontractors or suppliers.
  - b. Designation of work "by others," if shown on shop drawings, shall mean that the work will be the responsibility of the CONTRACTOR rather than the Subcontractor or supplier who has prepared the shop drawings.
5. No equipment or material for which listings, drawings, or descriptive material is required shall be fabricated, purchased, or installed until the ENGINEER has reviewed and accepted such lists, final shop drawings, or other descriptive material. Installation of such equipment or material without accepted submittals will be considered defective work.
6. Submittal Review Time:

---

01 33 03-2  
Submittal Procedures

Pump Station No. 26 Improvements

- a. Submittals will be acted upon by the ENGINEER as promptly as possible and returned to the CONTRACTOR not later than the time allowed for review in Paragraph 1.3.B.2 below.
  - b. The CONTRACTOR shall provide in their Construction Schedule the time for CITY review of each submittal (and resubmittal for major equipment and control systems) in accordance with the allowable time specified herein and in Section 01 32 13, Progress Schedule.
  - c. This required time for CITY review shall not be a cause for delay in contract completion nor shall it be a reason for an extension of contract time.
  - d. If the CONTRACTOR is required by the CITY to resubmit data, then neither the time required for the CONTRACTOR to prepare and resubmit such data, nor the required time for CITY review, shall be a cause for delay in contract completion or for an extension of contract time.
  - e. Responsibility for time required for preparing and submitting required data shall be assigned solely to the CONTRACTOR.
7. Excessive Submittal Review:
  - a. It is considered reasonable that the CONTRACTOR shall make a complete and acceptable submittal to the ENGINEER by the second submission of a submittal item.
  - b. Additional costs of the ENGINEER's review beyond the second submission shall be the responsibility of the CONTRACTOR and may be deducted from the monthly progress payments.
  - c. This applies to all submittals including shop drawings.
8. Changes After Review:
  - a. After a submittal has been reviewed and accepted, no changes or substitutions in that submittal will be allowed without the ENGINEER's approval.
  - b. If allowed, the CONTRACTOR will be responsible for the additional costs for engineering, administrative, clerical or other work required for additional review.
9. Intent of Review:
  - a. Shop drawings will be reviewed for general conformance with the drawings and specifications.
  - b. The intent of the review is to determine if the CONTRACTOR is submitting materials and equipment which are in general conformance with the Contract Documents.
  - c. Detailed review of dimensions, sizes, space requirements, coordination with other equipment, and other construction details is not performed.
  - d. Additional work and costs, resulting from errors in the shop drawings shall be the CONTRACTOR's responsibility and liability.
  - e. Accuracy, coordination, and completeness of shop drawings shall be the sole responsibility of the CONTRACTOR, including responsibility to backcheck comments, corrections, and modifications from the ENGINEER's review before fabrication.
10. The CONTRACTOR shall indicate on the submittal transmittal form if and how the submittal deviates from the contract requirements. In addition, CONTRACTOR shall include a copy of the relevant specification section in its entirety marked with ACCEPT/DEVIATE next to each paragraph. Failure to include this documentation is grounds for ENGINEER to reject and return the Submittal to the CONTRACTOR for resubmission.
11. Rebar Shop Drawings:
  - a. The CONTRACTOR shall supply the ENGINEER with a copy of all reinforcing steel detail drawings.

---

01 33 03-3  
Submittal Procedures

Pump Station No. 26 Improvements

- b. Changes to the Contract Documents made by the CONTRACTOR in reinforcing steel shop drawings shall be called out in the letter of submittal.
  - c. Such changes will not be acceptable unless the ENGINEER has expressed consent to such changes in writing.
12. Submittals of shop drawings, layout diagrams, catalog cuts and data, test reports, and information in sufficient detail to show complete compliance with all specified requirements shall be furnished to the ENGINEER, covering but not limited to the following items (as applicable):
- Aggregate Base Course
  - Asphalt mixes
  - Caulking and sealing compounds
  - Chemical systems
  - Concrete mixes
  - Control panels
  - Demolition plan
  - Detection systems
  - Electrical conduit, wire and specials
  - Electrical fixtures and appliances
  - Electrical load centers
  - Electrical substations
  - Electrical conduit, wire and specials
  - Engineered fill
  - Engines and appurtenances
  - Equipment provided by the CONTRACTOR
  - Fences, barricades and gates
  - Gas monitoring systems
  - Generators and appurtenances
  - Glazing
  - Grating
  - Gravel bedding
  - Grout
  - Hardware
  - Imported fill
  - Indicators
  - Instrumentation
  - Landscaping
  - Lights and lighting fixtures
  - Meters
  - Miscellaneous fabricated metals
  - Motor control centers
  - Motors, starters and controls
  - Paints, coatings and finishes
  - Pipe, fittings and specials
  - Pipe supports and anchors
  - Planting plan
  - Plumbing fixtures
  - Precast concrete elements
  - Pressure gauges
  - Primary elements
  - Programmable logic controllers
  - Pumps

---

Submittal Procedures

Pump Station No. 26 Improvements

Recorders  
Reinforcing steel and layout drawings  
Sheet pile, shoring and bracing  
Signs  
Structural steel  
Temporary bypasses  
Temporary dewatering systems and equipment  
Valve and gate operators and controllers  
Valves and gates  
Variable frequency drives

**B. Submittal Procedure:**

1. The CONTRACTOR shall submit to the ENGINEER for review one (1) electronic copy of each submittal (shop drawings, electrical diagrams, and catalog cuts for fabricated items and manufactured items furnished under this Contract, etc.)
2. Shop drawings shall be submitted in sufficient time to allow the ENGINEER not less than twenty (20) working days for examining the shop drawings except for designs for turnkey items for which thirty (30) working days will be allowed, and substitutions for which (40) working days will be allowed.
3. Shop drawings shall be accurate, distinct, and complete, and shall contain all required information, including satisfactory identification of items, units, and assemblies in relation to the Contract Drawings and Specifications.
4. CONTRACTOR Certification:
  - a. Shop drawings shall be submitted only by the CONTRACTOR, who shall indicate by a signed stamp on the shop drawings, or other approved means, that the CONTRACTOR has checked and approved the shop drawings, and that the work shown is in accordance with Contract requirements and has been checked for dimensions and relationship with work of all other trades involved.
  - b. Submitting incomplete or unchecked shop drawings for the ENGINEER to correct or finish will not be acceptable, and shop drawings that, in the opinion of the ENGINEER, indicate that they have not been checked by the CONTRACTOR will be rejected and returned to the CONTRACTOR for resubmission in the proper form.
5. Return of Reviewed Submittals:
  - a. When the shop drawings have been reviewed by the ENGINEER, the appropriate number of submittals will be returned to the CONTRACTOR appropriately stamped.
  - b. If major changes or corrections are necessary, the shop drawing will be rejected and returned to the CONTRACTOR with the need for such changes or corrections indicated.
  - c. The CONTRACTOR shall correct and resubmit rejected shop drawings in the same manner and quantity as specified for the original submittal.
  - d. If changes are made by the CONTRACTOR (in addition to those requested by the ENGINEER) on the resubmitted shop drawings, such changes shall be clearly explained in a transmittal letter accompanying the resubmitted shop drawings.
6. The review of such shop drawings and catalog cuts by the ENGINEER shall not relieve the CONTRACTOR from responsibility for correctness of dimensions, fabrication details, coordination with other work, and space requirements, or for deviations from the Contract Drawings or Specifications, unless the CONTRACTOR has called attention to such deviations in writing by a letter accompanying the shop drawings and the ENGINEER approves the change or deviation in writing at the time of submission; nor

shall review by the ENGINEER relieve the CONTRACTOR from the responsibility for errors in the shop drawings.

7. The CONTRACTOR agrees that shop drawing submittals processed by the ENGINEER do not become Contract Documents and are not Change Orders; that the purpose of the shop drawing review is to establish a reporting procedure and to permit the ENGINEER to monitor the CONTRACTOR's progress and understanding of the design.

C. Shop Drawing Requirements: Shop drawings referred to herein shall include shop drawings, catalog cuts and information schematic diagrams, and other submittals for both shop and field-fabricated items. The CONTRACTOR shall submit, as applicable, the following for all prefabricated or manufactured structural items, material, and equipment:

1. General:

- a. For structures, submit all shop, setting, equipment, miscellaneous iron and reinforcement drawings and schedules necessary for construction. The foregoing shall include detailed "pour drawings" which shall show the sequence of concrete placement, and the type, quantity and location of all embedment items (sleeves, anchor bolts, door frames, etc.)
- b. For pipelines, submit a detailed layout of the pipeline with details of clearances for crossings, bends, closure pieces and fabricated specials and furnish any other details necessary.
- c. For trench excavation, submit detailed plan showing the design of shoring, bracing, sloping or other provisions necessary for safety.
- d. For boring and jacking, submit a detailed description of the process to be used.
- e. For equipment which requires electrical service, submit detailed information to show power supply requirements, MCC and control panel, elevations, wiring diagrams, control and protection schematics, shop test data, operation and maintenance procedures, outline drawings, and manufacturer's recommendation of the interface/interlock among the equipment.
- f. For mechanical equipment submit all data pertinent to the installation and maintenance of the equipment including shop drawings, anchorage requirements, manufacturer's recommended installation procedure, detailed installation drawings, test data and curves, operation and maintenance manuals, and other details necessary.
- g. For architectural fabrication submit all data pertinent to the installation of the fabrications, including shop drawings, manufacturer's recommended installation procedure, detailed installation drawings, and other details necessary.
- h. For shop drawings or equipment drawings, including dimensions, size, and location of connections to other work, and weight of equipment.
- i. Installation or placing drawings for equipment, drives, and bases.
- j. Supporting calculations for equipment and associated supports, or hangers required or specified to be designed by equipment manufacturers, including seismic restraint information and details.
- k. Complete coating manufacturer's specifications, including materials description and paint system.
- l. Performance data and head vs. flow curves for compressor and pumps.
- m. Suggested spare parts list with current price information.
- n. List of special tools required for checking, testing, parts replacement, and maintenance. (Special tools are those which have been specially designed or adapted for use on parts of the equipment, and which are not customarily and routinely carried by maintenance mechanics.)

---

01 33 03-6  
Submittal Procedures

Pump Station No. 26 Improvements

- o. List of special tools furnished with the equipment.
  - p. List of materials and supplies required for the equipment prior to and during startup.
  - q. Installation instructions.
  - r. List of materials and supplies furnished with the equipment.
  - s. Samples of finish colors for selection.
  - t. Special handling instructions.
  - u. Requirements for storage and protection prior to installation.
  - v. Requirements for routine maintenance required prior to plant startup.
  - w. Startup and operating instructions.
  - x. Seismic design calculations and restraint details for equipment and piping supports. Calculations shall be stamped by a Civil or Structural Engineer registered in the State of California.
- 2. Electrical:
    - a. Wiring and control diagrams of systems and equipment. Local control panel details.
    - b. List of special motor features being provided (e.g., space heaters, altitude corrections, thermal protectors, mounting arrangement, etc.).
    - c. Complete motor rating for all motors, including motor no-load, starting, and full-load current at rated voltage; full-load speed and full-load current at 110 percent voltage; motor service factor; motor efficiency and power factor at 1/2, 3/4, and full-load at rated voltage; recommended maximum kVAR of power factor correction capacitors when capacitors are switched with motor.
    - d. See Division 26, ELECTRICAL, for additional specific submittal requirements.
  - 3. Instrumentation and Control:
    - a. See Technical Sections for additional specific submittal requirements.
    - b. The submittals shall include satisfactory identification of items, units, and assemblies in relation to the Specification Section number, and the system or equipment identification or tag number shown on the Drawings, the Process and Instrumentation Diagram (P&ID), or as provided in applicable Specification Section.
- D. Submittals required for foreign-manufactured items:
- 1. In addition to the submittal requirements stated above, suppliers of foreign-manufactured items shall submit the names and addresses of companies within the United States that maintain technical service representatives and a complete inventory of spare parts and accessories for each foreign-made item proposed for incorporation into the work. Failure to provide the foregoing capabilities shall be just cause for rejection of the foreign-manufactured items.
- E. Final shop drawings to be submitted to CITY:
- 1. Complete sets of reproducible (full size mylar or vellum base) final shop drawings shall be submitted to the CITY before, or at the time of, delivery of equipment onto the site.
- F. Seismic loading design provisions:
- 1. All equipment supports that are not specifically detailed on the Drawings or specified herein shall be the responsibility of the equipment manufacturers and shall be designed by a Civil or Structural Engineer registered in the State of California.
  - 2. The design shall be in accordance with the seismic provisions of the latest edition of the 2016 edition of the California Building Code (CBC) and of the seismic design

requirements listed in Section 01 61 03, General Product Requirements, in addition to all other loading conditions.

G. Submittal of interface information (connection and correlation with other work):

1. Where called for in the Specifications, and as determined necessary by the ENGINEER to provide proper correlation with other equipment, complete interface information shall be submitted.
2. This interface information shall be accurate and contain all information necessary to allow the completion of detailed design and construction of the interfacing or connecting work.
3. The CONTRACTOR shall include in their negotiation for subcontract work, such agreements as may be necessary to ensure the accuracy of Subcontractor's interface submittal information.
4. In the event additional costs are incurred due to subsequent changes to information given in said interface information, such additional costs shall be borne by the CONTRACTOR.

H. Record Drawings

1. The CONTRACTOR shall deliver to the OWNER one complete set of final Record Drawings for OWNER records before the contract will be accepted by the OWNER. The Record Drawings will consist of a set of reproducible drawings of all CONTRACTOR supplied equipment (including control systems) and a marked-up set of Contract Record Drawings.
2. Record Drawings of CONTRACTOR-Supplied Equipment
  - a. Drawings shall be provided in electronic pdf form.
  - b. The overall dimensions of each drawing submitted to the ENGINEER shall be equal to one of the OWNER's standard sheet sizes. The title block area in the lower right hand corner of each drawing shall be clear of all linework, dimensions, details, and notes, except for the CONTRACTOR's title block. The dimensions of the title block area are minimum and are measured from the edges of the drawing sheet.

| DRAWING FORMAT                |                                    |
|-------------------------------|------------------------------------|
| Sheet Sizes<br>Height x Width | Title Block Area<br>Height x Width |
| 11" x 8-1/2"                  | 2-1/2" x 3-3/4"                    |
| 11" x 17"                     | 3" x 4"                            |
| 22" x 34"                     | 3-1/2" x 8"                        |

3. Contract Record Drawings

- a. The CONTRACTOR shall keep an up-to-date set of marked-up Contract Drawings on an OWNER-supplied set of Drawings.
- b. The OWNER-supplied set of Drawings will consist of one set of full-size sepia reproductions of the Contract Drawings, supplied to the CONTRACTOR at the start of the work.

---

01 33 03-8  
Submittal Procedures

Pump Station No. 26 Improvements

- c. During the progress of the work, the CONTRACTOR shall record on the Contract Record Drawings any changes from or additions to the work described in the Plans and Specifications.
- d. All information recorded on the Contract Record Drawings shall be clearly legible.
- e. Information to be recorded on the Contract Record Drawings shall include, but not be limited to, the following:
  - 1) Actual routing of electrical conduits, whose routing is only indicated in general on the Drawings.
  - 2) Actual location of manhole structures.
  - 3) Actual alignment of all installed pipe.
  - 4) Specific details of pipe connections, and manhole structures.
  - 5) Specific details on the installation and connection of mechanical and electrical equipment.
  - 6) Field dimensions where they differ from those shown on the Drawings.
  - 7) Additions to and/or deletions from the work, including all contract change orders.
  - 8) Other details showing as-built conditions, which are shown differently or only in general on the Drawings.
  - 9) Addenda.
  - 10) Location of buried features located during construction except utility service connections.
- f. It is the CONTRACTOR's responsibility to ensure that any changes, deletions, specific construction details, etc., performed by a Subcontractor are recorded on the Contract Record Drawings.
- g. Location Survey:
  - 1) The CONTRACTOR shall professionally survey the lateral and vertical position of anything buried underground as part of this Contract to within one inch accuracy of the benchmark and baseline provided by the OWNER.
  - 2) The survey information shall be included on the record drawings and the CONTRACTOR shall not be allowed to cover the buried materials until after the OWNER's inspector has verified the information as accurate and complete, and is shown on the record drawings.
- h. Once every month, starting from the completion of mobilization as defined in Section 01 71 13, Mobilization, the CONTRACTOR shall provide the OWNER with a copy of the then up-to-date set of marked-up Contract Record Drawings in accordance with the provisions under Section 01 29 03, Measurement and Payment, and Section 01 32 16, Project Schedule.
- i. At the end of the work, prior to Project Closeout, the CONTRACTOR shall provide the OWNER with the Contract Record Drawings, showing all "as-built" conditions.
- j. See also Section 01 77 03, Operational Completion and Project Closeout.

I.

I. Operation and Maintenance (O&M) Manuals:

- 1. The CONTRACTOR shall furnish five (5) hard-copies (if requested by the Owner at project completion) and two (2) electronic copies on USB drives of a complete instruction manual for installation, operation, maintenance, and lubrication requirements for each component of mechanical and electrical equipment or system.
- 2. All equipment manufacturers shall be made aware of these requirements and all associated costs shall be included in the costs for furnishing the equipment or system.

---

01 33 03-9  
Submittal Procedures

Pump Station No. 26 Improvements

3. O&M Submittal Review Checklist:
  - a. The CONTRACTOR shall include a completed O&M Manual Submittal Review Checklist (copy included at the end of this Section) with each O&M manual submittal.
  - b. The checklist shall indicate that the O&M manual as submitted complies in all respects to the contract requirements.
  - c. Any O&M manual submitted without a completed checklist will be rejected.
4. The manuals shall be furnished to the ENGINEER upon the delivery of the respective equipment.
5. No payment will be made for equipment or materials or equipment installation before the respective O&M manuals have been approved by the ENGINEER.
6. Each O&M manual shall be complete in all respects for all equipment, controls, accessories, and associated appurtenances.
7. Each O&M manual shall include, but not be limited to, the following:
  - a. Diagrams and illustrations, including pump curves indicating operating points.
  - b. Detailed description of the function of each principal component of the system.
  - c. Performance and nameplate data.
  - d. Installation instructions.
  - e. Starting procedure
  - f. Proper adjustment procedure.
  - g. Test procedures.
  - h. Operating procedure.
  - i. Shutdown instructions.
  - j. Emergency operating instructions and troubleshooting guide.
  - k. Safety instructions.
  - l. Maintenance and overhaul instructions which shall include detailed assembly drawings with part numbers, parts list, instructions for ordering spare parts, and complete preventive maintenance instructions required to ensure satisfactory performance and longevity of the equipment.
  - m. Lubrication instructions which shall list points to be greased or oiled, shall recommend type, grade, and temperature range of lubricants, and shall recommend frequency of lubrication.
  - n. List of electrical relay settings and control and alarm contact settings.
  - o. Electrical interconnection wiring diagram for equipment furnished, including all control and lighting systems.
  - p. Recommendations for spare parts and special tools.
8. Hard-Copy O&M Manuals:
  - a. Each copy of the manual shall be assembled in one or more hard-back type three-ring binders, each with title page, typed table of contents, and heavy section dividers with numbered plastic index tabs.
  - b. Cover label and title page shall be clearly labeled to designate the project title, project number, Specification Section where the item is specified, system or equipment for which it is intended with reference to the facility, equipment number, and equipment manufacturer name.
  - c. Typed table of contents for the entire set, identified by volume number, shall appear in each binder.
  - d. Each manual shall be divided into sections paralleling the equipment specifications.
  - e. All data shall be hole-punched for binding and composition and printing shall be arranged so that punching does not obliterate any data.

- f. Pages larger than 8-1/2" x 11" shall be folded, showing title block or optionally included in binder pockets.
    - g. Where more than one binder is required, they shall be labeled "Vol. 1", "Vol. 2", and so on.
    - h. Submit manual organization and format to the ENGINEER for approval prior to manual preparation.
  - 9. Electronic O&M Manuals:
    - a. In addition to the designated number of hard-copies for each required Manufacturer's O&M manual, provide an electronic copy, each on its own separate compact disc/s (CD-ROM).
    - b. The CD-ROM shall contain one full version of the O&M manual in Adobe's Portable Document File (PDF) format.
    - c. In addition, the CD-ROM shall contain the separate text and drawing files used to create the PDF O&M manual.
    - d. An index shall be provided on the CD-ROM as a separate text file with the name "index" and shall include the file name and detailed description of each individual file included on the CD-ROM.
    - e. The CD-ROM and the CD-ROM case shall be labeled with the Project title, Project number, Specification section, equipment number, equipment name, and equipment manufacturer name.
  - 10. Manuals shall be transmitted to the ENGINEER upon delivery of the equipment and all equipment shall be serviced in accordance with the manufacturer's recommendations prior to operation. A service record shall be maintained on each item of equipment and shall be delivered to the ENGINEER prior to final acceptance of the project.
- J. Manufacturers' certificates and proper installation:
- 1. The CONTRACTOR shall submit manufacturers' certificates of proper installation for items of equipment as specified under Section 01 75 06, Testing, Training and Startup.
- K. Samples and test specimens:
- 1. Where required in the Specifications, and as determined necessary by the ENGINEER, test specimens or samples of materials, appliances, and fittings to be used or offered for use in connection with the work shall be submitted to the ENGINEER at the CONTRACTOR's expense, with information as to their sources, with all cartage charges prepaid, and in such quantities and sizes as may be required for proper examination and tests to establish the quality or equality thereof, as applicable.
  - 2. All samples and test specimens shall be submitted in ample time to enable the ENGINEER to make any tests or examinations necessary, without delay to the work. The CONTRACTOR will be held responsible for any loss of time due to their neglect or failure to deliver the required samples to the ENGINEER, as specified.
  - 3. The CONTRACTOR shall submit additional samples as required by the ENGINEER to ensure equality with the original approved sample and/or for determination of Specification compliance.
  - 4. Laboratory tests and examinations that the OWNER elects to make in its own laboratory will be made at no cost to the CONTRACTOR, except that, if a sample of any material or equipment proposed for use by the CONTRACTOR fails to meet the Specifications, the cost of testing subsequent samples shall be borne by the CONTRACTOR.
  - 5. All tests required by the Specifications to be performed by an independent laboratory shall be made by a laboratory approved by the ENGINEER. Certified test results of all

---

01 33 03-11  
Submittal Procedures

Pump Station No. 26 Improvements

specified tests shall be submitted in duplicate to the ENGINEER. The samples furnished and the cost for the laboratory services shall be at the expense of the CONTRACTOR and included in the prices bid for the associated work.

6. Approved sample items (fixtures, hardware, etc.) may be incorporated into the work upon approval, and when no longer needed by the ENGINEER for reference.

L. Material and equipment colors:

1. The ENGINEER will provide a schedule of selected colors within 30 days after approval of materials and equipment, and after receiving samples of the manufacturers' standard colors for those items requiring OWNER's selection.

M. Certificates of Compliance:

1. A Certificate of Compliance shall be furnished for materials specified to a recognized standard or code prior to the use of any such materials in the work.
2. The ENGINEER may permit the use of certain materials or assemblies prior to sampling and testing if accompanied by a Certificate of Compliance.
3. The certificate shall be signed by the manufacturer of the material or the manufacturer of assembled materials and shall state that the materials involved comply in all respects with the requirements of the Specifications.
4. A Certificate of Compliance shall be furnished with each lot of material delivered to the work and the lot so certified shall be clearly identified in the certificate.

N. Quality Assurance

1. Source limitations: To the greatest extent possible for each unit of work, the CONTRACTOR shall provide products, materials, or equipment of a singular generic kind from a single source.
2. Compatibility of options:
  - a. Where more than one choice is available as options for CONTRACTOR's selection of a product, material, or equipment, the CONTRACTOR shall select an option which is compatible with other products, materials, or equipment already selected.
  - b. Compatibility is a basic general requirement of product/material selections.

O. Review by ENGINEER

1. After review by the ENGINEER of each of the CONTRACTOR's submissions, the material will be returned to the CONTRACTOR with actions defined as follows:
  - a. NO EXCEPTIONS TAKEN: Accepted subject to its compatibility with further submittals and additional partial submittals for portions of the work not covered in this submittal. Does not constitute approval or deletion of specified or required items not shown in the partial submittal.
  - b. MAKE CORRECTIONS NOTED: Same as 1.a., except that minor corrections as noted shall be made by the CONTRACTOR.
  - c. REVISE AND RESUBMIT: Rejected because of major inconsistencies or errors which shall be resolved or corrected by the CONTRACTOR prior to subsequent review by the ENGINEER.
  - d. REJECTED - RESUBMIT: Submitted material does not conform to Plans and Specifications in major respect, e.g., wrong item, wrong size, model, capacity, or material.
2. Review actions (a) and (b) above constitute acceptance by the ENGINEER of the submittal.

P. Requests for Information

---

01 33 03-12  
Submittal Procedures

Pump Station No. 26 Improvements

1. Requests for Information about the Contract Documents shall be directed by the CONTRACTOR to the ENGINEER using a Request for Information (RFI) form as agreed to by the OWNER and the ENGINEER. Such requests shall not be transmitted directly to the ENGINEER from a Subcontractor or Supplier.
  2. A separate form shall be used for each specific item for which information is required. Requests for Information for more than one item using a single RFI form will be permitted only when the items are so functionally related that expediency indicates review of the group of items as a whole.
  3. The ENGINEER will reply to the CONTRACTOR's Request for Information as soon thereafter as practicable.
- Q. Construction Photographs
1. Provide photographs showing the preconstruction site, construction progress, and the post-construction site.
  2. Format: Photographs shall be digital format
    - a. Digital Format:
      - 1) Digital photos shall be taken with a minimum 3.5 mega pixel density and provided in JPG format.
      - 2) Digital photo files shall be provide on a CD accompanied by a text file that lists the file name, date photo was taken, and brief description of the photograph and location where the photograph was taken.
  3. Take a minimum of 50 photos of the preconstruction site and the property adjacent to the perimeter of the construction site. Particular emphasis shall be directed to structures both inside and outside the site, or as directed by OWNER.
  4. Take a minimum of 72 photos monthly showing the progress of construction. The location of these photographs shall be determined by OWNER.
  5. Take a minimum of 50 photos of the post-construction site and the property adjacent to the perimeter of the site. Particular emphasis shall be directed to structures both inside and outside the plant boundary, or as indicated by OWNER.

## SECTION 01 42 03

### REFERENCE STANDARDS AND ABBREVIATIONS

#### **PART 1 - GENERAL**

##### **1.1 REFERENCE STANDARDS**

- A. The standards referred to, except as modified, shall have full force and effect as though printed in this Specification, and shall be the latest edition or revision thereof in effect on the bid opening date, unless a particular edition or issue is indicated. Copies of these standards are not available from the CITY.
- B. The ENGINEER will furnish, upon request, information as to how copies may be obtained.
- C. Abbreviations and terms, or pronouns in place of them, shall be interpreted as follows:

|         |                                                                                                                                                                             |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AAMA:   | Architectural Aluminum Manufacturer's Association                                                                                                                           |
| AAN:    | American Association of Nurserymen                                                                                                                                          |
| AAR:    | Association of American Railroads                                                                                                                                           |
| AASHTO: | American Association of State Highway and Transportation Officials, Standard Specifications                                                                                 |
| AATCC:  | American Association of Textile Chemists and Colorists                                                                                                                      |
| ACI:    | American Concrete Institute, Standards                                                                                                                                      |
| AFBMA:  | Anti-Friction Bearing Manufacturer's Association, Inc.                                                                                                                      |
| AGA:    | American Gas Association                                                                                                                                                    |
| AGC:    | Associated General Contractors                                                                                                                                              |

## **SECTION 01 45 03**

### **QUALITY CONTROL**

#### **PART 1 - GENERAL**

##### **1.1 OBSERVATION AND SUPERVISION**

- A. The ENGINEER or ENGINEER's appointed representative will review the Work and the CONTRACTOR shall provide facilities and access to the Work at all times as required to facilitate this review.
- B. Responsibility:
  - 1. The CONTRACTOR shall be solely responsible to supervise and direct the entire Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to complete the Work in accordance with the Contract Documents.
  - 2. The CONTRACTOR shall be solely responsible for the means, methods, techniques, sequences, quality control, and procedures of construction and safety precautions and programs incidental thereto.
  - 3. The foregoing includes work performed by the CONTRACTOR's Subcontractors.
  - 4. The CONTRACTOR shall be responsible to see that the finished Work complies accurately with the Contract Documents.
  - 5. CONTRACTOR shall be responsible for maintaining a complete hardcopy set of all project documents at the site at all times. Project documents shall include but are not limited to all drawings, specifications, submittals, requests for information (RFI), requests for change (RFC), change orders, and up to date project record drawings.
  - 6. Project documents as described above shall be onsite and available for CITY or ENGINEER review at all times. Failure to maintain or make project documents available will result in the stoppage of work. Schedule and cost changes resulting from stoppage of work are the responsibility of the CONTRACTOR.
- C. Superintendent:
  - 1. The CONTRACTOR shall designate in writing and submit for ENGINEER's approval a technically qualified, English-speaking superintendent, who shall be onsite and responsible for the work, and who shall not be replaced without written acceptance of the ENGINEER.
  - 2. The superintendent shall be the CONTRACTOR's representative at the job site and shall have authority to act on behalf of the CONTRACTOR.
  - 3. All communications given to the superintendent shall be as binding as if given to the CONTRACTOR.
  - 4. The CONTRACTOR's superintendent shall be present at the site of the Work at all times while work is in progress. Failure to observe this requirement shall be considered as suspension of the Work by the CONTRACTOR until such time as such superintendent is again present at the site.
  - 5. CONTRACTOR's superintendent shall be responsible for maintaining a complete hardcopy set of all project documents.

Quality Control

Pump Station No. 26 Improvements

## 1.2 RESPONSIBILITY

- A. The CONTRACTOR is responsible for conducting all testing and inspection specifically required by the Specifications and otherwise necessary to ensure compliance with the Contract Documents.
  - 1. Approval of Testing Laboratories and Geotechnical Consultants:
    - a. All laboratory work under this contract shall be performed by a laboratory approved by the ENGINEER, whether the laboratory is employed by the CONTRACTOR, or is owned and operated by the CONTRACTOR.
    - b. The basis of approval includes the following:
      - 1) Testing laboratories performing work in connection with concrete, steel, and bituminous materials shall comply with ASTM E329 and ASTM D3666, respectively.
      - 2) Testing laboratories performing work not in connection with concrete, steel, bituminous materials, soils and non-destructive testing shall comply with ASTM E548.
- B. The ENGINEER may conduct periodic independent testing and inspection to verify compliance with the Contract Documents.
- C. Retesting:
  - 1. The CITY reserves the right to back-charge the CONTRACTOR for retesting of deficient or defective work or products upon written notification.
  - 2. Compensation for retesting on behalf of the CITY will be made through deductions from the Progress Payments.
- D. The CONTRACTOR is responsible for correcting all defective work discovered prior to final acceptance of the Contract, despite the failure of the Inspector(s) to discover it.

## 1.3 TESTS AND INSPECTIONS

- A. The CONTRACTOR shall be responsible for scheduling all inspections and tests required.
  - 1. The ENGINEER shall be given a minimum 48 business hours notice prior to any inspections or tests.
- B. With the exception of the special inspections noted above to be paid for by the CITY; the CONTRACTOR shall pay for all tests, inspections and special inspections including, but not limited to:
  - 1. Standard inspections and tests necessary to comply with laws, ordinances, rules, regulations and orders of public authorities pursuant to General Conditions.
  - 2. Concrete and CLSM compressive strength tests for trial batch mix designs.
  - 3. Tests of materials, inspections, and certifications required by the Specifications.
  - 4. Testing, adjusting, and balancing of equipment and systems required by the Specifications.
  - 5. One tension and elongation test for each 5 tons of steel or fractional part thereof for each size will be required, unless the steel can be identified by heat or melt numbers and is accompanied by mill analysis and test reports. Commercial stock may be used, subject to approval of the ENGINEER.
  - 6. Any testing performed by the CONTRACTOR for their own quality control.
  - 7. All compaction testing, moisture testing, field testing of CLSM for backfill placement, geotechnical observations, and all certifications necessary to comply with the specifications.

---

01 45 03-2  
Quality Control

Pump Station No. 26 Improvements

8. Retests or re-inspections by the CITY, if required, and tests or inspections required due to CONTRACTOR error or lack of required identifications of material.
  9. Any and all water used by the CONTRACTOR in any testing.
- C. The CONTRACTOR shall be responsible for scheduling all tests and inspections pertaining to soils which includes all items covered by 31 05 03 Earthwork. CONTRACTOR shall hire a third party accredited laboratory and geotechnical consultant for approval by CITY a minimum of 30 days in advance of using the laboratory or geotechnical consultant.
- D. Two copies of the agency or laboratory report of each test or inspection shall be provided to the ENGINEER. All tests of materials shall be made in accordance with the commonly recognized standards of national technical organizations, and such other special methods and tests as are prescribed in the Contract Documents. Hardcopies of soils testing daily reports shall be provided to the ENGINEER before close of business the day tests are completed.
- E. Purchase Orders:
1. One copy of each of the CONTRACTOR's purchase orders for materials forming a portion of the work shall be furnished to the ENGINEER, if requested.
  2. Each such purchase order shall contain a statement that the materials included in the order are subject to inspection by the CITY.
  3. Materials purchased locally will be inspected at the point of manufacture or supply, and materials supplied from points more than 50 miles from the job site will be inspected upon arrival at the job, except when other inspection requirements are provided for specific materials in other Sections of this Specification.
- F. Samples:
1. The CONTRACTOR shall furnish samples of materials as are required by the ENGINEER, without charge.
  2. No material shall be used until the ENGINEER has had the opportunity to test or examine such materials.
  3. Samples will be secured and tested whenever necessary to determine the quality of the material.
  4. Samples and test specimens prepared at the job site, such as concrete test cylinders, shall be taken or prepared by the ENGINEER in the presence and with the assistance of the CONTRACTOR.

#### 1.4 AUTHORITY AND DUTIES OF INSPECTOR

- A. Inspectors employed by the CITY shall be authorized to inspect all work done and materials and equipment furnished to complement the CONTRACTOR furnished independent inspector.
1. Such inspection may extend to all or any part of the Work, and to the preparation, fabrication, or manufacture of the materials and equipment to be used.
  2. The Inspector will not alter or waive the provisions of the Contract Documents.
  3. The Inspector will keep the ENGINEER informed as to the progress of the work and the manner in which it is being done.
  4. The Inspector will call the CONTRACTOR's attention to nonconformance with the Contract Documents that the Inspector may have observed.
  5. The Inspector will not be responsible for the adequacy or correctness of the CONTRACTOR's means, methods, techniques, sequences, or procedures for construction.

---

01 45 03-3  
Quality Control

Pump Station No. 26 Improvements

6. The Inspector will not approve or accept any portion of the work, issue instructions contrary to the Contract Documents, or act as foreman for the CONTRACTOR.
7. The Inspector may reject defective materials, equipment, or work when it is not in compliance with the Contract Documents.
8. The Inspector will not be responsible for:
  - a. The CONTRACTOR's quality control program.
  - b. The CONTRACTOR's safety program.
  - c. Coordinating the work or activities of the CONTRACTOR or their Subcontractor.

## **SECTION 01 51 03**

### **TEMPORARY CONSTRUCTION FACILITIES AND UTILITIES**

#### **PART 1 - GENERAL**

##### **1.1 CONTRACTOR'S STAGING AREA AND WORK ACCESS PLAN**

- A. The CONTRACTOR shall limit the location of the storage of equipment and materials to the staging area(s) designated on the Drawings and as directed by the ENGINEER.
- B. The CONTRACTOR shall make their own arrangements for additional space that may be required and shall bear all associated costs.
- C. Work Access Plan: The CONTRACTOR shall submit a work access plan showing the planned access route for deliveries of supplies and mobilization of work force for ENGINEER's approval prior to mobilization.
- D. On-Site Project Office:
  - 1. The CONTRACTOR shall maintain near the work in progress a suitable office or other protected area in which shall be kept project copies of the Contract Documents, project progress records, project schedule, shop drawings and other relevant documents which shall be accessible to the OWNER and ENGINEER during normal working hours.
  - 2. The CONTRACTOR shall make their own arrangements for additional space that may be required and bear all associated costs.
- E. Temporary Facilities Plan:
  - 1. The CONTRACTOR shall submit to the ENGINEER for approval, as part of the mobilization effort, the proposed plan and layout for all temporary offices, sanitary facilities, temporary construction roads, storage buildings, storage yards, temporary water service and distribution, temporary telephone and temporary power service and distribution.
  - 2. The plan shall show all temporary fencing and gates and all proposed access to the work areas.
  - 3. Prior to the removal of existing fence, the CONTRACTOR shall provide temporary security fencing at least equal to the existing chain link and barbed wire fencing to protect the existing facilities and structures.
- F. Access Roads:
  - 1. The CONTRACTOR shall "winterize" and maintain all access roads at all times to provide a driving surface satisfactory for 2-wheel drive low clearance vehicular traffic.
  - 2. The roads shall be gravel surfaced, smooth, and free from humps and depressions.
  - 3. Contractor shall perform dust control on all access roads.
  - 4. All costs of complying with this requirement shall be included in the lump sum bid.

##### **1.2 STORAGE - GENERAL**

- A. The CONTRACTOR shall provide any temporary storage required for the protection of equipment and materials as recommended by manufacturers of such materials.

---

01 51 03-1

Temporary Construction Facilities and Utilities

Pump Station No. 26 Improvements

### 1.3 STORAGE BUILDINGS

- A. The CONTRACTOR shall erect or provide temporary storage buildings of the various sizes as required for the protection of mechanical and electrical equipment and materials as recommended by manufacturers of such equipment and materials.
- B. The buildings shall be provided with such environmental control systems that meet recommendations of manufacturers of all equipment and materials stored in the buildings.
- C. The buildings shall be of sufficient size and so arranged or partitioned to provide security for their contents and provide ready access for inspection and inventory.
- D. At or near the completion of the work, and as directed by the ENGINEER, the temporary storage buildings shall be dismantled, removed from the site, and remain the property of the CONTRACTOR.
- E. Combustible materials (paints, solvents, fuels, etc.) shall be safely stored and separated in accordance with the manufacturer's requirements and in compliance with hazardous material storage requirements. CONTRACTOR shall be responsible for providing proper storage buildings for combustible materials.

### 1.4 STORAGE YARDS

- A. The CONTRACTOR shall provide temporary storage yards as required for the storage of materials that are not subject to damage by weather conditions.
- B. Materials such as pipe, reinforcing and structural steel, shall be stored on pallets or racks, off the ground, and stored in a manner to allow ready access for inspection and inventory.
- C. Temporary gravel surfacing of the storage yards shall meet with the approval of the ENGINEER.

### 1.5 PARKING AREAS

- A. Control vehicular parking to preclude interference with public traffic or parking, access by emergency vehicles, CITY's operations, or construction operations.

### 1.6 VEHICULAR TRAFFIC

- A. Comply with Laws and Regulations regarding closing or restricting use of public streets or highways. No public or private road shall be closed, except by written permission of proper authority. Assure the least possible obstruction to traffic and normal commercial pursuits.
- B. Conduct the Work to interfere as little as possible with public travel, whether vehicular or pedestrian.
- C. Whenever it is necessary to cross, close, or obstruct roads, driveways, and walks, whether public or private, provide and maintain suitable and safe bridges, detours, or other temporary expedients for accommodation of public and private travel.

Temporary Construction Facilities and Utilities

Pump Station No. 26 Improvements

## 1.7 DELIVERY-STORAGE-HANDLING

### A. General:

1. The CONTRACTOR shall deliver, handle, and store materials and equipment in accordance with supplier's written recommendations and by methods and means which will prevent damage, deterioration, and loss including theft.
2. Delivery schedules shall be controlled to minimize long-term storage at the site and overcrowding of construction spaces.
3. In particular, the CONTRACTOR shall provide delivery/installation coordination to ensure minimum holding or storage for material or equipment recognized to be flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other sources of loss.

### B. Transportation and Handling:

1. Materials and equipment shall be transported by methods to avoid damage and shall be delivered in dry, undamaged condition in supplier's unopened containers or packaging.
2. The CONTRACTOR shall provide equipment and personnel to handle the materials, and equipment by methods that will prevent soiling and damage.
3. The CONTRACTOR shall provide additional protection during handling to prevent marring and otherwise damaging packaging, and surrounding surfaces.

### C. Storage and Protection:

1. Materials and equipment shall be stored in accordance with supplier's written instructions, with seals and labels intact and legible. Exposed metal surfaces of valves, fittings and similar materials shall be coated with grease in accordance with manufacturer's recommendations to prevent corrosion. Sensitive materials and equipment shall be stored in weather-tight enclosures and temperature and humidity ranges shall be maintained within tolerances required by supplier's written instructions.
2. For exterior storage of fabricated materials, they shall be placed on sloped support above ground. Materials or equipment subject to deterioration shall be covered with impervious sheet covering; ventilation shall be provided to avoid condensation.
3. Loose granular materials shall be stored on solid surfaces in a well-drained area and shall be prevented from mixing with foreign matter.
4. Inspection:
  - a. Storage shall be arranged to provide access for inspection.
  - b. The CONTRACTOR shall periodically inspect to assure materials and equipment are undamaged and are maintained under required conditions.
5. Storage shall be arranged in a manner to provide access for maintenance of stored items.

## 1.8 PROJECT SECURITY

- A. The CONTRACTOR shall make adequate provision for the protection of the work area against fire, theft and vandalism, and for the protection of the public and CITY personnel against exposure to injury, and for the security of any off-site storage areas.
- B. All costs for this protection shall be included within the CONTRACTOR's bid.

---

01 51 03-3

Temporary Construction Facilities and Utilities

Pump Station No. 26 Improvements

### 1.9 TEMPORARY UTILITIES

- A. The CONTRACTOR shall provide and pay for all necessary temporary telephones, fuel, power, potable water, sanitary, and proper toilet accommodations. CONTRACTOR shall not use CITY-owned utilities except for potable water. CITY will work with CONTRACTOR to provide potable water free of charge. The CONTRACTOR, however, shall be required to furnish and lay such pipe and/or provide such other means as may be necessary and/or incidental to the delivery of water at such point or points of use and at such pressure as may be necessary. No additional compensation will be made therefore. Contractor shall not use quick acting valves which might create surges.
- B. The temporary facilities to be provided by the CONTRACTOR as described above shall conform to all requirements in regard to operation, safety, and fire hazards of State and local authorities and of Underwriters.
- C. CONTRACTOR shall return the site and facilities to their original "pre-construction" condition, unless otherwise specified in the Contract Documents, at the completion of the project.

### 1.10 SOUND CONTROL

- A. The CONTRACTOR shall comply with all local sound control and noise level rules, regulations and ordinances which apply to any work performed pursuant to the contract.
- B. Each internal combustion engine, used for any purpose on the job or related to the job, shall be equipped with a muffler of a type recommended by the manufacturer, so as to produce a maximum noise level of 85 dBA at 5 feet.
- C. No internal combustion engine shall be operated on the project without said muffler.
- D. Special Precautions for Inhabited Areas:
  - 1. In inhabited areas, particularly residential, operations shall be performed in a manner to minimize unnecessary noise generation.
  - 2. In residential areas, special measures shall be taken to suppress noise generated by repair and service activities during the night hours.

### 1.11 DUST/AIR POLLUTION CONTROL

- A. The CONTRACTOR shall comply with all Federal, State and local regulatory requirements with respect to air pollution prevention.
- B. The CONTRACTOR shall take whatever steps, procedures, or means as are required to prevent dust conditions being caused by operations in connection with the execution of the Work; and on any road which the CONTRACTOR or any of their Subcontractors are using, excavation or fill areas, demolition operations, or other activities.
- C. Control shall be by sprinkling, use of dust palliatives, modification of operations, or any other means acceptable to agencies having jurisdiction.
- D. Damage to personal property, etc., resulting from the CONTRACTOR's construction operations shall be borne by the CONTRACTOR at no cost to the CITY.

---

01 51 03-4

Temporary Construction Facilities and Utilities

Pump Station No. 26 Improvements

- E. The CONTRACTOR shall keep the streets and work area clean at all times by means of mechanical sweepers or hand sweeping. Water will be used for dust control only, and not for cleaning streets.
- F. Burning of waste, rubbish, or other debris will not be permitted on or adjacent to site.

#### 1.12 WASTE DISPOSAL

- A. The CONTRACTOR shall dispose of surplus materials, waste products, and debris and shall make necessary arrangements for such disposal. The CONTRACTOR shall obtain written permission from property owner prior to disposing surplus materials, waste products, or debris on private property.
- B. All waste disposal shall be done in accordance with applicable laws and regulations.
- C. Landfill Disposal:
  - 1. If the CONTRACTOR proposes to dispose of construction debris, trench spoils, excavation spoils, etc., at a landfill, the CONTRACTOR shall be responsible to provide and pay for all permits and analyses required by the landfill.
  - 2. If the analyses determine that the material is hazardous, then an equitable adjustment of the Contract for the cost of hazardous waste disposal will be made in accordance with the General Conditions, and the following:
    - a. Time extension or contract costs will not be granted for delays that could have been avoided by the CONTRACTOR redirecting their forces and equipment to perform other work on the contract.
- D. Ditches, washes, or drainageways shall not be filled.
- E. Disposal operations shall not create unsightly or unsanitary nuisances.
- F. The CONTRACTOR shall maintain the disposal site in a condition of good appearance and safety during the construction period.
- G. Prior to final acceptance of the work, the CONTRACTOR shall have completed the leveling and cleanup of the disposal site.

#### 1.13 CLEAN UP

- A. Throughout the period of construction, the CONTRACTOR shall keep the work site free and clean of all rubbish and debris, and shall promptly remove from the site, or from property adjacent to the site of the work, all unused and rejected materials, surplus earth, concrete, plaster, and debris.
- B. Upon completion of the work, and prior to final acceptance, the CONTRACTOR shall remove from the vicinity of the work all plant, surplus material, and equipment belonging to the CONTRACTOR or used under their direction during construction.

#### 1.14 TEMPORARY ENCLOSURES

- A. When sandblasting, spray painting, spraying of insulation, or other activities inconveniencing or dangerous to property or the health of employees, the public or

construction workers, are in progress, the area of activity shall be enclosed adequately to contain the dust, over spray, or other hazard.

- B. In the event there are no permanent enclosures of the area, or such enclosures are incomplete or inadequate, the CONTRACTOR shall provide suitable temporary enclosures as required by the ENGINEER to meet field conditions in accordance with the recommendations of the owner-furnished equipment supplier (if applicable) and the CONTRACTOR's equipment supplier requirements.
- C. Said temporary or permanent enclosures shall be adequately ventilated to ensure the safety of the workers.

#### 1.15 DRAINAGE

- A. The CONTRACTOR shall take all necessary actions as required to meet discharge requirements of the State of California and other pertinent local ordinances and regulations pertaining to dewatering and/or site drainage discharged into storm drains and creeks. This may include, but may not be limited to, the use of retention basins and silt basins to settle most of the solids prior to discharge.
- B. In excavation, fill, and grading operations, care shall be taken to disturb the pre-existing drainage pattern as little as possible.
- C. Particular care shall be taken not to direct drainage water onto private property or into streets or drainageways inadequate for the increased flow.
- D. Drainage means shall be provided to protect the work.

#### 1.16 TEMPORARY LIGHTING

- A. The CONTRACTOR shall provide temporary lighting in all work areas sufficient to maintain a lighting level during working hours not less than the lighting level required by OSHA standards.

#### 1.17 CONSTRUCTION FACILITIES

- A. Construction hoists, elevators, scaffolds, stages, shoring, and similar temporary facilities shall be of ample size and capacity to adequately support and move the loads to which they will be subjected. Railings, enclosures, safety devices, and controls required by law or for adequate protection of life and property shall be provided.
- B. Temporary supports shall be designed with an adequate safety factor to assure adequate load bearing capability. Whenever required by safety regulations, the CONTRACTOR shall submit design calculations for staging and shoring prior to application of loads.

#### 1.18 REMOVAL OF TEMPORARY FACILITIES AND UTILITIES

- A. At such time or times as any temporary construction facilities and utilities are no longer required for the Work, the CONTRACTOR shall notify the ENGINEER of their intent and schedule for removal of the temporary facilities and utilities, and obtain the ENGINEER's approval before removing the same.

---

01 51 03-6

Temporary Construction Facilities and Utilities

Pump Station No. 26 Improvements

- B. As approved, the CONTRACTOR shall remove the temporary facilities and utilities from the site as CONTRACTOR's property and leave the site in such condition as specified, as directed by the ENGINEER, and/or as shown on the Drawings.
- C. In unfinished areas, such as planted medians, the condition of the site shall be left in a condition that will restore original drainage, evenly graded, seeded or planted as necessary, and left with an appearance equal to, or better than original.

Temporary Construction Facilities and Utilities

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **SECTION 01 57 03**

### **SEWER BYPASS PUMPING**

#### **PART 1 - GENERAL**

##### **1.1 GENERAL**

- A. Scope: This Section covers temporary bypass pumping requirements, required of the CONTRACTOR, that shall apply during construction, including but not limited to furnishing all materials, labor, equipment, power, maintenance, etc. to implement a temporary pumping system for the purpose of diverting the existing sanitary sewer flow around the work area for the duration necessary to complete the work.
- B. The CONTRACTOR shall inform all Subcontractors and manufacturers of the requirements herein and include the required services in their costs for the work specified in these Contract Documents.
- C. The design, installation and successful operation of the temporary pumping system shall be the CONTRACTOR's responsibility. The bypass system shall meet the requirements of all codes and regulatory agencies having jurisdiction.
- D. The bypass system shall be designed, installed and operated by the CONTRACTOR to prevent any and all leakage or discharge of sewage to the environment. If a sewage leak or discharge occurs, CONTRACTOR shall be solely responsible for the remedy of the leak, containment and clean-up of the discharge, as well as responsible for any direct or consequential damages, including fines, that are associated with the leak.
- E. Scheduling:
  - 1. Temporary bypass pumping is requisite to satisfactory completion of the Contract and, therefore, shall be completed within the contract time.
  - 2. All temporary bypass pumping activities shall be realistically allowed for and shown on the CONTRACTOR's Construction Schedule.
  - 3. Schedule and perform work in a manner that does not cause or contribute to sanitary sewer overflows, releases or spills of sewage from surrounding collection system or bypass system.
  - 4. All temporary bypass pumping shall be scheduled in conformance with the restrictions specified in Section 01 14 03, Special Project Constraints.

##### **1.2 SUBMITTALS**

- A. Temporary Bypass Pumping Plan:
  - 1. Not less than 1 month prior to CONTRACTOR's intended start of temporary bypass pumping, the CONTRACTOR shall submit a detailed Temporary Bypass Pumping Plan for each of the pipeline segment replacements and pump station improvements that require bypass pumping per the Drawings to the ENGINEER for review.

---

01 57 03-1

Sewer Bypass Pumping

Pump Station No. 26 Improvements

2. Temporary Bypass Pumping shall not commence without written approval of the plan from the ENGINEER.
3. The Temporary Bypass Pumping Plan (for each separate area of work) shall include:
  - a. Detailed description of the Temporary Bypass Pumping Plan, including a drawing identifying suction manholes, suction piping, high-level alarm float switch locations/elevations, pumps, discharge piping, and discharge connection details.
  - b. Description of sewer plugging method and types and location of plugs.
  - c. Number, size, material, location and method of installation of suction piping.
  - d. Number, size, material, location and method of installation of discharge piping
  - e. Bypass pump information, including make, model, size, curves with operating range clearly delineated, number of each size to be on site and power requirements.
  - f. Description of backup pump, power and piping equipment.
  - g. Calculations for static lift, flow velocity, friction and fittings losses.
  - h. Power generator size, location, fueling plan.
  - i. Method of protecting discharge manholes or structures from erosion and damage.
  - j. Thrust and restraint block sizes and locations.
  - k. Any temporary pipe supports and anchoring required.
  - l. Method of crossing streets while maintaining traffic flow requirements.
  - m. Schedule for installation and maintenance of bypass pumps and piping.
  - n. Startup, leakage and pressure testing plan:
    - 1) Testing shall be conducted using clean water
    - 2) ENGINEER shall be notified a minimum of 24 hours prior to testing.
  - o. Identification of any coordination required with the CITY's staff.
  - p. Plan for monitoring upstream manholes for backup impacts.
  - q. Procedures for setup and breakdown of pumping operations.
  - r. System Monitoring Plan
  - s. Emergency Response Procedures:
    - 1) Provide detailed emergency procedures to be followed in event of pump failures, sewer overflows, service backups, and sewage spillage.
    - 2) Maintain copy of emergency procedures on site for duration of project.
    - 3) Include emergency contact numbers for CITY and CONTRACTOR personnel.
    - 4) Provide emergency contact hierarchy for day and night operations.
    - 5) Provide spill reporting procedures.
    - 6) List all containment and clean up equipment and supplies to be on site and available at all times.
    - 7) Provide detailed procedures for spill containment and cleanup.
  - t. Proposed use of vacuor trucks
  - u. Valve/piping system plan for removable bypass piping sections

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. All bypass piping shall be fusion bonded High Density Polyethylene.

---

01 57 03-2

Sewer Bypass Pumping

Pump Station No. 26 Improvements

- B. Discharge piping diameter: velocity not to exceed 5 feet per second
- C. Suction piping diameter: Determined according to pump size, flow calculations, and manhole depth following manufacturer's specifications and recommendations.
- D. High-Density Polyethylene (HDPE) Pipe:
  - 1. High density solid wall and following ASTM F714 Polyethylene (PE) Plastic Pipe (SDR-DR) based on Outside Diameter, ASTM D1248 and ASTM D3550.
  - 2. Homogenous throughout, free of visible cracks, discoloration, pitting, varying wall thickness, holes, foreign material, blisters, or other deleterious faults.
  - 3. Defective areas of pipe: Cut out and joint fused as stated herein.
  - 4. Assembled and joined at site using couplings, flanges or butt-fusion method to provide leak proof joint. Follow manufacturer's instructions and ASTM D 2657. Threaded or solvent joints and connections will not be permitted.
    - a. Fusing: By personnel certified as fusion technicians by manufacturer of HDPE pipe and/or fusing equipment.
    - b. Butt-fused joint: True alignment and uniform roll-back beads resulting from use of proper temperature and pressure.
    - c. Allow adequate cooling time before removal of pressure.
    - d. Watertight and have tensile strength equal to that of pipe.
  - 5. Flexible Hoses and Associated Couplings and Connectors:
    - a. Abrasion resistant.
    - b. Suitable for intended service.
    - c. Rated for external and internal loads anticipated, including test pressure.
      - 1) External loading design: Incorporate anticipated traffic loadings, including traffic impact loading.
    - d. When subject to traffic loading, compose system, such as traffic ramps or covers.
      - 1) Install system and maintain HS-20-44 loading requirements while in use or as directed by the ENGINEER.
- E. Valves and Fittings:
  - 1. Provide all valves and fittings necessary to operate the Bypass Pumping System and to enable quick adjustments or modifications to the system, such as pump switchover.
  - 2. Selection shall be appropriate for raw municipal wastewater and shall be based on flow calculations and system operating pressures.
  - 3. At minimum, the following valves shall be provided:
    - a. Check valves on the discharge of each pump
    - b. Isolation valves that enable either the duty or the standby pump to be brought online or taken offline without delay.
  - 4. Cam Lock or quick release fittings shall not be allowed.
  - 5. Where a removable bypass piping section is proposed, CONTRACTOR shall provide valve/piping system to allow for removal of bypass piping section in intersection of roadway. CONTRACTOR shall submit a plan for the valve/piping system and gain approval from ENGINEER/CITY prior to implementation.
- F. Plugs: Selected and installed according to size of line to be plugged, pipe and manhole configurations, and based on specific site.

---

01 57 03-3

Sewer Bypass Pumping

Pump Station No. 26 Improvements

1. Plugs shall be inspected for defects prior to use
  2. Provide redundant plugs available in the event a plug fails
- G. Aluminum irrigation piping or glued PVC piping will not be permitted.
- H. Discharge hose will only be allowed in short sections when approved by ENGINEER.

## 2.2 EQUIPMENT

- A. Pumps: Provide fully automatic self-priming units that do not require foot-valves or vacuum pumps for priming.
1. Leak proof design.
  2. Capable of passing minimum 2" diameter solids.
  3. Pumps shall have minimum 4" suction and discharge connections.
  4. Electric or diesel powered. CONTRACTOR shall provide generator if electric powered, no electric service shall be assumed to be available at the work sites.
  5. Able to run dry without damage.
  6. Provide start/stop controls for each pump, complete with visual and auditory alarming systems.
  7. Provide a high-level alarm float switch near the suction of the bypass pumping system that when activated will indicate the pumping system is not keeping pace with influent sewage flows.
  8. Provide noise attenuation system for pumps producing noise louder than 60 dBA at 30 feet from pump. Provide similar noise attenuation for all generators used.
  9. Bypass System Capacity:  
Bypass system shall have sufficient capacity to pump the peak anticipated sewer flows at each bypass point. Peak anticipated sewer flows at each bypass point are as follows: 350 gpm maximum if work is done prior to PS 26 pump installation; 900 gpm maximum if work is done after PS 26 pump installation.
    - 1) Work Zone 1: Existing 10" line (parallel to Sierra College Boulevard)
    - 2) Work Zone 2: Existing 8" line (parallel to Sierra College Boulevard)
    - 3) Work Zone 3: Existing 8" line (intersection of East Roseville Parkway and Sierra College Boulevard)
    - 4) Work Zone 4: Existing 10" line (parallel to Sierra College Boulevard)
    - 5) Work Zone 5: Existing 10" line (parallel to Sierra College Boulevard)
    - 6) PS #26:
      - a) Existing 10" line (perpendicular to Sierra College Boulevard)
      - b) Removal and replacement of existing pumps
  10. Standby Equipment:
    - a. Provide a minimum of one full capacity standby pump for each size maintained on site. A minimum of one standby pump shall be provided for up to two duty pumps and a minimum of two standby pumps shall be provided for three or more duty pumps.
    - b. Standby pump shall be maintained online, isolated from duty pump by a valve.
    - c. A sufficient number of valves, tees, elbows, connections, tools, piping, and other parts of the system hardware for the different pipe sizes as needed, shall be on site and readily available to ensure immediate repair or modifications of any part of the system as necessary.

---

01 57 03-4

Sewer Bypass Pumping

Pump Station No. 26 Improvements

- d. If the pumps are electrical, a standby generator shall be provided on site at all times.

### **PART 3 - EXECUTION**

#### **3.1 GENERAL**

- A. Raw sewage is prohibited from entering any drain inlets, storm drain manholes, or other outlets that flow into a stream, creek, river, or other waterway. Raw sewage shall not leave the sewer collection system.
- B. Bypass pumping and/or diversion shall be provided as required for acceptable completion of the sewer mainline replacement via open cut and pipe bursting methods as well as the improvements to City of Roseville Pump Station #26.
- C. Bypass pumping shall be done in such a manner as not to damage public or private property or create a nuisance or health menace.
- D. Bypass pumping shall adhere to CITY easement boundaries and encroachment permits.
- E. The CONTRACTOR shall be liable for all cleanup, damage, and/or resultant fines in the event of a sewage spill. After the Work is completed, flow shall be returned to the rehabilitated sewer and all temporary equipment removed.

#### **3.2 INSTALLATION AND REMOVAL**

- A. Provisions and requirements must be approved by ENGINEER before implementation.
- B. CITY and ENGINEER shall be notified of the schedule and present during installation of Bypass Pumping system.
- C. Access manholes or make connections to existing sewer and construct temporary bypass pumping structures at access locations indicated on ENGINEER approved Drawings.
- D. Plugging or blocking of sewage flows shall incorporate a primary and secondary plugging device. When plugging or blocking is no longer needed for performance and acceptance of work, remove in a manner that permits the sewage flow to slowly return to normal without surge, to prevent surcharging or causing other major disturbances downstream.
- E. When working inside manholes, follow all OSHA, Local, State and Federal safety requirements. Take required measures to protect workforce against sewer gases and/or combustible or oxygen-deficient atmosphere.
- F. Installation, Operation and Removal of Bypass Pipelines:
  - 1. When bypass pipeline crosses local streets and private driveways, place in roadway ramps.

---

01 57 03-5  
Sewer Bypass Pumping

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

2. When roadway ramps cannot be used, place bypass in trenches and cover with temporary pavement as approved by ENGINEER.
3. Prior to any excavation required, CONTRACTOR shall locate all utilities in the proposed area and notify the ENGINEER of any potential conflicts.
4. During bypass pumping operation, protect sewer lines from damage inflicted by equipment.
5. Upon completion of bypass pumping operations, and after the receipt of written permission from ENGINEER, remove piping, restore property to pre-construction condition and restore pavement. Bypass pipeline shall be flushed with potable water prior to removal to prevent spillage of sewage to the environment.

### 3.3 INITIAL TESTING

- A. Pressure testing of the bypass pipeline shall be conducted and witnessed by the ENGINEER prior to initial testing. Pressure testing shall be with potable water. The provision of potable water for testing shall be the responsibility of the CONTRACTOR.
- B. An initial test of the complete bypass pumping system shall be conducted in the presence of the ENGINEER, using potable water. The provision of potable water for testing shall be the responsibility of the CONTRACTOR.
- C. Pumps shall be shown to be capable of self-priming after a loss of prime, with a minimum reprime lift greater than the suction lift that will be required during normal operation.
- D. Suction pipe configuration for reprime test shall incorporate a 2 feet minimum horizontal run, a 90° elbow and vertical run at the minimum specified lift. Pipe size shall be equal to the pump suction diameter.
- E. Repeatability of performance shall be demonstrated by testing three consecutive reprime cycles. Full pump capacity (flow) shall be achieved within five minutes during each cycle. No water should be discharged from the priming system to the environment during priming or operation.

### 3.4 OPERATION OF THE BYPASS SYSTEM

- A. CONTRACTOR shall have sole responsibility for the operation of the bypass system. Neither CITY nor ENGINEER personnel shall be involved in bypass system operation in any way.
  1. System monitoring:
    - a. CONTRACTOR shall supply personnel dedicated to the monitoring and maintenance of the bypass system full time during all hours that the system is operated (24 hours per day where applicable).
    - b. CONTRACTOR shall be responsible for monitoring bypass pumping operations using CONTRACTOR personnel who are on site performing other functions. Bypass pumping operations shall be monitored, including examination of the entire length of the bypass pipeline at least once every 2 hours during operating hours to confirm that all systems are fully functional, not leaking, and in good condition. CONTRACTOR shall repair any leaks discovered immediately.

---

01 57 03-6

Sewer Bypass Pumping

Pump Station No. 26 Improvements

### 3.5 USE OF VACTOR TRUCKS

- A. CONTRACTOR may use sewer plugging and vactor trucks to bypass low flows as indicated on the Drawings or proposed by the CONTRACTOR. CONTRACTOR shall confirm and estimate the peak flow rate to be pumped out to confirm pumping with a vactor truck is feasible as opposed to bypass pumping.
- B. When plugging sewer lines, contractor shall regularly monitor upstream manholes for surcharging and pump out the manhole and sewer lines as frequently as required.
- C. CONTRACTOR may discharge pumped flow into a nearby downstream manhole at a rate which does not cause surcharge in the downstream sewer.

+ + END OF SECTION + +

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 01 61 03**

### **GENERAL PRODUCT REQUIREMENTS**

#### **PART 1 - GENERAL**

##### **1.1 SCOPE**

- A. All products furnished and installed under this contract shall conform to the general stipulations set forth in this Section except as otherwise specified in other Sections.

##### **1.2 COORDINATION**

- A. The CONTRACTOR shall coordinate all details of the products and equipment with other related parts of the Work, including verification that all structures, piping, wiring, and equipment components are compatible. The CONTRACTOR shall be responsible for all structural and other alterations in the Work required to accommodate products or equipment differing in dimensions or other characteristics from that contemplated in the Contract Drawings or Specifications.

##### **1.3 DESIGN REQUIREMENTS**

- A. Where CONTRACTOR design is specified, design and installation of systems, equipment, and components, including supports and anchorage, shall be in accordance with provisions of 2019 edition of the California Building Code (CBC).
  - 1. Basic Wind Speed: 105 mph, Exposure C.
  - 2. Seismic:
    - a.  $S_S$  (maximum short-term spectral response acceleration) = 0.426
    - b.  $S_1$  (maximum 1-second spectral response acceleration) = 0.216
    - c.  $S_{DS}$  (design short-term spectral response acceleration) = 0.414
    - d.  $S_{D1}$  (design 1-second spectral response acceleration) = 0.312
    - e.  $I_e$  (Seismic Importance Factor) = 1.5
    - f. Risk Category = IV
  - 3. Maximum Rain Intensity: 2.22-inches/hour (15 min precipitation intensity)
- B. Proof of Compliance:
  - 1. Structural integrity and anchorage shall be certified by an approved calculation that demonstrates the adequacy of the anchorage system for seismic forces. This calculation may be based on principles of structural analysis and engineering mechanics, or based on similarity to approved shake-table tests.
  - 2. The CONTRACTOR shall submit for review and approval test data or calculations certified by a Civil or Structural Engineer registered in the State of California to show compliance with the above requirements.

##### **1.4 ENVIRONMENTAL REQUIREMENTS**

- A. Altitude: Provide materials and equipment suitable for installation and operation under rated conditions at 100 feet above sea level.

---

01 61 03-1

General Product Requirements

Pump Station No. 26 Improvements

- B. Provide equipment and devices installed outdoors or in unheated enclosures capable of continuous operation within an ambient temperature range of 15 degrees F to 120 degrees F.

#### 1.5 WORKMANSHIP AND MATERIALS

- A. The CONTRACTOR shall guarantee all equipment against faulty or inadequate design, improper assembly or erection, defective workmanship or materials, and leakage, breakage, or other failure. Materials shall be suitable for service conditions.
- B. All equipment shall be designed, fabricated, and assembled in accordance with recognized and acceptable engineering and shop practice. Individual parts shall be manufactured to standard sizes and gages so that repair parts, furnished at any time, can be installed in the field. Like parts of duplicate units shall be interchangeable. Equipment shall not have been in service at any time prior to delivery, except as required by tests.
- C. Except where otherwise specified, structural and miscellaneous fabricated steel used in equipment shall conform to AISC standards. All structural members shall be designed for shock or vibratory loads. Unless otherwise specified, all steel which will be submerged, all or in part, during normal operation of the equipment shall be at least 1/4 inch thick.
- D. Except where otherwise specified, all metal which will be exposed to weather, submerged or otherwise exposed to moisture shall be either non-ferrous or stainless steel, as the application may require.

#### 1.6 LUBRICATION

- A. Equipment shall be adequately lubricated by systems which require attention no more frequently than weekly during continuous operation. Lubrication systems shall not require attention during startup or shutdown and shall not waste lubricants.
- B. Lubricants of the type recommended by the equipment manufacturer shall be provided in sufficient quantity to fill all lubricant reservoirs and to replace all consumption during testing, startup, and operation prior to acceptance of equipment by CITY. Unless otherwise specified or permitted, the use of synthetic lubricants will not be acceptable.
- C. Lubrication facilities shall be convenient and accessible. Oil drains and fill openings shall be easily accessible from the normal operating area or platform. Drains shall allow for convenient collection of waste oil in containers from the normal operating area or platform without removing the unit from its normal installed position.

#### 1.7 ELECTRIC MOTORS

- A. Unless otherwise specified, motors furnished with equipment shall meet the following requirements:
  - 1. Designed and applied in accordance with NEMA, ANSI, IEEE, AFBMA, and NEC for the duty service imposed by the driven equipment, such as frequent starting, intermittent overload, high inertia, mounting configuration, or service environment.
  - 2. Premium efficiency rated.
  - 3. Rated for continuous duty at 40-degrees Celsius ambient, unless the application is well recognized for intermittent duty service as a standard industry practice.

---

01 61 03-2

General Product Requirements

Pump Station No. 26 Improvements

4. Insulated with Class F insulation and designed for a service factor of 1.15, or greater.
5. Three phase motors used in conjunction with variable speed drives shall have Class F insulation with a Class B temperature rise at rated nameplate horsepower, and 1.15 service factor.
6. When operating at service factor load, maximum observable temperature rise of insulation and motor parts, as determined by resistance or thermometer methods, shall not exceed the NEMA allowable limits for the type of motor, the type of enclosure, and the particular application with regard to continuous or intermittent duty.
7. To ensure long motor life, nameplate horsepower, regardless of service factor, shall be at least 115 percent of the maximum load imposed by the driven equipment.
8. Designed for full voltage starting.
9. Designed to operate from an electrical system that may have a maximum of 5 percent voltage distortion per IEEE Standard 519.
10. Derated, if required, for the altitude at which the equipment is installed.
11. Clamp-type grounding terminal shall be inside motor conduit box.
12. External conduit boxes shall be oversized at least one size larger than NEMA standard.
13. Totally enclosed motors shall have a continuous moisture drain which also excludes insects.
14. Bearings shall be either oil or grease lubricated.
15. Manufacturer's standard motor may be supplied on integrally constructed, packaged assemblies such as appliances, tools, unit heaters, and similar equipment specified by model number, in which case a redesign of the unit would be required to furnish motors of other than the manufacturer's standard design. However, in all cases, totally enclosed motors are preferred and shall be furnished if offered by the manufacturer as a standard option.
16. Totally enclosed motors shall be furnished on:
  - a. Equipment for installation below grade.
  - b. Equipment operating in wet or dust-laden locations.
17. Drip-proof motors, or totally enclosed motors at the supplier's option, shall be furnished on equipment in indoor, above-grade, clean, and dry locations.
18. Explosion-proof or submersible motors shall be furnished as required by applicable codes, as specified in other Sections, or at the supplier's option.
19. Motors shall be rated and constructed as follows:
  - a. Below 1/2 hp:
    - 1) 115 volts, 60 Hz, single phase.
    - 2) Built-in manual-reset thermal protector, or integrally mounted stainless steel enclosed manual motor starter.
  - b. 1/2 hp and above:
    - 1) 460 volts, 60 Hz, 3 phase.
    - 2) Where specified or required by the drawings, motors used on 240-volt systems shall be 230 volts, 60 Hz, 3 phase.

## 1.8 DRIVE UNITS

- A. The nominal input horsepower rating of each gear or speed reducer shall be at least equal to the nameplate horsepower of the drive motor. Drive units shall be designed for 24 hours continuous service.
- B. Unless otherwise specified, the use of gearmotors will not be acceptable.

---

01 61 03-3  
General Product Requirements

Pump Station No. 26 Improvements

C. Gear reducers:

1. Each gear reducer shall be a totally enclosed unit with oil or grease lubricated antifriction, rolling element bearings throughout.
2. Helical, spiral bevel, combination bevel-helical, and worm gear reducers shall have a service factor of at least 1.50 based on the nameplate horsepower of the drive motor. Shaft-mounted and flange-mounted gear reducers shall be rated AGMA Class II. Helical gear reducers shall have a gear strength rating to catalog rating of 1.5. Each gear reducer shall bear an AGMA nameplate.
3. The thermal horsepower rating of each unit shall equal or exceed the nameplate horsepower of the drive motor. During continuous operation, the maximum sump oil temperature shall not rise more than 100°F above the ambient air temperature in the vicinity of the unit and shall not exceed 200°F.
4. Bearings:
  - a. Each grease lubricated bearing shall be installed in a bearing housing designed to facilitate periodic regreasing of the bearing by means of a manually operated grease gun.
  - b. Each bearing housing shall be designed to evenly distribute new grease, to properly dispose of old grease, and to prevent overgreasing of the bearing.
  - c. The use of permanently sealed, grease lubricated bearings will not be acceptable.
  - d. An internal or external oil pump and appurtenances shall be provided if required to properly lubricate oil lubricated bearings.
  - e. A dipstick or sight glass arranged to permit visual inspection of lubricant level shall be provided on each unit.
5. Gear reducers that require the removal of parts or periodic disassembly of the unit for cleaning and manual regreasing of bearings will not be acceptable.
6. Certification shall be furnished by the gear reducer manufacturer indicating that the intended application of each unit has been reviewed in detail by the manufacturer and that the unit provided is fully compatible with the conditions of installation and service.

D. V-belt drives:

1. Each V-belt drive shall include a sliding base or other suitable tension adjustment. V-belt drives shall have a service factor of at least 1.6 at maximum speed based on the nameplate horsepower of the drive motor.

## 1.9 ANCHOR BOLTS

- A. Equipment suppliers shall furnish suitable anchor bolts for each item of equipment.
- B. Anchor bolts, together with templates or setting drawings, shall be delivered sufficiently early to permit setting the anchor bolts when the structural concrete is placed.
- C. Anchor bolts shall comply with Section 05 05 06, Anchors, Inserts and Dowels and, unless otherwise specified, shall have a minimum diameter of 1/2-inch.
- D. Unless otherwise indicated or specified, anchor bolts for items of equipment mounted on baseplates shall be long enough to permit 1-1/2 inches of grout beneath the baseplate and to provide adequate anchorage into structural concrete.

---

01 61 03-4

General Product Requirements

Pump Station No. 26 Improvements

### 1.10 EQUIPMENT BASES

- A. Unless otherwise indicated or specified, all equipment shall be installed on concrete bases at least 6 inches high.
- B. Cast iron or welded steel baseplates shall be provided for pumps, compressors, and other equipment.
- C. Each unit and its drive assembly shall be supported on a single baseplate of neat design.
- D. Baseplates shall have pads for anchoring all components and adequate grout holes.
- E. Baseplates for pumps shall have a means for collecting leakage and a threaded drain connection.
- F. Baseplates shall be anchored to the concrete base with suitable anchor bolts and the space beneath filled with grout as specified in Section 03 60 03, Grout.

### 1.11 SPECIAL TOOLS AND ACCESSORIES

- A. Equipment requiring periodic repair and adjustment shall be furnished complete with all special tools, instruments, and accessories required for proper maintenance. Equipment requiring special devices for lifting or handling shall be furnished complete with those devices.

### 1.12 SHOP PAINTING

- A. Surface Protection:
  - 1. All steel and iron surfaces shall be protected by suitable paint or coatings applied in the shop.
  - 2. Surfaces that will be inaccessible after assembly shall be protected for the life of the equipment.
  - 3. Exposed surfaces shall be finished smooth, thoroughly cleaned, and filled as necessary to provide a smooth uniform base for painting.
  - 4. Electric motors, speed reducers, starters, and other self-contained or enclosed components shall be shop primed or finished with a high-grade oil-resistant enamel suitable for coating in the field with an alkyd enamel.
  - 5. Coatings shall be suitable for the environment where the equipment is installed.
- B. Shop Primer:
  - 1. Surfaces to be painted after installation shall be prepared for painting as recommended by the paint manufacturer for the intended service, and then shop painted with one or more coats of the specified primer.
  - 2. Unless otherwise specified, the shop primer for steel and iron surfaces shall be:
    - a. Cook "391-N-167 Barrier Coat",
    - b. Koppers "No. 10 Inhibitive Primer",
    - c. Tnemec "37H Chem-Prime HS",
    - d. Valspar "13-R-28 Chromox Primer",
    - e. Or equal.
- C. Machined, polished, and nonferrous surfaces which are not to be painted shall be coated with rust-preventive compound, Houghton "Rust Veto 344", Rust-Oleum "R-9", or equal.

General Product Requirements

Pump Station No. 26 Improvements

### 1.13 PREPARATION FOR SHIPMENT

- A. All equipment shall be suitably packaged to facilitate handling and protect against damage during transit and storage. All equipment shall be boxed, crated, or otherwise completely enclosed and protected during shipment, handling, and storage. All equipment shall be protected from exposure to the elements and shall be kept thoroughly dry at all times.
- B. Painted surfaces shall be protected against impact, abrasion, discoloration, and other damage. All painted surfaces which are damaged prior to acceptance of equipment shall be repainted to the satisfaction of ENGINEER.
- C. Grease and lubricating oil shall be applied to all bearings and similar items.
- D. Each item of equipment shall be tagged or marked as identified in the delivery schedule or on the Shop Drawings. Complete packing lists and bills of material shall be included with each shipment.

### 1.14 STORAGE

- A. Upon delivery, all equipment and material shall immediately be stored and protected until installed in the Work.
- B. Pumps, motors, electrical equipment, and all equipment with antifriction or sleeve bearings shall be stored in weathertight structures maintained at a temperature above 60°F. Equipment, controls, and insulation shall be protected against moisture and water damage. All space heaters furnished in equipment shall be connected and operated continuously.
- C. Equipment and materials shall not show any pitting, rust, decay, or other deleterious effects of storage when installed in the work.

### 1.15 INSTALLATION AND OPERATION

- A. Equipment shall not be installed or operated except by, or with the guidance of, qualified personnel having the knowledge and experience necessary for proper results. When so specified, or when employees of the CONTRACTOR or their subcontractors are not qualified, such personnel shall be field representatives of the manufacturer of the equipment or materials being installed.
- B. Qualified field representatives shall be provided by the equipment manufacturers as required by Section 01 75 06, Testing, Training and Startup.
- C. All equipment installed under this Contract, including that furnished by CITY shall be placed into successful operation according to the written instructions of the manufacturer or the instructions of the manufacturer's field representative. All required adjustments, tests, operation checks, and other startup activity shall be provided.
- D. Acceptance of work in connection with the installation of equipment furnished by others will be subject to approval of the field representative. The CONTRACTOR shall be responsible for planning, supervising, and executing the installation of work, and the

REVISED BID SET

## **SECTION 01 64 03**

### **OWNER-FURNISHED EQUIPMENT**

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

- A. The work specified in this Section includes the unloading, handling, installation, connection, and testing of OWNER-furnished equipment as indicated on the Plans and as specified herein.
- B. OWNER-furnished equipment:
  - 1. Submersible Sewage Pumps
    - a. Equipment Manufacturer: Xylem/Flygt
    - b. Contact Person: Adrian Gutierrez (508) 274-4643
    - c. Components: Two NP 3202 pumps with 310 mm impellers and motors
- C. Definitions: As used in this Section, the following terms have the meaning indicated:
  - 1. Equipment Manufacturer:
    - a. The Company with whom the OWNER has a contract to procure the equipment items.
  - 2. Defective:
    - a. An adjective which when modifying the word "equipment" refers to OWNER-furnished equipment and indicates that such equipment is unsatisfactory, faulty or deficient; that such equipment does not conform to the provisions of the Equipment Specifications; that such equipment does not meet the requirements of any inspection, test, or approval referred to in the Equipment Specifications; or that such equipment is damaged.
  - 3. Equipment specifications:
    - a. The specifications and other Contract Documents covering the purchase and delivery of OWNER-furnished equipment are included in the separate agreement between the OWNER and the Equipment Manufacturer.
  - 4. Approved shop drawings:
    - a. The drawings and data supplied by the Equipment Manufacturer for OWNER-furnished equipment, as approved by the ENGINEER.

##### **1.2 CONTRACTOR COORDINATION WITH EQUIPMENT MANUFACTURER**

- A. CONTRACTOR shall be in close coordination with service representatives of the manufacturer of the OWNER-furnished equipment in every phase of installation.
- B. Both the CONTRACTOR and the Equipment Manufacturer have separate responsibilities, both of which must necessarily be interwoven as regards the installation, testing and acceptance of the equipment.
- C. The Agreement between the OWNER and the Equipment Manufacturer, plus approved shop drawings, are available for inspection at the ENGINEER's Office. All prospective Contractors shall review said Agreement and shop drawings.

---

01 64 03-1

Owner-Furnished Equipment

Pump Station No. 26 Improvements

### 1.3 QUALITY ASSURANCE

- A. Equipment specifications and approved shop drawings:
  - 1. The CONTRACTOR will be presumed cognizant, prior to entering into the Contract, of the provisions of the Equipment Specifications and approved Shop Drawings.
  - 2. One copy of the approved shop drawings will be made available to the CONTRACTOR to whom the Contract is awarded.
- B. Installation:
  - 1. OWNER-furnished equipment shall be installed as specified in Paragraph 3.1.
- C. Operation:
  - 1. OWNER-furnished equipment shall be operated in accordance with the written instructions furnished with the equipment, and with the instructions issued by representatives of equipment manufacturers.
- D. Testing:
  - 1. After installation, and following certification in writing by Equipment Manufacturer that the installation is ready for electrical testing, the CONTRACTOR shall make electrical tests on OWNER-furnished equipment.
  - 2. The tests shall prove that the equipment has been properly installed; that power, control, instrumentation, and alarms are properly connected and wired from the equipment to points of supply or receipt of signals and are properly calibrated; and that all other work performed by the CONTRACTOR renders the equipment operational as intended.

### 1.4 DELIVERY, STORAGE, AND HANDLING

- A. Delivery of OWNER-furnished equipment:
  - 1. Equipment will be delivered to the CONTRACTOR at the site of the work as specified in the Equipment Specifications and identified in Section 01 11 03, Summary of Work.
  - 2. Changes to the delivery procedure and schedule may be made if mutually agreed between the CONTRACTOR and the OWNER, and if approved by the Equipment Manufacturer.
  - 3. Inspection and Acceptance:
    - a. Upon delivery, conduct with OWNER or ENGINEER a joint inspection for the purpose of identifying product, general verification of quantities, and observation of apparent condition.
    - b. Such inspection will not be construed as final or as receipt of any product that, as a result of subsequent inspections and tests, are determined to be nonconforming.
    - c. Damaged or incomplete products to be returned for replacement will not be unloaded, except as necessary to expedite return shipment.
    - d. OWNER will submit claims for transportation damage and expedite replacement of damaged, defective, or deficient items.
    - e. Indicate signed acceptance of delivery on a copy of the invoice.
    - f. Upon CONTRACTOR's acceptance of OWNER-furnished equipment, it shall be understood that the CONTRACTOR assumes the responsibilities assigned to him in these Specifications in relation to the installation, testing and operation of OWNER furnished equipment.

---

01 64 03-2

Owner-Furnished Equipment

Pump Station No. 26 Improvements

4. Defective Equipment Notice:
- a. The CONTRACTOR shall verify the conditions of OWNER-furnished equipment and shall submit to the ENGINEER within 7 days after delivery date a statement listing all defective equipment items.
  - b. The list shall include the cost and extension to the Contract Time that the CONTRACTOR estimates for the correction and repair of each defective equipment item and a statement of the CONTRACTOR's opinion as to the cause of the defective equipment items.
  - c. If the CONTRACTOR makes no submittal within the time period specified, it shall be understood that the OWNER-furnished equipment is in satisfactory condition and that the CONTRACTOR's acceptance has occurred as of the date of delivery.
  - d. If the CONTRACTOR makes a submittal listing defective equipment items within the time period specified, the ENGINEER will decide on the course of action to be taken. The possible courses of action by the ENGINEER include:
    - 1) Correction By Change Order:
      - a) To authorize the CONTRACTOR to proceed with the correction and repair of defective equipment items through the issuance of a Change Order.
      - b) The CONTRACTOR's consent to perform such repair and correction shall be construed as CONTRACTOR's acceptance for the items included in the Change Order.
    - 2) Correction By Force Account:
      - a) To direct the CONTRACTOR to proceed with the correction and repair of defective equipment items through the procedures specified for force account work.
      - b) It shall be understood that CONTRACTOR's acceptance has occurred for the items covered under force account work on the date of the issuance of the ENGINEER's directive.
    - 3) Correction By Others:
      - a) To have others perform the correction and repair of defective equipment items.
      - b) The CONTRACTOR shall observe the work done by others and notify the ENGINEER in writing of all irregularities, faulty workmanship, or unsatisfactory work done by others.
      - c) The CONTRACTOR observations shall be carried out without obstruction or interference to others performing work.
      - d) Upon completion of the correction and repair, the ENGINEER will notify the CONTRACTOR and it shall be understood that CONTRACTOR's acceptance has occurred for items repaired by others upon receipt of the ENGINEER's notification.
    - 4) Modify the Installation Contract:
      - a) To modify the Plans and Specifications in order to meet changing conditions.
      - b) It shall be understood that CONTRACTOR's acceptance has occurred upon receipt of the ENGINEER's modifications to Plans and Specifications.
    - 5) Reject the Characterization:
      - a) To state to the CONTRACTOR that an item listed by the CONTRACTOR is not a defective equipment item.
  - e. Regarding such items, it shall be understood that CONTRACTOR's acceptance has occurred on the delivery date.

---

01 64 03-3

Owner-Furnished Equipment

Pump Station No. 26 Improvements

5. If CONTRACTOR is not prepared to accept delivery of OWNER-furnished equipment by either the specified Estimated Date of Arrival or such OWNER-confirmed delivery date, as specified herein, associated costs incurred by OWNER shall be borne by CONTRACTOR. Such costs may include, but not be limited to, demurrage, interest, insurance costs, additional administrative and engineering costs, additional factory and field technical support, additional storage and reshipping costs, cost escalation, and extended warranty costs due.
  6. The CONTRACTOR shall unload the equipment from the delivery vehicle within 24 hours after arrival of the vehicle transporting such equipment to the site. The equipment shall be unloaded in accordance with manufacturers' instructions, or as specified.
  7. The CONTRACTOR shall assume responsibility for storage and handling of equipment after the delivery has been accepted.
- B. Protection of OWNER-furnished equipment:
1. The CONTRACTOR shall protect the equipment in accordance with the Equipment Manufacturer's recommendations against weather conditions, including construction of a temporary cover, and periodic lubrication, if required.
  2. From the time of receipt until the equipment is energized for operations, unless such equipment is being worked on, equipment shall be considered in storage.
  3. While in storage, a 120V, 1 phase source of power shall be provided and connected to space heaters in all items of equipment so equipped. Equipment not provided with space heaters shall be provided with a light bulb or electric heater while in storage to prevent moisture condensation.

#### 1.5 SCHEDULING:

- A. It shall be understood that the CONTRACTOR's review of the Equipment Specifications has allowed the scheduling of their operations in accordance with the dates for the delivery of OWNER-furnished equipment anticipated in said Equipment Specifications.

### **PART 2 - PRODUCTS (NOT USED)**

### **PART 3 - EXECUTION**

#### 3.1 EQUIPMENT INSTALLATION

- A. The CONTRACTOR shall install OWNER-furnished equipment in accordance with the instructions and recommendations furnished with the equipment, approved shop drawings, instructions of the representatives of equipment manufacturers and installation manuals, and as indicated on the Plans.
- B. The CONTRACTOR shall be responsible to include in their bid all labor, materials, and equipment required to install the OWNER-furnished equipment and make the complete system operate satisfactorily.
- C. Equipment shall not be installed or operated except by, or with the guidance of, qualified personnel having the knowledge and experience necessary to obtain proper results. Such personnel shall be field representatives of the Equipment Manufacturer.

---

01 64 03-4  
Owner-Furnished Equipment

Pump Station No. 26 Improvements

- D. Factory Service Representatives:
1. Qualified factory service representatives will be provided by the Equipment Manufacturer as required to perform all manufacturers' field services called for in these Specifications.
  2. Equipment Manufacturer will submit resumes of the proposed factory service representatives to the ENGINEER for review and acceptance not less than 21 days prior to the factory services representative's first site visit.
  3. Factory service representatives will observe, instruct, guide, and direct CONTRACTOR's erection or installation procedures, and perform an installation check, as required herein or as requested by the ENGINEER.
  4. Each factory service representative will revisit the site as often as necessary to attain installation satisfactory to ENGINEER.
- E. The CONTRACTOR shall furnish and install all piping, electrical and instrumentation work, interconnections, finish painting and accessories as required to make the OWNER-furnished equipment and system complete and functional.
- F. Provide foundation pads for OWNER-furnished products as shown. Verify exact dimensions and configuration of all pads, including penetrations, with OWNER-furnished product shop drawings.
- G. Anchor Bolts:
1. Where required, provide anchor bolts, fasteners, washers, and templates needed for installation of OWNER-furnished equipment.
  2. Size and locate anchor bolts in accordance with OWNER-furnished product shop drawings and installation instructions.
- H. Mechanical and electrical equipment shall be properly aligned, plumb and level, with no stresses on connecting piping or conduit.

### 3.2 FIELD FINISHING

- A. Products will be delivered with prime coat(s) applied.
- B. Finish coat as specified in Section 09 91 03, PAINTING.
- C. Touch up or repair damage to coatings resulting from unloading, storage, installation, testing, and startup.
- D. If finish coats are damaged extensively after transfer, completely repaint.
- E. Touch up, repair, or complete repainting shall match color of original paint, and shall be fully compatible with applied primers and finish.

### 3.3 EQUIPMENT FIELD TESTING

- A. General:
1. Field Testing shall consist of Functional Testing performed by the CONTRACTOR, and Performance Testing performed by the Equipment Manufacturer with OWNER assistance.

---

01 64 03-5  
Owner-Furnished Equipment

Pump Station No. 26 Improvements

2. Minimum Functional Testing requirements are specified in Section 01 75 06, Testing, Training and Startup.
  3. The CONTRACTOR shall schedule, coordinate, and perform all Functional Tests required to prove that the equipment has been properly installed and is in satisfactory operating condition.
  4. The Equipment Manufacturer will furnish a factory trained representative to provide technical guidance to assist the OWNER's CONTRACTOR during Functional Testing.
  5. Addition Functional Testing requirements for the Owner-Supplied Equipment are listed in the Technical Specifications.
- B. The CONTRACTOR shall repair, replace or correct to the satisfaction of the ENGINEER all defective equipment items caused by the CONTRACTOR's improper placement and handling of OWNER-furnished equipment.
- C. After testing, the CONTRACTOR shall repair, replace, or correct faulty work.

#### 3.4 SERVICES OF EQUIPMENT MANUFACTURER'S REPRESENTATIVES

- A. The Equipment Manufacturers (through the OWNER) will provide services of skilled representatives of equipment manufacturer's for inspecting the installation, adjustments, start-up and testing of OWNER-furnished equipment.
- B. The extent of services provided by manufacturer's representatives is specified in the Equipment Specifications.
- C. The services will be provided as requested by the ENGINEER.
- D. The CONTRACTOR and their employees shall fully cooperate with the manufacturer's representatives.
- E. The CONTRACTOR shall notify the ENGINEER in writing 15 calendar days before the equipment manufacturer's representative needs to be present at the site.

- Does not include any extended warranty or preventative maintenance agreement

## Terms & Conditions

This order is subject to the Standard Terms and Conditions of Sale – Xylem Americas effective on the date the order is accepted which terms are available at <http://www.xyleminc.com/en-us/Pages/terms-conditions-of-sale.aspx> and incorporated herein by reference and made a part of the agreement between the parties.

**Purchase Orders:** Please make purchase orders out to: Xylem Water Solutions USA, Inc.

**Freight Terms:** 3 DAP - Delivered At Place 08 - Jobsite (per Incoterms 2020)  
See Freight Payment (Delivery Terms) below.

**Taxes:** State, local and other applicable taxes are not included in this quotation.

**Back Charges:** Buyer shall not make purchases nor shall Buyer incur any labor that would result in a back charge to Seller without prior written consent of an authorized employee of Seller.

**Shortages:** Xylem will not be responsible for apparent shipment shortages or damages incurred in shipment that are not reported within two weeks from delivery to the jobsite. Damages should be noted on the receiving slip and the truck driver advised of the damages. Please contact our office as soon as possible to report damages or shortages so that replacement items can be shipped and the appropriate claims made.

**Terms & Conditions:** Attached please find our Standard Terms & Conditions of Sale that apply to this order.

**Taxes:** State, local and other applicable taxes are not included in this quotation.

**Time of delivery:** Delivery lead times are [FILL IN # OF WEEKS HERE] weeks after receipt of submittal approval and order acceptance.

**Terms of delivery:** PP/Add Order Position

**Terms of Payment:** 100% Net 30 days following shipment date. Xylem's payment shall not be dependent upon Purchaser being paid by any third party unless Owner denies payment due to reasons solely attributable to items related to the equipment being provided by FLYGT.

**Schedule:** Please consult your local Flygt Branch Office to get fabrication and delivery lead times.

**Changes:** This Quote is based on the current design criteria provided to Xylem Water Solutions USA, Inc. Revisions may result in price changes.

**Exclusions:** This Quote includes only the items listed specified above.

**Validity:** Please note that this pricing is valid for 30 days and is contingent upon final approval of submittals and release for fabrication within 90 days of PO date.

We thank you for your interest in Flygt equipment from Xylem Water Solutions USA, Inc. and look forward to being of service to you in the near future.

Sincerely,

A handwritten signature in black ink, appearing to read 'Adrian Gutierrez', with a stylized flourish at the end.

## Introducing the Xylem Preventative Maintenance Agreement

Don't forget to protect your new assets

Thank you for considering Xylem for your pumping equipment needs. We appreciate the significance of your purchase decision and want to ensure you get the most out of your investment. The most cost-effective way to do this is to sign-up for a preventative maintenance agreement (PMA) that we tailor to your specific requirements and budget. A Xylem PMA offers a proven method to extend your equipment life, prevent expensive repairs and minimize unplanned failures. It's also ensures you remain in compliance with environmental, health and other government regulations – critical to maximizing operation uptime.

### Our Flygt Gold PMA Includes:

- One scheduled preventative maintenance service visit with multi-point inspection, 12 months after purchase and discounted access to Xylem's rental fleet
- An additional 12-month warranty when purchased with your new or replacement Flygt pump(s)
- The option to renew annually or on a multi-year basis following the first service visit
- Priority service on repairs and field service calls

*\* Flat-Rate Pricing is available for new and replacement Flygt models 3069, 3085, 3102, 3127, 3153, 3171, 3202, 3301 & 3315 starting at \$500 per pump.*

Multi-year PMA packages are available as well.  
Contact your Xylem Sales Representative today for more information.

Visit our [PMA site](#) for more info

Let's Solve Water

# WARRANTY

## Xylem Water Solutions USA, Inc.

For the period defined, Xylem Water Solutions USA, Inc. offers a commercial warranty to the original End Purchaser against defects in workmanship and material on Flygt Products. Warranty covers Flygt parts and labor as outlined in **ADDENDUM – A**.

### COVERAGE:

Xylem Water Solutions USA, Inc. will pay the cost of parts and labor during the warranty period, provided that the Flygt product, with cable attached, is returned prepaid to a Xylem Water Solutions USA, Inc. Authorized Service Facility for Flygt Product repairs. Coverage for Flygt parts and labor will be provided for the period shown in **ADDENDUM - A**. The warranty period will begin from date of shipment or date of a valid Start-up (For permanently installed pumps only). In cases where the Start-up date is used as the beginning of the warranty on a permanently installed Flygt pump, a Start-up Report completed by an approved service technician from a Xylem Water Solutions USA, Inc. Authorized Service Facility for Flygt products must be received by the Xylem Water Solutions USA, Inc. Area Service Manager for Flygt Products within thirty (30) days of the initial onset of the unit placed into service. If not received, the beginning of the warranty coverage will default to the Flygt product ship date. A Start-up for a permanently installed Flygt pump must occur within one (1) year from the date of shipment from a Xylem Water Solutions USA, Inc. authorized facility for Flygt Products or warranty will automatically default to ship date as start of warranty. (See **STORAGE** section) When using the start-up date as the beginning of the warranty, a copy of the Start-up Report will be required to support any Warranty Claims. Warranty on Flygt Dewatering pumps will begin with ship date only. No other date on Flygt Dewatering pumps will be considered.

Xylem Water Solutions USA, Inc.'s sole obligation under this Warranty for Flygt Products shall be to replace, repair or grant credit for Flygt Products upon Xylem Water Solutions USA, Inc.'s exclusive determination that the Flygt Product does not conform to the above warranty. In the event that the Flygt product is replaced, warranty on the replacement product will be equal to the balance remaining on the original product or ninety (90) days, which ever is greater.

### MISUSE:

This Warranty shall not apply to any Flygt product or part of Flygt product which (i) has been subjected to misuse, misapplication, accident, alteration, neglect, or physical damage (ii) has been installed, operated, used and/or maintained in a manner which is in an application that is contrary to Xylem Water Solutions USA, Inc.'s printed instructions as it pertains to installation, operation and maintenance of Flygt Products, including but without limitation to (iii) operation of equipment without being connected to monitoring devices supplied with specific products for protection; or (iv) damaged due to a defective power supply, improper electrical protection, faulty installation or repair, ordinary wear and tear, corrosion or chemical attack, an act of God, an act of war or by an act of terrorism; or (v) has been damaged resulting from the use of accessory equipment not sold by Xylem Water Solutions USA, Inc. or not approved by Xylem Water Solutions USA, Inc. in connection with Flygt products.

### WEAR PARTS:

This warranty does not cover costs for standard and/or scheduled maintenance performed, nor does it cover Flygt parts that, by virtue of their operation, require replacement through normal wear (aka: Wear Parts), unless a defect in material or workmanship can be determined by Xylem Water Solutions USA, Inc.. Wear Parts are defined as Cutters, Cutting Plates, Impellers, Agitators, Diffusers, Wear Rings (Stationary or Rotating), Volutes (when used in an abrasive environment), oil, grease, cooling fluids and/or any items deemed necessary to perform and meet the requirements of normal maintenance on all Flygt equipment.

# WARRANTY

## Xylem Water Solutions USA, Inc.

### DISCLAIMERS:

(i) Xylem Water Solutions USA, Inc.'s warranties are null and void when Flygt Products are exported outside of the United States of America without the knowledge and written consent of Xylem Water Solutions USA, Inc.; (ii) Xylem Water Solutions USA, Inc. makes no independent warranty or representation with respect to parts or products manufactured by others and provided by Xylem Water Solutions USA, Inc. (however, Xylem Water Solutions USA, Inc. will extend to the Purchaser any warranty received from Xylem Water Solutions USA, Inc.'s supplier for such parts or products).

### LIMITATIONS:

XYLEM WATER SOLUTIONS USA, INC. NEITHER ASSUMES, NOR AUTHORIZES ANY PERSON OR COMPANY TO ASSUME FOR XYLEM WATER SOLUTIONS USA, INC., ANY OTHER OBLIGATION IN CONNECTION WITH THE SALE OF ITS FLYGT EQUIPMENT. ANY ENLARGEMENT OR MODIFICATION OF THIS WARRANTY BY A FLYGT PRODUCT DISTRIBUTOR, OR OTHER SELLING AGENT SHALL BECOME THE EXCLUSIVE RESPONSIBILITY OF SUCH ENTITY.

THE FOREGOING WARRANTY IS EXCLUSIVE AND IN LIEU OF ANY AND ALL OTHER EXPRESS OR IMPLIED WARRANTIES, GUARANTEES, CONDITIONS OR TERMS OF WHATEVER NATURE RELATING TO FLYGT PRODUCT(S), INCLUDING AND WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE WHICH ARE HEREBY EXPRESSLY DISCLAIMED AND EXCLUDED. PURCHASER'S EXCLUSIVE REMEDY AND XYLEM WATER SOLUTIONS USA, INC.'S AGGREGATE LIABILITY FOR BREACH OF ANY OF THE FOREGOING WARRANTIES IS LIMITED TO REPAIRING OR REPLACING FLYGT PRODUCTS AND SHALL IN ALL CASES BE LIMITED TO THE AMOUNT PAID BY THE PURCHASER HEREUNDER. IN NO EVENT IS XYLEM WATER SOLUTIONS USA, INC. LIABLE FOR ANY OTHER FORM OF DAMAGES, WHETHER DIRECT, INDIRECT, LIQUIDATED, INCIDENTAL, CONSEQUENTIAL, PUNITIVE, EXEMPLARY OR SPECIAL DAMAGES, INCLUDING BUT NOT LIMITED TO LOSS OF USE, LOSS OF PROFIT, LOSS OF ANTICIPATED SAVINGS OR REVENUE, LOSS OF INCOME, LOSS OF BUSINESS, LOSS OF PRODUCTION, LOSS OF OPPORTUNITY OR LOSS OF REPUTATION.

XYLEM WATER SOLUTIONS USA, INC. WILL NOT BE HELD RESPONSIBLE FOR TRAVEL EXPENSES, RENTED EQUIPMENT, OUTSIDE CONTRACTOR'S FEES, OR ANY EXPENSES ASSOCIATED WITH A FLYGT PRODUCT REPAIR SHOP NOT AUTHORIZED BY XYLEM WATER SOLUTIONS USA, INC. U.S.A., INC. REIMBURSEMENT COSTS FOR CRANES AND/OR ANY SPECIAL EQUIPMENT USED IN CONJUNCTION FOR THE REMOVAL AND/OR REINSTALLATION OF ANY FLYGT EQUIPMENT IS NOT COVERED UNDER THIS WARRANTY.

ANY UNAUTHORIZED ALTERATIONS TO SUPPLIED FLYGT EQUIPMENT USED WITHOUT XYLEM WATER SOLUTIONS USA, INC. SUPPLIED FLYGT BRAND CABLE OR CONTROLS WILL NOT BE COVERED UNDER THIS WARRANTY, UNLESS IT CAN BE PROVEN SUCH ANCILLARY EQUIPMENT IS SUITABLE FOR THE PURPOSE AND EQUAL TO XYLEM WATER SOLUTIONS USA, INC. SUPPLIED FLYGT BRAND CABLES OR CONTROLS THAT WOULD ORIGINALLY HAVE BEEN SUPPLIED WITH THE TYPE OF EQUIPMENT IN USE.

### REQUIREMENTS:

A copy of Electrical System Schematics of the Control used (including a Control's Bill of Material) could be required to support a Warranty Claim when a non Flygt Brand Control is used. In addition, a written record, hereby known as "the log", will be associated with each unit serial number and must be maintained by the organization having product maintenance responsibility. The log must record each preventative maintenance activity and any repair activity during the life of the warranty or verification that a Xylem Water Solutions USA, Inc. authorized Service Contract for Flygt Products is in force and must be available for review and/or auditing. Failure to meet these conditions could render this warrant null and void. Such logs could be required to determine warranty coverage.

# WARRANTY

## Xylem Water Solutions USA, Inc.

### **STORAGE:**

Should a delay occur between ship date and the date of start-up, maintenance as outlined in Xylem Water Solutions USA, Inc.'s Care & Maintenance Manual for Flygt Products must be performed by the "CONTRACTOR" and/or "OWNER" during any such period of storage. Documentation providing proof and outlining what maintenance was performed must be provided to Xylem Water Solutions USA, Inc. or its Flygt Products representative within thirty (30) days of said maintenance, or the Xylem Water Solutions USA, Inc. warranty for Flygt Products could be considered void.

### **CONTROLS:**

Warranty coverage for permanently installed controls will start for the end purchaser on the date of shipment. This warranty does not apply to controls that have been damaged due to a defective and/or improper input power supply, improper electrical protection, accidental damage, improper or unauthorized installation and/or repair, unauthorized alteration, negligence, environmental corrosion or chemical attack, improper maintenance or storage of control, any act of God, an act of war, an act of terrorism or damage resulting from the use of accessory equipment not approved by Xylem Water Solutions USA, Inc.. Further, this warranty does not apply in the event an adjustment is found to correct the alleged defect.

Solid state devices will be covered for a period of one (1) year except in the Flygt Standard Control Panel (FSCP) where the solid state devices will be covered for the full warranty period of the control panel. Electrical control panels containing controllers, PLC's, drives, soft starts, and other computerized equipment will require Transient Voltage Surge Suppression (TVSS) protection in order to satisfy the requirements of this warranty. The protection equipment associated with the control must be kept in working condition during the life of the warranty. Auxiliary equipment supplied with the control (air-conditioners etc.) is limited by the respective original equipment manufacturer's warranty offered. Consumable items such as: light bulbs, fuses, and relays are covered under normal operating conditions. Electrical surges experienced during startups and/or during normal operating use of the control panel will cause the consumable items not to be covered under this warranty policy. Components not supplied by Xylem Water Solutions USA, Inc. will not covered by this warranty.

### **TOP (The Optimum Pump Station)**

Xylem Water Solutions USA, Inc. will warrant the Flygt TOP pre-engineered fiberglass pump station components against defects in material and workmanship for a period of one (1) year from date of start-up or eighteen (18) months from date of shipment and is valid only to the original owner of the station. Warranty shall cover the cost of labor and materials required to correct any warrantable defect, excluding any removal and reinstallation costs, FOB Xylem Water Solutions USA, Inc.'s authorized warranty service location for Flygt's TOP.

Flygt Products contained within a TOP pre-engineered fiberglass pump station will carry the standard Xylem Water Solutions USA, Inc. warranty for Flygt products and/or accessories installed in the TOP pre-engineered fiberglass pump station.

All Flygt Product restrictions and/or limitations as outlined and described within the context of this warranty are germane to all sections of this Xylem Water Solutions USA, Inc. Warranty document.

## **SECTION 01 71 13**

### **MOBILIZATION**

#### **PART 1 - GENERAL**

##### **1.1 GENERAL**

- A. Mobilization shall include the obtaining of all bonds, insurance, and licenses; moving onto the site of all plant and equipment; furnishing and erecting plants, temporary buildings, and other construction facilities; all as required for the proper performance and completion of the work.
- B. Mobilization shall include but not be limited to the following principal items:
  - 1. Moving on to the site of all CONTRACTOR's equipment.
  - 2. Installing temporary construction power, wiring, and lighting facilities.
  - 3. Developing construction water supply.
  - 4. Furnishing the work access plan as specified in Section 01 51 03, Temporary Construction Facilities and Utilities.
  - 5. Providing all on-site CONTRACTOR communication facilities, including telephones, and radio pagers and any radio communications facilities required for the CONTRACTOR to coordinate their forces.
  - 6. Providing on-site sanitary facilities and potable water facilities as specified in Section 01 51 03, Temporary Construction Facilities and Utilities.
  - 7. Arranging for and erection of the CONTRACTOR's work and storage yard, including site security.
  - 8. Posting all EPA and OSHA required notices and establishment of safety programs.
  - 9. Post all required labor and EEOE notices.
  - 10. Have the CONTRACTOR's superintendent at the job site full time.
  - 11. Submittal and CITY acceptance of the Construction Schedule.
  - 12. Establishing site security, lighting, fencing, and signing.
  - 13. Obtaining all bonds, insurance and licenses.
  - 14. Providing an organization chart of the project and for the CONTRACTOR's firm. The project chart shall include the name, title and responsibilities of each position which is involved in the work.
  - 15. Other mobilization items approved by the ENGINEER required to support the complete work (e.g., Health and Safety Plans for Hazardous Waste).

## **SECTION 01 74 03**

### **CLEANING**

#### **PART 1 - GENERAL**

##### **1.1 WORK INCLUDED**

- A. This Section covers the work necessary for cleaning during construction and final cleaning on completion of the Work.

##### **1.2 GENERAL**

- A. At all times maintain areas covered by the Contract and public properties free from accumulations of waste, debris, and rubbish caused by construction operations.
- B. Pollution Control:
  - 1. Conduct cleaning and disposal operations to comply with local ordinances and anti-pollution laws.
  - 2. Do not burn or bury rubbish and waste materials on project site.
  - 3. Volatile wastes shall be properly stored in covered metal containers and removed daily.
  - 4. Do not dispose of volatile wastes such as mineral spirits, oil, or paint thinner in storm or sanitary drains.
  - 5. Do not dispose of wastes into streams or waterways.
- C. Construction materials such as concrete forms and scaffolding shall be neatly stacked by the CONTRACTOR when not in use. The CONTRACTOR shall promptly remove splattered concrete, asphalt, oil, paint, corrosive liquids, and cleaning solutions from surfaces to prevent marring or other damage.
- D. Use only cleaning materials recommended by manufacturer of surface to be cleaned.
- E. Use cleaning materials only on surfaces recommended by cleaning material manufacturers.

#### **PART 2 - PRODUCTS (NOT USED)**

#### **PART 3 - EXECUTION**

##### **3.1 CLEANING DURING CONSTRUCTION**

- A. During execution of Work, clean site and public properties and dispose of waste materials, debris, and rubbish to assure that buildings, grounds, and public properties are maintained free from accumulations of waste materials and rubbish.
- B. Wet down dry materials and rubbish to lay dust and prevent blowing dust.

---

01 74 03-1  
Cleaning

Pump Station No. 26 Improvements

- C. Provide approved containers for collection and disposal of waste materials, debris, and rubbish. Empty containers within one day after they are full.
- D. Remove grease, dust, dirt, stains, labels, fingerprints, and other foreign materials from exposed and semi-exposed surfaces.
- E. Repair, patch, and touch up marred surfaces to specified finish to match adjacent surfaces.
- F. Vacuum clean all interior spaces, including inside cabinets. Broom clean paved surfaces, rake clean other surfaces of grounds.
- G. Handle materials in a controlled manner with as few handlings as possible; do not drop or throw materials from heights.
- H. Schedule cleaning operations so that dust and other contaminants resulting from cleaning process will not fall on wet, newly painted surfaces.
- I. Vacuum clean interior building areas when ready to receive finish painting and continue vacuum cleaning on an as-needed basis until building is ready for substantial completion or occupancy.

### 3.2 FINAL CLEANING

- A. Refer to the requirements of the Contract Documents in addition to the requirements of this Section.
- B. See Section 01 77 03, Operational Completion and Project Closeout, for additional requirements.
- C. At the completion of Work on all Contracts and immediately prior to final inspection, cleaning of the entire Project will be accomplished according to the following provisions:
  - 1. The CONTRACTOR shall thoroughly clean, sweep, wash, and polish all work and equipment, including finishes. The cleaning shall leave the structures and site in a complete and finished condition to the satisfaction of the ENGINEER.
  - 2. Should the CONTRACTOR not remove rubbish or debris or not clean the building and site as specified above, the CITY reserves the right to have the cleaning done at the expense of the CONTRACTOR.
  - 3. Employ professional cleaners for final cleaning.
  - 4. In preparation for substantial completion of occupancy, conduct final inspection of sight-exposed interior and exterior surfaces, and of concealed spaces.
  - 5. Remove grease, dust, dirt, stains, labels, fingerprints, and other foreign materials from sight-exposed interior and exterior finished surfaces; polish surfaces so designated to shine finish.
  - 6. Repair, patch, and touch up marred surfaces to specified finish, to match adjacent surfaces.
  - 7. Broom clean paved surfaces; rake clean other surfaces of grounds.
  - 8. Replace air-handling filters if units were operated during construction.
  - 9. Clean ducts, blowers, and coils, if air-handling units were operated without filters during construction.
  - 10. Clean luminaires in accordance with manufacturer's recommendations. Clean all light fixtures.

---

## **SECTION 01 75 06**

### **TESTING, TRAINING, AND STARTUP**

#### **PART 1 - GENERAL**

##### **1.1 GENERAL**

- A. Scope:
  - 1. This Section covers general equipment and system testing and startup requirements, services of the manufacturer's representatives and special coordinating services required of the CONTRACTOR that shall apply during construction and training of the CITY's personnel for facilities operation.
  - 2. Specific testing and tracking procedures and requirements found in the Technical Specifications shall also apply.
- B. The CONTRACTOR shall inform all Subcontractors and manufacturers of the requirements herein and include the required services in their costs for the work specified in these Contract Documents. Where a minimum amount of time is stated in the Technical Specifications for manufacturers' services, any additional time required to perform the specified services shall be provided at no additional cost to the CITY.
- C. Scheduling:
  - 1. Equipment testing and startup are requisite to satisfactory completion of the Contract and, therefore, shall be completed within the contract time.
  - 2. All equipment testing and plant startup activities shall be realistically allowed for and shown on the CONTRACTOR's Construction Schedule, in accordance with Section 01 32 13, Progress Schedule.
  - 3. All equipment testing and plant startup activities shall be scheduled in conformance with the restrictions specified in Section 01 14 03, Special Project Constraints.
- D. Equipment testing shall be satisfactorily completed prior to commencing plant startup associated with the particular equipment item or equipment package. The equipment shall not be considered ready for testing until the following conditions are satisfied:
  - 1. Manufacturer's certification of equipment installation has been accepted by the ENGINEER.
  - 2. Electrical and/or instrumentation Subcontractor certification of motor control logic has been accepted by the ENGINEER.
  - 3. Related Technical Submittals, O&M Manual and Final Shop Drawings have been accepted by the ENGINEER.
  - 4. Operator training services have been furnished by the CONTRACTOR (operational testing only).
  - 5. Testing procedures have been submitted in writing and accepted by the ENGINEER in accordance with Section 01 33 03, Submittal Procedures. All testing procedures and results shall be submitted in writing.
- E. The requirements of plant startup specified herein shall also apply to the startup of individual treatment plant processes and facilities.
- F. Startup Plan:

---

01 75 06-1

Testing, Training and Startup

Pump Station No. 26 Improvements

1. Not less than 3 months prior to initial equipment or system startup, the CONTRACTOR shall submit to the ENGINEER for review, a detailed Facilities Startup Plan for the associated items of equipment and/or systems.
2. The Startup Plan shall include:
  - a. A detailed sub-network of the CONTRACTOR's Construction Progress Schedule including the following activities:
    - 1) Manufacturer's Services;
    - 2) Installation Certifications;
    - 3) Operator Training;
    - 4) O&M Manual;
    - 5) Functional Testing;
    - 6) Performance Testing;
    - 7) Operational Testing;
    - 8) All other activities necessary to affect a coordinated and successful Testing, Training and Startup.
  - b. Written testing plan with proposed data logs for each item of equipment to be tested.
  - c. A discussion of any coordination required with the CITY's staff and/or any system or equipment outage requirements.
  - d. The Plan shall be updated and/or revised as necessary prior to subsequent Construction Progress Meetings.
  - e. Testing shall not be scheduled earlier than 30 days after approval of the Plan.

## 1.2 SERVICES DURING CONSTRUCTION

### A. General:

#### 1. Manufacturer's Representative:

- a. The CONTRACTOR shall provide the services of competent and experienced technical representatives of the manufacturers of all equipment and systems furnished under the contract, for as many days as may be necessary for assembly, installation, testing assistance and operator training.
- b. Manufacturer's field representatives shall observe, instruct, guide, and direct CONTRACTOR's erection or installation procedures, or perform an installation check, as required.
- c. In each case, the CONTRACTOR shall arrange to have the manufacturer's representative revisit the job site as often as necessary until operator training is complete and testing and startup problems have been resolved to the satisfaction of the ENGINEER.
- d. This requirement applies to manufacturers of all equipment furnished (excluding manually operated valves smaller than 24 inches in size, and any other items of equipment specifically exempted by the ENGINEER in writing), whether or not specifically set forth in the Technical Specifications.
- e. The CONTRACTOR shall maintain a service record on each item of equipment and shall deliver these service records to the ENGINEER prior to acceptance of operational testing.

### B. Fulfillment of Specified Minimum Services:

1. The CONTRACTOR shall obtain prior written approval from the ENGINEER for providing manufacturers' services.
2. All requests to the ENGINEER for prior approval shall (1) be in writing, (2) be submitted not less than 10 calendar days prior to the providing of the subject

---

01 75 06-2

Testing, Training and Startup

Pump Station No. 26 Improvements

- services, (3) state the service to be provided, and (4) state the reason(s) why the timing of the service is appropriate.
3. Request made to the ENGINEER less than 10 calendar days prior to the manufacturers' services may not receive consideration and response prior to the times the services are provided.
  4. Visits of manufacturers and their representatives to the jobsite or training classroom without prior approval as provided herein may not act to fulfill the specified minimum man-day requirements.
- C. Certificate of Proper Installation:
1. Equipment requiring factory tests shall not be delivered to the jobsite until the CONTRACTOR submits acceptable certified test results to the ENGINEER.
  2. Equipment shall not be considered ready for functional testing until after the following certifications have been submitted and accepted by the ENGINEER.
    - a. Manufacturer Representatives:
      - 1) The CONTRACTOR shall require that each manufacturer's representative furnish to the ENGINEER a written and signed report addressed to the CITY certifying that the equipment has been properly installed, adjusted, lubricated, is in accurate alignment, is free from any undue stress imposed by connecting piping or anchor bolts, has been operated satisfactorily under full-load conditions and is ready for full-time operation.
      - 2) For pumps, compressors, blowers, engines, motors, and other rotating or reciprocating equipment, the report shall certify that the equipment operates within the manufacturer's allowable limits for vibration.
      - 3) The report shall also certify that all controls, protective devices, instrumentation, and control panels furnished as part of the manufacturer's equipment package are properly installed and calibrated; and that the control logic for equipment startup, shutdown, sequencing, interlocks, and emergency shutdown has been tested and is properly operating.
      - 4) The CONTRACTOR shall also sign said certification.
      - 5) The CONTRACTOR shall submit "Manufacturer's Certification of Proper Installation" on the CITY form.
    - b. Electrical and Instrumentation Subcontractor:
      - 1) The CONTRACTOR shall require that the electrical and/or instrumentation Subcontractor shall furnish a written and signed report to the ENGINEER certifying that the motor control logic for the equipment item that resides in motor control centers, control panels, control boards, microprocessors, distributed processing units, computers, and the like furnished by the electrical and/or instrumentation Subcontractor has been properly tested and calibrated.
      - 2) The report shall certify that the control logic for equipment startup, shutdown, sequencing, interlocks, and emergency shutdown has been tested and is properly operating.
      - 3) The CONTRACTOR shall also sign said certification.

### 1.3 STARTUP AND TESTING

- A. General:
1. The CONTRACTOR shall provide the effective coordination of all parties necessary for the successful project startup.

---

Testing, Training and Startup

Pump Station No. 26 Improvements

2. The ENGINEER shall not be responsible to instruct the CONTRACTOR in the startup of the project, however, the ENGINEER will be available prior to and during startup to provide operational and technical support to the CONTRACTOR.
  3. The CONTRACTOR shall furnish all labor, consumables (power, water, chemicals, air, etc.) tools, equipment, instruments, and services required and incidental to completing all functional, performance and operational testing of installed equipment.
  4. The CONTRACTOR shall submit for favorable review the proposed test procedures to the ENGINEER for review at least 30 days prior to testing.
  5. After favorable review of the test procedures, the CONTRACTOR shall give the ENGINEER written notice confirming the date of testing at least five working days before the time the equipment is scheduled to be tested.
  6. All testing shall be witnessed by the ENGINEER to be considered valid.
  7. Test Reports:
    - a. CONTRACTOR shall submit written detailed results of all functional, performance and operational testing.
    - b. Upon successful completion of Operational testing all equipment installation, testing and maintenance records shall be submitted to the ENGINEER.
    - c. Said records shall be bound separately for each piece of equipment or system and shall be collected by type of record.
  8. For factory tests, written test results shall be submitted to the ENGINEER at least 10 days prior to shipment.
- B. Functional testing:
1. All items of mechanical and electrical equipment shall be functionally tested by the CONTRACTOR after installation for proper operation.
  2. A minimum of ten (10) days prior to the start of functional testing, the CONTRACTOR shall submit interconnection diagrams for the equipment and for the alarms, controls and instruments associated with the equipment. This requirement shall not relieve the CONTRACTOR of meeting any requirements in the technical specifications for earlier submittal of the interconnection diagrams.
  3. Minimum Test Requirements
    - a. The functional test of each piece of mechanical equipment shall continue for not less than eight (8) continuous hours without interruption.
    - b. The functional test shall include checking for proper rotation, alignment, speed, flows, pressure, vibration, sound level, etc. Initial equipment and system adjustment and calibrations shall be performed in the presence of and with the assistance of the manufacturer's representative.
    - c. The functional test shall include a demonstration of the proper performance of all alarms, local and remote controls, instrumentation, equipment functions, and all other electrical, mechanical, and piping systems.
    - d. All parts shall operate satisfactorily in all respects, under continuous full load, and in accordance with the specified requirements, for the full duration of the eight-hour test period.
    - e. If any part of a unit shows evidence of unsatisfactory or improper operation during the eight-hour test period, correction or repairs shall be made and the full eight-hour test operation, as specified herein, shall be repeated after all parts operate satisfactorily.
- C. Performance testing:
1. Where performance testing is required by the Technical Specifications, the testing shall be supervised by the manufacturer's representative. These services shall

---

01 75 06-4  
Testing, Training and Startup

Pump Station No. 26 Improvements

- continue until such times as the applicable equipment or system has been successfully tested for performance and has been accepted by the ENGINEER for operational testing.
2. Performance testing shall take place after functional testing is successfully completed in accordance with Article 1.3 B.
  3. Performance testing shall demonstrate that the equipment meets all performance requirements specified.
- D. Startup/operational testing:
1. Upon successful completion of operator training and the functional, performance and leakage testing, the CONTRACTOR shall startup the facilities and test the equipment operation and performance by conducting a seven (7) day, continuous operational test of the completed facilities as an operational process unit to demonstrate to the ENGINEER's satisfaction that all equipment and systems required by these specifications will operate in the manner in which they are intended to perform.
  2. The CITY will provide CONTRACTOR-trained operating personnel for the duration of the operational test. Said operation shall be conducted and under the supervision and direction of the CONTRACTOR and/or manufacturer's representative.
  3. Operational Defects:
    - a. All defects in materials or workmanship which appear during the operational test shall be immediately corrected by the CONTRACTOR.
    - b. In the event of a malfunction or deficiency that results in shutdown or partial operation of a system or process unit or results in performance that is less than that specified, the startup duration shall be repeated for that corresponding system or process unit and any other affected equipment so its proper operation and performance as required by the Contract Documents is demonstrated for a minimum of seven (7) continuous and trouble free days.
  4. If the operational test is interrupted through no fault of the CONTRACTOR, the test may resume at the earliest mutually agreeable time.
  5. No unit process or part thereof shall be placed in service until it has successfully completed operational testing.
  6. During plant startup, the CONTRACTOR shall provide the appropriate construction trades and the services of authorized Manufacturer's representatives for operational testing and as necessary, to correct faulty equipment operation.
  7. After completion of all startup/operational testing, the CONTRACTOR shall repaint, hose, scrub, clean up and otherwise return the work to a "like new" condition, prior to CITY acceptance.

#### 1.4 TRAINING OF CITY PERSONNEL

- A. General:
1. Operation and maintenance training of CITY's personnel shall be provided for mechanical, electrical, instrumentation and control equipment as listed in this Section or elsewhere in the Specifications.
  2. For the purposes of this requirement, operations training is considered to be separate from maintenance training. Instructions are to be tailored to the needs of each group.
  3. These training services shall be conducted by the manufacturer's representative and shall ensure measurable and observable means that CITY's personnel are qualified to perform equipment task requirements, including essential knowledge, skills, and abilities.

---

01 75 06-5  
Testing, Training and Startup

Pump Station No. 26 Improvements

4. Training shall be conducted by competent representatives who are certified by the manufacturer to be thoroughly familiar with the subject matter as well as instructional methods.
  5. Training materials shall be submitted to the CITY (see Paragraph 1.4 C below) for review. Acceptance of training materials is required prior to start of training.
  6. All training shall be completed prior to beginning operational testing.
  7. The CITY shall have the right to videotape any or all training sessions, or may designate separate sessions or portions thereof for the sole purpose of videotaping.
- B. Training coordinator:
1. The CONTRACTOR shall designate and provide one or more persons to be responsible for coordinating and expediting training duties.
  2. The person or persons so designated shall be present at all training coordination meetings with the CITY.
- C. Training schedule:
1. The CONTRACTOR's coordinator shall coordinate the training periods with CITY's personnel and manufacturer's representatives, and shall submit a training schedule and the training materials for each piece of equipment or system for which training is to be provided.
  2. The training schedule shall be submitted not less than 21 calendar days prior to the time that the associated training is to be provided and shall be based on the then current Plan of Operation.
  3. Equipment and/or systems shall be deemed suitable for use in training upon satisfactory completion of functional testing.
  4. All training with regards to a unit process or part thereof shall be completed prior to the start of operational testing.
  5. As a minimum, training shall be provided on the following equipment and systems:
    - a. Pumps
    - b. Electrical Systems
    - c. Instrumentation and Controls
    - d. Generator
  6. The CONTRACTOR shall provide distinct and separate training sessions for both operations and maintenance personnel, meeting the following criteria:
    - a. Maintenance Training:
      - 1) Maintenance training shall be provided for all items in 1.4.C.5 above.
      - 2) Maintenance training shall be scheduled on at least one day shift, Monday through Thursday.
      - 3) Training shall emphasize theory of operations, troubleshooting, and preventative maintenance and repair procedures.
      - 4) The discussion shall encompass issues relating to instrumentation, electrical, and mechanical systems.
    - b. Operations training:
      - 1) Operations training shall be provided for each piece of equipment listed in Paragraph 1.4.C.5 above.
      - 2) Operations and/or Maintenance training shall be scheduled on three consecutive day shifts, Tuesday through Thursday.
    - c. Training session schedules shall be approved by the ENGINEER.
    - d. Training shall emphasize theory of operations, startup instructions, emergency and normal shutdown instructions, lockout procedures, troubleshooting, preventative maintenance, and alarm and control logic.

---

01 75 06-6  
Testing, Training and Startup

Pump Station No. 26 Improvements

7. The CONTRACTOR shall confirm each training period a minimum of three working days prior to the schedule time.
8. If a manufacturer's representative fails to conduct a scheduled training class, the CONTRACTOR hereby agrees to compensate the CITY for labor costs, including overhead, for all CITY personnel in attendance for the entire scheduled training period.
9. If the CONTRACTOR or the manufacturer's representative fails to provide training that qualifies the CITY personnel to perform equipment task requirements, the CONTRACTOR hereby agrees to provide remedial training to ensure CITY personnel proficiency at no additional cost to the CITY.

## **PART 2 - PRODUCTS (NOT USED)**

## **PART 3 - EXECUTION**

### **3.1 RECORD KEEPING**

- A. The CONTRACTOR shall maintain as a minimum, the following records:
  1. Equipment manufacturer's shop drawings.
  2. Daily logs indicating all equipment testing and startup activities.
  3. Log and time sheets of all manufacturer's representatives performing services on the jobsite.
  4. Updated equipment testing and startup schedules.
  5. Records of system cleaning.
  6. Hydrostatic and pressure test records.
  7. Equipment alignment and vibration measurements and corrective actions.
  8. Equipment lubrication records.
  9. Insulation resistance measurements.
  10. Electrical phase, voltage, and amperage measurements.
  11. Electrical breaker inspection, test, and adjustment records.
  12. Logs of abnormal circuits and lifted wires.
  13. Testing and validation of all central and alarm functions.
  14. Data sheets of all testing and calibration of instrumentation devices and control loops including documentation of set points.
  15. Equipment and system release logs (from construction to startup).
  16. Daily work reports.

### **3.2 GENERAL PROCEDURES**

- A. The general work procedures listed below outline the work to be performed by the CONTRACTOR. Additional procedures applicable to specific equipment items are specified elsewhere.
- B. Technical assistance and support:
  1. Obtain the assistance of the appropriate construction trades and the manufacturer or vendor, as required for technical assistance during equipment installation, testing, and startup by the CONTRACTOR and for training of the CITY's Operation and Maintenance personnel.
  2. Furnish names and telephone numbers of manufacturer's and vendor's current technical service representatives for use by the ENGINEER.

---

01 75 06-7

Testing, Training and Startup

Pump Station No. 26 Improvements

- C. Instructions:
1. Maintain an adequate manufacturer's instruction file so that the information will be readily available during equipment testing and startup.
  2. Prior to equipment testing, finalize, and transmit to the ENGINEER the applicable technical manuals as required under Section 01 33 03, Submittal Procedures of the Contract Specifications.
- D. Removal of rust preventives:
1. Prior to equipment testing, remove all rust preventives and oils used to protect the equipment during the construction period whenever these protective materials will be detrimental to operation or equipment maintenance.
- E. Lubricants:
1. At least 60 days prior to startup, provide a list of the manufacturer's recommended lubricants for use in the plant. All equipment lubrication shall be listed with the lubricant types and quantities recommended and approved by the equipment manufacturers.
  2. Provide the necessary lubricants for startup and the initial 60 days of operation.
  3. Flush systems and install the initial charge of all lubricants. Dispose of flushing oil in accordance with applicable regulations.
  4. The CONTRACTOR shall lubricate the equipment in accordance with the manufacturer's recommendations until the equipment is accepted by the CITY.
  5. Maintain a lubrication record for each item of equipment. The CONTRACTOR shall submit the lubrication records to the ENGINEER prior to equipment testing.
- F. Packing and seals:
1. Install, adjust, and replace packing, mechanical seals, and accessories, as necessary, during the equipment testing and startup period.
  2. Adjust seal water and flushing water flow rates in accordance with the equipment manufacturer's recommendations.
- G. Removal of temporary bracing:
1. Prior to equipment testing, remove all temporary supports, bracing, or other foreign objects that were installed in vessels, transformers, rotating machinery, or other equipment to prevent damage during shipping, storage, and erection, and repair any damage sustained.
- H. Rotation, alignment, and vibration:
1. Prior to equipment testing, check rotating machinery for correct direction of rotation and for freedom of moving parts before connecting the driver.
  2. Prior to equipment testing, perform the cold alignment and hot alignment to the manufacturer's tolerances.
  3. Prior to equipment testing, test equipment vibration and correct any vibration in excess of the manufacturer's recommendation.
- I. Tie-ins at the contract limits:
1. Provide proper notification, preparation, and coordination for safe tie-ins and minimal interference with the pump station operation.
  2. Obtain approval and make the necessary tie-ins at the unit limits as required by the Contract Documents and as approved by the ENGINEER.
  3. Prior to startup, remove the temporary blind flanges, plugs, bulkheads, seals, etc.

---

01 75 06-8  
Testing, Training and Startup

Pump Station No. 26 Improvements

- J. Leak and pressure tests:
  - 1. Provide the ENGINEER with 3-day advance notification in writing of the schedule for non-operating field leak tests or field pressure tests on piping and field fabricated equipment, unless otherwise directed by the ENGINEER.
  - 2. Provide the water, air and any special media required for the test purposes.
  - 3. Prior to startup, conduct all leak and pressure tests in accordance with applicable codes, regulations, and the Contract Documents, and as approved by the ENGINEER. The CONTRACTOR is advised that the tests shall be witnessed by the ENGINEER, to be considered valid.
  - 4. Maintain a record of the leak and pressure test data and work completed.
  - 5. Dispose of the test media in a manner that is acceptable to and approved by the CITY and applicable regulatory agencies.
  - 6. Isolate in-line equipment as necessary for protection against test pressure.
- K. Pressure/vacuum safety relief devices:
  - 1. Prior to equipment testing, test and adjust all safety devices as recommended by the equipment manufacturer.
  - 2. Prior to plant startup, provide the ENGINEER with a list of all field or factory equipment settings.
- L. Flushing and chemical/mechanical cleaning:
  - 1. Prior to equipment operation, conduct all flushing, blowing, and chemical/mechanical cleaning operations without using the permanently installed equipment.
  - 2. Provide any special media needed for flushing and/or cleaning purposes.
  - 3. Dispose of all media in a manner that is acceptable to and approved by the CITY and the applicable regulatory agencies.
  - 4. All systems shall be free of trash and construction debris before initiating startup.
  - 5. Maintain a record of the work completed.
- M. Screens, strainers, and blind flanges:
  - 1. Provide and install temporary strainers, screens, and blind flanges as necessary to protect the equipment and to test the equipment and pipelines.
  - 2. Prior to startup, remove all of the temporary blinds and temporary appurtenances.
  - 3. Clean the screens and strainers as required during startup.
  - 4. At the end of startup, clean all of the permanently installed screens and strainers.
- N. Purging/inerting:
  - 1. Prior to startup, purge and/or passivate the facilities as specified.
  - 2. Install purge/inerting connections in accordance with the manufacturer's recommendations.
  - 3. Provide purge or inerting materials and conduct the necessary operations as recommended by the equipment manufacturer.
- O. Drying out:
  - 1. Prior to startup, dry out the facilities as specified or recommended by the equipment manufacturer to prevent contamination of catalysts, operating materials, and/or product.
  - 2. Dry out systems, protective coatings, refractories, and linings as specified or recommended by the equipment manufacturers.

### 3.3 SPECIFIC PROCEDURES

- A. In addition to the work responsibilities described in Subsection 3.2, the procedures outlined below further define the work responsibilities of the CONTRACTOR for specific systems and items of equipment.
- B. Mechanical equipment:
1. Level baseplates and soleplates and grout under all load bearing surfaces.
  2. Install suitable supports and flexible connections to alleviate any piping stresses that may be imposed on pumps, compressors, and drivers.
  3. In accordance with the manufacturer's recommendations, chemically clean lube oil, seal oil, and cooling systems. Dispose of waste and cleaning media in a manner that is acceptable to and approved by the CITY and applicable regulatory agencies.
  4. In accordance with the manufacturer's recommendations, charge the lube oil, seal oil, and cooling systems with flushing media and circulate for cleaning purposes. Dispose of any flushing media in a manner that is acceptable to and approved by the CITY and applicable regulatory agencies.
  5. Charge the lube oil systems, seal oil systems, and cooling systems with the amount and type of operating oil or coolant recommended by the manufacturer.
  6. Operate the equipment and check for excessive vibration, abnormal operating noises, overheating and lubricant leakage, etc., and test any safety shutdown/alarm devices for proper operation, and make any operating tests required by the ENGINEER. The adjustments required for proper operation shall be made prior to operational testing.
  7. Utilize manufacturer's representative for technical assistance during installation and startup.
  8. Prior to startup, all sidewalks, gratings, handrails, safety chains, safety shields, etc., shall be installed.
  9. Prior to startup, demonstrate to the ENGINEER's satisfaction that all chemical solution pipelines are connected to the intended pump(s) and application points, and that the pipes, appurtenances contained therein and diffusers will operate at the intended flow rates.
  10. Prior to startup, the applicable safety equipment, emergency shower and eyewash units, fire extinguishers, fire suppression equipment, self-contained breathing apparatus, toxic and/or combustible gas detectors (including the respective personnel warning system), protective clothing, emergency repair kits, etc., shall be installed in an acceptable manner-subject to the ENGINEER's approval, and be fully ready for operation.
  11. All safety hazards, e.g., exposed drive shafts or rotating equipment members, exposed electrical circuitry, open electrical junction boxes and panels, improperly supported piping and conduits, missing safety devices, etc., shall be corrected prior to supplier training of the CITY's personnel.
  12. The CONTRACTOR shall perform a comprehensive safety inspection and correct any safety deficiencies found before implementing plant startup.
  13. Roadways that are required for ambulance service, fire fighting access, delivery of treatment chemicals and supplies, and disposal of the treatment byproducts shall be completed prior to startup.
  14. Prior to startup, install all warning and safety signs, labels, and devices.
- C. Electrical power and lighting systems:
1. Provide the ENGINEER with 3-day advance notification in writing of the test schedule. The CONTRACTOR is advised that the tests shall be witnessed by the ENGINEER.

---

01 75 06-10  
Testing, Training and Startup

Pump Station No. 26 Improvements

2. Perform insulation resistance tests on all wiring 120 volt and larger. Do not use meggar instruments or solid-state devices.
  3. Perform insulation resistance tests on all motor and transformer windings from phase to phase and phase to ground.
  4. Perform grounding system tests to determine the continuity of connections and the value of resistance to ground.
  5. Fill electrical gear with oil and/or other media as recommended by the equipment manufacturer.
  6. Prior to energizing electrical equipment, startup, test and set switchgear and circuit breaker relays for proper coordination and operation.
  7. The CONTRACTOR shall obtain the services of a qualified "independent testing service", member of the National Electric Testing Association, to perform a thermographic survey on all switchgear buses, insulators and power connections when energized and under at least 20 percent load. Significant hot spots shall be further checked by infrared pyrometer for exact temperature rise. The CONTRACTOR shall troubleshoot and correct the thermographic hot spots. Correction shall be verified by repeating the thermographic survey at no additional cost to the CITY.
  8. The CONTRACTOR shall obtain the services of a qualified "independent testing service", member of the National Electric Testing Association, to inspect and test the protective relays and the 800-ampere and larger drawout breakers for proper installation, adjustment, and operation in accordance with the manufacturer recommendations.
  9. The CONTRACTOR shall obtain the services of a qualified "independent testing service", member of the National Electrical Testing Association, to perform DC high potential tests on all cables that will operate at more than 2,000 volts to ground.
  10. Obtain local electrical inspector's approval where required.
  11. Energize all substations, with approval of the Utility Company and the ENGINEER after completion of all electrical testing.
  12. Prior to startup, perform tests and adjustments on all switchgear and motor control equipment to demonstrate proper operation and conformance to the Contract Documents and manufacturer's recommended settings.
  13. Prior to startup, test installation of emergency power and lighting systems for proper operation, including light intensity.
  14. Prior to startup, provide the ENGINEER with a record of all test data and the work completed.
  15. Vacuum clean all electrical equipment prior to startup and acceptance.
- D. Piping systems:
1. Provide the ENGINEER with 3-day advance notification in writing of test schedule.
  2. Hydrostatically or pneumatically test all piping as required by the codes and contract documents.
  3. After successful testing of the piping, slowly drain the system and then flush the system. Orifice plates shall be installed after testing. If installed with the piping, they will be removed and replaced with spacers or pipe spools of equal length prior to the pressure test.
  4. Dewater the system, remove blind flanges, and perform tightness tests, as required by the ENGINEER.
  5. Insulate or paint piping, flanges, threaded joints, or field welds after the specified testing of each item has been completed unless instructed otherwise by the ENGINEER.

---

01 75 06-11  
Testing, Training and Startup

Pump Station No. 26 Improvements

6. Leave exposed all welded joints (longitudinal, girth, and nozzle) in underground piping that have not been shop tested until the specified testing has been completed. After final testing of these joints, cover the system.
7. Prior to substantial completion and startup, check pipe hangers, supports, guides, and pipe specialties for the removal of all shipping and erection stops and for the correctness of the cold and hot settings for the design service. Make adjustments as necessary to obtain proper installation. Provide the ENGINEER with instructions for the hot settings.
8. As necessary during equipment testing and at the end of substantial completion and startup, clean or replace the screens and filter elements as appropriate for the filter type and service.
9. Prior to startup, verify, to the extent required by the ENGINEER, that specified valve packing has been provided on valves installed in the plant.
10. Prior to startup, install all of the valve and piping system identification labels.
11. Prior to startup, check and record the position of all process system valves.
12. Prior to startup, correct support, vibration, and thermal expansion problems detected during the preliminary equipment testing.
13. Prior to the startup, retorque all hot and cold service bolting as required to ensure a permanent and proper installation.
14. Prior to startup, demonstrate to the ENGINEER's satisfaction that each piping system (e.g., chemical, sample, utility, irrigation process, etc.) functions as designed and required by the Contract Documents.

+ + END OF SECTION + +

---

01 75 06-12  
Testing, Training and Startup

Pump Station No. 26 Improvements

## **SECTION 01 77 03**

### **OPERATIONAL COMPLETION AND PROJECT CLOSEOUT**

#### **PART 1 - GENERAL**

##### **1.1 GENERAL**

- A. Closeout is hereby defined to include general requirements near the end of the Contract Time, in preparation for Final Completion, Final Payment, normal termination of Contract, occupancy by CITY and similar actions evidencing completion of the Work.
- B. Specific requirements for individual units of Work are specified in Sections of Divisions 2 through 43.
- C. Where a conflict exists between this section and the Contract Documents, the conditions in the Contract Documents take precedence.

##### **1.2 CERTIFICATION OF SUBSTANTIAL COMPLETION**

- A. Prior to requesting the ENGINEER's inspection for certification of each phase as Substantially Complete, the CONTRACTOR shall certify in writing that each phase of the Work is Substantially Complete and shall submit a list of known items still to be completed or corrected (Contractor's punchlist) prior to Contract Completion.
- B. The following items shall be completed:
  - 1. CITY has been advised of any pending insurance changeover requirements.
  - 2. Specific warranties, maintenance agreements, final certifications and similar documents have been submitted.
  - 3. All tools, spare parts, extra stocks of materials, and similar physical items have been delivered to CITY.
  - 4. Instruction of CITY's operation/maintenance personnel and start up testing has been completed.
  - 5. Submittal and acceptance of all O&M manuals.
  - 6. Changeover of locks to CITY's cores/keys.
- C. Punchlist:
  - 1. When the CONTRACTOR considers that the Work, or a portion or phase thereof which the CITY agrees to accept separately, is Substantially Complete, the CONTRACTOR shall certify in writing that the work is Substantially Complete and shall prepare and submit to the ENGINEER a comprehensive list of items to be completed or corrected prior to Contract Completion (punchlist).
  - 2. The ENGINEER may add additional work items to the punchlist.
  - 3. Failure to include an item on the punchlist does not alter the responsibility of the CONTRACTOR to complete all Work in accordance with the Contract Documents.
  - 4. Upon receipt of the CONTRACTOR's punchlist, the ENGINEER will make an inspection to determine whether the Work or designated portion thereof is Substantially Complete.
  - 5. If the ENGINEER's inspection discloses any item, whether or not included on the CONTRACTOR's list, that is not in accordance with the requirements of the Contract Documents, the CONTRACTOR shall, upon notification by the ENGINEER and before

---

01 77 03-1

Operational Completion and Project Closeout

Pump Station No. 26 Improvements

- an issuance of the Certificate of Operational Completion is provided, complete or correct such item.
6. The CONTRACTOR shall then submit a request for another inspection by the ENGINEER.
  7. When the Work or designated portion thereof is accepted by the ENGINEER to be Substantially Complete, the ENGINEER will prepare a Certificate of Operational Completion.
  8. The date of Operational Completion shall be the date of the ENGINEER's inspection and acceptance.

### 1.3 FINAL CLEANUP

- A. At completion, leave project clean and ready for use.
  1. Legally dispose of waste materials, debris and rubbish off the site.
  2. Remove grease, dust, dirt, stains, labels, fingerprints, and other foreign materials from exposed and enclosed surfaces.
  3. Repair, patch and touch up all affected curbs, gutters, and sidewalks to match adjacent surfaces.
  4. Broom clean paved surfaces, rake clean other surfaces of grounds. Vacuum clean all interior surfaces, rake clean other surfaces of grounds.

### 1.4 CONTRACT AS-BUILT DRAWINGS

- A. The CONTRACTOR shall prepare and submit Contract As-Built Drawings for the CITY.
  1. The CONTRACTOR shall make a record of changes during construction on prints of the Drawings provided by the CITY for this purpose (Contract As-Built Drawings) as described in Section 01 33 03, Submittal Procedures.
  2. ENGINEER will verify on a monthly basis and provide written verification that the Contract As-Built Drawings are being developed and kept updated prior to submitting CONTRACTOR'S progress payment to the CITY.
  3. The reproducible drawings on which changed conditions are recorded shall be returned to the ENGINEER prior to Final Completion.

### 1.5 WARRANTIES

- A. The Contract Documents cover the CONTRACTOR's responsibility to remedy defects due to faulty workmanship and materials.
- B. Special warranties are required by various Sections of these Specifications. Assemble written warranties, label and submit to the ENGINEER.
  1. Equipment warranties shall be written in the manufacturer's standard form and shall be countersigned by the Subcontractor or supplier and the CONTRACTOR.
  2. All other warranties shall be written on the Subcontractor's or supplier's letterhead and shall be countersigned by the CONTRACTOR.

### 1.6 SPARE PARTS AND MAINTENANCE MATERIALS

- A. Spare parts and maintenance materials are required by various Sections of the Specifications.
  1. Parts and materials shall be packaged so as to preclude damage in normal handling and storage.

---

01 77 03-2  
Operational Completion and Project Closeout  
Pump Station No. 26 Improvements

2. Packages shall be labeled with full description of contents and project name and clearly identified as to which item of equipment they belong to. CONTRACTOR shall maintain a spare parts inventory list which shall be provided to the CITY prior to Final Completion.
3. Submit packaged parts and materials to ENGINEER.
4. Submit the value of all spare parts.

#### 1.7 FINAL INSPECTION

- A. Prior to requesting ENGINEER's final inspection for certification of Final Completion and Final Payment, complete the following and list known exceptions (if any):
  1. Submit Final Payment request with final releases and supporting documentation not previously submitted and accepted.
  2. Submit copy of final punchlist of itemized work to be completed or corrected, stating that each item has been completed or otherwise resolved for acceptance, endorsed and dated by ENGINEER.
  3. Submit Consent of Surety.
  4. Revise and submit evidence of final, continuing insurance coverage complying with insurance requirements.
- B. Certify in writing that the work has been completed in accordance with the Contract Documents, and request ENGINEER's final inspection.
- C. Reinspection:
  1. Within seven (7) days after receipt of the CONTRACTOR's notice that the work has been completed, including punchlist items resulting from earlier inspections, and excepting incomplete items delayed because of acceptable circumstance, the ENGINEER will reinspect the work.
  2. Upon completion of reinspection, ENGINEER will either prepare a certificate of Final Completion or advise the CONTRACTOR of work not complete or obligations not fulfilled as required for Final Completion.
  3. If necessary, inspection procedure will be repeated.

Operational Completion and Project Closeout

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **SECTION 02 41 03**

### **DEMOLITION**

#### **PART 1 - GENERAL**

##### **1.1 DEFINITIONS**

- A. "Demolish": CONTRACTOR shall remove from the site as property of CONTRACTOR. Demolition includes disconnecting, removal, loading, repairs, cleanup, transportation, unloading, disposal permits and fees, disposal, and all other items required to remove the material from the site.
- B. "Salvage": CONTRACTOR shall remove from area of Work and place in location designated by ENGINEER. Equipment is property of CITY. Salvage includes disconnecting, removal, repairs, cleanup, loading, transportation, unloading, and all other items required to remove and relocate the material.
- C. "CITY to Remove": CITY will remove from area of Work prior to CONTRACTOR commencing demolition Work for this area.
- D. "Relocate": CONTRACTOR shall relocate material shown to new locations shown on Drawings or stated herein. Relocation includes disconnecting, removal, reconnecting, attaching, repairs, and all other items required to relocate material to new location.
- E. "Abandon": CONTRACTOR shall disconnect and leave in place as specified.
- F. "Materials": Any and all items and objects that are scheduled, specified, or shown to be demolished, salvaged, removed, relocated, or abandoned.

##### **1.2 SUBMITTALS**

- A. Submittals:
  - 1. Product Information: Grout, sealants, and bonding agents to be used for patching.
- B. Informational Submittals:
  - 1. Plan and schedule phased demolition, including limits of demolition, as part of and consistent with the progress schedule specified in Section 01 32 13, PROGRESS SCHEDULE.
  - 2. Methods of demolition and equipment proposed to demolish materials.
  - 3. Copies of any authorizations and permits required to perform Work.
  - 4. Copies of Hazardous Materials Inspection Reports.
  - 5. Repair procedures for demolition of materials beyond limits shown on Drawings.

---

## **PART 2 - PRODUCTS**

### **2.1 GENERAL**

- A. CONTRACTOR shall provide all materials and equipment in suitable and adequate quantity as required to accomplish the Work shown, specified herein, and as required to complete the Project.

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Drawings are based on available information. The Work may differ slightly from what is shown. CONTRACTOR shall be responsible for determining the work required by inspecting the site.

### **3.2 SAFETY REQUIREMENTS**

- A. All Work shall be done in conformance with all applicable rules and regulations pertaining to safety.
- B. Hazardous Materials:
  - 1. See General Conditions.
  - 2. Existing facilities, or portions thereof, to be demolished may contain hazardous materials such as asbestos cement piping, residual chemicals in existing or abandoned piping, lead-based paint, mercury seals, or other unknown hazardous materials.

### **3.3 SEQUENCE**

- A. Be responsible for the sequence of Work.
- B. Conform to constraints as specified in Section 01 14 03, SPECIAL PROJECT CONSTRAINTS.

### **3.4 COORDINATION**

- A. Coordination with ENGINEER:
  - 1. Only materials specified herein, shown on the Demolition Photographs or the Drawings, or approved by ENGINEER in the field shall be demolished, salvaged, removed, relocated, or abandoned.
  - 2. Verify materials scheduled to be demolished, salvaged, removed, relocated, or abandoned with ENGINEER prior to performing Work.
  - 3. Do not remove materials without prior approval of ENGINEER.
  - 4. Provide at least 3 working days' notice to ENGINEER prior to start of Work.
  - 5. Notify ENGINEER to turn off affected services or facilities before starting Work.
  - 6. Provide temporary services during interruptions to affected services or facilities as acceptable to ENGINEER.
  - 7. ENGINEER will indicate limits of Work if not clearly shown.
- B. Coordination with Utility Owners:

---

02 41 03-2  
Demolition

Pump Station No. 26 Improvements

1. Notify utility owners to turn off affected services or facilities before starting Work.
2. Provide not less than 72 hours notice to utility owners prior to shutdown, unless otherwise directed by utility owners.
3. Provide temporary services during interruptions to affected services or facilities as acceptable to utility owners.

### 3.5 LIMITS

- A. Drawings define minimum portions of materials to be demolished. Unless otherwise shown, rough cuts or breaks may be made to limits of demolition shown. If rough cuts or breaks are made exceeding limits shown, CONTRACTOR shall repair the cuts or breaks back to the dimensions shown on Drawings at CONTRACTOR's expense.
- B. If limits are not clear on the Drawings or Demolition Photographs, limits shall be as directed by ENGINEER.
- C. All areas not within the limits of demolition Work shown on the Drawings, or as specified herein, shall be left undisturbed, unless necessary for demolition of materials.

### 3.6 DEMOLITION

- A. General:
  1. Inspect condition of materials to be demolished prior to bidding to assess potential for salvage value.
  2. Remove all materials associated with existing equipment that is to be demolished.
  3. Materials within limits of demolition will become the property of CONTRACTOR.
  4. All materials from the demolition process shall be removed safely from the project site as soon as possible. They shall be disposed of in accordance with applicable federal, state, and city regulations. CONTRACTOR is responsible for determining these regulations and shall bear all costs associated with disposal of the materials.
- B. Pavement and Curbs:
  1. Provide saw cut at all concrete and pavement surfaces and curb removal limits and where neat connection lines are required.
  2. Surfaces exposed by demolition activities shall be repaired and finished to provide a uniform, smooth, level transition between adjacent surfaces.
- C. Concrete, CMU, and Reinforcing:
  1. In areas where concrete or CMU portions are to be removed from a structure, the edge of removal shall be cut with a concrete saw to leave a perpendicular edge or by core-drilling where a circular hole is required.
  2. Damaged concrete shall be removed to solid concrete. Damaged concrete shall include concrete that is soft, spalled, cracked, or otherwise damaged as determined by ENGINEER.
  3. Depth of removal shall be as determined by ENGINEER unless otherwise shown or specified.
  4. Reinforcing shall be cut and removed unless otherwise shown or instructed by ENGINEER.
  5. Spalled edges may be required to be re-sawn at the discretion of the ENGINEER.
  6. Protect adjacent structures and equipment from damage during Work.
  7. Exposed surfaces following demolition activities shall be repaired and finished to provide a uniform, smooth, and level transition between adjacent surfaces.

---

02 41 03-3  
Demolition

Pump Station No. 26 Improvements

8. Remove and repair designated cracked and damaged concrete areas shown in accordance with this section and Section 03 30 03, CAST-IN-PLACE CONCRETE.
- D. Concrete Embedded Items:
1. Except for core drills, demolish anchor bolts, reinforcing steel, conduit, and other materials that are concrete embedded to a minimum of 1 inch below final finished surface. For core drills, coat rebar exposed by core drilling with System No. 304 in accordance with Section 09 91 03, PAINTING.
  2. Plug empty pipes and conduits with fireproof sealant to maintain fire ratings for floors or walls.
  3. Patching:
    - a. Demolish damaged concrete. Damaged concrete shall be removed to solid concrete. Damaged concrete shall include concrete that is soft, spalled, cracked, or otherwise damaged as determined by ENGINEER.
    - b. Coat with approved bonding agent.
    - c. Patch with nonshrink, nonmetallic grout.
- E. Piping:
1. Pressurized Services: Install restrained caps or plugs at the demolished ends, unless otherwise shown.
  2. Gravity Services: Install concrete plugs, 5-foot minimum length.
- F. Utilities:
1. Excavate utility lines serving structures to be demolished.
  2. Demolish electrical, sanitary, and storm drainage lines serving structures to be demolished.
  3. Support or relocate utility lines exposed by Work.
  4. For water and gas lines to be demolished or capped and terminated, provide a permanent leakproof closure. Closure type shall be as recommended by utility owner.
- G. Electrical:
1. Remove conduits and wiring from materials to be demolished back to nearest junction box.
  2. For existing circuits to remain operational, intercept existing conduit at the most convenient location, or as shown, and splice and extend conduit to new location. Install new conductors as required to accomplish intended results. New conductors shall be continuous without splices between junction boxes.
  3. For existing circuits no longer needed, demolish conductors from conduits.
  4. Demolish all surface-mounted conduit which is no longer needed.
  5. For conduit below grade or concealed within walls, cap and abandon in place.

### 3.7 SALVAGE

- A. Salvage materials for CITY's own use where shown.
- B. Remove materials with extreme care so as not to damage.
- C. Promptly remove materials from Work area.
- D. Store materials in location designated by ENGINEER.
- E. Clean and protect materials from dust, dirt, natural elements, and store as directed.

---

02 41 03-4  
Demolition

Pump Station No. 26 Improvements

### 3.8 RELOCATION

- A. ENGINEER will determine condition of materials prior to removal.
- B. Remove all materials associated with items to be relocated.
- C. Existing materials shall not be damaged during removal.
- D. Properly store and maintain materials in same condition as when removed.
- E. Clean and protect materials from dust, dirt, natural elements, and store as directed.

### 3.9 ABANDONMENT

- A. Structures: Break holes into or core drill floor slabs, catch basins, and other below-grade concrete structures to be abandoned in place to allow water to freely migrate through.
- B. Piping and Conduits:
  - 1. General: Piping and conduits to be abandoned shall be capped with a watertight plug at demolished end in a manner that will prevent entrance of soil, groundwater, or moisture.
  - 2. Pressurized Services: Install restrained caps or plugs at the demolished ends, unless otherwise shown.
  - 3. Gravity Services: Install concrete plugs, 5-foot minimum length.

### 3.10 REPAIR AND REPLACEMENT

- A. Any damaged materials scheduled to be salvaged or relocated shall be repaired by the CONTRACTOR to the satisfaction of ENGINEER or replaced at the CONTRACTOR's expense.
- B. Any damage to areas not within the limits of demolition Work shown on the Demolition Photographs, Drawings, or as specified herein shall be repaired or replaced to original precontract conditions at the CONTRACTOR's sole expense.

### 3.11 DISPOSAL

- A. Dispose of materials offsite in licensed landfills and in accordance with all local, state, and federal regulations. CONTRACTOR is responsible for obtaining any and all necessary permits for disposal.

Demolition

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

**SECTION 03 21 03**  
**CONCRETE REINFORCEMENT**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Section includes: Fabrication and placement of reinforcement including bars, ties and supports, and welded wire fabric for concrete, encasements and fireproofing.

**1.2 SUBMITTALS**

- A. Shop Drawings:
1. Manufacturer's specifications and installation instructions for all materials and reinforcement accessories.
  2. Drawings for fabrication, bending, and placement of concrete reinforcement. Comply with ACI 315, Parts A and B. For walls, show elevations to a minimum scale of 1/4-inch to 1-foot. For slabs, show top and bottom reinforcing on separate plan views. Show bar schedules, stirrup spacing, diagrams of bent bars, arrangements and assemblies, as required for the fabrication and placement of concrete reinforcement, unless otherwise noted. Keep splices to a minimum. Avoid splices in regions of maximum tension stresses whenever possible.
- B. Certificates: Submit one (1) copy of steel producer's certificates of mill analysis, tensile and bend tests for reinforcing steel.

**1.3 QUALITY ASSURANCE**

- A. Reference Standards: Comply with applicable provisions and recommendations of the following, except as otherwise shown or specified:
1. American Concrete Institute (ACI):
    - a. ACI 315, Manual of Engineering and Placing Drawings for Reinforced Concrete Structures.
    - b. ACI 318, Building Code Requirements for Reinforced Concrete.
  2. Concrete Reinforcing Steel Institute:
    - a. Manual of Standard Practice, includes ASTM standards referred to herein.
- B. Allowable Placing Tolerances: Comply with ACI 318, Chapter 7 - Details of Reinforcement.

**1.4 DELIVERY, HANDLING, AND STORAGE**

- A. Deliver concrete reinforcement materials to the site bundled, tagged and marked. Use metal tags indicating bar size, lengths, and other information corresponding to markings shown on placement diagrams.

---

03 21 03-1  
Concrete Reinforcing

Pump Station No. 26 Improvements

- B. Store concrete reinforcement material at the site to prevent damage and accumulation of dirt or excessive rust. Store on heavy wood blocking so that no part of it will come in contact with the ground.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Reinforcing Bars: ASTM A615, Grade 60 for all non-welded bars. ASTM A706, Grade 60 for welded bars.
- B. Smooth Steel Dowels: ASTM A36.
  - 1. Epoxy coated conforming to ASTM A775 or ASTM A934.
- C. Mechanical Couplers: Reinforcement bars may be spliced with a mechanical connection. Provide a full mechanical connection which shall develop in tension or compression, as required, at least 125% of specified yield strength ( $f_y$ ) of the bar in accordance with ACI 318 Section 12.14.3.2. The locations of the connections are subject to the approval of the ENGINEER.
  - 1. Dayton Superior Bar Lock S/CA Series.
  - 2. Or approved equal
- D. Threaded Splicing Systems: Dowel Bar Splicer System shall comply with ICC Report #4028. The completed splice shall exceed 160% of the specified yield strength ( $f_y$ ) of the bar.
  - 1. Dayton Superior DB/DI parallel threaded couplers.
  - 2. Or approved equal
- E. Steel Wire: ASTM A82.
- F. Welded Wire Fabric: ASTM A185. Furnish in flat sheets, not rolls.
- G. Column Spirals: Hot-rolled rods for spirals, ASTM A615.
- H. Supports for Reinforcement: Bolsters, chairs, spacers and other devices for spacing, supporting and fastening reinforcement in place.
  - 1. Use wire bar type supports complying with CRSI recommendations, except as specified below. Do not use wood, brick, or other unacceptable materials.
  - 2. For slabs on grade, use 5000 psi concrete blocks.
  - 3. At all formed surfaces, provide supports complying with CRSI "Manual of Standard Practice" as follows: Plastic protected or stainless steel legs.
  - 4. For all PVC lined concrete surfaces, provide supports complying with CRSI "Manual of Standard Practice" as follows: Either plastic or metal plastic protected legs.

### **2.2 FABRICATION**

- A. General: Fabricate reinforcing bars to conform to required shapes and dimensions, with fabrication tolerances complying with CRSI, "Manual of Standard Practice". In case of

---

03 21 03-2  
Concrete Reinforcing

Pump Station No. 26 Improvements

fabricating errors, do not re-bend or straighten reinforcement in a manner that will injure or weaken the material.

- B. Unacceptable Materials: Reinforcement with any of the following defects will not be permitted in the Work:
1. Bar lengths, bends, and other dimensions exceeding specified fabrication tolerances.
  2. Bends or kinks not shown on approved Shop Drawings.
  3. Bars with reduced cross-section due to excessive rusting or other cause.

### **PART 3 - EXECUTION**

#### **3.1 INSPECTION**

- A. Examine substrate and conditions under which concrete reinforcement is to be placed with installer, and notify ENGINEER, in writing, of unsatisfactory conditions. Do not proceed with the Work until unsatisfactory conditions have been corrected in a manner acceptable to ENGINEER.

#### **3.2 INSTALLATION**

- A. Comply with the applicable recommendations of specified codes and standards, and CRSI, Manual of Standard Practice, for details and methods of reinforcement placement and supports.
- B. Clean reinforcement to remove loose rust and mill scale, oil, earth, ice, and other materials that reduce or destroy bond with concrete.
- C. Position, support, and secure reinforcement against displacement during formwork construction or concrete placement operations. Locate and support reinforcing by metal chairs, runners, bolsters, spacers and hangers, as required.
1. Place reinforcement to obtain the minimum concrete cover as shown. Arrange, space, and securely tie bars and bar supports together with 16-gauge wire to hold reinforcement accurately in position during concrete placement operations. Slab and wall bars shall be tied at every intersection around the periphery of the slab or wall and not less than every 48 inches in the field at walls and 60 inches in the field at slabs.
  2. Bar supports shall be placed no further than 4 feet apart in each direction. Supports must be completely concealed in the concrete and shall not discolor or otherwise mar the surface of the concrete.
  3. Set wire ties so that twisted ends are directed away from exposed concrete surfaces.
  4. Do not secure reinforcing steel to forms with wire, nails or other ferrous metal. Do not permit metal supports subject to corrosion to touch or be within the required clearance to formed or exposed concrete surfaces.
- D. Install welded wire fabric in as long lengths as practical. Lap adjoining pieces at least one full mesh and lace splices with wire. Do not make end laps midway between supporting beams or directly over beams of continuous structures. Offset end laps in adjacent widths to prevent continuous laps.

- E. Provide sufficient numbers of supports of strength required to carry reinforcement. Do not place reinforcing bars more than 2 inches beyond the last leg of any continuous bar support. Do not use supports as bases for runways for concrete conveying equipment or similar construction loads.
- F. Splices: Provide reinforcement lap splices by placing bars in contact, and tying tightly with wire. Comply with requirements shown for minimum lap of spliced bars.
- G. Mechanical Couplers in Lieu of Lap Splicing:
  - 1. Provide mechanical butt splices in accordance with the recommendation of the manufacturer of the mechanical splicing device. Butt splices shall develop 125 percent of the specified minimum yield tensile strength of the spliced bars or of the smaller bar in transition splices. Flame dry bars before butt splicing. Provide adequate jigs and clamps or other devices to support, align, and hold the longitudinal centerline of the bars to be butt spliced in a straight line.
- H. Reinforcement Around Openings: Place an equivalent area of steel around the pipe or opening and extend on each side sufficiently to develop bond in each bar. See the Details on Drawings for bar extension length each side of opening. Where welded wire fabric is used, provide extra reinforcing using fabric or deformed bars.
- I. Field Bending: Field bending of reinforcing steel bars is not permitted when rebending will later be required to straighten bars. Rebending of bars at the same place where strain hardening has taken place due to the original bend will damage the bar. Consult with the ENGINEER prior to any pour if the CONTRACTOR foresees a need to work out a solution to prevent field bending.

### 3.3 INSPECTION OF REINFORCEMENT

- A. Do not place concrete until the reinforcing steel is inspected and permission for placing concrete is granted by ENGINEER. All concrete placed in violation of this provision will be rejected.

++ END OF SECTION ++

03 21 03-4  
Concrete Reinforcing

Pump Station No. 26 Improvements

**SECTION 03 30 03**  
**CAST-IN-PLACE CONCRETE**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Section includes: Place, finish, cure, strip, and repair concrete.

**1.2 REFERENCES**

- A. American Concrete Institute (ACI)
1. ACI 211.1, Standard Practice for Selecting Proportions for Normal, Heavyweight and Mass Concrete.
  2. ACI 214, Recommended Practice for Evaluation of Strength Test Results of Concrete.
  3. ACI 301, Specifications for Structural Concrete for Buildings, (includes ASTM Standards referred to herein).
  4. ACI 304, Guide for Measuring, Mixing, Transporting and Placing Concrete.
  5. ACI 305, Hot Weather Concreting.
  6. ACI 306, Cold Weather Concreting.
  7. ACI 309, Guide for Consolidation of Concrete.
  8. ACI 311, Guide for Concrete Inspection.
  9. ACI 318, Building Code Requirements for Reinforced Concrete.
  10. ACI 347, Guide to Formwork for Concrete
  11. ACI 350, Environmental Engineering Concrete Structures.

**1.3 SYSTEM DESCRIPTION**

- A. Class A Concrete shall be steel reinforced and includes:
1. Foundations.
  2. Walls.
  3. Slabs.
  4. Beams.
  5. Girders.
  6. Columns.
  7. Equipment bases.
  8. Pipe supports.
- B. Class B Concrete shall be placed without forms or with simple forms, with little or no reinforcing, and includes:
1. Concrete fill.
  2. Curbs and gutters.
  3. Sidewalks.
  4. Thrust blocks.
  5. Encasements.

---

03 30 03-1  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

#### 1.4 SUBMITTALS

- A. Samples: Submit samples of materials as specified and as otherwise may be requested by ENGINEER, including names, sources and descriptions.
- B. Product Data: Submit for approval the following:
  - 1. Manufacturer's specifications with application and installation instructions for proprietary materials and items, including admixtures and bonding agents.
  - 2. List of concrete materials and concrete mix designs proposed for use. Include the results of all tests performed to qualify the materials and to establish the mix designs.
- C. Laboratory Test Reports: Submit copies of laboratory test reports for materials and mix design tests
- D. Delivery Tickets: Furnish to ENGINEER copies of all weighmaster certificate delivery tickets for each load of concrete delivered to the site. Provide items of information as specified in ASTM C94, Section 16. Delivery tickets shall be signed by a Certified Weighmaster.

#### 1.5 QUALITY ASSURANCE

- A. Tests for Concrete Materials: Submit written reports to ENGINEER, for each material sampled and tested, prior to the start of Work. Provide the Project identification name and number, date of report, name of CONTRACTOR, name of concrete testing service, source of concrete aggregates, material manufacturer and brand name for manufactured materials, values specified in the referenced specification for each material, and test results. Indicate whether or not material is acceptable for intended use.
- B. If the concrete mix designs specified herein have not been used previously by the ready-mix supplier, mix proportions and concrete strength curves for regular cylinder tests shall be established by an approved ready-mix supplier or an independent testing laboratory based on the relationship of 7, 14 and 28 day strengths versus slump values of 2, 4 and 6 inches, all conforming to these Specifications. A laboratory, independent of the ready-mix supplier, shall be required to prepare and test all concrete cylinders. The costs for preparation of mix designs, not previously used by the ready-mix supplier, and testing of concrete and materials shall be borne by CONTRACTOR.

### **PART 2 - PRODUCTS**

#### 2.1 CONCRETE MATERIALS

- A. Cement:
  - 1. Portland cement, ASTM C150, Type II; or blended hydraulic cement, ASTM C595, Type 1P (MS).
  - 2. Do not use cement which has deteriorated because of improper storage or handling.
- B. Aggregates: ASTM C33 and as herein specified.

---

03 30 03-2  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

1. Do not use aggregates containing soluble salts, substances such as iron sulfides, pyrite, marcasite, ochre, or other materials that can cause stains on exposed concrete surfaces.
  2. Fine Aggregate: Provide clean, sharp, natural sand free from loam, clay, lumps or other deleterious substances.
  3. Coarse Aggregate: Provide clean, uncoated, processed aggregate containing no clay, mud, loam, or foreign matter, as follows:
    - a. Crushed stone, processed from natural rock or stone.
    - b. Coarse Aggregate Size: Size to be ASTM C33, Nos. 57 or 67, except that No. 467 may be used for footings, foundation mats and walls 16 inches or greater in thickness.
- C. Water: Clean, free from injurious amounts of oils, acids, alkalis, organic materials or other substances that may be deleterious to concrete or steel.

## 2.2 CONCRETE ADMIXTURES

- A. Provide admixtures produced by established reputable manufacturers, and use in compliance with the manufacturer's printed instruction. Do not use admixtures that have not been incorporated and tested in the accepted mixes, unless otherwise authorized in writing by ENGINEER.
- B. Air-Entraining Admixtures: ASTM C260.
1. Product and Manufacturer: Provide one of the following:
    - a. SIK AER, as manufactured by Sika Corporation.
    - b. MasterAir AE 200, as manufactured by BASF.
    - c. Daravair, as manufactured by W.R. Grace & Conn.
    - d. Or approved equal.
- C. High-Range Water-Reducing Admixture ("Superplasticizer"): ASTM C494, Type F/G.
1. Superplasticizer shall be used in all Class A Concrete. Do not use high range water-reducing admixture containing more chloride ions than are contained in municipal drinking water. Add only at the job site to concrete in compliance with the manufacturer's printed instruction.
  2. Product and Manufacturer: Provide one of the following:
    - a. Sikament 320, as manufactured by Sika Corporation.
    - b. MasterGlenium, as manufactured by BASF.
    - c. Daracem-100, as manufactured by W.R. Grace & Conn.
    - d. Or approved equal.
- D. Water-Reducing Admixture: ASTM C 494, Type A.
1. A water-reducing, aqueous solution of a modification of the salt of polyhydroxylated organic acids. Do not use admixture containing any lignin, nitrates or chlorides added during manufacture.
  2. Product and Manufacturer: Provide one of the following:
    - a. Eucon WR-75, as manufactured by The Euclid Chemical Company.
    - b. MasterPozzoloth, as manufactured by BASF.
    - c. WRDA series, as manufactured by W.R. Grace & Conn.
    - d. Or approved equal.

---

03 30 03-3  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

- E. Pozzolanic Admixtures:
1. Pozzolanic admixtures shall not be used in structures with concrete in contact with potable water, but may be used in other concrete.
  2. Provide Mineral admixtures, when used, meeting the requirements of ASTM C618 Class F.
  3. A substitution by weight, of the portland cement by pozzolan, so that the total tricalcium aluminate content of the resulting cement plus pozzolan is not greater than 8%, will be considered. However, the pozzolan shall not exceed 20% by weight of the cement plus pozzolan.
- F. Set-Control Admixtures: ASTM C494, as follows:
1. Type B, Retarding.
  2. Type C, Accelerating.
  3. Type D, Water-reducing and Retarding.
  4. Type E, Water-reducing and Accelerating.
  5. Type F, Water-reducing, high range admixtures.
  6. Type G, Water-reducing, high range, and retarding admixtures.
- G. Color Pigments:
1. Color pigments for colored concrete must be of iron oxides complying with ASTM C979.
- H. Calcium Chloride: Do not use calcium chloride in concrete, unless otherwise authorized in writing by ENGINEER. Do not use admixtures containing calcium chloride where concrete is placed against galvanized steel.

## 2.3 PROPORTIONING AND DESIGN OF MIXES

- A. Prepare design mixes of concrete. Mixes subject to the following limitations:
1. Class A Concrete
    - a. Specified 28-day Compressive Strength: 4,000 psi minimum.
    - b. Air content: 5%  $\pm$  1%. For concrete placed at least 2 feet below the adjacent grade, an air-entraining admixture is not required unless otherwise specified.
    - c. Slump, before addition of superplasticizer: 3½ inches  $\pm$  ½ inches
    - d. Slump, after addition of superplasticizer: 8-inch maximum

| Coarse Aggregate Size | Cementitious Content-Pounds Per Cubic Yard | Water-Cement Ratio by Weight |
|-----------------------|--------------------------------------------|------------------------------|
| ¾"                    | 625 min, 800 max                           | 0.375                        |
| 1"                    | 600 min, 800 max                           | 0.385                        |
| 1 ½"                  | 590 min, 800 max                           | 0.400                        |

- e. Use superplasticizer in all Class A Concrete. Use water reducers in combination with superplasticizers as required for mixing.
2. Class B Concrete
    - a. Specified 28-day Compressive Strength: 2,500 psi.
    - b. Maximum Water-Cement Ratio by Weight: 0.49.
    - c. Slump: 3-inch Minimum, 5-inch Maximum.

---

03 30 03-4  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

- B. Use an independent testing facility acceptable to ENGINEER for preparing and reporting proposed mix designs.
- C. Admixtures:
  - 1. Use air-entraining admixture in all concrete, except interior slabs subject to abrasion, unless otherwise shown or specified. Add air-entraining admixture at the manufacturer's prescribed rate to result in concrete at the point of placement having air content within the prescribed limits.
  - 2. Use amounts of admixtures as recommended by the manufacturer for climatic conditions prevailing at the time of placing. Adjust quantities and types of admixtures as required to maintain quality control.
- D. Colored Concrete:
  - 1. The dosage of colored pigments for colored concrete must not exceed 10 percent by weight of cementitious materials in the concrete mix design.
  - 2. When test panels are specified, cementitious materials and aggregates from the same sources used in the authorized test panel must be used for the colored concrete in the completed work.

#### 2.4 EPOXY BONDING AGENT

- A. For use in all dry-packed holes, concrete repair and for unplanned cold-joints.
- B. Provide an epoxy-resin bonding agent, two component, polysulfide type.
- C. Product and Manufacturer: Provide one of the following:
  - 1. Sikadur 32, Hi-Mod LPL, as manufactured by Sika Corporation.
  - 2. Eucopoxy LPL, as manufactured by the Euclid Chemical Company.
  - 3. Or approved equal.

#### 2.5 CONCRETE CURING MATERIALS

- A. Absorptive Cover: Burlap cloth made from jute or kenaf, weighing approximately 10 ounces per square yard and complying with AASHTO M182, Class 3.
- B. Moisture Retaining Cover: One of the following, complying with ASTM C171.
  - 1. Waterproof paper.
  - 2. Polyethylene film.
  - 3. White burlap-polyethylene sheet.
- C. Curing Compound: ASTM C309 Type 1-D (water retention requirements):
  - 1. Product and Manufacturer: Provide one of the following:
    - a. Super Aqua Cure VOX, as manufactured by The Euclid Chemical Company.
    - b. Sealtight 1100, as manufactured by W.R. Meadows, Incorporated.
    - c. Or approved equal.
- D. Concrete Densifier and Chemical Hardener (Surface Applied)
  - 1. Product and Manufacturer: Provide one of the following:
    - a. LS, as manufactured by Consolideck.
    - b. Liqui-Hard, as manufactured by W. R. Meadows.

---

03 30 03-5  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

- c. Duro-Nox LS, as manufactured by Nox-Crete.
- d. Or approved equal.

## **2.6 EMBEDDED ITEMS**

- A. Provide and install items such as plates, angles, inserts, bolts and similar items not specified elsewhere under this Section. Carbon steel embedded items shall be hot dip galvanized after fabrication.
- B. Abrasive Stair Nosings
  - 1. Provide single-component stair nosing
  - 2. 3-inch width
  - 3. Aluminum Extrusion, with provisions for anchoring into concrete
  - 4. Extruded with multiple channels, dovetail shaped, filled with aluminum oxide grit set in epoxy resin
  - 5. Designed for installation before concrete sets, at the front edge of the stair
  - 6. Provide continuous stair nosings, width of stairway less 3 inches on each side. No splices in stair nosings.
  - 7. Manufacturers/Models:
    - a. Balco; Model R-315P
    - b. Babcock Davis; Model BSTTB
    - c. Or Equal

## **PART 3 - EXECUTION**

### **3.1 CONCRETE MIXING**

- A. Provide concrete produced by the ready-mixed process.
- B. Comply with the requirements of ASTM C 94, and as herein specified. Proposed changes in mixing procedures, other than herein specified, must be accepted by ENGINEER before implementation.
  - 1. Plant equipment and facilities: Conform to National Ready- Mix Concrete Association "Plant and Delivery Equipment Specification."
  - 2. Mix concrete in revolving type truck mixers that are in good condition and which produce thoroughly mixed concrete of the specified consistency and strength.
  - 3. Do not exceed the proper capacity of the mixer.
  - 4. Mix concrete for a minimum of two minutes after arrival at the job site, or as recommended by the mixer manufacturer.
  - 5. Mix concrete during transit only as recommended by the mixer manufacturer.
  - 6. Mix at proper speed until concrete is discharged.
  - 7. Maintain adequate facilities at the job site for continuous delivery of concrete at the required rates.
  - 8. Provide access to the mixing plant for ENGINEER at all times.

---

03 30 03-6  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

### 3.2 TRANSPORTING CONCRETE

- A. Transport and place concrete not more than 90 minutes after water has been added to the dry ingredients or before 250 revolutions of the drum or blades, whichever occurs first.
- B. If an admixture is used to retard the set time and the concrete temperature does not exceed 85 degrees F, the travel and placing time may be extended to 120 minutes or 300 revolutions of the drum or blades, whichever occurs first.
- C. Take care to avoid spilling and separation of the mixture during transportation.
- D. Do not place concrete in which the ingredients have been separated.
- E. Do not retemper partially set concrete.
- F. Use suitable and approved equipment for transporting concrete from mixer to forms.

### 3.3 CONCRETE PLACEMENT

- A. General: Place concrete continuously so that no concrete will be placed on concrete, which has hardened sufficiently to cause the formation of seams or planes of weakness within the section. If a section cannot be placed continuously, provide construction joints as specified in Section 03 15 16, Concrete Joints. Deposit concrete as nearly as practical in its final location to avoid segregation due to rehandling or flowing. Do not subject concrete to any procedure that will cause segregation.
  - 1. Screed concrete that is to receive other construction to the proper level to avoid excessive skimming or grouting.
  - 2. Do not use concrete which becomes non-plastic and unworkable, or does not meet the required quality control limits, or which has been contaminated by foreign materials. Do not use retempered concrete. Remove rejected concrete from the job site and dispose of it in an acceptable location.
  - 3. Do not place concrete until all forms, bracing, reinforcement, and embedded items are in final and secure position.
  - 4. Do not place in cold weather, unless adequate precautions are taken against frost action.
  - 5. Do not place footings, piers or pile caps on frozen soil.
  - 6. Unless otherwise approved, place concrete only when ENGINEER is present.
  - 7. Allow a minimum of 3 days of curing before placing new concrete against a slab or wall already in place.
- B. Concrete Conveying:
  - 1. Handle concrete from the point of delivery and transfer to the concrete conveying equipment and to the locations of final deposit as rapidly as practical by methods that will prevent segregation and loss of concrete mix materials.
  - 2. Provide mechanical equipment for conveying concrete to ensure a continuous flow of concrete at the delivery end. Provide runways for wheeled concrete conveying equipment from the concrete delivery point to the locations of final deposit. Keep interior surfaces of conveying equipment, including chutes, free of hardened concrete, debris, water, ice and other deleterious materials.

---

03 30 03-7  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

3. Pumping concrete is permitted, however do not use aluminum pipe for conveying.

C. Placing Concrete into Forms:

1. Deposit concrete in forms in horizontal layers not deeper than 24 inches and in a manner to avoid inclined construction joints. Where placement consists of several layers, place concrete at such a rate that concrete that is being integrated with fresh concrete is still plastic.
2. Do not permit concrete to free fall within the form from a distance exceeding 8 feet, except as noted in Section 03 11 03, Concrete Formwork. Use "elephant trunks" or "wall pipes" to prevent free fall and excessive splashing on forms and reinforcement.
3. Remove temporary spreaders in forms when concrete placing has reached the elevation of such spreaders.
4. Consolidate concrete placed in forms by mechanical vibrating equipment supplemented by hand-spading, rodding or tamping. Use equipment and procedures for consolidation of concrete in accordance with the applicable recommended practices of ACI 309. Vibration of forms and reinforcing will not be permitted.
5. Vibrators shall have a frequency of at least 8,000 vpm, with amplitude required to consolidate the concrete in the section being placed. At least one stand-by vibrator in operable condition shall be at the placement site prior to initiating placement of the concrete.
6. Do not use vibrators to transport concrete inside of forms. Insert and withdraw vibrators vertically at uniformly spaced locations not farther than the visible effectiveness of the machine. Place vibrators to rapidly penetrate the layer of concrete and at least 6 inches into the preceding layer. Do not insert vibrators into lower layers of concrete that have begun to set. At each insertion, limit the duration of vibration to the time necessary to consolidate the concrete and complete embedment of reinforcement and other embedded items without causing segregation of the mix.
7. The forms shall contain sufficient windows or be limited in height to allow visual observation of the concrete and the vibrator operators shall be required to see the concrete being consolidated to ensure good quality workmanship or the CONTRACTOR shall have a person who is actually observing the vibration of the concrete at all times and advising the vibrator operators of any changes needed to assure complete consolidation.
8. Do not place concrete in beam and slab forms until the concrete previously placed in columns and walls is no longer plastic.
9. Force concrete under pipes, sleeves, openings and inserts from one side until visible from the other side to prevent voids.

D. Placing Concrete Slabs and Footings:

1. Deposit and consolidate concrete in a continuous operation, within the limits of construction joints, until the placing of a panel or section is completed.
2. Consolidate concrete during placing operations using mechanical vibrating equipment, so that concrete is thoroughly worked around reinforcement and other embedded items and into corners.
3. Consolidate concrete placed in beams and girders of supported slabs, and against bulkheads of slabs on ground, as specified for formed concrete structures.
4. Bring surfaces to the correct level. Smooth the surface, leaving it free of humps or hollows. Do not sprinkle water on the plastic surface. Do not disturb the surfaces prior to beginning finishing operations.

---

03 30 03-8

Cast-in-Place Concrete

Pump Station No. 26 Improvements

E. Bonding for Next Concrete Pour: Per Section 03 15 16, Concrete Joints.

F. Quality of Concrete Work:

1. Make all concrete solid, compact and smooth, and free of laitance, cracks and cold joints.
2. All concrete for liquid retaining structures, and all concrete in contact with earth, water, or exposed directly to the elements shall be watertight.
3. Cut out and properly replace to the extent ordered by ENGINEER, or repair to the satisfaction of ENGINEER, surfaces which contain cracks or voids, are unduly rough, or are in any way defective. Thin patches or plastering will not be acceptable.
4. Repair all leaks through concrete, and cracks, holes or other defective concrete in areas of potential leakage and make watertight.
5. Repair, remove, and replace defective concrete as ordered by ENGINEER at no additional cost to CITY.

G. Cold Weather Placing:

1. Protect all concrete Work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures, in compliance with the requirements of ACI 306 and as herein specified.
2. When the air temperature has fallen to or may be expected to fall below 40°F, provide adequate means to maintain the temperature, in the area where concrete is being placed, at between 50°F and 70°F for at least seven days after placing. Provide temporary housings or coverings including tarpaulins or plastic film. Maintain the heat and protection, if necessary, to ensure that the ambient temperature does not fall more than 30°F in the 24 hours following the seven-day period. Avoid rapid dry-out of concrete due to overheating, and avoid thermal shock due to sudden cooling or heating.
3. When air temperature has fallen to or is expected to fall below 40°F, uniformly heat all water and aggregates before mixing as required to obtain a concrete mixture temperature of not less than 55°F and not more than 85°F at point of placement.
4. Do not use frozen materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials. Ascertain that forms, reinforcing steel, and adjacent concrete surfaces are entirely free of frost and ice before placing concrete.
5. When temperatures are expected to be below 32°F the night before the concrete is placed, then all reinforcing steel, forms and the ground shall be preheated, for a minimum of 12 hours, under a minimum temperature of 50°F.
6. Do not use salt and other materials containing antifreeze agents or chemical accelerators, or set-control admixtures, unless approved by ENGINEER, in mix designs.
7. Weather predictions made by the nearest NOAA station, and corrected for the local elevation and environmental conditions, may be used to determine whether cold weather protection shall be required. Thermometers will be used by ENGINEER and these readings shall determine whether cold weather protection shall be required and whether cold weather protection is adequate.

H. Hot Weather Placing:

1. When hot weather conditions exist as any combination of high air temperature, low relative humidity and wind velocity that would seriously impair the quality and

---

03 30 03-9  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

strength of concrete, place concrete as recommended by ACI 305 and as herein specified.

2. Cool ingredients before mixing to maintain concrete temperature at time of placement below 85°F. No concrete shall be placed if its temperature exceeds 90°F. Mixing water may be chilled, or chopped ice may be used, or liquid nitrogen may be added. Ice, when introduced into the mixer shall be in such form that it will be completely melted and dispersed throughout the mix at the completion of the mixing time. The addition of ice shall not increase the specified water to cement ratio.
3. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that the steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.
4. Thoroughly wet forms before placing concrete. Forms shall be free of standing water when concrete is placed.
5. Do not use set-control admixtures, unless approved by ENGINEER in mix designs.
6. Fog spray shall be used during finishing operations whenever necessary to avoid surface plastic shrinkage cracking. Fog spray shall also be used after finishing and before the specified curing is commenced to avoid surface plastic shrinkage cracking.
7. Obtain ENGINEER'S approval of other methods and materials proposed for use.

I. Removal of Forms:

1. The CONTRACTOR shall be responsible for all damage resulting from improper and premature removal of forms. Satisfy all applicable OSHA requirements with regard to safety of personnel and property.
2. Forms and shoring for elevated structural slabs or beams shall remain in place in accordance with ACI 318, Chapter 6, and until the concrete has reached a compressive strength equal to the specified 28-day compressive strength as determined by test cylinders unless noted otherwise in Section 03 11 03, Concrete Formwork. Removal of all supports prior to obtaining adequate field cured cylinder results and reshoring shall not be permitted.

J. Backfill Against Walls:

1. Do not place backfill against walls until the concrete has obtained a compressive strength equal to the specified 28-day compressive strength. Where backfill is to be placed on both sides of the wall, the backfill shall be placed simultaneously on both sides to prevent differential pressures.
2. Since the walls of some structures are laterally restrained or supported by suspended slabs and/or slabs on grade and are not designed as cantilever retaining walls, the CONTRACTOR shall submit a schedule of wall shoring, bracing, and backfilling that is coordinated with the concrete curing, test cylinder reports and the design assumptions and obtain a review from the ENGINEER prior to proceeding.

K. Patching:

1. Patching of concrete shall provide an acceptable and structurally sound surface finish uniform in appearance or the CONTRACTOR shall upgrade the finish by other means at no additional cost.
2. Tie Holes: All tie holes, except where sealant is indicated, shall be filled with dry pack nonshrink grout. White cement shall be added as needed so the color of grout after curing matches the color of adjacent concrete. Tie holes shall be thoroughly sandblasted or roughened. Flush the patch area with water and allow to dry. Coat the surface of the existing concrete with an approved bonding agent prior to filling with

---

03 30 03-10

Cast-in-Place Concrete

Pump Station No. 26 Improvements

nonshrink grout. Complete the repair in the time duration specified by the bonding agent manufacturer. The grout shall be rammed into place in thin layers and leveled to the plane of the surrounding concrete. Cure in accordance with the manufacturer's recommendations.

3. Defective Areas: Remove all defective concrete such as honeycombed areas and rock pockets out to sound concrete. Small shallow holes caused by air entrapment at the surface of the forms shall not be considered defects unless the amount is so great as to be considered not the standard of the industry and due primarily of poor workmanship. If chipping is required, the edges shall be perpendicular to the surface. Feather edges shall not be permitted. The defective area shall be filled with a nonshrink, nonmetallic, grout. Use an approved bonding agent on horizontal patches prior to placing nonmetallic, non shrink grout. Since some bonding agents may not be compatible for some vertical surface patching techniques, demonstrate all methods for repair of vertical surfaces using the actual materials, methods, and curing procedures required by the manufactures of the materials on the project site. The CONTRACTOR shall consult with representatives of the bonding agent manufacturer and the nonshrink grout manufacturer, and these representatives shall be onsite and assist in the demonstration.
4. Blockouts at Pipes or Other Penetrations: Conform to details shown or submit proposed blockouts for review. Use nonshrink, nonmetallic grout.

### 3.4 FINISH OF FORMED SURFACES

#### A. Rough Form Finish:

1. Standard rough form finish is with concrete surface having the texture imparted by the form material, with tie holes and defective areas repaired and patched with mortar of 1 part cement to 1½ parts sand & all fins and other projections exceeding ¼ inches in height rubbed down or chipped off.
2. Use rough form finish for the following:
  - a. Exterior vertical surfaces up to 1 foot below grade.
  - b. Interior exposed vertical surfaces of liquid containers up to 1 foot below liquid level.
  - c. Interior and exterior exposed beams and undersides of slabs.
  - d. Other areas shown.

#### B. Smooth Form Finish:

1. Produce smooth form finish (Class A, as defined by ACI-347) by selecting form materials that will impart a smooth, hard, uniform texture. Arrange panels in an orderly and symmetrical manner with a minimum of seams. Repair and patch defective areas as above with all fins or other projections completely removed and smoothed.
2. Use smooth form finish for surfaces that are to be covered with a coating material. The material may be applied directly to the concrete or may be a covering bonded to the concrete such as waterproofing, damp proofing, painting or other similar system.

#### C. Smooth Rubbed Finish:

1. Provide smooth, rubbed finish to concrete surfaces which have received smooth form finish as follows:
  - a. Rubbing of concrete surfaces not later than the day after form removal.

---

03 30 03-11

Cast-in-Place Concrete

Pump Station No. 26 Improvements

- b. Moistening of concrete surfaces and rubbing with carborundum brick or other abrasive until a uniform color and texture is produced. Do not apply cement grout other than that created by the rubbing process.
  - 2. Except where surfaces have been previously covered as specified above, use smooth rubbed finish for the following:
    - a. Interior exposed walls and other vertical surfaces.
    - b. Exterior exposed walls and other vertical surfaces down to 1 foot below grade.
    - c. Interior and exterior horizontal surfaces, except exterior exposed slabs and steps.
    - d. Interior exposed vertical surfaces of liquid containers down to 1 foot below liquid level.
    - e. Other areas shown.
- D. Sack Rubbed Finish:
- 1. Before applying the sack-rubbed finish, fill all tie rod holes and large cavities and remove or correct all fins and irregularities as specified in the Smooth Rubbed Finish.
  - 2. Produce a sack rubbed finish by rubbing the concrete surface with a clean rubber float or wad of burlap and mortar. Use mortar made of premixed sacking mortar or one part portland cement and 1.5 parts, by volume, clean sand passing a No. 16 sieve, mixed with sufficient water to provide a consistency equal to that of a thick cream. Use the same type and brand cement as used in the concrete or colored premixed sacking mortar. The mortar finish color shall match the surrounding concrete. If necessary, blend white cement into the mortar to match the surrounding concrete surface.
  - 3. Thoroughly wet the surface of the concrete and then perform sack rubbing while the surface is damp but not wet. Thoroughly rub the mortar over the area with a rubber float or wad of burlap, filling all pits. While the mortar is still plastic in the pits, rub the surface with the rubber float or burlap using a dry mix of the above proportions, removing all excess plastic material and placing enough dry material in the pits to stiffen and solidify the mortar, then finish the mortar fillings flush with the surface. At the end of the rubbing, no mortar or material shall remain on the surface other than that within the pits.
  - 4. Ensure the completed surface is free of surface voids and blemishes, and is uniform in appearance and texture, except for the difference in texture between the filled voids and the remainder of the surface.
  - 5. A thorough wash-down with stiff bristle brushes shall follow the final bagging or stoning operation. No extraneous materials shall remain on the surface of the wall. The wall shall be sprayed with a fine fog spray periodically to maintain a continually damp condition for at least 3 days after the application.
  - 6. Use a sack rubbed finish for the following areas or as indicated in the Drawings:
    - a. Interior exposed walls and other vertical surfaces.
    - b. Exterior exposed walls and other vertical surfaces down to 1 foot below grade.
    - c. Interior and exterior horizontal surfaces, except exterior exposed slabs and steps.
    - d. Or other areas shown.
- E. Related Unformed Surfaces:
- 1. At tops of walls, horizontal offsets, and similar unformed surfaces occurring adjacent to formed surfaces, strike off smooth and finish with a texture matching the adjacent formed surfaces. Continue the final surface treatment of formed surfaces uniformly across the adjacent unformed surfaces, unless otherwise shown.

---

03 30 03-12  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

### 3.5 MONOLITHIC SLAB FINISHES

#### A. Float Finish:

1. After placing concrete slabs, do not work the surface further until ready for floating. Begin floating when the surface water has disappeared or when the concrete has stiffened sufficiently. Check and level the surface plane to a tolerance not exceeding  $\frac{1}{4}$  inch in 10 feet when tested with a 10-foot straightedge. Cut down high spots and fill all low spots. Uniformly slope surface to drains as shown. Immediately after leveling, refloat the surface to a uniform, smooth, granular texture.
2. Use float finish for the following:
  - a. Interior horizontal surfaces of liquid containers, except those to receive grout topping.
  - b. Exterior below grade horizontal surfaces.
  - c. Surfaces to receive additional finishes, except as shown or specified.

#### B. Trowel Finish:

1. After floating, begin the first trowel finish operation using a power-driven trowel. Begin final troweling when the surface produces a ringing sound as the trowel is moved over the surface.
2. Consolidate the concrete surface by the final hand troweling operation. Finish shall be free of trowel marks, uniform in texture and appearance, and with a surface plane tolerance not exceeding  $\frac{1}{8}$  inch in 10 feet when tested with a 10-foot straight edge. Grind smooth surface defects that would telegraph through applied floor covering system.
3. Use trowel finish for the following:
  - a. Interior exposed slabs, unless otherwise shown or specified.
  - b. Slabs to receive resilient floor finishes.

#### C. Non-Slip Broom Finish:

1. Immediately after trowel finishing, slightly roughen the concrete surface by brooming in the direction perpendicular to the main traffic route. Use fiber-bristle broom, unless otherwise directed. Coordinate the required final finish with ENGINEER before application.
2. Use Non-Slip Broom Finish for the following:
  - a. Exterior exposed horizontal surfaces subject to light foot traffic.
  - b. Interior and exterior concrete steps and ramps.
  - c. Horizontal surfaces which will receive a grout topping or a concrete equipment base slab.

### 3.6 CONCRETE CURING AND PROTECTION

#### A. General:

1. Protect freshly placed concrete from premature drying and excessive cold or hot temperature and maintain without drying at a relatively constant temperature for the period of time necessary for hydration of the cement and proper hardening of the concrete.
2. Start initial curing after placing and finishing concrete as soon as free moisture and bleed water sheen has disappeared from the concrete surface. Keep concrete continuously moist during initial curing.

---

03 30 03-13

Cast-in-Place Concrete

Pump Station No. 26 Improvements

3. Begin final curing procedures immediately following initial curing and before the concrete has dried. The total curing duration shall not be less than ten (10) days. For concrete sections over 30-inch thick, continue curing for an additional seven (7) days, minimum. Avoid rapid drying at the end of the final curing period.
- B. Use one of the following methods as approved by ENGINEER:
1. Walls:
    - a. Method 1: Leave concrete forms in place and keep entire surfaces of forms and exposed concrete surfaces wet for the entire curing duration. If forms are loosened and the contact between the concrete surface and forms is broken then the entire wall shall be wet cured.
    - b. Method 2: Continuously sprinkle or fog with water 100 percent of the exposed surfaces for the curing duration immediately after removal of forms.
    - c. Method 3: When approved by ENGINEER and as noted below, apply curing compound immediately after removal of forms.
  2. Slab and Curbs:
    - a. Method 1: Protect surface by water ponding for the entire curing duration.
    - b. Method 2: Cover concrete surfaces and exposed edges with the specified absorptive cover, thoroughly saturating the cover with water, and keeping the absorptive cover continuously wet with sprinklers or porous hoses during the curing duration. Lap adjacent absorptive cover sections 3-inches minimum.
    - c. Method 3: Cover the concrete surfaces and exposed edges with the specified moisture-retaining cover during the curing duration. Seal edges and seams with waterproof tape, adhesive or sand berm. Water must be introduced between the moisture-retaining cover and the concrete surface whenever moist drops cannot be detected on the concrete side of the cover or the concrete surface is noticeably dry.
    - d. Method 4: Cover all exposed surfaces with 1-inch minimum layer of wet sand, earth, or sawdust and keep continuously wet for the curing duration.
    - e. Method 5: Continuously sprinkle or fog exposed surfaces for the curing duration.
    - f. Method 6: When approved by ENGINEER and as noted below, apply liquid curing compound immediately after final finishing when surface will no longer be damaged by traffic necessary to apply curing compound.
- C. Liquid curing compound:
1. Apply the specified curing compound to concrete surfaces when permitted by ENGINEER. Slabs to receive terrazzo floors, concrete/grout topping or ceramic tile, concrete of water bearing structures, and concrete that will receive coatings shall not be cured with liquid curing compound. The compounds shall be applied by power spray equipment in accordance with the manufacturer's directions. Recoat areas, which are subjected to heavy rainfall within 3 hours after initial application. Maintain the continuity of the coating and repair damage to the coat during the entire curing period. Remove curing compound from exposed surfaces at the end of the curing duration. For concrete surfaces, which will be in contact with potable water, the manufacturer shall certify that the curing compound used is NSF 61 approved.
- D. Temperature of Concrete During Curing:
1. When the nighttime low temperature may drop to 40°F or below, maintain the concrete temperature between 50°F and 70°F continuously throughout the curing period, by heating, covering, insulation or housing as required.

---

03 30 03-14  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

2. When the daytime high temperature may rise to 90°F or above, maintain the concrete temperature at a minimum and reduce temperature variations by providing moist curing continuously for the concrete curing period.
  3. During either of the conditions specified above, the minimum curing time shall be 10 days (240 hours), after which coverings, housings, and insulation shall remain on the work for an additional 3 days, to allow gradual temperature equalization with the atmosphere.
- E. Protection from Mechanical Injury: During the curing period, protect concrete from damaging mechanical disturbances including load stresses, heavy shock, excessive vibration, and from damage caused by rain or flowing water. Protect all finished concrete surfaces from damage by subsequent construction operations.

### 3.7 FIELD QUALITY CONTROL

- A. The CONTRACTOR will employ a testing laboratory to perform field quality control testing. ENGINEER will direct the number of tests and cylinders required. Furnish all necessary assistance required by ENGINEER.
- B. Quality Control Testing During Construction:
1. Perform sampling and testing for field quality control during the placement of concrete, as follows:
    - a. Sampling Fresh Concrete: ASTM C172.
    - b. Slump: ASTM C143; one test for each concrete load at point of discharge; and one for each set of compressive strength test specimens.
    - c. Air Content: ASTM C231; one for the first concrete load, and one for every two concrete loads thereafter, or when required by an indication of change. Adjust mix if test results are unsatisfactory and resubmit for ENGINEER'S approval.
    - d. Compressive Strength Tests: ASTM C39; one set of 4 standard compression cylinders for each 100 cubic yards or fraction thereof, of each mix design placed in any one day; 1 specimen tested at 7 days, and 2 specimens tested at 28 days, 1 held. Cast, store and cure specimens as specified in ASTM C31.
      - 1) Adjust mix if test results are unsatisfactory and resubmit for ENGINEER'S approval.
      - 2) Concrete that does not meet the strength requirements is subject to rejection and removal from the Work, or to other such corrective measures as directed by ENGINEER, at the expense of CONTRACTOR.
    - e. Concrete Temperature: Test each time a slump test is made.
  2. Where questionable field conditions may exist during placing concrete or immediately thereafter, strength tests of specimens cured under field conditions will be required by ENGINEER to check the adequacy of curing and protecting of the concrete placed. Specimens shall be molded at the same time and from the same samples as the laboratory cured specimens.
    - a. Provide improved means and procedures for protecting concrete when the 28-day compressive strength of field-cured cylinders is less than 85% of companion laboratory-cured cylinders.
    - b. When laboratory-cured cylinder strengths are appreciably higher than the minimum required compressive strength, field-cured cylinder strengths need not exceed the minimum required compressive strength by more than 500 psi even though the 85 percent criterion is not met.

---

03 30 03-15  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

3. The testing laboratory shall submit certified copies of test results directly to ENGINEER and CONTRACTOR after tests are made.
- C. Evaluation of Quality Control Tests:
1. Do not use concrete delivered to the final point of placement that has slump or temperature outside the specified values, nor that which is older than specified in section 3.2.
  2. Compressive strength tests for laboratory-cured cylinders will be considered satisfactory if the averages of all sets of three consecutive compressive strength tests results equal or exceed the 28 day design compressive strength of the type or class of concrete; and, no individual strength test falls below the required compressive strength by more than 500 psi.
  3. If the compressive strength tests fail to meet the minimum requirements specified, the concrete represented by such tests will be considered deficient in strength and subject to replacement, reconstruction or to other action approved by ENGINEER.
- D. Testing Concrete Structure for Strength:
1. When there is evidence that the strength of the in-place concrete does not meet specification requirements, provide the services of a concrete testing service to take cores drilled from hardened concrete for compressive strength determination at no additional expense to CITY. Provide tests complying with ASTM C42 and the following:
    - a. Take at least three (3) representative cores from each member or suspect area at locations directed by ENGINEER.
    - b. Strength of concrete for each series of cores will be considered satisfactory if their average compressive strength is at least 85% and no single core is less than 75% of the 28 day required compressive strength.
    - c. Report test results, in writing, to ENGINEER on the same day that tests are made. Include in test reports the Project identification name and number, date, name of CONTRACTOR, name of concrete testing service, location of test core in the structure, type or class of concrete represented by core sample, nominal maximum size aggregate, design compressive strength, compression breaking strength and type of break (corrected for length-diameter ratio), direction of applied load to core with respect to horizontal plane of the concrete as placed, and the moisture condition of the core at time of testing.
  2. Fill core holes solid with non-shrink, high strength grout, and finish to match adjacent concrete surfaces.
- E. Water Leakage Tests for All Water-Holding Structures:
1. All water-holding structures shall be subjected to leakage tests after the concrete has been cured and obtained its design strength, and before backfill, brick facing, or other work which will cover the concrete surfaces of the walls is begun. Water leakage tests shall be conducted by the CONTRACTOR as follows:
    - a. All water-holding structures shall be filled with water to the maximum liquid level shown on the Drawings prior to leak testing at a rate less than 4 ft/hr. After these structures have been kept full for 3-days, it will be assumed for the purpose of the test that the absorption of moisture by the concrete in the basin is complete. All valves and gates to the structure shall then be closed and the change in water surface measured over a 48-hour period. The vertical distance to the water surface shall be measured to within 1/16-inch from a fixed point on the

---

03 30 03-16  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

containment structure above the water surface. Measurements shall be recorded at 24-hour intervals.

- b. During the test period, all exposed portions of the structure shall be examined for dampness or leaks and all visible leaks or damp spots shall be marked; such leaks or damp spots shall be later patched or corrected in a manner acceptable to the ENGINEER prior to additional leakage testing. If the drop in water surface in the 48-hour period exceeds 0.05% of the normal volume of liquid contained in the water-holding structure, after accounting for evaporation, precipitation and temperature in open basins, or if damp spots or any seepage is present on the walls or other areas exposed to view where moisture can be picked up on a dry hand, the leakage shall be considered excessive and the leakage test will be considered to have failed. A floating, restrained, partially filled, calibrated, open container for evaporation and precipitation measurement should be positioned in open containment structures, and the water level in the container recorded. Determination of evaporation by a shallow pan-type measuring device is discouraged as the heating of the bottom of a shallow pan can cause accelerated evaporation of water when compared with that taking place from a deep containment structure.
  - 1) Wet areas on top of wall footings shall not be considered cause of a qualitative failure of the leakage test unless the water can be observed to be flowing.
- c. If the leakage is excessive, and if damp spots and observed seepage is present on exposed surfaces, the water-holding structure shall be drained, all leaks and damp spots previously marked shall be patched, and the necessary repairs made, and the basin shall be retested. The CONTRACTOR's method of repair shall be subject to the requirements of these specifications and submitted for review and approval by the ENGINEER.
- d. The water-holding structure shall then be refilled and again tested for leakage and this testing and repair process shall be repeated as many times as necessary until the leakage test passes. This process shall be continued until the drop in water surface in specified test period with the basin full is less than the quantity specified above and all damp spots and seepage disappears when the structures are full of water. All repairs of faulty workmanship and materials, and additional tests, shall be made by the CONTRACTOR in an acceptable manner, at no additional cost to the CITY. Both the correction for excessive leakage and the removal of the damp or wet spots on exposed surfaces shall be required to pass the leakage test.
- e. The purpose of this test is to determine the integrity of the finished concrete and to show that the exposed wall surfaces are visually acceptable. Therefore, all other equipment, e.g., stop gates, sluice gates, etc. or temporary bulkheads, should be made watertight prior to the test.
- f. As an alternative to having watertight bulkheads, gates or valves, the CONTRACTOR shall accurately measure the leakage through gates, valves, and bulkheads with methods acceptable to the ENGINEER.
- g. An assumed leakage through gates and valves based on the manufacturer's recommendations is not acceptable.

---

03 30 03-17

Cast-in-Place Concrete

Pump Station No. 26 Improvements

### 3.8 MISCELLANEOUS CONCRETE ITEMS

- A. Filling-In: Fill-in holes and openings left in concrete structures for the passage of work by other contractors, unless otherwise shown or directed, after the work of other contractors is in place. Mix, place and cure concrete as herein specified, to blend with in-place construction. Provide all other miscellaneous concrete filling shown or required to complete the Work.
- B. Curbs:
  - 1. Provide monolithic finish to interior curbs by stripping forms while concrete is still green and steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
  - 2. Exterior curbs shall have rubbed finish for vertical surfaces and a broomed finish for top surfaces.
- C. Equipment Bases:
  - 1. Unless specifically shown otherwise, provide concrete bases for all pumps and other equipment. Construct bases to the dimensions shown, or as required to meet manufacturers requirements and drawing elevations. Where no specific elevations are shown, bases shall be 6-inches thick and extend 3-inches outside the metal equipment base or supports. Bases to have smooth trowel finish, unless a special finish such as terrazzo, ceramic tile or heavy duty concrete topping is required. In those cases, provide appropriate concrete finish.
  - 2. Include all concrete equipment base work not specifically included under other Sections.
  - 3. In general, place bases up to 1-inch below the metal base. Properly shim equipment to grade and fill 1-inch void with non-shrink grout as specified in Section 03 60 03, Grout.
- D. Installation of embedded items
  - 1. Install all embedded items prior to concrete placement, or, if necessary, as soon after concrete placement as possible, before concrete is set.
  - 2. Use temporary support and bracing to keep embedded items in place while concrete cures.
  - 3. Protect all embedded items from damage during concrete installation.

### 3.9 CONCRETE REPAIRS

- A. Repair of Formed surfaces:
  - 1. Repair exposed-to-view formed concrete surfaces that contain defects which adversely affect the appearance of the finish. Surface defects that require repair include color and texture irregularities, cracks, spalls, air bubbles, honeycomb, rock pockets, and holes left by the rods and bolts; fins and other projections on the surface; and stains and other discolorations that cannot be removed by cleaning.
  - 2. Repair concealed formed concrete surfaces that may contain defects that adversely affect the durability of the concrete. Surface defects that require repair include cracks in excess of 0.01-inch wide, cracks of any width and other surface deficiencies which penetrate to the reinforcement or completely through non-reinforced sections, honeycomb, rock pockets, holes left by tie rods and bolts, and spalls except minor breakage at corner.

---

03 30 03-18  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

3. Repair structural cracks and cracks in water-holding structures.
- B. Method of Repair of Formed Surfaces:
1. Repair and patch defective areas with cement mortar immediately after removal of forms and as directed by ENGINEER.
  2. Cut out honeycomb, rock pockets, voids over ½-inch diameter, and holes left by tie rods and bolts, down to solid concrete but, in no case, to a depth of less than 1-inch. Make edges of cuts perpendicular to the concrete surface. Before placing the cement mortar, thoroughly clean, dampen with water, and brush-coat the area to be patched with the specified bonding agent.
    - a. For exposed-to-view surfaces, blend white portland cement and standard portland cement so that, when dry, the patching mortar color will match the color of the surrounding concrete. CONTRACTOR shall impart texture to repaired surfaces to match texture of existing adjacent surfaces. Provide test areas at inconspicuous locations to verify mixture, texture and color match before proceeding with the patching. Compact mortar in place and strike off slightly higher than the surrounding surface.
  3. Cracks which require repair shall be pressure grouted, epoxy injected, using one of the following in accordance with Section 03 01 06, Crack Repair by Epoxy Injection. Apply in accordance with the manufacturer's directions and recommendations.
    - a. Sikadur 35, Hi-Mod L.V. and Sikadur 31, Hi-Mod Gel, as manufactured by Sika Corporation Company.
    - b. Euco Epoxy #452 Epoxy System, as manufactured by The Euclid Chemical Company.
    - c. Or approved equal.
  4. Fill holes extending through concrete by means of a plunger-type gun or other suitable device from the least exposed face, using a flush stop held at the exposed face to ensure completely filling.
  5. Sandblast exposed-to-view surfaces that require removal of stains, grout accumulations, sealing compounds, and other substances marring the surfaces. Use sand finer than No. 30 and air pressure from 15 to 25 psi.
- C. Repair of Unformed Surfaces:
1. Test unformed surfaces, such as monolithic slabs, for smoothness and to verify surface plane to the tolerances specified for each surface and finish. Correct low and high areas as herein specified.
  2. Test unformed surfaces sloped to drain for trueness of slope, in addition to smoothness, using a template having the required slope. Correct high and low areas as herein specified.
  3. Repair finish of unformed surfaces that contain defects which adversely affect the durability of the concrete. Surface defects, as such, include crazing, cracks in excess of 0.01-inch wide or which penetrate to the reinforcement or completely through non-reinforced sections regardless of width, spalling, popouts, honeycomb, rock pockets, and other objectionable conditions.
  4. Repair structural cracks and cracks in water-holding structures.
- D. Methods of Repair of Unformed Surfaces:
1. Correct high areas in unformed surfaces by grinding, after the concrete has cured sufficiently so that repairs can be made without damage to adjacent areas.

---

03 30 03-19  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

2. Correct low areas in unformed surfaces during, or immediately after completion of surface finishing operations by cutting out the low areas and replacing with fresh concrete. Finish repaired areas to blend into adjacent concrete. Apply in accordance with the manufacturer's directions and recommendations. Use one of the following:
    - a. Euco Poly-Patch, as manufactured by The Euclid Chemical Company.
    - b. Sikatop 122, as manufactured by Sika Corporation.
    - c. Or approved equal.
  3. Repair defective areas, except random cracks and single holes not exceeding 2-inch diameter, by cutting out and replacing with fresh concrete. Remove defective areas to sound concrete with clean, square cuts, and expose reinforcing steel with at least  $\frac{3}{4}$ -inch clearance all around. Dampen all concrete surfaces in contact with patching concrete and brush with the specified bonding agent. Place patching concrete before grout takes its initial set. Mix patching concrete of the same materials and proportions to provide concrete of the same type or class as the original adjacent concrete. Place, compact and finish as required to blend with adjacent finished concrete. Cure in the same manner as adjacent concrete.
  4. Repair isolated random cracks, as approved by ENGINEER, and single holes not over 2-inch diameter, by the dry-pack method. Groove the top of cracks, and cut out holes to sound concrete and clean of dust, dirt and loose particles. Dampen all cleaned concrete surfaces and brush with the specified bonding agent. Place dry-pack before the cement grout takes its initial set. Mix dry-pack, consisting of 1 part portland cement to 2 parts fine aggregate passing a No. 16 mesh sieve, using only enough water as required for handling and placing. Compact dry-pack mixture in place and finish to match adjacent concrete. Keep patched areas continuously moist for not less than 72 hours.
  5. Cracks which extend through the full member section, or any cracks determined by ENGINEER to require pressure grouting repair, shall be pressure grouted, epoxy injected, using one of the following in accordance with Section 03 01 06, Crack Repair By Epoxy Injection. Apply in accordance with the manufacturer's directions and recommendations.
    - a. Sikadur 35, Hi-Mod L.V. and Sikadur 31, Hi-Mod Gel, as manufactured by Sika Corporation.
    - b. Euco Epoxy #452 Epoxy System, as manufactured by The Euclid Chemical Company.
    - c. Or approved equal.
  6. Assure that surface is acceptable for flooring material to be installed in accordance with manufacturer's recommendations.
- E. Other Methods of Repair:
1. Repair methods not specified above may be used if approved by ENGINEER.

++ END OF SECTION ++

---

03 30 03-20  
Cast-in-Place Concrete

Pump Station No. 26 Improvements

## **SECTION 03 60 03**

### **GROUT**

#### **PART 1 - GENERAL**

##### **1.1 SUMMARY**

- A. Section includes epoxy, non-metallic, non-shrink, and ordinary Portland cement-sand grouts.

##### **1.2 REFERENCES**

- A. American Society for Testing and Materials (ASTM)
  - 1. ASTM C33, Standard Specification for Concrete Aggregates.
  - 2. ASTM C150, Standard Specification for Portland Cement.
  - 3. ASTM C595, Standard Specification for Blended Hydraulic Cements.
  - 4. ASTM C1107, Standard Specification for Packaged Dry, Hydraulic-Cement Grout.

##### **1.3 SYSTEM DESCRIPTION**

- A. Furnish ordinary cement-sand grout for the following:
  - 1. Foundation grout.
  - 2. Construction joint grout.
  - 3. As shown in the Drawings.
- B. Furnish non-shrink, non-metallic grout for the following:
  - 1. Equipment bases, 25 hp or less.
  - 2. Base plates.
  - 3. Guardrail and railings.
  - 4. Through-bolt and form tie openings.
  - 5. As shown in the Drawings.
- C. Furnish epoxy grout for the following:
  - 1. Equipment bases, 26 hp or more and/or sole plates with vibration, thermal movement, etc.
  - 2. Blockouts for gate guides.
  - 3. Retrofit waterstop installation.
  - 4. As shown in the Drawings.

##### **1.4 SUBMITTALS**

- A. Product Data:
  - 1. Manufacturer's specifications and installation instructions for all proprietary materials.
  - 2. Proposed method for keeping existing concrete surfaces wet prior to placing grout.
  - 3. Forming method for fluid grout placements.
  - 4. Curing method for grout.
- B. Laboratory Test Reports and Certificates:

---

03 60 03-1  
Grout

Pump Station No. 26 Improvements

1. For proprietary materials, submit copies of reports on quality control tests.
2. Submit certification that materials meet specification requirements for nonproprietary materials.
3. For ordinary cement-sand grout, copies of grout mix design and laboratory strength test reports.

## 1.5 PRODUCT DELIVERY, STORAGE AND HANDLING

- A. Delivery of Materials: Deliver grout materials from manufacturers in unopened containers and bearing intact manufacturer's labels.
- B. Storage of Materials: Store grout materials in a dry shelter and protected from moisture.

## **PART 2 - PRODUCTS**

### 2.1 MATERIALS

- A. High-Strength Epoxy Grout.
  1. Use 100% solids, prepackaged, solvent-free, moisture insensitive, high-strength epoxy grout.
  2. Product and Manufacturer: Provide one of the following:
    - a. E<sup>3</sup>-HP, as manufactured by The Euclid Chemical Company.
    - b. Sikadur 42 Grout Pak, as manufactured by Sika Corporation.
    - c. Five Star HP Epoxy Grout by Five Star Products, Incorporated.
    - d. Or approved equal.
- B. Non-shrink, Non-metallic Grout:
  1. Prepackaged non-staining cementitious grout which shall meet the minimum requirements of ASTM C1107 and requiring only the addition of water at the jobsite.
  2. Product and Manufacturer: Provide one of the following:
    - a. NS, as manufactured by The Euclid Chemical Company.
    - b. Five Star Grout, as manufactured by Five Star Products, Incorporated.
    - c. Sika Grout 212, as manufactured by Sika Corporation.
    - d. Or approved equal.
- C. Ordinary Cement-Sand Grout: Prepare design mix for ordinary cement grout.
  1. Cement: Portland cement, ASTM C150, Type II; or blended hydraulic cement, ASTM C595, Type 1P.
  2. Aggregates: ASTM C33 and as herein specified.
    - a. Do not use aggregates containing soluble salts or other substances such as iron sulfides, pyrite, marcasite, ochre, or other materials that can cause stains on exposed concrete surfaces.
    - b. Fine Aggregate: Clean, sharp, natural sand, free from loam, clay, lumps or other deleterious substances.
      - 1) Dune sand, bank run sand and manufactured sand are not acceptable.
    - c. Coarse Aggregate: Coarse aggregate not permitted.
  3. Admixtures: Provide admixtures produced by established reputable manufacturers and use in compliance with the manufacturer's printed instruction. Do not use admixtures that have not been incorporated and tested in the accepted mixes, unless

---

03 60 03-2  
Grout

Pump Station No. 26 Improvements

- otherwise authorized in writing by ENGINEER. Refer to Section 03 30 03, Cast-In-Place Concrete, for additional admixture requirements.
4. Proportioning and Design of Mixes: Mixes are subject to the following limitations:
    - a. Specified 28-day Compressive Strength: 4,000 psi.
    - b. Minimum amount of water necessary for the mixture to flow under its own weight.
    - c. Fine Aggregate meeting ASTM C33.
    - d. Air Content Percentage:  $\pm 1.5\%$ .
    - e. Minimum Cement Content in Pounds per Cubic Yard: 658.
    - f. Slump at point of placement: 5 inch  $\pm 1$  inch.
  5. Proportion mix by either laboratory trial batch or field experience methods, using materials to be employed on the Project for grout required. Comply with ACI 211.1 and provide a complete report, from an independent testing laboratory, to ENGINEER, at least 30 days prior to start of Work. Do not begin grout production until ENGINEER has approved mix.
  6. Laboratory Trial Batches: When laboratory trial batches are used to select grout proportions, prepare test specimens, and conduct strength tests as specified in ACI 301, Chapter 3 - Proportioning.
  7. Field Experience Method: When field experience methods are used to select grout proportions, establish proportions as specified in ACI 301, Chapter 4.

### **PART 3 - EXECUTION**

#### **3.1 INSPECTION**

- A. Examine the substrate and conditions under which grout is to be placed with installer and notify ENGINEER, in writing, of unsatisfactory conditions. Do not proceed with the Work until unsatisfactory conditions have been corrected in a manner acceptable to ENGINEER.

#### **3.2 INSTALLATION**

- A. General:
  1. Mix, place and cure grout as shown and in accordance with manufacturer's instructions. If manufacturer's instructions conflict with the Specifications, do not proceed until ENGINEER provides clarification.
  2. Manufacturers of proprietary products shall make available upon 72 hours notification the services of a qualified, full time employee to aid in assuring proper use of the product under job conditions. The cost of this service, if any, shall be borne by CONTRACTOR.
  3. When placing grout conform to temperature and weather limitations in Section 03 30 03, Cast-In-Place Concrete.
- B. Through-bolt and form-tie holes: Fill space with dry pack dense grout hammered in with steel tool and hammer. Coordinate dry pack dense grout application with bonding agent in Section 03 15 16, Concrete Joints.
- C. Columns, Beams and Equipment Bases: Prepare concrete surface by sandblasting, chipping, or by mechanical means to remove any soft material prior to setting base plates and machinery. After shimming columns, beams and equipment indicated to be

---

03 60 03-3  
Grout

Pump Station No. 26 Improvements

grouted on the plans to proper grade, securely tighten anchor bolts. Properly form around the base plates allowing sufficient room around the edges for placing the grout. Adequate depth between the bottom of the base plate and the top of concrete base must be provided to assure that the void is completely filled with grout.

- D. Guardrails and Railings: After posts and rails have been properly inserted into holes or sleeves, fill the annular space between posts and cast-in-place sleeves and/or below base plates with non-shrink grout. Bevel grout at juncture with post so that moisture flows away from posts.
- E. Construction Joints: Ordinary cement-sand grout may be used in place of mortar over the contact surface of the old concrete at the interface of horizontal construction joints as outlined in Section 03 15 16, Concrete Joints, and Section 03 30 03, Cast-In-Place Concrete, of these Specifications.
- F. Curing: Cure all grout in accordance with manufacturer's written instructions. Wet cure ordinary cement-sand grout and non-shrink non-metallic grout for a minimum of three (3) days unless directed otherwise by the ENGINEER.

## **SECTION 05 05 06**

### **ANCHORS, INSERTS, AND DOWELS**

#### **PART 1 - GENERAL**

##### **1.1 SUMMARY**

- A. Section includes all post-installed anchors and inserts required to anchor parts of the Work to supporting concrete or masonry construction, and plaster. This Section also includes adhesives for anchoring reinforcing dowels into existing concrete.

##### **1.2 REFERENCES**

- A. American Society for Testing and Materials
  - 1. ASTM A36, Standard Specification for Carbon Structural Steel.
  - 2. ASTM A320, Standard Specification for Alloy-Steel and Stainless Steel Bolting for Low-Temperature Service.
  - 3. ASTM D746, Standard Test Method for Brittleness of Temperature of Plastics and Elastomers by Impact
  - 4. ASTM D1505, Standard Test Method for Density of Plastics by the Density-Gradient Technique
  - 5. ASTM D1525, Standard Test Method for Vicat Softening Temperature of Plastics
- B. 2018 International Building Code (IBC)
- C. American Concrete Institute (ACI)
  - 1. ACI 355.2, Qualification of Post-Installed Mechanical Anchors in Concrete
  - 2. ACI 355.4, Qualification of Post-installed Adhesive Anchors in Concrete

##### **1.3 SYSTEM DESCRIPTION**

- A. Provide the size, type, and length of anchor shown on the drawings or, if not shown, as specified in the detailed sections of these specifications.
- B. When the size, length or load carrying capacity of an anchor bolt, expansion anchor, toggle bolt, or concrete insert is not shown or specified, provide the size, length and capacity required to carry the design load times a minimum safety factor of 4.
- C. For equipment anchors, if the design load is not specified by the manufacturer, provide anchors of diameter no less than the diameter of the hole minus 3/16 inch. When the design load is not specified by the manufacturer, provide structural calculations.

BID SET

## 1.4 SUBMITTALS

- A. Product Data: Submit for approval copies of material certification, manufacturer's specifications, load tables, dimension diagrams and installation instructions for the devices.
- B. Installer's Qualifications: When installing adhesive anchors subject to sustained tension loading or when specifically noted in the Drawings, submit for approval copies of the installer's qualifications certified by the ACI/CRSI Adhesive Anchor Installer Certification program.

## 1.5 QUALITY ASSURANCE

- A. Post-installed concrete anchors shall be ICC approved for seismic applications in cracked concrete and prequalified in accordance with ACI 355.2 or ACI 355.4.

## **PART 2 - PRODUCTS**

### 2.1 ANCHOR BOLTS

- A. Non-submerged Use in areas of wet use, washdown areas, or areas outside heated buildings:
  - 1. Stainless steel Type 316, unless otherwise shown.
  - 2. Diameter, Length and Bend Dimensions: As required by equipment or machinery manufacturer. Unless otherwise required, provide 3/4-inch minimum diameter by 12-inches long and other geometry as shown.
  - 3. Furnish A320 nuts and washers of same material for each bolt, unless otherwise shown.
  - 4. Provide sleeves as required or as shown for location adjustment.
- B. Submerged Use:
  - 1. Submerged use is defined as any connection 1 foot 6 inches below the normal water surface elevation in a water holding basin.
  - 2. As specified for nonsubmerged use, for equipment, machinery or other connections except as follows:
    - a. Coating of anchor bolt threads is not required.
    - b. Where threads are covered with fusion bonded coating, provide nut of proper size to fit and provide connection of equal strength to embedded bolt.
- C. For anchoring fabricated metalwork, structural steel, or other components where connections will be protected or dry:
  - 1. Galvanized Steel, 36 ksi, minimum.
  - 2. Minimum Size: 3/4-inch diameter by 12-inch long, unless otherwise shown.
  - 3. At base plates with grout pads, furnish two nuts and two washers per bolt of same material as bolt, unless otherwise shown.

BID SET

## 2.2 ANCHOR BOLT SLEEVE

- A. High Density Polyethylene Plastic:
  - 1. Single unit construction with deformed sidewalls such that the concrete and grout lock in place.
  - 2. The top of the sleeve shall be self-threading to provide adjustment of the threaded anchor bolt projection.
  - 3. Material requirements shall conform to the following:
    - a. Plastic: High density polyethylene.
    - b. Density: 0.956, ASTM D1505.
    - c. Vicant Softening Point: 256°F, ASTM D1525
    - d. Brittleness Temperature: -180°F, ASTM D746
- B. Fabricated Steel Sleeve:
  - 1. Material: A36 steel.
  - 2. Dimensions, welding, and sizes as shown.

## 2.3 STAINLESS STEEL FASTENERS LUBRICANT (ANTISEIZING)

- A. Provide for stainless steel nuts and machined bolts, anchor bolts, concrete anchors, and all other threaded fasteners.
- B. Lubricant shall contain substantial amounts of molybdenum disulfide, graphite, mica, talc, or copper as manufactured by:
  - 1. Loc Tite Co., Permatex.
  - 2. Or equal

## 2.4 CONCRETE INSERTS

- A. For vertical support of grating or floor plate, provide cast-in metal fabrications as shown.
- B. Except as permitted below, or as otherwise shown, provide malleable iron inserts for hanging piping and conduit from concrete ceilings and soffits. Comply with Federal Specification WW-H-171-E (Type 18). Provide those recommended by the manufacturer for the required loading.
- C. Obtain inserts in sufficient time so as not to delay concrete or masonry work.
- D. Product and Manufacturer: Provide inserts of one of the following:
  - 1. Figure 282, as manufactured by Anvil/Grinnell.
  - 2. Sharktooth Insert, as manufactured by Hohmann and Barnard, Incorporated.
  - 3. Or equal.

## 2.5 ADHESIVE (EPOXY) ANCHORS AND DOWELS

- A. Provide adhesive anchors where specifically shown and where adhesive anchors are allowed. Unless otherwise shown, adhesive anchors are allowed for anchoring:

---

REVISED  
BID SET

1. Supports for pipe, conduit, and electrical boxes, devices, and panels, on floors and walls
  2. Handrails, guardrails, sunshades, stairs,
  3. Fixtures and equipment on floors and walls, and
  4. Single pipes and conduits <2 inch in diameter to ceilings and soffits.
- B. Adhesive shall be epoxy resin. Vinylester resin anchors are NOT allowed.
- C. Product and Manufacturer: Provide one of the following:
1. Installation to Concrete:
    - a. HIT-HY 200 as manufactured by Hilti, Inc.
    - b. SET-3G as manufactured by Simpson Strong-Tie, Inc.
    - c. Or approved equal meeting ACI 355.4.
  2. Installation to solid-grouted Masonry:
    - a. HIT-HY 270 as manufactured by Hilti, Inc.
    - b. SET as manufactured by Simpson Strong-Tie, Inc.
    - c. Or approved equal.

## 2.6 EXPANSION ANCHORS

- A. Provide expansion anchors only where specifically shown and where expansion anchors are allowed. Unless otherwise shown, and except as noted below, expansion anchors are allowed for anchoring:
1. Supports for pipe, conduit, and electrical boxes, devices, and panels, to floors and walls.
  2. Handrails, guardrails, and sunshades.
  3. Fixtures and equipment which have no moving parts, to floors and walls.
- B. Expansion anchors are NOT allowed in any submerged or chemical containment areas.
- C. Leveling nuts shall not be used with expansion anchors. If leveling nuts are required, provide adhesive anchors, unless otherwise shown.
- D. Wedge anchors: Provide one of the following:
1. Installation to Concrete:
    - a. Hilti Kwik Bolt TZ by Hilti, Inc.
    - b. Strong-Bolt 2 by Simpson Strong-Tie, Inc.
    - c. Or approved equal meeting ACI 355.2.
  2. Installation to solid-grouted Masonry:
    - a. Hilti Kwik Bolt-3 by Hilti, Inc.
    - b. Wedge-All by Simpson Strong-Tie, Inc.
    - c. Or approved equal.
- E. Drop-in anchors, only where specific shown on the drawings: Provide one of the following:
1. HDI by Hilti, Inc.
  2. Drop-In by Simpson Strong-Tie, Inc.
  3. Or equal.

## 2.7 SCREW ANCHORS

- A. Provide screw anchors only where specifically shown. Provide ICC approved screw anchors suited for seismic and cracked concrete applications.
- B. Installation to Concrete or Masonry:
  - 1. KH-EZ by Hilti, Inc.
  - 2. Titen HD by Simpson Strong-Tie, Inc.
  - 3. Or approved equal.

## 2.8 TOGGLE BOLTS

- A. Provide toggle bolts only where specifically shown, to fasten single pipes and conduits <1 inch and equipment weighing less than 50 lbs (4-bolts required) to hollow walls.
- B. Provide spring-wing toggle bolts, with two-piece wings, carbon steel bolts with zinc coating in accordance with Federal Specification FF-S-325.
- C. Product and Manufacturer: Provide toggle bolts of one of the following:
  - 1. The Rawlplug Company, Incorporated.
  - 2. Haydon Bolts, Incorporated.
  - 3. Or equal.

## 2.9 OTHERS

- A. Powder actuated fasteners and other types of anchors not specified herein shall not be used, unless approved by ENGINEER.

## 2.10 ACCESSORIES

- A. Provide Belleville washers, or approved equal, at anchorage connections used to transfer anchorage loads at sheet metal equipment housings.

## **PART 3 - EXECUTION**

### 3.1 INSTALLATION OF ANCHORS

- A. Obtain anchor bolts in sufficient time so as not to delay concrete or masonry work.
- B. Adhesives shall be stored and installed at the service temperature ranges recommended by the manufacturer.
- C. Locate and accurately set the anchor bolts using templates or other devices as necessary.
- D. Protect threads and shank from damage during installation of equipment and structural steel.

---

05 05 06-5

Anchors, Inserts and Dowels

Pump Station No. 26 Improvements

City of Roseville

WWE Project: 21-060

April  
2023  
REVISED  
BID SET

- E. Post-installed anchors are NOT acceptable substitutes for cast-in-place anchor bolts.
- F. Assure that embedded items are protected from damage and are not filled in with concrete.
- G. Unless otherwise shown, the minimum diameter of anchor bolts for structural steel is  $\frac{3}{4}$  inch, and for other applications,  $\frac{3}{8}$  inch.
- H. Unless otherwise shown, provide the following minimum embedment, where "d" is the nominal anchor diameter:
  - 1. Cast-in-place anchors: 12d.
  - 2. Adhesive anchors: 12d.
  - 3. Expansion anchors: 8d.
- I. Unless otherwise shown, provide a minimum edge distance equal to six times the bolt diameter for adhesive anchors, eight times the bolt diameter for expansion anchors and a bolt spacing equal to twelve times the bolt diameter.
- J. Concrete shall have a minimum age of 21 days at the time of post-installed anchor installation.
  - 1. Concrete temperature at the time of adhesive anchor installation shall be at least 50°F.
- K. Existing reinforcing bars in the concrete structure may conflict with specific anchor locations. Unless noted on the Drawings that the bars can be cut, the CONTRACTOR shall review the existing structural drawings and shall undertake to locate the position of the reinforcing bars at the locations of the concrete anchors by ferrosan, ground penetrating rebar (GPR), x-ray, chipping or other means.
- L. Drilling equipment used and installation of post-installed anchors shall be in accordance with the manufacturer's printed instructions.
- M. For the adhesive and expansion anchors, CONTRACTOR shall comply with the manufacturer's printed installation instructions on the drilled hole diameter and depth.
- N. CONTRACTOR shall properly clean out the hole utilizing a wire brush and compressed air in accordance with the manufacturer's printed installation instructions to remove all loose material from the hole, prior to installing adhesive or expansion anchors. Drilled and cleaned anchor holes shall be protected from contamination until the anchor is installed. A drilled anchor hole shall be re-cleaned assuming the hole was just drilled, if in the opinion of ENGINEER or Inspector that the hole has become contaminated after initial cleaning.
- O. Unless otherwise indicated by the manufacturer, adhesive shall be dispensed through a tube or cartridge extension, beginning at the maximum depth of the hole and withdrawn as adhesive is injected, followed by insertion and rotating the anchor to the specified depth. Where necessary, spaces around anchors at the surface shall be sealed

Anchors, Inserts and Dowels

Pump Station No. 26 Improvements

City of Roseville

WWE Project: 21-060

April  
2023  
REVISED  
BID SET

at horizontal to vertically overhead locations to prevent loss of the adhesive during curing.

- P. Anchors to be installed in the adhesive shall be clean, oil-free, and free of loose rust, paint, or other coatings.
- Q. Installed anchors shall be securely fixed in-place to prevent displacement. Unless shown otherwise on the Drawings, anchors shall be installed perpendicular to the concrete surface.
- R. Reinforcing adhesive dowel bars or all-threaded adhesive bars shall not be bent after being adhesively embedded in hardened, sound concrete.
- S. In lieu of the use of stacked standard washers, if threads of an anchor bolt protrude beyond the attachment, the installers shall use a fabricated filler plate of equal or greater size of the washer. Hole on the filler plate shall be 1/16 inch (or 2 to 3 mm) greater than the bolt size. Coat as appropriate in accordance with the material and installation location requirements.

### 3.2 FIELD QUALITY CONTROL

- A. Anchors shall be installed by qualified personnel in accordance with the manufacturer's printed installation instructions. Installation of adhesive anchors shall be performed by personnel trained to install adhesive anchors.
- B. Installation of adhesive anchors horizontally or upwardly inclined to support sustained tension loads shall be performed by personnel certified by the ACI/CRSI Adhesive Anchor Installer Certification program.
- C. CONTRACTOR shall employ a special inspector to perform field inspection services in accordance with Chapter 17 of the IBC for all post-installed anchors.
  - 1. The special inspector must be periodically on the jobsite during post-installed anchor installation.
  - 2. Adhesive anchors installed to resist sustained tension loads shall be continuously inspected during installation by an inspector specially approved for that purpose by the building official.
- D. CONTRACTOR shall employ a testing laboratory to perform field quality testing of installed adhesive anchors. A minimum of 10% of randomly selected adhesive anchors and reinforcing dowel bars greater than 3/8 inch diameter are to be tension tested to the least of 50 percent of expected adhesive ultimate bond strength or 80 percent of steel yield strength of the anchor rod. Maintain the proof load at the required load level for a minimum of 10 seconds.
  - 1. Tension testing shall be performed in accordance with ASTM E488.
  - 2. The independent testing laboratory shall submit an anchorage testing plan for approval to ensure the testing requirements are fulfilled.

WWE Project: 21-060

April  
2023  
REVISED  
BID SET

3. If failure of more than 5 percent of the tested anchors or reinforcing dowel bars occurs, CONTRACTOR will be required to pay for the costs involved in testing the remaining 90%.
  - a. Concrete cracking in the vicinity of the anchor after loading shall be considered a failure.
- E. CONTRACTOR shall correct improper workmanship, remove and replace, or correct as instructed by the ENGINEER, all anchors or bars found unacceptable or deficient, at no additional cost to the OWNER.
- F. The independent testing and inspection agency shall complete a report on each area. The report should summarize the observations made by the inspector and be submitted to ENGINEER.
- G. Provide access for the testing agency to places where Work is being produced so that required inspection and testing can be accomplished.

## **SECTION 07 92 03**

### **JOINT SEALANTS**

#### **PART 1 - GENERAL**

##### **1.1 SUBMITTALS**

- A. Product Data: Surface preparation and installation instructions. Indicate where each product is proposed to be used. Provide sealant certified to NSF/ANSI Standard 61 where sealant is in direct contact with potable water.
- B. Samples: Material proposed for use showing color range available.
- C. Quality Control Submittals:
  - 1. Applicator Qualification: Documentation showing minimum of 5 years' experience installing sealants in projects of similar scope.
  - 2. Certificates of Compliance: Proposed materials meet Specification requirements.

##### **1.2 ENVIRONMENTAL REQUIREMENTS**

- A. Ambient Temperature: Between 40 and 80 degrees F (4 and 27 degrees C) when sealant is applied. Consult manufacturer when sealant cannot be applied within these temperature ranges.

#### **PART 2 - PRODUCTS**

##### **2.1 SEALANT MATERIALS**

- A. Sealant Characteristics:
  - 1. Uniform, homogeneous.
  - 2. Free from lumps, skins, and coarse particles when mixed.
  - 3. Nonstaining, nonbleeding.
  - 4. Hardness of 15 minimum and 50 maximum, measured by ASTM C661 method.
  - 5. Immersible may be substituted for nonimmersible.
- B. Sealant Color: To match adjacent surfaces or as selected by ENGINEER.
- C. One-Part Polyurethane, Immersible:
  - 1. Polyurethane base, single-component, moisture curing; ASTM C920, Type S, Grade NS or P, Class 25.
  - 2. Capable of being continuously immersed in water.
  - 3. Designed to be used where the maximum depth of sealant will not exceed 1/2 inch.
  - 4. Provide sealant certified to NSF/ANSI Standard 61 where sealant is in direct contact with potable water.
  - 5. Manufacturers and Products for Nonsag:
    - a. Sika Construction: Sikaflex-1a.
    - b. Tremco: Vulkem 116.

---

07 92 03-1  
Joint Sealants

Pump Station No. 26 Improvements

- c. Or approved equal.
- 6. Manufacturers and Products for Self-Leveling:
  - a. Sika Construction: Sikaflex-1C SL.
  - b. Tremco: Vulkem 45 SSL.
  - c. Or approved equal.
- D. Two-Part Polyurethane, Immersible:
  - 1. Polyurethane elastomeric, two-part, self leveling (or gun grade), non-staining, which cures at ambient temperature and conforms to ASTM C920.
  - 2. Designed to be used where the maximum depth of sealant will exceed 1/2 inch or where chemical curing is required.
  - 3. Manufacturers and Products:
    - a. Sika Construction: Sikaflex-2C.
    - b. Tremco: Dymeric 240FC.
    - c. Or approved equal.
- E. Waterproof Expandable Sealant
  - 1. One-component, polyurethane foam that expands and cures slowly to a semi-rigid, closed cell foam upon reaction with moisture, such as ambient humidity
  - 2. Manufacturers and Products:
    - a. Sika Chemical Corp.; Boom
    - b. Or approved equal

## 2.2 BACKUP MATERIAL

- A. Nongassing, extruded, closed-cell round polyethylene foam rod, compatible with sealant used, and as recommended by sealant manufacturer.
- B. Size: As shown or as recommended by sealant material manufacturer. Provide for joints greater than 1/2-inch deep. Backup material should be sized to maintain 2:1 width to depth ratio to the greatest extent possible.
- C. Manufacturers and Products:
  - 1. Dow Corning; Ethafoam SB.
  - 2. Sonneborn; Sonofoam.
  - 3. Or approved equal.

## 2.3 ANCILLARY MATERIALS

- A. Bond Breaker: Pressure sensitive tape as recommended by sealant manufacturer to suit application. Provide bond breaker tape in the bottom of joints to prevent 3-sided joint sealant adhesion when backup material is not used.
- B. Joint Cleaner: Noncorrosive and nonstaining type, recommended by sealant manufacturer; compatible with joint forming materials.
- C. Primer: Nonstaining type recommended by sealant manufacturer to suit application

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Use of more than one material for the same joint is not allowed unless approved by the sealant manufacturer.
- B. Install joint sealants in accordance with ASTM C1193.
- C. Horizontal and Sloping Joints of 1 Percent Maximum Slope: Use self-leveling (Grade P) joint sealant.
- D. Steeper Sloped Joints, Vertical Joints, and Overhead Joints: Use nonsag (Grade NS) joint sealant.

### **3.2 PREPARATION**

- A. Verify that joint dimensions, and physical and environmental conditions, are acceptable to receive sealant.
- B. Surfaces to be sealed shall be clean, dry, sound, and free of dust, loose mortar, oil, and other foreign materials.
  - 1. Mask adjacent surfaces where necessary to maintain neat edge.
  - 2. Starting of work will be construed as acceptance of subsurfaces.
  - 3. Apply primer to dry surfaces as recommended by sealant manufacturer.
- C. Verify that joint shaping materials and release tapes are compatible with sealant.
- D. Examine joint dimensions and size materials to achieve required width/depth ratios.
- E. Carefully follow manufacturer's instructions for mixing multi-component products.

### **3.3 INSTALLATION**

- A. Use joint filler to achieve required joint depths, to allow sealants to perform intended function.
  - 1. Install backup material as recommended by sealant manufacturer.
  - 2. Where possible, provide full length sections without splices; minimize number of splices.
  - 3. Tape sealant may be used as joint filler if approved by sealant manufacturer.
- B. Use bond breaker where recommended by sealant manufacturer and in the bottom of joints to prevent 3-sided joint sealant adhesion.
- C. Seal joints around window, door and louver frames, expansion joints, and elsewhere as indicated.
- D. Joint Sealant Materials: Follow manufacturer's recommendation and instructions, filling joint completely from back to top, without voids.

- E. Joints: Tool slightly concave after sealant is installed.
  - 1. When tooling white or light color sealant, use a water wet tool.
  - 2. Finish joints free of air pockets, foreign embedded matter, ridges, and sags.
- F. Tape Sealant: Compress to 50 percent of expanded thickness and install in accordance with manufacturer's instructions.

### 3.4 CLEANING

- A. Clean surfaces next to the sealed joints of smears or other soiling resultant of sealing application.
- B. Replace damaged surfaces resulting from joint sealing or cleaning activities.

++ END OF SECTION ++

REVISED BID SET

## **SECTION 09 91 03**

### **PAINTING**

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

- A. Scope: Provide and install coatings on all exposed surfaces as indicated herein, in other Specification Sections, and on the Drawings.

##### **1.2 QUALITY ASSURANCE**

- A. Experience: Both Coatings Manufacturer and Coatings Installer shall have a minimum 5 years' experience in production and application, respectively, of specified products. Coatings Installer shall be approved and endorsed, in writing, by Coatings Manufacturer.
- B. Regulations: Meet federal, state, and local requirements which apply to the work, including, but not limited to those regulations limiting the emission of volatile organic compounds.
- C. Coatings Manufacturer Recommendations: Coatings Installer shall follow all recommendations of the Coatings Manufacturer regarding storage, handling, surface preparation, application of coatings, recoat times, environmental conditions during storage, preparation and application of coatings, and all other Coatings Manufacturer recommendations.
- D. Warranty: Both Coatings Manufacturer and Coatings Installer shall provide a 1-year complete replacement warranty for all coatings. Manufacturer shall provide 5-year warranty for long-term performance of coatings in addition to 1-year warranty.

##### **1.3 SUBMITTALS**

- A. Shop Drawings, Coatings Manufacturer shall submit for approval the following:
  - 1. Copies of Manufacturer's technical information and application instructions for each material proposed for use. Specify exactly which product is being proposed for each coating type (as specified below). This may be accomplished through a reference table along with information on the various products, or by a separate, tabbed section with information on products being submitted for each system in a separate tab of a binder. Submittal of general Manufacturer's literature without detailing which product is proposed for each paint system will be unacceptable.
  - 2. Copies of Manufacturer's complete color charts for each coating system.
  - 3. Letter from the Coatings Manufacturer approving and endorsing Coatings Installer.
  - 4. Letter from Coatings Manufacturer stating that volatile organic compounds (VOCs) meet all Federal, State and Local requirements.
  - 5. Furnish copies of the final, approved submittal to the Coatings Installer so that it is clear which product is to be used for which each system.
- B. Reference Samples:

---

09 91 03-1  
Painting

Pump Station No. 26 Improvements

1. Provide reference samples of paint colors and textures as required by the ENGINEER. Reference samples will show the color and texture of the final paint to be applied and shall be approved by the ENGINEER prior to painting. Reference samples should be applied to similar substrates to the final surfaces to be painted. If ENGINEER chooses to forego reference samples, CONTRACTOR must receive the allowance to forego reference samples before painting begins or all painted surfaces will be re-painted at the ENGINEER's discretion and at no additional cost to the CITY.

#### 1.4 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Protection: Protect all pre-coated items from coating damage during shipping.
- B. Store products in accordance with Manufacturer's directions.
- C. Store products in a neat, orderly fashion. Protect products from damage. Protect storage area from damage from stored products.

## **PART 2 - PRODUCTS**

### 2.1 PRODUCT AND MANUFACTURER:

- A. Provide coating types as listed in the following table. The systems referenced in the table are those provided by TNE MEC and Sherwin-Williams. If manufacturers other than TNE MEC or Sherwin Williams are desired, the CONTRACTOR shall submit equivalent paint systems.

| COATING TYPE                         | DESCRIPTION                                                                                                                                                       | Sherwin Williams Series                 | TNE MEC SERIES         |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|------------------------|
| Clear Polyamine Epoxy                | Clear Polyamine Epoxy, high solids, moisture resistant, designed as a one-coat wood sealer.                                                                       | GP3477                                  | Series 201, Epoxoprime |
| Acrylic Filler                       | Waterborne Cementitious Acrylic designed for application on porous surfaces such as rough-faced concrete masonry units                                            | CementPlex 875                          | Series 130, Envirofill |
| Interior Acrylic Latex               | Single component, finish as required                                                                                                                              | ProMar 200                              | N/A                    |
| Industrial Acrylic                   | Single component, high density acrylic finish for interior, exterior surfaces                                                                                     | Pro Industrial High Performance Acrylic | Series 1029            |
| Interior Latex Primer/ Sealer        | Waterborne vinyl acrylic primer/sealer for interior gypsum wallboard/plaster. Capable of providing uniform seal and suitable for use with specified finish coats. | ProMar 200 Primer                       | Series 115             |
| Exterior Acrylic Latex Primer/Sealer | Capable of providing uniform seal and suitable for use with specified finish coats.                                                                               | Extreme Bond Latex Primer               | Series 1028            |

09 91 03-2  
Painting

Pump Station No. 26 Improvements

|                                |                                                                                                                                                                                                        |                                           |                                                                                |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|--------------------------------------------------------------------------------|
| Polyamine Epoxy Sealer         | Waterborne Polyamine Epoxy, penetrating, flexible and low-odor primer designed for sealing porous substrates.                                                                                          | Multi-Purpose Acrylic Primer              | Series 151, Elasto-Grip FC                                                     |
| Acrylate                       | Modified Waterborne Acrylate designed for application on porous surfaces such as rough-faced concrete masonry units or wood surfaces. Flexible and breathable, moisture and UV resistant. Matte Finish | Loxon XP                                  | Series 156, Enviro-crete                                                       |
| Polyamidoamine Epoxy           | Polyamidoamine Epoxy designed for use on steel or other ferrous metals not in contact with potable water but submerged or immersed in wastewater or non-potable water.                                 |                                           | Series N69, V69 or L69 (type per local VOC regulations), Hi-Build Epoxoline II |
|                                | Polyamidoamine Epoxy designed for use on steel or other ferrous metals in contact with potable water.                                                                                                  | Macropoxy 5500                            | Series N140, L140 or V140 (type per local VOC regulations), Pota-Pox Plus      |
| Polyurethane                   | Aliphatic Acrylic Polyurethane designed for exterior weathering, abrasion and corrosion resistance                                                                                                     | HS Polyurethane 250 or Waterbased Acrolon | Series 1095, Endura-Shield                                                     |
| Silane Water Repellent Sealant | Silane/Siloxane penetrating water repellent blend designed for application on above-grade concrete, stucco, block, masonry and stone surfaces                                                          | Loxon 7% Siloxane                         | Series 636, Dur A Pell 20                                                      |
| Wood Sealer / Stain            | Single component, 250 g/l wood stain in clear or standard colors                                                                                                                                       | Minwax 250                                |                                                                                |
| Wood Varnish Finish            | Single component polyurethane varnish                                                                                                                                                                  | Minwax                                    |                                                                                |

- B. All coatings used shall comply with Federal, State and local VOC limits based on application location.

## 2.2 COLOR

- A. Color Pigments: Pure, nonfading, lead-free applicable types to suit the substrates and service indicated.
- B. Provide colors as described in the drawings or specifications, or as selected by ENGINEER from standard color palette. For piping system colors, reference pipe schedule.

09 91 03-3  
Painting

Pump Station No. 26 Improvements

- C. Where existing colors are to be matched or satisfactory color is not available from standard color palette, provide custom-mixed colors.
- D. Provide samples of each color on the substrate to be coated for approval by the ENGINEER prior to beginning coating application.

### **PART 3 - EXECUTION**

#### **3.1 SURFACE PREPARATION**

- A. Coatings Installer shall prepare all surfaces to be painted in strict accordance with Coatings Manufacturer's recommendations.
- B. Coatings Manufacturer representative shall observe Coatings Installer's methods of preparing surfaces and approve of the work prior to Coatings Installer beginning coating installation. If, after a period of time, Coatings Manufacturer is satisfied with Coatings Installers methods, Coatings Manufacturer can allow Coatings Installer to proceed without inspection following surface preparation. Coatings Manufacturer and installer will still both be held equally accountable for any coatings failure.

#### **3.2 PROTECTION**

- A. Protect all adjacent surfaces from overspray, dripping or other transfer of coatings not intended for those surfaces. Use masking, tape, drop cloths, plastic and other protective materials as appropriate.
  - 1. Remove, mask, or otherwise protect hardware, lighting fixtures, switchplates, aluminum surfaces, stainless steel surfaces, machined surfaces, couplings, shafts, bearings, nameplates on machinery, and other surfaces not intended to be painted.
  - 2. Protect working parts of mechanical and electrical equipment from damage during surface preparation and painting process. Mask openings in motors, fan housings, etc. to prevent coatings from falling inside.
  - 3. Correct all damages by cleaning, repairing or replacing, and repainting, as acceptable to ENGINEER.
- B. Completely remove all masking, tape, drop cloths, plastic and other protective materials within 48 hours of completion of application of finish coat. Take special care to remove masking and plastic which cover tank vent openings, HVAC registers, vents, motor vents, and other areas where airflow is critical to proper operation.

#### **3.3 APPLICATION**

- A. Paint all exposed surfaces not specifically excluded in 3.3.C, below. Provide and install Coatings in accordance with the following Table, unless otherwise specified in other Sections:

---

09 91 03-4  
Painting

Pump Station No. 26 Improvements

B.

| COATING SYSTEM NO. | SURFACE TO BE COATED                                 | PRIMER COATING               | NO OF PRIMER COATS | PRIME COAT THICKNESS (EACH COAT) | FINISH COATING                     | NO OF FINISH COATS | FINISH COAT THICKNESS (EACH COAT) |
|--------------------|------------------------------------------------------|------------------------------|--------------------|----------------------------------|------------------------------------|--------------------|-----------------------------------|
| 100                | Concrete Masonry Units (Interior)                    | Acrylic Filler               | 1                  | 70 SF/Gal Application Rate       | Acrylate                           | 2                  | 135 SF/Gal Application Rate       |

\* Where in contact with potable water, coating shall be NSF-61 certified.

C. Items Delivered with Factory Applied Primer:

1. For items delivered with a factory applied primer and requiring painting under this Section, the factory applied primer may be used in lieu of field applied primer only under the following conditions:
  - a. The ENGINEER approves the use of the factory applied primer in lieu of field applied primer.
  - b. The factory applied primer is certified by the Coatings Manufacturer as compatible with the field applied finish coat.
  - c. The Coatings Manufacturer's recommended recoat time for the factory applied primer has not been exceeded.
2. If all of the above conditions are not met, the Coatings Installer shall re-prepare all surfaces to be painted in strict accordance with Coatings Manufacturer's recommendations and primer applied, in accordance with this Section.

D. Table Definitions:

1. SF/Gal: Square foot of coverage per gallon of coating used.
2. MDFT: mil dry film thickness
3. mil: 1/1000 of an inch paint thickness
4. Ferrous Pipe: Includes Ductile Iron, Cast Iron, Steel, and Galvanized Steel piping
5. Steel Items: Includes steel and galvanized steel items such as structural steel, doors, window frames, overhead coiling doors, bollard posts, steel gates, steel fences, and all other steel and galvanized steel items.
6. Non-Metallic Pipe: Polyvinyl Chloride, Chlorinated Polyvinyl Chloride, Fiberglass Reinforced Plastic, High Density Polyethylene
7. Exposed: Located above grade, exposed to the atmosphere not submerged. Includes surfaces inside and outside of buildings.
8. Submerged: In an area which normally is under water or other liquid or is intermittently under water or other liquid.
9. Buried: Located below grade, surrounded by backfill.

E. Surfaces Not Requiring Painting:

1. Unless otherwise stated or shown below or in other sections, the following areas or items will not require painting or coating:
  - a. Concrete surfaces.
  - b. Reinforcing steel.
  - c. Copper, bronze, brass, Monel, aluminum, chromium plate, and stainless-steel surfaces, except where:
    - 1) Required for electrical insulation between dissimilar metals.

---

09 91 03-6  
Painting

Pump Station No. 26 Improvements

- 2) Aluminum and stainless steel are embedded in concrete or masonry, or aluminum is in contact with concrete or masonry.
- 3) Color coding of equipment and piping is required.
- d. Existing piping, fittings and pipe supports.
- e. Pipe unions or portions of piping systems where painting would make disassembly difficult or impossible.
- f. Prefinished electrical, mechanical, and architectural items such as motor control centers, switchboards, switchgear, panelboards, transformers, disconnect switches, HVAC equipment enclosures, ductwork, acoustical tile, cabinets, louvers, and wall panels.
- g. Electrical conduits.
- h. Cathodic protection anodes.
- i. Insulated piping and insulated piping with jacket will require prime coat only.
- j. Fiberglass reinforced plastic (FRP) surfaces with an integral ultra-violet resistant colored gel coat do not require painting, provided the color is as selected.
- k. Glass, plexiglass or other transparent or translucent material intended to allow passage of light.
- l. Civil/site materials such as asphalt, gravel, rock, chain-link fence, and plantings.

### 3.4 RECOAT TIMES

- A. Coatings Installer shall observe all requirements of the Coatings Manufacturer regarding recoat times.

### 3.5 PAINT LOG

- A. Coatings Installer shall keep a paint log
  - 1. Specific details of the contents and format paint log shall be determined by the Coatings Installer and approved by the ENGINEER.
  - 2. At a minimum, paint log shall record, on a daily basis for any day when coating work is performed:
    - a. Weather conditions, including 3-day forecast
    - b. Which surfaces were prepared for coating
    - c. Approval of surface preparation by the Coatings Manufacturer representative
    - d. Which surfaces or systems were coated that day
    - e. Who the installer was (specific names of persons on crew)
    - f. Which coating type was used
    - g. Which coat was installed
    - h. What the application rate or MDFT was (as approved by ENGINEER)
  - 3. Paint log shall be kept on-site. Paint log shall be signed on a daily basis, for any day when coating work is performed, by the supervisor of the coatings installer field crew and by the ENGINEER.
  - 4. Any painted surface which was not recorded in the paint log shall be stripped, re-prepared, and recoated at the ENGINEER's discretion.

### 3.6 WARRANTY INSPECTION

- A. Warranty inspection shall be conducted during the eleventh month following completion of the Work. All defective Work shall be repaired by the CONTRACTOR in accordance with

---

09 91 03-7  
Painting

Pump Station No. 26 Improvements

this Specification and to the satisfaction of the ENGINEER and at the CONTRACTOR'S expense.

- B. Any location where paint has peeled, bubbled, or cracked and any location where rusting is evident shall be considered to be a failure of the system. The CONTRACTOR shall make repair at all points where failures are observed by removing the deteriorated paint, cleaning the surface, and recoating or repainting with the same system. If the area of failure exceeds 25 percent of the total coated or painted surface, the entire coating or paint system may be required to be removed and repainted in accordance with this specification as determined by the ENGINEER.
- C. All costs for CONTRACTOR'S inspection, Manufacturer's inspection and all costs for repair shall be borne by the CONTRACTOR.

++ END OF SECTION ++

Pump Station No. 26 Improvements

## PART 1 - GENERAL

- A. Provide the electrical WORK, complete and operable, as indicated in accordance with the Contract Documents.
- B. The provisions of this Section shall apply to all Sections in Division 26, except as otherwise indicated by respective specification.
- C. Work included:
  - 1. The WORK of this Section is required for operation of electrically-driven equipment provided under Specifications in other Divisions.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                |

| 5. Title 8, Subchapter 5,  | California Administrative Code Electrical Safety Orders |
| 6. UBC                     | Uniform Building Code                                   |

B. Electrical equipment shall be listed by and shall bear the label of Underwriters' Laboratories, Inc. (UL) or an independent testing laboratory acceptable to the local code enforcement agency having jurisdiction.

April 2023  
REVISED BID SET

- C. Installation of electrical equipment and materials shall comply with OSHA Safety and Health Standards (29 CFR 1910 and 29 CFR 1926, as applicable), state building standards, and applicable local codes and regulations.
- D. Standards: Where referenced in these specifications or on the drawings, the publications and standards of the following organizations apply:
- |             |                                                         |
|-------------|---------------------------------------------------------|
| 1. AEIC     | Association of Edison Illuminating Companies            |
| 2. ANSI     | American National Standards Institute                   |
| 3. ASTM     | American Society of Testing and Materials               |
| 4. ICEA     | Insulated Cable Engineers Association                   |
| 5. IEEE     | Institute of Electrical and Electronics Engineers       |
| 6. NEMA 250 | Enclosure for Electrical Equipment (1000 Volts Maximum) |
| 7. NFPA     | National Fire Protection Association                    |
| 8. NETA     | International Electrical Testing Association            |
- E. Where the requirements of the specifications conflict with UL, NEMA, NFPA, or other applicable standards, the more stringent requirements shall govern.

#### **1.04 SUBMITTALS**

##### **A. General**

1. Furnish submittals in accordance with the requirements of Section 01 33 03 – Submittal Procedures.
2. Custom-prepare Shop Drawings.
3. Drawings or data indicating "optional" or "as required" equipment will not be accepted.
4. Cross out options not proposed or delete from the Shop Drawings.

##### **B. Shop Drawings**

1. Shop drawings shall include the following:
  - a. Complete material lists stating manufacturer and brand name of each item or class of material.
  - b. Shop Drawings for grounding WORK not specifically indicated
  - c. Front, side, rear elevations, and top views with dimensional data
  - d. Location of conduit entrances and access plates
  - e. Component data
  - f. Connection diagrams, terminal numbers, internal wiring diagrams, conductor size, and cable numbers
  - g. Method of anchoring, seismic requirements, weight
  - h. Types of materials and finish
  - i. Nameplates
  - j. Temperature limitations, as applicable
  - k. Voltage requirement, phase, and current, as applicable

---

26 00 00-2

General Electrical Work

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- l. Front and rear access requirements
  - m. Test reports
  - n. Grounding requirements
- C. Catalog Cuts
  - 1. Submit catalog cuts or photocopies of applicable pages of bulletins or brochures for mass produced, non-custom manufactured material.
  - 2. Stamp the catalog data sheets in order to indicate the Project name, applicable Specifications Section and Paragraph, model number, and options.
- D. Materials and Equipment Schedules
  - 1. Within 30 Days of the commencement date in the Notice to Proceed, deliver to the ENGINEER a complete list of materials, equipment, apparatus, and fixtures that are proposed for use.
  - 2. Include in the list the type, size, name of manufacturers, catalog number, and such other information as required to identify the item.
- E. Include with each submittal a copy of this specification section, with addenda updates included, and all referenced and applicable sections included, with each paragraph check-marked to indicate specification compliance or marked to indicate requested deviations from specification requirements. Check marks (✓) shall denote full compliance with a paragraph as a whole. If deviations from the specifications are indicated, and therefore requested by the CONTRACTOR, each deviation shall be underlined and denoted by a number in the margin to the right of the identified paragraph, referenced to a detailed written explanation of the reasons for requesting the deviation. The ENGINEER shall be the final authority for determining acceptability of requested deviations. The remaining portions of the paragraph not underlined will signify compliance on the part of the CONTRACTOR with the specifications. Failure to include a copy of the marked-up specification sections, along with justification(s) for any requested deviations to the specification requirements, with the submittal shall be sufficient cause for rejection of the entire submittal with no further consideration.

## **1.05 FACILITY OPERATION AND MAINTENANCE MANUALS**

### **A. General**

- 1. Submit complete operation and maintenance manual in accordance with the requirements of Section 01 33 03.13 – O&M Manual Review Checklist.

## **1.06 As-Built Drawings**

- 1. Prepare as-built drawings, including but not limited to showing invert and top elevations and routing of duct banks and exact location of concealed below-grade electrical installations, and color coding of each individual control conductor.
- 2. Maintain AS-BUILT drawings and update in conjunction with CONSTRUCTION progress of installation. AS-BUILT drawings shall be a full-sized set of drawings marked to reflect deviations, modifications and changes.
- 3. Furnish the drawings to the ENGINEER in accordance with the requirements of Section 01 33 03 – Submittal Procedures.

General Electrical Work

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **1.07 IDENTIFICATION FOR ELECTRICAL SYSTEMS**

### **A. Identification**

1. Provide danger, caution, and warning signs and equipment identification markings in accordance with applicable federal, state, OSHA, and NEC requirements.

### **B. Local Disconnect Switches**

1. Legibly mark each local disconnect switch for motors and equipment in order to indicate its purpose, unless the purpose is indicated by the location and arrangement.

### **C. Warning Signs**

#### **1. 600 Volts Nominal, or Less**

- a. Mark entrances to rooms and other guarded locations that contain live parts with conspicuous signs prohibiting unqualified persons from entering.
2. Mark indoor electrical installations that are open to unqualified persons and contain metal-enclosed switchgear, unit substations, transformers, and other similar associated equipment over 600 volts nominal, with appropriate caution signs.

### **D. Isolating Switches**

1. Provide isolating switches not interlocked with an approved circuit-interrupting device with a sign warning against opening them under load.

## **1.08 PERMANENT PUBLIC UTILITIES REQUIREMENTS**

### **A. Contact the serving utility and verify compliance with requirements before construction.**

### **B. Coordinate schedules and payments for WORK by utilities.**

1. The CONTRACTOR to coordinate and schedule pre-construction utility coordination meeting with utility service representative with thirty (30) days of CONTRACT.

### **C. Where conduits and conductors in the WORK are indicated to be larger, heavier schedule, or have greater protective coating than utility requirements, provide the larger size, heavier schedule, or greater protection.**

### **D. Provide electrical service as indicated and as required by the serving utility.**

### **E. Verify and provide service conduits, fittings, transformer pad, grounding devices, and service wires not provided by the serving utility.**

### **F. Verify with the utility the exact location of each service point and type of service, and pay charges levied by the serving utilities as part of the WORK.**

## **1.09 PERMITS AND INSPECTION**

### **A. Obtain permits and pay inspection fees according to the General Conditions.**

## **1.10 AREA DESIGNATIONS**

### **A. General**

1. Designations for raceway system enclosures shall comply with the requirements of Section 26 05 33– Electrical Raceway Systems.
2. Designations for electrical WORK specifically indicated in other Sections shall comply with the requirements of those Sections unless indicated otherwise.

---

26 00 00-4

General Electrical Work

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

3. Designations for other electrical WORK not included in the above Paragraphs shall be as follows:

| AREA             | NEMA ENCLOSURE CLASSIFICATION |    |   |   |    |         |
|------------------|-------------------------------|----|---|---|----|---------|
|                  | 1                             | 3R | 7 | 9 | 12 | Notes   |
| Inside Wet Well  |                               |    | X |   |    |         |
| Near Wet well    |                               |    |   |   |    | NEMA 4X |
| Outside Building |                               | X  |   |   |    |         |
| Inside Building  |                               |    |   |   | X  |         |

4. Designations for electrical WORK not included in the above Paragraphs shall be NEMA 4X.

5. Installations in hazardous locations shall conform strictly to the requirements of the indicated Class, Group, and Division.

**B. Material Requirements**

1. Provide sealing fittings in chlorine and hydrofluosilicic (HFS) acid areas.
2. Construct NEMA 4X enclosures of Type 316 stainless steel, except in chlorine and HFS areas where non-metallic enclosures shall be provided.
3. Do not coat NEMA 4X enclosures.
4. Construct NEMA 7 enclosures of cast aluminum where used with aluminum conduit, and of cast iron when used with galvanized steel conduit.
5. Do not coat NEMA 7 and 9 enclosures.
6. Construct NEMA 1, 3R, and 12 enclosures of steel, and prime and coat with ANSI 61 light grey paint.

**1.11 TESTS**

- A. The CONTRACTOR shall be responsible for factory and field tests indicated in Division 26, as required by the ENGINEER, and as required by other authorities having jurisdiction.
- B. Furnish necessary testing equipment.
- C. Pay the costs of the tests, including replacement parts and labor, due to damage resulting from damaged equipment or from testing and correction of a faulty installation.
- D. Reporting
  1. Where test reporting is indicated, submit proof-of-design test reports for mass-produced equipment with the Shop Drawings.
  2. Submit factory performance test reports for custom-manufactured equipment for approval prior to shipment.
  3. Submit field test reports for review prior to Substantial Completion.

---

26 00 00-5

General Electrical Work

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- E. Remove and replace equipment or material that fails a test, or, if the ENGINEER approves, repair and retested for compliance.
- F. Corrections to equipment or materials with a factory warranty shall be as recommended by the manufacturer and shall be performed in a manner that does not void the warranty.

## **1.12 DEMOLITION AND RELATED WORK**

### **A. General**

- 1. Perform electrical demolition WORK as indicated.
- 2. The demolition WORK may also be indicated on non-electrical Drawings.
- 3. Coordinate with all trades regarding electrical de-energization, disconnection, and removal, and the overall sequence of construction.

### **B. Electrical Requirements for Removed Equipment**

- 1. Remove dedicated wiring and exposed conduits back to the source.
- 2. Abandon in place wiring that shares conduits with other equipment wiring, except power wiring.
- 3. Remove power wiring from the power source to the initial pull box, junction box or manhole remote from the panel, and abandon in place the remaining wiring.

#### **4. Encased Conduits**

- a. Abandon in place wiring routed through encased conduits.
- b. Cut encased conduits flush to the floor and grout flush with the floor. Remove exposed conduit to the first fitting/coupling before encasement. Remove the fitting/coupling and replace with a 5-thread conduit cap.
- 5. Remove remote-mounted starters, disconnect switches, circuit breakers, sensors, and transmitters.

### **C. Where new lighting and receptacles are installed, remove old lighting, receptacles, switches, wiring, and conduits.**

### **D. Junction Boxes**

- 1. Wiring and conduits indicated to be extended shall be terminated in a new junction box with terminal strips.
- 2. Provide a junction box with a NEMA rating in accordance with the area in which it is located, and sized as required.
- 3. Properly identify wires and terminals before disconnection.

### **E. Removed materials and equipment not indicated as "RETURN TO OWNER", upon removal, shall be the CONTRACTOR'S responsibility to dispose of off- Site.**

### **F. Remove and relocate material and equipment indicated to be relocated or reused, and reinstall to be protected from damage.**

### **G. Place materials indicated to be returned to the OWNER in boxes, with the contents clearly marked, and store at a location determined by the ENGINEER.**

### **H. Identification**

---

26 00 00-6

General Electrical Work

Pump Station 26 Improvement Project

1. Where motor control centers and panelboards are indicated to have components, assemblies, or circuits removed and reconnected, provide the affected MCC compartments with new engraved nameplates worded as indicated and matching the existing, or modify the panelboard schedule to indicate the revised circuits.
2. Pencil or magic marker markings directly on the MCC or panelboard breaker will not be accepted.

### **1.13 CONSTRUCTION SEQUENCING**

#### **A. General**

1. Continuance of facility operation during upgrades is critical, the CONTRACTOR shall coordinate the WORK to be provided in, on, or adjacent to existing equipment.
2. Submit a written sequencing request, including the sequence and duration of activities to be performed during plant shutdown. Schedule of WORK, shall be subject to OWNER and Engineer approval, to minimize required shutdown time.
3. Switching, safety tagging, and lock-out, as required for plant shutdown or to isolate existing equipment, shall be performed by the CONTRACTOR under the direction of OWNER.

#### **B. Modifications**

1. Perform modifications or alterations to existing electrical facilities as required to successfully install and integrate the proposed electrical equipment as indicated.
2. Perform modifications to existing equipment, panels, and cabinets in a professional manner.
3. Repair coatings to match existing.
4. The costs for modifications to existing electrical facilities that are required for a complete and operating system shall be included as part of the WORK.

#### **C. Existing Utilities**

1. Exercise extreme caution when digging trenches to not damage existing underground utilities.
2. The cost of repairs of damages caused during construction shall be included as a part of the WORK.

#### **D. Field Verifications**

1. Visit the Site before submitting a Bid to become better acquainted with the WORK of this Contract.
2. The lack of knowledge will not be accepted as justification for extra compensation to perform the WORK.
3. The CONTRACTOR shall be responsible for identifying available existing circuit breakers in lighting panels for the intended use as required.
4. The CONTRACTOR shall be responsible for field verifying the available space in substation switchboards to integrate new power circuit breakers.
5. The cost for the above verifications shall be included as part of the WORK.

#### **E. Installation of Temporary Equipment**

1. To facilitate the continuous operation of existing equipment, provide the temporary equipment as indicated.

---

26 00 00-7

General Electrical Work

Pump Station 26 Improvement Project

2. Submit installation and connection details for review and acceptance by the ENGINEER.
3. Costs associated with these temporary installations shall be included as part of the WORK.
4. Temporary wiring and equipment shall remain the property of the CONTRACTOR unless indicated otherwise.

## **PART 2 - MATERIALS**

### **2.01 GENERAL**

- A. Provide equipment and materials that are new and are the products of experienced and reputable manufacturers in the industry.
- B. Provide equipment and materials listed by UL and bearing the UL label, where UL requirements apply.
- C. Furnish equipment and material products of the same manufacturer. Equipment and materials shall be of industrial grade standard of construction.
- D. Temperature Ratings of Equipment Terminations
  1. Provide terminations and lugs rated for use with 75-degree C conductors.
  2. Wire sizes in the Contract Documents are based on NEC ampacity tables using the 75-degree C ratings.
  3. Provide equipment and materials suitable for storage, installation and operation in an ambient of 0°C to 50°C up to an elevation of 3,300 feet above sea level, except where more stringent conditions are stated in individual equipment specifications.
- E. Furnish factory finished electrical equipment, wireways and panels with manufacturer's standard primer and enamel topcoats, unless stated otherwise in the individual equipment specifications.
  1. Provide 1 pint of the equipment manufacturer's touch-up paint per 500 square feet of painted surface for repair of damaged enamel topcoats.

### **2.02 ELECTRICAL IDENTIFICATION**

- A. Nameplates
  1. Fabricate nameplates from white-letter, black-face laminated plastic engraving stock, such as **Formica Type ES-1** or equal.
  2. Securely fasten each nameplate, using fasteners constructed of brass, cadmium-plated steel, or stainless steel, and screwed into inserts or tapped holes as required.
  3. Provide engraved characters of the block style, with no characters smaller than 1/8-inch top to bottom.
  4. Provide nameplates for field mounted devices and instruments, such as pressure switches, limit switches, flow meters, etc. Identify the name of the device and its unique identifier:

| Examples: | Pressure Switch | Limit Switch |
|-----------|-----------------|--------------|
|           | PS-1            | LS-1         |

5. Where it is impractical to attach laminated nameplates to field devices, provide 19-gauge, 2-inch square brass tags with 1/4-inch black filled engraving. Provide Seton Standard Brass Valve tags or equivalent. Attach tags with No. 16 brass jack chain.

---

26 00 00-8

General Electrical Work

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

B. Conductor and Equipment Identification

1. Provide heat shrink sleeve markers, Brady Permasleeve or approved equal.

**2.03 PROTECTIVE MATTING**

- A. Provide full-width, high-voltage switchboard matting in front of indoor switchgear, service equipment, panelboards and motor control centers.
- B. For 600-volt equipment, provide matting that is 1/4-inch-thick and 36-inches wide.
- C. Matting Manufacturer, or Equal
1. W.H.Salisbury and Company; Mats, Inc.; Rhino

**PART 3 - EXECUTION**

**3.01 INSTALLATION**

- A. Provide materials and provisions required for a complete and operable system, even if not required explicitly by the Contract Documents.
- B. Typical provisions include terminal lugs not furnished with vendor-supplied equipment, compression connectors for cables, splices, junction and terminal boxes, and control wiring required by vendor-furnished equipment to connect with other equipment indicated in the Contract Documents.
- C. The Drawings diagrammatically indicate the desired location and arrangement of outlets, conduit runs, equipment, and shall be used as closely as possible.
- D. Exact locations shall be determined by the CONTRACTOR in the field, based on the physical size and arrangement of equipment, finished elevations, and other obstructions.
- E. Conduits
1. Where conduit development drawings or "home runs" are indicated, route the conduits in accordance with those requirements.
  2. Provide exposed or encased routings as indicated, except conceal conduit in finished areas unless indicated otherwise.
  3. Size conduits encased in a slab for conduit OD not to exceed 1/3 of the slab thickness, and lay out and space as to not impede concrete flow.
- F. Placement
1. Install conduit and equipment as to avoid obstructions, to preserve headroom, and to keep openings and passageways clear.
  2. Locate luminaires, switches, convenience outlets, and similar items within finished rooms as indicated.
  3. Where exact locations are not indicated, such locations will be determined by the ENGINEER.
  4. If equipment is installed without instruction and must be moved, the cost of moving shall be included as part of the WORK.
  5. Adjust luminaire locations in order to avoid obstructions and to minimize shadows.
- G. Circuits
1. Wherever conduits and wiring for lighting and receptacles are not indicated, it shall be the CONTRACTOR'S responsibility to provide lighting and receptacle-related conduits and

---

26 00 00-9

General Electrical Work

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

wiring as required, based on the actual installed fixture layout and the circuit designations as indicated.

2. Provide No. 12 AWG minimum wiring, and 3/4-inch minimum conduits (exposed) and one-inch minimum conduits (encased).
3. Where circuits are combined in the same raceway, de-rate conductor ampacities in accordance with NEC requirements.

H. Workmanship

1. Install materials and equipment in strict accordance with the printed recommendations of the manufacturer, and using workers skilled in the WORK.
2. Coordinate installation in the field with other trades in order to avoid interferences.

I. Protection of Equipment and Materials

1. Fully protect materials and equipment against damage from any cause.
2. Cover materials and equipment, both in storage and during construction, in such a manner that no finished surfaces will be damaged, marred, or splattered with water, foam, plaster, or paint.
3. Keep moving parts clean and dry.
4. Replace or refinish damaged materials or equipment, including faceplates of panels and switchboard sections, as part of the WORK.

J. Provide incoming utility power equipment in conformance with the utility's requirements.

K. Provide starters shall be in accordance with the requirements of Section 26 29 13 – Solid State Reduced Voltage Starting, and with Section 26 05 15 – Industrial Control Panels for starters not in MCC'S.

**3.02 CORE DRILLING**

- A. Perform core drilling as required for the installation of raceways through concrete walls and floors.
- B. Base the locations of floor penetrations, as may be required, on field conditions.
- C. Verify exact core drilling locations based on equipment actually furnished as well as exact field placement.
- D. To the extent possible, identify the existence and locations of encased raceways and other piping in existing walls and floors with the OWNER prior to any core drilling activities.
- E. Repair damage to encased conduits, wiring, and piping as part of the WORK.

**3.03 CONCRETE HOUSEKEEPING PADS**

- A. Provide concrete housekeeping pads for indoor floor-standing electrical equipment.
- B. Extend housekeeping pads for equipment, including future units, 3-1/2 inches above the surrounding finished floor or grade, and 2 inches larger in both dimensions than the equipment, unless otherwise indicated.
- C. Provide concrete housekeeping curbs for conduit stub-ups in indoor locations that are not concealed by equipment enclosures.
- D. Extend housekeeping curbs to 3-1/2 inches above the finished floor or grade.

---

26 00 00-10

General Electrical Work

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

### **3.04 EQUIPMENT IDENTIFICATION**

- A. Provide nameplates for panelboards, control and instrumentation panels, starters, switches, and pushbutton stations.
- B. In addition to nameplates, equip control devices with standard collar-type legend plates.
- C. Identify control devices within enclosures as indicated and similar to the subparagraph above.
- D. Provide suitable inscribed finish plates for toggle switches that control loads out of sight of switches and for multi-switch locations of more than 2 switches.
- E. Use equipment names and tag numbers, where indicated, on nameplates.
- F. Provide typewritten circuit directories for panelboards, that accurately reflect the outlets connected to each circuit.
- G. Terminal Blocks
  - 1. Label termination points on terminal blocks by identifiers on the blocks.
  - 2. Provide identifiers that have been preprinted by the terminal manufacturer or custom-printed.
  - 3. Hand-lettered markers will not be accepted.
- H. Provide arc-flash labels for all distribution equipment, stand-alone disconnects, starters, and VFDs. Fill in all values as required by NFPA 70E, and as calculated as part of the Protective Device Study. Verify that all settings as prescribed by the approved Protective Device Study have been implemented in the field.

### **3.05 CLEANING**

- A. Before final acceptance, thoroughly clean the electrical WORK of cement, plaster, and other materials.
- B. Remove temporary tags, markings, stickers, and the like.
- C. Remove oil and grease spots with a non-flammable cleaning solvent by carefully wiping and scraping cracks and corners.
- D. Apply touch-up paint to scratches on panels and cabinets.
- E. Vacuum clean electrical cabinets and enclosures. Do not use compressed air to clean cabinets.
- F. Clean luminaires inside and out. Replace failed lamps.
- G. Properly dispose cleaning debris and refuse off-site.

**END OF SECTION**

THIS PAGE INTENTIONALLY LEFT BLANK

## PART 1 - GENERAL

- A. This Section specifies the WORK necessary to test, commission, and demonstrate that the electrical work satisfies the criteria of these Specifications and functions as required by the Contract Documents.
- B. The WORK of this Section includes furnishing the labor, equipment, and power required to support the testing indicated in other Divisions of these Specifications. Electrical testing indicated herein and functional testing of power and controls not tested under Division 17 - Instrumentation, shall be completed before commencement of the 7 Day test of Section. This scope may require the CONTRACTOR to activate circuits, shutdown circuits, run equipment, make electrical measurements, replace blown fuses, and install temporary jumpers, etc.
- C. The requirements of Section 26 00 00 – General Electrical Work, apply to the WORK of this Section.
- D. Carry out tests indicated herein for individual items of materials and equipment in other Sections. Testing shall be done in accordance with the manufacturer's instructions, these Specifications, and applicable NETA Acceptance Testing Specifications, NEMA, ANSI, NFPA, and ASTM Standards.

|                     |                                                       |

- 26 01 26-1  
 Electrical Tests  
 Pump Station 26 Improvement Project  
 City of Roseville  
 WVE Project: 21-060  
 April 2023  
 REVISED BID SET

- B. Standards: Where referenced in these specifications or on the drawings, the publications and standards of the following organizations apply:
1. ANSI American National Standards Institute
  2. IEEE Institute of Electrical and Electronics Engineers
  3. IEEE 400 – 2001, Guide for Field Testing and Evaluation of the Insulation of Shielded Power Cable Systems
  4. IEEE 576 – 2000, Recommended Practice for Installation, Termination, and Testing of Insulated Power Cable as Used in Industrial and Commercial Applications
  5. NETA, International Electrical Testing Association
  6. NETA ATS, Acceptance Testing Specifications for Electrical Power Equipment and Systems.
  7. NETA MTS, Maintenance Testing Specifications for Electrical Power Equipment and Systems.
- C. The publications listed above form a part of this specification to the extent referenced.
- D. Where a date is given for reference standards, the edition of that date shall be used. Where no date is given for reference standards, the latest edition available on the date of the Notice Inviting Bids shall be used.

#### **1.04 SUBMITTALS**

- A. Submit in accordance with Section [01 33 03] –Submittal Procedures.
- B. Submit complete system test procedures for review. Test procedures shall include but not be limited to:
1. Detailed procedures in sufficient detail to verify conformance with these Specifications.
  2. Incorporation of the Test Record Sheets included at the end of this Section.
  3. Detailed comprehensive testing schedule including:
    - a. Each major piece of electrical distribution equipment.
    - b. Each major electrical subsystem.
    - c. Duration of each test.
    - d. Milestone test completion date.
    - e. Ambient Conditions at time of test
    - f. Date of test results submittals following completion of the tests.
    - g. Names and qualifications of the individual(s) responsible for performing the testing.
- C. Following completion of the test submit the completed test results to the Engineer for review. The results shall include a dedicated section with the “as-left” settings of all devices, relays, circuit breakers, etc.
- D. Test result shall be submitted in one submittal
- E. Test reports shall be based on NETA’s latest Acceptance Testing Specifications having a sign-off, pass/fail data filed for each line item covered by NETA’s Acceptance Testing Specifications latest edition.

#### **1.05 COMMISSIONING**

- A. Commissioning in Section 01 75 06 shall not be attempted until all subsystems have been found to operate satisfactorily.

26 01 26-2  
Electrical Tests

Pump Station 26 Improvement Project

- B. Commissioning shall only be attempted as a function of normal plant operation in which plant process flows and levels are routine and equipment operates automatically in response to flow and level parameters or computer command, as applicable. Simulation of process parameters shall be considered only upon receipt of a written request by the CONTRACTOR.

#### **1.06 TESTING ORGANIZATION QUALIFICATIONS**

- A. Testing organization shall be corporately and financially independent of the supplier, producer and installer of the equipment.
- B. Testing organization shall meet Federal OSHA criteria for accreditation of testing laboratories, Title 29, Part 1907, 1910 and 1936. Membership in the National Electrical Testing Association constitutes proof of meeting such criteria.
- C. Testing organization shall provide all materials, equipment, labor and technical supervision to perform inspections and tests.

#### **1.07 SAFETY AND PRECAUTIONS**

- A. Safety practices shall include, but are not limited to, the following requirements:
  - 1. Occupational Safety and Health Act.
  - 2. Accident Prevention Manual for Industrial Operations, National Safety Council.
  - 3. Applicable state and local safety operating procedures.
  - 4. Owner's safety practices.
  - 5. National Fire Protection Association - NFPA 70E
  - 6. American National Standards for Personnel Protection
- B. All tests shall be performed with apparatus de-energized. Exceptions must be thoroughly reviewed to identify safety hazards and devise adequate safeguards.
- C. The testing firm shall have a designated safety representative on the project to supervise the testing operations with respect to safety.

### **PART 2 - TESTING & REPORTS**

#### **2.01 PRE-ENERGIZATION AND OPERATING TESTS**

- A. The complete electrical system shall be performance tested when first installed on-site. Each protective, switching, and control circuit shall be adjusted in accordance with the recommendations of the protective device study and tested by actual operation using current injection or equivalent methods as necessary to ensure that each and every such circuit operates correctly to the satisfaction of the authority having jurisdiction.
  - 1. Instrument Transformers. All instrument transformers shall be tested to verify correct polarity and burden.
  - 2. Protective Relays. Each protective relay shall be demonstrated to operate by injecting current or voltage, or both, at the associated instrument transformer output terminal and observing that the associated switching and signaling functions occur correctly and in proper time and sequence to accomplish the protective function intended.
  - 3. Switching Circuits. Each switching circuit shall be observed to operate the associated equipment being switched.

Electrical Tests

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

4. Control and Signal Circuits. Each control or signal circuit shall be observed to perform its proper control function or produce a correct signal output.
  5. Metering Circuits. All metering circuits shall be verified to operate correctly from voltage and current sources, similarly to protective relay circuits.
  6. Acceptance Tests. Complete acceptance tests shall be performed, after the station installation is completed, on all assemblies, equipment, conductors, and control and protective systems, as applicable, to verify the integrity of all the systems.
  7. Relays and Metering Utilizing Phase Differences. All relays and metering that use phase differences for operation shall be verified by measuring phase angles at the relay under actual load conditions after operation commences.
- B. Test Report. A test report covering the results of the tests required in the Pre-Energization and Operating Tests shall be delivered to the authority having jurisdiction prior to energization. Acceptance Testing shall be in accordance with NETA ATS, Electrical Power Equipment and Systems.

### **PART 3 - EXECUTION**

- A. The following test requirements supplement test and acceptance criteria that may be stated elsewhere.
- B. Perform Electrical Tests after electrical installation is 100% completed.

#### **3.02 LIGHTING AND RECEPTACLES**

- A. Switching, include remote control, if present in system. Circuitry is in accordance with panel schedules. All interior and exterior lighting shall be checked for proper operation.
- B. Test ground interrupter (GFI) receptacles and circuit breakers for proper operation by methods sanctioned by the receptacle manufacturer.

#### **3.03 SWITCHGEAR AND SWITCHBOARD ASSEMBLIES**

- A. Visual and Mechanical Inspection.
1. Inspect for physical, electrical and mechanical condition.
  2. Compare equipment nameplate information with latest one-line diagram and report discrepancies.
  3. Check for proper anchorage, required area clearances, physical damage and proper alignment.
  4. Inspect all doors, panels and sections for paint, dents, scratches, fit and missing hardware.
  5. Verify that fuse and/or circuit breaker sizes and types correspond to drawings.
  6. Verify that current and potential transformer ratios correspond to drawings.
  7. Inspect all bus connections for high resistance. Use low-resistance ohmmeter or check tightness of bolted bus joints by using a calibrated torque wrench.
    - a. Refer to manufacturer's instructions or NETA ATS Table 100.12.
  8. Test all electrical and mechanical interlock systems for proper operation and sequencing.
  9. Closure attempt shall be made on locked open devices. Opening attempt shall be made on locked closed devices.

---

26 01 26-4  
Electrical Tests

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

10. Clean entire switchgear using manufacturer's approved methods and materials.
  11. Inspect insulators for evidence of physical damage or contaminated surfaces.
  12. Verify proper barrier and shutter installation and operation.
  13. Lubrication
    - a. Verify appropriate contact lubricant on moving current carrying parts.
    - b. Verify appropriate lubrication on moving and sliding surfaces.
  14. Exercise all active components.
  15. Inspect all mechanical indicating devices for proper operation.
- B. Electrical Tests
1. Perform test on all instrument transformers in accordance with Instrument Transformer Section.
  2. Perform ground-resistance tests in accordance with Grounding Systems Section.
  3. Perform insulation-resistance test on each bus section, phase-to-phase and phase-to-ground for one (1) minute. Test voltages and minimum resistances shall be in accordance with NETA ATS, Table 100.1.
  4. Perform insulation-resistance test on control wiring. Do not perform this test on wiring connected to solid-state components.
  5. Perform control wiring performance test. Use the elementary diagrams of the switchgear to identify each remote control and protective device. Conduct tests to verify satisfactory performance of each control feature.
  6. Perform secondary voltage energization test on all control power circuits and potential circuits as detailed below. Check voltage levels at each point on terminal boards and at each terminal on devices.
  7. Perform current injection tests on the entire current circuit in each section of switchgear.
    - a. Perform current test by primary injection, where possible, with magnitudes such that a minimum of 1.0 ampere flows in the secondary circuit.
    - b. Where primary injection is impractical, utilize secondary injection with a minimum current of 1.0 ampere.
    - c. Test current at each device.
  8. Determine accuracy of all meters per Metering and Instrumentation Section. Verify multipliers.
  9. Control Power Transformers - Dry Type
    - a. Inspect for physical damage, cracked insulation, broken leads, tightness of connections, defective wiring and overall general condition.
    - b. Verify proper primary and secondary fuse ratings or circuit breakers.
    - c. Verify proper interlock function and contact operation.
    - d. Perform insulation-resistance tests. Perform measurement from winding-to-winding and windings-to-ground. Test voltage and minimum resistances shall be in accordance with NETA ATS, Table 100.1. Results shall be temperature corrected in accordance with NETA ATS, Table 100.14.

- e. Perform secondary wiring integrity test. Disconnect transformer at secondary terminals and connect secondary wiring to proper secondary voltage. Check potential at all devices.
  - f. Verify proper secondary voltage by energizing primary winding with system voltage. Measure secondary voltage with the secondary wiring disconnected.
10. Potential Transformer Circuits
- a. Perform secondary wiring integrity test. Disconnect transformer at secondary terminals and connect secondary wiring to proper secondary voltage. Check for proper potential at all devices.
  - b. Verify secondary voltage by energizing primary winding with system voltage. Measure secondary voltage with the secondary wiring disconnected.
11. Test circuit breakers in accordance with Circuit Breaker paragraphs.

C. Test Values

- 1. Bolt-torque levels shall be in accordance with NETA ATS Table 100.12, unless otherwise specified by manufacturer.
- 2. Insulation-resistance test shall be performed in accordance with NETA ATS, Table 100.1. Values of insulation resistance less than this table or manufacture's minimum should be investigated.

**3.04 LOW-VOLTAGE CABLES-600V MAXIMUM**

A. Visual and Mechanical Inspection

- 1. Compare cable data with drawings and specifications.
- 2. Inspect exposed sections of cables for physical damage and proper connection in accordance with single-line diagram.
- 3. Inspect bolted electrical connections for high resistance using one of the following methods:
  - a. Use of low-resistance ohmmeter
  - b. Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS, Table 100.12.
- 4. Inspect compression-applied connectors for correct cable match and indentation.
- 5. Inspect for correct identification, arrangements, and cable color coding.
- 6. Inspect cable jacket insulation and condition.

B. Electrical Tests

- 1. Perform insulation-resistance test on each conductor with respect to ground and adjacent conductors. Applied potential shall be 500 volts dc for 300 volt rated cable and 1000 volts dc for 600 volt rated cable. Test duration shall be one minute.
  - a. Motor feeders shall be tested with motors disconnected and controller open.
  - b. Motor control circuits shall be tested and verified for proper operation with control stations and overcurrent devices connected.
  - c. Panelboard feeders shall be tested with feeder breaker open and panel-board connected. If a lighting transformer is associated with the panelboard, it shall be connected and the test made for both primary and secondary sides.

---

26 01 26-6  
Electrical Tests

Pump Station 26 Improvement Project

- d. Conductors of main lighting feeders, including lighting panel shall be tested with branch circuits open.
  - 2. Prior to performing insulation resistance tests on cables, verify that they are not connected to a solid-state device.
    - a. Equipment shall be disconnected to avoid damage during prior to testing.
    - b. The CONTRACTOR shall notify Engineer if minimum insulation values cannot be obtained.
  - 3. Perform resistance measurements through all bolted connections with low-resistance ohmmeter, if applicable.
  - 4. Perform continuity test to insure correct cable connection.
- C. Test Values – Visual and Mechanical
- 1. Compare bolted connection resistance to values of similar connections. Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
  - 2. Bolt-torque levels should be in accordance with NETA ATS, Table 100.12 unless otherwise specified by the manufacturer.
- D. Test Values – Electrical
- 1. Compare bolted connection resistance values to values of similar connections. Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
  - 2. Insulation-resistance values shall be in accordance with manufacturer's published data. In the absence of manufacturer's published data, use NETA ATS Table 100.1. Values of insulation resistance less than this table or manufacturer's recommendations shall be investigated to determine cause of deviations.
  - 3. Cable shall exhibit continuity.
  - 4. Deviations in resistance between parallel conductors shall be investigated to determine cause of deviations.

### **3.05 CIRCUIT BREAKERS - LOW-VOLTAGE - INSULATED-CASE**

A. Visual and Mechanical Inspection

- 1. Check circuit breaker for proper mounting and compare nameplate data to drawings and specifications.
- 2. Operate circuit breaker to ensure smooth operation.
- 3. Inspect case for cracks or other defects.
- 4. Verify tightness of accessible bolted electrical connections by calibrated torque-wrench method in accordance with manufacturer's published data or NETA ATS- 2017, Table 100.12.

B. Electrical Tests

- 1. Perform a contact-resistance test.

---

26 01 26-7  
Electrical Tests

Pump Station 26 Improvement Project

2. Perform insulation-resistance test on each conductor with respect to ground and adjacent conductors. Applied potential shall be 500 volts dc for 300 volt rated cable and 1000 volts dc for 600 volt rated cable. Test duration shall be one minute.
3. Determine long-time minimum pickup current by primary current injection where practical.
4. Perform long-time delay time-current characteristic test by passing three hundred percent (300%) rated current through each pole separately. Record trip time.
5. Determine short time pickup and delay by primary current injection.
6. Determine ground-fault pickup and time delay by primary current injections.
7. Determine instantaneous pickup current by primary injection using run-up or pulse method.

C. Test Values

1. Compare contact resistance or millivolt drop values to adjacent poles and similar breakers. Investigate deviations of more than fifty percent (50%). Values of resistance less than this table or manufacturer's recommendations shall be investigated to determine cause of deviations.
2. Insulation resistance shall not be less than 100 megohms.
3. Trip characteristic of breakers shall fall within manufacturer's published time-current characteristic tolerance band, including adjustment factors.
4. All trip times shall fall within Table ICO. Circuit breakers exceeding specified trip time at three hundred percent (300%) of pickup shall be tagged defective.
5. Instantaneous pickup values shall be within values shown on Table ICI.

| <b>Table ICO</b><br><b>Insulated-Case Circuit Breaker Overcurrent Trip Test</b><br><b>(At 300% of Rated Continuous Current of Circuit Breaker)</b> |                                                    |                                      |

### **3.06 CIRCUIT BREAKERS - LOW-VOLTAGE - POWER**

#### **A. Visual and Mechanical Inspection**

1. Inspect for physical damage and compare nameplate data with drawings and specifications.
2. Perform mechanical operation test in accordance with manufacturer's instructions.
3. Check cell fit and element alignment and proper operation of racking interlocks.
4. Bolt-torque levels should be in accordance with NETA ATS, Table 100.12 unless otherwise specified by the manufacturer.
5. Check arc chutes for damage.
6. Clean entire circuit breaker using approved methods and materials.
7. Lubricate as required.

#### **B. Electrical Tests**

1. Perform a contact-resistance test.
2. Perform an insulation-resistance test at 1000 volts dc from pole-to-pole and from each pole-to-ground with breaker closed and across open contacts of each phase.
3. Determine long-time minimum pickup current by primary current injection.
4. Determine long-time delay by primary injection.
5. Determine short-time pickup and delay by primary current injection.
6. Determine ground-fault pickup and delay by primary current injection.
7. Determine instantaneous pickup value by primary current injection.
8. Make adjustments for final settings in accordance with breaker setting sheet.
9. Activate auxiliary protective devices, such as ground-fault or under voltage relays, to ensure operation of shunt trip devices. Check the operation of electrically-operated breakers in their cubicle.
10. Check charging mechanism.

#### **C. Test Values**

1. Compare contact resistance or millivolt drop values to adjacent poles and similar breakers. Investigate deviations of more than fifty percent (50%).

---

26 01 26-9  
Electrical Tests

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

2. Insulation resistance shall not be less than 100 megohms. Investigate values less than 100 megohms.
3. Trip characteristics of breakers when adjusted to setting sheet parameters shall fall within manufacturer's published time-current tolerance band.

### **3.07 PROTECTIVE RELAYS**

#### **A. Visual and Mechanical Inspection**

1. Inspect relays for physical damage and compliance with drawings and specifications.
2. Inspect cover gasket for proper seal; clean cover glass; check for foreign material, particularly in disc slots of permanent and electromagnets; check disk clearance; check conditions of spiral spring and case contacts.
3. Check for freedom of movement, proper travel and alignment, and tightness of mounting hardware and tap plugs.
4. Set relays in accordance with approved settings from Specification Section 26 05 73 – Protective Device Studies.

#### **B. Electrical Tests**

1. Perform insulation-resistance test on each circuit-to-frame. Do not perform this test on solid-state devices.
2. Perform the following tests at the recommended trip settings.
3. Pickup parameters on each operating element.
4. Perform timing test at two (2) points on time-current curve.
5. Pickup target and seal-in units.
6. Special tests as required to check operation of restraint, directional, and other elements per manufacturer's instruction manual.
7. Perform phase-angle and magnitude contribution tests on all differential and directional-type relays after energization to vectorially prove proper polarity and connection.

### **3.08 INSTRUMENT TRANSFORMERS**

#### **A. Visual and Mechanical Inspection**

1. Inspect for physical damage and nameplate information for compliance with drawings and specifications.
2. Verify proper connection of transformers with system requirements.
3. Verify tightness of all bolted connections and assure that adequate clearances exist between primary circuits and secondary circuit wiring.
4. Verify that all required grounding and shorting connections provide good contact.
5. Test proper operation of transformer withdrawal mechanism (tip out) and grounding operation when applicable.
6. Verify proper primary and secondary fuse sizes for potential transformers.

#### **B. Electrical Tests - Current Transformers**

1. Perform insulation-resistance test of the current transformer and wiring-to-ground at 1000V dc. Do not perform this test on solid-state devices.

Electrical Tests

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

2. Perform a polarity test of each current transformer.
3. Perform a ratio-verification test using the voltage or current method in accordance with ANSI C57.13.1.
4. Perform an excitation test on transformers used for relaying applications in accordance with ANSI C57.13.1.
5. Measure relaying circuit burdens at transformer terminals and determine the total burden in ohms at 60Hz.
6. When applicable, perform insulation-resistance and dielectric withstand tests on the primary winding with secondary grounded. Test voltages shall be per NETA ATS, Table 100.1 and ITD respectively.

**C. Electrical Tests - Voltage Transformers**

1. Perform insulation-resistance tests winding-to-winding and windings-to-ground. Test voltages shall be applied for one (1) minute in accordance with NETA ATS, Table 100.1. Do not perform this test with solid-state devices connected.
2. Perform a polarity test on each transformer to verify the polarity marks or H1-X1 relationship as applicable.
3. Perform a ratio test using a transformer-turns-ratio test set or by voltage comparison method.
4. Perform a dielectric withstand test on the primary windings with the secondary windings connected-to-ground. The dielectric voltage shall be in accordance with Table ITD and applied for one (1) minute.

**D. Test Values**

1. Insulation-resistance measurement on any instrument transformer shall be not less than that shown in NETA ATS, Table 100.1.
2. Perform a burden/saturation calculation on current transformers supplying relaying circuits.
3. Ratio accuracies shall be within 0.5% of nameplate or manufacturer's specifications.
4. Withstand tests shall be evaluated as pass/fail.

| 25                                                                  | 150                  | 37.5                                                           | 50        |

Table is derived from paragraph 8.8.2 and tables 2 and 7 of ANSI/IEEE C57.13, "Standard Requirements for Instrument Transformers."

26 01 26-11  
Electrical Tests

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

### **3.09 METERING AND INSTRUMENTATION**

#### **A. Visual and Mechanical Inspection**

1. Examine all devices for broken parts, shipping damage, and tightness of connections.
2. Verify that meter types, scales, and connections are in accordance with drawings and specifications.

#### **B. Electrical Tests**

1. Determine accuracy of meters at 25/50/75/100% of full scale for each metered parameter.
2. Calibrate meters to one-half percent (0.5%).
3. Verify all instrument multipliers.

### **3.10 GROUNDING SYSTEMS**

#### **A. Visual and Mechanical Inspection:**

1. Inspect ground system for compliance with contract documents and NFPA 70 National Electrical Code Article 250.
2. Inspect physical and mechanical conditions.
3. Inspect bolted electrical connection for high resistance using one or more of the following methods:
  - a. Use of low-resistance ohmmeter
  - b. Verify tightness of accessible bolted electrical connections by calibrated torque-wrench methods in accordance with manufacturer published data and NETA ATS Table 100.12.
4. Inspect anchorage.

#### **B. Electrical Tests**

1. Perform ground-impedance measurements utilizing the fall-of-potential method per ANSI/IEEE Standard 81 "IEEE Guide for Measuring Earth Resistivity, Ground Impedance, and Earth Surface Potentials of a Ground System." Instrumentation utilized shall be as defined in Section 12 of the above guide and shall be specifically designed for ground impedance testing. Provide sufficient spacing so that plotted curves flatten in the 62% area of the distance between the item under test and the current electrode.
2. Perform point-to-point tests to determine the resistance between the main grounding system and all major electrical equipment frames, system neutral, and derived neutral points.

#### **C. Test Values**

1. Compare bolted connection resistance values to values of similar connections. Investigate values which deviate from those of similar bolted connections by more than 50 percent of the lowest value.
2. The resistance between the main grounding electrode and ground shall be no greater than five ohms for large commercial or industrial systems and one ohm or less for generating or transmission station grounds unless otherwise specified by the owner. (Reference ANSI/IEEE Standard 142).
3. Investigate point-to-point resistance values that exceed 0.5 ohm.

### **3.11 GROUND-FAULT SYSTEMS (NEC 230-95)**

#### **A. Visual and Mechanical Inspection**

---

26 01 26-12  
Electrical Tests

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

1. Inspect for physical damage and compliance with drawings and specifications.
2. Inspect neutral main bonding connection to assure:
  - a. Zero-sequence sensing system is grounded.
  - b. Ground-strap sensing systems are grounded through sensing device.
  - c. Ground connection is made ahead of neutral disconnect link on zero-sequence sensing systems.
  - d. Grounded conductor (neutral) is solidly grounded.
3. Inspect control power transformer to ensure adequate capacity for system.
4. Manually operate monitor panels (if present) for:
  - a. Trip test
  - b. No trip test
  - c. Nonautomatic reset
5. Record proper operation and test sequence.
6. Set pickup and time-delay settings in accordance with the settings provided by the owner/user's electrical engineer.

**B. Electrical Tests**

1. Measure system neutral insulation resistance to ensure no shunt ground paths exist. Remove neutral-ground disconnect link. Measure neutral insulation resistance and replace link.
2. Determine the relay pickup current by current injection at the sensor and operate the circuit interrupting device.
3. Test the relay timing by injecting three hundred percent (300%) of pickup current, or as specified by manufacturer.
4. Test the system operation at fifty-seven percent (57%) rated control voltage, if applicable.
5. Test zone interlock systems by simultaneous sensor current injection and monitoring zone blocking function.
6. On multiple sources, tie breaker, etc., systems, devise a simulation scheme that fully proves correct operation.

**C. Test Parameters**

1. System neutral insulation shall be a minimum of one hundred (100) ohms, preferably one (1) megohm or greater.
2. Relay timing shall be in accordance with manufacturer's published time-current characteristic curves but in no case longer than one (1) second for fault currents equal to or greater than 3,000 amperes.
3. Relay pickup value shall be within +/-10% of setting and in no case greater than 1200A.

**3.12 AC MOTORS**

**A. Visual and Mechanical Inspection**

1. Inspect for physical damage and compare nameplate data with drawings and specifications.
2. Inspect for proper anchorage, mounting, grounding, connection, and lubrication.
3. When applicable, perform special tests such as air gap spacing and pedestal alignment.

---

26 01 26-13  
Electrical Tests

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

4. Check for unusual mechanical or electrical noise or signs of overheating during initial test run.

**B. Electrical Tests - Induction Motors**

1. Perform insulation-resistance tests in accordance with ANSI/IEEE Standard 43.
2. Motor 200 HP and Less - Test duration shall be one minute with resistances tabulated at thirty and sixty seconds. Calculate the dielectric absorption ratio.
3. Motor Larger than 200 HP - Test duration shall be ten minutes with resistances tabulated at thirty seconds, one minute, and ten minutes. Calculate the dielectric absorption ratio and polarization indexes.
4. Perform insulation-resistance test on pedestal per manufacturer instructions.
5. Test motor starter prior to energizing the motor.
6. Check resistance temperature detector (RTD) circuits for conformance with drawings. Check that metering or relaying devices using the RTD's are of the proper rating.
7. Check that the motor space heater circuit is in proper operating condition and in accordance with drawings and specifications.
8. Check all protective devices in accordance with other sections of these specifications.
9. Perform a rotation test to ensure proper shaft direction.
10. Measure running current and evaluate relative to load conditions and nameplate full-load amperes.
11. Perform vibration tests: Motors Larger than 200 HP - Perform vibration base-line test. Amplitude shall be plotted versus frequency. For motors 200 HP and less perform vibration and amplitude test.

**C. Test Values**

1. Perform insulation-resistance tests at the test voltage listed in NETA ATS, Table 100.1. Investigate dielectric absorption ratios less than 1.4 and polarization index ratios less than 1.5 for Class A insulation and 2.0 for Class B insulation.
2. Vibration amplitudes shall not exceed values shown in Table MAV.
3. Salient pole voltage drop should be equal for each pole. Investigate values that differ by more than ten percent (10%).

| <b>Table MAV</b><br><b>Maximum Allowable Vibration Per NEMA MG-1</b> |                                      |
|----------------------------------------------------------------------|--------------------------------------|
| <b>Speed RPM</b>                                                     | <b>Amplitude Inches Peak-to-Peak</b> |
| 3000 and above                                                       | 0.001                                |
| 1500-2999                                                            | 0.0015                               |
| 1000-1499                                                            | 0.002                                |
| 999 and below                                                        | 0.0025                               |

**3.13 LOW-VOLTAGE MOTOR CONTROL CENTERS**

**A. Visual and Mechanical Inspection**

1. Inspect for physical damage, proper anchorage, and grounding.
2. Inspect equipment for compliance with drawings and specifications.

3. Motor-running protection:

- a. Compare overload heater rating with motor full-load current rating to verify proper sizing. (Adjust as necessary if power factor correction capacitors are connected on load side of heaters.)

4. Check tightness of bolted connections using calibrated torque wrench.

B. Electrical Tests

1. Insulation tests:

- a. Measure insulation resistance of each bus section phase-to-phase and phase-to-ground for one (1) minute. Test voltage shall be in accordance with NETA ATS, Table 100.1.
  - b. Measure insulation resistance of each starter section phase-to-phase and phase-to-ground with the starter contacts closed and the protective device open. Test voltage shall be in accordance with NETA ATS, Table 100.1.
  - c. Measure insulation resistance of each control circuit with respect to ground. Refer to NETA ATS, Table 100.1. Do not perform this test on wiring connected to solid-state components.
2. Test motor overload units by injecting current through overload unit and monitoring trip time at three hundred percent (300%) of motor full-load current.
3. Test molded-case breakers per Low Voltage Insulated Case Circuit Breakers paragraphs.
4. Perform operational tests by initiating control devices to affect proper operation.
5. Determine accuracy of all meters per Metering and Instrumentation paragraphs.
6. Test protective devices in accordance with Protective Relay paragraphs.

C. Test Values

1. Bolt-torque levels should be in accordance with NETA ATS, Table 100.12 unless otherwise specified by the manufacturer.
2. Insulation-resistance test results shall conform with NETA ATS, Table 100.1.
3. Control wiring-insulation test voltage shall be 500V dc for 300-volt rated cables and 1000V dc for 600-volt rated cables. Do not perform this test on wiring connected to solid-state components.
4. Perform overload tests at three hundred percent (300%) of motor full-load current. Trip times shall be in accordance with manufacturer's tolerances. Investigate values in excess of one hundred twenty (120) seconds.

**3.14 TRANSFORMERS – SMALL DRY-TYPE, AIR-COOLED (600 Volt and Below, less than 100 kVA single-phase or 1000 kVA three-phase)**

- A. Inspect for physical damage, broken insulation, tightness of connections, defective wiring and general condition.
- B. Thoroughly clean unit prior to making any tests.
- C. Perform insulation-resistance test. Calculate dielectric absorption ratio and polarization index. Make measurements from winding-to-winding and windings-to ground. Test voltages and minimum resistance shall be in accordance with NETA ATS, Table 100.5. Results shall be temperature corrected in accordance with NETA ATS, Table 100.14.

---

26 01 26-15  
Electrical Tests

Pump Station 26 Improvement Project

- D. Verify taps and connect transformer to desired tap, is applicable.
- E. Energize primary winding with system voltage. Measure secondary voltage with the secondary load disconnected. Record results.
- F. A functional test and check of electrical components is required prior to performing subsystem testing and commissioning. Compartments and equipment shall be cleaned as required by other provisions of these Specifications before commencement of functional testing. Functional testing shall comprise:
  - 1. Visual and physical check of cables, circuit breakers, transformers, and connections associated with each item of new and modified equipment.
  - 2. Verification that electrical equipment has been labeled with Arc Flash protection boundary and PPE levels, as required by Section 26 05 73 – Protective Device Studies.
  - 3. Setting of protective relays in conformance with results of the Short Circuit Study required by Section 26 05 73 – Protective Device Studies and testing of relays to assure that relays will trip at the current value and time required by the Study.
  - 4. Circuit Breakers
    - a. Circuit breakers that have adjustable time or pick-up settings for ground current, instantaneous overcurrent, short-time overcurrent, or long-time overcurrent, shall be field-adjusted by a representative of the circuit breaker manufacturer.
    - b. Time and pickup setting shall correspond to the recommendations of the Short Circuit Study.
    - c. Setting shall be tabulated and proven for each circuit breaker in its installed position.
    - d. Test results shall be certified by the person performing the tests and shall be submitted to the ENGINEER.
- G. Complete ground testing of grounding electrodes per requirements below prior to operating the equipment.
- H. Subsystem testing shall occur after the proper operation of alarm and status contacts has been demonstrated or otherwise accepted by the ENGINEER and after process control devices have been adjusted as accurately as possible. Alarm conditions shall be simulated for each alarm point, and alarm indicators shall be checked for proper operation. It is intended that the CONTRACTOR will adjust limit switches and level switches to their operating points prior to testing and will set pressure switches, flow switches, and timing relays as dictated by operating results.
- I. Metering and indication lights for motors and other devices shall be tested for proper operation.
- J. All control circuits such as motor, interlock and remote shall be tested for proper operation.
- K. After initial settings have been completed, each subsystem shall be operated in the manual mode and it shall be demonstrated that operation is in compliance with the Contract Documents. Once the manual mode of operation has been proven, automatic operation shall be demonstrated to verify such items as proper start and stop sequence of pumps, proper operation of valves, proper speed control, etc.
- L. Motor operated valves shall be tested after having been phased and tested for correct motor rotation and after travel and torque limit switches have been adjusted by a representative of the valve manufacturer. Tests shall verify status indication, proper valve travel, and correct command control from local and remote devices.

---

26 01 26-16  
Electrical Tests

Pump Station 26 Improvement Project

- M. All lighting panels, circuits and fixtures; and power panels, circuits and receptacles shall be tested for proper operation.
- N. Provide ground resistance tests on the main grounding electrode or system in the presence of the ENGINEER and submit results
  - 1. Visual and Mechanical Inspection
    - a. Verify ground system is in compliance with drawings and specifications.
  - 2. Electrical Tests
    - a. Perform fall-of-potential test or alternative in accordance with IEEE Standard 81 on the main grounding electrode or system.
    - b. The earth resistance of each ground electrode shall be measured and recorded before electrodes are connected to the grounding loop.
    - c. Perform point-to-point tests to determine the resistance between the main grounding system and all major electrical equipment frames, system neutral, and/or derived neutral points.
  - 3. Test Values
    - a. The resistance between the main grounding electrode and ground shall be no greater than five ohms for commercial or industrial systems and one ohm or less for generating or transmission station grounds unless otherwise specified by the owner.
    - b. Investigate point-to-point resistance values which exceed 0.5 ohm.
- O. Subsystems shall be defined as individual and groups of pumps, conveyor systems, chemical feeders, air conditioning units, ventilation fans, air compressors, etc.

### **3.15 TEST REPORTS**

- A. The test report shall include the following:
  - 1. Summary of project.
  - 2. Description of equipment tested.
  - 3. Description of test.
  - 4. Test data.
  - 5. Analysis and recommendations.
- B. Test data records shall include the following minimum requirements:
  - 1. Identification of the testing organization.
  - 2. Equipment identification.
  - 3. Humidity, temperature, and other atmospheric conditions that may affect the results of the tests/calibrations.
  - 4. Date of inspections, tests, maintenance, and/or calibrations.
  - 5. Identification of the testing technician.
  - 6. Indication of inspections, tests, maintenance, and/or calibrations to be performed and recorded.
  - 7. Indication of expected results when calibrations are to be performed.
  - 8. Indication of "as-found" and "as-left" results.

---

26 01 26-17  
Electrical Tests

Pump Station 26 Improvement Project

9. Sufficient spaces to allow all results and comments to be indicated.
- C. The testing firm shall furnish a copy or copies of the complete report to the owner as required in the acceptance contract.

9. Voltage, phase, and frequency ratings
  10. Service factor
  11. Full load current at rated horsepower for application voltage
  12. Full load speed
  13. Guaranteed minimum full load efficiency and nominal efficiencies at 1/2 and 3/4 load.
  14. Type of thermal protection or overtemperature protection, where included
  15. Wiring diagram for devices such as motor leak detection, temperature, or zero speed switches, as applicable
  16. Bearing data. Include recommendation for lubricants of required type bearings.
  17. If utilized with a variable frequency controller, verify motor is inverter duty type. Include minimum speed at which motor may be operated for the driven machinery. Provide shaft grounding details and information. Provide insulated bearing details and information.
  18. Power factor at 1/2, 3/4 and full load.
  19. Recommended size for power factor correction capacitors to improve power factor to 0.95 percent lagging when operated at full load.
- C. If water cooling is required for motor thrust bearings, the Shop Drawing submittals shall indicate this requirement.

#### **1.05 FACILITY OPERATION AND MAINTENANCE MANUALS**

##### **A. General**

1. Submit complete operation and maintenance manual in accordance with the requirements of Section 01 33 03.13 – O&M Manual Review Checklist.

### **PART 2 - MATERIALS**

#### **2.01 GENERAL**

- A. Electric motors driving identical machines shall be identical.
- B. Electric motors shall comply with NEMA MG-1 - Motor and Generator. Motors used with adjustable frequency drives shall comply with NEMA MG-1, Part 31, and shall be clearly identified as "Inverter Duty."
- C. Maximum motor loading shall be equal to nameplate horsepower rating or less, exclusive of service factor and be verifiable from the submittal data of the driven machinery.
- D. Electric motors shall be NEMA Design B unless otherwise indicated. Starting torque or breakdown torque be less than the value in NEMA MG 1 shall not be permitted. Motors shall be suitable for the indicated starting method.
- E. Motor Voltage Ratings
  1. Low voltage motors shall have voltage ratings in accordance with the following, unless otherwise indicated:
    - a. Motors below 1/2 HP shall be rated 115 volts, single phase, 60 Hz. Dual voltage motors rated 115/208 volts is acceptable, provided leads are brought out to the conduit box.
    - b. Motors 1/2 HP and larger shall be rated 460 volts, 3 phase, 60 Hz.

---

26 05 10-2  
Electric Motors

Pump Station 26 Improvement Project

F. Insulation

1. Three phase motors shall be provided with Class F insulation, rated to operate at a maximum ambient temperature of 40 degrees C and at the altitudes where the motors will be installed and operated, without exceeding Class B temperature rise limits stated in NEMA MG 1-12.44.
2. Single phase motors shall have Class F insulation with temperature rise not to exceed the insulation class.
3. Motors to be operated from adjustable frequency drives shall be provided with insulation systems to withstand 1600-volt spikes, with dV/dT as defined in NEMA MG 1-31.
4. The adjustable frequency drive manufacturer shall coordinate with the motor manufacturer to determine when additional dV/dT protection is required. Where required, it shall be furnished and installed as per the manufacturer's written instructions.

G. Motors (Non-hazardous locations)

1. 50 HP or smaller shall be totally enclosed, fan cooled (TEFC) with a Service Factor of 1.15 unless otherwise indicated.
2. Motors 50 HP and greater shall be TEFC, with a service factor of 1.15.

H. Motors (hazardous locations)

1. Motors for use in hazardous locations shall have enclosures suitable for the classification indicated. Such motors shall be U.L. listed and be stamped as such.
- I. Motors larger than 50 HP installed outdoors or in unheated areas shall be provided with 120-volt AC space heaters, wired to a terminal strip in a low voltage motor junction box. If provided by the manufacturer when not specified, the manufacturer shall not require that they be connected or the CONTRACTOR shall connect them at no extra cost to the OWNER, in order to keep the warranty in force.

J. NEMA Premium Efficiency Motors

1. Motors with a nameplate rating of 1 HP and larger shall be NEMA premium efficient units. Motors shall be stamped with the efficiency on the nameplate with the caption "NEMA Nominal Efficiency" or "NEMA Nom. Eff." Such motors shall have efficiencies determined by the test as set forth in ANSI/IEEE 112 - Standard Test Procedure for Polyphase Induction Motors and Generators, Method B.
2. Efficiency: Nominal efficiency and minimum efficiency shall be defined in accordance with the following tables. Both efficiencies shall be included in the Shop Drawing submittal.

REVISED BID SET

K. Two speed motors shall be of the 2-winding type.

L. Motor Capacity

1. Motor size shall be de-rated from nameplate values as follows:

a. Ambient Temperature

- For ambient temperatures up to but not exceeding 40 degrees C, no derating is required.
- For ambient temperatures exceeding 40 degrees but less than 50 degrees C, de-rate nameplate HP ratings to 85 percent.

b. Site Altitude: No derating is required for altitudes less than 3300 feet (1000 meters). Higher altitudes require the following derating factors:

| Altitude           | Derating Factor |
|--------------------|-----------------|
| 3,300 to 5,000 ft  | 97 percent      |
| 5,001 to 6,600 ft  | 94 percent      |
| 6,601 to 8,300 ft  | 91 percent      |
| 8,301 to 9,900 ft  | 88 percent      |
| 9,901 to 11,500 ft | 85 percent      |

2. Increased circuit breaker, magnetic starter, and conductor and conduit capacities required for motors larger than the indicated sizes shall be provided as part of the WORK.

## 2.02 ACCESSORY REQUIREMENTS

- A. General: Horizontal motors 3 HP and larger and every vertical motor shall have split-type cast metal conduit boxes. Motors shall be provided with oversized conduit boxes. Where conduit sizes indicated do not match the motor terminal box, the CONTRACTOR shall provide means to accommodate the motor requirements. Motor boxes other than open drip-proof shall be gasketed.
- B. Lifting Devices: Motors weighing 265lb (120Kg) or more shall have suitable lifting eyes for installation and removal.
- C. Special Requirements: The CONTRACTOR shall refer to individual equipment specifications for special requirements such as motor winding thermal protection or multi-speed windings.
- D. Grounding Lugs: Provide motor grounding lug suitable to terminate ground wire, sized as indicated.
- E. Nameplate: Motors shall be fitted with permanent stainless-steel nameplates indelibly stamped or engraved with NEMA Standard motor data, in conformance with NEMA MG-1-10.40. Inverter duty motors shall be clearly identified as such.
- F. Where motors are indicated by elementary schematics or specifications to have zero speed switches, the switches shall be factory mounted integral to the motors. Switches shall close the contacts when the motor is at zero speed.

---

26 05 10-8  
Electric Motors

Pump Station 26 Improvement Project

- G. Inverter duty motors shall be provided with shaft grounding rings. Rings shall be factory installed, and shall be manufactured by **Aegis**, or equal. The motor warranty shall include coverage against VFD-induced bearing damage or failure.

### **2.03 MOTOR THERMAL PROTECTION**

- A. Single Phase Motors: Single phase 120, 208-volt motors shall have integral thermal overload protection or shall be inherently current limited.
- B. Thermostats: Where indicated or specified, winding thermostats shall be snap action, bi-metallic, temperature-actuated switch. Thermostats shall be provided with one normally closed contact. The thermostat switch point shall be pre-calibrated by the manufacturer. All inverter duty motors shall be provided with winding thermostats, unless RTDs are specified. All explosion-proof motors shall be provided with winding thermostats.

### **2.04 MOTOR BEARINGS**

A. Vertical Motors

1. Provide bearings of the type and size required to meet the thrust loading requirements with a rated B-10 life of 100,000 hours as defined by the Anti-Friction Bearing Manufacturers Association (AFBMA).
2. Bearings for motors 75 HP and larger shall be oil lubricated and contained in an oil reservoir with oil sight level gage and oil fill and drain openings with plugs.
3. Equip grease lubricated bearings with fittings in each bearing housing. Fittings shall be accessible without removals of any covers or guards. Provide drains to prevent over lubrication.

B. Horizontal Motors:

1. General: Equip motors larger than one (1) HP with end single shielded bearings of either the anti-friction or sleeve type with a rated B-10 life of 100,000 hours as defined by the AFBMA.
2. Anti-Friction Type: Grease lubricated type with sealed end caps to prevent grease from migrating to the bearing exterior. Provide with an excess-grease reservoir located outboard of the bearing and provisions for purging old grease.
3. Sleeve Type: Oil lubricated type contained in an oil reservoir with oil sight level gage and oil fill and drain openings with plugs. Provide bearings with shaft seals and pressure-equalizing vents to prevent oil from migrating to the motor windings.

- C. Inverter Duty Motors: Provide an insulated bearing to prevent circulating bearing currents.

### **2.05 CONNECTION BOXES**

- A. Provide motors with NEMA MG-1 type I connection boxes made of fabricated steel or cast-iron construction compatible with the motor specified. Provide motors larger than 150 Hp with NEMA MG-1 type II connection boxes. Provide boxes with gaskets between the box and motor and between the box and cover. Boxes shall be capable of rotation in 90° increments. Align boxes for bottom conduit entry.

---

26 05 10-9  
Electric Motors

Pump Station 26 Improvement Project

- B. Provide an auxiliary terminal box for terminating auxiliary and protective devices lead wires.

## **2.06 MANUFACTURERS, OR EQUAL**

- A. **U.S. Motors/Nidec**
- B. **Baldor**
- C. **WEG**

## **PART 3 - EXECUTION**

### **3.01 INSTALLATION**

- A. Motor installation shall be performed in accordance with the motor manufacturer's written recommendations and the written requirements of the manufacturer of the driven equipment. Shaft grounding devices shall be connected to the grounding system in accordance with the manufacturer's recommendations.
- B. Related electrical WORK involving connections, controls, switches, and disconnects shall be performed in accordance with the applicable sections of Division 26.

### **3.02 STORAGE**

- A. Protect motors from exposure of elements for which they are not designed. Install and energize temporary electrical service to motors with electrical heaters.
- B. Unless protected by manufacturer's packing, upon delivery, carefully wrap each motor in three layers of 8 mil minimum polyethylene. Secure the wrap with adhesive tape to minimize the entrance of moisture. For base mounted motors, wrap the entire assembly.

### **3.03 FACTORY TESTING**

- A. Motors rated 100 HP and larger shall be factory tested in conformance with IEEE 112, IEEE 43 - Recommended Practice for Testing Resistance of Rotating Machinery, and NEMA MG-2. Except where specific testing or witnessed shop tests are required by the specifications for driven equipment, factory test reports may be copies of routine test reports of electrically duplicate motors. Test report shall indicate test procedure and instrumentation used to measure and record data. Test report shall be certified by the motor manufacturer's test personnel and be submitted to the ENGINEER.

### **3.04 FIELD TESTING**

- A. The CONTRACTOR shall perform the following field tests (see also Section 26 01 26 – Electrical Testing]):
  - 1. Inspect each motor installation for any deviation from rated voltage, phase, frequency, and improper installation.
  - 2. Visually check for proper phase and ground connections. Verify that multi-voltage motors are connected for proper voltage. Verify shaft grounding devices are properly grounded.
  - 3. Check winding and bearing temperature detectors and space heaters for functional operation.
  - 4. Test for proper rotation prior to connection to the driven equipment.
  - 5. Visually check that motor overload heaters are properly sized and that MCP breaker settings are correct for the motor installed.

---

26 05 10-10  
Electric Motors

Pump Station 26 Improvement Project

6. Test insulation (megger test) of new and re-used motors in accordance with NEMA MG-1.  
Test voltage shall be 1000 VAC plus twice the rated voltage of the motor.

REVISED BID SET

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 26 05 15  
INDUSTRIAL CONTROL PANELS**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall provide complete industrial control panels and/or local control stations as indicated herein or in other Sections of the Specifications.
- B. This section also specifies miscellaneous electrical devices used throughout this project. These devices are not limited to use within industrial control panels or local control stations.

**1.02 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS**

- A. Industrial control panels and/or local control stations shall comply with the requirements of NEC (including Article 409), NEMA, and UL.

**1.03 SUBMITTALS**

- A. Furnish Shop Drawings in accordance with Sections 01 33 03 –Submittal Procedures and 26 00 00 – General Electrical Work.
  - 1. Ladder diagrams and written descriptions explaining ladder diagram operation and system operation.
  - 2. Include catalog cuts of control equipment including enclosures, overcurrent devices, relays, pilot devices, terminations, and wire troughs.

**PART 2 - PRODUCTS**

**2.01 GENERAL**

- A. The CONTRACTOR shall provide the equipment, panels and stations to satisfy the functional requirements in the relevant mechanical equipment and Instrumentation and Control specifications and the Electrical Elementary Schematics. Each panel and station shall be fabricated with UL labeled components. Equipment not specifically indicated as being WORK of other Sections shall be provided under this Section. All equipment, panels and stations shall be wired under this Section.
- B. The controls shall be 120 V maximum. Where the electrical power supply is 240 V, single phase or 480 V, 3 phase, the station shall be provided with a fused control power transformer. Control conductors shall be provided in accordance with Section 26 05 19 – Wire and Cabling
- C. Each panel and/or station shall be provided with identified terminal strips for the connection of external conductors. The CONTRACTOR shall provide sufficient terminal blocks to connect 25 percent additional conductors for future use. Termination points shall be identified in accordance with Shop Drawings. The panels and/or stations shall be the source of power for all 120 VAC solenoid valves interconnected with the panels and/or stations. Equipment associated with the panels and/or stations shall be ready for service after connection of conductors to equipment, controls, panels and/or stations.
- D. Wiring to door-mounted devices shall be extra flexible and anchored to doors using wire anchors cemented in place. Exposed terminals of door-mounted devices shall be guarded to prevent accidental personnel contact with energized terminals.
- E. Enclosures

---

26 05 15-1  
Industrial Control Panels

Pump Station 26 Improvement Project

1. In finished rooms, enclosures shall be NEMA 12 steel enclosures painted with ANSI 61 exterior and white interior.
  2. In all other non-hazardous areas, enclosures shall be NEMA 4X stainless steel with brushed finish. Where possible, penetrations shall be made in such a manner to maintain the NEMA 4X rating. If this is not possible, the penetrations shall be made in such a manner to minimize entry of foreign materials into the enclosure, subject to approval by the ENGINEER.
  3. In hazardous areas, enclosures shall be cast aluminum NEMA 7 and shall be UL listed for use in hazardous or classified locations.
  4. In chemical areas for alum, sodium hypochlorite, etc., NEMA 4X fiberglass enclosures shall be used.
  5. Enclosures shall be freestanding, pedestal-mounted, or equipment skid-mounted, as indicated. Internal control components shall be mounted on a removable mounting pan. Mounting pan shall be finished white.
- F. Disconnect Switches
1. Heavy duty, fusible, single throw switches shall be rated not less than 65 KAIC at 480 VAC.
  2. Horsepower rated
  3. UL listed
  4. Pad lockable in "Off" position and door interlock
  5. Enclosure per area classification in Section 26 00 00 – General Electrical Work.
  6. 480 V, 3-phase, 3-pole (6-pole when used with 2-speed motor).
  7. Auxiliary control contacts as applicable and where indicated.
  8. As manufactured by **GE, Eaton Electrical, Square D**, or equal.
- G. Identification of panel-mounted devices, conductors, and electrical components shall be in accordance with Section 26 00 00 – General Electrical Work.
- H. Panel-mounted devices shall be mounted a minimum of 3-feet above finished floor elevation, but not higher than 6'-6" above finished floor, unless noted otherwise.

## 2.02 PANEL/STATION COMPONENTS

- A. Pushbuttons, selector switches, and pilot lights shall be the heavy-duty, oil-tight type, sized to 30-mm. Miniature style devices are not acceptable. Devices shall be as manufactured by **Allen Bradley, EATON, Square-D**, or equal.
1. Lens colors shall be GREEN for "run," "open," or "on"; RED for "stopped," "closed," or "off"; and AMBER for alarm.
  2. Pilot lights shall be full voltage, push-to-test LED cluster type.
  3. Provide hazardous location type pilot devices in classified locations.
- B. Relays shall be 3 PDT with 10-amp contacts, plug-in type with indicating light, rectangular blades and provided with sockets for screw-type termination and hold-down clips. Relays shall be as manufactured by **Square-D, Potter Brumfield**, or equal.
- C. Elapsed time meters shall be non-resettable type, read to a maximum of 99999.9 hours and shall be as manufactured by **GE, EATON**, or equal.

---

26 05 15-2  
Industrial Control Panels

Pump Station 26 Improvement Project

D. Magnetic starters shall be:

1. NEMA rated, Size 1 minimum. IEC or dual NEMA/IEC rated type are not acceptable.
2. FVNR type unless indicated otherwise.
3. Combination starters with magnetic only instantaneous trip circuit breakers such as **EATON HMCP, SE GV5PB**, or equal. Breakers shall be rated 65 KIAC minimum.
4. Control transformers shall be provided with primary and secondary fuses, 120 V maximum control voltage. VA rating of transformer shall be based on devices on the control schematic.

E. Terminal strips shall be provided for every panel and shall be the flanged fork or ring lug type suitable for No. 12 AWG stranded wire minimum. Provide 25 percent spare terminals in each panel.

F. Time delay relays shall be combination on delay and off delay (selectable) with adjustable timing ranges. Provide socket with screw terminal connections and retaining strap. Time delay relays shall be **Square D, ATC, EATON**, or equal.

## **2.03 FACTORY TESTING**

A. Each panel/station shall be factory assembled and tested for sequence of operation prior to delivery.

## **2.04 SPARE PARTS**

A. Provide a minimum of 10 percent spare lamps (minimum 2) and one spare lens for each color pilot lamp in each panel.

## **PART 3 - EXECUTION**

### **3.01 INSTALLATION**

- A. Panels/stations shall be installed in accordance with in Section 26 00 00 – General Electrical Work, and in accordance with the manufacturer's recommendations.
- B. Panels/stations shall be protected at the site from loss, damage, and the effects of weather. Panels/stations shall be stored in an indoor, dry location. Heating shall be provided in areas subject to corrosion and humidity.
- C. Panels/station interiors and exteriors shall be cleaned, and coatings shall be touched up to match original finish upon completion of the WORK.
- D. Conduit, conductors, and terminations shall be installed in accordance with Section 26 00 00 – General Electrical Work.

### **3.02 FIELD TESTING**

A. Each panel/station shall be tested again for functional operation in the field after the connection of external conductors and prior to equipment startup.

END OF SECTION

26 05 15-3  
Industrial Control Panels

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 26 05 19**  
**WIRE AND CABLING**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall provide wire and cable, complete and operable, in accordance with the Contract Documents.
- B. In the event that motors provided are larger horsepower than the motors indicated, raceways, conductors, starters, overload elements, and branch circuit protectors shall be revised as necessary to control and protect the increased motor horsepower in accordance with Section 26 05 10 – Electric Motors. Revisions are part of the WORK of this Section.

**1.02 SUBMITTALS**

- A. The CONTRACTOR shall submit Shop Drawings in accordance with Sections 01 33 03 – Submittal Procedures and 26 00 00 – General Electrical Work.
- B. Submit catalog cuts and material list for each conductor type. Indicate insulation material, conductor material, voltage rating, manufacturer and other data pertinent to the specific cable, such as type shielding, number of pairs and applicable standards.
- C. Submit cable test results in accordance with this Section as well as Section 26 01 26 – Electrical Tests.

**1.03 DELIVERY, STORAGE AND HANDLING**

- A. The CONTRACTOR shall protect all cables from damage at all times.
- B. Cable ends shall be protected from water entry in accordance with the manufacturer's recommended procedures. Cable ends shall not be left open in manholes or other locations subject to submergence. If the cable ends become submerged prior to splicing or termination, the cables shall be replaced in their entirety.
- C. Cables shall be pulled into raceways in accordance with the manufacturer's requirements. Under no circumstances shall cable pulling tensions exceed the manufacturer's written instructions.
- D. Pulling tensions on raceway cables shall be within the limits recommended by the cable manufacturer. Wire pulling lubricant, where needed, shall be UL approved.

**PART 2 - MATERIALS**

**2.01 GENERAL – LOW-VOLTAGE CABLE**

- A. Conductors, include grounding conductors, shall be stranded copper. Aluminum conductor and/or solid conductor wire and cable will not be permitted. Insulation shall bear the UL label, the manufacturer's trademark, and identify the type, voltage, and conductor size. Conductors except flexible cords and cables, fixture wires, and conductors that form an integral part of equipment such as motors and controllers shall conform to the requirements of Article 310 of the National Electric Code, latest edition, for current carrying capacity. Flexible cords and cables shall conform to Article 400, and fixture wires shall conform to Article 402. Wiring shall have wire markers at each end.

---

26 05 19-1  
Wires and Cabling

Pump Station 26 Improvement Project

## 2.02 LOW-VOLTAGE POWER AND LIGHTING CONDUCTORS

- A. Wire rated for 600 volts in duct or conduit for power and lighting circuits shall be single conductor, Class B Type XHHW-2 cross-linked polyethylene conforming to UL-44 - UL Standard for Thermoset-Insulated Wires and Cables.
  - 1. THHN/THWN wire shall not be permitted to be used for any power or control wiring in this project, except as specifically permitted within control panels per Section 40 95 13 – Control Panels.
- B. Conductors for feeders as defined in Article 100 of the NEC shall be sized to prevent a voltage drop exceeding 3 percent at the farthest outlet of power, heating, and lighting loads, or combinations of such loads, and where the maximum total voltage drop on both feeders and branch circuits to the farthest connected load does not exceed 5 percent.
- C. Wiring for 600-volt class power and lighting shall be as manufactured by **Okonite, General Cable, Southwire**, or equal.

## 2.03 LOW-VOLTAGE CONTROL CONDUCTORS

- A. Low voltage control wire in duct or conduit shall be the same type as power and lighting wire indicated above.
- B. Control wiring shall be No.14 AWG.
- C. Control wires inside panels and cabinets shall be machine tool grade type MTW, UL approved, rated for 90 degrees C at dry locations, and be as manufactured by **American, General Cable**, or equal.
- D. Multi-Conductor Cable: Where multi-conductor cable is indicated on the drawings, provide type TC, multi-conductor cable assemblies with an overall heat, moisture, and sunlight resistant PVC jacket. Conductor insulation shall be color coded per ICEA-S-58-679, method 1, colored compounds with tracers.

## 2.04 INSTRUMENT CABLE

- A. Instrumentation cable shall be rated at 300 volts, minimum.
- B. Individual conductors shall be No. 16 AWG stranded, tinned copper. Insulation shall be color coded polyethylene: black-clear for 2 conductor cable and black-red-clear for 3 conductor cable.
- C. Instrumentation cables shall be composed of the individual conductors, an aluminum polyester foil shield, a No. 18 or larger AWG stranded, tinned copper drain wire, and a PVC outer jacket with a thickness of 0.047-inches.
  - 1. Single pair, No. 16 AWG, twisted, shielded cable shall be **Belden Part No. 8719**, similar by **General Cable**, or equal.
  - 2. Single triad, No. 16 AWG, twisted, shielded cable shall be **Belden Part No. 8618**, similar by **General Cable**, or equal.

## 2.05 CABLE SPLICES AND TERMINATIONS

- A. Where cable lugs are required for power cable terminations, utilize compression lugs – **3M** Scotchlok 30000 and 31100 Series, **Penn Union** HBBLU and BLU, **Burndy** Hylug, or equal. Utilize compression tools as recommended by the manufacturer. Pressure type, twist-on connectors (wire nuts) will not be acceptable.
- B. Pre-insulated fork tongue lugs shall be **Thomas & Betts, Burndy**, or equal.

---

26 05 19-2  
Wires and Cabling

Pump Station 26 Improvement Project

- C. General purpose insulating tape shall be **Scotch No. 33, Plymouth Slip-knot**, or equal. High temperature tape shall be polyvinyl as manufactured by **Plymouth, 3M**, or equal.
- D. Labels for coding 600-volt wiring shall be computer printable or pre-printed, self-laminating, self-sticking, as manufactured by **W.H. Brady, 3M**, or equal.
- E. Stress cone material for make-up of medium voltage shielded cable shall be as manufactured by **Raychem, 3M**, or equal.
- F. Shielded power cable shall be spliced using kits specifically designed to splice medium voltage, shielded power cables. Splice kits shall be designed for continuous submergence. Heat shrink splice kits shall be **Raychem "Type HVS"**, or equal. "Cold" shrink splice kits shall be **3M "5760 Series"**, or equal. The CONTRACTOR's personnel shall be trained by the splice kit manufacturer for proper installation of the splices, and shall submit certification of training as a shop drawing. A certified trainee shall perform the splice work.

## **PART 3 - EXECUTION**

### **3.01 INSTALLATION**

- A. The CONTRACTOR shall provide, terminate and test all power, control, and instrumentation conductors.
- B. The CONTRACTOR shall, as a minimum, provide the number of control wires listed in the conduit schedule or on the Contract Drawings. Excess wires shall be treated as spares for future use.
- C. Conductors shall not be pulled into any raceway until raceway has been cleared of moisture and debris.
- D. Instrumentation wire shall not be run in the same raceway with power and control wiring except where specifically indicated.
- E. Wire in panels, cabinets, and wireways shall be neatly grouped using nylon tie straps, and shall be neatly fanned out to terminals.
- F. Single conductor cable in cable trays shall be No. 1/0 or larger and shall be of a type listed and marked for use in cable trays. Tray cable smaller than 1/0 shall be multi-conductor, with outer jacket.

### **3.02 FIELD ASSEMBLY**

#### **A. General**

- 1. Wire taps and splices shall be properly taped and insulated according to their respective classes.
- 2. In general, there shall be no cable splices in underground manholes or pullboxes. If splices are necessary, the cables shall be spliced using submersible cable splices, suitable for continuous submergence. Splices in underground manholes and pullboxes may be made only with the approval of the ENGINEER.
- 3. Stranded conductors shall be terminated directly on equipment box lugs making sure that conductor strands are confined within lug. Use forked-tongue lugs where equipment box lugs have not been provided.
- 4. Excess control and instrumentation wires shall be long enough to terminate at any terminal block in the enclosure, be properly taped, be identified with origin, and be neatly coiled.

#### **B. Control Wire and Cable**

---

26 05 19-3  
Wires and Cabling

Pump Station 26 Improvement Project

1. Control conductors shall be spliced or terminated only at the locations indicated and only on terminal strips or terminal lugs of vendor furnished equipment.
2. In motor control centers, and control panels, control wire and spare wire shall be terminated to terminal strips.
3. The CONTRACTOR shall provide as a minimum the number of control wires listed in the conduit schedule or as indicated in the Contract Documents. Excess wires shall be treated as spares.

C. Instrumentation Wire and Cable

1. Shielded instrumentation cables shall be grounded at one end only, preferably the receiving end on a 4 - 20 mA system.
2. Two and 3 conductor shielded cables installed in conduit runs which exceed available standard cable lengths may be spliced in pullboxes with the prior approval of the ENGINEER. Such cable runs shall have only one splice per conductor.

D. Power Wire and Cable

1. 120/208-volt, 120/240-volt, and 480/277-volt branch circuit conductors may be spliced in suitable fittings at locations determined by the CONTRACTOR. Cables rated above 2,000 volts shall be spliced or terminated only at equipment terminals indicated.
2. Splices to motor leads in motor terminal boxes shall be wrapped with mastic material to form a mold and then shall be taped with a minimum of 2 layers of varnished cambric tape over-taped with a minimum of 2 layers of high temperature tape.
3. Shielded power cable shall be terminated with pre-assembled stress cones in a manner approved by the cable and terminal manufacturer. The CONTRACTOR shall submit the proposed termination procedure as a Shop Drawing.
4. VFD shielded power cables shall have the shield grounded at all locations where it is exposed.

### 3.03 IDENTIFICATION

A. Cable Identification

1. Wire and cable shall be identified for proper control of circuits and equipment and to reduce maintenance effort. Identification shall be installed at every termination point.
2. Identification Numbers
  - a. The CONTRACTOR shall assign to each control and instrumentation wire and cable a unique identification number in a Source/Destination format. The following are specific examples:
    - 61FY106-3/61PLCx001-1-1-4. This is a connection from a Flow Transmitter Signal Isolator to a PLC Analog Input Module Point, at Rack 1, Slot 1, Point 4.
    - 64FSHx00400-NC/61PLCP00001-TB5-123. This is a connection from an eyewash station flow switch to a PLC Panel Terminal Block TB-5, Terminal 124.
    - CB1-S/M1-L1. This is a connection within a MCC Bucket from Circuit Breaker CB-1 to Motor Contactor M1, Terminal L1 (the example show is a 120VAC Single Phase Motor).
  - b. Numbers shall be assigned to conductors having common terminals and shall be shown on "as built" drawings. Identification numbers shall appear within 3-inches of conductor

---

26 05 19-4  
Wires and Cabling

Pump Station 26 Improvement Project

terminals. "Control and Instrumentation Conductors" shall be defined as any conductor used for control, interlock, alarm, annunciator, or signal purposes.

- c. Multiconductor cable shall be assigned a number which shall be attached to the cable at intermediate pull boxes and at stub-up locations beneath free-standing equipment. It is expected that the cable number shall form a part of the individual wire number. Individual control conductors and instrumentation cable shall be identified at pull points as described above. The instrumentation cable numbers shall incorporate the loop numbers assigned in the Contract Documents.
- d. Color Coding of Power Wire: Provide color coding throughout the entire network of feeders and circuits (600 volts and below) per sheet I-02.
- e. Insulated ground wire shall be green, and neutral shall be gray. Color coding and phasing shall be consistent throughout the Site, but bars at panelboards, switchboards, and motor control centers shall be connected Phase A-B-C, top to bottom, or left to right, facing connecting lugs.
- f. Color coding tape shall be used where colored insulation is not available. Colored identification tape may be used on conductors between the local disconnect and the load, where permitted by the NEC. Any phase changes necessary for proper rotation shall be made at the driven equipment where colored insulation is used. Phase changes may be made on the load side of the local disconnect, where phase colors are identified using tape.
- g. General purpose AC control cable shall be red. General purpose DC control cable shall be blue.
- h. Spare cable shall be terminated on terminal screws and shall be identified with a unique number as well as with destination.
- i. Terminal strips shall be identified by computer printable, cloth, self-sticking marker strips attached under the terminal strip.

#### **3.04 FIELD QUALITY CONTROL**

- A. Cable Assembly and Testing: Cable assembly and testing shall comply with applicable requirements of ICEA Publication No. S-95-658/NEMA WC70 - Ethylene-Propylene-Rubber Insulated Wire and Cable for the Transmission and Distribution of Electrical Energy.
- B. Factory test results shall be submitted in accordance with Section 01 33 03 – Submittal Procedures, prior to shipment of cable. The following field tests (in addition to the tests specified in Section 26 01 26 – Electrical Tests) shall be the minimum requirements:
  - 1. Insulation resistance testing, using a DC megohmmeter, shall be performed on cables operating at more than 2,000 volts to ground. Time-resistance readings shall be taken and recorded at intervals of 30 seconds and one minute. Time-resistance voltage levels shall be per the cable manufacturer's recommendations.
  - 2. Power cable rated at 600 volts shall be tested for insulation resistance between phases and from each phase to a ground using a megohmmeter.
  - 3. Field testing shall be done after cable is installed in the raceways.
  - 4. Field tests shall be performed by a NETA-certified test organization. Field megger testing may be performed by a NETA-certified test organization. Test results shall be submitted to the ENGINEER for review and acceptance.

---

26 05 19-5  
Wires and Cabling

Pump Station 26 Improvement Project

5. Cables failing the tests shall be replaced with a new cable or be repaired. Repair methods shall be as recommended by the cable manufacturer and shall be performed by persons certified by the industry.
- C. Continuity Test: Control and instrumentation cable shall be tested for continuity, polarity, undesirable ground, and origination. Such tests shall be performed after installation and prior to placing cable in service.

REVISED BID SET

## SECTION 26 05 26

### GROUNDING

#### PART 1 - GENERAL

##### 1.01 SCOPE OF WORK

- A. Provide the electrical grounding system, complete and operable, as indicated in accordance with the Contract Documents.
- B. The requirements of Section 26 00 00 – General Electrical Work, apply to this Section.
- C. Single Manufacturer
  - 1. Like products shall be the end product of one manufacturer in order to achieve standardization of appearance, operation, maintenance, spare parts, and manufacturer's services.

##### 1.02 SUBMITTALS

- A. Furnish submittals in accordance with the requirements of Section 01 33 03 – Submittal Procedures and Section 26 00 00 – General Electrical Work.
- B. Shop Drawings
  - 1. Submit manufacturer's product information for connectors, clamps, and all grounding system components, showing compliance with the requirements of this Section.

#### PART 2 - PRODUCTS

##### 2.01 EQUIPMENT

- A. Components of the grounding electrode system shall be manufactured in accordance with UL 467 - Standard for Safety Grounding and Bonding Equipment, and shall conform to the applicable requirements of National Electrical Code Article 250 and local codes.
- B. Grounding System
  - 1. Grounding loop conductors shall be bare annealed copper conductors.
  - 2. Conductors shall be No. 4/0 unless indicated otherwise.
  - 3. Ground Rods
    - a. Unless indicated otherwise, provide ground rods minimum of 3/4 inch in diameter, 10 feet long, and with a uniform covering of electrolytic copper metallically bonded to a rigid steel core.
    - b. Provide corrosion-resistant copper-to-steel bond.
    - c. The rods shall conform to UL 467.
    - d. The rods shall be of the sectional type, joined by threaded copper alloy couplings.
  - 4. Buried, concrete-encased, or otherwise inaccessible cable-to-cable and cable-to-ground rod connections using exothermic welds.
    - a. Manufacturer, or Equal
      - **Cadweld**
      - **Thermoweld**
  - 5. Exposed Connectors

---

26 05 26-1  
Grounding

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- a. Exposed grounding connectors shall be of the compression type (connector-to-cable), constructed of high-copper alloy, and manufactured specifically for the particular grounding application.
  - b. Manufacturer, or Equal
    - **Burndy**
    - **O.Z. Gedney**
6. Use grounding clamps to bond each separately-derived system to the grounding electrode conductors.
7. Equipment Grounding Circuit Conductors
- a. The conductors shall be the same type and insulation as the load circuit conductors.
  - b. The minimum size shall be as indicated. Where not indicated, sizes shall conform to Table 250.122 of the National Electrical Code.
  - c. Metallic conduit systems shall have an equipment grounding wires as well as being equipment grounding conductors themselves.
8. Grounding Materials Manufacturer, or Equal
- a. **Copperweld**
  - b. **Thermoweld**
  - c. **OZ Gedney**

## **PART 3 - EXECUTION**

### **3.01 PREPARATION**

- A. Provide a separate grounding conductor, securely grounded in each raceway independent of raceway material.
- B. Provide a separate grounding conductor for each motor and connect at motor box. Provide a supplemental ground connection for motor shaft grounding rings, where applicable.
- C. Do not use bolts for securing the motor box to the frame or the cover for grounding connectors.
- D. Sizes shall be as indicated on the Conduit Schedule and in accordance with NEC Article 250.
- E. Route the conductors inside the raceway.
- F. Provide a grounding-type bushing for secondary feeder conduits that originate from the secondary section of each MCC section, switchboard, or panelboard.
- G. Individually bond the raceway to the ground bus in the secondary section.
- H. Provide a green insulated wire as grounding jumper from the ground screw to a box grounding screw, and, for grounding type devices, to the equipment grounding conductor.
- I. Provide a separate grounding conductor in each individual raceway for parallel feeders. Connect the parallel ground conductors together at each end of the parallel run, as required by the NEC.
- J. Interconnect the secondary switchgear MCC or panelboard neutral bus to the ground bus in the secondary switchgear compartment only at the service entrance point. For wye connected, 3 phase, separately derived systems with 3 wire distribution, connect the transformer neutral to the grounding electrode system at the transformer. Connections shall be in accordance with the NEC.

---

26 05 26-2  
Grounding

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- K. Provide the duct bank ground system as indicated, including trenching, splices, ground rods, and connections to equipment and structures.
- L. Measure ground impedance in accordance with IEEE STD 81 after installation but before connecting the electrode to the remaining grounding system. Provide additional grounding system testing in accordance with Section 26 01 26 – Electrical Tests.
- M. Low Voltage Grounded System (600V or less)
1. A low-voltage grounded system is defined as a system where the local power supply is a transformer, with the transformer secondary grounded.
  2. Grounding system connections for a premises-wired system supplied by a grounded AC service shall be provided with a grounding electrode connector connected to the grounded service conductor at each service, in accordance with the NEC.
  3. The grounded circuit conductor shall not be used for grounding non-current-carrying parts of equipment, raceways, and other enclosures except where specifically listed and permitted by the NEC.
- N. Embedded Ground Connections
1. Underground and grounding connections embedded in concrete shall be UL-listed ground grid connectors.
  2. The connection shall be made in accordance with the manufacturer's instructions.
  3. Do not conceal or cover ground connections until the ENGINEER or an authorized representative has established that every grounding connection conforms to the requirements of the Contract Documents and has given the CONTRACTOR written confirmation.
- O. Ground Ring
1. Furnish trenching and materials as necessary to install the ground ring as indicated.
  2. The bonding conductor shall be in direct contact with the earth and of the indicated size.
  3. Provide a minimum burial depth of 36 inches or as indicated on the Drawings, whichever is greater.
  4. Re-compact disturbed soils to their original density in 6-inch lifts.
- P. Duct Bank Ground
1. Embed a grounding conductor in every duct bank as indicated. The ground conductor shall be terminated at the ground grid at each end of the duct bank. Where no ground grid is installed, terminate at a suitable grounding electrode conductor near the end of the duct bank in accordance with the NEC.
- Q. Ground Rods
1. Provide ground rods at the indicated locations.
  2. A single electrode that does not have resistance-to-ground of 25 ohms or less shall be augmented by additional electrodes to obtain this value.
  3. Take the resistance-to-ground measurement during dry weather, a minimum of 48 hours after a rainfall.
  4. Rods forming an individual ground array shall be equal in length.
- R. Instrumentation Shield Grounding

---

26 05 26-3  
Grounding

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

1. Shielded instrumentation cable shall have its shield grounded at one end only unless the approved Shop Drawings indicate that the shield will be grounded at both ends.
2. The grounding point shall be at the control panel or at the receiving end of the signal carried by the cable.
3. The termination of the shield drain wire shall be on its own terminal screw.
4. Jumper together the terminal screws, using manufactured terminal block jumpers or a No. 14 green insulated conductor.
5. Connect the ground bus via a green No. 12 conductor to the main ground bus for the panel.

26 05 26-4  
Grounding

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

**SECTION 26 05 33**  
**ELECTRICAL RACEWAY SYSTEMS**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. Provide electrical raceway systems, complete and in place, as indicated in accordance with the Contract Documents.
- B. In the event that individual equipment loads provided are larger than indicated in the Contract Documents, revise raceways, conductors, starters, overload elements, and branch circuit protectors as necessary in order to control and protect the increased connected load in conformance to NEC requirements as part of the WORK.

**1.02 SUBMITTALS**

- A. Furnish submittals in accordance with Section 01 33 03 – Submittal Procedures, and Section 26 00 00 – General Electrical Work.
- B. Shop Drawings
  - 1. Submit complete catalog cuts of raceways, fittings, boxes, supports, and mounting hardware, marked where applicable to show proposed materials and finishes.

**PART 2 - PRODUCTS**

**2.01 GENERAL**

- A. Pull and junction boxes, fittings, and other indicated enclosures that are dedicated to the raceway system shall comply with the requirements of this Section.

**2.02 CONDUIT**

- A. Galvanized Rigid Steel (GRS) Conduit
  - 1. Provide rigid steel conduit manufactured from mild steel, hot-dip galvanized inside and out.
  - 2. Provide rigid steel conduit manufactured in accordance with NEMA C80.1 – Electrical Rigid Steel Conduit, and UL-6 – Electrical Rigid Metal Conduit - Steel.
  - 3. Manufacturer, or Equal
    - a. **Allied Tube & Conduit**
    - b. **Wheatland Tube**
- B. PVC Rigid Non-Metallic Conduit
  - 1. Provide rigid non-metallic conduit manufactured from Schedule 40 PVC, as indicated, and sunlight-resistant.
  - 2. Provide rigid non-metallic conduit manufactured in accordance with NEMA TC-2 - Electrical Plastic Tubing and Conduit, and UL-651 - Standard for Rigid Non-metallic Conduit.
  - 3. Manufacturer, or Equal
    - a. **Carlton**
    - b. **Cantex**
- C. Rigid PVC-Coated Galvanized Steel (GRS-PVC) Conduit

---

26 05 33-1  
Electrical Raceway Systems

Pump Station 26 Improvement Project

1. The conduit shall meet the requirements for GRS conduit as indicated above.
  2. Bond a PVC coating to the outer surface of the galvanized conduit.
  3. Ensure that the bond between the coating and the conduit surface is greater than the tensile strength of the coating.
  4. Provide the inside surfaces and threads of the conduit with a 2-mil urethane coating.
  5. Provide a PVC coating thickness not less than 40 mils.
  6. The PVC-coated RGS shall be manufactured in accordance with the following standards:
    - a. UL-6
    - b. ANSI C80.1
    - c. NEMA RN1 - PVC Externally Coated Galvanized Rigid Steel Conduit and Intermediate Metal Conduit
  7. Manufacturer, or Equal
    - a. **Robroy Industries**
    - b. **O'Kote**
    - c. **Thomas & Betts**
- D. Liquid-Tight Flexible Conduit
1. Provide liquid-tight flexible conduit constructed of a flexible galvanized metal core with a sunlight-resistant thermoplastic outer jacket.
  2. Provide liquid-tight flexible conduit manufactured in accordance with the requirements of UL-360 - Steel Conduits, Liquid-Tight Flexible.
  3. Manufacturer, or Equal
    - a. **Anaconda, Sealtite**
    - b. **Electriflex, Liquatite**
- E. Electrical Metallic Tubing (EMT) or Intermediate conduit (IMC) will not be accepted.

## **2.03 FITTINGS AND BOXES**

### **A. General**

1. For use with metallic conduit, provide cast and malleable iron fittings of the threaded type with 5 full threads.
2. Fittings and Boxes
  - a. Provide fittings and boxes with neoprene gaskets and non-magnetic stainless steel screws.
  - b. Attach covers by means of holes tapped into the body of the fitting.
  - c. Covers for fittings attached by means of clips or clamps will not be accepted.
  - d. Provide surface-mounted switches and receptacles shall be housed in FD-type weatherproof conduit fittings. Bell type boxes are not permitted.
3. Provide boxes larger than standard cast or malleable types manufactured of Type 316 stainless steel, NEMA 4X.
4. Terminations

---

26 05 33-2  
Electrical Raceway Systems

Pump Station 26 Improvement Project

- a. In outdoor areas, terminate conduit in rain-tight hubs.
  - b. Manufacturer, or Equal
    - **Myers**
    - **O.Z. Gedney**
    - **Appleton**
  - c. In other than outdoor areas, provide sealed locknuts and bushings.
5. Hazardous Locations
- a. In hazardous locations, provide conduit, fittings, and boxes suitable for the indicated Class and Division.
  - b. Provide conduits terminated in NEMA 7 boxes with a male bushing, inside the box.
  - c. Manufacturer, or Equal
    - **Adalet Type PEM**
- B. Cast Aluminum Fittings and Boxes
- 1. Provide cast aluminum boxes and fittings with less than 0.40 percent copper content, and use with aluminum conduit.
  - 2. Manufacturer, or Equal
    - a. **Crouse-Hinds (EATON) Mark 9**
- C. Malleable Iron Fittings and Boxes
- 1. For use with galvanized steel conduit, provide fittings and boxes constructed of malleable iron or gray-iron alloy with zinc plating boxes shall be of the FD type.
  - 2. Manufacturer, or Equal
    - a. **Crouse-Hinds (EATON) Form 5**
    - b. Equivalent by **O.Z. Gedney**
    - c. Equivalent by **Appleton**
- D. PVC Fittings and Boxes
- 1. For use with rigid non-metallic conduit, provide fittings manufactured of solvent-welded PVC.
  - 2. Provide boxes manufactured of PVC.
  - 3. Manufacturer, or Equal
    - a. **Hoffman**
    - b. **Crouse-Hinds (EATON)**
  - 4. Provide welding solvent as required for the installation of non-metallic conduit and fittings.
- E. PVC-Coated RGS Fittings
- 1. For use with PVC-coated RGS, provide PVC-coated coated that are the products of the same manufacturer as the conduit.
  - 2. Provide male and female threads and internal surfaces with a 2-mil urethane coating.
- F. Stainless Steel Boxes
- 1. Provide stainless steel boxes with PVC-coated RGS conduit and where indicated.

2. Provide NEMA 4X stainless steel boxes, constructed of Type 316 stainless steel.
3. Provide stainless steel of a minimum of 14-gauge thickness, with a brushed finish.
4. Door Hinges
  - a. Provide doors with full-length stainless steel piano hinges.
  - b. Non-hinged boxes will not be accepted.
5. Manufacturer, or Equal
  - a. **Hoffman**
  - b. **Rittal**

G. Sheet Steel Boxes

1. Sheet steel boxes shall be galvanized steel outlet and switch boxes.
2. Manufacturer, or Equal
  - a. **Raco**
  - b. **Steel City**
  - c. **Appleton Electric**

## 2.04 HAZARDOUS LOCATIONS

- A. Conform with NEC Articles 501 and 502 for areas identified as "Hazardous Areas".
- B. Provide threaded cast boxes and fittings for junction boxes and pull boxes in Class I and Class II areas. Unless otherwise indicated, boxes and fittings shall be UL listed for installation in Class I, Groups A, B, C, and D and Class II, Groups E, F, and G.
- C. Fixture hangers for pendant-mounted lighting fixtures shall conform to Class I, Division 1 and Class II Division 1 requirements.
- D. Provide conduit seals with sealing compound and fiber in Class I, Division I location within 18 inches of each conduit entering an enclosure containing electrical devices except for hermetically sealed switches and receptacles. Provide a conduit seal for each conduit leaving the hazardous location.
- E. Flexible connections to motors and other vibrating equipment in Class I, Division I locations shall be made with flexible fittings approved for Class I locations.

## 2.05 WIREWAY

- A. General
  1. Provide wireway of the lay-in type and NEMA-rated for the area in which it is to be installed in accordance with the requirements of Section 26 00 00 – General Electrical Work.
  2. Separate power, control, signal and communications cables by grounded metallic dividers in wireways or run in separate wireways.
- B. Fittings and Covers
  1. Provide fittings and sections with non-magnetic stainless steel screws.
  2. Attach covers by hinges and clamps to the bodies.
  3. Covers attached by means of clips or screws will not be accepted.
  4. Provide covers and bodies constructed of aluminum or minimum 14-gauge steel.
- C. Grounding

---

26 05 33-4  
Electrical Raceway Systems

Pump Station 26 Improvement Project

1. Ground the steel and aluminum wireway bodies.
  2. Provide steel dividers with steel wireways or aluminum dividers with aluminum wireways, and ground by means of an individual grounding conductor.
  3. Non-metallic dividers will not be accepted.
- D. Terminations
1. In indoor and outdoor areas, terminate conduit in rain-tight hubs as manufactured by Myers, O.Z. Gedney, or equal.
  2. Manufacturer, or Equal
    - a. **Myers**
    - b. **O.Z. Gedney**

## **PART 3 - EXECUTION**

### **3.01 GENERAL**

- A. Run wiring in raceway unless indicated otherwise.
- B. Install raceways between equipment as indicated.
- C. Provide raceway systems that are electrically and mechanically complete before conductors are installed.
- D. Bends and Offsets
  1. Provide bends and offsets that are smooth and symmetrical, and accomplished with tools designed for this purpose.
  2. Provide factory elbows wherever possible.
- E. Routing
  1. Where raceway routings are indicated, follow those routings to the extent possible.
  2. Where raceways are indicated but routing is not indicated, such as home runs or on conduit developments and schedules, raceway routing shall be the CONTRACTOR's choice and provided in strict accordance with the NEC as well as customary installation practice.
  3. Provide the raceway encased, exposed, concealed, or under-floor as indicated, except conceal conduit in finished areas unless specifically indicated otherwise.
  4. Adjust routings in order to avoid obstructions.
- F. Coordination
  1. Coordinate between trades prior to installing the raceways.
  2. The lack of such coordination shall not be justification for extra compensation, and any costs for removal and re-installation to resolve conflicts shall be part of the Contract Price.
- G. Install exposed raceways parallel or perpendicular to structural beams.
- H. Expansion Fittings
  1. Install expansion fittings with external bonding jumpers wherever exposed raceways cross building expansion joints.

---

26 05 33-5  
Electrical Raceway Systems

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

2. Install expansion/deflection fittings where conduit movement is expected in more than one dimension, and where conduits transition out of structures in locations where differential settlement may occur.
3. Encased Expansion Fittings
  - a. Install encased expansion fittings wherever encased conduits cross building expansion joints.
  - b. Deflection type fittings shall not be required for encased conduits crossing an expansion joint within a single structure.
4. Provide expansion and expansion/deflection fittings constructed of the same material as the raceway to which they are installed.
- I. Install expansion fittings with bonding jumpers wherever raceways cross building expansion joints.
- J. Install exposed raceways at least 1/2 inch from walls or ceilings except that at locations above finished grade where damp conditions do not prevail, install exposed raceways at least 1/4 inch from the face of walls or ceilings by the use of clamp backs or struts.
- K. Wherever contact with concrete or dissimilar metals can produce galvanic corrosion of equipment, provide a means of suitable insulation in order to prevent such corrosion.

### **3.02 CONDUIT**

- A. Provide exposed conduit manufactured of rigid galvanized steel, except as follows and unless indicated otherwise:
  1. In areas with chlorine or hydrofluosilicic acid, provide Schedule 40 PVC conduit.
  2. In Class I, Div I or Div II hazardous locations, provide PVC-coated GRS conduit.
  3. For conduit containing only grounding system bonding conductors, provide Schedule 80 PVC conduit.
- B. Power conduit encased in concrete shall be constructed of Schedule 40 PVC.
- C. Analog control or instrumentation conduit shall be GRS.
- D. Concrete Encasement
  1. Where PVC or GRS conduit is stubbed up from a concrete encasement, provide a PVC-coated GRS elbow.
  2. The conduit shall emerge from the concrete in a direction perpendicular to the surface whenever possible.
  3. Do not encase conduit in the bottom floor slab below grade.
- E. Size
  1. Provide exposed conduit of 3/4-inch minimum trade size.
  2. Provide encased conduit of one-inch minimum trade size.
- F. Install supports at distances required by the NEC.
- G. Concrete cover for conduit and fittings shall not be less than 1-1/2 inches for concrete exposed to earth or weather, or less than 3/4 inch for concrete not exposed to weather or in contact with the ground.
- H. Penetrations

1. Provide conduit passing through walls or floors with plastic sleeves.
  2. Perform core drilling in accordance with the requirements of Section 26 00 00 – Electrical Work, General.
  3. Conduits passing through a slab, wall, or beam shall not significantly impair the strength of the construction.
- I. Conduits embedded within a slab, wall, or beam (other than those merely passing through) shall meet the following requirements:
1. Conduits with their fittings embedded within a column shall not displace greater than 4 percent of the gross area of cross section;
  2. Conduits shall not be larger in outside dimension than 1/3 the overall thickness of the slab, wall, or beam in which it is embedded; and,
  3. Conduits shall not be spaced closer than 3 outside diameters on centers.
- J. Place the conduit such that cutting, bending, or displacing reinforcement from its proper location will not be required.
- K. Coat threads with a conductive lubricant before assembly.
- L. Joints
1. Provide joints that are tight, thoroughly grounded, secure, and free of obstructions in the pipe.
  2. Adequately ream the conduit in order to prevent damage to the wires and cables inside.
  3. Use strap-wrenches and vises to install the conduit, in order to prevent wrench marks on the conduit.
  4. Replace conduit with wrench marks.
  5. Where installed in chemical or fuel containment areas, the conduit shall not have joints or fittings located below the top of the containment area to prevent entry of chemicals or fuel into the conduit system.
- M. Slope
1. Wherever possible, slope the conduit runs to drain at one or both ends of the run.
  2. Wherever conduit enters a substructure below grade, slope the conduit in order to drain water away from the structure.
  3. Take extreme care in order to avoid pockets or depressions in the conduit.
- N. Where conduits from duct banks enter building walls below grade, transition to PVC-coated GRS at least 12" outside the wall. Installation of PVC-coated rigid steel conduit through a core-drilled hole in an exterior wall below-grade shall utilize a sealing device as manufactured by **Link Seal**, or equal.
- O. Connections
1. Make connections to lay-in-type grid lighting fixtures by using flexible metal conduit not exceeding 4 feet in length.
  2. Make connections to motors and other equipment subject to vibration by using liquid-tight flexible conduit not exceeding 3 feet in length.
  3. Provide equipment subject to vibration that is normally provided with wiring leads with a cast junction box for the make-up of connections.

---

26 05 33-7  
Electrical Raceway Systems

Pump Station 26 Improvement Project

- P. Provide conduit seal fittings in hazardous classified locations, in strict accordance with the NEC.
- Q. Provide conduit, fittings, and boxes required in hazardous classified areas that are suitably rated for the area, and provide in strict accordance with NEC requirements.
- R. Duct sealant shall be foam duct sealant such as **Polywater FST or approved equal**. Provide duct sealant at the following locations:
1. Where required by NEC Article 300.7.
  2. In areas where chlorine gas or fumes from sodium hypochlorite exist to prevent passage of gas through the raceway system.
- S. Empty Conduits
1. Tag empty conduits at both ends to indicate the final destination.
  2. Where it is not possible to tag the conduit, identify the destination by means of a durable marking on an adjacent surface.
  3. Install a pull-cord in each empty conduit in floors, panels, manholes, equipment, and the like.
  4. Install a removable plug on empty conduits that terminate below grade, in vaults, manholes, handholes, and junction or pullboxes.
- T. Identification of Conduits
1. Identify conduits at ends and at pulling points.
  2. Identification shall be the unique conduit number assigned in the Contract Documents.
  3. Other than 120 VAC panelboard circuits, if a conduit has not been assigned a unique number in the Contract Documents, assign a unique number following the numbering scheme used in the Contract Documents.
  4. Assign a unique number to 120 VAC panelboard circuits, similar to the cable numbering scheme used in the Contract Documents.
  5. Provide conduit identification by a stamped or engraved non-corroding metal tag attached to the conduit bushing.
  6. Provide an engraved phenolic nameplate in accordance with the requirements of Section 16050 – General Electrical Work.
  7. Markings with a pen or paint will not be accepted.
- U. Identification of Pullboxes and Junction Boxes
1. Identify pullboxes and junction boxes.
  2. Identification shall be the unique conduit number assigned in the Contract Documents, or if not assigned a unique number the CONTRACTOR shall assign one following the numbering scheme used in the Contract Documents.
  3. Provide box identification by a stamped or engraved non-corroding metal tag or an engraved phenolic nameplate, in accordance with the requirements of Section 16050 – General Electrical Work, and attached to the box or enclosure.
  4. Markings with a pen or paint will not be accepted.
- V. Provide conduit for data cables in accordance with the equipment manufacturer's recommendations, especially regarding separation from low- and medium-voltage power raceways.

REVISED BID SET

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 26 05 43**  
**UNDERGROUND RACEWAY SYSTEMS**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. Provide underground raceway systems, complete and in place, as indicated in accordance with the Contract Documents.
- B. Pull boxes, and fittings that are dedicated to the underground raceway system shall comply with the requirements of this Section.

**1.02 SUBMITTALS**

- A. Furnish submittals in accordance with the requirements of Section 01 33 03 – Submittal Procedures, and Section 26 00 00 – General Electrical Work.
- B. Shop Drawings
  - 1. Submit complete catalog cuts of all raceways, fittings, pullboxes, marked where applicable in order to show proposed materials and finishes.
- C. As-Built Drawings
  - 1. Prepare as-built drawings of encased concealed and exposed raceways, ducts, raceways, junction boxes, pull boxes, and electrical and instrumentation equipment.
  - 2. Show routings, burial depths, and handhole locations and sizes, and where applicable, connections to drainage systems.
  - 3. Furnish the drawings to the ENGINEER in accordance with the requirements of Section 01 33 03 – Submittal Procedures.

**PART 2 - PRODUCTS**

**2.01 PULLBOXES**

- A. Frames and Covers
  - 1. Provide traffic-type covers with an H-20 loading, except as otherwise indicated.
  - 2. Identify pullbox covers as "ELECTRIC" by providing raised letters cast into the covers.
  - 3. Provide frost-proof and water-tight grey iron frames and covers with solid lids and inner lids, and with 28-inch clear openings.
  - 4. Bolt the covers and lids to cast-in-place steel frames using corrosion-resistant hardware.
  - 5. Factory-prime the frames.
  - 6. Provide covers constructed of cast-iron, and provide pick holes.
  - 7. Provide frames with a 1/2-inch drilled and tapped hole and lug in order to accommodate a No. 4/0 AWG bare stranded copper conductor connected to a ground rod and the ground conductor of power cables passing through the pull boxes.
- B. Equip pull boxes with pulling-in irons, opposite and below each ductway entrance.
- C. Provide pull boxes with closed bottoms; open-bottom pull boxes will not be accepted.
- D. Provide PVC duct bank conduits with end bells.

---

26 05 43-1  
Underground Raceway Systems  
Pump Station 26 Improvement Project

E. Brackets

1. Provide non-metallic, non-conductive brackets and stanchions in pull boxes as required for racking wiring through the pull boxes. Attach to pull boxes walls using stainless steel anchors and hardware.
2. Brackets and stanchions: **Underground Devices, Inc.**, or equal.

F. Precast Pull boxes Manufacturer, or Equal

1. **Jensen Precast**
2. **Old Castle**
3. **U.S. Precast**

## 2.02 DUCTBANKS

A. Provide underground ducts constructed of Schedule 40 PVC.

B. Encase ducts in red-dyed concrete with steel reinforcing bars.

C. Provide concrete with a 3,000-psi compressive strength conforming to the requirements of Section 03 30 03 – Cast-in-Place Concrete.

D. Colorant

1. The concrete shall be dyed red throughout the ducts; surface treatment will not be accepted.
2. Provide colorant consisting of an integral red-oxide coloring pigment in the proportion of 8 pounds per cubic yard of concrete.
3. The costs, if any, of cleaning coloring pigment from the concrete delivery equipment and other related cleanings shall be considered as part of the WORK.

E. Grounding

1. Duct banks shall contain a No. 4/0 bare stranded copper ground wire.
2. The ground wire shall be continuous through the ductbank and terminate at power distribution equipment and the grounding grid.

F. Identification Tape

1. Provide continuous lengths of underground warning tapes located 12 inches above and parallel to the duct banks.
2. Provide tape consisting of 6-inch wide polyethylene film, imprinted with "CAUTION - ELECTRIC UTILITIES BELOW."
3. Manufacturer, or Equal

a. **Brady**

## PART 3 - EXECUTION

### 3.01 GENERAL

- A. Install underground raceways between pull boxes as indicated.
- B. Raceway systems shall be electrically and mechanically complete before conductors are installed.
- C. Provide bends and offsets that are smooth and symmetrical, and fabricated with tools designed for this purpose.

---

26 05 43-2

Underground Raceway Systems

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- D. Use factory elbows wherever possible.
- E. To the extent possible, follow the raceway routings as indicated on the Drawings.
- F. Adjust the indicated routings as necessary in order to avoid obstructions.
- G. Coordination with Other Trades
  - 1. Coordinate with other trades prior to installation of raceways.
  - 2. The lack of coordination shall not be justification for extra compensation.
  - 3. Perform removal and re-installation to resolve conflicts as part of the WORK.

### **3.02 DUCTBANKS**

- A. Install duct banks in accordance with the following criteria:
  - 1. Assemble the duct using high-impact, non-metallic spacers and saddles in order to provide conduits with vertical and horizontal separation.
  - 2. Set the plastic spacers every 5 feet.
  - 3. Anchor the duct array every 5 feet in order to prevent movement during the placement of concrete.
  - 4. Lay the duct on a grade line of at least 3 inches per 100 feet, sloping towards pull boxes.
  - 5. Install the duct and adjust the pull box depths such that the top of the concrete envelope is a minimum of 18 inches below grade and a minimum of 24 inches below roadways.
  - 6. Accomplish changes in direction of the duct envelope by more than 10 degrees horizontally or vertically by using bends with a minimum radius 24 times the duct diameter.
  - 7. Stagger duct couplings a minimum of 6 inches.
  - 8. Provide select backfill or sand for the bottom of the trench.
  - 9. Cleaning
    - a. Clean each bore of the completed duct bank by drawing through it a standard flexible mandrel, one foot long and 1/4 inch smaller than the nominal size of the duct.
    - b. After passing the mandrel, draw through a wire brush and swab.
  - 10. For spare raceways that are not indicated to contain conductors, provide a 1/8-inch polypropylene pull cord installed throughout the entire length of the raceway.
- B. Grout duct entrances smooth, and terminate ducts with flush end bells.
- C. Assemble sections of pre-fabricated pull boxes using waterproof mastic, and set on a 6-inch bed of gravel as recommended by the manufacturer or as required by field conditions.
- D. Provide watertight duct bank penetrations through walls of pull boxes, and building walls below grade.
- E. Terminate concrete-encased duct banks at building foundations.
- F. Where ducts enter buildings, provide duct sealant in every duct at the building-end of the duct run to prevent water or condensation entry from the duct bank into the building.
  - 1. Manufacturer, or Equal
    - a. **Polywater FST, FST-MINI**

---

26 05 43-3

Underground Raceway Systems

Pump Station 26 Improvement Project

- G. When duct enters the building on a concrete slab on grade, do not encase the duct but transition to rigid steel PVC-coated conduits on stub-ups.
- H. Sealing
  - 1. Where an underground conduit enters a structure through a concrete roof or a membrane-waterproofed wall or floor, provide a sealing device.
  - 2. Manufacturer, or Equal
    - a. **Link-Seal**
  - 3. Use the sealing device with rigid steel conduit.
  - 4. Transition from PVC to rigid steel conduit prior to building entry.

END OF SECTION

**SECTION 26 05 48**  
**SEISMIC RESTRAINTS AND SUPPORTS**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall provide seismic restraint devices for electrical systems, complete and operable, in accordance with the Contract Documents.

**1.02 SUBMITTALS**

- A. Submittals shall be in accordance with Administrative Requirements Section 01 33 03 – Submittal Procedures and Section 26 00 00 – General Electrical Work.
- B. Submit seismic anchoring calculations with equipment and raceway submittals. Calculations and determination of anchor types shall be performed and stamped by a licensed structural engineer registered in the State of California. Engineer shall either be employed by the equipment manufacturer or the equipment manufacturer shall hire an independent consultant to perform these services.
- C. Submit equipment anchoring methods. Include anchoring locations, anchor types and minimum anchor embedment depths.
- D. Submit catalog cuts and material list for each anchor type.
- E. Submit recommended torque values for bolting.

**PART 2 - MATERIALS**

**2.01 SEISMIC ANCHORING AND RESTRAINTS**

- A. Equipment Anchors:
1. Securely anchor electrical equipment. Anchoring shall have the capability of withstanding seismic forces per ASCE 7-05, Minimum Design Loads for Buildings and Other Structures, Chapter 13, with SDS = 0.686, IP = 1.5, RP = 2.5, and ap = 1.0.
- B. Raceway Supports:
1. Seismically support raceways (conduit, cable tray, busway, etc.) 2.5 inches inside diameter and larger and suspended 12 inches or more from the top of the raceway to the bottom of the support for the hanger. Raceway supports shall have the capability of withstanding seismic forces per ASCE 7-05, Minimum Design Loads for Buildings and Other Structures, Chapter 13, with SDS = 0.686, IP = 1.5, RP = 2.5, and ap = 1.0.
  2. Seismically supported raceway systems shall currently be pre-approved by the California Office of Statewide Health Planning and Development.

**2.02 MOUNTING HARDWARE**

- A. Miscellaneous Hardware
1. Provide nuts, bolts, and washers constructed of stainless steel.
    - a. Materials
      - All Areas: Anchor bolts and screws shall be Type 316 ASTM A276 stainless steel. Nuts shall be hex Type 316 stainless steel, ASTM A194, Grade 8M, or ASTM F594, Type 316 stainless steel.

---

26 05 48-1

Seismic Restraints and Supports

Pump Station 26 Improvement Project

2. Provide threaded rods for trapeze supports constructed from continuous threaded galvanized steel, 3/8-inch diameter minimum.

- a. Materials

- All Areas: ASTM A276, Type 304 stainless steel.

- B. Struts

1. Construct struts for mounting of conduits and equipment of 304 stainless steel.
2. Where contact with concrete or dissimilar metals may cause galvanic corrosion, use suitable non-metallic insulators in order to prevent such corrosion.
3. Aluminum strut for free-standing support frames are not permitted.
4. Strut Manufacturer, or Equal: **Unistrut; B-Line**

- C. End Caps

1. Provide plastic protective end caps for all exposed strut ends.
2. End Caps Manufacturer, or Equal: **Unistrut, Model P2860**

- D. Anchors

1. Provide stainless steel expansion anchors for attaching equipment to concrete walls, floors, and ceilings.
2. Wood plugs will not be accepted.
3. Anchor Manufacturer, or Equal: **"Power-Bolt" or "Power-Stud"** as manufactured by **Power Fasteners, Inc.**; similar by **Star**.

## **PART 3 - EXECUTION**

### **3.01 INSTALLATION**

- A. The CONTRACTOR shall provide and install equipment anchors and raceway supports in accordance with the final shop drawings and manufacturer's recommendations. Properly torque all bolts to the recommended values.

END OF SECTION

**SECTION 26 05 73**  
**PROTECTIVE DEVICE STUDIES**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall perform the indicated short circuit and protective device studies for the electrical power system in accordance with the Contract Documents.
- B. The WORK of this Section shall include protection studies for motors with solid state overload and overcurrent protection devices.
- C. It is the responsibility of the CONTRACTOR to obtain the information required from the electric utility and appropriate vendors.

**1.02 QUALIFICATIONS**

- A. Short circuit studies, protective device evaluation studies, arc-flash hazard analysis studies, and protective device coordination studies shall be performed by a manufacturer who has been regularly engaged in short circuit and protective device coordination services for a period of at least 10 years.
- B. The indicated studies shall be signed by the professional electrical engineer, registered in the State of California, responsible for the studies.
- C. The studies shall utilize computer programs with proven reliability and accuracy for performing 3-phase fault-duty calculations.

**1.03 SUBMITTALS**

- A. The indicated studies shall be submitted and approved by the ENGINEER prior to final approval of the distribution equipment Shop Drawings and release of equipment for manufacture.
- B. An initial short circuit study shall be submitted and reviewed before the ENGINEER will approve the Shop Drawings for medium-voltage switchgear, transformers, or 480-volt distribution equipment.
- C. Submit an initial protective device coordination study shall be submitted with 90 days after the approval of the initial short circuit study.
- D. The short circuit, arc-flash hazard analysis, and protective device coordination studies shall be updated prior to Project Substantial Completion; utilize characteristics of as-installed equipment and materials.
- E. The adequacy of the equipment "withstand" and interruption ratings shall be approved by the ENGINEER.

**1.04 MANUFACTURERS' SERVICES**

- A. The low-voltage switchgear manufacturer shall furnish the services of a qualified field engineer and necessary tools and equipment in order to test, calibrate, and adjust the protective relays and circuit breaker trip devices as recommended in the power system coordination study.
- B. The motor control center manufacturer shall furnish the services of a qualified field engineer to calibrate the MCPs as recommended in the power system study.

---

26 05 73-1  
Protective Device Studies

Pump Station 26 Improvement Project

## **PART 2 - PRODUCTS (NOT USED)**

## **PART 3 - EXECUTION**

### **3.01 GENERAL**

- A. The studies shall include development of single-line and impedance diagrams of the power system.
- B. The diagrams shall identify components considered in the study and the ratings of power devices, including transformers, circuit breakers, relays, fuses, busses, and cables.
- C. The resistances and reactance's of cables shall be identified in the impedance diagram.
- D. The studies shall contain written data from the electric utility company regarding maximum available short circuit current, voltage, and X/R ratio of the utility power system.
- E. The studies shall include every protective device and feeder included within the WORK.
- F. The first upstream overcurrent device outside the WORK shall be used as a fixed reference.
- G. The studies shall include all portions of the electrical distribution system for normal and standby power sources down to and including the 480-volt distribution system.

### **3.02 SHORT CIRCUIT STUDY**

- A. The short circuit study shall be performed with the aid of a digital computer program, and shall be in accordance with the following Standards:

|                    |                                                                                                   |
|--------------------|---------------------------------------------------------------------------------------------------|
| ANSI/IEEE 141      | Recommended Practice for Electrical Power Distribution for Industrial Plants                      |
| ANSI/IEEE 242      | Recommended Practice for Protection, and Coordination of Industrial, and Commercial Power Systems |
| ANSI/IEEE C 37.010 | Application Guide for AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis       |
| ANSI/IEEE C 37.13  | Low-Voltage AC Power Circuit Breakers Used in Enclosures                                          |

### **3.03 PROTECTIVE DEVICE EVALUATION STUDY**

- A. A protective device evaluation study shall be performed in order to determine the adequacy of circuit breakers, molded case switches, and fuses.
- B. Any problem areas or inadequacies in the equipment due to prospective short-circuit currents shall be promptly brought to the attention of the ENGINEER.
- C. Do not utilize series-rated circuit breakers to meet short circuit requirements for this project.
- D. Devices shall be fully rated to withstand available fault currents.

### **3.04 PROTECTIVE DEVICE EVALUATION STUDY**

- A. A protective device coordination study shall be performed in order to develop the necessary calculations to select power fuse ratings, protective relay characteristics and settings, ratios and characteristics of associated current transformers, and low-voltage breaker trip characteristics and settings.

---

26 05 73-2  
Protective Device Studies

Pump Station 26 Improvement Project

- B. Any problem areas or inadequacies in the equipment due to prospective short-circuit currents shall be promptly brought to the ENGINEER's attention.

### **3.05 TIME/CURRENT COORDINATION CURVES**

- A. As a minimum, the time/current coordination curves for the power distribution system shall include the following items plotted on 5-cycle log-log graph paper:
1. time/current curves for each protective relay, circuit breaker, or fuse demonstrating graphically that the settings will provide protection and selectivity within industry standards
  2. Each curve shall be identified, and tap and time dial settings shall be specified.
  3. Provide individual curves for each feeder unless identical to others.
  4. Selectivity
    - a. Time/current curves for each device shall be positioned to provide the maximum selectivity to minimize system disturbances during fault clearing.
    - b. Where selectivity cannot be achieved, the ENGINEER shall be notified as to the cause.
    - c. Recommendations shall be included for alternate methods that would improve selectivity.
  5. time/current curves and points for cable and equipment damage.
  6. circuit interrupting device operating and interrupting times
  7. Indicate maximum fault values on the graph.
  8. sketch of bus and breaker arrangement
  9. magnetizing inrush points of transformers
  10. thermal limits of dry-type and liquid-insulated transformers (ANSI damage curve)
  11. Every restriction of the ANSI and National Electrical Code shall be followed, and proper coordination intervals and separation of characteristics curves shall be maintained.

### **3.06 ARC FLASH STUDY**

- A. An arc flash study shall be performed with the aid of a digital computer program in order to determine the "Arc Flash Protection Boundary" and "Personal Protective Equipment" (PPE) levels for applicable electrical distribution equipment, stand-alone disconnects, starters, and VFDs in the power distribution system.
- B. The arc flash study shall be performed in conjunction with short circuit calculations and protective device coordination.
- C. The arc flash study shall be in accordance with the latest version of the following Standards:
1. NFPA 70E Standard for Electrical Safety Requirements for Employee Workplaces
  2. IEEE 1584 IEEE guide for performing Arc Flash Hazard Calculations
  3. OSHA (29 CFR PART 1910) Occupational Safety and Health Standards for General Industry
  4. ANSI Z535.4 Product Safety Signs and Labels
- D. The recommended values for the "Arc Flash Protection Boundary" and PPE levels, based on the arc flash study results, shall be tabulated in the study.
- E. Labeling

1. The digital computer program shall provide the “Arc Flash Protection Boundary” and PPE values in a format that can be directly printed on to labels.
2. The CONTRACTOR shall provide these labels in accordance with Section 26 00 00 – General Electrical Work.

### **3.07 FINAL SUMMARY REPORT**

- A. Summarize the results of the indicated power system studies in a final report.
- B. The report shall include the following items:
  1. single-line diagram
  2. impedance diagram
  3. tabulation of all protective devices identified on the single line diagram
  4. time/current coordination curves
  5. specific recommendations, if any
  6. test instrumentation, condition, and connections, as applicable, for each study
  7. computerized fault current calculations
  8. any suggested changes to the protection scheme or equipment selection that will result in improved system reliability and safety
  9. recommendations to minimize the arc flash energy
- C. The report shall include information concerning the computer program used for the study, as well as a general discussion of the procedure, items, and data considered in the preparation of the study.
- D. Submit 1 bound copy and PDF including all protective device study data files of the report to the ENGINEER.
- E. The final report shall include all coordination study data files copied to 32GB flash drive.

### **3.08 PROTECTIVE DEVICE TESTING, CALIBRATION, AND ADJUSTMENT**

- A. Test, calibrate, and adjust the protective relays and circuit breaker trip devices in accordance with the recommendations in the power system coordination study.
- B. Calibrate the MCPs as in accordance with the recommendations in the power system study.
- C. Adjustments shall be made prior to energizing any electrical equipment.

END OF SECTION

## **SECTION 26 12 16**

### **PANELBOARDS AND GENERAL-PURPOSE DRY TYPE TRANSFORMERS**

#### **PART 1 - GENERAL**

##### **1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall provide panelboards and general-purpose dry-type transformers, complete and operable, in accordance with the Contract Documents.
- B. Single Manufacturer: Like products shall be the end product of one manufacturer in order to achieve standardization of appearance, operation, maintenance, spare parts, and manufacturer's services.

##### **1.02 SUBMITTALS**

- A. General: Submittals shall be in accordance with Section 01 33 03 – Submittal Procedures and Section 16050 – General Electrical Work.
- B. Shop Drawings
  - 1. Transformers
    - a. Dimension drawings
    - b. Technical certification sheets
    - c. Drawing of conduit entry/exit locations
    - d. Transformer ratings, including:
      - Voltage
      - Continuous current
      - Basic impulse level for equipment over 600 volts
      - KVA
    - e. Descriptive bulletins
    - f. Product sheets
  - 2. Panelboards
    - a. Breaker layout drawings with dimensions and nameplate designations
    - b. Component list
    - c. Drawings of conduit entry/exit locations
    - d. Assembly ratings including:
      - Short circuit rating
      - Voltage
      - Continuous current
    - e. Cable terminal sizes
    - f. Descriptive bulletins
    - g. Product sheets
    - h. Installation information
    - i. Seismic certification and equipment anchorage details

---

26 12 16-1

Panelboards and General-Purpose Dry Type Transformers

Pump Station 26 Improvement Project

## **PART 2 - PRODUCTS**

### **2.01 GENERAL**

#### **A. Transformers**

1. The transformers shall be dry-type, designed, manufactured, and tested in accordance with the latest applicable standards of ANSI and NEMA.
2. Transformers shall be UL-listed and bear the UL label.

#### **B. Panelboards**

1. Panelboards shall be dead front factory assembled. Panelboards shall comply with NEMA PB-1-Panelboards, as well as the provisions of UL 50 - Safety Enclosures for Electrical Equipment and UL 67 - Safety Panelboards. Panelboards used for service equipment shall be UL labeled for such use. Lighting panelboards shall be rated for 120/208-volt, 3 phase operation or 120/240 volt for single phase operation as indicated. Power panelboards shall be rated for 480 volts, 3 phase, 3 wire operation, unless indicated otherwise.
2. The manufacturer of the panelboard shall be the manufacturer of the major components within the assembly, including circuit breakers.

### **2.02 TRANSFORMERS**

- #### **A. Energy Efficiency:** Standard dry-type transformers shall meet the energy efficiency requirements of the Department of Energy Code of Federal Regulations (10 CFR PART 431), DOE 2016 Efficiency Levels. The product requirements are in the appliance regulations, Title 20, and the usage requirements are in Title 24.

#### **B. Ratings**

1. KVA and voltage ratings shall be as indicated.
2. Transformers shall be designed for continuous operation at rated kVA, for 24 hours a day, 365 days a year operation, with normal life expectancy as defined in ANSI C57.96 - Guide for Loading Dry Type Distribution and Power Transformers
3. Transformer sound levels shall not exceed the following ANSI and NEMA levels for self-cooled ratings:

|               |       |
|---------------|-------|
| Up to 9 kVA   | 40 dB |
| 10 to 50 kVA  | 45 dB |
| 51 to 150 kVA | 50 dB |

#### **C. Construction**

##### **1. Insulation Systems**

- a. Transformers shall be insulated as follows:

- 2 kVA and smaller: 150 deg C insulation system based upon 80 deg C rise.
- 3 to 15 kVA: 185 deg C insulation system based upon 115 deg C rise.
- 15 kVA and larger: 220 deg C insulation system based upon 150 deg C rise.

- b. Required performance shall be obtained without exceeding the above indicated temperature rise in a 40 deg C maximum ambient.
- c. Insulation materials shall be flame-retardant and shall not support combustion as defined in ASTM D 635 - Test Method for Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position.
- 2. Transformer windings shall be copper.
- 3. Transformers shall have four 2-1/2 percent taps, 2 above and 2 below 480 volts.
- 4. Transformer shall include vibration dampeners between the core and the enclosure to minimize and isolate sound transmission.

D. Manufacturers: **General Electric, Eaton, Schneider Electric/Square D Company, or equal.**

## **2.03 PANELBOARDS**

### **A. Ratings**

- 1. Panelboards rated 240-VAC or less shall have short circuit ratings not less than 22,000 amperes RMS symmetrical.
- 2. Panelboards rated 480-VAC shall have short circuit ratings not less than 65,000 amperes RMS symmetrical.
- 3. Panelboards shall be labeled with a UL short circuit rating. Series ratings are not acceptable.

### **B. Construction**

- 1. Lighting and power distribution panels shall have tin-plated copper bus bars.
- 2. Breakers shall be one, 2, or 3-pole as indicated, with ampere trip ratings as required by the equipment. Breakers shall be quick-make and quick-break, inverse time trip characteristics, to trip free on overload or short circuit, and to indicate trip condition by the handle position.
- 3. The panels shall have hinged doors with combination catch and latch. The front panels shall be so arranged that when the plates are removed, the gutters, terminals and wiring will be exposed and accessible. The doors shall have inner doors within the plates to have only the breaker operating mechanism exposed when they are opened. Live conductors and terminals shall be concealed behind the plates.
- 4. Panelboards shall be rated for the intended voltage.
- 5. Circuit breakers shall be interchangeable and capable of being operated in any position as well as being removable from the front of the panelboard without disturbing adjacent units. No plug-in circuit breakers will be acceptable.
- 6. Lighting and power distribution panels which are not part of a motor control center shall be constructed in accordance with Section 26 00 00 – General Electrical Work, Panels shall have the necessary barriers, supports, and liberal wiring gutters. Trim screws shall be stainless steel. Panelboard parts of metal other than copper, aluminum, or stainless steel shall be cadmium plated.
- 7. Panelboards shall be UL listed except for special enclosures which are not available with UL listing.
- 8. Panelboards shall be suitable for use as service entrance where indicated.

C. Manufacturers: **General Electric, Eaton, Schneider Electric/Square D Company, or equal**

D. Surge Protection Devices (SPD)

---

26 12 16-3

Panelboards and General-Purpose Dry Type Transformers

Pump Station 26 Improvement Project

1. Provide integral SPDs. SPDs shall conform to Section 26 43 00 – Surge Protection Devices.
2. SPD units shall be rated for the voltage and phase service of the panel at 240 kA per phase.

#### **2.04 NAMEPLATES**

- A. Nameplates shall meet the requirements of Section 26 00 00 – General Electrical Work.

### **PART 3 - EXECUTION**

#### **3.01 GENERAL**

- A. WORK of this Section shall be installed as indicated in Section 26 00 00 – General Electrical Work.

END OF SECTION

---

26 12 16-4

Panelboards and General-Purpose Dry Type Transformers

Pump Station 26 Improvement Project

**SECTION 26 22 00**  
**LOW VOLTAGE SWITCHGEAR**

## PART 1 - GENERAL

## 1.01 SCOPE OF WORK

- A. The CONTRACTOR shall provide electrical service sections, distribution switchboards, special control panels, control and terminal cabinets, control devices, circuit breakers, and all appurtenant work, complete and operable, in accordance with the Contract Documents.
- B. The requirements of Section 26 00 00 – General Electrical Work, apply to the WORK of this Section.

## 1.02 REGULATORY AGENCIES AND STANDARDS

- A. Regulatory Agencies: Installation, materials, equipment and workmanship shall conform to the latest provisions of the following agencies:
1. NEC (NFPA 70) National Electrical Code: 2020 Edition
- B. Electrical equipment shall be listed by and shall bear the label of Underwriters' Laboratories, Inc. (UL) or an independent testing laboratory acceptable to the local code enforcement agency having jurisdiction.
- C. Installation of electrical equipment and materials shall comply with OSHA Safety and Health Standards (29 CFR 1910 and 29 CFR 1926, as applicable), state building standards, and applicable local codes and regulations.
- D. Standards: Where referenced in these specifications or on the drawings, the publications and standards of the following organizations apply:
1. ANSI American National Standards Institute
    - a. ANSI/IEEE C37.20 Switchgear Assemblies, including Metal-Enclosed Bus
    - b. ANSI/NEMA ICS-2 Devices, Controllers, and Assemblies for Industrial Control
    - c. ANSI/UL 1008 Automatic Transfer Switches, Safety Standard for
  2. ASTM American Society of Testing and Materials
  3. ICEA Insulated Cable Engineers Association
  4. IEEE Institute of Electrical and Electronics Engineers
  5. NEMA 250 Enclosure for Electrical Equipment (1000 Volts Maximum)
  6. NFPA National Fire Protection Association
  7. NETA International Electrical Testing Association

### 1.03 QUALITY ASSURANCE

- A. General: All materials shall be inspected for compliance with Section 26 00 00 – General Electrical Work, and shall be tested per Section 26 01 26 - Electrical Tests.
- B. Factory Tests: Design test reports conducted on similar assemblies at the factory testing facilities shall be submitted.

#### **1.04 WARRANTY**

- A. The system warranty shall be no less than one year after initial startup and shall include all costs for repair, parts, travel and living expenses, and labor.

#### **1.05 SUBMITTALS**

- A. The CONTRACTOR shall submit Shop Drawings of the Automatic Transfer Switch in accordance with the requirements for of Section 01 33 03 –Submittal Procedures.
- B. Equipment ratings and characteristics including voltage ratings, continuous current ratings, fault current withstand ratings, neutral bus ratings, enclosure type, ratings and arrangement of overcurrent protective devices.
- C. Outline and dimensional drawings and conduit entry restrictions.
- D. Nameplate designations, sizes and mounting methods.
- E. Short circuit rating of the complete assembly
- F. Replacement parts lists and operation and maintenance procedures
- G. Seismic design certification of the anchoring system in accordance with Section 26 05 48.
- H. After review by the ENGINEER, the Shop Drawings of the service section shall be submitted to the utility company for approval prior to fabrication.

#### **1.06 FACILITY OPERATION AND MAINTENANCE MANUALS**

- A. General
  - 1. Submit complete operation and maintenance manual in accordance with the requirements of Section 01 33 03.13 – O&M Manual Review Checklist.
- B. The CONTRACTOR shall submit operation and maintenance procedures for the ENGINEER's review. The data sheets shall be supplemented by written text and shall include the following:
  - 1. Operating procedures.
  - 2. Maintenance procedures.
  - 3. Manufacturer's parts list, illustrations, assemblies, and diagrams.

### **PART 2 - PRODUCTS**

#### **2.01 GENERAL**

- A. Materials: All materials and equipment provided under this Specification shall be new; they shall be in accordance with the requirements of the Institute of Electrical and Electronic Engineers, the National Electrical Manufacturer's Association, the National Fire Protection Association, and the National Electrical Code. Where available, all materials and equipment shall bear the Underwriters' Laboratories label.
- B. Equipment: All equipment for the same purpose shall be of the same make.
- C. Enclosure Requirements: All outdoor equipment, fixtures, and wiring devices shall be of approved, weatherproof construction.
- D. Standard Products: Materials and equipment submitted for approval shall be the cataloged products of companies regularly engaged in the manufacture of such items, of the latest standard

---

26 22 00-2  
Low Voltage Switchgear

Pump Station 26 Improvement Project

design that conforms to the specification requirements, and shall essentially duplicate material and equipment that has been in satisfactory use for several years.

## **2.02 SWITCHBOARD**

- A. Indoor construction shall be of the universal frame type using die-formed welded and bolted members. Enclosing panels shall be 14-gauge steel, bolted in place. In addition, indoor construction shall conform to the following:
  - 1. Switchboard shall be totally enclosed, NEMA 3R, gasketed.
  - 2. Bus bar shall be copper fully insulated. Bus bars shall be braced for short circuits of 65,000 amperes RMS symmetrical minimum, or as indicated on the Drawings. A full-length copper ground bus bar shall be provided at the bottom of the switchboard enclosure.
- B. Outdoor construction shall be as described in the previous paragraph, except that switchboard installation shall be rodent- and bird-proof. Outdoor switchgear construction shall be NEMA 3R, non-walk-in type. An insulating compound shall be applied to the interior surface of roof panels for condensation control.
- C. Floor-standing distribution switchboards, and main service switchboard, shall be cataloged products of the main circuit breaker manufacturer. Switchboard shall be shipped fully assembled and tested.

## **2.03 MAIN SERVICE SWITCHBOARD**

- A. General: The main service switchboard shall consist of a freestanding assembly that complies with the Contract Documents, with particular reference to the provisions of the above paragraph entitled, "Switchboard."
- B. Switchboard: Switchboards shall be front- and side-accessible. Switchboards shall be constructed to accommodate additional distribution sections. The switchboards shall consist of the sections described in the following paragraphs.
- C. Service Section: The service section shall consist of an underground pull compartment and a revenue metering compartment all to utility requirements. Components such as meter bases, busses, lugs, and auxiliaries shall be furnished.
- D. Main Circuit Breaker Compartment: The main circuit breaker compartment's circuit breaker unit shall have the ratings indicated. Service neutral shall be brought to a terminal in the main circuit breaker compartment. A disconnecting link shall be provided in a bus bar connection between the neutral terminal and the switchboard ground bus.
  - 1. The circuit breaker shall have protective features with capability of selective tripping which can be used to provide overcurrent protection from overloads, short circuits, and ground faults.
- E. The circuit breaker shall be individually mounted stationary of the size and type indicated. Motorized spring charging shall be provided where indicated.
- F. Distribution Section: The distribution section shall consist of stationary, molded case circuit breakers of the size indicated. A full-length vertical bus shall be provided for each distribution section. The rating shall be 400 amperes, or more where indicated.

## **2.04 OVERCURRENT PROTECTIVE DEVICES**

- A. Circuit breakers having a frame size of 150 amperes or less shall be molded-case type with thermal, magnetic, non-interchangeable, trip-free, sealed trip units. The breaker contact material shall be

---

26 22 00-3  
Low Voltage Switchgear

Pump Station 26 Improvement Project

a non-weldable silver alloy. The breakers shall have arc-extinguishing chutes. Ground fault tripping, where required, shall be as required below.

- B. Circuit breakers with a frame size of 225 amperes to 600 amperes shall be molded case with interchangeable thermal and adjustable magnetic trip elements. Ground fault protection shall be provided by means of a core balance transformer encircling all feeder leads. The transformer shall energize a surface-mounted, solid-state relay, adjustable from 10 - 20 percent of phase current with an adjustable time delay of zero to 36 cycles. Ground fault protection shall include a test panel containing indication and test tripping circuits.
- C. Circuit breakers with a frame size more than 600 amperes shall be molded case as described above, except if power circuit breakers are indicated. Molded case circuit breakers shall have an integral, solid state over-current trip unit and line current sensors.
  - 1. Trip units shall have adjustable long time tripping in the range of 60 to 100 percent of continuous rating, instantaneous tripping adjustable in the range of 300 to 1000 percent of continuous rating, and ground fault tripping adjustable in the range of 20 to 60 percent of continuous rating, with adjustable delay of approximately 5 to 40 cycles.
- D. Power circuit breakers shall be of the stationary type. The power circuit breakers shall be insulated case units. The draw-out mechanism shall have four positions: connected, test, disconnect, and remove. The circuit breaker element shall be able to assume the connected, test, and disconnected positions with the circuit breaker cubicle door closed.
- E. Interlocks shall be provided to assure that the circuit breaker element is open before movement from a position is possible; stored energy mechanism shall be discharged automatically upon removal of the circuit breaker element from its cubicle. Charging of stored energy springs shall be motorized; closing of the main power contacts shall automatically charge the tripping springs. A manual trip button, position indicators, and status of stored energy mechanism shall be fitted to the front panel.
- F. Power circuit breakers shall be equipped with an integral solid-state 3 phase tripping unit as described above.
- G. Circuit breaker interlocking shall include an anti-pumping circuit.

## **PART 3 - EXECUTION**

### **3.01 INSTALLATION - GENERAL**

- A. All electrical equipment shall be installed securely in place. Equipment shall be mounted parallel and perpendicular to the walls, floors, and ceilings.
- B. All anchors and fasteners shall be types designed for the intended purpose and shall be capable of adequately, safely, and permanently securing the material in place. Generally, screws shall be used on wood surfaces, masonry anchors in concrete or brick, toggle bolts on hollow walls, machine screws, bolts, or welded studs on steel. Nails shall be used only for temporary attachment or support.
- C. Omissions or conflicts on Drawings or between Drawings and Specifications shall be brought to the attention of the ENGINEER for clarification before proceeding with the work.
- D. The CONTRACTOR shall make all necessary provisions throughout the Site to receive all equipment as construction progresses and shall provide adequate backing, supports, inserts, and

---

26 22 00-4  
Low Voltage Switchgear

Pump Station 26 Improvement Project

anchor bolts for the hanging and support of all electrical cabinets, enclosures, conduits, panelboards, and switches, and shall provide sleeves through walls, floors, or foundations where electrical lines are required to penetrate.

- E. Floor standing equipment shall be leveled with shims as required to maintain horizontal surfaces within 1/32-inch per horizontal foot; after leveling, equipment shall be anchored, then grouted so that no space exists between concrete and equipment support beams.

### **3.02 PREPARATION AND FINISH SYSTEMS**

- A. All equipment cabinets or enclosures furnished under this Section shall have a finish that will conform to Section 26 29 00 - Low-Voltage Motor Control Center.

END OF SECTION

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 26 29 00**  
**LOW-VOLTAGE MOTOR CONTROL CENTERS**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall provide motor control centers (MCCs), complete and operable, in accordance with the Contract Documents.
- B. Contract documents were developed utilizing sizing for EATON MCCs. If MCCs other than EATON are approved for this project, it is the contractor's responsibility to make accommodations for equipment sizing and layout that is different from that show on the contract document
- C. The requirements of Section 26 00 00 – General Electrical Work, apply to the WORK of this Section.
- D. In the event that provided motors are of greater horsepower than the indicated motors, revise the raceways, conductors, starters, overload elements, and branch circuit protectors as necessary in order to control and protect the increased motor horsepower in accordance with Section 16150 – Electric Motors.
- E. Single Manufacturer
  - 1. The MCCs shall be the end product of one manufacturer in order to standardize appearance, operation, maintenance, spare parts, and manufacturer's services.
  - 2. This requirement, however, does not relieve the CONTRACTOR of overall responsibility for the WORK.
- F. Coordination
  - 1. The equipment provided under this Section shall operate the electric motor driver with the driven equipment as indicated under other equipment Sections.
  - 2. The MCC manufacturer shall be provided with the following information, at a minimum:
    - a. Section 26 00 00 – General Electrical Work
    - b. Section 26 05 10 – Electric Motors
    - c. Section 26 05 15 – Industrial Control Panels
    - d. Section 26 01 26 – Electrical Tests
    - e. Electrical Contract Drawings

**1.02 SUBMITTALS**

- A. Furnish submittals in accordance with Section 26 00 00 – General Electrical Work.
- B. Furnish the following equipment information in the Shop Drawings:
  - 1. NEMA rating and color of enclosure
  - 2. horizontal and vertical bus ampacities, voltage rating, interrupting capacity, and materials of construction
  - 3. ground bus size and material of construction
  - 4. conduit entrance provisions
  - 5. main incoming line entry provision (top or bottom)

---

26 29 00-1  
Low-Voltage Motor Control Centers  
Pump Station 26 Improvement Project

6. control unit nameplate schedule
  7. circuit breaker types, frames, and settings
  8. starter NEMA sizes, auxiliary contact provisions, and coil voltage
  9. relays, timers, pilot devices, control transformer VA and fuse sizes
  10. MCC Wiring Diagrams
    - a. Furnish custom elementary schematic ladder diagrams for each compartment.
    - b. The ladder diagrams shall include remote devices.
    - c. Submittals not meeting these requirements will not be reviewed further and will be returned to the CONTRACTOR.
  11. MCC Internal Connections
    - a. Furnish the MCC internal connection list and diagram developed by the UL 508C panel assembly shop that is preparing the PLC Section.
    - b. The list and diagram shall detail each wiring connection between the PLC Section and each compartment provided by the MCC Manufacturer, and shall specifically include and indicate the terminals and wire numbers on both ends of each internal connection wire.
    - c. Submittals not meeting these requirements will not be reviewed further and will be returned to the CONTRACTOR.
  12. Short circuit rating of the complete assembly
  13. Replacement parts lists and operation and maintenance procedures
  14. Seismic design certification of the anchoring system in accordance with Section 16070.
  15. Time-current curves for protective devices
  16. RVSS and VFD Equipment Information
    - a. name of starter and drive manufacturer
    - b. type and complete model number
    - c. assembly drawing and nomenclature, including enclosure dimensions, mounting and anchoring details, and internal layout
    - d. detailed schematics, including external wiring connections
    - e. maximum heat dissipation capacity in kW
    - f. altitude de-rating information
  17. Factory test data certifying compliance with requirements of similar equipment from the same manufacturer
- C. Furnish an Owner's Manual, including:
1. manufacturer's 2-year warranty
  2. field test report
- D. Furnish the Manufacturer's Service Representative's resume, including the following documentation:
1. copy of the proposed representative's Factory Training Certificate

---

26 29 00-2  
Low-Voltage Motor Control Centers  
Pump Station 26 Improvement Project

2. number of years' experience servicing the manufacturer's MCCs and VFDs
  3. a statement that the individual is authorized to inspect, test and perform field service and repairs
- E. Spare Parts List
1. Furnish spare parts information for parts required by this Section as well any other spare parts recommended by the MCC manufacturer.
- F. Startup and Testing Report
1. Within 15 days after completion of startup and testing, the CONTRACTOR shall submit a report for the MCC.
  2. The report shall contain the following documentation:
    - a. the device name, serial number, rating, and complete model number of each MCC
    - b. a complete listing of all tests performed and the results of each test
    - c. a complete listing of all circuit breaker and overload settings, fuse ratings, settings, setpoints and configuration information for VFDs and equipment or devices with adjustable settings
    - d. documentation for training that was provided to the OWNER's personnel, including topics covered, instructor's name and contact information, and a list of attendees.

## **PART 2 - PRODUCTS**

### **2.01 GENERAL**

- A. The manufacturer of the low-voltage motor control center shall also manufacture at least the following:
1. molded case circuit breakers, up to and including 225 ampere frame size
  2. disconnect switches
  3. magnetic motor starters
  4. control and timing relays rated at 600 volts AC
  5. pushbuttons, lights and selector switches, including remote mounted control stations
  6. meters, including ammeter, voltmeter, and solid-state metering devices
- B. Single Manufacturer
1. Devices of the same type shall be products of the same manufacturer.
  2. This requirement applies to control devices, custom-fabricated equipment, and insofar as practical to equipment manufactured on a production basis.
- C. Lighting transformers and panelboards shall be in accordance with the requirements of Section 12 16 – Panelboards and General-Purpose Dry-Type Transformers.
- D. Motor control centers shall conform to the standards for NEMA Class IIS, Type B diagrams and wiring.
- E. MCC Schedule

| MCC DESIGNATION | LOCATION |
|-----------------|----------|
|-----------------|----------|

|         |                  |
|---------|------------------|
| MCC 100 | East of Wet Well |
|         |                  |

## 2.02 DESIGN, CONSTRUCTION, AND MATERIAL REQUIREMENTS

- A. The motor control centers shall be 600-volt class and suitable for operation on a 3-phase, 60-Hz system.
- B. The system operating voltage and number of wires shall be as indicated.
- C. Power
  - 1. The motor control center shall receive power from a 3-phase, wye-connected 480-volt service panel with a grounded neutral.
  - 2. Power distribution from the MCC shall be 480-volt, 3-phase, 3-wire.
  - 3. The MCC shall include provision for termination of an incoming neutral conductor in conformance to NEC requirements for service entrance.
- D. Enclosure
  - 1. The enclosure shall be of NEMA Type 12.
  - 2. The variable frequency drive (VFD) and solid-state soft starter (RVSS) compartments may be of NEMA Type 1, gasketed, provided that ventilation inlet openings are covered by externally replaceable dust filters.
  - 3. Compartment doors shall be interlocked with compartment circuit breakers, fitted with a maintenance override.
  - 4. Latches for panelboard compartments shall have butterfly heads or another hand operable method that does not require tools to operate.
- E. Size and Arrangement
  - 1. Motor control centers shall be configured as mechanical groupings of control center units, assembled into a lineup of control center sections.
  - 2. Each control section shall be nominally 90 inches tall by a minimum of 20 inches deep.
  - 3. MCCs shall be designed to not exceed the indicated spatial requirements, including spaces, spares, and future compartments.
  - 4. MCCs shall be subject to rejection if they exceed the indicated lengths, where allotted space is critical.
  - 5. Equipment within the MCC may be rearranged at the discretion of the manufacturer, providing that the MCC includes the spares, space, and future provisions as indicated and that panelboards are either at the top of their sections or the bottoms are at least 36 inches above the housekeeping pad.
  - 6. Switches and circuit breakers used as switches shall be located such that the center of the grip of the operating handle of the switch or circuit breaker, when in its highest position, will not be more than 6 feet, 7 inches above the floor, including the height of the concrete pad unless provided with a handle extension acceptable to the Authority Having Jurisdiction.

---

26 29 00-4

Low-Voltage Motor Control Centers

Pump Station 26 Improvement Project

## F. Components

### 1. Busses

a. Provide a continuous copper ground bus, full width of the motor control center line-up.

#### b. Horizontal Busses

- The main horizontal bus shall be of silver-plated copper, and located within an isolated compartment.
- The bus shall be rated for 600 amperes minimum, but in no case less than the main lug or main breaker frame size.

#### c. Vertical Busses

- The vertical bus in each section shall consist of a single silver-plated copper conductor per phase, with a current capacity of not less than 300 amps.
- The vertical bus shall be completely isolated and insulated, and shall extend the full height of the section wherever possible.

d. Power buses shall be braced to withstand 65,000 amperes, minimum.

e. The PLC section shall have neither a horizontal nor a vertical bus, in order to allow the maximum room for control components.

### 2. Wireways

a. Provide a separate vertical wireway adjacent to each vertical unit, covered by a hinged door.

b. Each individual unit compartment shall be provided with a side barrier to permit pulling wire in the vertical wireway without disturbing adjacent unit components.

c. Full height (90-inch) compartments or sections are not required to have a separate wireway.

3. Power, control, and signal fuses shall have blown fuse indicators.

4. Control wires shall be color coded in accordance with Section 16120 – Wires and Cabling.

## G. Cabinets

1. Structural members shall be fabricated of not less than 12-gauge steel, and side and top panels and doors shall be fabricated of not less than 14-gauge steel.

2. Spaces designated as SPACE or BLANK shall include blank hinged doors and vertical bus bars.

3. Control units inside compartments shall be clearly identified with tags or stencil markings.

#### 4. Identification

a. Each control unit, including spares, spaces and blanks, lights, and devices shall be identified by an engraved nameplate.

b. Identification shall include the indicated circuit number.

c. Each motor control center shall be fitted with the manufacturer's nameplate which shall include the NEMA Standard electric rating and other pertinent data, including manufacturer, sales order number, date of manufacture, and place of manufacture.

---

26 29 00-5

Low-Voltage Motor Control Centers

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

5. Where "L" or "U" shaped MCC layouts are indicated, corner compartments shall have similar current and short circuit ratings as functional compartments.
6. Fans, heat exchangers, transformers, capacitors, junction boxes, and other devices shall not be mounted on the outside of the motor control center enclosure.
7. Protective Coating
  - a. The finish for motor control center shall be light grey: ANSI 61 or 49.
  - b. The panels shall be coated with 2 coats of primer inside and out, and 2 coats of enamel finish.
  - c. External colors other than ANSI 61 or 49 will not be accepted.

### **2.03 MAIN AND FEEDER CIRCUIT BREAKERS (480 V)**

- A. Circuit breakers having a frame size of 150 amperes or less shall be molded-case type with thermal magnetic non-interchangeable, trip-free, sealed trip units.
- B. Circuit breakers with a frame size of 225 amperes to 1,200 amperes shall be molded case with interchangeable thermal, and adjustable magnetic trip RMS sensing electronic trip elements with the following adjustments:
  1. long-time setting (by changing the unit)
  2. long-time delay
  3. short-time setting
  4. short-time delay
  5. instantaneous setting
  6. ground-fault setting
  7. ground-fault delay
- C. The interrupting capacity of the main and feeder branch circuit breakers shall be a minimum of 65,000 RMS symmetrical amperes.
- D. Service disconnects rated 1000 amps or greater shall provide for ground fault protection of the equipment.
- E. Circuit breaker disconnect operators shall be capable of accommodating 3 padlocks for locking in the OPEN position.
- F. Circuit breaker auxiliary contacts shall be furnished where indicated.

### **2.04 MOTOR STARTERS**

- A. Motor starters shall be mounted in standard motor control center assemblies, arranged as indicated.
- B. Components
  1. Each motor starter unit shall consist of a combination magnetic contactor and short circuit protective device, mounted in a completely enclosed cubicle.
  2. The short circuit protective device shall be an instantaneous, magnetic only circuit breaker: **Cutler-Hammer Type HMCP, G.E. Mag-Break Motor Circuit Protector**, or equal.

---

26 29 00-6  
Low-Voltage Motor Control Centers  
Pump Station 26 Improvement Project

3. Circuit breakers provided as part of a motor starter unit shall be capable of being padlocked in the OPEN position.
4. Resetting of thermal overload elements shall be possible with the unit door closed.
5. Provide 3-phase overload trip units to suit the full load current of the equipment installed, and the trip unit shall be adjusted as required for power factor correction capacitors.

#### C. Magnetic Starters

1. Magnetic starters shall have auxiliary contacts as indicated, including N-O and N-C contacts as indicated, plus one each spare N-O and N-C contact.
2. The combination motor starters shall be draw out-type for Size 5 and below.
3. The fixed-type unit assembly shall be constructed such that it can be easily removed from its panel after disconnecting the wires to the terminal block and withdrawing from the primary bus.
4. Removal of a unit assembly shall be possible without rear access and without disturbing any other unit in the motor control center.

#### D. Control Power Transformer

1. Each starter unit shall have its own control power transformer, with a 115-volt grounded secondary.
2. Provide one secondary fuse and 2 primary fuses.
3. Control power transformers shall be sized to accommodate the indicated control devices.
4. Local control devices shall be mounted independently of the cover door.
5. Starters shall have a local GREEN RUN indicator, and a RED OFF indicator to indicate the presence of control power when the motor is not energized.
6. Starters shall be provided with elapsed time meters, HAND-OFF-AUTO selector switches, and other devices as indicated.
7. Cubicle control wires shall be terminated at a pull-apart disconnecting terminal block located at the cubicle.

#### E. Identification

1. The motor control center manufacturer shall be responsible for identifying each control wire within each motor starter unit with wrap-around permanent plastic markers.
2. Each control wire shall be identified at both ends.

#### F. Full-Voltage Starters

1. Full-voltage motor starter units shall be NEMA Size 1 or larger.
2. Each combination starter shall be rated for a minimum 65,000 RMS symmetrical amperes.

#### G. NEMA Ratings

1. Motor starters shall be designed to NEMA ratings.
2. Starters designed to IEC ratings or with dual IEC/NEMA ratings will not be accepted, either as part of an MCC, as remote starters, or as part of an equipment package.

---

26 29 00-7

Low-Voltage Motor Control Centers

Pump Station 26 Improvement Project

## **2.05 CONTROL DEVICES**

- A. Control devices shall be in accordance with the requirements of Section 26 05 15 – Local Control Stations and Miscellaneous Electrical Devices.
- B. Metering
  - 1. Provide solid-state metering where indicated.
  - 2. Include CTs and PTs of ratios as indicated or as recommended by the MCC manufacturer.
  - 3. The CT leads shall terminate on shorting type terminal blocks, and the shorting bar shall be grounded to the MCC ground bus.
  - 4. Manufacturer, or Equal
    - a. **G.E. – Multilin “PQM” II**
    - b. **EATON - PXM 2260**
    - c. **Allen Bradley – PowerMonitor 3000**
    - d. **Square-D – PowerLogic ION 7300**

## **2.06 FACTORY TESTS**

- A. Provide the manufacturer's standard electrical and mechanical production tests and inspections for motor control centers and their components.
- B. The tests shall include electrical continuity check, dielectric tests for each circuit, and inspection for proper functioning of components including controls, protective devices, metering, and alarm devices.

## **2.07 SPARE PARTS**

- A. The CONTRACTOR shall furnish the following for each MCC:
  - 1. Unit Control Transformer: one of each size furnished in magnetic starters installed
  - 2. Bezels: 3 of each color installed for pilot indicators
  - 3. Panel Lamps: one dozen of each type (form, voltage and current rating) installed
  - 4. Control Fuses: one dozen of each type (form, voltage and current rating) installed
  - 5. Relays: one of each type and size installed
- B. Spare parts shall be identified by MCC number, type, size, and manufacturer.

## **2.08 MCC MANUFACTURER, OR EQUAL**

- A. **EATON Cutler-Hammer Freedom "2100" Series**
- B. **General Electric "8000 Line"**
- C. **Schneider Square-D, Model 6**

## **PART 3 - EXECUTION**

### **3.01 GENERAL**

- A. The CONTRACTOR shall install motor control centers in accordance with the manufacturer's published instructions.

- B. Conduit installation shall be coordinated with the manufacturer's as-fabricated drawings such that conduit stub-ups are within the area allotted for conduit.
- C. Conduit shall be stubbed up in the section that contains the devices to which conductors are terminated.

### **3.02 STORAGE AND HANDLING**

- A. If stored at the Site, motor control centers shall be stored in a clean, dry space.
- B. Factory wrapping shall be maintained or an additional heavy plastic cover shall be provided to protect units from dirt, water, construction debris, and traffic.
- C. The storage space shall be heated or the MCC space heaters shall be energized.
- D. Motor control centers shall be handled carefully to avoid damage to motor control center components, enclosure, and finish.
- E. Damage shall be repaired before installation.

### **3.03 MANUFACTURER'S SERVICES**

- A. General
  - 1. An authorized Service Representative of the manufacturer shall be present at the Site for 3 Work Days in order to provide the services listed below.
  - 2. For the purpose of this paragraph, a Work Day is defined as an 8-hour period, excluding travel time.
  - 3. The service representative's resume shall be approved by the ENGINEER before training is scheduled.
- B. Inspection, Startup, Field Adjustment
  - 1. The Service Representative shall supervise the following items, and shall certify that the equipment and controls have been properly installed, aligned, and readied for operation:
    - a. installation of the equipment
    - b. inspection, checking, and adjusting of the equipment
    - c. startup and field testing for proper operation
    - d. performance of repairs to correct any discrepancies or problems revealed during startup and testing
    - e. performance of field adjustments to ensure that the equipment installation and operation comply with the indicated requirements
    - f. Preparation and submittal of a report covering startup and testing, including a listing of equipment settings and parameters at the end of startup and testing.

### **3.04 INSTALLATION**

- a. Motor control centers shall be installed on 3-1/2-inch concrete pads and in accordance with the requirements of Section 26 00 00 – General Electrical Work.
- B. After leveling and shimming, the CONTRACTOR shall anchor motor control centers to the concrete pads, and shall grout such that no space exists between the pad and support beams.
- C. The CONTRACTOR shall:

---

26 29 00-9  
Low-Voltage Motor Control Centers  
Pump Station 26 Improvement Project

1. torque bus bar bolts to manufacturer's recommendations, and tighten sheet metal and structure assembly bolts;
2. adjust motor circuit protector (MCP) devices to the instantaneous trip setting position recommended for the actual horsepower and full load amps of the motor;
3. verify that overload devices are proper for equipment installed;
4. make necessary changes in overload devices as required for motors having power factor correcting capacitors;
5. touch up scratches after the equipment has been installed;
6. verify that nameplate, and other identification is accurate; and
7. provide high-voltage switchboard matting in front of the MCC, in accordance with the requirements of Section 16050 – General Electrical Work.

### **3.05 FIELD TESTS**

#### **A. Provide a visual and mechanical inspection after installation, as follows:**

1. Inspect for physical damage, proper anchorage, and grounding.
2. Verify that the ratings of the thermal overload heaters match the motor full-load current nameplate data.
3. Check tightness of bolted connections.

#### **B. Electrical Tests**

##### **1. Insulation Tests**

- a. Measure the insulation resistance of each bus section phase-to-phase and phase-to-ground for one minute.
  - b. The test voltage and minimum acceptable resistance shall be in accordance with manufacturer's recommendations.
  - c. Measure the insulation resistance of each starter section phase-to-phase and phase-to-ground with the starter contacts closed and the protective device open.
  - d. The test voltage and minimum acceptable resistance shall be in accordance with the manufacturer's recommendations.
  - e. Measure the insulation resistance of each control circuit with respect to ground.
2. Verify the proper operation of control logic in each mode of control.

**END OF SECTION**

**SECTION 26 29 13**  
**SOLID-STATE REDUCED VOLTAGE STARTERS**

**PART 1 - GENERAL**

**1.01 WORK OF SCOPE**

- A. General: The CONTRACTOR shall provide solid-state reduced voltage motor starters, complete and operable, in accordance with the Contract Documents.
- B. Single Manufacturer: Like products shall be the end product of one manufacturer in order to standardize appearance, operation, maintenance, spare parts, and manufacturer's services. However, the CONTRACTOR shall remain responsible to the OWNER for the WORK of the Contract.
- C. Coordination: Equipment provided under this Section shall operate the electric motor and the driven equipment indicated under other equipment specifications. The CONTRACTOR's attention is specifically directed to the need for proper coordination of the WORK under this Section with the WORK under the equipment section and with the WORK under Section 26 05 10 - Electric Motors.

**1.02 SUBMITTALS**

- A. Furnish submittals in accordance with Section 01 33 03 – Submittal Procedures, except that Shop Drawing information for the drives shall be submitted as part of the information for the driven equipment.
- B. Shop Drawings
  - 1. Equipment information
    - a. Name of drive manufacturer
    - b. Type and model
    - c. Assembly drawing and nomenclature
    - d. Maximum heat dissipation capacity (KW)
  - 2. Written description of ladder diagram operation. Custom schematics shall be furnished. Diagrams shall include remote devices.
  - 3. System block diagram and interconnection diagrams.
  - 4. Replacement parts list and operation and maintenance instructions.

**PART 2 - PRODUCTS**

**2.01 GENERAL**

- A. Solid-state reduced voltage starters (SSRV) shall be UL-listed and consist of a SCR-based power section, logic board, internal paralleling bypass contactor, and forward/reverse contactors.
- B. Starters shall conform to the following:
  - 1. The SCR-based power section shall consist of 6 back-to-back SCRs, 2 SCRs per phase, and shall be rated for a minimum peak inverse voltage rating of 2.5 times line voltage, 1200 PIV for 480 volts. Units using triacs or SCR/diode combinations shall not be

---

26 29 13-1  
Solid-State Reduced Voltage Starters  
Pump Station 26 Improvement Project

acceptable. Resistor/capacitor snubber networks shall be used to prevent false firing of SCRs due to dv/dt characteristics of the electrical system.

2. Starters shall include the following logic and control functions:

- a. Adjustable maximum starting current from 200 percent to 500 percent
- b. Ramp time adjustment from 1 to 40 seconds
- c. Adjustable linear voltage deceleration
- d. Kick start
- e. Phase loss protection
- f. Undervoltage protection
- g. Current unbalance protection
- h. Phase rotation protection (prevents starting)
- i. Class 20 electronic overload protection. Heat sink overtemperature protection shall be provided.
- j. Dry contacts for remote indication of RUN and TRIP status

3. The paralleling bypass contactor shall energize when the motor reaches full speed. The contactor shall be an integral part of the reduced voltage starter and be connected directly across the power SCRs.

4. The starter shall be housed in a NEMA 3R enclosure. Heaters and cooling fans shall be provided if required to maintain the equipment within the manufacturer's environmental guidelines.

5. The starter shall be provided with a control power transformer sized to accommodate controls indicated on the Contract Drawings. An input power circuit breaker shall be provided. Lug termination of the incoming power conductors shall not be permitted. The starter and circuit breaker shall be rated for 65 KAIC RMS at 480 V.

6. The starter shall have door-mounted indication of run, phase rotation, phase loss, undervoltage, current unbalance, and current trip.

7. The starter shall be provided with the operator controls indicated. Operator interface controls shall be heavy duty, oil-tight, 30.5-mm.

8. Starter controls shall be amended with Deragger+ anti-ragging pump management system controllers, one for each starter provided and per contract drawings.

## **2.02 MANUFACTURERS, OR EQUAL**

- A. Solid-state reduced voltage starters shall be **Schneider Electric/Square D Company Altistart 48 with Reversing Contactors, Isolation Contactors, and Modbus TCP Ethernet Connectivity, or approved equal.**

## **PART 3 - EXECUTION**

### **3.01 GENERAL**

- A. The CONTRACTOR shall install the solid-state reduced voltage starters in accordance with the manufacturer's published instructions.

---

26 29 13-2

Solid-State Reduced Voltage Starters

Pump Station 26 Improvement Project

B. The CONTRACTOR shall

1. Verify that the overload devices are properly adjusted for the equipment installed.
2. After the equipment is installed, touch up scratches and verify that nameplate and other identification is accurate.

C. Inspection, Startup, Field Adjustment: An authorized service representative of the manufacturer shall supervise the following and certify the equipment and controls have been properly installed, aligned, and readied for operation.

1. Installation of the equipment
2. Inspection, checking, and adjusting the equipment
3. Startup and field testing for proper operation

END OF SECTION

Solid-State Reduced Voltage Starters

Pump Station 26 Improvement Project

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 26 32 13**  
**STANDBY POWER GENERATION**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall provide an engine-driven standby electrical generating system, complete and operable, in accordance with the Contract Documents.
- B. The CONTRACTOR shall be responsible for coordination of interface with other equipment and for any special construction necessary to complete the WORK of this Section in an acceptable manner.
- C. The supplier of the generator set shall also be the manufacturer of the engine for the generator system; however, the CONTRACTOR shall be responsible to the OWNER for the WORK of this Section.

**1.02 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS**

- A. Materials shall conform with applicable requirements of the National Electrical Code (NEC), and any other State or Municipal codes which apply. Generator system shall meet applicable standards and codes, including IEEE, NEMA, ANSI, OSHA, and UL.

**1.03 SUBMITTALS**

- A. Furnish submittals in accordance with Section 01 33 03 – Submittal Procedures.
- B. Shop Drawings
  - 1. Detailed, dimensioned Shop Drawings and data demonstrating adherence to the requirements of these specifications shall be submitted and approved before fabrication, shipment, or other WORK under this Section begins. Include the manufacturer's certification that engine atmospheric emissions will comply with the limitations.
  - 2. Certified custom drawings and custom wiring diagrams of each component in the system and a master wiring diagram showing the entire system on one sheet. This diagram shall include all AC and DC power control connections between the generator, engine, fuel tank system, batteries, and circuit breakers and shall be a custom drawing for this specific installation. A master drawing of the engine/generator set shall also be provided, showing general dimensions, bill of materials, location and size of all connections for fuel, cooling, exhaust, direct current connections, conduit locations, and connections for control and power wiring. Include wire and terminal numbers for all diagrams. Furnish KW output curves, fuel consumption curves, and certified air emission data sheets.
  - 3. Outline drawings and connection diagrams shall be complete enough to enable the installation to be designed completely, and connection diagrams shall give both internal and external connections. Include foundation loading and clearances.
  - 4. Four copies of complete and detailed instructions for the operation, lubrication, and maintenance of equipment in the system. The manuals shall be furnished after final approval of Shop and working drawings but prior to shipment of equipment. Manuals shall be complete with wiring diagrams, lubrication schedules and recommended lubricants, drawings, cuts, parts lists, and other necessary data. All parts shall be numbered or

April 2023  
REVISED BID SET

otherwise clearly identified to facilitate ordering of replacements. Descriptions of all operational control devices and their functions shall also be included.

#### **1.04 QUALITY ASSURANCE**

- A. Permits from Local Air Quality District: Contractor shall submit engine emissions data and required fees and obtain a "Permit to Construct" from Placer County Air Pollution Control District (PCADCD) in the Owner's name prior to delivery of engine-generator set to job-site.
- B. The engine/generator shall be the product of a manufacturer who has been regularly engaged in the design and production of similar engine/generator sets for a minimum of 10 years.
- C. The supplier shall maintain a local part and 24-hour service facility within the State of California. The supplier shall have factory trained and authorized service representatives to furnish necessary installation, test, and start-up supervision as well as operation and maintenance training necessary for final approval and acceptance.

### **PART 2 - PRODUCTS**

#### **2.01 SYSTEM COMPONENTS**

- A. Provide one new diesel engine-powered electric generator set, in an outdoor, waterproof, walk-in sound attenuated enclosure. The engine generator shall have a nominal standby rating of 130KW, 163KVA, 0.8 power factor, 480 volts, three phase, four wire, grounded neutral, 60 Hertz. The equipment package shall include in general, and as applicable, engine and generator on a common vibration isolating base, with auxiliaries, accessories, and controls, including intake filters, discharge silencer, turbocharger, heat exchangers, foundation bolts, isolators, piping, flexible couplings, supports, complete exhaust piping, ring, and silencer, insulation, control panels, lubrication system, water jacket heaters, cooling system, fuel tank, batteries and battery rack, battery charger, spare parts, and all materials necessary to permit installation, testing and placing the system in successful operation.
- B. Provide one 400-amp frame circuit breaker located in the generator enclosure with 250 amp trip unit.
- C. Provide fuel storage tank with double wall steel construction, integral with the base of the generator-set and generator-set enclosure capable of operating the engine at 100% load for 24 hours minimum.
- D. The generator-set, enclosure, base-mounted fuel tank, and accessories shall be assembled and shipped to the Site as a complete, coordinated package, ready for installation. The engine generator base, cooling system, etc., shall be factory painted before installation in the enclosure.

#### **2.02 SYSTEM OPERATION**

- A. The system shall operate as follows:
  - 1. Automatic Control
    - a. A maintained remote contact closure from the automatic transfer switch shall cause the generator-set to start and run.
    - b. When the remote startup contact opens, the engine shall continue to operate for an adjustable cool-down time (typically 5 to 30 minutes).

---

26 32 13-2

Standby Power Generation

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

2. Local Control: The generator-set shall be capable of manual initiation or stopping from the locally mounted generator control panel. The local generator control panel shall be provided as part of this Contract.
3. Emergency Stop Control: An emergency stop pushbutton shall be provided at the generator control panel that shall cause the unit to stop without any delay.

### 2.03 ENGINE

- A. The CONTRACTOR shall provide a complete engine-powered standby electrical generating system of the type and capacity indicated.
- B. The diesel engine shall be mounted on a common base with the generator and the direct connected radiator and shall be rated for standby service, continuously for the duration of the electric power interruption, with engine jacket water cooled by means of a direct mounted water-to-air radiator under SAE conditions at 85 degrees F, 1500 feet above sea level. It should be noted that this is the rating of the engine.
- C. The minimum generator rating shall be 125 KW.
- D. The diesel engine shall be four-cycle, turbocharged, aftercooled, 1800 rpm, with individual fuel pumps and injection valve for each cylinder.
- E. The generator-set shall be **Cummins**, or approved equal.
- F. The engine shall have a dry type air cleaner with service indicator, fuel oil filter, full pressure positive pump lubrication with full-flow oil filters, thermostatic regulated oil cooling system, and crankcase drain with valving to be able to drain the crankcase oil without reaching under the engine.
- G. The engine shall also be equipped with two 120 volt, thermostatically controlled jacket water heaters. Power shall be derived from a suitably-rated dry-type transformer and panelboard, also provided as part of the generating system, and including facilities to provide power to the battery charger, fuel oil transfer pumps if required, and other generator-related facilities.
- H. The diesel engine shall perform as indicated when operating on a commercial grade of non-premium distilled petroleum fuel oil such as No. 2 domestic burner oil and diesel fuel.
- I. The engine shall be equipped with an electric 12 or 24 volt dc starting system of sufficient capacity to crank at a speed which will start the engine under conditions indicated. Include a charging alternator. The starting pinion shall disengage automatically when the engine starts. The starting system shall include relays for fully automatic operation from a remote signal.
- J. The engine shall be provided with electronic governor system capable of automatic isochronous frequency regulation.
- K. The engine shall minimize discharge of gaseous pollutants and shall comply with the discharge limitations of the Air Quality Management District. The CONTRACTOR shall furnish a certification from the manufacturer that the proposed generator set will comply with the limitations.

### 2.04 BATTERIES AND BATTERY CHARGER

- A. Battery: Provide a lead-acid storage battery with sufficient capacity for three 30 second cranking cycles, allowing 10 seconds between cycles. Submit calculations verifying adequate capacity. The battery shall be on a plastic rack as close as practical to the starter motor. The CONTRACTOR shall provide vented, nonmetallic protective covers or red and black plastic or rubber boots

---

26 32 13-3

Standby Power Generation

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

covering all terminals to protect against an accidental short circuit as might be caused by laying a metallic object on the battery. Metallic racks and covers are not acceptable.

- B. Battery Charger: A unit-mounted battery charger for 120 V, single phase, 60 Hz input shall be provided. The battery charger shall be voltage regulated, with separate float and equalize charge voltage adjustment having a 10 amp rating. The battery charger shall include alarm relays to sense high and low dc voltage, zero current, and ac power failure, with individual output contacts wired to terminal strips for tie into remote alarms. Also, provide an ac "on" indicating pilot LED light and dc voltmeter and ammeter and annunciator. The battery charger shall be as recommended by generator-set provider.

## **2.05 EXHAUST SYSTEM**

- A. The engine shall be provided with an exhaust system consisting of flexible connection, exhaust silencer, steel piping, fittings, stainless steel hardware and supports, brackets, and rain collar.
- B. The flexible connection shall be of the stainless-steel bellows type with flanged ends. Flexible elements shall be stainless steel suitable for exhaust temperatures recommended by the engine manufacturer. The flexible connection shall be suitable for vibration isolation and for relieving stress caused by thermal expansion.
- C. The exhaust silencer shall be a critical grade manufactured by **Maxim**, or equal.
- D. Exhaust piping shall be pitched upward from the engine and be provided with sufficient drains to eliminate condensation and rain water. Exhaust piping shall be welded steel pipe. Elbows shall be welding type, standard wall. Flanges shall be welding slip-on type, 125 pound, either forged or plate steel. Exhaust piping shall be supported independently of the silencer. The silencer and exhaust piping shall be insulated with a minimum of 2-1/2 inches of calcium silicate with a stainless steel jacket and shall be supported as required. The weight of the exhaust and silencer shall not be supported by the engine.

## **2.06 COOLING SYSTEM**

- A. The engine shall be equipped with a cooling system having sufficient capacity to effectively cool the engine when delivering full rated horsepower at the conditions stated above. A radiator and engine-driven fan of a type and capacity recommended by the engine manufacturer shall be included.
- B. The radiator shall be sized in accordance with the engine manufacturer's recommendation for use with 50 percent aqueous ethylene glycol. Air flow shall be controlled by a power inlet damper and a gravity discharge damper, both provided as part of the walk-in outdoor enclosure. Design ambient air temperature shall be 100 degrees F at sea level.
- C. The engine shall have an engine-driven, gear driven centrifugal type water circulating pump for circulating water through the cooling system.

## **2.07 GENERATOR**

- A. The generator shall be nominally rated 130 KW at .8 PF, 480 V 3 phase, 60 Hz, 4 wire wye and shall be a brushless design with solid state permanent magnet generator (PMG) exciter. Other excitation methods are not acceptable. The voltage regulator shall be solid state, generator mounted. Provide radio-interference suppression meeting commercial standards.
- B. If a line to neutral short circuit occurs, the generator shall be capable of supporting 300 percent rated current for 10 seconds without externally mounted devices.

---

26 32 13-4

Standby Power Generation

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

- C. Voltage Regulation Tolerance: Plus or minus 1 percent of any present value over the 3 phase load range. Instantaneous voltage dip or rise, when measured with an oscilloscope, shall not exceed 25 percent upon full load application or rejection, and shall return to preset value within 0.5 seconds.
- D. Waveform: Deviation factor of output voltage shall not exceed 5 percent and the value of any individual harmonic shall not exceed 2 percent of the fundamental when operating with an unbalanced load.
- E. Temperature Rise: Temperature rise of any component shall not exceed the rise permitted by NEMA standards. The voltage regulator shall be adjustable minus 25 percent to plus 10 percent.
- F. Bearing: Double sealed ball bearing, lubricated for life.

## 2.08 VIBRATION ISOLATORS

- A. The engine and generator shall be mounted on a common system base and shall be provided with vibration isolators of number and size as recommended by the engine supplier to support the engine, generator, radiator, and base. The isolation mountings shall consist of steel or cast iron top and bottom housings incorporating steel springs or "donut" style isolators, located between the genset and the base, and shall be provided with built-in leveling bolts and built-in resilient chocks to control isolation and withstand lateral forces in all directions.
- B. The vibration isolators shall be **Korfund Dynamics Corporation Series L**, or equal.

## 2.09 LUBRICATION AND COOLING FLUIDS

- A. The supplier shall furnish the engine fully charged with lubricating oil and grease as specified by the manufacturer for continuous service. The cooling system shall be furnished with a full charge of 50 percent ethylene glycol.

## 2.10 GENERATOR SYSTEM CONTROL PANEL

- A. The engine shall be provided with an integrally mounted instrument and control panel, vibration isolated, NEMA 12 compliant, dead front, constructed of 14-gauge steel and containing at least the following equipment:

|                                                                                        |
|----------------------------------------------------------------------------------------|
| Coolant temperature gauge                                                              |
| Oil pressure gauge                                                                     |
| Four position selector switches marked for "auto," "manual," "stop," and "stop/reset." |
| Automatic starting controls (2 wire start/stop)                                        |
|                                                                                        |
| Coolant level pre-alarm                                                                |
| Coolant temperature pre-alarms (low and high)                                          |
| Fuel pressure pre-alarm                                                                |

|                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Low dc voltage alarm to indicate loss of charge on battery                                                                                                                                |
| Electrical contacts and "push to test" pilot lights for shutting down the engine on low oil pressure, high oil temperature, over-crank, high coolant temperature, and overspeed condition |
| Individual electrical contacts for remote indication of any pre-alarm or alarm condition                                                                                                  |
| Running Time Meter (Non Resettable)                                                                                                                                                       |
| Emergency stop switch                                                                                                                                                                     |
| Voltmeter and switch, ammeter and switch, frequency meter                                                                                                                                 |

#### B. Wiring

1. Signal wiring shall be segregated from power wiring and be arranged neatly to facilitate tracing of circuits.
2. Plastic wiring wraps shall be used to bundle wires, except within wiring ducts. The bundles shall be securely fastened to the steel structure at suitable intervals not exceeding 12-inches in length. No open space hanging of wires will be permitted. Flexible stranded copper wiring shall be used throughout. No solid conductor wire shall be permitted.
3. Terminal blocks shall be provided for interconnections between remote devices and local control panel wiring. The terminal blocks shall be factory assembled on a mounting channel, and the channel shall be bolted to the inside of the panel. The terminals shall have a continuous marking strip using the nomenclature on the schematic diagrams. No more than 2 wires shall be terminated at any one terminal. Wire terminals shall have sleeve wire markers properly marked to match the schematic diagrams.

### 2.11 GENERATOR ENCLOSURE AND FUEL TANK

#### A. Generator Enclosure

1. A weatherproof, sound attenuated, walk-in type enclosure shall be provided to house the engine/generator and accessories. The following standards and codes shall be met at a minimum:
  - a. NEPA 70 (National Electric Code)
  - b. NFPA 30
  - c. NFPA 37
  - d. NFPA 110
  - e. UL 142
  - f. API 620
2. The enclosure shall be constructed with an aluminum diamond plate finished floor for mounting on a concrete pad. The enclosure shall conform to the following design criteria.

|                             |           |
|-----------------------------|-----------|
| Rigidity wind test equal to | [150] MPH |

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

|                             |                                           |
|-----------------------------|-------------------------------------------|
| Roof load equal to          | [50] lbs. per sq. ft.                     |
| Floor load equal to         | [200] lbs. per sq. ft.                    |
| Rain test equal to          | [4]-inches per hour                       |
| Enclosure certified to meet | [BOCA base building and mechanical codes] |

3. Test data on similar construction by the manufacturer shall be available to the ENGINEER upon request.
4. Enclosure shall consist of a roof, steel floor, fuel tank base, 2 side walls and 2 end walls, of stressed skin, semi-monocoque construction, sized as required to meet dimensional, sound attenuation, and code requirements for the actual generator provided.
5. The system shall include a cooling and combustion air inlet silencer section, an equipment enclosure section, and a cooling air discharge silencer section. It shall be designed to reduce source noise by an estimated average 75 dB(A) as measured at a distance of 7-meters from the enclosure. The enclosure shall also be bird- and rodent-proof with all openings screened.
6. Roof and walls shall be of one-piece semi-monocoque construction. Framing members shall be aluminum or aluminized steel. Skin material shall be minimum thickness 0.040-inch, pre-painted earth bronze color, aluminum (roof shall be mill finish) or minimum thickness 18-gauge aluminized steel. Other materials of construction may be acceptable; however, the CONTRACTOR shall furnish data verifying that the proposed system is equivalent or better than that indicated. Alternative skin colors may be submitted to the ENGINEER for selection. Skin panels shall be hard-riveted to framing members on 3-inch centers maximum. Pop rivets and bolts are not acceptable fasteners to attach exterior skin to framing. Roof assembly shall be cambered to aid in rain runoff.
7. Insulation in walls and roof shall be semi-rigid, thermo acoustic, thickness as required to meet the noise criteria. Lining shall be perforated mill finish aluminum. Self-adhesive foam and loose or batt-type insulating materials will not be accepted.
8. Lifting provisions shall be provided at the enclosure base, with capacity suitable for rigging the entire assembly. Quality assurance procedures of the manufacturer shall include regular testing of the lift devices.
9. A minimum of 4 single personnel access doors shall be provided. A hinged access door for the load bank controls shall also be provided. Doors shall consist of an extruded frame with skin material matching enclosure. Doors shall be fully gasketed to form a weathertight perimeter seal and be pad-lockable. Hinges shall be stainless steel, and lock mechanisms shall be 3 point, with panic hardware to allow opening from inside even when padlocked. The door threshold, if needed, shall be aluminum. Stairs and handrails shall be aluminum and shall be manufactured to meet field-installed conditions.
10. Air handling shall be as follows: Air shall enter the enclosure through a removable hood. Motor-operated dampers shall be provided, wired to be spring operated to open upon engine startup. Radiator discharge shall be through a gravity-operated damper and into a hood.

---

26 32 13-7

Standby Power Generation

Pump Station 26 Improvement Project

The system shall not exceed 0.5-inch wg total external static pressure to ensure adequate airflow for cooling and combustion.

11. A bolt-in-place removable end wall panel shall be provided for maintenance and/or equipment installation. Bolts, nuts, and washers shall be stainless steel.
12. Enclosure manufacturer shall provide all necessary hardware to externally mount the exhaust silencer and maintain the weatherproof integrity of the system. A bird screen shall be installed on exhaust outlet.
13. An electrical package shall include minimum four 100 watt incandescent lights, one battery-backed emergency light with two 25 watt heads, one light switch, and one duplex GFCI receptacle. These items, as well as the motor-operated air inlet damper, shall be factory wired to a 60A 120/240V Load Center. Input power to the load center shall be as indicated.

**B. Sub-base Fuel Storage System**

1. Provide a double wall secondary containment sub-base fuel tank mounted within or beneath the structural skid below the generator set. The tank shall have fuel level gauge, fill, vent, bottom drain, top supply and return lines.
2. The tank shall have venting and emergency venting per UL 12 and NFPA 30; lockable fill, low-level, and high-level alarm contacts; and a dc electric analog fuel level gauge. The rupture basin shall include a float contact to indicate tank rupture. The crossmembers shall incorporate 3/8-inch thick steel tapping plates for gen-set mounting. The entire enclosure/fuel tank package shall be UL listed for use with a diesel engine generator system and shall meet the previously indicated codes and standards.
3. The fuel storage tank capacity shall be sufficient for operating the engine at 100% load for 24 hours, generator rating.
4. Pipe and Fittings
  - a. Pipe and fitting materials shall be new and the best of their respective classes. Pipe shall be clearly marked with the manufacturer's standard trade mark or identification mark. Pipe and fittings, unless otherwise indicated, shall meet the requirements of these specifications.
  - b. Piping carrying fuel oil shall be copper type "L" with wrought copper fittings silver soldered. Flexible connections shall be provided between fuel lines and the engine.
5. Hangers, Supports, and Miscellaneous Metalwork: The CONTRACTOR shall provide all necessary hangers, supports, concrete inserts, anchors, and guides for the standby generator equipment.
6. Valves: The CONTRACTOR shall provide ball valves for installation at all required points and on at least each fuel supply line. Ball valves shall be stainless steel, rated 125 pounds working pressure and in every respect be suitable for the purpose intended.

**2.12 SPARE PARTS**

- A. Four sets of the following spare parts shall be furnished:
1. Air filters
  2. Oil filters
  3. Fuel filters

REVISED BID SET

## **PART 3 - EXECUTION**

### **3.01 START-UP ASSISTANCE AND TRAINING**

- A. The manufacturer's representative shall furnish on-Site start-up assistance and shall inspect the installation prior to start-up to verify that equipment is installed in accordance with the manufacturer's requirements.
- B. Upon completion of startup and after acceptance by the OWNER, the CONTRACTOR shall completely fill the fuel tank.
- C. In addition, the manufacturer's representative shall provide on-Site training for operation and maintenance of all equipment included in this Section.
- D. The following times shall be included, as a minimum, for the above tasks. A Day is defined as 8 hours on-Site, exclusive of meals and travel. Each task shall be considered a separate trip to the site. Dates and times for the trips shall be coordinated with the OWNER.
  - 1. Inspection of the installation: One Day
  - 2. Startup assistance: One Day
  - 3. Operation and Maintenance Training: One Day

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

#### **1.04 WARRANTY**

- A. The system warranty shall be no less than one year after initial startup and shall include all costs for repair, parts, travel and living expenses, and labor.

#### **1.05 SUBMITTALS**

- A. The CONTRACTOR shall submit Shop Drawings of the Automatic Transfer Switch in accordance with the requirements for of Section 01 33 03 –Submittal Procedures.
- B. Equipment ratings and characteristics including voltage ratings, continuous current ratings, fault current withstand ratings, neutral bus ratings, enclosure type, ratings and arrangement of overcurrent protective devices.
- C. Outline and dimensional drawings and conduit entry restrictions.
- D. Nameplate designations, sizes and mounting methods.
- E. ATS information on setpoints and methods for adjusting settings.
- F. Short circuit rating of the complete assembly
- G. Replacement parts lists and operation and maintenance procedures
- H. Seismic design certification of the anchoring system in accordance with Section 26 05 48.

#### **1.06 FACILITY OPERATION AND MAINTENANCE MANUALS**

- A. General
  - 1. Submit complete operation and maintenance manual in accordance with the requirements of Section 01 33 03.13 – O&M Manual Review Checklist.
- B. The CONTRACTOR shall submit operation and maintenance procedures for the ENGINEER's review. The data sheets shall be supplemented by written text and shall include the following:
  - 1. Operating procedures.
  - 2. Maintenance procedures.
  - 3. Manufacturer's parts list, illustrations, assemblies, and diagrams.

### **PART 2 - PRODUCTS**

#### **2.01 GENERAL**

- A. Materials: All materials and equipment provided under this Specification shall be new; they shall be in accordance with the requirements of the Institute of Electrical and Electronic Engineers, the National Electrical Manufacturer's Association, the National Fire Protection Association, and the National Electrical Code. Where available, all materials and equipment shall bear the Underwriters' Laboratories label.
- B. Equipment: All equipment for the same purpose shall be of the same make.
- C. Enclosure Requirements: All outdoor equipment, fixtures, and wiring devices shall be of approved, weatherproof construction.
- D. Standard Products: Materials and equipment submitted for approval shall be the cataloged products of companies regularly engaged in the manufacture of such items, of the latest standard design that conforms to the specification requirements, and shall essentially duplicate material and equipment that has been in satisfactory use for several years.

26 36 23-2

Automatic Transfer Switch

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## 2.02 AUTOMATIC TRANSFER SWITCH

- A. The automatic transfer (ATS) switch shall be a 3-pole, double-throw, with in-phase monitor rated at 480 volts, with the continuous current rating shown.
- B. The ATS switch shall be able to withstand the short circuit currents indicated or shall have the same withstand rating as the switchboard in which it is installed.
- C. The load terminals of the ATS switch shall be de-energized when the ATS switch is in the neutral position; the duration of the neutral position shall be adjustable from zero to 30 seconds. The ATS switch shall comply with requirements of ANSI/UL 1008 and ANSI/NEMA ICS-2.
- D. The ATS switch shall be manually operable but the manual operating mechanism shall be declutched when the electric operator becomes energized. Mechanical and electrical interlocks shall be provided to prevent simultaneous closure of the normal and emergency positions.
- E. The automatic transfer switch shall include integrated controls featuring solid state timing and sensing relays. Protective features and indicators shall include:
  - 1. Three-phase, close-differential undervoltage protection on the Normal source; dropout shall be adjustable from 80-85 percent; pick-up shall be adjustable from 90-95 percent.
  - 2. Engine start and run contact closure; contact closure shall be adjustable from zero to 120 seconds after failure of the Normal source is detected. The engine run contact shall remain closed for an adjustable period of zero to 5 minutes (cool down period) after the load has been transferred back to the normal source.
  - 3. Circuitry shall be provided to prevent transfer to the Emergency source until Emergency source voltage and frequency are within 90 percent of nominal values.
  - 4. Adjustable time delay of retransfer of up to 10 minutes after the voltage of the Normal source has attained the pick-up setting specified in the foregoing Item No. 1 on all phases.
  - 5. The automatic transfer switch shall be equipped with indicator lamps for the Normal and Emergency positions. Two "dry" contacts shall be provided for the Emergency position and one "dry" contact for the Normal position; said contacts shall be wired to identified terminals.
  - 6. Three-position selector switch: TEST-OFF-AUTO; the AUTO position shall cause engine start-up, transfer, and retransfer of the load on failure and subsequent restoration of the Normal source. The TEST position shall simulate failure of the Normal source for however long the switch is in the Test position.
- F. The automatic transfer switch shall be as manufactured by **ASCO 7000 Series, EATON**, or equal.

## PART 3 - EXECUTION

### 3.01 INSTALLATION - GENERAL

- A. All electrical equipment shall be installed securely in place. Equipment shall be mounted parallel and perpendicular to the walls, floors, and ceilings.
- B. All anchors and fasteners shall be types designed for the intended purpose and shall be capable of adequately, safely, and permanently securing the material in place. Generally, screws shall be used on wood surfaces, masonry anchors in concrete or brick, toggle bolts on hollow walls, machine screws, bolts, or welded studs on steel. Nails shall be used only for temporary attachment or support.

26 36 23-3

Automatic Transfer Switch

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- C. Omissions or conflicts on Drawings or between Drawings and Specifications shall be brought to the attention of the ENGINEER for clarification before proceeding with the work.
- D. The CONTRACTOR shall make all necessary provisions throughout the Site to receive all equipment as construction progresses and shall provide adequate backing, supports, inserts, and anchor bolts for the hanging and support of all electrical cabinets, enclosures, conduits, panelboards, and switches, and shall provide sleeves through walls, floors, or foundations where electrical lines are required to penetrate.
- A. Floor standing equipment shall be leveled with shims as required to maintain horizontal surfaces within 1/32-inch per horizontal foot; after leveling, equipment shall be anchored, then grouted so that no space exists between concrete and equipment support beams.

### **3.02 PREPARATION AND FINISH SYSTEMS**

- A. All equipment cabinets or enclosures furnished under this Section shall have a finish that will conform to Section 26 29 00 - Low-Voltage Motor Control Center.

END OF SECTION

WWE Project: 21-060

April 2023  
REVISED BID SET

**SECTION 26 43 00**  
**SURGE PROTECTION DEVICES (SPD)**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. Provide all labor, materials, equipment, and incidentals as shown, specified, and required to furnish and install surge protective devices (SPD).
- B. SPDs furnished under this Section shall be ANSI/UL 1449 Type 2 integrating both surge suppression and high-frequency noise filtering suitable for use on low-voltage distribution systems.
- C. The requirements of Section 26 00 00 – General Electrical Work, apply to the WORK of this Section

**1.02 REFERENCE SPECIFICATIONS, CODES, AND STANDARDS**

- A. Reference Standards:
  - 1. ANSI/UL 1449, Fourth Edition, Safety Surge Protective Devices
  - 2. IEEE C62.41.1, Guide on the Surge Environment in Low-Voltage (1000V and Less) AC Power Circuits
  - 3. IEEE C62.45, Recommended Practice on Surge Testing for Equipment Connect to Low-Voltage (1000V and Less) AC Power Circuits
  - 4. UL 1283, Safety Electromagnetic Interference Filters
  - 5. NFPA 70, National Electric Code

**1.03 SUBMITTALS**

- A. Furnish submittals in accordance with Section 26 00 00 – General Electrical Work, General.
- B. Shop Drawings:
  - 1. Electrical and mechanical drawings for each type of unit, showing electrical ratings, dimensions, mounting provisions, connection details, and layout diagrams.
- C. Product Data:
  - 1. Manufacturer's technical information, including catalog information.
  - 2. Manufacturer's technical specifications with assembly and component ratings.
- D. Certifications: Certification that SPD devices comply with standards referenced in this Section.

**1.04 QUALITY ASSURANCE**

- A. Qualifications:
  - 1. Manufacturer: Shall have at least five (5) years' experience manufacturing and servicing products substantially similar to those required and shall be able to submit documentation of at least 5 installations in satisfactory operation for at least five (5) years each.
- B. Component Supply and Compatibility:
  - 1. Obtain all products included in this Section regardless of component manufacturer from a single SPD manufacturer.
  - 2. SPD manufacturer shall review and approve or prepare all Shop Drawings and other submittals for all components furnished under this Section.

---

26 43 00-1  
Surge Protection Devices (SPD)  
Pump Station 26 Improvement Project

3. Components shall be suitable for the specified service conditions and shall be integrated into overall assembly by SPD manufacturer.

## **PART 2 - PRODUCTS**

### **2.01 GENERAL**

- A. SPD shall be modular, high-energy, parallel design with fast-acting transient voltage suppression using metal oxide varistors. Equipment shall provide noise attenuation with electromagnetic interference filter.
- B. SPD shall be suitable for operation under the following environmental conditions:
1. Relative Humidity: Zero to 95%, non-condensing
  2. Frequency: 47 to 63 Hz
  3. Temperature: Zero to 149°F
  4. SPD operating voltage shall be suitable for the associated SPD location(s).
  5. SPD shall be suitable for internal and external mounting. SPD shall be factory-mounted and integrated into distribution equipment specified under the following Sections:
    - a. Section 26 00 00 – General Electrical Work
    - b. Section 26 12 16 – Panelboards and General-Purpose Dry Type Transformers
    - c. Section 26 29 00 – Low-Voltage Motor Control Centers
- C. SPD shall include a surge suppression path for each mode as required for the system configuration. Each mode shall be individually fused and equipped with thermal cutouts. SPD short-circuit current rating shall be 200 kA. Protection modes shall include, to the extent applicable, the following:
1. Line-to-line
  2. Line-to-neutral
  3. Line-to-ground
  4. Neutral-to-ground
- D. SPD shall include electromagnetic interference/radio frequency interference (EMI/RFI) noise rejection filter with attenuation up to 30 dB from 10 kHz to 100 MHz.
- E. SPDs and components in the operating path shall have maximum continuous operating voltage greater than 115% of nominal system operating voltage.
- F. ANSI/UL 1449 minimum withstand rating shall be 20 kA per pole, and ANSI/UL 1449 voltage protection rating for SPD shall not exceed the following:

| <b>Modes</b> | <b>208Y/120</b> | <b>480Y/277</b> |
|--------------|-----------------|-----------------|
| L-N,L-G, N-G | 800             | 1200            |
| L-L          | 1200            | 2000            |

- G. SPD surge capacity based upon IEEE C62.41 location category shall, as a minimum, be the following:

| <b>Category</b> | <b>Application</b> | <b>Per Phase</b> | <b>Per Mode</b> |
|-----------------|--------------------|------------------|-----------------|
| C               | Service entrance   | 240 kA           | 120 kA          |

---

26 43 00-2

Surge Protection Devices (SPD)

Pump Station 26 Improvement Project

|   |                                                     |        |       |
|---|-----------------------------------------------------|--------|-------|
| B | High exposure locations<br>(distribution equipment) | 160 kA | 80 kA |
| A | Branch locations                                    | 120 kA | 60 kA |

H. Provide SPD equipped with the following accessories:

I. Surge counter with display for indicating the number of surges detected.

J. LED indicators for monitoring device status.

K. Audible alarm and silence switch for indicating an inoperative condition.

L. Dry contacts, "form C", for remote annunciation of unit status.

M. Source Quality Control: Perform manufacturer's standard factory tests on equipment. Tests shall be in accordance with ANSI/UL 1449.

N. Manufacturers: **General Electric, Eaton, Schneider Electric/Square D Company, or approved equal.**

### **PART 3 - EXECUTION**

#### **3.01 GENERAL**

A. Install SPD in accordance with equipment manufacturer's written recommendations and instructions and the Contract Documents.

B. Where an SPD cannot be installed integral with the equipment to which it is connected, conductor length between suppressor and connection point shall be as short and as straight as possible.

REVISED BID SET

### 1.03 SUBMITTALS

- A. Furnish the following product information in accordance with the requirements of Section 01 33 03 – Submittal Procedures.
- B. Furnish the following information:
  - 1. Interior Luminaires
    - a. catalog data sheets and photos
    - b. luminaire finish and metal gauge
    - c. lens material, pattern, and thickness
      - candlepower distribution curves in 2 or more planes
    - d. candlepower chart, 0 to 90 degrees
    - e. lumen output chart
    - f. average maximum brightness data in foot-lamberts
    - g. coefficients of utilization for zonal cavity calculations
    - h. mounting or suspension details
    - i. heat exchange and air handling data
  - 2. Exterior Luminaires
    - a. catalog data sheets and photos
    - b. luminaire finish and metal gauge
    - c. lens material, pattern, and thickness
    - d. IES lighting classification and Isolux diagram
    - e. fastening details to wall or pole
    - f. ballast type, location, and method of fastening
    - g. for light poles: wind loading; complete dimensions; and finish
  - 3. Lamps
    - a. voltages
    - b. colors
    - c. approximate life (in hours)
    - d. approximate initial lumens
    - e. lumen maintenance curve
    - f. lamp type and base
  - 4. Ballasts

## **PART 2 - PRODUCTS**

### **2.01 LUMINAIRES**

A. General

- 1. Additional WORK requirements are indicated in the Luminaire Schedule on the Drawings.
- 2. Fluorescent luminaires that utilize double-ended lamps and contain ballast(s) that can be serviced in place shall be provided with a disconnecting means either internal or external to each luminaire, in accordance with the requirements of Article 410.130(G)(1) of the 2020 NEC.

B. Provide a feed-through type or separate junction box.

C. Provide 2-lamp ballasts when possible.

D. Tandem-wire luminaires for 3-lamp fluorescent luminaires.

E. Provide minimum 18 AWG wire leads.

F. Provide components that are accessible and replaceable without removing the luminaire from the ceiling.

G. Soffit Installations

- 1. Installations shall be UL-labeled as "Suitable for Damp Locations."
- 2. Provide removable and prewired ballasts.

H. Exterior Installations

- 1. Installations shall be UL-labeled as "Suitable for Wet Locations."
- 2. Provide removable and prewired ballasts.
- 3. When factory-installed photocells are provided, the entire assembly shall be UL-labeled.

REVISED BID SET

I. Emergency Lighting

1. Power Pack

- a. self-contained
- b. 120 V
- c. 6 V sealed lead-calcium, maintenance free
- d. indicator switch in accordance with the requirements of UL 924

2. lighted, push-to-test pushbutton and indicator

3. capability of providing full illumination for 1-1/2 hours in emergency mode

4. capability of full recharge in 24 hours, automatically initiated upon resumption of normal line voltage

5. capability of protecting against excess charging and discharging

6. twin halogen, sealed lighting heads

7. solid state charger

8. normal and emergency LED indicating lights

9. Provide a 3-wire power cord and plug set.

10. mounting stand

11. time delay relays in order to maintain emergency lighting in areas illuminated by HID luminaires for 5 minutes after normal power has been restored.

12. Provide NEMA-rated enclosures in accordance with the area classifications in which they are installed.

J. Exit Signs

1. internally illuminated

2. universal mounting type

3. internal 6V sealed lead-calcium, maintenance free battery

4. battery charger

5. LED-type emergency and normal indicating lights

6. press-to-test button

7. directional arrows

8. red letters on a white panel

**2.02 LAMPS**

A. Light Emitting Diode (LED)

1. High

2. Efficiency Type: energy

3. Color: per schedule

B. Manufacturer, or Approved Equal

1. Cooper Crouse (EATON)

REVISED BID SET

2. Lithonia

**2.03 LED DRIVER**

A. General

1. UL-Listed, ETL-certified
2. high power factor, energy-efficient type
3. Driver shall meet luminaire requirements.
4. LED driver shall be UL listed with integral short circuit, overload and overheat protection.
5. Power factor >90% and total harmonic distortion THD <20%.
6. Provide driver capable of operating on 120, 208V.
7. Driver shall have minimum 3 years warranty and rated for 50,000 hours.

**2.04 LIGHTING CONTROL**

A. Photocell

1. Photo Control: automatic ON-OFF switch
2. Housing: self-contained; die-cast aluminum; unaffected by moisture, vibration, or temperature changes
3. Settings: ON at dusk; OFF at dawn
4. Provide a time delay feature in order to prevent false switching.
5. field-adjustable to control operating levels
6. Manufacturer, or Equal
  - a. **Tork**
  - b. **Paragon**

**2.05 POLES**

- A. Rating (with luminaire): 125-mph steady winds without incurred damage
- B. Material: steel
- C. one-piece stationary type

**PART 3 - EXECUTION**

**3.01 LUMINAIRES**

A. General

1. Install in accordance with the manufacturer's recommendations.
2. Provide necessary hangers, pendants, canopies, and other accessories.
3. Provide additional ceiling bracing, hanger supports, and other structural reinforcements to the building as required to safely mount the luminaire.
4. Install the luminaire plumb and level.
5. The mounting heights indicated for wall-mounted or pendant-mounted luminaires are from the bottom of the luminaire to finished floor or finished grade, whichever is applicable.

26 50 00-5  
Lighting

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

6. Install each luminaire outlet box with a galvanized stud.

B. Pendant Mounting

1. Provide swivel-type hangers and canopies to match the luminaires, unless otherwise indicated.
2. Space single-stem hangers on continuous-row fluorescent luminaires 48 inches apart.
3. Provide twin-stem hangers on single luminaires.

C. Pole Mounting

1. Provide a cast-in-place concrete base.
2. Install the pole base flush with the finished grade where located in grassy areas not subject to vehicular traffic, and 30 inches above the finished grade when the pole is located in areas subject to damage from vehicular traffic.
3. Set the luminaire poles on anchor bolts and secure with double nuts on each bolt.
4. After the luminaire has been leveled and plumbed, dry-pack the luminaire base with grout.

D. Finished Areas

1. Install the luminaires symmetrically with tile pattern.
2. Locate with the centerline of tile or with centerline of the joint between adjacent tile runs.
3. Install recessed luminaires tight to the finished surface such that no spill light will show between the ceilings and the sealing rings.
4. When installing on combustible low-density cellulose fiberboard, provide spacers and mount luminaires 1-1/2 inches from ceiling surface, or use luminaires suitable for mounting on low-density ceilings.

5. Junction Boxes

- a. Flush and Recessed Luminaires: Locate a minimum of one foot from the luminaire.
- b. In concealed locations, install junction boxes to be accessible by the removal of the luminaire.

6. Wiring and Conduit

- a. Provide wiring of a suitable temperature rating as required by the luminaire.
- b. Provide flexible steel conduit.

7. Provide plaster frames when required by ceiling construction.

8. Independent Supports

- a. Provide each recessed fluorescent luminaire with 2 safety chains or 2 No. 12 soft-annealed galvanized steel wires of length needed to secure the luminaire to the building structure, independent of the ceiling structure.
- b. Ensure that the tensile strength of chain or wire, and the method of fastening to the structure, is adequate to support the weight of the luminaire.
- c. Fasten the chain or wire to each end of the luminaire.

E. Unfinished Areas

---

26 50 00-6  
Lighting

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

1. Locate the luminaires to avoid conflicts with other building systems and blockage of the luminaire light output.
2. Luminaire Suspension
  - a. Provide 1/4- inch threaded steel hanger rods.
  - b. Scissor-type hangers will not be accepted.
3. For attachments to steel beams, provide flanged beam clips and straight or angled hangers.

### **3.02 LAMPS**

- A. Within each luminaire, provide the number and type for which the luminaire is designed, unless otherwise indicated.

### **3.03 LED DRIVERS**

- A. Install in accordance with the manufacturer's recommendations.
- B. Use LED driver mounting holes to fasten the driver securely within the luminaire.
- C. Replace noisy or defective drivers.

### **3.04 LIGHTING CONTROL**

- A. Outdoor Luminaires
  1. The photocells shall switch lights ON at dusk and OFF at dawn.
- B. Dimming Systems
  1. Install in accordance with the manufacturer's recommendations.
  2. Do not connect ballasts or equipment to the dimming system unless such connections are acceptable to the dimming system manufacturer.

### **3.05 CLEAN-UP**

- A. Remove labels and other markings, except the UL listing mark.
- B. Wipe the luminaires inside and out in order to remove construction dust.
- C. Clean the luminaire plastic lenses with an antistatic cleaner only.
- D. Touch up painted surfaces of the luminaires and the poles with matching paint provided by the manufacturer.
- E. Replace defective lamps at the Date of Substantial Completion.

REVISED BID SET

THIS PAGE INTENTIONALLY LEFT BLANK

## **SECTION 31 05 03**

### **EARTHWORK**

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

- A. Section includes: All excavating, backfilling, filling, grading, subgrade preparation and disposing of earth materials as required. It also includes all temporary means needed to prevent discharge of sediment to watercourses from dewatering systems or erosion.

##### **1.2 REFERENCES**

- A. American Society for Testing and Materials (ASTM)
  - 1. ASTM C33, Standard Specification for Aggregate Material.
  - 2. ASTM D422, Method for Particle-Size Analysis of Soils.
  - 3. ASTM D423, Liquid Limit of Soils.
  - 4. ASTM D427, Shrinkage Factors of Soils.
  - 5. ASTM D698, Test Method for Laboratory Compaction Characteristics of Soil.
  - 6. ASTM D1556, Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
  - 7. ASTM D2922, Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).
  - 8. ASTM D2166, unconfined compressive strength of soils.
- B. Occupational Safety and Health Administration (OSHA)
  - 1. Title 29, Code of Federal Regulations, Part 1926
- C. City of Roseville
  - 1. Design and Construction Details for Trench Backfill

##### **1.3 SYSTEM DESCRIPTION**

- A. Permits and Regulations:
  - 1. Perform excavation Work in compliance with applicable requirements of governing authorities having jurisdiction.
  - 2. Obtain all necessary permits for Work in roads, rights-of-way, railroads, etc. Also, obtain permits as required by local, state and federal agencies for discharging water from excavations, for erosion control, and for prevention of air and water pollution.

##### **1.4 SUBMITTALS**

- A. Test Reports - Borrow, Backfill, and Grading: Testing laboratory shall submit copies of the following reports directly to ENGINEER:
  - 1. Tests on borrow material.
  - 2. Tests on footing subgrade.
  - 3. Field density tests.
  - 4. Optimum moisture - maximum density curve for each soil used for backfill.

---

31 05 03-1  
Earthwork

Pump Station No. 26 Improvements

5. Reports of observations for conformance of borrow material to the Project Geotechnical Report.
  6. Quality Control Plan: Names and phone numbers of independent testing companies that will be used to perform soil and asphalt concrete testing, qualifications, and proposed procedures for performing tests and providing test results to ENGINEER.
- B. Submit to the ENGINEER samples of all materials, including select backfill, general backfill, bedding, crushed stone, sand and topsoil. Submit samples of the proposed material at least seven days in advance of its anticipated use.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. General:
1. All material will be tested by the laboratory and approved by the ENGINEER.
  2. No material shall be placed without the approval of the ENGINEER.
- B. Marking Tape:
1. Plastic:
    - a. Inert polyethylene, impervious to known alkalis, acids, chemical reagents, and solvents likely to be encountered in soil.
    - b. Thickness: Minimum 4 mils.
    - c. Width: 12 inches.
    - d. Identifying Lettering: Minimum 1-inch high, permanent black lettering imprinted continuously over entire length.
    - e. Manufacturers and Products:
      - 1) Reef Industries; Terra Tape.
      - 2) Allen; Markline.
      - 3) Or equal.
  2. Metallic:
    - a. Solid aluminum foil, visible on unprinted side, encased in a protective high visibility, inert polyethylene plastic jacket.
    - b. Foil Thickness: Minimum 5.5 mils.
    - c. Width: 12 inches.
    - d. Identifying Lettering: Minimum 1-inch high, permanent black lettering imprinted continuously over entire length.
    - e. Joining Clips: Tin or nickel-coated, furnished by tape manufacturer.
    - f. Manufacturers and Products:
      - 1) Reef Industries; Terra "D".
      - 2) Allen; Detectatape.
      - 3) Or equal.
  3. Marking tape shall be marked with the following statements:
    - a. Sanitary Sewer Pipeline: "CAUTION - SANITARY SEWER PIPELINE BURIED BELOW."
    - b. For Existing Utilities Within Trench Limits: "CAUTION - BURIED PIPELINE/CONDUIT" or as specified by utility owner.
  4. Color:
    - a. Sanitary Sewer Pipeline: Green, as specified in ANSI Z53.1 Safety Color Code.

---

31 05 03-2  
Earthwork

Pump Station No. 26 Improvements

- b. Others Disturbed: Color, as specified for specific utility in ANSI Z53.1 Safety Color Code.
- C. Pipe Locating Wire:
  - 1. Pipe locating wire shall be bare AWG No. 10, soft drawn, single-strand copper wire.
  - 2. Provide at least 6-mil PVC electrical tape insulation around wire where adjacent to metal pipe, valves, and in all valve boxes.
- D. Filter Fabric:
  - 1. Filter fabric shall be Mirafi, Type 140N; Dupont, Type PAR, Style 3401, or equal and shall conform to the following requirements:
  - 2. Minimum grab strength of 120 lbs per ASTM D4632.
  - 3. Apparent open size (AOS) to be equal to or greater than the U.S. Standard Sieve No. 100 (0.210 mm) per ASTM D4751.
  - 4. Percent open area not to exceed about 25 percent. The percent open area is defined as the ratio of the sum of 20 or more individual open areas (times 100) to the sum of the corresponding 20 or more individual total areas.
  - 5. Permittivity shall not be less than 1.7 sec-1.
- E. Fill Material:
  - 1. Classification:
    - a. Fill adjacent to structures to a distance measured horizontally from the structure that is equal to the depth from the finished grade is classified as Select Fill.
    - b. Outside these limits, the fill is classified as Common Fill, unless otherwise specified.
  - 2. Common Fill:
    - a. Common Fill materials shall consist of soils obtained from on-site excavations or off-site sources that are uniformly mixed, contain no organic material, and have been passed through a 3-inch screen.
    - b. The maximum expansion of off-site materials shall be 1.5% as performed on a sample remolded to approximately 9% of the maximum dry density as determined in accordance with ASTM D 698 at 2% below optimum moisture content under a 100 psf surcharge pressure.
    - c. If on-site material is unsuitable as determined by the ENGINEER, imported fill shall be used.
  - 3. Select Fill:
    - a. Select fill or backfill is material selected by the ENGINEER from the excavation.
    - b. Select material shall be free of organic or other unsuitable materials and shall not contain rocks, or unbroken masses of soil larger than 4 inches in greatest dimension.
- F. Aggregate Base:
  - 1. Class 2, ¾ inch maximum conforming to Section 26 of the Caltrans Standard Specifications.
- G. Granular Bedding:
  - 1. Well-graded sand and gravel materials.
  - 2. Unfrozen, friable, and no clay balls, roots, or other organic material.
  - 3. Clean or gravelly sand with less than 5% passing No. 200 sieve, as determined in accordance with ASTM D1140, or gravel or crushed rock within maximum particle size and other requirements as follows unless otherwise specified.

---

31 05 03-3  
Earthwork

Pump Station No. 26 Improvements

4. 3/4-inch maximum particle size, except 1/4 inch for stainless steel pipe, copper pipe, tubing, and plastic pipe under 3-inch diameter.
  5. Conduit and Direct-Buried Cable:
    - a. Sand, clean or clean to silty, less than 12% passing No. 200 sieve.
    - b. Individual Particles: Free of sharp edges.
    - c. Maximum Size Particle: Pass a No. 4 sieve.
    - d. If more than 5% passes No. 200 sieve, the fraction that passes No. 40 sieve shall be non-plastic as determined in accordance with ASTM D4318.
- H. Sand:
1. Natural or manufactured granular material, containing no organic material.
  2. Sand will be non-plastic, when tested in accordance with ASTM D 4318, 100% passing a 1/2 inch screen and no more than 20% passing a No. 200 screen.
- I. Crushed Stone:
1. Crushed stone will be crushed rock or gravel conforming to the requirements of ASTM C33, Size #57.
- J. Gravel Surfacing
1. Gravel Surfacing will be crushed rock, angular, and well-graded.
  2. Maximum size of 3/4 inch, at least 50% passing the No 4. screen, between 10 and 30% passing the No. 10 screen and no more than 15% passing the No. 40 screen.
  3. Color to be selected by CITY.
- K. Controlled Low Strength Material (CLSM):
1. Select and proportion ingredients to obtain compressive strength between 50 and 150 psi at 7 days in accordance with ASTM D4832. Sufficient cement shall be added to meet the strength and material requirements given below and as required to provide sufficient strength for compacting overlying trench backfill. Provide certified mix design and test results in accordance with submittal requirements.
  2. Materials:
    - a. Cement: ASTM C150, Type I or II, two sacks minimum per cubic yard.
    - b. Aggregate: ASTM C33, maximum Size 7. The amount of material passing a No. 200 sieve shall not exceed 12%. The above No. 200 sieve material shall be well graded so as to avoid segregation. The minus #200 sieve fraction shall be non-plastic.
    - c. Fly Ash (if used): ASTM C618, Class C or F.
    - d. Water: Clean, potable, containing less than 500 ppm of chlorides.
  3. Mix Design:
    - a. The CONTRACTOR and its suppliers shall determine the materials and proportions used to meet the requirements of these Specifications. Make daily checks of the aggregate gradation and adjust the mix design as required. Modify the CLSM mix as necessary to meet the flowability, pumpability, and set time requirements for each individual pour.
    - b. At least 30 days before placing CLSM, submit to the ENGINEER a mix design for each CLSM to be used. The mix design shall include trial lab and field data, with pairs of 6-inch by 12-inch cylinder breaks performed at 7, 14, and 28 days. Molds shall be plastic or waxed cardboard. The mix design shall be performed by an independent laboratory under the direction of an engineer licensed in California.

---

31 05 03-4  
Earthwork

Pump Station No. 26 Improvements

- c. No CLSM shall be placed until the ENGINEER has approved the mix design. The ENGINEER's approval of the mix design shall be understood to indicate conditional acceptance. Final acceptance will be based on tests conducted on field samples and conformance with these Specifications.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- A. Inspection:
  1. Provide ENGINEER with sufficient notice and with means to examine the areas and conditions under which excavating, filling, and grading are to be performed.
  2. ENGINEER will notify CONTRACTOR if conditions are found that may be detrimental to the proper and timely completion of the Work.
  3. Do not proceed with the Work until unsatisfactory conditions have been corrected in a manner acceptable to ENGINEER.
- B. "Pot-holing":
  1. Excavate and backfill, in advance of the construction, test pits to determine conditions or location of the existing utilities and structures.
  2. Define the location of each existing facility involved within the area of his excavation for Work under this Contract.
  3. Exercise care during such location work to avoid damaging and/or disrupting the affected facility.
  4. CONTRACTOR is responsible for repairing, at his expense, damage to any structure, piping, or utility caused by his Work.
- C. Temporary Fencing:
  1. Furnish and install a temporary fence surrounding excavations and work area, including the stockpile and storage areas.
  2. Provide fence openings only at vehicular, equipment, and worker access points.

#### **3.2 EROSION CONTROL**

- A. General: Implement the construction procedures outlined herein to assure minimum damage to the environment during construction. Take all additional measures required to conform to the requirements of applicable codes and regulations.
  1. Whenever possible, locate and construct access and temporary roads to avoid environmental damage. Make provisions to regulate drainage, avoid erosion, and minimize damage to vegetation.
  2. Where areas must be cleared for storage of materials or temporary structures, provisions will be made for regulating drainage and controlling erosion, subject to the ENGINEER'S approval.
  3. Remove only those shrubs and grasses that must be removed for construction. Protect the remainder to preserve their erosion-control value.
- B. Control Measures: Apply measures to control erosion and to minimize the siltation of the existing waterways, and natural ponding areas. Such measures include, but are not limited to, the use of berms, baled straw silt barriers, gravel or crushed stone, mulch, slope drains, and other methods.

---

31 05 03-5  
Earthwork

Pump Station No. 26 Improvements

1. Install erosion and sediment control practices where shown and according to applicable standards, codes, and specifications. The practices will be maintained in effective working condition during construction and until the drainage area has been permanently stabilized.
  2. Temporary measures will be coordinated with the construction of permanent drainage facilities and other Work to the extent practicable to assure economical, effective, and continuous erosion and siltation control.
  3. CONTRACTOR will provide special care in areas with steep slopes. Disturbance of vegetation will be kept to a minimum to maintain stability.
  4. After stabilization, remove all straw bale dikes, debris, etc., from the site.
- C. Dust Control:
1. Prevent blowing and movement of dust from exposed soil surfaces and access roads to reduce on- and off-site damage and health hazards.
  2. Control may be achieved by irrigation in which the site is sprinkled with water until the surface is moist.
  3. Repeat the process as needed.
- D. Failure to Comply: In the event CONTRACTOR repeatedly fails to satisfactorily control erosion and siltation, the CITY reserves the right to employ outside assistance or to use its own forces to provide the corrective measures indicated. The cost of such work, plus engineering costs, will be deducted from monies due CONTRACTOR.

### 3.3 DEWATERING

- A. General:
1. Continuously control all water during the course of construction, including surface water and ground water, to prevent any damage to any excavation or to the construction activities occurring within those excavations.
  2. Maintain all dewatering systems full time (24-hours/day) during the entire time the excavation is open. Do not shut down dewatering systems at night, on weekends or on holidays, or any other time the excavation is open.
  3. Each excavation will be kept dry during subgrade preparation and continually thereafter until the structure to be built, or the pipe to be installed therein is inspected by the ENGINEER and backfill operations have been completed.
  4. Provide adequate alarm, monitoring and back-up systems for all dewatering systems to maintain control of all water during all times any excavation is open.
- B. Surface Water:
1. Provide and maintain adequate drainage and dewatering system to prevent surface water from entering excavations and to remove and dispose of all rainwater entering excavations, trenches, or other parts of the Work.
  2. Keep the different working areas on the site free of surface water at all times. Special care will be taken to eliminate depressions that could serve as mosquito pools.
  3. The diversion and removal of surface water will be performed in a manner that will prevent the accumulation of water behind temporary structures or at any other locations within the construction area where it may be detrimental.
- C. Ground Water:

---

31 05 03-6  
Earthwork

Pump Station No. 26 Improvements

1. Provide, operate and maintain dewatering system to permit excavation and subsequent construction activities in a dry, safe environment.
  2. System shall be of sufficient size and capacity to maintain groundwater level a minimum of 2 feet below the lowest point of excavation.
  3. Contractor shall make an assessment of the potential for dewatering induced settlement of surrounding soils and structures. Contractor shall provide all necessary equipment and facilities, including re-injection wells, cutoff walls, infiltration trenches, etc, to prevent damage to adjacent structures.
- D. Disposal of water:
1. Disposal of discharge water shall conform to any and all applicable permit requirements.

### 3.4 EXCAVATION SUPPORT SYSTEMS

- A. Trench Support
1. Provide, install and maintain trench shields for all trench excavations for which trench shields are required (at a minimum, as required by OSHA).
  2. Follow all OSHA guidelines and other applicable laws and ordinances.
  3. Elevation of Bottom:
    - a. Excavation of earth material below the bottom of a shield will not exceed the limits established by ordinances, codes, laws and regulations.
    - b. When using a shield for pipe installation, the bottom of the shield will not extend below the mid-diameter of installed pipe at any time.
    - c. When using a shield for the installation of structures, the bottom of the shield shall not extend below the top of the bedding for the structures.
  4. Moving Shield: When a shield is removed or moved ahead, extreme care will be taken to prevent the movement of pipe or structures or the disturbance of the bedding for pipe or structures. Pipe or structures that are disturbed are to be removed and reinstalled as specified.
- B. Below Grade Structure Excavation Support
1. Provide, install and maintain excavation support systems for all structural excavations where excavation support is required (at a minimum, as required by OSHA).
  2. Follow all OSHA guidelines and other applicable laws and ordinances.
  3. Prepare excavation support plan addressing the following topics:
    - a. Details of shoring, bracing, sloping or other provisions for worker protection from the hazards of caving ground
    - b. Design assumptions and calculations
    - c. Methods and sequencing of installing excavation support
    - d. Proposed locations of stockpiled excavated materials
    - e. Minimum lateral distance from the crest of slopes for vehicles, equipment, and materials
    - f. Location of vertical and horizontal monitoring points on structures and recommended frequency of monitoring for excavation support system stability and performance
  4. Design of excavation support systems and excavation support plan shall be prepared by a civil or structural engineer registered in the state in which the system is installed.

---

31 05 03-7  
Earthwork

Pump Station No. 26 Improvements

- a. Excavation support system shall consist of h-pile and lagging, sheet piles, or other reliable method of excavation support.
  - b. The use of below-ground tiebacks is allowed, however, Contractor is responsible for locating and avoiding potential conflicts with existing utilities in the area in which the tie-backs are installed. All tiebacks shall be further than 3 feet from any conflicting utility. Tiebacks shall not use existing structures for support.
- C. Removal of Excavation Support
1. Completely remove all excavation support unless ENGINEER specifically allows requested excavation support to remain in place after backfill.
  2. Remove all excavation support in a manner that will maintain support as excavation is backfilled and will not leave voids in the backfill.

### 3.5 EXCAVATION

A. General:

1. Material removed: Excavations include earth, sand, clay, gravel, hardpan, boulders, rock, pavements, rubbish, and all other materials within the excavation limits.
2. Excavations for structures and pipelines will be open excavations. Provide excavation protection system(s) required by ordinances, codes, laws, and regulations to prevent injury to workmen and to prevent damage to new and existing structures or pipelines. Unless shown or specified otherwise, protection system(s) will be utilized under the following conditions.
  - a. Excavation Less Than 5 feet deep: Excavations in stable rock or in soil conditions where there is no potential for a cave-in may be made with vertical sides. Under all other conditions, excavations will be sloped and benched, shielded, or shored and braced.
  - b. Excavations More Than 5 feet deep: Excavations in stable rock where there is no potential for a cave-in may be made with vertical sides. Under all other conditions, excavations will be sloped and benched, shielded or shored and braced.
  - c. Excavation protection system(s) will be installed and maintained in accordance with the excavation plan submitted.
3. CONTRACTOR shall be made aware of the specific excavation support suggestions detailed in the Geotechnical report.

B. Structural Excavation:

1. The elevation of the bottom of footings shown is approximate only. ENGINEER may order such changes in dimensions and elevations as may be required to secure a satisfactory footing.
2. Hand-trim all structure excavations to permit the placing of full widths and lengths of footings on horizontal beds. Rounded and undercut edges will not be permitted.
3. Excavations shall allow for aggregate base, forms, working space, installation of shoring or bracing or the safe sloping of banks.

C. Pipe Trench Excavation:

1. No more than 100 feet of trench may be opened in advance of pipe laying.
2. Minimize trench width to the greatest extent practical but conform to the following:
3. Sufficient to provide room for installing, jointing, and inspecting piping, but in no case wider at top of pipe than pipe barrel outside diameter plus 3 feet.
4. Enlargements at pipe joints may be made, if required, and approved by ENGINEER.

---

31 05 03-8  
Earthwork

Pump Station No. 26 Improvements

5. Sufficient for shoring and bracing, or shielding and dewatering.
  6. Sufficient to allow thorough compaction of backfill adjacent to bottom half of pipe.
  7. Depth of trench will be as shown. If required and approved by ENGINEER, depths may be revised.
- D. Subgrades:
1. Subgrades for roadways, structures and trench bottoms shall be firm, dense, and thoroughly compacted and consolidated; free from mud, muck, and other soft or unsuitable materials; and remain firm and intact under all construction operations.
  2. Subgrades that are otherwise solid, but which become soft or mucky on top due to construction operations, shall be reinforced with select fill.
  3. The finished elevation of stabilized subgrades shall not be above subgrade elevations shown.
- E. Material Storage: Stockpile satisfactory excavated materials in approved areas, until required for backfill or fill. Place, grade, and shape stockpiles for proper drainage.
1. Locate and retain soil materials away from edge of excavations.
  2. Dispose of excess soil material and waste materials as specified hereinafter.
- F. Unauthorized Excavation:
1. All excavation outside the lines and grades shown, and which is not approved by ENGINEER, together with the removal and disposal of the associated material is at the CONTRACTOR'S expense.
  2. Unauthorized excavations shall be filled and compacted with select fill by the CONTRACTOR at his expense.

### 3.6 PLACEMENT OF FILL AND BACKFILL

- A. General:
1. Backfill excavations as promptly as Work permits, but not until completion of the following:
    - a. Acceptance by the ENGINEER of construction below finish grade.
    - b. Inspection, testing, approval, and recording of locations of underground piping and ductwork.
    - c. Removal of concrete formwork.
    - d. Removal of shoring and bracing, and backfilling of voids with satisfactory materials.
    - e. Removal of trash and debris.
  2. Remove and replace with approved fill material, as specified, fill containing organic materials or other unacceptable material.
  3. Compact all fill and backfill as specified in Subsection 3.7.
- B. Structural Backfill:
1. Select fill shall be placed as structural backfill where shown on the Drawings or indicated herein.
  2. Constraints:
    - a. Backfill water-holding basins or structures only after satisfactory leakage tests have been conducted as specified in Sections Concrete and Precast Concrete.
    - b. No backfill or fill material shall be placed when free water is standing on the surface of the area.

---

31 05 03-9  
Earthwork

Pump Station No. 26 Improvements

- c. No compaction of fill will be permitted with free water on any portion of the fill to be compacted.
    - d. No fill shall be placed or compacted in a frozen condition or on top of frozen material.
    - e. Any fill containing organic materials or other unacceptable material previously described shall be removed and replaced with approved fill material prior to compaction.
  - 3. Levels of backfill against concrete walls are not to differ by more than 2 feet on either side of walls, unless walls are adequately braced, or all floor framing is in place up to and including grade level slabs.
  - 4. Wherever a pipe passes through a structure backfill, the structure backfill shall be placed and compacted to an elevation 12 inches above the top of the pipe before the trench is excavated.
- C. Backfill in Pipe Trenches:
- 1. Pipeline trenches may be backfilled prior to pressure testing, but no structure shall be constructed over any pipeline until it has been tested.
  - 2. Unless otherwise shown, place all pipe on a minimum 6 inches thick layer of Granular Bedding. The bedding shall extend 12 inches above the top of the pipe.
  - 3. Install bedding as follows:
    - a. Spread bedding and grade to provide a uniform and continuous support beneath the pipe at all points between bell holes or pipe joints.
    - b. After each pipe section is placed, deposit and compact sufficient bedding material under and around each side of the pipe to hold the pipe in proper position and to maintain alignment during subsequent pipe jointing and bedding operations.
    - c. Bedding material shall be deposited and compacted uniformly and simultaneously on each side of the pipe to prevent lateral displacement. Then place and compact the bedding material to an elevation 12 inches above the top of pipe.
  - 4. Above the level of bedding, place Select or Common Fill, as specified elsewhere in these specifications.
  - 5. Controlled Low Strength Material (CLSM):
    - a. When CLSM pipe zone material is indicated, the pipe may be supported above the trench floor on pea gravel bags or sandbag supports. The CONTRACTOR shall demonstrate to the ENGINEER, 7 days prior to full pipeline backfill installation, placement of CLSM as described below. This demonstration shall occur on the first 300 feet of trench, The CLSM pipe zone material shall be installed as indicated.
      - 1) Bedding and Embedment: Place and compact CLSM pipe zone material using the following techniques:
        - a) Following placement and anchoring of the pipe, remove all loose soil from trench walls and floor. Remove any unstable soil at the top of the trench which might fall into the trench during placement of the CLSM.
        - b) Deliver the CLSM to the trench in ready mix trucks or traveling pug mill and utilize pumps or chutes to place the CLSM in the trench. Direct CLSM to one side of the pipe, taking care not to displace the pipe at any time. Continue placing CLSM on one side of the pipe until CLSM has gone under the pipe and up the other side to a depth of 6 inches above the pipe bottom. Use at least two handheld vibrators to continuously liquefy and

---

31 05 03-10  
Earthwork

Pump Station No. 26 Improvements

move CLSM into all voids. Adjust water in mixture to maintain fluid consistency but maintain strength requirements. Continue placing CLSM on both sides of the pipe continuously using two vibrators for every 30 feet of pipe run.

- c) Maintain stability of pipe and conduit throughout CLSM placement and curing. CLSM will likely require placement in lifts to prevent pipe flotation. No movement of the pipe caused by flotation will be allowed. If any movement occurs, the CLSM material shall be removed and/or repaired in full conformance with these Contract Documents at no additional cost to the CITY. Remove all sloughed material or other debris from top of previously placed CLSM.
- d) CLSM shall be allowed to cure a minimum of 4 hours prior to placing each lift as well as trench zone material. A smaller cure period will be allowed if it can be demonstrated to the ENGINEER that it will support the individual lift or trench zone material. The CLSM shall be sufficiently strong to support trench backfill material and the compaction effort required to achieve the specified compaction.

D. Marking Tape:

- 1. Continuously install marking tape along centerline of all buried piping, on top of last lift of pipe zone material unless otherwise shown. Coordinate with piping installation drawings. Install in accordance with manufacturer's recommendations.
  - a. Metallic Marking Tape: Install with nonmetallic piping and waterlines. Join ends with clips provided by the manufacturer.
  - b. Plastic Marking Tape: Install with metallic piping.

E. Pipe-Locating Wire:

- 1. Pipe-locating wire shall be provided for the entire length of all nonmetallic pipelines and shall be continuous around restrained joint sections.
- 2. Install pipe locating wire by strapping to the top of the pipe with PVC tape, polyethylene-backed tape, or tie locks. Test pipe locating wire with pipe locator equipment prior to final acceptance.
- 3. Stub the pipe-locating wire up inside each valve box or flush-mounted Type C corrosion monitoring stations. Sufficient excess length shall be provided at terminal connections to allow continuation of the pipe-locating wire to the terminal connection.
- 4. Wire splices shall be made with compression fittings or soldering; wrapped with Tac-Tape, Aqua-Seal, or equal, and wrapped with electrical tape. Prevent bare copper wire from contacting metallic appurtenances including, but not limited to, pipe, buried valves, or fittings.

F. Resume backfilling operations using the techniques described above to complete the pipe zone backfill. ENGINEER will approve the pipe zone backfill prior to initiating the trench zone backfill.

G. Embankments:

- 1. To the maximum extent available, use excess earth obtained from structure and trench excavations for construction of embankments. Obtain additional material from borrow pits, if such pits are shown, otherwise obtain additional material from offsite sources as necessary.

---

31 05 03-11  
Earthwork

Pump Station No. 26 Improvements

2. Strip, scarify, level and roll the subgrade so that surface materials of the subgrade will be compact and well bonded with the first layer of the embankment.
  3. Wherever a pipe is to pass through a fill or embankment, place and compact the fill or embankment material to an elevation 12 inches above the top of the pipe before the trench is excavated.
- H. Crushed Stone:
1. Place where shown on the Drawings, to the limits shown.
  2. Place in hand-tamped lifts, not to exceed 6 inches.
- I. Replacement of Unacceptable Excavated Materials: In cases where over-excavation for the replacement of unacceptable soil materials is required, backfill the excavation to the required subgrade with select backfill material and thoroughly compacted.

### 3.7 COMPACTION

- A. General:
1. Compaction by inundation with water will not be permitted.
  2. Provide equipment capable of discing, aerating, and mixing the soil to ensure reasonable uniformity of moisture content throughout the material and to reduce the moisture content by air drying, if necessary.
  3. Perform compaction with equipment suitable for the type of fill material being placed. Select equipment that is capable of providing the minimum density required by these Specifications. Use hand-operated compacting equipment within a distance of 3 feet from the wall of any completed below grade structure. Between 3 feet and 12 feet adjacent to below grade structures, compaction may be completed with lightweight compaction equipment weighing less than 15,000 pounds. Beyond 12 feet adjacent to below grade structures, there are no equipment weight restrictions. Provide equipment that is capable of compacting in restricted areas next to structures and around piping.
- B. Compaction Density Requirements: The degree of compaction required for several types of fill is listed below. Moistened or aerated material as necessary to provide the moisture content specified, or if not specified, that will facilitate obtaining the specified compaction.

| MATERIAL                                | Required Minimum Density (ASTM D 1557) | Maximum Uncompacted Lift* |
|-----------------------------------------|----------------------------------------|---------------------------|
| Common Fill/Prepared Subgrade:          | 90%                                    | 8 inches                  |
| Select Fill/Trench Backfill above pipe: |                                        |                           |
| More than 2 feet below final grade      | 90%                                    | 8 inches                  |
| Less than 2 feet below final grade      | 95%                                    | 8 inches                  |
| Aggregate Base:                         | 95%                                    | 8 inches                  |
| Granular Bedding                        | 90%                                    | 6 inches                  |
| Sand                                    | 90%                                    | 6 inches                  |
| Gravel Surfacing                        | 95%                                    | 6 inches                  |

31 05 03-12  
Earthwork

Pump Station No. 26 Improvements

\*Where large areas of backfill allow for use of large, heavy equipment, ENGINEER may, at their option, allow uncompacted lifts up to 12 inches.

C. Moisture Content: All fill and backfill shall be prepared and thoroughly mixed to achieve optimum moisture content,  $\pm 3\%$ , with the following exception: On site clayey soils optimum to  $+3\%$ .

D. Testing: Testing will be as specified under Paragraph 3.10, "Field Quality Control".

### 3.8 GRADING

A. General:

1. Uniformly grade areas within limits of grading under this Section, including adjacent transition areas.
2. Smooth subgrade surfaces within specified tolerances, and compact with uniform levels or slopes between points where elevations are shown or between such points and existing grades.

B. Adjacent to Structures: Grade areas adjacent to structures to drain away from structures (including masonry fences) and to prevent ponding.

C. Walks: Shape surface of areas under walks to line, grade and cross-section, with finish surface not more than 1 inch above or below the required subgrade elevation.

D. Pavements: Shape surface of areas under pavement to line, and grade and cross-section with finish surface not more than  $\frac{1}{2}$  inch above or below the required subgrade elevation.

E. Under Building Slabs: Grade smooth and even, free of voids, compacted as specified and to required elevation. Provide final grades within a tolerance of  $\frac{1}{2}$  inch when tested with a 10-foot straightedge.

F. Special Areas: In turfed areas or areas covered with gravel, stone, wood chips, or other special cover, grade to within not more than 1 inch above or below the required subgrade elevations.

G. Compaction: After grading, compact subgrade surfaces to the depth and percentage of maximum density for each area classification.

| Area                                       | Required Minimum Density<br>(ASTM D 1557) |
|--------------------------------------------|-------------------------------------------|
| Beneath Treatment Structures and Buildings | 95%                                       |
| Beneath Pavement                           | 90%                                       |
| Landscaped and other areas                 | 85%                                       |

### 3.9 PAVEMENT BASE COURSE

A. Shoulders:

1. Place shoulders along edges of base course to prevent lateral movement.

---

31 05 03-13  
Earthwork

Pump Station No. 26 Improvements

2. Construct shoulders of acceptable soil materials, placed in such quantity to compact to thickness of each base course layer.
  3. Compact and roll at least a 12-inch width of shoulder simultaneously with compacting and rolling of each layer of base course.
- B. Placing:
1. Place base course material on prepared subgrade in layers of uniform thickness conforming to indicated cross-section and thickness.
  2. Maintain optimum moisture content for compacting base material during placement operations.

### 3.10 FIELD QUALITY CONTROL

- A. General: Testing by a testing laboratory of materials, testing for moisture content during placement and compaction of fill materials, and of compaction requirements for compliance with technical requirements of the Specifications.
- B. The CONTRACTOR shall retain one or more independent testing agencies to perform all quality control testing required for all materials except portland cement concrete. The required testing is for soil, aggregates, imported gravel, aggregate base, asphalt concrete, and CLSM. Each independent testing agency shall perform the testing under the supervision of an engineer registered in California. Technicians performing the testing shall be certified to operate the equipment and have at least 1 full year of experience in the type of tests being performed.
- C. A Quality Control Plan shall be submitted by the CONTRACTOR to the ENGINEER at least 30 days before field testing is required. It shall include the names, addresses, and phone number of the companies, the major personnel that will be involved, and resumes of the individuals that will be supervising and performing the tests. Copies of certificates held by the companies and the testing personnel shall be included.
- D. CONTRACTOR's independent testing agency shall perform all field and laboratory testing as described in these Specifications. Test shall include specific gravity, sand equivalent, durability, abrasion resistance, soundness, gradation, compaction curves, lab and field moisture contents, compressive strength, and field density. Other tests shall be performed by the CONTRACTOR's independent testing agency as may be required to meet the Specifications. Mix design testing for portland cement concrete, CLSM, and asphalt concrete shall also be performed by the CONTRACTOR. Field testing for portland cement concrete will be performed by the ENGINEER.
- E. CONTRACTOR shall schedule all lab testing so that materials arriving at the site have been approved by the ENGINEER for use on the Project.
- F. All lab tests shall be performed on Samples obtained from the source of actual material that will be used on the Project. No test results more than 90 days old shall be submitted for review.
- G. The location of field density tests shall be determined by the ENGINEER.
- H. Frequency of tests: Frequency will be not less than as follows:
  1. For trenches:

---

31 05 03-14  
Earthwork

Pump Station No. 26 Improvements

- a. In open fields: 2 locations every 1,000 linear feet, for each layer
  - b. Along dirt, gravel, or paved roads or off traveled right-of-way: 2 locations every 500 linear feet, for each layer
  - c. Crossing roads: 2 locations along each crossing, for each layer
  2. For structural backfill: 1 every 50 cubic yards.
  3. In embankment or fill: 1 every 200 cubic yards.
  4. Base material: 1 every 50 cubic yards.
  5. Footing Subgrade: 1 every 50 linear feet, for each layer.
  6. Paved Areas and Building Slab Subgrade: 1 every 500 square feet, but in no case less than 3 tests, for each layer.
- I. The ENGINEER may modify the frequency or spacing of tests to provide for testing at specific structures or locations where the ENGINEER deems additional testing is required. The CONTRACTOR shall perform such additional testing up to 10% above the frequency and total number of tests specified at no additional cost to the CITY.
- J. Verbal and hand-written test results shall be provided to the ENGINEER and CONTRACTOR immediately following the field testing. Written test data sheets shall be provided to the ENGINEER not more than 12 hours following completion of the field test. Typed lab test results shall be provided to the ENGINEER not more than 7 calendar days following completion of the tests. However, the results must be reviewed and approved by the ENGINEER prior to placing the material in the trenches or incorporating it in the Work.
- A. Any location where a failing test occurs shall be recompacted and retested until a passing test is obtained. Specified testing values are minimums and no tests shall be accepted below the specified minimums. No material shall be placed over the failing test area until the failing material is recompacted and a passing test is obtained and the area is approved by the ENGINEER. The limits of the failing test shall be assumed to be halfway between the failing location and the nearest passing location. Additional tests may be taken to determine the limits of unsatisfactory compaction.
- B. At the first of each month, the CONTRACTOR shall provide to the ENGINEER a typed summary of all tests performed for the previous month including test location by station, depth below finished grade, material tested, wet density, moisture content, dry density, maximum density curve used, and percent relative compaction. Lab test results shall also be included in the monthly report with clear description of material tested, intended use on the Project, and a statement of compliance or noncompliance with the Project Specifications.
- C. Any material which does not meet the Specifications shall be removed from the site and replaced with material in compliance.
- D. Material which has been softened or modified prior to placing the overlying lift shall be removed down to material which is in compliance.

### 3.11 DISPOSAL OF EXCAVATED MATERIALS

- A. Material removed from the excavations that does not conform to the requirements for fill or is in excess of that required for backfill shall be hauled away from the Work site

---

31 05 03-15  
Earthwork

Pump Station No. 26 Improvements

and disposed of by CONTRACTOR in compliance with ordinances, codes, laws and regulations at no additional cost to the CITY.

B. Any uncontaminated material can be hauled to 1800 Booth Road.

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **SECTION 31 11 03**

### **SITE PREPARATION**

#### **PART 1 - GENERAL**

##### **1.1 DEFINITIONS**

- A. Interfering or Objectionable Material: Trash, rubbish, and junk; vegetation and other organic matter, whether alive, dead, or decaying; topsoil.
- B. Clearing: Removal of interfering or objectionable material lying on or protruding above ground surface.
- C. Grubbing: Removal of vegetation and other organic matter including stumps, buried logs, and roots greater than 0.5 inch caliper to a depth of 6 inches below subgrade.
- D. Stripping: Removal of topsoil remaining after applicable scalping is completed.
- E. Project Limits: Areas, as shown or specified, within which Work is to be performed.

#### **PART 2 - PRODUCTS (NOT USED)**

#### **PART 3 - EXECUTION**

##### **3.1 GENERAL**

- A. Clear, grub, and strip areas actually needed for waste disposal, borrow, or site improvements within limits shown or specified.
- B. Do not injure or deface vegetation that is not designated for removal.

##### **3.2 LIMITS**

- A. As follows, but not to extend beyond Project limits.
  - 1. Excavation 5 feet beyond top of cut slopes.
  - 2. Trench Excavation: 4 feet from trench centerline, regardless of actual trench width.
  - 3. Waste Disposal:
    - a. Clearing: 5 feet beyond perimeter.
    - b. Scalping and Stripping: Not required.
    - c. Grubbing: Around perimeter as necessary for neat finished appearance.
  - 4. Structures: 5 feet outside of new structures.
  - 5. Roadways: Clearing , grubbing and stripping 50 feet from centerline.
  - 6. Overhead Utilities:
    - a. Clearing and Grubbing: Entire width of easements and rights-of-way.
    - b. Scalping and Stripping: Wherever grading is required.
  - 7. Other Areas: As shown.

---

31 11 03-1  
Site Preparation

Pump Station No. 26 Improvements

- B. Remove rubbish, trash, and junk from entire area within Project limits.

### 3.3 CLEARING

- A. Clear areas within limits shown or specified.
- B. Fell trees so that they fall away from facilities and vegetation not designated for removal.
- C. Cut stumps not designated for grubbing flush with ground surface.
- D. Cut off shrubs, brush, weeds, and grasses to within 2 inches of ground surface.

### 3.4 GRUBBING

- A. Grub areas within limits shown or specified.

### 3.5 STRIPPING

- A. Do not remove topsoil until after scalping is completed.
- B. Strip areas within limits to minimum depths shown or specified. Do not remove subsoil with topsoil.

### 3.6 DISPOSAL

- A. Clearing and Grubbing Debris: Dispose of debris offsite.
- B. Strippings:
  - 1. Dispose of strippings that are unsuitable for topsoil or that exceed quantity required for topsoil offsite or approved by ENGINEER.
  - 2. Stockpile topsoil in sufficient quantity to meet Project needs. Dispose of excess strippings as specified for clearing and grubbing.

++ END OF SECTION ++

## **SECTION 32 12 16**

### **ASPHALT CONCRETE PAVEMENT**

#### **PART 1 - GENERAL**

##### **1.1 SUBMITTALS**

###### **A. Information Submittals:**

1. Asphalt Concrete Mix Formula:
  - a. Submit minimum of 15 days prior to start of production.
  - b. Submittal to include the following information:
    - 1) Gradation and portion for each aggregate constituent used in mixture to produce a single gradation of aggregate within specified limits.
    - 2) Bulk specific gravity for each aggregate constituent.
    - 3) Measured maximum specific gravity of mix at optimum asphalt content determined in accordance with ASTM D2041.
    - 4) Percent of asphalt lost due to absorption by aggregate.
    - 5) Percentage of asphalt cement, to nearest 0.1 percent, to be added to mixture.
    - 6) Optimum mixing temperature.
    - 7) Optimum compaction temperature.
    - 8) Temperature-viscosity curve of asphalt cement to be used.
2. Test Report for Asphalt Cement:
  - a. Submit minimum 10 days prior to start of production.
  - b. Show appropriate test method(s) for each material and the test results.
3. Statement of qualification for independent testing laboratory.
4. Test Results:
  - a. Mix design.
  - b. Asphalt concrete core.
  - c. Gradation and asphalt content of uncompacted mix.

##### **1.2 QUALITY ASSURANCE**

###### **A. Qualifications:**

1. Independent Testing Laboratory: In accordance with ASTM E329.
2. Asphalt concrete mix formula shall be prepared by approved certified independent laboratory under the supervision of a certified asphalt technician.

##### **1.3 ENVIRONMENTAL REQUIREMENTS**

- A. Temperature: Do not apply asphalt materials or place asphalt mixes when ground temperature is lower than 10 degrees C (50 degrees F) or air temperature is lower than 4 degrees C (40 degrees F). Measure ground and air temperature in shaded areas away from heat sources or wet surfaces.
- B. Moisture: Do not apply asphalt materials or place asphalt mixes when application surface is wet.

---

32 12 16-1

Asphalt Concrete Pavement

Pump Station No. 26 Improvements

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. Asphalt Material: Conform to the following specification:
  - 1. Asphalt Material shall be a hot mix asphalt concrete, consisting of a mixture of mineral aggregate and paving asphalt conforming to Section 92 of the Caltrans Standard Specifications, PG 64-10.
- B. Seal Coat: Conform to the following specification:
  - 1. Seal coat material shall be conforming to Section 37 of the Caltrans Standard Specifications.

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Traffic Control:
  - 1. In accordance with all applicable specification sections and laws.
  - 2. Minimize inconvenience to traffic, but keep vehicles off freshly treated or paved surfaces to avoid pickup and tracking of asphalt.
- B. Driveways: Repave driveways from which pavement was removed. Leave driveways in as good or better condition than before start of construction.

### **3.2 LINE AND GRADE**

- A. Provide and maintain intermediate control of line and grade, independent of underlying base, to meet finish surface grades and minimum thickness.
- B. Shoulders: Construct to line, grade, and cross-section shown.

### **3.3 PREPARATION**

- A. Prepare subgrade as specified.
- B. Thoroughly coat edges of contact surfaces with emulsified asphalt or asphalt cement prior to laying new pavement. Prevent staining of adjacent surfaces.

### **3.4 PAVEMENT APPLICATION**

- A. General: Place asphalt concrete mixture on approved, prepared base in conformance with this section.
- B. Pavement Mix:
  - 1. Prior to Paving:
    - a. Sweep primed surface free of dirt, dust, or other foreign matter.
    - b. Patch holes in primed surface with asphalt concrete pavement mix.
  - 2. Place asphalt concrete pavement mix in one single lift.
  - 3. Total Compacted Thickness: 3 inches.

---

32 12 16-2  
Asphalt Concrete Pavement

Pump Station No. 26 Improvements

4. Apply such that meet lines are straight and edges are vertical.
  5. Collect and dispose of segregated aggregate from raking process. Do not scatter material over finished surface.
  6. After placement of pavement, seal meet line by painting a minimum of 150 millimeters (6 inches) on each side of joint with cut-back or emulsified asphalt. Cover immediately with sand.
- C. Compaction: Roll until roller marks are eliminated and density of 92 percent of measured maximum density determined in accordance with ASTM D2041.
- D. Tolerances:
1. General: Conduct measurements for conformity with crown and grade immediately after initial compression. Correct variations immediately by removal or addition of materials and by continuous rolling.
  2. Completed Surface or Wearing Layer Smoothness:
    - a. Uniform texture, smooth, and uniform to crown and grade.
    - b. Maximum Deviation: 1/8 inch from lower edge of a 3.6-meter (12-foot) straightedge, measured continuously parallel and at right angle to centerline.
    - c. If surface of completed pavement deviates by more than twice specified tolerances, remove and replace wearing surface.
  3. Transverse Slope Maximum Deviation: 1/4 inch.
- E. Seal Coat:
1. General: Apply seal coat of paving grade or emulsified asphalt to finished surface at longitudinal and transverse joints, joints at abutting pavements, areas where asphalt concrete was placed by hand, patched surfaces, and other areas as directed by ENGINEER.
  2. Preparation:
    - a. Surfaces that are to be sealed shall be maintained free of holes, dry, and clean of dust and loose material.
    - b. Seal in dry weather and when temperature is above 2 degrees C (35 degrees F).
  3. Application:
    - a. Fill cracks over 1.5 millimeters (1/16 inch) in width with asphalt-sand slurry or approved crack sealer prior to sealing.
    - b. When sealing patched surfaces and joints with existing pavements, extend minimum 150 millimeters (6 inches) beyond edges of patches.

REVISED BID SET

**SECTION 32 31 13**  
**CHAIN LINK FENCES AND GATES**

**PART 1 - GENERAL**

**1.1 SUBMITTALS**

- A. Shop Drawings: Detailed information and specifications for materials, finishes, and dimensions.
- B. Samples: Approximately 6 inches square, or 6 inches long of posts, rails, braces, fabric, wire, ties, and fittings.
- C. Quality Control Submittals:
  - 1. Manufacturer's recommended installation instructions.
  - 2. Evidence of Supplier and installer qualifications.

**1.2 SCHEDULING AND SEQUENCING**

- A. Complete necessary site preparation and grading before installing chain link fence and gates.

**PART 2 - PRODUCTS**

**2.1 GENERAL**

- A. Match style, finish, and color of each fence component with that of other fence components.

**2.2 CHAIN LINK FENCE FABRIC**

- A. PVC-coated galvanized fabric conforming to ASTM F668, Class 1 or 29.
  - 1. Color: Black.
  - 2. Manufacturers and Products:
    - a. Colorbond Corp., Raritan, NJ; Colorbond II.
    - b. Cyclone Fence, United States Steel, Chicago, IL; Cyclone Color Fence System.
- B. Height: 72 inches, unless otherwise shown.
- C. Wire Gauge: No. 9.
- D. Pattern: 2-inch diamond-mesh.
- E. Diamond Count: Manufacturer's standard and consistent for fabric furnished of same height.
- F. Loops of Knuckled Selvages: Closed or nearly closed with space not exceeding diameter of wire.

---

32 31 13-1  
Chain Link Fences and Gates

Pump Station No. 26 Improvements

- G. Wires of Twisted Selvages:
  - 1. Twisted in a closed helix three full turns.
  - 2. Cut at an angle to provide sharp barbs that extend minimum 1/4-inch beyond twist.
- H. Privacy Slats, if called for on Drawings:
  - 1. HDPE or PVC Top Lock slats sized for No. 9 gauge 2-inch mesh, approximately 1 3/32-inches wide.
  - 2. Length to match the fabric height minus 2 inches.
  - 3. Color selected by OWNER.

## 2.3 POSTS

- A. General:
  - 1. Strength and Stiffness Requirements: ASTM F669, Heavy Industrial Fence, except as modified in this section.
  - 2. Steel Pipe: ASTM F1083.
  - 3. Roll-Formed Steel Shapes: Roll-formed from ASTM A570, Grade 45, steel.
  - 4. Protective Coatings:
    - a. Zinc Coating: ASTM F1234, Type A external and internal coating.
  - 5. Color Coating: ASTM F1043, minimum 10 mils thickness over zinc coating to match color of chain link fabric.
- B. Line Posts:
  - 1. Steel Pipe:
    - a. Outside Diameter: 2.375-inch.
    - b. Weight: 3.65 pounds per foot.
  - 2. Roll-Formed Steel C Shape:
    - a. Outside Dimensions: 2.25-inch by 1.625-inch.
    - b. Weight: 2.70 pounds per foot.
  - 3. Steel H-Section:
    - a. Outside Dimensions: 2.25-inch by 1.70-inch.
    - b. Weight: 3.26 pounds per foot.
- C. End, Corner, Angle, and Pull Posts:
  - 1. Steel Pipe:
    - a. Outside Diameter: 2.875-inch.
    - b. Weight: 5.79 pounds per foot.
- D. Posts for Removable Fence Panels: As specified for end, corner, angle, and pull posts.
- E. Posts for Swing Gates:
  - 1. Material: ASTM F1043 Group IA ASTM F1083 schedule 40 pipe.
  - 2. Gate Post Size per ASTM F900:

| <b>For gate fabric height up to and including 6 feet</b> |                       |
|----------------------------------------------------------|-----------------------|
| Gate Leaf Width                                          | Post Outside Diameter |
| Up to 4 feet                                             | 2.375-inch            |
| Over 4 feet to 10 feet                                   | 2.875-inch            |
| Over 10 feet to 18 feet                                  | 4.0-inch              |
| <b>For gate fabric height over 6 feet to 12 feet</b>     |                       |
| Up to 6 feet                                             | 2.875-inch            |

|                         |            |
|-------------------------|------------|
| Over 6 feet to 12 feet  | 4.0-inch   |
| Over 12 feet to 18 feet | 6.625-inch |
| Over 18 feet to 24 feet | 8.625-inch |

- a. Roll-formed steel shapes may be substituted for steel pipe posts for gate leaf widths up to 6 feet and fabric heights up to 8 feet.
  - 1) Outside Dimensions: 3.5-inch by 3.5-inch.
  - 2) Weight: 4.85 pounds per foot.

## 2.4 TOP RAILS AND BRACE RAILS

- A. Galvanized steel pipe or roll-formed steel C shapes, color-coated.
- B. Protective Coatings: As specified for posts.
- C. Color Coating: ASTM F1043, minimum 10 mils thickness over zinc coating to match color of chain link fabric.
- D. Strength and Stiffness Requirements: ASTM F669, Top Rail, Heavy or Light Industrial Fence.
- E. Steel Pipe:
  - 1. ASTM F1083.
  - 2. Outside Diameter: 1.66-inch.
  - 3. Weight: 2.27 pounds per foot.
- F. Roll-Formed Steel C Shapes:
  - 1. Roll formed from ASTM A570, Grade 45.
  - 2. Outside Dimensions: 1.625-inch by 1.25-inch.
  - 3. Weight: 1.40 pounds per foot.

## 2.5 FENCE FITTINGS

- A. General: In conformance with ASTM F626, except as modified by this article.
- B. Post and Line Caps: Designed to accommodate passage of top rail through cap, where top rail required.
- C. Tension and Brace Bands: No exceptions to ASTM F626.
- D. Tension Bars:
  - 1. One-piece.
  - 2. Equal in length to full height of fabric.
- E. Truss Rod Assembly: 3/8-inch diameter.
- F. Barb Arms: 45-degree arms for supporting three strands of barbed wire.

## 2.6 TENSION WIRE

- A. Zinc-coated steel marcelled tension wire conforming to ASTM A824, Type II, Class 2.

## 2.7 GATES

### A. General:

1. Gate Operation: Opened and closed easily by one person.
2. Welded Steel Joints: Paint with zinc-based paint.
3. Chain Link Fabric: Attached securely to gate frame at intervals not exceeding 15 inches.

### B. Swing Gates: ASTM F900.

#### 1. Hinges:

- a. Furnished with large bearing surfaces for clamping in position.
- b. Designed to swing either 180 degrees outward, 180 degrees inward, or 90 degrees in or out, as shown, and not twist or turn under action of gate.
2. Latches: Plunger bar arranged to engage stop, except single gates of openings less than 10 feet wide may each have forked latch.
3. Gate Stops: Mushroom type or flush plate with anchors, suitable for setting in concrete.
4. Locking Device and Padlock Eyes: Integral part of latch, requiring one padlock for locking both gate leaves of double gates.
5. Hold-Open Keepers: Designed to automatically engage gate leaf and hold it in open position until manually released.

### C. Fabric Salvage: Knuckled.

### D. Appurtenances and Framework: As specified.

## 2.8 REMOVABLE FENCE PANELS

### A. Panel Length:

1. Equal division of total length of removable fence section.
2. Maximum 10 feet.

### B. Frames: ASTM F1184, Type I.

## 2.9 CONCRETE

### A. Provide as specified in Section 03 30 03, Cast-in-Place Concrete.

## **PART 3 - EXECUTION**

### 3.1 GENERAL

- A. Install chain link fences and gates in accordance with ASTM F567, except as modified in this section, and in accordance with fence manufacturer's recommendations, as approved by ENGINEER. Erect fencing in straight lines between angle points.
- B. Provide all necessary hardware for a complete fence and gate installation.

### 3.2 PREPARATION

- A. Establish locations of fence lines, gates, and terminal posts.

### 3.3 POST SETTING

- A. Driven posts are not acceptable.
- B. Post Hole Depth:
  - 1. Minimum 3 feet below finished grade.
  - 2. 2 inches deeper than post embedment depth below finish grade.
- C. Backfill post holes with concrete to 2 inches above finished grade.
- D. Before concrete sets, crown and finish top of concrete to readily shed water.

### 3.4 BRACING

- A. Brace gate and corner posts diagonally to adjacent line posts to ensure stability.

### 3.5 TOP RAILS

- A. Install top rail sleeves with springs at 105 feet maximum spacing to permit expansion in rail.

### 3.6 CHAIN LINK FABRIC

- A. Do not install fabric until concrete has cured minimum 7 days.
- B. Install fabric with twisted and barbed selvage at top.

### 3.7 GATES

- A. Hang gates and adjust hardware so gates operate satisfactorily from open or closed position.
- B. Set gate stops in concrete to engage center drop rod or plunger bar.

### 3.8 ELECTRICAL GROUNDING

- A. Ground fences in accordance with applicable requirements of IEEE C2, National Electrical Safety Code.

### 3.9 FIELD QUALITY CONTROL

- A. Gate Tests: Prior to acceptance of installed gates and gate operator systems, demonstrate proper operation of gates under each possible open and close condition specified.

## **SECTION 33 01 21**

### **SEWER PIPELINE CLEANING**

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

- A. The intent of sewer pipeline cleaning is to remove foreign materials from the line prior to CCTV inspection and subsequent pipe bursting per Specification Section 33 05 26. Since the success of this phase of work depends a great deal on the cleanliness of the lines, the importance of this phase of the operation is emphasized. It is recognized that there may be some conditions such as broken pipe and major blockages that prevent cleaning from being accomplished some of which are noted in the Drawings or where additional damage would result if cleaning were attempted or continued. Should such conditions be encountered, the CONTRACTOR will notify the ENGINEER before finalizing the decision to not complete mechanical cleaning on the pertinent pipeline.

##### **1.2 SUBMITTALS**

- A. Submit for approval, prior to commencement of work, a list of sewer cleaning equipment to be used including manufacturers' specifications for each piece of equipment (e.g., truck) and its associated tools (e.g., nozzles).

##### **1.3 QUALIFICATIONS**

- A. Pre-qualification shall require that the contracting company and the job supervisor each have a minimum of three (3) years experience in the performance of the type of work specified and shall have specifically performed at least 100,000 feet of cleaning within the past three years. A company with less than three (3) years experience may pre-qualify if they can demonstrate to the satisfaction of the ENGINEER that they have the capabilities, overall experience, equipment, and expertise to satisfactorily complete the project in accordance with these specifications. Documentation supporting the minimum experience of the contracting company shall be submitted with the proposal.

#### **PART 2 - PRODUCTS**

##### **2.1 CLEANING EQUIPMENT**

- A. The equipment shall be capable of removing dirt, grease, rocks, sand, roots, and other materials and obstructions from sewer lines and manholes. Alternatives to equipment described herein require approval by ENGINEER prior to commencing work. The following requirements for the cleaning equipment must be met:
- B. High-velocity hydraulic equipment (hydroflusher) shall be truck or trailer mounted. The equipment shall carry a nominal 800 gallon minimum water tank and have a minimum

33 01 21-1

Sewer Pipeline Cleaning

Pump Station No. 26 Improvements

of 650 feet of high-pressure hose with a selection of two or more cleaning nozzles. The equipment shall be capable of supplying water at minimum 30 gallons per minute at a minimum working pressure of 750 pounds per square inch (psi), and regulated to not exceed a maximum pressure of 1,500 psi. All controls shall be located so that the equipment can be operated above ground at minimal interference to existing traffic and/or danger to the operator.

1. The nozzles shall be capable of producing a scouring action for any pipeline size scheduled to be cleaned.
  2. Hydraulically propelled equipment such as root saws or rotating chain flails may be used upon approval by ENGINEER for each line segment.
  3. Hydraulically propelled equipment such as sewer balls or movable dams shall not be used.
  4. Due to possible accessibility constraints, additional lengths of high-pressure hose may be required.
  5. It shall be CONTRACTOR's responsibility to provide all equipment required to complete cleaning work.
- C. Vacuum truck shall be a minimum 27-inch mercury (high-vacuum unit) with a positive displacement blower, which produces a minimum of 3500 CFM air flow, 8-inch suction tubes, and 16 cubic yards of hauling capacity for debris and water mixture.

## **2.2 MECHANICAL CLEANING EQUIPMENT**

- A. Alternative mechanically powered cleaning equipment proposed for use by CONTRACTOR shall require approval by CITY and/or CITY's Representative (e.g. ENGINEER) prior to commencing work. Examples include, but are not limited to, power rodding machines and bucket machines.
- B. CONTRACTOR shall be responsible for any damage to the sewer or any service connections as a result of using mechanically powered cleaning equipment, including rehabilitation and/or replacement of sewer pipeline to CITY's satisfaction.

## **PART 3 - EXECUTION**

### **3.1 SAFETY**

- A. Conduct operations during all phases of work to ensure public safety and in such a manner as to cause as little inconvenience as possible to the traveling public and abutting property owners. Convenient access to driveways, houses, and buildings along the line of work shall be maintained.
- B. Submit a site-specific Health and Safety Plan for the work to be performed in accordance with OSHA requirements.

33 01 21-2  
Sewer Pipeline Cleaning

Pump Station No. 26 Improvements

- C. CONTRACTOR shall follow all manufacturer's instructions/recommendations for operation and maintenance of cleaning equipment and related appurtenances.
- D. Precautions shall be taken to ensure that the water pressure created does not damage or cause flooding of public or private property being served by the sewer.

### 3.2 CLEANING

- A. Flush and clean pipeline interiors to remove sludge, dirt, sand, grit, stone, grease, roots, and other materials from pipe such that successful CCTV inspection of the pipes outlined in the Drawings can be performed per Specification Section 33 01 31, Sewer Pipeline CCTV Inspection.
- B. A minimum of one operator and one laborer shall be at the job site at all times when cleaning is being performed.
- C. Selection of the equipment to be used shall be based on the conditions of the pipeline segment at the time the work commences and in accordance with the requirements within this specification.
- D. CONTRACTOR shall be responsible for and repair any damage caused by their operations at no additional cost to the CITY and to the CITY's satisfaction.
- E. High-velocity Hydraulic Cleaning:
  - 1. All hydraulic cleaning equipment shall be truck mounted. Water jet cleaning equipment shall include a water tank, auxiliary engine, pumps, and hydraulically driven hose reel. The CONTRACTOR shall provide a minimum of 650 feet of high-pressure hose.
  - 2. CONTRACTOR shall provide a selection of high velocity nozzles, each having a flow capacity and working pressure necessary to clean the pipe thoroughly while preventing sewer backups and impacts to nearby residences. Pressure to the nozzle shall be regulated by a relief valve to prevent backing up into existing structures.
  - 3. Nozzles shall be capable of producing a jet stream angle of 15 to 45 degrees from the horizontal. The CONTRACTOR shall also provide a high velocity gun with sufficient discharge and pressure to thoroughly clean manhole interiors.
  - 4. CONTRACTOR shall clean contiguous pipe segments in order from upstream to downstream.
  - 5. When hydraulic cleaning equipment is used for the purpose of completing scheduled cleaning, the CONTRACTOR shall clean the pipeline with as many passes of a high-velocity hydraulic cleaning machine as necessary until all debris is removed from the pipe.
    - a. CONTRACTOR shall subdivide individual manhole to manhole pipe segments into partial segments no more than 100-foot in length and clean downstream partial segment first then next upstream partial segment all the way to downstream

33 01 21-3

Sewer Pipeline Cleaning

Pump Station No. 26 Improvements

manhole and continue this procedure until cleaning of entire manhole to manhole segment is complete.

6. CONTRACTOR shall be responsible to plan and control the cleaning operations to prevent flooding and/or damage of the sewers and manholes, and to prevent backflow into building structures through sewers and/or laterals.
- F. Whenever lines to be cleaned show evidence of being more than one-half filled with solids at the upstream or downstream manhole, and removal of said solids is not possible with handheld tools such as scoops, shovels, and/or clam shovels, bucket machines or power rodding machines shall be utilized to remove most of the materials before hydraulic equipment is brought into use for finishing the cleaning of the pipeline. As previously stated in Paragraph 2.2, the CONTRACTOR shall acquire approval by CITY or CITY's Representative prior to commencing work with bucket machines or power rodding machines.
1. If bucket or rodding machine is required and approved, that equipment shall be run the entire length of the manhole to manhole segment until CONTRACTOR deems solids level is low enough such that additional passes of a high velocity hydraulic cleaning machine will complete cleaning.
  2. Power rodding machines shall be a "continuous rod" type capable of rodding distances of up to 650 feet in one setup. Rodding machines shall have the ability to spin the rod either clockwise or counterclockwise and be able to be pushed straight out or pulled back without rotating the machine. It shall be capable of pulling pipe-size swabs or brushes back through the sewer for cleaning and flushing purposes. The rodding machine shall have a positive drive and shall be capable of producing a 2000-pound pull. The rod shall be specifically designed for use with the rodding machine.
  3. Whenever bucket machines are used, the bucketing process shall be done in one pipeline segment at a time. A bucket of proper size shall be placed in the downstream manhole and pulled at intervals toward the upstream manhole until the entire pipeline segment has been cleaned. Mechanically powered equipment such as bucket machines shall be provided in pairs and shall be belt-driven or employ an overload device.
  4. Upon completion of the bucketing/rodding operation, high-velocity sewer cleaning equipment shall be used to ensure that all sand, grease, and other fine materials have been removed. Satisfactory precautions shall be taken to protect the pipelines from damage that might be inflicted by the improper use of cleaning equipment.
- G. When the CONTRACTOR deems an adequate number of passes has been completed to remove all foreign materials, CONTRACTOR shall conduct CCTV inspection for confirmation of removal of foreign materials along entire pipe segment per Section 33 01 31.
- H. CONTRACTOR shall be responsible for water used for sewer cleaning operation. The CONTRACTOR may contact the CITY to obtain approval to use water and a water meter

Sewer Pipeline Cleaning

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **SECTION 33 01 31**

### **SEWER PIPELINE CCTV INSPECTION**

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

- A. The intent of Sewer Pipeline CCTV inspection is to verify existing sewer pipeline conditions prior to repair and rehabilitation techniques as well as verify successful application after the work is completed. These CCTV inspections will be designated "field verification CCTV inspection" and "post-installation CCTV inspection"

##### **1.2 SUMMARY**

- A. Technical Specification Section Includes:
1. Pipeline flushing and cleaning.
  2. Closed circuit television (CCTV) inspection of sewer pipelines.
  3. Audio-video taping of pipeline interior.

##### **1.3 REFERENCES**

- A. Electronics Industries Association (EIA).
- B. National Association of Sewer Service Companies (NASSCO) Pipeline Assessment and Certification Program (PACP).

##### **1.4 DEFINITIONS**

- A. Field Verification CCTV Inspections:
1. CCTV inspection for verifying the condition of the existing sewer pipeline prior to the Work including locating all service laterals. This shall include an inspection before and after any repairs that alter the condition of the pipe that has the potential to affect the Work to be done as specified in the Drawings and specifications.
- B. Post Installation CCTV Inspection:
1. CCTV inspection for verifying the successful installation per section 3.8 of Specification 33 05 26, Gravity Sanitary Sewer Pipe Bursting

##### **1.5 SUBMITTALS**

- A. Submit to the ENGINEER a contact name and phone number for the CONTRACTOR's designated representative who will be on-site during cleaning and inspection work.

---

33 01 31-1

Sewer Pipeline CCTV Inspection

Pump Station No. 26 Improvements

Additionally, submit a secondary contact name and phone number for the designated representative's backup.

- B. Submit for approval, prior to commencement of work, a list of video camera equipment to be used including manufacturers' specifications for each camera type.
- C. Submit site-specific Health and Safety Plan.

#### 1.6 QUALIFICATIONS

- A. Experienced and pre-qualified personnel utilizing equipment and materials meeting the requirements of these specifications shall perform all work.
- B. Pre-qualification shall require that the CCTV inspection company and the job supervisor each have a minimum of three (3) years experience in the performance of the type of work specified and shall have specifically performed at least 100,000 feet of television inspection within the past three years. A company with less than three (3) years experience may pre-qualify if they can demonstrate to the satisfaction of the ENGINEER that they have the capabilities, overall experience, equipment, and expertise to satisfactorily complete the project in accordance with these specifications. Documentation supporting the minimum experience of the contracting company shall be submitted to the CITY.
- C. Camera Operator must have current National Association of Sewer Service Companies (NASSCO) Pipeline Assessment and Certification Program (PACP) certification.
  - 1. Camera operator must have a minimum two years experience and 50,000 linear feet of CCTV inspection work using the NASSCO PACP program.
  - 2. CONTRACTOR shall provide to ENGINEER written confirmation certifying Camera Operator:
    - a. Meets experience requirements; and
    - b. Possesses current PACP certification.

#### 1.7 COORDINATION

- A. Coordinate on a daily basis and make provisions to ensure the ENGINEER is present whenever CCTV inspection work is being performed. While it is understood that the ENGINEER(s) may not always be present, the CONTRACTOR understands that the ENGINEER(s) may be present at various points during the work to verify that the quality requirements are adhered to throughout the Work.
- B. If CCTV inspection work reveals any defects or conditions that would prevent the rehabilitation work to be done that is not called out in the Drawings the CONTRACTOR will immediately contact the ENGINEER via telephone or person-to-person correspondence to make them aware of the condition. CONTRACTOR shall move on to other pipelines, continuing work uninterrupted.

---

33 01 31-2

Sewer Pipeline CCTV Inspection

Pump Station No. 26 Improvements

- C. If for any reason the CONTRACTOR anticipates that a defect could result in a Sanitary Sewer Overflow (SSO) within twenty-four (24) hours, the CONTRACTOR will immediately contact the ENGINEER via telephone or person-to-person correspondence to make them aware of the condition.

## **PART 2 - PRODUCTS**

### **2.1 CCTV INSPECTION EQUIPMENT**

- A. The television camera used for the inspection shall be one specifically designed and constructed for operation in connection with sewer inspection and capable of operating in 100 percent humidity conditions.
- B. Cameras used for CCTV inspection of pipelines six inches (6") in diameter and larger shall be of the articulating head type. The camera head shall have a 360-degree radial view rotating head capable of rotating to view laterals, joints, and defects directly.
- C. The television camera used for the inspection shall be in color format specifically designed and constructed for such inspections. Lighting and video quality shall be suitable to allow a clear and focused picture clearly showing the entire inside periphery of the sanitary sewer pipeline for a minimum of six lineal feet ahead of the camera.
- D. The camera shall have a minimum capability of 600 lines of horizontal resolution at center; optimum imagery with minimum illumination; and meet requirements of EIA Standard Video Signal.
- E. The camera shall be equipped with a remote variable intensity control of the camera lights with remote control adjustments for focus and iris located at the monitoring station to ensure peak picture quality throughout all conditions encountered during the survey.
- F. Focal distance shall be adjustable for cameras used to inspect pipelines six inches (6") in diameter and larger.
- G. Camera monitors shall be located where the ENGINEER can view the monitor and make notes in addition to the operating technician. Monitors shall have a resolution capability of no less than 600 lines of horizontal resolution.
- H. Each CCTV inspection unit shall contain a means to transport the CCTV camera in a stable condition (e.g. mounted on skids, mounted on transporter, etc.) through the sewer under survey and/or inspection conditions. Such equipment shall ensure the maintained location of the CCTV camera when used independently on or near to the central axis of a circular shaped sewer pipe.

- I. Each CCTV inspection unit shall carry sufficient numbers of guides and rollers such that, when surveying or inspecting, all bonds are supported away from pipe and manhole structures and all CCTV cables and/or lines used to measure the CCTV camera's location within the sewer are maintained in a taut manner and set at right angles where possible, to run through or over the measuring equipment.
- J. The date of the survey, the identifying number (or location) of the beginning and ending manholes for the pipeline being surveyed, and a continuous forward and reverse read-out of the camera distance from the manhole of reference shall be continuously displayed on the monitors as part of the video presentation. The remote reading footage counter shall be accurate to within two-tenths of a foot.

### **PART 3 - EXECUTION**

#### **3.1 SEQUENCING**

- A. Refer to Section 01 14 03, Special Project Constraints and Section 33 05 26, Gravity Sanitary Sewer Pipe Bursting regarding the required sequencing of Field Verification CCTV Inspections, pipeline cleaning, and Post-installation CCTV inspections.
- B. If there is a known spot-repair required based on the Drawings, conduct a CCTV inspection prior to initiating the repair to confirm the location and extent of repair required. Following completion of the spot repair, complete one more field verification CCTV inspection prior to the Work.
- C. If field verification CCTV inspection reveals any previously unknown required spot repairs, complete spot repairs, then re-CCTV the line prior to the Work. Any required spot repair work that was not shown on the Drawings shall be confirmed with the ENGINEER and CITY prior to completing and the work will be completed as a Change Order to the Contract.

#### **3.2 SAFETY**

- A. Conduct operations during all phases of work to ensure public safety and in such a manner as to cause as little inconvenience as possible to the traveling public and abutting property owners. Convenient access to driveways, houses, and buildings along the line of work shall be maintained.
- B. Submit a site-specific Health and Safety Plan for the work to be performed in accordance with OSHA requirements.

#### **3.3 PREPARATION**

- A. Verify location of sewer pipelines to be inspected. Due to potential site constraints, the CONTRACTOR shall review the project site locations for accessibility.

- B. Exercise caution when conducting work so as not to cause damage to private property. CONTRACTOR shall be solely responsible for any damage caused to private property and shall repair any such damage to a level approved by the ENGINEER at no additional cost.
- C. Upon completion of work, CONTRACTOR shall restore the area to pre-existing conditions and (if possible) notify the property owner when leaving the area.
- D. CONTRACTOR shall document pre-inspection and post-inspection conditions of private properties with digital photographs.
  - 1. Disputes with property owners will be settled through the use of photos that will document pre-inspection conditions. In the event that the Contractor fails to adequately document pre-construction conditions, the Contractor will be obligated to restore disputed landscaping, yards, improvements, etc. to the satisfaction of the ENGINEER.

### 3.4 PIPELINE CLEANING

- A. All pipelines are to be cleaned per Specification 33 01 21 and Section 33 05 26 prior to the Work. Sequencing of the cleaning with respect to the completion of CCTV inspection work shall be left to the means and methods of the CONTRACTOR.

### 3.5 INSPECTION – PIPELINE

- A. Furnish all materials, labor, equipment, power, and maintenance to complete CCTV inspection of the scheduled pipeline segments.
- B. Televiser all pipeline segments completely from starting manhole to ending manhole on the same video in a continuous run. Partial televising on one video and then completing the run on another is unacceptable unless an impassible condition is encountered and properly documented, and a "reverse set-up" completed. The camera shall travel in the direction of the flow in the pipeline segment (i.e., downstream) unless there is no access to the upstream manhole or when a flushing inlet exists at the upstream end of the pipeline or when completing a "reverse set-up". "Reverse set-ups" for convenience are not acceptable, unless pre-approved by ENGINEER at the ENGINEER's discretion. Cost of "reverse set-up" shall be included within CONTRACTOR's bid. No additional payment shall be made for a line requiring a "reverse set-up".
- C. If, during the inspection, the television camera will not pass through the entire line segment as a result of offset joints, broken pipe, protruding taps, or other obstructions, the CONTRACTOR shall set up his equipment so that the inspection can be performed from the destination manhole or other access points (i.e., a "reverse set-up").
- D. If, during the inspection, the viewable portion of the pipe is reduced to less than 80% of the interior pipe diameter due to submerged lines or sags, the CONTRACTOR shall

---

33 01 31-5

Sewer Pipeline CCTV Inspection

Pump Station No. 26 Improvements

vacuum clean or jet flush the line to remove or lower the standing water level and proceed concurrently with the television inspection. In the event the CONTRACTOR is still unable to televise the entire line and has demonstrated to the ENGINEER that every reasonable effort has been made to dewater the pipeline, the CONTRACTOR will complete the inspection to the best of their ability in the reduced viewable pipe diameter condition and move on to the next setup.

- E. The travel speed of the camera shall be uniform and shall not exceed 30 feet per minute. Any means of propelling the camera through the pipeline that would exceed this rate of speed or produce non-uniform or jerky movements shall not be acceptable. The camera shall be stopped and/or backed up to view and analyze apparent defects and unusual or uncommon conditions within the pipeline.
  - 1. Self-propelled cameras, manual winches, power winches, cable, and powered rewinds or other devices that do not obstruct the camera view or interfere with proper documentation of the sewer conditions shall be used to move the camera through the pipeline segment.
  - 2. In no case shall the hose of a high-velocity water cleaning machine be allowed for use as a tow cable.
- F. Stop the camera a minimum of five (5) seconds at every lateral to look up the center of the lateral and see any apparent defects, such as broken pipes, root intrusions, or other defects that would inhibit the rehabilitation work to be done. The lens and lighting shall be readjusted, if necessary, in order to ensure a clear, distinct, and properly lighted feature.
- G. Minimize the amount of recorded video beyond the required time at each observation when the camera is stationary. Utilize a pause feature (or similar) within the video recording device to limit the amount of recorded video resulting from non-inspection related activities (e.g., adjustment of camera/lighting settings, equipment monitoring/adjustment).
- H. Take still digital photos of all laterals, defects, and observations noted on the CCTV inspection report.

### 3.6 FIELD QUALITY CONTROL

- A. Provide an acceptable picture that is in focus, distinct, clear, and properly illuminated, with good contrast and without distortion. The picture shall be of true and adequate color and tint, free from interference and distortion.
- B. The picture shall show at least 80% of the pipe periphery above the waterline. All recording shall be in color achieving and maintaining proper balance of tint and brightness.
- C. The picture shall have adequate light to clearly ascertain any pipeline defects like cracks and their severity in addition to clearly seeing other features like laterals and joints.

---

33 01 31-6

Sewer Pipeline CCTV Inspection

Pump Station No. 26 Improvements

- D. The camera lens shall be kept clean and clear of any fogging due to oil, grease, or other material or debris. Material that obscures the lens shall be cleaned off before proceeding with the recording operation.
- E. If debris or other obstructions cause reduced visibility, or if the image is obscured, the CONTRACTOR shall make reasonable attempts to clear the lens of the camera before continuing inspection.
- F. The importance of accurate distance measurement is emphasized. The accuracy of the remote reading footage counter shall be verified by use of a walking meter, roll-a-tape, or other suitable device to the approval of the ENGINEER prior to the commencement of the Work.
- G. Other unacceptable conditions that shall serve as a cause for rejection of submitted videos include, but are not necessarily limited to:
  - 1. The loss of color or severe redness due to equipment malfunction and black-and-white pictures irrespective of quality.
  - 2. Loss of vertical hold which impacts the ability to read and interpret the video.
  - 3. Incorrect manhole identifications, or if it is not clear which line has been televised.
  - 4. Inaccurate footage readings during any portion of the inspection.
  - 5. Any other unidentifiable defect such as equipment interference, equipment malfunction, and blurred or obscured images from an unknown source that detracts from the ability to read the video with reliable accuracy.

### 3.7 RETRIEVAL OF EQUIPMENT

- A. CONTRACTOR shall retrieve television camera equipment stuck or lost in mains immediately at the time of incident. CITY personnel and equipment are not available to assist the CONTRACTOR in the retrieval of equipment. Following the retrieval of the camera equipment, the pipeline shall be restored according to current applicable standards and to the approval of the ENGINEER. CONTRACTOR shall be responsible for all private and public property restoration to the satisfaction of the ENGINEER. No additional compensation will be made for any costs associated with retrieval of equipment.

### 3.8 CCTV INSPECTION REPORTS

- A. CCTV inspections shall be evaluated against the video for accuracy and completeness, prior to submittal to ENGINEER for acceptance.
- B. BUSlink USB 2.0 External Hard Drive (or ENGINEER approved equal) containing the following shall be submitted to the ENGINEER within two (2) weeks of the inspection. ENGINEER shall return the external hard drive within one week of submittal:

1. Video imagery with audio track containing simultaneously recorded narrative commentary describing in detail condition of pipeline interior.
    - a. Video shall be captured in MPEG (.mpg) format.
  2. Digital still photography of every observation.
    - a. Digital photos shall be in JPEG (.jpg) format.
- C. All submitted data shall become the property of the CITY upon completion of the project.

+ + END OF SECTION + +

## SECTION 33 05 13

### HYBRID PVC SANITARY SEWER MANHOLE

#### **PART 1 - GENERAL**

##### **1.1 SCOPE**

This specification shall govern for the furnishing of all work necessary to accomplish and complete the installation of a PVC Sanitary Sewer Manhole (SSMH), comprising fiberglass reinforced plastic lined concrete sanitary sewer maintenance access base and top sections, a polyvinyl chloride riser section and all appurtenances. The PVC SSMH shall be corrosion, abrasion, inflow and infiltration resistant.

The PVC Sanitary Sewer Manhole shall be modular and shall include the following main components:

Fiberglass Reinforced Plastic (FRP) concrete protective liners for SSMH base and top sections, including all appurtenances. Liners shall be non-structural units, constructed of fiberglass reinforced unsaturated polyester resin, third-party certified for wastewater infrastructure use, designed to provide a gastight and watertight homogenous barrier that protects the concrete SSMH base and top sections from corrosion, abrasion, inflow and infiltration. FRP liners shall be manufactured by Predl Systems North America Inc., Burnaby, BC.

Concrete SSMH base and top sections, cast around the FRP concrete protective liners. Concrete base and top sections shall be ASTM C478 compliant and manufactured by Diamond Precast Concrete Ltd., Burnaby, BC or a Predl Systems certified precast facility.

PVC riser section shall be AWWA C900 compliant, DR-51 pressure class PVC pipe, manufactured by Diamond Plastics Corp., Grand Island, NE.

ASTM C990 compliant elastomeric sealant and ASTM C877 compliant external joint wrap, for the purpose of joining the lined concrete base, PVC riser and lined concrete top SSMH sections, supplied by others.

##### **1.2 GENERAL DESCRIPTION**

###### **A. Configuration:**

The SSMH base section shall include an FRP Baseline and the SSMH top section will include an FRP Top Liner with integral Access Collar and Gasket, to accept and an FRP Telescoping access Tube. Each prefabricated FRP liner component shall be constructed from one piece homogenous composite and/or thermoplastic with minimum thickness of 3 mm (1/8"). FRP concrete protective liners shall be non-structural elements.

###### **1. FRP Baseline:** Each SSMH Baseline shall include:

- a) Full flow channels with side walls to the crown of the pipe(s) or above;
- b) A non-skid pattern on inner bench surfaces;
- c) Gasketed, flexible and watertight, bell type, pipe connections for specific pipe types to receive the collection pipes at the exact angles and slopes as specified on Contract Documents.

---

33 05 13-1

Hybrid PVC Sewer Manhole

Pump Station No. 26 Improvements

The Bells shall be monolithically attached to the SSMH base liner channels, be integral to the Baseline and have a water stop on the outside and a pipe stop on the inside that matches the diameter and wall thickness of the collection pipe and ensure that the flow line from the pipe stop to the inside channels are smooth and without obstruction. The Bells shall conform to the outside and inside curve of the SSMH walls.

The Baseline shall have a spigot or bell type joint facing the PVC riser tube and connecting to the inside or outside of the PVC riser, respectively. An ASTM C990 compliant butyl rubber sealant, such as ConSeal CS-102, shall be used in the joint interface. An ASTM C877 compliant external joint wrap, such as ConSeal CS-212, shall be used to seal the joint from the outside.

2. **FRP Top Liner with integral Access Collar and Gasket:** The FRP Top Liner component shall provide concrete protection from corrosion, abrasion, inflow and infiltration for the SSMH cone section and shall feature an integral FRP Access Collar and Gasket at the manway opening, to receive an FRP Telescoping Access Tube.

The FRP Top Liner shall either have cone or flat top configuration depending on the requirements of Contract Documents.

The Top Liner shall have a spigot or bell type joint facing the PVC riser tube and connecting to the inside or outside of the PVC riser, respectively. An ASTM C990 compliant butyl rubber sealant, such as ConSeal CS-102, shall be used in the joint interface. An ASTM C877 compliant external joint wrap, such as ConSeal CS-212, shall be used to seal the joint from the outside.

3. **Telescoping Access Tube:** The FRP Telescoping Access Tube shall provide concrete protection from corrosion, abrasion, inflow and infiltration for the manway entry section, between the casting at the finished grade and top of the SSMH top section. The Telescoping Access Tube shall accommodate grading adjustments up to 12" of height.

#### B. Dimensions:

1. FRP Baselines and Top Liners shall have outside diameters of 51", 58" and 61.75", corresponding substantially to the outside diameters of 48", 54" and 60" C900 DR-51 PVC pressure pipes. Tolerance on the outside diameter shall be +/- 1%. Other diameters, as agreed upon between purchaser and the manufacturer, are covered by this specification.
2. FRP Baselines and Top Liners shall have spigot joint diameters of 48.80", 55.30" and 59.19", corresponding to the inside diameters of 48", 54" and 60" C900 DR-51 PVC pressure pipes. Tolerance on the spigot joint diameter shall be +0/-0.125". Other diameters, as agreed upon between purchaser and the manufacturer, are covered by this specification.
3. Allowable tolerance for Baseline invert elevations shall be 0.125" and 2% for pipe slope.

4. Access Collars and Telescopic Access Tube shall accommodate manway openings of 24", 27", 32" or 36". Telescopic Access Tube shall have a nominal height of 15". Access Collars can be either eccentric or concentric.

**C. Marking and Identification**

Baseliner shall be marked with the following information:

- 1) Manufacturer's identification
- 2) Nominal diameter
- 3) Sanitary Sewer Maintenance Access (SSMH) identification
- 4) Detailed invert configuration
- 5) Installation assist marks molded into the Baseline

All other components shall be marked with the following information:

- 1) Manufacturers Identification
- 2) Nominal Diameter
- 3) Installation assist marks, if applicable

**1.3 HANDLING AND STORAGE**

FRP SSMH liners must not be dropped or impacted. When stored for extended periods (more than a few days) Baseliners shall be stored on a flat surface, upside down to minimize deformation. Baseliners shall not be exposed to direct sunlight for extended periods.

**PART 2 - REFERENCES**

**2.1 REFERENCES**

Sanitary Sewer Maintenance Access liners shall conform to the following design criteria:

- A. ASTM D395: Standard Test Methods for Rubber Property-Compression Set
- B. ASTM D412: Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers-Tension
- C. ASTM D471: Standard Test Method for Rubber Property-Effect of Liquids
- D. ASTM D543: Standard Practices for Evaluating the Resistance of Plastics to Chemical Reagents

## 2.1 SUBMITTALS

- A. Conform to bid document requirements
- B. Submit manufacturer's data and details of following items for approval:
  - 1. Shop drawings of SSMH sections, base units and construction details, jointing methods, materials, and dimensions
  - 2. Summary of criteria used in SSMH design including, as minimum, material properties, loading criteria, and dimensions assumed. Include certification from manufacturer that polymer concrete SSMH design meets or exceeds the load and strength requirements of ASTM C 478 and ASTM C 857, reinforced in accordance with ACI 440.1R-15. Include current ISO 9001:2008 certification
  - 3. Frames, grates, rings, and covers
  - 4. Materials to be used in fabricating pipe drop connections
  - 5. Materials to be used for pipe connections
  - 6. Materials to be used for stubs and stub plugs, if required
  - 7. Proof of independent Chemical Resistance testing conducted in accordance with the Standard Specifications for Public Works Construction (California Greenbook) Section 211-2
  - 8. Submitted sealed drawings by a registered Professional Engineer

## **PART 3 - PRODUCTS**

### 3.1 FRP LINERS, BELLS, GASKETS, MECHANICAL DEVICES, CONCRETE, AND THIRD-PARTY ACCESSORIES

- A. **FRP liner body:** The resins used shall be unsaturated, supplier certified, commercial grade polyester resins. Mixing lots of resins from different manufacturers or "odd-lotting" of resins shall not be permitted. Quality-assurance records on the resin shall be maintained.

The reinforcing materials shall be commercial grade "E-CR" type glass, specially formulated for corrosive environments, in the form of mat, chopped roving, continuous roving, continuous roving, roving fabric or a combination of the above, having a coupling agent that will provide a suitable bond between the glass reinforcement and resin. Fiberglass and/or polypropylene ribs and/or structural members may be utilized to meet the design criteria.

No inert fillers shall be used. Additives, such as thixotropic agents, catalysts, promoters, etc., may be added as required by the specific manufacturing process to be used to meet the requirements of this standard.

The laminate shall consist of multiple layers of glass matting and resin. The surface exposed to the sewer/chemical environment shall be resin rich and shall have no exposed fibers.

---

33 05 13-4  
Hybrid PVC Sewer Manhole

Pump Station No. 26 Improvements

- B. **Bells:** Bell shall be manufactured from the same unsaturated, supplier certified, commercial grade polyester resins as the main FRP Baseline body. If available, polypropylene injection molded bells are also allowed.
- C. **Gaskets:** Resilient materials for connectors and filler rings shall be manufactured from natural rubber, polyisoprene, neoprene, nitrile, or ethylene propylene diene monomer (EPDM) synthetic rubber and shall conform to the material requirements prescribed in this specification. If a splice is used in the manufacture of the seal, its strength shall be such that the seal shall with-stand a 180° bend with no visible separation.
- D. **Mechanical devices:** Expansion rings, tension bands, and take-up devices used for mechanically compressing the resilient portion of the connector against the pipe or SSMH shall be made from a material or materials in combination that will ensure durability, strength, resistance to corrosion, and have properties that will ensure continued resistance to leakage. All metallic mechanical devices and bolt assemblies used to mechanically deform resilient materials shall be constructed of corrosion resistant materials meeting the physical properties and chemical composition requirements of ASTM A493 and A666, Type 302 through Type 316.
- E. **Third party accessories:** Third party accessories integral to the PVC SSMH System or the FRP SSMH Liner (flow control devices, valves, gates, inside drop assembly, man entry ladder, etc.) shall be governed by the respective manufacturers' materials specifications.
- F. **Concrete:** Concrete shall be wet-cast, conforming to the requirements of the most recent versions of ASTM C478, CSA A23.1, and CSA A23.4. Concrete shall have an A-3 exposure class, unless otherwise specified by the project engineer.

### 3.2 DESIGN

- A. **Exterior Surface:** The exterior surface shall be finished with embedded aggregates and FRP bonding bridges to allow for adequate bonding with the surrounding concrete once cast. The exterior surface shall be free of blisters larger than 0.5" in diameter, delamination and fiber show, except in the vicinity of FRP bonding bridges where fiber show is acceptable. Gel-coat or paint or other coatings are not allowed.
- B. **Interior Surface:** The interior surfaces shall be resin rich with no exposed fibers. Interior flow surfaces shall be smooth for improved corrosion resistance and reduced sludge build-up. The surface shall be free of crazing, delamination, blisters larger than 0.25" in diameter, and wrinkles of 0.125" or greater in depth. Gel-coat shall be permitted on interior surfaces, no paint or other coatings are allowed.
- C. **Repairs:** Any SSMH liner repair is required to meet all requirements of this specification. All repair must all be preapproved by the manufacturer.
- D. **Chemical Resistance:** FRP SSMH liners must demonstrate having sufficient corrosion resistance by passing the "Greenbook" 2009 edition (or later), Standard Specifications for Public Works Construction, Chemical Resistance Test (Pickle Jar Test), per third-party accredited laboratory test results.

#### **E. Physical Properties:**

---

33 05 13-5  
Hybrid PVC Sewer Manhole

Pump Station No. 26 Improvements

All FRP liner material shall have the following physical properties when tested at 77 °F ± 5 degrees:

| Property                          | Standard   | Units               | Value      |
|-----------------------------------|------------|---------------------|------------|
| Density                           | ASTM D792  | g/cm <sup>3</sup>   | 1.02       |
| Thickness                         | --         | Mm                  | 3 min.     |
| Tensile Strength                  | ASTM D638  | psi                 | 6,500 min. |
| Hardness (Shore "A")              | ASTM D2240 |                     | 95-97      |
| Weight change                     | --         | --                  | --         |
| Flexural Strength                 | ASTM D790  | lbf/in <sup>2</sup> | 8050 min   |
| Compressive Strength              | ASTM D695  | psi                 | 6,500 min  |
| Ignition Loss                     | ASTM D2584 | %                   | 52 avg.    |
| Taber abrasion test (weight loss) | ASTM D4060 | %                   | 0.075      |

Tensile specimens shall be prepared and tested in accordance with ASTM D412 using Die B. Weight change specimens shall be 1 IN by 3 IN samples.

All gaskets shall have the following physical properties:

| Property                                                         | Standard                                     | Units  | Requirement                                                          |
|------------------------------------------------------------------|----------------------------------------------|--------|----------------------------------------------------------------------|

| Low temperature brittle point                                    | ASTM D2137                                   | --     | No fracture at -40°C                                                 |
| Tear resistance                                                  | ASTM D624, Die B                             | kN/m   | 34                                                                   |

33 05 13-6  
Hybrid PVC Sewer Manhole

Pump Station No. 26 Improvements

Upon request, the manufacturer shall provide written certification that the FRP liners and gaskets used meets or exceeds the requirement of this specification.

#### F. Chemical Resistance

After conditioning to constant weight at 110 °F, FRP liner specimens shall be exposed to the following solutions for a period of 112 days at 77 °F ± 5 degrees, as prescribed in Standard Specifications for Public Works Construction, section 211-2 (Pickle Jar Test).

At 28-day intervals, tensile specimens and weight change specimens shall be removed from each of the chemical solutions and tested. If any specimen fails to meet the 112-day requirement before completion of the 112-day exposure, the material will be subject to rejection.

| Chemical Solution                                | Concentration             |
|--------------------------------------------------|---------------------------|
| Sulfuric acid                                    | 20%*                      |
| Sodium hydroxide                                 | 5%                        |
| Ammonium hydroxide                               | 5%*                       |
| Nitric acid                                      | 1%*                       |
| Ferric chloride                                  | 1%                        |
| Sodium hypochlorite                              | 1%                        |
| Soap                                             | 0.1%                      |
| Detergent (linear alkyl benzyl sulfonate or LAS) | 0.1%                      |
| Bacteriological                                  | BOD not less than 700 ppm |

\* Volumetric percentages of concentrated C.P. grade reagents.

### 3.2 MANUFACTURER

- A. Manufacturer shall have 25 years of FRP concrete protective liner manufacturing experience and shall have fabricated and delivered at least 20,000 FRP concrete protective liners for wastewater applications.
- B. Precaster shall be certified by the National Precast Concrete Association.

## PART 4 - EXECUTION

### 4.1 MATERIALS TEST METHODS

- A. All test methods shall be performed per corresponding ASTM standard and per "Greenbook" 2009 edition (or later), Standard Specifications for Public Works Construction, Chemical Resistance Test (Pickle Jar Test).

### 4.2 QUALITY ASSURANCE/QUALITY CONTROL

- A. **Examination:** Each SSMH liner shall be examined for dimensional requirements and workmanship.

---

33 05 13-7  
Hybrid PVC Sewer Manhole

Pump Station No. 26 Improvements

- B. **Composition Control:** Controls on glass and resin content shall be maintained for all manufacturing processes and for each portion of SSMH liner fabrication. Records shall be maintained for these control checks. Proper glass content may be shown by glass usage checks or glass and resin application rate checks.
- C. **Certified facility:** The SSMH liners shall be designed and manufactured in an ISO 9001 and 14001 certified manufacturing facility.

#### 4.3 PRECASTING

- A. **Casting:** FRP SSMH liners are non-structural components. Liners must be monolithically cast within a concrete SSMH section using a wet cast method. Custom pouring supports shall be provided with FRP liners to fully support the liners during the concrete pouring process against the vertical and horizontal forces created by the concrete during casting. The poured SSMH base must not be moved until adequate hydration has occurred. Lifting devices must not penetrate any surface of the liner. No liner may have holes or openings which will permit the intrusion of liquids or gases through the liner wall and into the concrete.
- B. **Installation:** The PVC SSMH installation should strictly follow the Predl Systems' recommended installation procedures to ensure long-term corrosion resistant service.

#### 4.4 FIELD INSTALLATION

- A. **Base:** Base shall be place on a compacted, graded bedding meeting the requirements of the contract documents. Base shall be level, with the invert elevations conforming to the contract documents.
  - a. Connect pipes to the SSMH base, using integral bell connectors, with gaskets supplied by the manufacturer
- B. **Riser:** Clean the joint surface of the base, ensuring no foreign material remains. Place ASTM C990 compliant butyl rubber sealant along the joint, ensuring no gaps remain.
  - a. Lower PVC riser onto joint, ensuring the butyl rubber sealant is engaged and compressed. Riser shall be set plumb.
  - b. Backfill approximately 6"-12" below the top of the riser. Compact backfill per contract documents and standard practices.
  - c. Clean the top of the PVC riser, ensuring no foreign material remains. Place ASTM C990 compliant butyl rubber sealant along top of the riser, ensuring no gaps remain.
- C. **Flat top:** Lower flat top on to PVC riser, ensuring the butyl rubber sealant is engaged and compressed. Place Telescopic Access Collar gasket in gasket seat of SSMH opening. Stack grade rings to the desired height. Place Telescopic Access Collar into grade ring opening, exert a downward force on the collar to engage the collar with the gasket, while ensuring no concentrated point loads are applied to the TAC. Ensure the gasket is fully engaged and no rolling occurred. Place butyl rubber sealant on top of collar flange, then set casting. Backfill and pave.

---

Hybrid PVC Sewer Manhole

Pump Station No. 26 Improvements

#### 4.5 FINAL TESTING AND ACCEPTANCE

- A. Hydrostatic Testing: Hydrostatic testing shall be conducted, as required, by plugging with approved plugs all influent and effluent pipes in the SSMH and filling the SSMH to the top of the SSMH cone with water. Additional water may be added over a 24-hour period to compensate for evaporate losses. At the conclusion of the 24-hour saturation period the SSMH shall be filled to the top of the SSMH cone and observed. A loss within a 30-minute period shall be considered an unsuccessful test.
- B. Vacuum Testing: Sanitary Sewer Maintenance Access Structures shall be tested, as required, after installation and prior to backfilling with all connections (existing and proposed) in place, in general accordance with ASTM C1244.

The lines entering the SSMH shall be temporarily plugged with the plugs braced to prevent them from being drawn into the SSMH. The plugs shall be installed in the lines beyond drop connections, gas sealing connections, etc. The test head shall be inflated in accordance with the manufacturer's recommendations. A vacuum of 10 inches of mercury shall be drawn, and the vacuum pump will be turned off. With the valve closed, the level vacuum shall be read after the required test time. If the drop in the level is less than 1-inch of mercury (final vacuum greater than 9-inches of mercury), the SSMH will have passed the vacuum test. The required test time is determined from the table below:

| Depth<br>(ft) | Nominal Diameter (in) |    |    |    |    |    |    |     |     |
|---------------|-----------------------|----|----|----|----|----|----|-----|-----|
|               | 30                    | 33 | 36 | 42 | 48 | 54 | 60 | 66  | 72  |
|               | Time (seconds)        |    |    |    |    |    |    |     |     |
| <4            | 6                     | 7  | 7  | 9  | 10 | 12 | 13 | 15  | 16  |
| 6             | 9                     | 10 | 11 | 13 | 15 | 18 | 20 | 22  | 25  |
| 8             | 11                    | 12 | 14 | 17 | 20 | 23 | 26 | 29  | 33  |
| 10            | 14                    | 15 | 18 | 21 | 25 | 29 | 33 | 36  | 41  |
| 12            | 17                    | 18 | 21 | 25 | 30 | 35 | 39 | 43  | 49  |
| 14            | 20                    | 21 | 25 | 30 | 35 | 41 | 46 | 51  | 57  |
| 16            | 22                    | 24 | 29 | 34 | 40 | 46 | 52 | 58  | 67  |
| 18            | 25                    | 27 | 32 | 38 | 45 | 52 | 59 | 65  | 73  |
| 20            | 28                    | 30 | 35 | 42 | 50 | 53 | 65 | 72  | 81  |
| 22            | 31                    | 33 | 39 | 46 | 55 | 64 | 72 | 79  | 89  |
| 24            | 33                    | 36 | 42 | 51 | 59 | 64 | 78 | 87  | 97  |
| 26            | 36                    | 39 | 46 | 55 | 64 | 75 | 85 | 94  | 105 |
| 28            | 39                    | 42 | 49 | 59 | 69 | 81 | 91 | 101 | 113 |
| 30            | 42                    | 45 | 53 | 63 | 74 | 87 | 98 | 108 | 121 |

- C. Acceptance: SSMHs will be accepted with relation to the hydrostatic test requirements and the vacuum test requirements if they meet the criteria above. Any SSMH which fails the initial test must be repaired or replaced prior to backfilling. The SSMH shall be

---

33 05 13-9

Hybrid PVC Sewer Manhole

Pump Station No. 26 Improvements

retested as described above until successful tests have been made. After the successful tests, the temporary plugs will be removed.

4.6 WARRANTY

A 10-year Warranty against corrosion shall be issued.

+ + END OF SECTION + +

Hybrid PVC Sewer Manhole  
Pump Station No. 26 Improvements

## **SECTION 33 05 26**

### **GRAVITY SANITARY SEWER PIPE BURSTING**

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

- A. This section covers the work necessary to completely replace gravity sanitary sewer pipe via pipe bursting techniques. The work shall consist of furnishing all labor, materials, equipment, and supervision necessary to replace certain sanitary sewer lines identified on the Contract Drawings. The Work shall consist of upsizing the existing specified 8" and 10" sewer pipes with 10" and 12" high density polyethylene (HDPE) standard dimension ratio (SDR) 17 pipe respectively. Complete replacement of the specified sanitary sewer lines shall consist of, but not necessarily limited to:
1. Sewage flow bypassing during the pipe bursting operations.
  2. Identification, disconnection, and reconnection of all existing live laterals if applicable.
  3. Excavation, backfill, and surface restoration of access pits.
  4. Television inspection and testing of completed pipe system.

##### **1.2 REFERENCES**

33 05 26-1

Gravity Sanitary Sewer Pipe Bursting

Pump Station No. 26 Improvements

1. Title 29, Code of Federal Regulations, Part 1926

1.3 QUALITY ASSURANCE

- A. Quality assurance procedures shall be performed by the pipe manufacturer fully in accordance with the requirements of this specification. The certification shall include certified laboratory data confirming that said tests have been performed on a sample of the pipe to be provided under this contract, or pipe from that production run, and that satisfactory results were obtained.
- B. Fusion joining and other procedures necessary for correct assembly of the polyethylene/PVC pipe shall be done only by personnel trained in those skills to the satisfaction of the ENGINEER and the pipe supplier.
- C. Only those tools designed for the aforementioned procedures, and approved by the pipe manufacturer or supplier and the ENGINEER, shall be used for assembly of pipe fittings to ensure proper installation. The heater plate shall be equipped with suitable means to measure the temperature of plate surface and to assure uniform heating such as thermometers or pyrometers.
- D. The CONTRACTOR performing the pipe installation shall be certified by the pipe bursting system manufacturer that the CONTRACTOR is a licensed installer of the manufacturer's system (if applicable).

1.4 QUALIFICATIONS

- A. The CONTRACTOR will have actively engaged in the installation of pipe using pipe bursting for a minimum of five (5) years and have installed, as a company, a minimum of 50,000 feet in similar conditions. Field Supervisory Personnel employed by the Pipe Bursting CONTRACTOR will have at least five (5) years of documented experience in the performance of the work and tasks as stated in the contract documents.
- B. Fusion equipment shall be operated only by technicians who have been certified by the pipe manufacturer or supplier and who have a minimum of three (3) years of experience fusion welding similarly sized pipe. The technicians experience shall be documented in the pipe submittal.

1.5 PERMITS

- A. Permits and Regulations:
  - 1. Perform excavation Work in compliance with applicable requirements of governing authorities having jurisdiction.
  - 2. Obtain all necessary permits for Work in roads, rights-of-way, etc. Also obtain permits as required by local, state and federal agencies for discharging water from excavations, for erosion control, and for prevention of air and water pollution.

1.6 SUBMITTALS

- A. CONTRACTOR shall submit a Pipe Bursting Work Plan and Construction Schedule as required by the CITY and ENGINEER in accordance with the requirements of 01 32 13, Progress Schedule.

---

33 05 26-2  
Gravity Sanitary Sewer Pipe Bursting  
Pump Station No. 26 Improvements

- B. CONTRACTOR shall submit a sewage bypass pumping and/or diversion plan for review and approval by the CITY and ENGINEER in accordance with the requirements of 01 57 03, Sewage Bypass Pumping.
- C. CONTRACTOR shall submit an Excavation Support plan for review and approval by the CITY and ENGINEER in accordance with the requirements of section 3.2.B.7 and 31 05 03, Earthwork.
- D. The CONTRACTOR shall perform trial fusion welds and submit samples to the ENGINEER for review prior to installation of the pipe. Full penetration welds shall provide a homogeneous material across the cross-section of the weld. The fusion machine employed for the trial welds shall be the same machine to be utilized for the installation work.
- E. CONTRACTOR shall submit details of insertion pit dimensions as required for safe bending of the pipe and straight-line insertion of the bursting head, pipe burst tooling, and pipe into the host pipe. CONTRACTOR shall also submit details of insertion pit and reception pit shoring and dewatering.
- F. Shop Drawings:
  - 1. The CONTRACTOR shall submit catalog cuts, specifications, dimensioned drawings, and installation details/sketches and other pertinent information for the pipe installation work. All materials provided shall be fully in accordance with the requirements of the reference specifications specified above.
  - 2. The CONTRACTOR shall verify with the pipe manufacturer all connection details.
  - 3. The CONTRACTOR shall furnish, prior to use of the materials, a certified affidavit of compliance for all materials and conformance with the methods of the manufacturer and ASTM requirements

#### 1.7 EXISTING SEWER SYSTEM

- A. Active Sewers: CONTRACTOR shall manage active flows from all sewer lines and sewer laterals as indicated on the Drawings and the Specifications.
- B. Connections to Existing Sewers and Manholes: The CONTRACTOR shall make all required connections to existing sewers, laterals, and manholes and carry out such work in accordance with local standards and requirements and as directed by the ENGINEER. Extreme care to prevent debris from flowing into downstream sewer lines shall be exercised.

#### 1.8 PROTECTION OF PROPERTY

- A. The CONTRACTOR shall contact the appropriate regional notification center such as Underground Service Alert (USA) at 800-227-2600 at least two (2) working days before beginning construction. The CONTRACTOR shall request that the utility owners conduct a utility survey and mark clearly the location of their services.
- B. It is CONTRACTOR's responsibility to determine the exact location and depth of all existing utilities, including service connections, which have been marked by the utility owners, which are shown on contract drawings and which the CONTRACTOR believes may be impacted by the Work.

---

33 05 26-3  
Gravity Sanitary Sewer Pipe Bursting  
Pump Station No. 26 Improvements

- C. The CONTRACTOR is cautioned that unknown utilities may be encountered or that the exact location of known utilities may be different than marked on the surface. If unknown utilities are encountered, work in that area must not proceed without CITY and ENGINEER's approval.
- D. The CONTRACTOR shall take necessary precautions to prevent damage to existing structures and hardscapes whether on the surface, aboveground, or underground. The CITY and ENGINEER shall be satisfied with the hardscape conditions removed and replaced by the CONTRACTOR. The following are the property protection requirements for the CONTRACTOR to follow:
1. An attempt has been made to show major structures on the Drawings. While the information has been compiled from the best available sources, its completeness and accuracy cannot be guaranteed, and it is presented as a guide to avoid possible difficulties.
  2. The CONTRACTOR shall protect all existing structures, trees, shrubs, and other items on the project site that are to be preserved, by substantial barricades or other devices commensurate with the hazard, from injury or destruction by vehicles, equipment, workmen, or other agents.
  3. Where existing fences, gates, buildings, hardscaping, landscaping, trees, shrubs or any other structure must be removed to properly carry out the Work, or are damaged during the work, they shall be restored at the CONTRACTOR's expense to their original condition or better.
  4. Without additional compensation, the CONTRACTOR may remove and replace in a condition as good as or better than original, any small structures such as fences, landscaping and others that interfere with the CONTRACTOR's operations.

## **1.9 SAFETY**

- A. The CONTRACTOR agrees that they shall assume sole and complete responsibility for job site conditions with respect to his specific work during the course of pipe bursting.

## **PART 2 - PRODUCTS**

### **2.1 MATERIALS**

- A. High Density Polyethylene (HDPE) Pipe
1. Pipe shall be high molecular weight, high density polyethylene pipe with a SDR of 17. The material shall be listed by the Plastic Pipe Institute (PPI) with a designation of PE 4710 and have a minimum cell classification of 445574E (for Gray Pipe) as described in ASTM D3350. The pipe material shall meet the requirements for Type III, Class B, Category 5, Grade P34 material as described in ASTM D1248. The pipe shall contain no recycled compound except that generated in the manufacturer's own plant from resin of the same specification from the same raw material pipe. Pipe (excluding black colored pipe) stored outside shall not be recycled. Pipe and fittings shall be made in conformance with ASTM F714 and ASTM D3261 as modified for the specified material. The pipe shall be homogenous throughout and free of visible cracks, holes, foreign inclusions, or other injurious defects. It shall be uniform in density and other physical properties. Any pipe not measuring these criteria shall be rejected.
  2. Pipe Color. Pipe shall conform to the following:
    - a. Inside. The inner wall shall be light green or gray

---

33 05 26-4

Gravity Sanitary Sewer Pipe Bursting

Pump Station No. 26 Improvements

- b. Outside. The outer wall shall be light green or gray
- c. Both the inside and outside may be the same color
- 3. Markings: Pipe materials shall be legibly marked by the pipe manufacturer. The following shall be printed on the pipe:
  - a. Name and trademark of manufacturer
  - b. Nominal pipe size
  - c. Dimension Ratio
  - d. The letters PE followed by the polyethylene grade per ASTM D1248, followed by the Hydrostatic Design Basis in hundreds of psi.
  - e. Manufacturing Standard Reference
  - f. A production code from which the date and place of manufacture can be determined
- 4. Joints:
  - a. Polyethylene pipe shall be joined by butt fusion welding, as specified in Part 3.4.
- 5. Coupling:
  - a. CONTRACTOR shall use electrofusion HDPE coupling with a designation of PE 4710 and have a minimum cell classification of 445574C as described in ASTM D3350, and a Hydrostatic Design Basis of 1600 psi @ 73°F.
  - b. PE4710 electrofusion couplings shall have a pressure rating of 200 psi for water @ 73°F.
  - c. Electrofusion coupling shall be black in color.
- 6. Lateral Connections:
  - a. Laterals shall be connected to the main line by use of heat fused saddle as approved by the ENGINEER.

### **PART 3 - EXECUTION**

#### **3.1 GENERAL**

- A. This section is intended to provide the CONTRACTOR with general guidance on the methods to be used to install the sewer pipe using the pipe bursting method. Nothing contained herein shall relieve the CONTRACTOR from completing the pipe bursting operation in the most feasible, efficient, and safe manner, using required materials to the lines and grades shown on the plans and to the requirements of these specifications.
- B. The CONTRACTOR shall protect pavements, improvements, utilities, and nearby structures from damage by forces, vibrations and ground movements generated by the pipe bursting equipment/process per section 1.8.
- C. All work shall be performed as specified herein and supervised by personnel experienced in the installation of pipe by the pipe bursting method per section 1.4.

#### **3.2 PREPARATION**

- A. Preliminary Site Investigation
  - 1. Prior to the pipe bursting operation, the CONTRACTOR shall perform a careful site investigation to locate and record (via high quality full-color photographs) possible surface obstructions, locate and mark active and inactive sewer laterals (if applicable); and formulate and submit plans to replace the pipe, to reconstruct all sewer laterals, and to restore all structures and plants that would be damaged by the

---

33 05 26-5

Gravity Sanitary Sewer Pipe Bursting

Pump Station No. 26 Improvements

Work. Photographs will be subject to the requirements of 01 33 03, Submittal Procedures in addition to the requirements below.

- a. Preliminary site photographs shall document the entirety of the proposed alignment prior to the Work.
- b. Photographs will be used to compare surface features after Work is completed to assess if damage has been done to existing features including but not limited to Asbestos cement paving and concrete.
2. Provide ENGINEER with sufficient notice and with means to examine the areas and conditions under which excavating, filling, and grading are to be performed.
3. An internal closed-circuit television (CCTV) inspection per specification 33 01 31 shall be performed by the CONTRACTOR after the sewer has been cleaned by the CONTRACTOR per specification 33 01 21, to determine the condition of each manhole-to-manhole segment of the existing sewer to be replaced by pipe bursting including evidence of cracks, past repairs, couplings, collars, pipe sags or changes in pipe direction that may represent obstructions to pipe bursting and requiring advance excavation and to locate sewer lateral service connections. The television inspection shall be completed in the same direction each in conformance with CITY's requirements. A copy of the television inspection video and logs from all televising operations shall be provided to the CITY and ENGINEER for review prior to construction.
4. ENGINEER will notify CONTRACTOR if conditions are found that may be detrimental to the proper and timely completion of the Work.
5. Do not proceed with the Work until unsatisfactory conditions have been corrected in a manner acceptable to ENGINEER.

B. Preliminary Site Work

1. General
  - a. The CONTRACTOR shall contact USA North811 (USA) service alert a minimum of forty-eight (48) hours in advance of any excavation or trenching work. USA may be contacted either on-line at [usanorth811.org](http://usanorth811.org) or by phone by dialing (800) 227-2600 or 811.
  - b. The CONTRACTOR shall excavate and backfill, in advance of the construction, test pits to determine conditions and locations of the existing utilities and subsurface structures.
  - c. The CONTRACTOR shall define the location of each existing facility involved within the area of their Work under this Contract.
2. Existing Sewer Lateral Connections
  - a. Upon completion by the CONTRACTOR of the CCTV inspection, the CONTRACTOR shall mark in the field the location of the existing sewer lateral connection(s).
3. Handling and Storage
  - a. The CONTRACTOR shall exercise special care during the unloading, handling, and storage of all pipe to ensure that the pipe is not cut, gouged, scored, or otherwise damaged. Any pipe segment which has cuts in the pipe wall exceeding 10 percent of the wall thickness shall be cut out and removed from the site at the CONTRACTOR's expense.
  - b. The pipe shall be stored so that it is not deformed axially or circumferentially which may hinder pipe installation. CONTRACTOR shall test all pipe for ovality prior to installation. Pipe not meeting specified requirements shall be replaced with new material.

---

33 05 26-6

Gravity Sanitary Sewer Pipe Bursting

Pump Station No. 26 Improvements

- c. All polyethylene and PVC pipes shall have an ultraviolet inhibitor and shall also be stored in a covered area on blocks, such that no individual pipes weight shall bear on another pipe segment. Pipes shall be supported so as not to allow the pipe to sag along its length between blocks during storage.
  - d. Allowed work areas are delineated on the Drawings.
- 4. Temporary Fencing
  - a. CONTRACTOR shall furnish and install temporary fencing surrounding excavations, entry and exit pits and work area, including the stockpile and storage areas.
  - b. CONTRACTOR shall provide fence openings only at vehicular, equipment and worker access points.
- 5. Environmental Controls
  - a. CONTRACTOR shall implement the construction procedures outlined herein to assure minimum damage to the environment during construction. Take all additional measures required to conform to the requirements of applicable codes and regulations.
    - 1) Erosion:
      - a) CONTRACTOR shall implement the construction procedures outlined herein to assure minimum damage to the environment during construction.
        - 1. Whenever possible, locate and construct access and temporary roads to avoid environmental damage. Make provisions to regulate drainage, avoid erosion and minimize damage to vegetation.
        - 2. Where areas must be cleared for storage of materials or temporary structures, provisions will be made for regulating drainage and controlling erosion, subject to the ENGINEER'S approval.
        - 3. Remove only those shrubs and grasses that must be removed for construction. Protect the remainder to preserve their erosion-control value.
        - 4. Apply measures to control erosion and to minimize the siltation of the existing waterways, and natural ponding areas. Such measures include, but are not limited to, the use of berms, baled straw silt barriers, gravel or crushed stone, mulch, slope drains and other methods.
        - 5. In the event CONTRACTOR repeatedly fails to satisfactorily control erosion and siltation, the CITY reserves the right to employ outside assistance or to use its own forces to provide the corrective measures indicated. The cost of such work, plus engineering costs, will be deducted from monies due CONTRACTOR.
    - 2) Dust:
      - a) Prevent blowing and movement of dust from exposed soil surfaces and access roads to reduce on- and off-site damage and health hazards.
      - b) Control may be achieved by irrigation in which the site is sprinkled with water until the surface is moist.
      - c) Repeat the process as needed.
    - 3) Noise:
      - a) All noise-generating construction activity shall occur within the hours permitted by the Municipal Code, or as otherwise specified by the hours permitted by the ENGINEER. All construction activities shall comply with the CITY's Noise Ordinance.
- 6. Sewer Bypass Pumping

---

33 05 26-7

Gravity Sanitary Sewer Pipe Bursting

Pump Station No. 26 Improvements

- a. The CONTRACTOR shall provide bypass pumping and/or flow diversion in accordance with Section 01 57 03.
- 7. Excavation Support Systems
  - a. Below Grade Structure Excavation Support
    - 1) Provide, install, and maintain excavation support systems for all structural excavations where excavation support is required (at a minimum, as required by OSHA).
    - 2) Follow all OSHA guidelines and other applicable laws and ordinances.
    - 3) Prepare excavation support plan addressing the following topics:
      - a) Details of shoring, bracing, sloping or other provisions for worker protection from the hazards of caving ground
      - b) Design assumptions and calculations
      - c) Methods and sequencing of installing excavation support
      - d) Proposed locations of stockpiled excavated materials
      - e) Minimum lateral distance from the excavations for vehicles, equipment, and materials
      - f) Location of vertical and horizontal monitoring points on structures and recommended frequency of monitoring for excavation support system stability and performance
    - 4) Design of excavation support systems and excavation support plan shall be prepared by a civil or structural engineer registered in the state in which the system is installed.
    - 5) CONTRACTOR shall be made aware of Temporary excavation and groundwater management recommendations in the Geotechnical Report.
- 8. Vibration
  - a. The CONTRACTOR shall address the potential for vibration impacts to residences during construction activities by preparing a detailed monitoring and notification plan, subject to review and approval by the ENGINEER and the CITY. The plan shall include, at a minimum, the following items:
    - 1) Public Notification. The CONTRACTOR shall notify property owners and residents located within 100 feet of pipe bursting activities at least one week prior to construction.
    - 2) Vibration Monitoring. The CONTRACTOR shall perform vibration monitoring to establish the level produced by high impact activities during construction. Monitoring should be conducted continuously whenever pipe bursting is done within 25 feet of any structure. Monitoring shall be conducted using a portable vibration monitoring instrument that provides a calibrated record of local ground movement/accelerations. If construction vibration exceeds 2.0 in./sec at the nearest exterior wall during vibration monitoring, construction activities shall immediately stop, and alternative work methods shall be used. The monitoring protocol and all monitoring results shall be submitted to the ENGINEER and CITY for review and approval.

### 3.3 PIPE BURSTING EQUIPMENT

- A. Should it become necessary to temporarily stop bursting operations, provisions shall be made to remotely start and stop the bursting head.
- B. Winch or Pulling Unit

1. The winch or pulling unit shall be operated to provide constant pull to the bursting unit in order that it may operate in an efficient manner with a minimum of recoil. It shall ensure directional stability in keeping the bursting unit in line.
2. The winch shall be of the constant load type and shall be fitted with a direct reading load gauge to measure the winching load. It shall also be fitted with a device to automatically disengage when loading exceeds a preset maximum load.
3. Contractor shall supply sufficient cable in one (1) continuous length so that the pull may be continuous between winching points.
4. The winch cable and cable drum shall be provided with safety cage and supports.
5. The CONTRACTOR shall also provide a system of guide pulleys and bracing at each manhole to minimize contact of cable with the existing sewer between manholes.
6. A nose cone shall be fixed to the first pipe or the head of the bursting unit and shall be fitted with a swivel attachment to reduce the twist transmission between the winch cable and nose cone.
7. Excavation supports in the insertion pit shall remain completely separate from the pipe support system and shall be so designed that neither the pipe nor the winch cable shall be in contact with them at any time.

#### C. Pneumatic Pipe Bursting

1. This section is intended to provide the CONTRACTOR with general guidance on the methods and equipment to be used to install the sewer pipe using the pneumatic pipe bursting method. Nothing contained herein shall relieve the CONTRACTOR from completing the pipe bursting operation in the most feasible, efficient, and safe manner, using required materials to the lines and grades shown on the plans and to the requirements of these specifications.
2. Pneumatic pipe bursting shall only be implemented for replacing fracturable pipe such as:
  - a. Asbestos Cement Pipe
  - b. Cast iron Pipe
  - c. Clay lined Concrete Pipe
  - d. Non-reinforced Concrete Pipe
  - e. Galvanized Steel Pipe
  - f. Polymer Concrete Pipe
  - g. PVC Pipe
  - h. Vitrified Clay Pipe
3. Only HDPE pipe shall be used for the pneumatic pipe bursting method.
4. The Pneumatic bursting unit shall consist of the following components at minimum:
  - a. Displacement hammer with an expander head fitted to the front or rear designed to force its way through the existing pipe bursting it as it progresses. The hammer may include components to allow reversible methods.
  - b. Constant tension winch designed to keep the hammer in contact with the existing pipe keeping the hammer in alignment with the existing pipe.
  - c. Air compressor to supply the adequate force necessary to power the pneumatic hammer and fracture and displace the existing pipe and surrounding soil.

#### D. Static Pipe Bursting

1. This section is intended to provide the CONTRACTOR with general guidance on the methods and equipment to be used to install the sewer pipe using the static pipe bursting method. Nothing contained herein shall relieve the CONTRACTOR from completing the pipe bursting operation in the most feasible, efficient, and safe manner, using required materials to the lines and grades shown on the plans and to the requirements of these specifications.
2. Static pipe bursting shall only be implemented for replacing fracturable pipe unless a series of cutters, splitters, or other assemblies are attached to the bursting head.

3. The Static Pipe Bursting unit shall consist of the following components at minimum:
  - a. An Expander head designed to force its way through the existing pipe, bursting it as it progresses. The expander head may include cutting or splitting assemblies to allow the bursting of non-fracturable pipe.
  - b. A rod, cable, or chain to be inserted into the existing pipe to align and guide the expander head and the new pipe. The rod, cable, or chain are attached to a static pipe bursting machine placed in an excavated pit at one end of the existing pipe.
  - c. A hydraulic power pack to provide the necessary power to apply a large pull force on the expander head and fracture and displace the existing pipe and surrounding soil.

### 3.4 PIPE JOINING

#### A. Continuous Pipe:

1. For purposes of pipe storage on the job site above ground, sections of HDPE/fPVC pipe shall be joined into continuous lengths of no more than 50' unless otherwise authorized by the ENGINEER. The joining method shall be the butt fusion method and shall be performed in strict accordance with the pipe manufacturer's recommendations. Fusion equipment used in the joining procedure shall be capable of meeting all conditions recommended by the pipe manufacturer, including, but not limited to, fusion temperature, alignment, and fusion pressure. CONTRACTOR shall keep a quality control log for every joint and pipe segment, certifying that all meet manufacturer requirements.
2. A fire-retardant bag or suitable enclosure shall be used with the heater plate to protect the heater plate surfaces from dirt and other debris when not in use. The heater plate surfaces shall be cleaned regularly as needed to prevent accumulation of fusion welding residues or other substances that may result in faulty pipe joining.
3. Butt fusion shall conform to ASTM D2657 and pipe manufacturer's criteria for the type of joining. Joint strength shall be equal to that of the adjacent pipe.
4. The inside and outside of the pipe ends shall be cleaned with a cotton or non-synthetic cloth to remove dirt, water, grease, and other foreign materials. The pipe ends shall be cut square and carefully aligned just prior to heating.
5. After achieving the proper melt pattern, the pipe ends shall be brought together in a firm, rapid motion applying sufficient pressure to form a pipe bead (1/8 inch to 3/16 inch in height) around and inside the entire circumference of the pipe.
6. The inside weld bead shall be removed by cutting the bead away without scoring the inside wall of the pipe. The CONTRACTOR shall submit to the ENGINEER, for review as part of the submittal requirements, a de-beading process for use in removing the internal bead for the newly joined HDPE/fPVC pipe sections.
7. A single electrofusion coupling may be used to complete the new pipe connection to each existing manhole.

### 3.5 PIPE INSTALLATION

- A. The Contractor shall install the pipe by utilizing a constant tension system with a hydraulic, pneumatic, or static bursting device that breaks apart the existing pipe. The void created by the bursting device shall be sufficient in size to accommodate the new pipe which shall be installed immediately after the void has been formed.
- B. The CONTRACTOR shall bear full responsibility for completing the pipe installation regardless of selected method. CONTRACTOR shall have no right to claim additional costs

---

33 05 26-10

Gravity Sanitary Sewer Pipe Bursting

Pump Station No. 26 Improvements

for the failure of the selected method to result in successful pipe installation. Failure of the CONTRACTOR's submitted installation method shall not be an acceptable delay or idle time claim.

- C. CONTRACTOR shall be aware that the geotechnical report lists recommendations for mitigation measures for ground deformation and provides methods for estimating whether impingement into existing, adjacent utility trenches might occur, based upon the diameter and depth of the existing utility.
- D. CONTRACTOR shall submit for approval by ENGINEER detailed calculations showing how the selected method of construction will develop the forces required to successfully complete the pipe installation including the pipe bursting head expander configuration and outside diameter, the annular space created between the expander head and the new pipe outside diameter.
- E. The CONTRACTOR shall excavate by hand or hand-operated mechanical equipment and expose potential obstructions to pipe bursting (e.g., past repairs, couplings, pipe collars or changes in pipe direction that may stop the bursting head) and remove obstructions prior to bursting. There will be no additional compensation for removal of pipe bursting obstructions, either known by the CONTRACTOR in advance of bursting or encountered during bursting.
- F. The CONTRACTOR shall excavate by hand or hand-operated mechanical equipment and expose pipelines within two diameters of the pipe to be burst to reduce stresses on the those pipelines during construction.
- G. The CONTRACTOR shall excavate by hand or hand-operated mechanical equipment and expose all building sewer lateral connections prior to replacing the existing sewer. The existing connections may be encased in mortar, concrete, or reinforced concrete. There will be no additional compensation for demolition of this concrete.
- H. The CONTRACTOR shall excavate pits at each end of the sewer segment to be burst. Pits shall be of sufficient size to allow access for bursting equipment and installation of new pipeline. All excavation shall be fully braced and supported in accordance with Section 3.2.b.7. Pits shall be centered over the existing sewer. Prior to conducting the work, the CONTRACTOR shall submit a plan to the ENGINEER showing the size and location of the proposed pits. All excavations shall be covered and securely fenced during non-working hours.
- I. The CONTRACTOR shall record the general progress i.e., insertion rates in feet per minute, reasons for stoppages, signs of failure of equipment and road or other surface damage. Contact by radio shall be always maintained between key positions so that slowing down, stopping and starting can be affected when necessary.
- J. The CONTRACTOR shall anchor the pipe to manholes after the pipe has been installed along the length of the sewer replaced. The CONTRACTOR shall use a modular seal, as specified and shown on the Drawings that is firmly seated perpendicular to the pipe axis, around the pipe exterior and cast into the structure base or near the structure wall center and conforms to ASTM C923. The structure or manhole connection shall be made a minimum of 48 hours after pipe insertion, but no sooner than the pipe has stopped

---

33 05 26-11

Gravity Sanitary Sewer Pipe Bursting

Pump Station No. 26 Improvements

moving in response to temperature changes. All cutting and sealing of the new pipe at manhole connections shall provide watertight pipe and manhole trough seals.

K. Continuous Pipe Installation Specific Requirements

1. The CONTRACTOR shall fuse together the full length of HDPE/fPVC pipeline to be installed prior to the start of pipe bursting. The above grade pipe shall be protected from scratching and gouging using pipe rollers or other suitable means.

3.6 FIELD QUALITY CONTROL

A. General: Field acceptance of the new pipeline shall be based on the CITY's testing methods as required under "SANITARY SEWER CONSTRUCTION CRITERIA" of Construction Standards.

1. CONTRACTOR shall perform all Work in the presence of the CITY's representative.

B. Manhole Inspection:

1. Manholes will be inspected after completion and within the guarantee period. Leakage and other defects that were a result of the CONTRACTOR's work shall be eliminated and repaired by the CONTRACTOR as required by the ENGINEER, at the CONTRACTOR's expense.

3.7 EXCAVATION BACKFILL

- A. Refer to Section 31 05 03, Earthwork and standard details as shown on the drawings.

3.8 FINAL CLEANING AND CCTV INSPECTION

- A. Prior to final acceptance and final inspection of the pipe by the ENGINEER, the CONTRACTOR shall flush and clean all parts of the system by removing all accumulated construction debris, rocks, gravel, sand, silt, and other foreign material from the pipe.
- B. After completion of the pipe installation, finish work at the manholes and final cleaning, the CONTRACTOR shall televise the sewer in accordance with CITY's requirements or section 33 01 31, Sewer Pipeline CCTV Inspection. The original video, stills, and electronic logs shall be provided to the ENGINEER and CITY.
- C. Upon completion of all work, CONTRACTOR shall remove all surplus materials and rubbish, shall repair all damages caused by his workers and shall leave the premises in a clean and orderly condition.

3.9 DISPOSAL OF EXCAVATED MATERIALS

- A. Material removed from the excavations that does not conform to the requirements for fill or is in excess of that required for backfill shall be hauled away from the Work site and disposed of by the CONTRACTOR in compliance with ordinances, codes, laws and regulations at no additional cost to the CITY.
- B. A site is not available to dispose of excess material.

### 3.10 RESTORATION OF EXISTING SURFACES

A. Refer to Section 32 12 16 and 03 01 03 or CITY Standard Details

WWE Project: 21-060

April 2023  
REVISED BID SET

## **SECTION 40 05 06**

### **PIPING SPECIALTIES**

#### **PART 1 - GENERAL**

##### **1.1 SUBMITTALS**

- A. Shop Drawings:
  - 1. Manufacturer's data on materials, construction, end connections, ratings, overall lengths, etc.

#### **PART 2 - PRODUCTS**

##### **2.1**

##### **2.1 RESTRAINED MECHANICAL JOINT GLANDS (RMJ)**

- A. Features:
  - 1. Pressure Rating:
    - a. Minimum Working Pressure Rating: Not less than 150 psi.
    - b. Safety Factor: Not less than two times working pressure and shall be supported by manufacturer's proof testing.
  - 2. RMJ gland shall be designed for use with standard mechanical joint pipe. Pipe restraint products designed for use with push-on joints will not be acceptable.
  - 3. Thrust Restraint:
    - a. Provide hardened steel wedges that bear against and engage outer pipe surface, and allow articulation of pipe joint after assembly while wedges remain in their original setting position on pipe surface.
    - b. Products employing set screws that bear directly on pipe will not be acceptable.
- B. Manufacturers and Products:
  - 1. Ductile Iron Pipe Only
    - a. EBAA Iron Sales Co.; Megalug.
    - b. Romac Industries Inc.: RomaGrip
    - c. Or Equal.

##### **2.2 MODULAR MECHANICAL SEALS**

- A. Features:
  - 1. Type: Interconnecting synthetic rubber links shaped and sized to continuously fill annular space between pipe and sleeve, blockout, or core-drilled opening in concrete slabs or walls.
  - 2. Links: EPDM
  - 3. Bolts and nuts: Type 316 stainless steel
  - 4. Pressure plates: composite
  - 5. Temperature range: -40 to 250 degrees Fahrenheit
  - 6. Pressure rating: guaranteed by the manufacturer to provide a water-tight seal with a differential hydrostatic head of 40-feet of water

---

40 05 06-1  
Piping Specialties

Pump Station No. 26 Improvements

- B. Manufacturers and Products:
  - 1. PSI-Thunderline; Link-seal, Type S-316
  - 2. Or equal

### **2.3 PIPE TO MANHOLE CONNECTORS**

- A. Features:
  - 1. Type: Resilient rubber male-to-female wedge-style flexible connector between a circular gravity pipe and a circular opening core-drilled into a precast or cast-in-place concrete structure.
  - 2. Performance Requirements:
    - a. Able to hold 10 psi head pressure for 10 minutes with no leakage
    - b. Load Rating: 150 lbs per inch pipe diameter
  - 3. Materials:
    - a. Body: resilient rubber material conforming to ASTM C923
    - b. Hardware: 300 Series Stainless Steel conforming to ASTM C923, ASTM A666 and ASTM A240
- B. Manufacturers and Products:
  - 1. Trelleborg Pipe Seals Milford, Inc., Model Kor-N-Seal I – 106 Series for pipes up to 18" diameter and Kor-N-Seal II – 206 Series for pipes from 20" to 54" in diameter.
  - 2. Or Equal

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. General
  - 1. Follow all manufacturer's directions
- B. Restrained Mechanical Joint Glands
  - 1. Follow all manufacturer's directions
  - 2. Tighten mechanical joint gland bolts before tightening restraint lugs
  - 3. Tighten restraint lugs until torque head breaks off
  - 4. In buried installations, wrap joint with plastic fastened to pipe to protect bolts and coupling from backfill material

## **SECTION 40 05 10**

### **PIPE AND FITTINGS**

#### **PART 1 - GENERAL**

##### **1.1 SUBMITTALS**

- A. Shop Drawings:
  - 1. Product data sheets for each piping system.
    - a. Include information on pipe, fittings and joint systems.
  - 2. Complete catalog information, descriptive literature, specifications, and identification of materials of construction.
  - 3. Complete descriptions and data for all coatings and linings.
  - 4. Tests and inspection data for pipe and coatings/linings.
  - 5. Qualifications for welders and/or technicians performing joining processes that requires specialized equipment to perform the work or as specifically identified herein.
- B. Operation and Maintenance Data as specified in Submittal Procedures section of these specifications.

##### **1.2 PRODUCT DELIVERY, STORAGE, AND HANDLING**

- A. In accordance with manufacturer's directions.

#### **PART 2 - PRODUCTS**

##### **2.1 PIPING SYSTEM DATA SHEETS**

- A. Piping system data sheets (PSDS) have been attached to this Specification and are incorporated herein by reference. Provide piping systems in accordance with piping system data sheets.

##### **2.2 THRUST RESTRAINT**

- A. Provide rigid or restrained joints and fittings for all piping systems specified with a test pressure in the Pipe Schedule.
- B. Unless otherwise specified in the Pipe Schedule or shown on the Drawings, thrust blocks shall not be used.

#### **PART 3 - EXECUTION**

##### **3.1 PIPE SCHEDULE**

- A. A Pipe Schedule is included in the Specifications and is incorporated herein by reference. Install piping systems in accordance with Pipe Schedule.

---

40 05 10-1  
Pipe and Fittings

Pump Station No. 26 Improvements

- B. For pipe which is shown on the Drawings, but not referenced in the Pipe Schedule, CONTRACTOR to provide pipe material and fittings which are appropriate for the intended service and acceptable to the ENGINEER.

### 3.2 PREPARATION

- A. Inspect pipe and fittings before installation, clean ends thoroughly, and remove foreign matter and dirt from inside.
- B. Repair any coatings or linings which were damaged during shipping and handling using manufacturer-approved coating and lining repair materials in accordance with manufacturer's instructions.

### 3.3 INSTALLATION

- A. General:
  - 1. Join pipe and fittings in accordance with manufacturer's instructions, unless otherwise shown or specified.
- B. Joint Assembly:
  - 1. Flanged Joints (FLG):
    - a. Bolt Holes: Straddle vertical centerlines, aligned with connecting equipment flanges or as shown.
    - b. Follow a bolt tightening pattern which produces uniform bearing pressure.
    - c. Do not over-tighten bolts. Follow manufacturer's recommendation for bolt torque.
    - d. Provide gasket at every flanged joint.
    - e. Provide insulating flange kit where indicated on Drawings and required in this Specification.
  - 2. Thermally butt fused (BF) HDPE joints
    - a. In general, the individual performing thermal butt fusion and electrofusion and the equipment used shall meet the requirements of the Plastic Pipe Institute (PPI), Technical Note (TN) 42, Recommended Minimum Training Guidelines for PE Pipe Butt Fusion Joining Operators and the requirements of Title 49, CFR Subpart F, 192.282 and 192.285.
    - b. Specific requirements that apply when joining HDPE pipe using butt fusion shall be as follows:
      - 1) Submit documentation that the fusion technician has been qualified and trained by the fusion equipment manufacturer or pipe manufacturer in the operation and procedures of the butt fusion process. All qualifications and training shall have been received within 1-year from the date of submitting the information. If acceptable documentation cannot be provided, sample joints shall be made and tested in accordance with TN-42. If pipe wall thickness is greater than 1-inch, submit an acceptable method recommended by the pipe manufacturer that will be used to test the sample joint. All costs associated with the sample joint testing and any retesting shall be borne by the CONTRACTOR.
      - 2) Each 2" NPS and larger butt fusion joint shall be documented using a data logging device or written log that records the following minimum parameters per completed joint:
        - a) Date and time
        - b) OWNER's project number and/or name

---

40 05 10-2  
Pipe and Fittings

Pump Station No. 26 Improvements

- c) Fusion Machine model
  - d) Pipe size, rating and PE type code (i.e. PE4710)
  - e) Heater plate surface temperature (minimum 2 values for each side of the heater plate per joint)
  - f) Recorded drag pressure
  - g) Gauge pressure and associated interfacial pressure (psi)
  - h) Heating time
  - i) Transfer time between heater plate being removed from the face of the opposing pipe ends and when the pipe ends are butted together
  - j) Cooling time
- 3) Provide log records at the end of each day in hardcopy format or as agreed upon with the OWNER and/or ENGINEER. Submit one (1) copy as a minimum to the OWNER's Representative or ENGINEER.
  - 4) At the completion of the work, submit all data log records on a compact disc that can be accessed using the data log manufacturer's software or if using written logs, all individual written daily logs are transferred into a pdf format and identified by day as a separate file.
- c. All joints that are determined to be defective visually or as a result of pressure testing shall be repaired using a thermal fusion method unless otherwise approved by the OWNER's Representative or ENGINEER.
  - d. Install buried HDPE pipe in accordance with ASTM D2774 and the pipe manufacturer's specific recommendations.
3. Insulating Flanges, Couplings, and Dielectric Unions:
- a. Applications: Provide insulating flange, coupling or di-electric union for all joints at the following locations:
    - 1) Dissimilar metal piping connections.
    - 2) Cathodically protected piping penetration to buildings.
    - 3) Submerged to unsubmerged metallic piping connections.
    - 4) Where required for electrically insulated connection.
  - b. Installation:
    - 1) Insulating joints connecting immersed piping to non-immersed piping shall be installed above maximum water surface elevation.
    - 2) Align and install insulating joints according to manufacturer's recommendations to avoid damaging insulating materials.
- C. Exposed Piping Installation:
- 1. Piping Runs:
    - a. Parallel to building or column lines and perpendicular to floor, unless shown otherwise.
    - b. Piping upstream and downstream of flow measuring devices shall provide straight lengths as required for accurate flow measurement.
  - 2. Supports: As specified in Piping Support Systems section of these specifications.
  - 3. Group piping wherever practical at common elevations; install to conserve building space and not interfere with use of space and other work.
  - 4. Provide unions or flanges at each piping connection to equipment or instrumentation on equipment side of each block valve to facilitate installation and removal.
  - 5. Install piping so that no load or movement in excess of that stipulated by equipment manufacturer will be imposed upon equipment connection;
  - 6. Install piping to allow for contraction and expansion without stressing pipe, joints, or connected equipment.

7. Piping clearance, unless otherwise shown:
  - a. Over Walkway and Stairs: Minimum of 7 feet 6 inches, measured from walking surface or stair tread to lowest extremity of piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
  - b. Between Equipment or Equipment Piping and Adjacent Piping: Minimum 3 feet 0 inch, measured from equipment extremity and extremity of piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
  - c. From Adjacent Work: Minimum 1 inch from nearest extremity of completed piping system including flanges, valve bodies or mechanisms, insulation, or hanger/support systems.
  - d. Do not route piping in front of or to interfere with access ways, ladders, stairs, platforms, walkways, openings, doors, or windows.
  - e. Headroom in front of openings, doors, and windows shall not be less than the top of the opening.
  - f. Do not install piping containing liquids or liquid vapors in transformer vaults or electrical equipment rooms.
  - g. Do not route piping over, around, in front of, in back of, or below electrical equipment including controls, panels, switches, terminals, boxes, or other similar electrical work.
- D. Buried Pipe Installation:
  1. Pipe Placement:
    - a. Keep trench dry until pipe laying and joining are completed.
    - b. Exercise care when lowering pipe into trench to prevent twisting or damage to pipe.
    - c. Prevent foreign material from entering pipe during placement.
      - 1) Close and block open end of last laid pipe section when placement operations are not in progress and at close of day's work.
    - d. Lay pipe upgrade with bell ends pointing in direction of laying.
    - e. Deflect pipe at joints for pipelines laid on a curve using unsymmetrical closure of spigot into bell. Utilize a maximum of 75 percent of manufacturer's recommended allowable joint deflection.
      - 1) If joint deflection of standard pipe lengths will not accommodate horizontal or vertical curves in alignment, provide:
        - a) Shorter pipe lengths.
        - b) Fittings/bends.
    - f. Secure pipe which has been placed from movement or damage while placing the next section of pipe.
    - g. Prevent uplift and floating of pipe prior to backfilling.
- E. Cleaning:
  1. Following assembly and testing, and prior to disinfection and final acceptance, flush pipelines with water at 2.5 fps minimum flushing velocity until foreign matter is removed. At a minimum, flush for a period of time which will flush the entire pipeline volume three times.
    - a. If impractical to flush large diameter pipe at 2.5 fps, clean in-place from inside by brushing and sweeping, then flush line at lower velocity. If lower velocity is used, flush the entire pipeline volume five times.
  2. Provide temporary means of removing flushing water from pipeline during flushing.

3. Provide means for removal/screening of debris from the flushing water, disposal of debris and disposal of flushing water.

#### 3.4 TESTING

- A. Pressure test piping in accordance with the Pipe Schedule, Testing of Pressure Piping Systems section of these specifications.

#### 3.5 SUPPLEMENTS

- A. The following supplements are attached to this Specification section and incorporated herein by reference:
  1. 40 05 23.03 – Piping System Data Sheet - Welded Stainless Steel Pipe (WSSTP)
  2. 40 05 33.12 – Piping System Data Sheet - HDPE Pressure Pipe (HDPE)
  3. 40 05 41 – Piping System Data Sheet - Vitrified Clay Gravity Sewer Pipe (VCP)

Piping System Data Sheet – Ductile Iron Pipe (DIP)

Pump Station No. 26 Improvements

| ITEM     | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | a.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Coating  | <p>Unless otherwise specified in the Pipe Schedule, piping shall be coated as follows:</p> <p><b>Buried Piping:</b></p> <ul style="list-style-type: none"> <li>• AWWA C151/A21.51: Minimum 1-mil asphaltic coating.</li> <li>• AWWA C105/A21.5: Polyethylene encasement, 4-mil high-density cross laminated or 8-mil linear-low density, color as required by local/state regulations.</li> </ul> <p><b>Exposed/Immersed Piping:</b></p> <ul style="list-style-type: none"> <li>• Primer Coating: Where shop primer is applied to protect pipe during shipping, storage and handling, primer shall be compatible with pipe coating requirements of Section 09 91 03, Painting.</li> </ul> |
| Fittings | <p>Lined and coated same as pipe.</p> <p><b>Push-On (PO):</b> AWWA C110/A21.10 and C111/A21.11, gray or ductile iron, 250 psi minimum working pressure. American Cast Iron Pipe Co., Fastite Joint; U.S. Pipe and Foundry, Tyton Joint.</p> <p><b>Mechanical Joint (MJ):</b> AWWA C110/A21.10, C111/A21.11, and C153/A21.53 gray or ductile iron, 250 psi minimum working pressure. Follower glands shall be ductile iron.</p> <p><b>Flange (FLG):</b> AWWA C110/A21.10 ductile iron, faced and drilled, 125-pound flat face. Gray cast iron will not be allowed.</p>                                                                                                                     |
| Joints   | <p><b>Push-On (PO):</b> 250 psi minimum working pressure, AWWA C110/A21.10 and C111/A21.11. American Cast Iron Pipe Co., Fastite Joint; U.S. Pipe and Foundry, Tyton Joint.</p> <p><b>Mechanical Joint (MJ):</b> 250 psi minimum working pressure.</p> <p><b>Flange (FLG):</b> 125-pound flat face, ductile iron, threaded conforming to AWWA C115/A21.15. Gray cast iron will not be allowed.</p> <p>Branch connections 3 inches and smaller, shall be made with service saddles as specified in Section 40 05 06, Piping Specialties.</p>                                                                                                                                               |
| Bolting  | <p><b>T-Bolts and other specialty bolts:</b> Type 304 stainless steel</p> <p><b>Hex Bolts:</b> ASTM A193 B8, Type 304 stainless steel</p> <p><b>Nuts:</b> ASTM A194 Grade 8, Type 304 stainless steel</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| ITEM            | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Gaskets         | <p><b>Push-On, Mechanical, and Proprietary Restrained Joints:</b> Red Rubber (SBR) conforming to ANSI/AWWA C111/A21.11.</p> <p><b>Flanged,</b> Water and Sewage Service: 1/8 inch-thick, red rubber (SBR), hardness 80 (Shore A), rated to 200 degrees F, conforming to ANSI B16.21, AWWA C207, and ASTM D1330, Grades 1 and 2.</p> <p>Full face for 125-pound flat-faced flanges, flat-ring type for 250-pound raised-face flanges. Blind flanges shall be gasketed covering the entire inside face with the gasket cemented to the blind flange.</p> <p>Gasket pressure rating to equal or exceed the system hydrostatic test pressure.</p> |
| Joint Lubricant | Manufacturer's standard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

REVISED BID SET

**SECTION 40 05 23.03****PIPING SYSTEM DATA SHEET – WELDED STAINLESS STEEL PIPE (WSSTP)**

| ITEM             | DESCRIPTION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pipe             | ANSI/AWWA C220, Standard for Stainless Steel Pipe, 1/2-inch diameter and larger, latest revision. Pressure class to accommodate test pressure listed in Pipe Schedule. Type as indicated in the Piping Schedule. Minimum Schedule 10.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Linings/Coatings | Factory Finish: <ol style="list-style-type: none"><li>1. All pipe and fittings shall be pickled after manufacture by immersion in acid bath until all weld discoloration and iron pickup is removed.</li><li>2. Thoroughly wash all pipe and fittings with clear water after pickling.</li></ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Joints           | Full penetration butt-welded, flanged, rolled grooved end, or threaded where shown and/or required. Field welded pipe joints are prohibited unless approved by ENGINEER. Where approved, field welds shall be pickled, passivated and cleaned.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Fittings         | <p>All fittings 6" and smaller shall be forged.</p> <p>Buried fittings 8" to 24" may be fabricated or forged. Buried fittings larger than 24" shall be fabricated.</p> <p>Exposed fittings 24" and smaller shall be forged. Exposed fittings 30" to 48" may be fabricated or forged. All fittings larger than 48" shall be fabricated.</p> <p>Fabricated: Type 304 stainless steel fabricated in accordance with AWWA C208; elbows to have a 22.5 degree maximum miter section angle and a radius of 2.5 times the diameter, unless shown otherwise; wyes, tees, crosses, and outlets to be reinforced in accordance with AWWA M 11. Fitting wall thickness shall be equal to or greater than adjoining pipe.</p> <p>Forged: Butt-welding fittings, ASTM A403M, type 304 stainless steel. Fitting wall thickness to match adjoining pipe.</p> <p>Threaded: Piping 4" and less, threaded per ANSI B1.20.1, pressure class to accommodate test pressure, stainless grade to match pipe grade (ASTM A351 CF8 for grade 304 pipe and CF8M for grade 316 pipe).</p> |
| Flanges          | AWWA C207, Class D (150 psi), Class E (250 psi), or Class F (275 psi) hub or ring type, flat-face. Type 304 stainless steel, pressure class to match pipe.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Bolting          | Hex Bolts: ASTM A320/A320M, Type 304 stainless steel, grade 5<br>Nuts: ASTM F594, Type 304 stainless steel, grade 5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Gaskets          | 1/8-inch thick, cloth-inserted rubber, corrosive acid and alkali free for intended service conforming to ANSI B16.21 and AWWA C207; full-face gaskets for flat-face flanges; flat ring gaskets for raised-                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

++ END OF SECTION ++

## SECTION 40 05 33.12

### FUSIBLE HIGH DENSITY POLYETHYLENE (HDPE) PIPE

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

###### A. SCOPE

1. This section specifies high density polyethylene (HDPE) pressure pipe and fittings for water and wastewater applications, including standards for dimensionality, testing, quality, acceptable fusion practice, safe handling and storage.
2. Furnish all labor, materials, equipment and incidentals required and install and test HDPE pipe and fittings, complete as shown on the Drawings and as specified herein.
3. Each offsite pipeline system shall utilize a single continuous length of the same pipe material, size, and pressure class unless otherwise noted on the Contract Drawings.
4. Pipe shall conform to the following dimensionality and general characteristics table:

| PIPE DESCRIPTION | NOMINAL<br>DIAMETER<br>(IN.) | DR<br>(IPS) | COLOR                              | PRESSURE<br>CLASS<br>(PSI) | REQD<br>INNER<br>DIAMETER<br>(IN.) |
|------------------|------------------------------|-------------|------------------------------------|----------------------------|------------------------------------|
| 12" SS           | 12                           | 17          | Grey/Black<br>with green<br>stripe | 125                        | 11.16                              |
| 10" SS           | 10                           | 17          | Grey/Black<br>with green<br>stripe | 125                        | 9.41                               |

\*Reference hydraulic grade line drawings for maximum working head depictions. Maximum working head is defined as the maximum hydraulic grade line to be used in CONTRACTOR calculations for test pressures as specified in Section 15990.

##### **1.2 REFERENCES**

- A. Work performed under this section shall conform to the Contract Drawings and Specifications and shall comply with all standards, rules and regulations, laws and ordinances of the OWNER and all other authorities having jurisdiction, as amended. That which is necessary to make the work comply with the above requirements shall be provided without additional cost to the OWNER.
- B. Unless otherwise specified, references to documents shall mean the documents in effect at the time of design, bid, or construction, whichever is earliest. If referenced

### 1.3 SUBMITTALS

- A. The name of the pipe and fitting manufacturers and a list of materials to be furnished by each manufacturer. Also, include information on the supplier and distributor.
- B. The name and qualifications of each technician proposed to perform fusion of pipe joints (including sidewall saddle fusion and electro fusion).
- C. Shop Drawings including piping layouts and schedules shall include dimensioning, fittings, types and locations of valves and appurtenances, joint details, methods and location of supports, anchorage, gasket material, grade of material and all other pertinent technical information for all items to be furnished.
- D. Pipe manufacturer and Fusion services provider shall include the following:

---

40 05 33.12-3

Fusible High Density Polyethylene (HDPE) Pipe

Pump Station No. 26 Improvements

1. Minimum Bending Radius
  2. Maximum Safe Pull Force
- E. Submit certification that the stress regression testing has been performed on the specific polyethylene resin being utilized in the manufacturing of the pipe for this contract in accordance with ASTM D2837.
- F. Prior to each shipment, submit certified test reports that the pipe and fittings for this contract were manufactured and tested in accordance with the ASTM and AWWA Standards specified herein.
- G. After pipe installation, the following AS-RECORDED DATA is required from the contractor and/or fusion provider to the OWNER upon request:
1. Surveyed point and vertical elevation of each butt fused joint, electrofusion coupling, and saddle.
  2. Approved datalogger device reports
  3. Pipe Size and Thickness
  4. Machine Size
  5. Fusion Technician Identification
  6. Job Identification
  7. Fusion Joint Number
  8. Fusion, Heating, and Drag Pressure Settings
  9. Heat Plate Temperature
  10. Time Stamp
  11. Heating and Cool Down Time of Fusion
  12. Ambient Temperature

#### 1.4 QUALITY ASSURANCE

- A. A representative of the pipe supplier shall witness and inspect the fusion of the first 20 joints installed by each fusion technician.
- B. All HDPE pipe to be installed under this Contract may be inspected at the factory for compliance with this Section by an independent testing laboratory provided by the OWNER. The manufacturer's cooperation shall be required in these inspections. The cost of these plant inspections of all pipe approved for this Contract will be borne by the OWNER.
- C. Inspection of the pipe may also be made by the ENGINEER or other representatives of the OWNER after delivery. The pipe shall be subject to rejection at any time on account of failure to meet any of the specified requirements, even though pipes may have been accepted as satisfactory at the place of manufacture. Pipe rejected after delivery shall be marked for identification and shall immediately be removed from the jobsite.

## 1.5 WARRANTY

- A. The pipe and pipe installation via fusion services shall be warranted for a minimum of one year per the pipe supplier's standard terms.

## **PART 2 - PRODUCTS**

### 2.1 GENERAL

- A. High Density Polyethylene (HDPE) Pipe Materials
  1. All material shall be manufactured from a PE 4710 resin listed with the Plastic Pipe Institute (PPI) as TR-4. The resin material shall meet the specifications of ASTM D 3350 with a minimum cell classification of 445474C. HDPE pipe and fittings shall contain no recycled compounds except that generated in the manufacturer's own plant from resin of the same specification from the same raw material.
  2. Pipe carrying fluids with disinfection residuals such as potable water, recycled water, or purified water, shall include Chlorine Class III Oxidative Resistance as defined by PPI TN-44, ASTM F2263, and ASTM D3350.
  3. Pipe shall be made of HDPE material with a minimum material designation code of PE4710 and with a minimum Cell Classification as noted above. The polyethylene compound shall be suitably protected against degradation by ultraviolet light by means of carbon black of not less than 2 percent. The manufacture of the HDPE resin shall certify the cell classification indicated.
  4. Pipe sizes 3" and large shall have a manufacturing standard of ASTM F 714, while pipe smaller than 3" shall be manufactured to the dimensional requirements listed in ASTM D 3035. Dimension Ratio (DR) and Outside Diameter (IPS/DIPS) shall be as specified on plans.
  5. Pipe shall meet AWWA C901 (1/2" to 3") or AWWA C906 (4" to 63"), and shall be listed as meeting NSF-61.
  6. Pipe shall be manufactured by an ISO 9001 certified manufacturer. The pipe manufacturer shall have an ongoing Quality Control program for incoming and outgoing materials and shall assure that the pipe will meet the material requirements of this specification. HDPE resins for manufacturing of pipe shall be checked for density, melt flow rate, and contamination. The facility shall have the necessary testing equipment to verify that pipe meets the AWWA and NSF standards. Pipe shall be checked for outside diameter, wall thickness, length, and surface finish on the inside and outside. The Manufacturer's production facilities shall be open for inspection by the OWNER or ENGINEER.
  7. HDPE pipe is a flexible conduit and shall be designed to transfer imposed loads to the surrounding embedment medium. The pipe and fittings shall be homogeneous throughout and free of all defects including but not limited to, holes, foreign inclusions, voids, indentations, delaminations, cracks, bubbles and pinholes, which due to their nature, degree, or extent, detrimentally affect the strength and serviceability of the pipe. Any pipe or fittings with such defects which, in the judgement of the ENGINEER, will affect the strength and serviceability shall be repaired or rejected.
  8. Pipe shall be furnished in standard laying lengths not exceeding 50-ft.

---

40 05 33.12-5

Fusible High Density Polyethylene (HDPE) Pipe

Pump Station No. 26 Improvements

## B. HDPE FITTINGS

1. All polyethylene pipe fittings shall be HDPE PE4710 and meet the requirements of ASTM F714. Fittings shall be made of HDPE material with a minimum material designation code of PE4710 and with a minimum Cell Classification 445474C. Fittings shall have a minimum pressure rating equal to or greater than the pipe to which they are joined unless otherwise specified on the plans or accepted by ENGINEER. All fittings shall meet the requirements of AWWA C901 or C906
2. HDPE fittings carrying fluids with disinfection residuals such as potable water, recycled water, or purified water, shall include Chlorine Class III Oxidative Resistance as defined by PPI TN-44, ASTM F2263, and ASTM D3350.
3. HDPE fittings shall be joined using fully self-restrained butt fusion and electrofusion. Adhesives, solvents, cements, socket fittings, push-on-joints, grooved joints, and mechanical compression joints shall not be permitted. All joints shall be made in strict compliance with the manufacturer's recommendations and ASTM 2657.
4. Butt Fusion Fittings
  - a. Molded fittings shall comply with the requirements of ASTM D 3261.
5. Electrofusion HDPE Fittings
  - a. Electrofusion Fittings shall have a manufacturing standard of ASTM F1055. For potable water systems, all electrofusion fittings shall have AWWA approval.
6. Elbow fittings shall be long radius and may not exceed 90 degrees.

## C. MECHANICAL FITTINGS

1. The use of self-restrained and unrestrained mechanical couplings are not permitted.

## D. SADDLE SIDEWALL FUSION CONNECTION

1. Mechanical saddle connections to HDPE carrier pipe are not permitted
2. Electrofusion saddles are not permitted.
3. Saddle connections to host HDPE pipe shall be made via saddle sidewall fusion.

## E. PIPE IDENTIFICATION

1. At 5-ft intervals along the pipe, the pipe shall be marked with the name of the manufacturer, size and class (pressure and DR), and manufacturing reference to ASTM F714.
2. All pipe shall be color coded for the intended service. The color coding shall be permanently coextruded stripes on the pipe outside surface as part of the pipe's manufacturing process. Painting HDPE pipe to accomplish color coding is not permitted. Color coding shall be as follows:
  - a. Communications or Power - orange
  - b. Sewer - green
  - c. Potable Water - blue
  - d. Non Potable Water, Recycled Water, or Purified Water - purple.

## F. CONNECTION HARDWARE

---

40 05 33.12-6

Fusible High Density Polyethylene (HDPE) Pipe

Pump Station No. 26 Improvements

1. Bolts, nuts, and washers for buried service shall be made of non-corrosive, high-strength, low-alloy steel having the characteristics specified in ANSI/AWWA C111/A21.11, regardless of any other protective coating.
- G. All ductile iron mechanical and flanged fittings shall be lined and coated with Tnemec 431 or Protecto 401 and as per manufacturer recommendation.

## 2.2 CONNECTIONS TO SANITARY SEWER MANHOLES AND STRUCTURES

- A. HDPE pipe shall be connected to manholes and other structures to provide a leakfree, properly graded flow into or out of the manhole or structure shall be as indicated in the Contract Documents.

## **PART 3 - EXECUTION**

### 3.1 GENERAL

- A. All HDPE pipe and fittings shall be cut, joined, and installed in accordance with the manufacturer's recommendations. Joining, laying, and pulling of polyethylene pipe shall be accomplished by personnel experienced in working with polyethylene pipe systems.

### 3.2 TRANSPORTATION, UNLOADING, HANDLING, AND STORAGE

- A. The manufacturer shall package product in a manner designed to deliver the pipe and fittings to the project neatly, intact and without physical damage. During transportation each pipe shall rest on suitable pads, strips skids, or blocks securely wedged or tied in place.
- B. During loading, transportation, and unloading, every precaution shall be taken to prevent damage to the pipe. The handling of the pipeline shall be in such a manner that the pipe is not damaged by dragging it over sharp and cutting objects. Cuts or gouges that reduce the wall thickness by more than 10% are not acceptable and must be cut out and discarded.
- C. Handle the pipe in accordance with the PPI Handbook of Polyethylene Pipe (2nd Edition), Chapter 2. All pipe and accessories shall be loaded and unloaded by lifting with hoists or by skidding in order to avoid shock or damage. Under no circumstances shall materials be dropped. Pipe handled on skidways shall not be rolled or skidded against pipe on the ground. Slings, hooks or pipe tongs shall be padded and used in such a manner as to prevent damage to the exterior surface or interior of the pipe. All pipe and fittings shall be subjected to visual inspection at time of delivery and before they are lowered into the trench to be laid.

- D. Materials, if stored, shall be kept safe from damage and shall not be stacked higher than the limits recommended by the manufacturer. The bottom tiers shall be kept off the ground on timbers, rails, or concrete. Pipe shall not be stored close to heat sources.
- E. The interior of the pipe as well as all sealing surfaces of mating components (i.e. flange faces) shall be kept free from dirt or foreign matter at all times. The open ends of all sections of joined and/or installed pipe (not in service) shall be plugged to prevent insects, animals, or foreign material from entering the pipe line or pipe section. The practice of stuffing cloth or paper in the open ends of the pipe will not be permitted. Use waterproof nightcaps to prevent the entrance of any type of natural precipitation into the carrier or containment pipe and will be secured to the pipe in such a manner that the wind cannot blow them loose. Where possible, the pipe shall be raised and supported at a suitable distance from the open end such that the open end will be below the level of the pipe at the point of support.
- F. All pipe and fittings shall be subjected to visual inspection at time of delivery and before they are installed or lowered into the trench to be laid. Defective, damaged, or unsound pipe will be rejected. Cuts, punctures, or gouges that penetrate or reduce the wall thickness by 10% or more are not acceptable and must be removed and discarded.

### 3.3 INSTALLATION

- A. Cutting pipe shall be done per the manufacturer's recommendations. No machine oil shall be imparted upon the cut surface. The cut shall leave a smooth cut at right angles to the axis of the pipe.
- B. HDPE pipe shall be pulled into place. Prior to pulling the pipeline, Contractor shall place rollers or other approved devices beneath the pipe to avoid unnecessary damage and to reduce pipe drag. Dragging the pipe on concrete or asphaltic pavement is not permitted.
- C. Per ASTM F1804, the Contractor shall determine and document the maximum proposed pull-in length and pull-in force for the pressure class and pipe diameter to be pulled. Pull-in lengths may not exceed the maximum lengths for the class and diameter pipe.
- D. Contractor shall install HDPE for horizontal directional drilling (HDD) trenchless construction pursuant to ASTM F1962, PPI TR-46, and PPI PE Handbook at a minimum.
- E. Contractor shall slipline HDPE inside a host pipe pursuant to ASTM F585 and PPI PE Handbook. A minimum 24-hour pipe relaxation period is required for sliplining operations prior to final connection to and installation of fittings.
- F. Fusible HDPE PE4710 pipelines maximum radius of curvature shall not exceed 100 x pipe outer diameter as installed. A maximum of 75% of manufacturer-permitted

minimum long-term cold bending radii shall only be permitted by the ENGINEER in special circumstances where fittings or flanges are not present or as designed by ENGINEER.

### 3.4 FUSION AND JOINING

#### A. GENERAL

1. All HDPE pipe segments shall be joined via butt fusion or electrofusion couplings. Smaller diameter connections to the HDPE pipe shall be made via sidewall fusion saddles or a butt fused reducing tee. The Contractor shall make every effort to reduce the use of electrofusion couplings as much as feasible and limit it to connecting separate testing runs, different classes of pipes, or repaired sections. Alternatives shall not be permitted for intermediate joints connecting two HDPE pipe segments unless permitted by ENGINEER on an individual basis.

#### B. BUTT FUSION REQUIREMENTS

1. The pipe shall be joined by the butt fusion procedure outlined in ASTM F 2620 or PPI TR-33. All fusion joints shall be made in compliance with the pipe or fitting manufacturer's recommendations. Fusion joints shall be made by qualified fusion technicians per PPI TN-42. A record or certificate of training for the fusion operator must be provided that documents training to the fundamentals of ASTM F 2620.
2. Each fusion joint shall be recorded and logged by an electronic monitoring device (data logger) connected to the fusion machine.
3. Only appropriately sized and outfitted fusion machines that have been approved by the pipe supplier shall be used for the fusion process. Fusion machines must incorporate the following elements:
  - a. HEAT PLATE - Heat plates shall be in good condition with no deep gouges or scratches. Plates shall be clean and free of any debris or contamination. Heater controls shall function properly; cord and plug shall be in good condition. The appropriately sized heat plate shall be capable of maintaining a uniform and consistent heat profile and temperature for the size of pipe being fused, per the pipe supplier's guidelines.
  - b. CARRIAGE - Carriage shall travel smoothly with no binding at less than 50 psi. Jaws shall be in good condition with proper inserts for the pipe size being fused. Insert pins shall be installed with no interference to carriage travel.
  - c. GENERAL MACHINE - Overview of machine body shall yield no obvious defects, missing parts, or potential safety issues during fusion.
  - d. DATA LOGGING DEVICE - An approved datalogging device with the current version of the pipe supplier's recommended and compatible software shall be used. Datalogging device operations and maintenance manual shall be with the unit at all times. If fusing for extended periods of time, an independent 110V power source shall be available to extend battery life.
4. Other equipment specifically required for the fusion process shall include the following:
  - a. Pipe rollers shall be used for support of pipe to either side of the machine.
  - b. A weather protection canopy that allows full machine motion of the heat plate, fusion assembly and carriage shall be provided for fusion in inclement,

extreme temperatures, and /or windy weather, per the pipe supplier's recommendations.

- c. An infrared (IR) pyrometer for checking pipe and heat plate temperatures shall be used.
- d. Fusion machine operations and maintenance manual shall be kept with the fusion machine at all times.
- e. Facing blades specifically designed for cutting HDPE pipe shall be used.

#### C. ELECTROFUSION REQUIREMENTS

- 1. Electrofusion joining shall be done in accordance with the manufacturers recommended procedure. Other sources of electrofusion joining information are ASTM F 1290, PPI TN 34, and PPI Municipal Advisory Board (MAB) Generic Electrofusion Procedure for Field Joining of 12 Inch and Smaller Polyethylene (PE) Pipe. The process of electrofusion requires an electric source, commonly called an electrofusion processor that has wire leads and a method to read electronically (by laser) or otherwise input the barcode of the fitting. The electrofusion processor must be capable of reading and storing the input parameters and the fusion results for later download to a record file. Qualification of the fusion technician shall be demonstrated by evidence of electrofusion training within the past year on the equipment to be utilized for this project.

#### D. SADDLE SIDEWALL FUSION CONNECTION

- 1. Saddle sidewall fusion shall be done in accordance with ASTM F 2620 or TR-41 or the fitting manufacturer's recommendations and PPI TR-41.
- 2. Saddle sidewall fusion joints shall be made by qualified fusion technicians. Qualification of the fusion technician shall be demonstrated by evidence of fusion training within the past year on the equipment to be utilized on this project.
- 3. Saddle sidewall fusion is used to fuse branch saddles, tapping tees, and other HDPE constructs onto the wall of the main pipe (ASTM F905).

#### E. FUSION OPERATORS

- 1. The employer of the fusion machine operator is responsible for the fusion joint quality of the fusion weld made by that individual. The employer is responsible for documenting all training and qualification records for that individual, including compliance to any code requirements for fusion/bonder operators.
- 2. All HDPE fusion equipment operators shall be qualified to the procedure used to perform pipe joining. Fusion equipment operators shall have current, formal training on all fusion equipment employed on the project. Training received more than two years prior to operation with no evidence of activity within the past 6 months shall not be considered current.
- 3. Fusion operators must have a current fusion training certificate McElroy Fusion Training Certificate for the equipment to be used on the project
- 4. When the fusion machine operator is employed by the HDPE pipe and fusion machine supplier, the supplier shall maintain an ISO 9001 Certified Quality Management System

#### F. FUSION DATA RECORDING

---

40 05 33.12-10

Fusible High Density Polyethylene (HDPE) Pipe

Pump Station No. 26 Improvements

1. McElroy DataLogger or equivalent fusion data recorder shall be used to record all fusion welds on hydraulically operated fusion machines. The device shall be capable of meeting the requirements of ASTM F 3124, "Standard Practice for Data Recording the Procedure used to Produce Heat Butt Fusion Joints in Plastic Piping Systems or Fittings". The device, or combination of devices, shall record the following variables of each fused joint:
  - a. Heater surface temperature- immediately before inserting the heater plate, measure with a pyrometer and manually enter into the weld record.
  - b. Gauge pressure during the initial heat cycle
  - c. Gauge pressure and elapsed time during the heat-soak cycle
  - d. Heater removal (dwell) time v. Gauge pressure and elapsed time during the fusing/cool cycle
  - e. Drag pressure
  - f. Pipe diameter and wall thickness
  - g. Type of HDPE material (Specification and Classification) and manufacturer
  - h. Fusion Machine Identification
2. The device shall record the operator name and a unique operator ID number, along with the date and time of each weld.
3. Records showing the device is up to date on all required calibration should be available for presentation when requested.
4. All fusion welds should be traceable to the report (via operator and weld ID) with an indentation weld stamp or by permanent paint marker/pen next to fusion weld.

#### G. INSTALLATION AND FUSION WEATHER CONDITIONS

1. The CONTRACTOR shall note that HDPE expands/contracts 1" for every 100-ft of pipe for every 10°F change. CONTRACTOR shall consider and make provisions for thermal expansion of HDPE during placement so as undue stresses do not develop at connection points to fittings from compression (cold pipe heating up) or tension (hot pipe cooling down). In addition, the CONTRACTOR shall make every effort to reduce snaking of the pipeline from thermal expansion prior to placement of fill material to the satisfaction of the ENGINEER. The CONTRACTOR shall base final lengths and make final connections to fittings when the outer temperature of the HDPE pipe is within 10°F of the monthly annual average temperature or within 10°F of the temperature of groundwater or if the CONTRACTOR has mitigated thermal expansion effects to the satisfaction of the ENGINEER.
2. Considerations shall be given to and provisions made to mitigate adverse weather conditions, such as temperatures below freezing, precipitation, heavy fog and mist, or wind.

### 3.5 TESTING

#### A. Butt Fusion Examinations and Testing

1. Visual: For pipe sections, examine the full exterior circumference for bead uniformity before cutting. After cutting the pipe section, review the interior bead. All beads should have visually acceptable bead formation as shown in Fig 4 and Appendix X2 of ASTM F 2620. In addition, the following characteristics are expected:
  - a. There shall be no evidence of cracks or incomplete fusing

- b. There shall be no evidence of captured objects (e.g., pipe shavings, facer ribbons) between bonded surfaces.
  - c. Variations in upset bead heights on opposite sides of the cleavage and around the circumference of fused pipe joints are acceptable
  - d. The apex of the cleavage between the upset beads of the fused joint shall remain above the base material surface
  - e. Fused joints shall not display visible angular misalignment, and outside diameter mismatch shall be less than 10% of the nominal wall thickness
  - f. Fusion data record review that meet criteria of section 3.04.D.1 can be used as additional verification of visual indicators.
2. Fusion Data Record Review
- a. The fusion date record for each fused joint shall be compared to the approved fusion procedure. The reviewer shall verify the following:
    - 1) That all data required herein was recorded
    - 2) Interfacial pressure was within the acceptable range
    - 3) Heater surface temperature was within the acceptable range
    - 4) Butt fusion pressure applied during the fusing/cool cycle was correctly calculated to include drag pressure, fell within the acceptable range for the applicable size and agrees with the recorded hydraulic fusing pressure.
    - 5) Butt fusing pressure was reduced to a value less than or equal to drag pressure at the beginning of the heat soak cycle.
    - 6) Fusing machine was opened at the end of the heat soak cycle, the heater was removed, and the end were brought together at the fusion pressure with the acceptable time range
    - 7) Cooling time at butt fusing pressure met the minimum time specified
  - b. If the recorded data is outside the limits of the acceptable range, the joint is unacceptable, and must be removed and replaced.
  - c. Frequency. Records for test fusion joints should be reviewed immediately after the joint is completed. Fusion joints for jobsite fusions should be reviewed daily or before being covered with backfill.
3. Mechanical Test
- a. Contractor shall mechanically test the first fusion of each operator and each machine used on the project. Installation shall not continue until a fusion test has passed the test. Additional mechanical test are not required as long as long as the fusion are reviewed with the frequency specified herein.
  - b. Testing of fusion joints with no fusion data record review shall be at a frequency specified by the Owner or Engineer.
  - c. The fusion shall be allowed to cool completely, then fusion test straps shall be cut out.
  - d. All samples shall be labeled with operator information. Testing must be done at 73 degrees F plus or minus 5 degrees. The test temperature and sample size are critical to testing. Testing performed at cold or elevated temperatures may not give similar results to tests performed at ambient temperatures.
  - e. Each pipe sample weld shall be subjected to testing at two locations 180 degrees apart from each other in the joint weld. All specimens shall be tested by one of the following methods:
    - 1) Reverse Bend Test are allowed for pipe sizes 4" IPS or smaller. The

specimens shall be prepared and tested in accordance with ASTM F 2620, Appendix X4.

- 2) Guided Side Bend Test are allowed for all wall thicknesses of 1" or greater. The specimens shall be removed and tested in accordance with ASTM F 3183.
3. Hydrostatic Burst Test is allowed for pipe sizes 2"-24". The specimen length should measure 6 times pipe diameter with the butt fusion joint in the center of the specimen. The specimen should be tested in a tank filled with water, and testing conditions monitored and recorded with computerized equipment. The specimen will be tested at 4 times pipe rated pressure for 5 minutes with no failure of joint allowed.
- f. Results of any mechanical test should be documented. Information on the weld and operator should be transferred from the sample to the testing record.

### 3.6 PIGGING, FLUSHING, CLEANING, AND DISINFECTING

- A. All mains shall be pigged, cleaned and flushed to remove all dirt, sand, debris, cuttings, and other foreign matter. The Contractor shall be responsible for developing a pigging and flushing plan to be submitted to the Engineer for approval prior to pigging and flushing.
- B. Disinfection:
  1. Cleaning and disinfecting of potable water systems shall be in accordance with AWWA C651 and AWWA M55 Chapter 10, and PPI Handbook of Polyethylene Pipe Chapter 2 (2nd Edition).
  2. The liquid disinfection chemical solution should be limited to less than 12% active chlorine. The time-duration of the disinfection should not exceed 24 hours. Chlorine tablets or powders are not permitted.
  3. Upon completion, the system should be thoroughly flushed with fresh water, and retested to verify the disinfectant chlorine level has been reduced to potable drinking water concentrations in all service water tubing and branch lateral pipes

+ + END OF SECTION + +

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 40 05 41**

**PIPING SYSTEM DATA SHEET – VITRIFIED CLAY GRAVITY SEWER PIPE (VCP)**

| ITEM            | DESCRIPTION                                                                                                                                                                                                                                                   |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pipe            | Conform to the requirements of ASTM C700 (4 to 42-inch) with unglazed extra strength vitrified clay pipe (VCP). The crushing strength (3-edge bearing method) shall be as set forth in the National Clay Pipe Institute (NCPI) Specification ER 4-67 for VCP. |
| Fittings        | Conform to the requirements of ASTM C700 (4 to 42-inch) with watertight preformed joints used with VCP.                                                                                                                                                       |
| Joints          | Two part polyurethane mixture joint with bell and spigot conforming to ASTM C425. Joints shall have resilient properties.                                                                                                                                     |
| Gaskets         | Conform to the requirements of ASTM C700.                                                                                                                                                                                                                     |
| Joint Lubricant | Vegetable based soap lubricant and as per Manufacturer's standard.                                                                                                                                                                                            |

Piping System Data Sheet – Vitrified Clay Gravity Sewer Pipe (VCP)

Pump Station No. 26 Improvements

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **SECTION 40 05 58**

### **FABRICATED SLIDE GATES**

#### **PART 1 - GENERAL**

##### **1.1 DESCRIPTION**

- A. Scope: This Section describes the design, fabrication, and supply of fabricated stainless steel slide gates, including wall thimbles (if applicable), pipe adapters (if applicable), discs, guide frames, stem guides, seats, operating stem, operator, and anchorage. Gate supplier shall provide all materials, equipment, and accessories necessary to furnish and install slide gates as described herein and as shown on Drawings.

##### **1.2 QUALITY ASSURANCE**

- A. Reference Standards: Comply with requirements and recommendations of the following references, except as otherwise specified:
1. AWWA C561-12, Fabricated Stainless Steel Slide Gates
  2. NSF/ANSI 61, Drinking Water System Components Health Effects
  3. ASTM A 276, Specification for Stainless Steel Bars and Shapes
  4. American Gear Manufacturers Association (AGMA)
  5. Anti-Friction Bearing Manufacturers Association (ABMA)
- B. Manufacturer's Qualifications: Gate manufacturer shall have a minimum of five years of experience of producing substantially similar equipment and shall be able to show evidence of at least ten installations in satisfactory operation for at least five years.
- C. Unit Responsibility: All equipment specified herein shall be coordinated and provided by a single gate manufacturer. Manufacturer assumes full responsibility for coordination of all components.
- D. Source Quality Control:
1. Shop Tests:
    - a. Test each slide gate fully assembled for proper seating, operation, and for leakage.
    - b. Fully open and close gate disc in its guide system to ensure that it operates freely.
- E. Warranty: Provide a 1-year warranty on all equipment from date of start-up. Warranty shall cover defects in workmanship, design, and materials. If any component should fail during the warranty period, it shall be corrected and the unit restored to service at no expense to the OWNER.

##### **1.3 SUBMITTALS**

- A. Shop Drawings:

---

40 05 58-1  
Fabricated Slide Gate

Pump Station No. 26 Improvements

1. Detailed drawings showing component and assembly dimensions, location of mechanical connections, weights of all equipment, installation details, and accessory details.
  2. Drawings, templates and directions for installation of anchor bolts and stem couplings.
- B. Product Data:
1. Descriptive literature, specifications, and engineering data.
  2. Materials of construction for all components and accessories.
  3. Force calculations for gate operator and stem, including seismic loading calculations.
  4. Shipping, storage, protection and handling instructions.
  5. Installation directions.
  6. Operation and Maintenance Manual.
- C. Shop Test Results:
1. Submit results of the required shop tests.
- D. Field Test Results:
1. Submit a written report giving the results of the field tests required.

#### 1.4 PRODUCT DELIVERY, STORAGE, AND HANDLING

- A. Gate manufacturer shall provide any special unloading, storage and handling instructions.

### **PART 2 - PRODUCTS**

#### 2.1 PRODUCT AND MANUFACTURER:

- A. Golden Harvest, GH-46NRS
- B. Or equal

#### 2.2 GOVERNING STANDARD

- A. Except as modified or supplemented herein, fabricated slide gates and their appurtenances shall conform to the applicable requirements of AWWA C561.

#### 2.3 SERVICE CONDITIONS AND PERFORMANCE

- A. Gate Schedule:

|                     |                                                                        |
|---------------------|------------------------------------------------------------------------|
| <b>Tag</b>          | G-01                                                                   |
| <b>Location</b>     | Wier Manhole                                                           |
| <b>Service</b>      | Raw Wastewater                                                         |
| <b>Operation</b>    | Open-Close                                                             |
| <b>Size (W x H)</b> | Coordinate with Hybrid PVC Manhole Manufacturer for 12" VCP inlet pipe |

|                                  |             |
|----------------------------------|-------------|
| <b>Tag</b>                       | G-01        |
| <b>Self-Contained</b>            | No          |
| <b>Seating Head</b>              | ~14 feet    |
| <b>Unseating Head</b>            | 12 inches   |
| <b>Inv. Elevation</b>            | 194         |
| <b>Embedded Inv.</b>             |             |
| <b>Operating Floor Elevation</b> |             |
| <b>Mounting</b>                  | Wall        |
| <b>Closure</b>                   | J-Bulb Seal |
| <b>Top Seal</b>                  | No          |
| <b>Actuator</b>                  | Nut         |
| <b>Gate Opening Direction</b>    | Upward      |
| <b>Stem Movement</b>             | Non-Rising  |
| <b>Stem Cover Type</b>           | None        |
| <b>Limit Switches</b>            | No          |

B. Performance:

1. Closed leakage shall not exceed 0.05 gallons per minute (GPM) per foot of gate periphery under seating or unseating head conditions.

## 2.4 COMPONENTS

A. General:

1. Slide gates and all appurtenances shall be provided by one gate manufacturer.
2. All components of the gates shall have a minimum thickness of ¼-inch.
3. Gates shall be either self-contained or non self-contained of the rising stem or non-rising configuration as indicated on the gate schedule.

B. Frame:

1. Frame Material: ASTM A-276 Type 316L SS.
2. Designed for maximum rigidity as column to take the thrust developed during the slide gate operation under maximum head.
3. Bolt-together guide frames are allowed.
4. Guide frame corners shall be factory welded.
5. The guides shall extend above or beneath the opening a sufficient amount to support the disc in the fully open or closed position.
6. The frame configuration shall be of the flush-bottom type and shall allow the replacement of the top and side seals without removing the gate frame from the wall.
7. Provide bolt holes in upper portion of sides of frame for connection to supporting angle.

C. Disc:

1. Material: ASTM A-240 Type 316L SS.
2. Disc shall be reinforced as necessary to limit deflection under the design operating head to less than 1/360 of the gate span.
3. Reinforcing members shall be 316L SS angle or channels welded to the plate.

D. Guides and Seals:

---

40 05 58-3  
Fabricated Slide Gate

Pump Station No. 26 Improvements

1. The guides shall be provided with frame mounted ASTM D-4020 ultra high molecular weight polyethylene (UHMWPE) seals that contact both sides of the slide disc and shall be of such length as to retain and support two thirds of the vertical height of the slide in the fully open position.
  2. Side and top seals shall be neoprene ASTM D-2000 or ASTM D-4020 UHMWPE, and shall be mechanical and fully adjustable in the field, or shall be self-adjusting type with a continuous compression cord.
  3. Lower seals shall be flush bottom resilient neoprene, mounted to the bottom of the disc or to the frame.
- E. Yoke and Pedestal (For Self-Contained Gates):
1. Self-contained gates shall be provided with a yoke to support the operating bench stand. The yoke shall be formed by two structural members welded at the top of the guides to provide a one piece rigid frame. The maximum deflection of the yoke shall be 1/360 of the gate's span.
- F. Pedestal (For Non Self-Contained Gates):
1. Non-self contained gates shall be provided with pedestal mounted lifts. Pedestal shall be stainless steel and provided with shop coating.
- G. Stem:
1. Material: ASTM A-276 Type 316L SS.
  2. Diameter shall be 1-1/2 inch minimum, and be sized as necessary to withstand two times the compressive force when 40 pounds of force are applied at the operator.
  3. Stem shall be supported such that the L/r ratio for unsupported lengths does not exceed 200.
  4. Threaded portions of the stem shall be full-depth ACME type cold rolled threads with a maximum surface roughness of 0.000016 inches. Machine cut threads will not be accepted.
  5. Join stems of more than one section by stainless steel or silicon bronze couplings threaded and keyed to the stems. All threaded and keyed couplings of the same size shall be interchangeable.
  6. Provide rising stems with an adjustable stop collar on the stem on all gates with manual operators.
  7. Connect the stem to the disc by means of a bolted connection with a minimum of two bolts.
- H. Stem Guides:
1. Provide Type 316 stainless steel stem guides when necessary to ensure that the maximum L/R ratio for the unsupported part of the stem is 200 or less per AWWA C561 standards. Maximum stem spacing allowed is 10 feet.
  2. Guides shall consist of collar with UHMWPE bushings, and bracket with slotted holes for adjustment in two directions.
  3. Inside diameter of the collar and bushings shall be slightly larger than the gate stem to prevent binding.
- I. Manual Actuator:
1. Crank Type:
    - a. Each crank-operated manual actuator shall be provided with a removable crank having a revolving grip.

---

40 05 58-4  
Fabricated Slide Gate

Pump Station No. 26 Improvements

- b. Crank handles shall have an overall length of not less than 6 inches and not more than 15 inches.
  - c. Crank handles shall be made of corrosion resistant material.
  - d. Maximum effort required to open the gate shall not be more than 40 pounds, and shall be able to withstand, without damage, an effort of 80 pounds.
  - e. Crank shall have fully enclosed single or double gear reducer as required for lifting capacity.
    - 1) Gears shall be machine cut.
    - 2) Arrow marked "open" shall be cast on the housing to indicate direction of rotation to open the gate.
    - 3) All bearings and gears shall be totally enclosed in a cast steel weather tight housing.
    - 4) Provide anti-friction bearings to properly support both opening and closing thrusts. Ball or roller bearings shall be used to support the stainless steel pinion shaft on crank-operated gearboxes.
    - 5) Lubrication fitting shall be provided in gear housing to permit lubrication of all gears and bearings.
- 2. Handwheel Type:
  - a. Direct Drive without reduction gearing
    - 1) Maximum handwheel diameter shall be 30 inches.
- 3. Furnish threaded bronze lift nut to engage threaded portion of stem.
  - a. Lift nut shall be flanged and supported on roller bearings.
  - b. Lift nut shall be capable of thrust developed during opening and closing of the gate without damage.
  - c. Provide adjustable bronze stop collar for OPEN and CLOSED position limitation.
  - d. Distance from center of radius of crank arm or center of handwheel to ground shall be less than 48 inches.
- J. Fasteners and Anchor Bolts:
  - 1. All fasteners necessary for installation and operation shall be furnished by the gate manufacturer.
  - 2. Fasteners shall be Type 316 stainless steel
  - 3. Fasteners shall be 1/2-inch diameter minimum, and adequately sized to withstand all operational stresses.
  - 4. Provide Type 316 stainless steel anchor bolts as required for stem guides, floorstands, and all equipment or appurtenances which must be secured to concrete walls or floors. Anchor bolts shall be of ample size and strength for the purpose intended, and shall be furnished by the gate manufacturer. Anchor bolts shall have a minimum diameter of 1/2-inch. Anchor bolts shall conform to the requirements of Specification Section 05 05 06, Anchors, Inserts, and Epoxy Dowels.
- K. Spare Parts: Provide the following spare parts:
  - 1. Bronze lift nuts:
    - a. One for each stem diameter provided
  - 2. Special tools required for servicing operator
- L. Identification:

---

40 05 58-5  
Fabricated Slide Gate

Pump Station No. 26 Improvements

1. Identify each slide gate with gate manufacturer's nameplate stamped with the approved designation as shown in the Gate Schedule. Manufacturer's nameplate shall be permanently fastened to the gate at the factory.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Installation shall be as shown on the Drawings and in accordance with gate manufacturer's written instructions.

#### **3.2 FIELD QUALITY CONTROL**

- A. Conduct functional and performance tests under approved simulated operating conditions.
- B. Functional Tests:
  1. Each slide gate with appurtenances shall be field tested. Tests shall demonstrate to ENGINEER that each part and all parts together function in the manner intended. All necessary testing equipment and manpower shall be provided by CONTRACTOR at his expense. OWNER will furnish all power, and incidental material and labor required for the tests.
- C. Leakage Tests:
  1. Maximum permissible leakage shall be in accordance with the requirements of Sub-Section 2.2, above. Excess leakage shall be reduced to meet specified requirements by adjusting the gate, or replacement will be required.
- D. In the event that the gate manufacturer is unable to demonstrate to ENGINEER that his equipment meets the requirements of the tests, the deficient equipment will be rejected, and adjustments and/or modifications shall be made. Retest the equipment as often as necessary to meet the specified requirements. No separate payments shall be made for adjustments and/or modifications.

#### **3.3 MANUFACTURER'S FIELD SERVICES:**

1. Minimum 2 trips for Manufacturer's Field Services:
  - a. 1 person-day for installation assistance
  - b. 1 person-day for inspection, testing, alignment, and training

Fabricated Slide Gate

Pump Station No. 26 Improvements

**SECTION 40 66 33**  
**FIBER OPTIC CABLING AND EQUIPMENT**

**PART 1 - GENERAL**

**1.1 SUMMARY**

- A. Section Includes:
  - 1. The minimum requirements for product quality and performance, including preparation and installation of fiber optic cabling.

**1.2 SUMMARY**

- A. All fiber optic, instrumentation and control equipment and materials, including installation and testing, shall conform to the following Codes and Standards, where applicable:
  - 1. ANSI/TIA/EIA-568-B and B.3, Commercial Building Telecommunications Cabling Standards
  - 2. ISO/IEC 11801, Generic Cabling for Customer Premises
  - 3. IEEE 802.3, Ethernet, Fast Ethernet, Gigabit Ethernet, 10 Gigabit Ethernet
  - 4. ITU-T G.652.D
  - 5. ATM Forum, User Network Interface (UNI)
  - 6. ANSI X3T9.5, FDDI
  - 7. EIA/TIA 492CAAB and ITU G.652.C
  - 8. EIA-455-41, Crush Resistance Standards
  - 9. EIA-455-25, Impact Resistance Standards
  - 10. EIA-455-104, Flexure Standards
  - 11. EIA/TIA-598, Color Coding of Fiber Optic Cables
  - 12. NFPA - National Fire Protection Agency
  - 13. OSHA - Occupational Safety and Health Act Standards
  - 14. UL - Underwriters Laboratories, Inc.
- B. The revisions of these Codes and Standards in effect on the date of issuance of the Contract Documents shall apply. Codes and Standards referenced shall be considered minimum acceptable work. In instances where two or more Codes are at variance, the most restrictive requirements shall apply.

**1.3 SUBMITTALS**

- A. Fiber Optic Submittal:
  - 1. All shop drawings shall be submitted on 11 x 17-inch or 24 x 36-inch sheets at one time. Drawings prepared on 8 1/2 x 11-inch sheets will not be accepted. Shop drawings shall be drawn to scale or completely dimensioned and shall include all information required to completely describe the contents. Drawings shall show front views, plan views, elementary wiring diagrams and numbered connection points.
  - 2. Product Submittals:
    - a. Product submittals shall be submitted within 20 work days after the Notice to Proceed. Any products that are purchased, fabricated or shipped before the product submittals have been favorably reviewed by the Engineer shall be done solely at the Contractor's risk.
    - b. Furnish to the Engineer detailed specifications of the material, shop drawings including product dimensions, catalog cuts, fiber optic diagrams, wiring diagrams, bill of material, and other descriptive material as required to fully describe the equipment being furnished under these Specifications Sections.

---

40 66 33-1  
Fiber Optic Cabling and Equipment  
Pump Station 26 Improvement Project

- c. Furnish 10 one-meter lengths of the submitted fiber optic cable with the Product Submittal.
- 3. Fiber Optic Routing Diagram:
  - a. The Fiber Optic Routing Diagram shall show all connections, splices and fiber optic devices. All cables shall be numbered consecutively on the diagrams. Cable identification shall be unique. "Typical" diagrams are not acceptable.
  - b. The Fiber Optic Routing Diagram shall show the connections and physical relationship of fiber optic devices and apparatus in pairs or groups by functionality or use within each location. Identify each fiber by its size and color on the Fiber Optic Routing Diagrams according to the fiber numbers shown on the Fiber Optic Routing Diagrams. Fiber identification on adapter plates shall be as shown on the Fiber Optic Routing Diagrams.
- 4. Cable Pulling Calculations:
  - a. Submit Pulling Calculations including distance, lubrication amounts, maximum and expected pulling tensions per segment(s). Pulling Calculations shall be submitted and approved prior to cable installations.
  - b. The Contractor may perform calculations on the worst case or typical segment(s) as an overall guideline. These may be submitted in place of each segment if desired.
  - c. Submit a Pulling Plan that describes how the fiber optic cables will be installed. This plan shall include sequence of installation steps, such as those described in Part 3, order of installation and quantity of cables, including cable name and cable number. The approved plan is required prior to cable installation. Note: Interduct cleaning and proofing may occur in advance of this plan's approval.
- 5. Fiber Optic Link Loss Calculations: Submit Fiber Optic Link Loss Calculations as described in this section prior to fiber link testing.
- B. Certificate
  - 1. Submit certification of supplier qualifications as detailed below.
  - 2. Submit certification of installed qualifications as detailed below.
- C. Field Quality Control
  - 1. Items listed under Part 3, 3.2 of this specification sections.

## **PART 2 - PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Subject to compliance with the Contract Documents, the manufacturers listed in the applicable Articles below are acceptable.

### **2.2 FIBER OPTICS:**

#### **A. QUALITY**

- 1. All products specified in these Specifications and shown on the Contract Drawings are intended to be of the highest quality. All equipment and materials shall be new and the products shall be from reputable suppliers with adequate experience in the manufacturing of these products. For uniformity, provide only one manufacturer for each type of product. Provide the manufacturer's latest product that conforms to these Specifications.
- 2. All equipment shall be designed for the service intended. The equipment shall be rugged and have ample strength to withstand all stresses that may occur during fabrication, transportation, erection, and continuous or intermittent operation.
- 3. All individual parts making up the product shall be adequately braced, anchored, and installed in a neat and workmanlike manner. All components and devices installed shall be standard items of industrial grade, unless otherwise noted in the Contract Documents, and shall be of

---

40 66 33-2

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

sturdy and durable construction. Light duty, fragile, and competitive grade devices of doubtful durability shall not be used. Utility, as well as appearance and safety, shall be given consideration in the design of products.

4. All products shall be Underwriters Laboratories (UL) listed, unless this requirement is waived by the Engineer or specified otherwise.
5. Products that are specified in these Specifications establish a standard of quality and do not prohibit the use of equal products of other manufacturers. However, all products furnished, whether specified or not, shall be favorably reviewed by the Engineer prior to purchase, delivery and installation.
6. When required by the Specifications or requested by the Engineer, the Contractor shall submit equipment or material samples for test or evaluation. The samples shall be furnished with information as to their source and prepared in such quantities and sizes as may be required for proper examination and testing, with all freight and charges prepaid by the Contractor. All samples shall be submitted before shipment of the equipment or material to the job site and in ample time to permit the making of proper tests, analyses, examinations, rejections, and resubmissions before incorporation into the work.
7. All fiber optic materials shall be new and free from defects. All fiber optic materials shall conform, where applicable, to the Standards listed in this Section, unless otherwise noted.

#### B. SUBSTITUTIONS

1. Substitution requests shall be submitted for review and approval prior to purchasing. Substitution submittals shall include, at minimum, the following:
  - a. Complete product specification including mechanical and electrical.
  - b. Name and contact information of manufacturer or supplier.
  - c. Trade or brand name.
  - d. Type, model, style, and/or catalog number.
2. The Contractor assumes full responsibility for including complete, correct data in the submittal and shall include complete diagrams and descriptive technical data sheets for the Engineer's determination of equality or suitability for any substitution. Only one such request may be submitted. The rejection of any substitution shall automatically require the Contractor to furnish the specified item without further discussion or delay.

#### C. NAMEPLATES

1. All fiber optic equipment and devices including all pull boxes shall be properly identified with a descriptive nameplate.
2. Pull Boxes and Vaults:
  - a. An industry standard 4 inch orange or yellow label marked "CAUTION FIBER OPTIC CABLE" in black font shall be attached to each fiber optic cable in each pull box.
  - b. Provide stainless steel nameplates with machine engraved or stamped letters. Size of letters shall be 1/2-inch high, minimum. Letters shall be machine engraved. All nameplates shall be screw mounted with stainless pan head machine screws tapped into the front of the pull box collar. Adhesive material shall not be used.
3. Devices: All devices shall be identified as to function and shall bear ZONE7 in the top line of the Nameplate.

#### D. SINGLE-MODE FIBER OPTIC CABLE

1. Manufacturers:
  - a. Corning Altos All-Dielectric cable.
  - b. Approved equal.
2. Description: Outdoor rated, single-mode, dual window dielectric, single jacketed, water blocking yarn (or gel filled) fiber optic cable.
3. General Fiber Specifications:

---

40 66 33-3

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

- a. The fiber optic cable described below shall be a dielectric, single jacketed, water blocking yarn or gel filled, with loose tube construction optimally protected from water infiltration. The cable shall contain multiple fibers and shall meet or exceed the specifications listed below.
- b. All optical fibers must be usable and meet specifications.
- c. Each optical fiber shall be proof tested by the fiber manufacturer at a minimum of 100 kpsi.
- d. The attenuation specification shall be a maximum value for each cabled fiber at 23 +5 OC.
4. Single-Mode Cable Specifications:
  - a. The fiber cable shall be single -mode with a low water peak cable that meets or exceeds EIA/TIA 492CAAB and ITU G.652.C.
  - b. The cable shall meet all requirements stated in the ANSI/ICEA Standard for Fiber Optic Outside Plant Communications Cable, ANSI/ICEA S-87-640-1999.
  - c. The cable shall be an all-dielectric single jacket cable.
  - d. The cable shall have a glass-reinforced plastic (GRP) dielectric central member, loose tube and a single MDPE jacket. The jacket material shall have a low coefficient of friction that is sufficiently low enough to allow free movement of the fibers.
  - e. The fiber cable shall contain 6 as indicated on the drawings.
  - f. Individual fibers shall be color coded per EIA/TIA-598 standards.
  - g. The cable shall contain a buffer tube filling that is either a water-blocking yarn or homogenous hydrocarbon-based gel with anti-oxidant additives to prevent water intrusion and migration. If gel filled, the gel chemical shall be chemically and mechanically compatible with all cable components, non-nutritive to fungus, non-hygroscopic and electrically non-conductive. The filling shall be clean, free of dirt and foreign matter and shall be readily removable with conventional non-toxic solvents.
5. The cable shall have manufacturer rating of at least 600 pounds maximum tensile strength loading during installation (loading).
6. The cable shall have manufacturer rating of at least 130 pounds maximum tensile strength for unloaded application (in-service).
- E. Fiber Characteristics:
  1. Each optical fiber shall consist of a germania-doped silica core surrounded by a concentric glass cladding. The fiber shall be a matched clad design.
  2. Single-mode fibers within the finished cable shall meet the following requirements:
    - a. Fiber Category: 50  $\mu$ m MM (OM3)
    - b. Central Element: Central Element
    - c. Fiber Count: 12
    - d. Core Diameter 8.3  $\mu$ m (nominal)
    - e. Proof/Tensile 100 kpsi, minimum
    - f. Attenuation:
      - 1) 3.0 dB/km / 1.0 dB/km
    - g. Label cables according to the plans and special specifications at the time of installation. Label cable at each end, at each pull box or junction box along the run. Cable label lettering shall be at least 0.25 inches in height and be black lettering with a white sleeve.
  3. Shipping:
    - a. Cables shall be shipped on a strongly constructed reel. The reel shall be designed to prevent damage to the cable during both shipment and cable installation.
    - b. Both cable ends shall be sealed to prevent moisture from entering or gel filling compound from escaping.
    - c. The outer cable shall be wrapped in protective wrap over the outer turns of the cable.
    - d. Both fiber optic cable ends shall be equipped with flexible pulling eyes.

---

40 66 33-4

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

- e. Factory Testing shall be favorably completed and submitted to the Engineer prior to installing the fiber optic cable.
- f. OTDR Testing of each cable shall accompany each reel.
- 4. Testing: Factory Testing requirements are covered in Part 3.3 of this specification and covers both factory and field tests.

F. SINGLE-MODE LC CONNECTORS

- 1. Manufacturers:
  - a. Corning
  - b. Approved equal.
- 2. Fiber Optic connectors shall be a ceramic ferrule LC type for single-mode fiber. The connectors shall use an Anaerobic or Unicam connection to the fiber strands.
- 3. The connector shall comply with the following standards:
  - a. ANSI/TIA/EIA-568-B.3
  - b. TIA/EIA 604-2
- 4. The connectors shall comply to the following characteristics:
  - a. Fiber Category: 50  $\mu$ m MM (OM3)
  - b. Keyed: No
  - c. Product Type (FOJP): Field-Installable Connectors
  - d. Technology: Field Polish (anaerobic)
  - e. Boot Color: Aqua
  - f. Connector Ferrule Material: Ceramic
  - g. Connector Housing Color: Metal
  - h. Connector Housing Material: Metal
  - i. Design - Connector Type: LC Compatible
  - j. Temperature Cycling: = 0.3 dB IL, -40 to +75C, 21 cycles
  - k. Insertion Loss, Max\_ (Connector): = 0.75 dB
  - l. Insertion Loss, Typical (Connector): = 0.2 dB
  - m. Reflectance (Connector): = -26 dB

G. FIBER OPTIC TERMINATION PANELS

- 1. Enclosure:
  - a. Manufacturer:
    - 1) Dinspace SNAP-12LC-SM or SNAP-12LC-MM.
    - 2) Approved equal.
- 2. The enclosure shall be installed and fully loaded with six 6-port (SM-ST) adapter plates.
- 3. The enclosure shall have top and bottom grommets as well as swing-out doors and latches.
- 4. The enclosure shall have strain-relief hardware and routing guides to help maintain minimum bend radius.
- 5. At locations shown on the plans, provide a fiber optic patch panel that shall have a connection port per fiber strand. If future requirements are stated, this capability shall be provided within this contract.
- 6. The patch panels shall be constructed of 16-gauge powder coated steel. The patch panel shall be modular and shall be capable of housing up to 12 LC fibers, either three 4-fiber cables or two 6-fiber cables.
- 7. Adapter Plates:
  - a. Manufacturers:
    - 1) Corning CCH-CP06-19T.
    - 2) Approved equal.
- 8. Adapter plates shall have 6 LC single-mode female to female connection points.
- 9. Provide space for up to four adapter plates.

---

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

#### H. SPLICES – FUSION

1. The field splices shall connect to fiber cables together for the purpose of a permanent splice in the cables.
2. If these splices are necessary to support the pulling plan of the fibers, these splices and enclosures shall be provided and installed at no additional cost to the City.
3. Typical field splice loss shall be <0.05 dB for single-mode fibers. The maximum installed loss may not exceed 0.30 dB (per TIA-568) for any splice.
4. The splice enclosure shall meet the following requirements:
  - a. Manufacturer:
    - 1) Corning.
    - 2) Approved equal.
  - b. The cable splice enclosure shall be a complete kit including the following:
    - 1) Connection brackets.
  - c. Stand-off studs with locking nuts.
  - d. Ground clamps.
  - e. Outer shell (typically 2 halves).
  - f. Inner shell assembled in 2 parts.
  - g. End caps as required.
  - h. Inner shell supports for splice trays shall be provided.
  - i. Outer shell clamp assemblies.
  - j. Cable entry through the ends of the enclosure.
  - k. Insulation/sealing tape.
5. The splices shall be encased in an outdoor rated splice enclosure at a mutually agreed pull box location or as specified on the plans. All changes shall be marked on the field set of drawings at the time of construction.
6. The splice enclosure shall be air and water tight, corrosion resistant, rodent-proof and re-enterable.
7. The splice enclosure shall be manufacturer certified for below ground, junction (pull box) installation.
8. The splice case shall be no larger than 5.5 inches in diameter by 22.5 inches in length (nominal). The splice case shall be designed and equipped with the necessary mounting hardware to be attached to the side of the pull box, and to be suspended vertically with sufficient clearance at each end for acceptable cable bends.
9. All fusion splices shall be made with a fusion splicer. The unit shall be portable and capable of both AC and battery powered operation. The unit shall be capable of splicing the cable specified and supplied under this contract. The fusion splicer shall have the following characteristics:
  - a. Splice protection sleeve heater.
  - b. Battery charging unit.
  - c. Spare electrodes, fuses and lamps.
  - d. Power meter/ light source and carrying case(s).
10. Splice construction shall be per splice and cable manufacturer's guidelines. A copy of the procedure shall be submitted and approved prior to performance of fusion splicing.
11. Mechanical Splices are not permitted.
12. The accepted procedure shall be on site and with the fusion installer at the time of the splice. The Engineer shall be informed of when splicing operations will take place and may witness the splicing operations. Failure to strictly adhere to these specifications will result in the Contractor having to re-splice the connection at no additional cost to the City.

---

40 66 33-6

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install telemetry system as shown on Drawings in accordance with manufacturer's written instruction.
- B. Provide documentation verifying the data communication rate (actual throughput), signal strength and signal quality for each radio.

### **3.2 FIELD QUALITY CONTROL**

- A. Conduct startup of equipment and perform operational checks.
- B. Maintain and submit an accurate daily or weekly log of all commissioning and startup functions.
  - 1. All commissioning/startup functions may be witnessed by the Engineer.
  - 2. All reports shall be signed and dated by the Contractor.
- C. Provide City with a written statement that equipment has been installed properly, started up, and is ready for operation by City's personnel.

### **3.3 FIBER INSTALLATION**

- A. General
  - 1. All work in this Section shall conform to the Codes and Standards outlined herein.
  - 2. Employ personnel that are skilled and experienced in the installation and connection of all elements, equipment, devices, instruments, accessories, and assemblies. All installation labor shall be performed by qualified personnel who have had experience on similar projects. Provide experienced workmanship for all installations.
  - 3. All work shall be performed in a workmanlike manner by craftsmen skilled in the particular trade. Work shall be performed in accordance with the Plans, Specifications, manufacturers' recommendations, and the best practice of the trade. Completed work shall present a neat and finished appearance.
  - 4. The Contractor shall be responsible for, and shall correct by repair or replacement, at his sole expense, equipment that in the opinion of the Engineer, is malfunctioning caused by faulty mechanical or electrical assembly by the Contractor. Necessary tests to demonstrate that the electrical and mechanical operation of the equipment is satisfactory and meets the requirements of these Specifications shall be made by the Contractor at no additional cost to the City.
  - 5. Ensure that all equipment and materials fit properly in the installations and locations for which they are intended. Perform any required work to correct improper installations at no additional expense to the City.
  - 6. The Engineer reserves the right to halt any work that is found to be substandard or being installed by unqualified personnel.
  - 7. All cutting, trimming and notching shall be laid out in advance. Notching or cutting of any structural member or building surface shall not proceed without specific approval from the Engineer. Cutting, channeling, chasing, or drilling of floors, walls, partitions, ceilings, paving, or other surfaces required for the installation, support, or anchorage of conduit, raceways, or other electrical materials and equipment shall be carefully conducted. The Contractor shall restore surfaces neatly to new condition using skilled craftsmen of the trades involved at no additional cost to the City.
  - 8. Maintain the premises free from accumulation of waste material or rubbish on a daily basis. Upon daily completion of work, remove materials, scraps, and debris from the premises and from the interior and exterior of all devices and equipment.

---

40 66 33-7

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

9. Follow and adhere to all manufacturers' instructions for handling, receiving, installation, and commissioning requirements prior to energizing the equipment. After energizing the equipment, the Contractor shall provide qualified technicians or manufacturer's services for troubleshooting, re-programming, and calibration of equipment.
  10. Vacuum clean the interior of all motor control centers, panelboards, junction boxes and other enclosures supplied under this project containing fiber optic equipment to remove all dirt, metal chips, stripped insulation, etc., from the enclosure. This cleaning shall be done prior to energizing the device initially and a second time immediately prior to the final acceptance inspection.
  11. After all other work has been accomplished, all work areas and all other fiber optic equipment shall be cleaned of all dust, dirt, grease, plaster, paint or other marks, by the Contractor.
- B. Material and Equipment Installation:
1. Follow the manufacturer's installation recommendations unless otherwise indicated on the Contract Drawings. Keep a copy of the manufacturer's installation instructions available at the job site for review at all times.
  2. All fiber optic equipment and appurtenance facilities that are separately mounted or anchored shall be so installed as to be in conformance to all requirements of the Uniform Building Code both for vertical and seismic loading.
  3. Locate and install all equipment such that it can be readily accessible for operation and maintenance. The City reserves the right to require minor changes in location of panels or equipment, prior to roughing in, without incurring any additional costs or charges.
  4. Equipment supports/anchors and restrainers shall meet the seismic requirements specified in these specifications.
- C. Cable Installation:
1. The cable shall be installed by licensed electricians using industry standard practices for fiber optic installation. The following are minimal generic guidelines that must be observed and performed.
  2. The interduct (installed by others) shall be blown down with compressed air for 5 minutes per segment (between pull boxes) or until the run is clear, whichever is longer.
  3. All interduct segments shall be "proofed" by passing a rigid mandrel, 90 percent of the size for the interduct or conduit, (typically 1.8 inches for a 2-inch PVC interduct) through the interduct or conduit. The proofing shall be performed by pushing a mandrel through the interduct (or conduit) segment. The Contractor shall record the distance of any obstructions prior to fiber optic installation. These records shall be submitted prior to cable installation. No compensation for cable damage will be considered or approved unless the segment was proofed prior to installation. If an obstruction is detected and unable to be cleared, the Contractor shall perform a subsequent re-test under observation of the Engineer. The Contractor shall allow up to three of these observed re-tests under this contract. During the mandrel operations, a table of distances from pull box to pull box shall be noted to allow for cable installation planning.
  4. Pulling Calculations including distance, lubrication amounts, maximum and expected pulling tensions per segment(s) shall be submitted and approved prior to cable installation.
  5. Upon completion of the mandrel testing and collection of pull distances, the Contractor shall set up a meeting between the Contractor, Engineer and the City to review results and present the installation plan. At this meeting, any issues or traffic control shall be discussed and resolved.
  6. Fiber Optic Cables shall be pulled in by hand from pull box to pull box. Cable lubricants shall be used in pulling the cables. The lubricant shall be approved by the fiber optic cable manufacturer. Typically on large runs, the fiber will be pulled from the center of the run.

---

40 66 33-8

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

7. At the pull box before and after any point of intersection (or spurs) of interduct runs and approximately every 1500 feet of the interduct run, the contractor shall coil 50 feet of additional cable at these pull boxes. All pull boxes shall have at least one loop to prevent micro or macro bends by exceeding minimal bend radiuses.
  8. The cable shall be kept on the factory roll, clean and away from foot or vehicular traffic. Cones, blockades and personnel shall be used to protect the cable from damage. Any cable that is run over by vehicular traffic shall be replaced by the contractor at no additional cost to the City.
  9. All pull boxes shall be kept closed when not in use. Any open pull boxes must be barricaded or marked with cones or other acceptable means. No open pull boxes will be allowed to be left overnight without expressed City approval.
  10. Unless specified otherwise on the plans, 6 feet of copper and/or 15 feet of fiber optic cable slack shall be provided in each pull box. 50 feet of copper and/or 100 feet of fiber optic cable slack for each signal interconnect cable run shall be provided in the dedicated communications Home Run pull box in front of each signal controller or the last pull box before the controller if a dedicated communications Home Run pull box is not available.
- D. Connections:
1. Install LC connectors per manufacturer's standard instructions. A copy of these instructions shall be onsite with the installer and available for inspection when onsite. If these instructions are not onsite, all connections made during that time will be removed and then re-installed after the instructions are onsite. This additional work shall be performed at no cost to the City.
- E. Fusion Splices:
1. All fusion splices shall be witnessed by the Engineer or City's representative. A copy of the splice instructions shall be onsite with the installer and available for inspection. If these instructions are not onsite, all splices made during this time will be removed and then re-installed after the instructions are onsite. This additional work shall be performed at no cost to the City.
- F. Testing:
1. General Requirements:
    - a. Perform a complete test of the installed project to demonstrate that the fiber optic system is functional as shown on the Contract Drawings.
    - b. Provide labor, instruments, and other material to complete the tests.
    - c. Submit a test report including the tests that were performed and the results.
    - d. Perform all tests, excluding Factory Testing, in the presence of the City's representative.
    - e. The tests shall include Factory Tests, Fiber Loss Tests and Optical Time Domain Reflectometer (OTDR) Testing.
    - f. All instruments shall be NIST certified within one year of the test being conducted. These certifications shall be included in the submittal for the test procedures and again with the actual test reports.
    - g. At least 2 weeks prior to the start of field testing, submit a test procedure for each type of test, sample test forms, and NIST calibration or Certifications for each instrument.
  2. Factory Tests (FT):
    - a. Factory tests shall be performed to demonstrate that the cables have been fabricated properly and are working correctly. Submit a test report indicating that the Factory Test was performed for Engineer's review. No cables shall be released for installation until the FT has been reviewed and approved by the Engineer.
    - b. All cabled optical fibers shall be 100 percent attenuation tested using an OTDR. The attenuation of each fiber shall be shipped along with the reel in a cable packet.
  3. Fiber Optic Link Loss Budget:

---

40 66 33-9

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

- a. Prepare a fiber optic link loss budget based on actual cable used and distances, connectors and splices on each fiber run. This budget information shall be in an excel spreadsheet format similar to the Fiber Optic Link Loss Budget form shown in Appendix A.
  - b. The fiber optic link loss budget must be submitted and approved prior to performing OTDR testing.
4. Fiber Loss Tests (FL):
  - a. Upon completion of a fiber cable run in which the cable has been installed in a fiber termination enclosure and connectors terminated, the individual fibers will be tested using a fiber loss kit with a 1310-nm laser source.
  - b. Testing shall be performed with both 1310 and 1550-nm laser light sources at one end and an optical loss meter at the other end of each fiber. Record results for each cable. If any cables are outside expected loss results, this shall be recorded including steps taken to correct these issues. Final fiber loss results shall be indicated on the test form. If unable to correct, the cable shall be replaced at no expense to the City.
  - c. The FL includes testing of all fibers installed under this contract including fibers that are for future splicing or future use.
  - d. Loss Testing shall be conducted from each end of a fiber and all results recorded on a form similar to the Fiber Loss Test Form shown in Appendix A.
5. Optical Time Domain Reflectometer Testing (OTDR):
  - a. The Contractor shall perform the Optical Time Domain Reflectometer (OTDR) Testing after he has delivered written notice to the Engineer that the Fiber Loss Tests has been successfully completed. This notice shall be in the form of the Fiber Loss Test Report.
  - b. The Contractor shall inform the Engineer at least one week prior to the OTDR so that the Engineer may witness the test.
  - c. The OTDR includes testing of all fibers installed under this contract including fibers that are for future use and spares.
  - d. If any equipment or cable fails the OTDR, the Contractor shall correct the problem and shall repeat the test until it is successful. If unable to correct, the cable shall be replaced at no expense to the City.
  - e. The OTDR shall be performed in the presence of the Engineer.
  - f. Any OTDR testing without the Engineer or City personnel shall not be accepted. Any re-testing of un-witnessed testing shall be performed solely at the Contractors expense. No time extensions or additions will be accepted for this work.
  - g. The OTDR test unit shall be designed for use on single-mode fiber at 1310 and 1550 nm wavelength and shall be a field unit with the following characteristics:
    - h. Dead zone: 49.2 feet or better
    - i. Attenuation range: 15 decibels or better
    - j. Distance range: 32,808.4 feet or better
    - k. Accuracy: + 6.6 feet
    - l. Printer: must be capable of printer or file output.
  - m. The OTDR test unit shall be capable of downloading the results to a PC and this file shall be provided to the City. Test results shall be readable via one of the following formats: pdf, xls, doc, or txt.
6. Test Reports:
  - a. Sample test forms and procedures for each type of test (Factory, Fiber Optic Link Loss, Fiber Loss and OTDR Summary) shall be submitted and approved prior to fiber shipment or installation as applicable.
  - b. Submit test results for review and approval immediately (within 1 week) after each test is completed.
  - c. Submit a copy of the approved test results with the O&M manual.

---

40 66 33-10

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

7. Damage:
  - a. Fiber Optic Cable and related facilities damaged during construction shall be replaced/repaired to current City standards and as specified below at the contractor's cost. This work shall include fiber optic cable, conduit, pull boxes/vaults, trenches, concrete, asphalt, traffic control, pull tape, splices, splice enclosures, terminations, labor, etc., as required.
  - b. Damage is described as a breach in the fiber optic cable jacket, a kink, a break of the cable, or any other condition that causes a reduction in the capacity of the cable.
  - c. Should fiber optic cable facilities be damaged during construction without visible damage to the cable, the cable shall be tested by a certified fiber optic technician provided by the contractor at the contractor's cost to ensure that there is no internal damage. Should the test show internal damage, the cable shall be replaced as specified below. Otherwise, the cable shall be protected and the facilities repaired to current City standards.
8. Repair:
  - a. Fiber optic cable running between and terminating at adjacent devices shall be replaced from:
    - 1) Termination to termination. All new cable and terminations shall be acceptance tested as required elsewhere in the City standards.
    - 2) If the new cable must be pulled through conduits that contain traffic signal phase wiring, then a "MAX CELL" or equivalent sleeve, per City standards, shall be installed in the conduit prior to the installation of the new fiber optic cable.
      - a) Pull box adjacent to the damage to controller cabinet.
        - (1) No more than 5 feet of slack may be used out of any one pull box.
        - (2) Pull boxes where new splices shall occur will be replaced with Fiberlyte FL36 24 inch deep vaults as specified in these construction standards (86-2.06)(02006110).
        - (3) At least 50 feet of slack must be provided in the new splice vault.
        - (4) The slack shall be provided in even amounts on either side of the splice enclosure.
        - (5) Only fusion splicing meeting City standards by a certified fiber optic technician will be allowed.
        - (6) All new cable, splices, and terminations shall be acceptance tested as required elsewhere in the City standards.
        - (7) The average optical loss of each splice shall not exceed 0.10 dB. The average is determined by measuring the splice loss in both directions with an OTDR, adding the 2 readings, and dividing by 2. Testing should be performed for both the 1310 and 1550 nm wavelengths.
        - (8) Splicing will not be allowed in pull boxes or vaults shared with non-signal interconnect cables.
        - (9) If the new cable must be pulled through conduits that contain traffic signal phase wiring, then a "MAX CELL" or equivalent sleeve, per City standards, shall be installed in the conduit prior to the installation of the new fiber optic cable.
    - b) Fiber optic cable running continuously past multiple traffic signal devices may be repaired by splicing at adjacent pull box locations.
      - (1) A single splice location may be appropriate if the damage is close enough to the adjacent pull box that the repair may be accomplished by using some of the slack in the existing cable.
        - (a) No more than 5 feet of slack may be used out of any 1 pull box.

---

40 66 33-11

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

- (b) Pull boxes where new splices shall occur will be replaced with Fiberlyte FL36 24 inch deep vaults as specified in these construction standards (86-2.06)(02006110).
  - (c) At least 50 feet of slack must be provided in the new splice vault.
  - (d) The slack shall be provided in even amounts on either side of the splice enclosure.
  - (e) Only fusion splicing meeting City standards by a certified fiber optic technician will be allowed.
  - (f) All new cable, splices, and terminations shall be acceptance tested as required elsewhere in the City standards.
  - (g) The average optical loss of each splice shall not exceed 0.10 dB. The average is determined by measuring the splice loss in both directions with an OTDR, adding the 2 readings, and dividing by 2. Testing should be performed for both the 1310 and 1550 nm wavelengths.
  - (h) Splicing will not be allowed in pull boxes or vaults shared with non-signal interconnect cables.
- (2) 2 splices may be necessary if the damage is not near an existing pull box. In this case, a splice shall be provided on either side of the damage and a new length of cable meeting City standards shall be installed between the splices.
- (a) Pull boxes where new splices shall occur will be replaced with Fiberlyte FL36 24 inch deep vaults as specified in these construction standards (86-2.06)(02006110).
  - (b) At least 100 feet of slack must be provided in each vault.
  - (c) The slack shall be provided in even amounts on either side of the splice enclosure.
  - (d) Only fusion splicing meeting City standards by a certified fiber optic technician will be allowed.
  - (e) All new cable, splices, and terminations shall be acceptance tested as required elsewhere in the City standards.
  - (f) The average optical loss of each splice shall not exceed 0.10 dB. The average is determined by measuring the splice loss in both directions with an OTDR, adding the 2 readings, and dividing by 2. Testing should be performed for both the 1310 and 1550 nm wavelengths.
  - (g) Splicing will not be allowed in pull boxes or vaults shared with non-signal interconnect cables.
  - (h) If the new cable must be pulled through conduits that contain traffic signal phase wiring, then a "MAX CELL" or equivalent sleeve, per City standards, shall be installed in the conduit prior to the installation of the new fiber optic cable.
- (3) Repair work must begin within 24 hours and be completed within 48 hours of the damage occurring irrespective of weekends and holidays.
- (4) Should the contractor be unable to make the repairs within this time frame, the City will complete temporary repairs and bill the contractor for their time and materials at the City's billable rate. The temporary repair shall be treated with the same restrictions, requirements, and care as the original cable. The contractor will still be required to make the permanent repairs prior to completion of the project.
- 3) Temporary copper SIC repairs must be made within 48 hours of the damage and provide sufficient bandwidth and reliability for the intended purpose of the copper SIC. Permanent repairs shall be completed within 30 days of the damage. The City

---

40 66 33-12

Fiber Optic Cabling and Equipment

Pump Station 26 Improvement Project

may make the repairs and bill the contractor for the work should the contractor be unwilling or unable to meet these requirements.

- 4) Should the copper SIC installation be required by the City, the contractor shall test all copper SIC prior to installation as follows:
  - a) For continuity of each wire pair. Resistance shall be consistent.
  - b) For high resistance (meggar) testing (250v setting):
    - (1) Each wire pair to ground
    - (2) Each wire pair to the cable shielding
    - (3) Each wire pair to wire pair
  - c) The test may be in the field or shop
  - d) A city technician does not need to be present
- 5) The contractor shall be liable for all inspection costs related to the removal and re-installation of new cable should untested cable found to be faulty after installation
- 6) Fiber optic cable shall be acceptance tested, every strand, both before and after installation at both 1310 and 1550 nm wavelengths. All testing shall be documented on OTDR Acceptance Test and Splice Loss Record forms. Losses shall not exceed 1.85 dB per mile of cable including patch panels and splices.

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 40 90 10**  
**CONTROL STRATEGIES**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The PLC programming and SCADA application programming shall be performed by OTHERS and is excluded from CONTRACTORS Scope of Supply. This information is provided as information only.
- B. **The control strategies shall be developed and PLC and SCADA programming and configuration will be provided by OTHERS.**
- C. The CONTRACTOR shall coordinate equipment testing as required by Contract Documents with City Integrator to complete Start-up and Testing requirements.

**1.02 RELATED WORK**

- A. Section 40 91 00                      Instrumentation and Control for Process Systems
- B. Section 40 95 10                    PLC-Based Control System Hardware
- C. Division 26                          Electrical Specifications

**1.03 FUNCTIONS AND CONTROL MODES**

- A. Functions
  - 1. LOCAL: The term "LOCAL" means "in the field" i.e. at the physical location of the equipment. Local control means at the equipment or control from the MCC starter panel.
  - 2. REMOTE: The term "REMOTE" means away from the equipment. Remote control means ability to control the equipment at the control panel/PLC or from the HMI away from the equipment or away from the MCC.
  - 3. Local Control Panel (LCP): refers to the presence of a field-situated panel, which serves as a control location. Usually this panel contains the PLC.
  - 4. Local Display: This function refers to the display of equipment status or process variable at a location in the field, local to the equipment.
  - 5. Local Interlock: This function refers to the presence of field control logic in which the status of other equipment directly effects the operation and control of the equipment being controlled.
  - 6. Control System Alarms and Status: Variable or status data to be alarmed in the Control Room.
  - 7. Local Alarms: Alarms that are announced in the field.
  - 8. Set Points: Values which are adjustable at the engineer (supervisor) level displays without requiring any software configuration. These values are not adjustable by the operator from the display station. Whenever a LOCAL/REMOTE set point selection is provided, in LOCAL, the set point shall be adjustable from the equipment. In REMOTE, the set point shall be adjustable from a REMOTE set point input.
- B. Control Modes
  - 1. Local Manual Control Mode: This mode enables manual control to the equipment. The equipment is then manually controlled (e.g. START, STOP, OPEN-STOP-CLOSE, etc.) by a local selector switch by switching the position to "HAND" or "OFF", or "OPEN-STOP-

---

Control Strategies

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

CLOSE". The control logic and set points in the control system PLC are bypassed and do not affect the operation of the equipment. All the controls from the HMI are disabled.

2. Local Automatic Control Mode: This mode enables automatic control that is provided and performed external to the PLC. In some cases, the equipment in the plant is pre-packaged with a Local Control Panel complete with its own automation logic.
3. Remote Manual Control Mode: This mode allows control from the HMI. The operator switches the "Auto/Manual" switch at the HMI to "MANUAL" position to enable manual operation from the HMI. In this position the operator is able to "START", "STOP", "OPEN", CLOSE" etc. the equipment, or manually change the control output to the equipment. Consequently, in this position the automatic control logic and set points in the controller are overridden. In this mode the local control system is also bypassed with the except of equipment safety interlock.
4. Remote Automatic Control Mode or SCADA Mode: This mode allows control of the equipment from the HMI and PLC. The operator switches the "AUTO/MANUAL" switch at the HMI to "AUTO" position to enable PCIS automatic operation. In this mode the equipment is controlled automatically by the control logic and set points residing in the PLC. The supervisor is able to change operational parameters through the HMI by entering new set points. A control mode status signal will be sent to the PLC to indicate when the PLC is allowed to control the equipment. The PLC shall monitor the control mode status (LOCAL/ REMOTE) and attempt to control only that equipment which is in the REMOTE mode.

#### C. General Control and Mode Switches Terms

1. "LOCAL-OFF-REMOTE" Switch: For the purpose of this definition and for simplicity, it is assumed that the switches is located at MCC.
  - a. LOCAL Position: In this position equipment automation and control from the control panel/PLC are bypassed. Control from the PLC and HMI is also disabled.
  - b. OFF Position: In this position all equipment control functions are off and disabled.
  - c. REMOTE Position: In this position equipment automation and control are available from the control panel/PLC. An AUTO-MANUAL and a START-OFF-STOP switch (or OPEN-OFF-CLOSE) shall be provided at the operator HMI workstation from which remote manual control is performed.
2. "HAND-OFF-AUTO" Switch: This switch is located usually at the LCP. Control through this switch is performed from the LCP only if the LOCAL-OFF-REMOTE switch at the MCC is in LOCAL position as discussed above. All the control functions are performed locally and external to the PLC.
  - a. HAND Position; in this position the equipment is started manually.
  - b. OFF Position: The equipment is off.
  - c. AUTO: In this position the equipment is automatically controlled locally and external to the PLC by local control hardware.
3. HMI Switches:
  - a. For equipment that is controllable from the PLC in either a MANUAL or AUTOMATIC mode, the operator shall be provided with a software "AUTO-MANUAL" selector switch at the operator HMI workstation. This switch is functional only when LOCAL-OFF-

REMOTE switch in the field is in REMOTE position. The following are the AUTO-MANUAL functions:

- AUTO – In this position the operator delegates and enables the automation and control functions of the equipment to be performed at the PLC/control panel in the field. The operator is unable to manually control the equipment from the HMI.
  - MANUAL – In this position the operator is able to override the control functions in the PLC and remotely control the field equipment manually from the HMI.
- b. A second software switch such as “START-OFF-STOP” or OPEN-STOP-CLOSE”, etc. or as required by the application, shall be provided in the HMI to control the equipment in the field manually from the HMI.

#### **1.04 QUALITY ASSURANCE**

- A. The Control Strategies shall be tested outside of the contactors scope and implemented during the field startup activities coordinated by the contractor in cooperation with the City integrator.

#### **PART 2 - PRODUCTS – NONE**

#### **PART 3 - EXECUTION -NONE**

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 40 91 00  
INSTRUMENTATION AND CONTROL PROCESS SYSTEMS**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR shall provide Instrumentation and Control System (I&CS) complete and operable, in accordance with the Contract Documents.
- B. The CONTRACTOR is responsible for a complete and operational system, and for all control functions of the pump station.
- C. The Division 40 drawings and specifications are to be read together with drawings and specifications of all other Divisions and specifically Division 26. Additional information necessary to complete the work is included in other sections of the drawings and specifications.
- D. The requirements of this Section apply to every component of the I&CS unless indicated otherwise.
- E. All tables shown of the Division 40 drawings and specifications are for information purposes only and may show partial lists of equipment and materials. A complete take-off from all drawings and specifications shall be done by the CONTRACTOR in order to determine accurate quantities of equipment and materials.
- F. **PLC, OIT, and SCADA programming is excluded from CONTRACTORS scope of work.** All other elements of the project and control function of the pump station, including but not limited to, Reduced Voltage Soft Starter configuration, forward/reverse controls, Derrager device configuration, and power monitor setup and integration shall be provided by the CONTRACTOR.

**1.02 DEFINITIONS AND ACRONYMS**

- A. System Supplier: The System Supplier shall be a single firm, corporation, or other entity assuming full responsibility through the CONTRACTOR to perform all engineering and to select, furnish, program, configure, integrate, supervise the installation and connections, test, calibrate, and place into operation all instrumentation, controls, communication hardware and software. The System Supplier shall specialize and have an experienced engineering and technical staff in the design, integration, and supply of systems similar to the one in these Contract Documents.
- B. AI/AO Analog Input/Output
- C. CMMS Computerized Maintenance Management System
- D. DI/DO Digital Input/Output
- E. FOC Fiber Optic Cable
- F. HMI Human Machine Interface
- G. HSE High Speed Ethernet
- H. I/O Input/Output Signals
- I. LAN Local Area Network
- J. LIMS Laboratory Information Management System
- K. MM Multimode (Fiber)
- L. OIT Operator Interface Terminal
- M. OPC OLE for Process Control (communication interface driver)

REVISED BID SET

- N. PID Proportional, Integral and Derivative Process Controller
- O. PLC Programmable Logic Controller
- P. PS Pump Station
- Q. RAM Random Access Memory
- R. SCADA Supervisory Control and Data Acquisition
- S. SM Single Mode (Fiber Optic)
- T. UPS Uninterruptible Power Supply
- U. WAN Wide Area Network
- V. WTP Water Treatment Plant
- W. WWTP Wastewater Treatment Plant

### **1.03 RESPONSIBILITIES**

- A. The CONTRACTOR, through the use of a single System Supplier and qualified electrical and mechanical installers, shall be responsible to the OWNER for the implementation of the I&CS and the integration of the I&CS with other required instrumentation and control devices.
- B. Due to the complexities associated with the interfacing of numerous control system devices, it is the intent of these specifications that the System Supplier will be responsible to the CONTRACTOR for the integration of the I&CS with existing devices and devices provided under this and other Divisions with the objective of providing a completely integrated control system free of signal incompatibilities.
- C. As a minimum, the implementation of the I&CS by the CONTRACTOR shall include the following WORK:
  - 1. Integrate the I&CS with existing devices and systems provided under this and other Divisions
  - 2. Prepare the required I&CS submittals
  - 3. Design and develop project-wide loop diagrams including those associated with equipment provided under other Divisions and OWNER-furnished and existing equipment
  - 4. Design and develop control panel drawings
  - 5. Field verify existing conditions
  - 6. Prepare factory and field test submittals
  - 7. Prepare training plan
  - 8. Prepare spare parts submittal
  - 9. Procure hardware and software
  - 10. Configure and factory test the I&CS
  - 11. Bench calibrate instruments and verify calibration after installation
  - 12. Terminate signals inside control and network panels; terminate communication and network devices and nodes
  - 13. Supervise and coordinate installation and termination of field signals, power, and utilities associated with the I&CS. Resolve signal, power, or functional incompatibilities between the I&CS and new and existing interfacing devices.

14. Loop test in accordance with the loop diagrams. Validate and certify loops
  15. Oversee, document, and certify system commissioning
  16. Conduct system performance test
  17. Prepare technical manuals
  18. Conduct training classes
  19. Prepare I&CS as-built final construction drawings
- D. Any Instrumentation Supplier responsibilities in addition to the list above are at the discretion of the CONTRACTOR and the Instrumentation Supplier. Additional requirements in this Section and throughout Division 17 that are stated to be the CONTRACTOR's responsibility may be performed by the Instrumentation Supplier if the CONTRACTOR and Instrumentation Supplier so agree.

#### **1.04 RELATED WORK**

- A. Section 40 91 00                      Instrumentation and Control for Process Systems
- B. Division 26                          Electrical Specifications
- C. All electrical work required under this section shall conform to the requirements of Division 40 and the applicable requirements of Division 01, Division 26.

#### **1.05 REGULATORY AGENCIES AND STANDARDS**

- A. Without limiting the generality of other requirements of these Specifications, all WORK specified herein shall conform to or exceed the applicable requirements of the referenced documents to the extent that the requirements therein are not in conflict with the provisions of this Section; provided, that where such documents have been adopted as a code or ordinance by the public agency having jurisdiction, such code or ordinance shall take precedence.
- B. The I&CS WORK shall conform to or exceed the applicable regulations, standards, specifications, and codes which are referenced in Section 01 42 03 Reference Standards and Abbreviations, and current as of the date of the final inspection for this Contract, including, but not limited to, those which are established by the following sources:
  1. The International Society of Automation (ISA)
  2. National Electrical Code (NEC)
  3. National Fire Protection Association (NFPA)
  4. Institute of Electrical and Electronic Engineers (IEEE)
  5. Occupational Safety and Health Administration (OSHA)
  6. American National Standards Institute (ANSI)
  7. National Electrical Manufacturers Association (NEA)
  8. Insulated Cable Engineers Association (ICEA)
  9. Local Power and Telephone Companies
  10. Local Authorities having jurisdiction over the work
  11. Federal Communication Commission (FCC)
  12. Underwriter Laboratory (UL)

---

40 91 00-3  
Instrumentation and Control Process Systems  
Pump Station 26 Improvement Project

- C. Where the requirements set forth in these Specifications or on the Drawings are greater or more rigid than the mandatory requirements referenced above, the applicable Specifications or Drawings shall govern.
- D. In the case of conflict between any mandatory requirements and Specifications or Drawings, the mandatory requirement shall be followed in each case, but only after submitting such proposed changes to the ENGINEER for approval.
- E. Nothing contained in these Specifications or shown on the Drawings will be so construed to conflict with any national, state, municipal, or local laws or regulations governing the installation of work specified herein, and all such acts, ordinances, and regulations, including the National Electrical Code, are hereby incorporated and made a part of these Specifications. All such requirements will be satisfied by the CONTRACTOR at no additional expense to the OWNER.
- F. The Drawings and Specifications are complementary to each other; what is called for by one shall be as binding as if called for by both. If a conflict between Drawings and Specifications is discovered, this shall be referred to the ENGINEER as soon as possible for resolution. Should a conflict exist between the Drawings, Specifications, and/or mandatory requirements (i.e., codes, ordinances, etc.), it will be assumed that the more expensive method has been estimated, unless such alternate has been agreed to prior to submission of bids.

#### **1.06 SUBMITTALS**

- A. Furnish submittals in accordance with the requirements of Section 01 33 03 – Submittal Procedures and 40 91 00 - Instrumentation and Control for Process Systems.
- B. The CONTRACTOR shall coordinate the I&CS part of the WORK so that a complete instrumentation and control system will be provided and will be supported by accurate Shop Drawings and as-built drawings.
- C. The submittals and their schedules shall be in accordance with the requirements listed below: Any incomplete submittal will be rejected and returned without comments.
- D. Interface between instruments, motor control centers, engines, starters, control valves, flowmeters and other equipment related to the I&CS shall be included in the shop drawing submittal. Interface between existing equipment, instruments and control panels shall also be included.
- E. The CONTRACOTR shall be submitted in paper and electronic (PDF) format and shall include but not be limited to:
  - 1. Equipment descriptive data, including equipment tag as identified in the contract documents.
  - 2. Full manufacturer's part number indicating all selected options.
  - 3. Equipment installation, service manuals, operation/maintenance manuals and recommended spare parts lists.
  - 4. Schematics and interconnecting wiring diagrams.
  - 5. Records of conductor identification, field terminals, changes, etc.
  - 6. Instrumentation and control panel shop drawings, face layouts, schematics and point-to-point wiring diagrams.
  - 7. Ethernet network control system architecture drawings complete with wiring identification numbers.
  - 8. Records of as-built information for the control system components.

40 91 00-4

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

- F. Symbols and Nomenclature: In these Contract Documents, systems, meters, instruments, and other elements are represented schematically, and are designated by symbols as derived from Instrument Society of America Standard ISA S5.1 - Instrumentation Symbols and Identification. The nomenclature and numbers designated herein and on the Drawings shall be employed exclusively throughout Shop Drawings, and similar materials. No other symbols, designations, or nomenclature unique to the manufacturer's standard methods shall replace those prescribed above, used herein, or on the Drawings.
- G. Shop Drawings shall include the letter head or title block of the System Supplier. The title block shall include, as a minimum, the System Supplier's registered business name and address, project name, drawing name, revision level, and personnel responsible for the content of the drawing.
1. Organization of the Shop Drawing submittals shall be compatible with eventual submittals for later inclusion in the Technical Manual. Submittals not so organized will not be accepted.
  2. For a project with multiple sites the CONTRACTOR shall provide a separate and unique set of drawings for each site.
  3. Drawings that require more than one sheet due to space limitation or continuation in the subject of the drawings (e.g. loop diagrams, etc.) shall be given the same drawing number but with different sheet number (e.g. sheet 1 of x, sheet 2 of x, etc.).
  4. Each submittal shall include a complete index appearing in the front of each bound submittal volume. Drawings and/or system groups shall be separated by labeled tags. The organization of the initial shop drawing submittal required above shall be compatible to eventual inclusion with the Technical Manuals submittal and shall include final alterations reflecting as-built conditions.
  5. Interfaces between new and existing instruments, motor starters, control valves, variable speed drives, flow meters, chemical feeders, panels, and other equipment related to the I&CS shall be included in the Shop Drawing submittal.
- H. Field Instrument Submittal
1. Submittal Schedule: The CONTRACTOR shall submit for approval a complete field and process instrument submittal, **all at one time, within 60 calendar days** after the date of Notice to Proceed is given to the CONTRACTOR.
  2. Submittal Contents: The submittal shall include a complete index which lists each device by tag number, type, and manufacturer in accordance with the specified data sheets provided in this CONTRACT. A separate manufacturer technical brochure or catalog sheet shall be included with each specified instrument data sheet. If, within a single system or loop, a single instrument is employed more than once, one manufacturer brochure or catalog sheet may cover multiple identical uses of that instrument in that system. Each manufacturer brochure or catalog sheet shall include a list of tag numbers for which it applies. System groups shall be separated by labeled tags. Special options and features which are furnished shall be identified.
- I. System Hardware Submittal:
1. Submittal Schedule: The CONTRACTOR shall submit for approval a complete system hardware submittal, **all at one time, within 90 calendar days** after the date of Notice to Proceed is given to the CONTRACTOR. This submittal shall be submitted together with the

submittal for the System Architecture, and Communication Diagrams submittal and the Project-Wide Wiring Diagrams and Panel Drawings submittal specified below.

2. Submittal Contents:

- a. The submittal shall be for the hardware specified under Sections 40 95 10 – PLC -Based Control System Hardware and 40 95 13 - Control Panels.
- b. The submittal shall include a complete index which lists each device by type, and manufacturer in accordance with the contract documents. A separate manufacturer technical data sheet or brochure shall be included for each hardware component. If, within a single system a single component is employed more than once, one manufacturer technical data sheet or brochure may cover multiple identical uses of that component in that system. Special options and features which are furnished shall be identified.
- c. The submittal shall include load calculations and size of the various UPS systems to demonstrate that the UPS is able to accommodate present and future load requirements, as well as overload capacity requirements.
- d. Spare Parts and Tools List: A list of spare parts and tools shall be submitted, covering items which are specified and furnished under this Contract. The list shall include the name, address, and phone number of manufacturer and manufacturer's local service representative of these parts. The list shall also include recommended spare parts and tools, quantities and prices from which the OWNER will select the "Additional Recommended Spare Parts and Tools".

J. Project-Wide Wiring Diagrams and Panel Drawings Submittal

1. Submittal Schedule: The CONTRACTOR shall submit for approval a complete set of project-wide wiring diagrams (PWWD) and panel drawings, **all at one time within 120 calendar days** after the date of Notice to Proceed is given to the CONTRACTOR. The PWWD and panel drawings shall be a singular complete hard copy bound package and accompanied with a PDF on a CD. This submittal shall be submitted together with the System Hardware submittal and the System Architecture and Communication Diagrams submittal specified herein.
2. Submittal Contents: The PWWD and panel drawings shall be submitted as a single and comprehensive set of drawings. The submittal shall include a complete index in the front of each part of the submittal. The drawings shall be indexed by systems, sites, or process areas. Diagrams shall be tagged in a manner consistent with the Contract Documents and shall include the following:
  - a. Project-Wide Wiring Diagrams: The PWWD shall define and document the contents of each analog and discrete monitoring, alarming, hardware interlock, and control functions associated with equipment provided under Division 40 sections. The PWWD shall also cover equipment provided under sections in other Divisions, existing, and OWNER-furnished equipment. The PWWD shall also include both field and panel wiring diagrams.
    - Drawings showing definitive diagram for every analog and discrete instrumentation loop system. These diagrams shall show and identify each component in each loop or system using legend and symbols from the standards in the Contract Documents. The wiring diagrams shall be presented on an 11"x17" drawing with no more than 10 loops per drawing.

---

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

- In general, loops shall be grouped and organized by PLC (if used) and the I/O cards within the PLC. Each I/O card shall be presented on a separate sheet(s) and on the right side of the drawing. The type of card, part number and its slot location shall be identified. Each I/O shall be identified as well as its location on the card and its address. Existing, spare, and future I/Os shall also be shown. Power supply wiring to the card/loops, wire colors, and terminal numbers shall be shown on the wiring diagrams. The I/O cards, the loops and any device in the loop shall be shown together. Each loop shall be complete, including the source/destination within new or existing panels, device(s) in the loop, field connection panels or field junction boxes, field and PLC interface terminal blocks and wire numbers.
  - In addition wiring diagrams shall show the following details
    - Functional name of each loop
    - Reference name, drawing, and loop diagram numbers for any signal continuing off the wiring diagram sheet.
    - MCC panel, circuit, and breaker numbers for power feeds to the loops and instrumentation.
    - Wiring type, size and color
    - Designation, and if applicable, terminal assignments associated with every manhole, pull box, junction box, conduit in which wiring is to be located, and panel through which the loop circuits pass.
    - Vendor panel, instrument panel, conduit, junction boxes, equipment and PLC terminations, termination identification wire numbers and colors, power circuits, and ground identifications.
  - Wiring diagrams shall be developed for loops in equipment vendor-supplied packages, equipment provided under Division 40, and OWNER-furnished equipment.
- b. Panel Wiring Diagrams: Panel wiring and/or piping diagrams shall be prepared in concert with the PWWD and shall include the following information:
- Name of panel
  - Power distribution schematic diagrams associated with each panel or system (120VAC, 24VDC and other DC systems, control circuits). The schematic diagram shall show source of power for the panel (circuit breaker panel and breaker) and fuses. All power backup system distribution shall also be shown.
  - Schematic diagrams for control circuits in accordance with ANSI standards. The diagrams shall show complete details on the circuit interrelationship of all devices within and outside each Control Panel. Including primary measurement and control devices.
  - Communication diagram(s) for the equipment inside the panel.
  - Interfaces with existing control and monitoring systems. The CONTRACTOR shall furnish all necessary diagrams that depict any and all modifications made to existing measurement and control circuits, equipment and wiring. It is the responsibility of the System Supplier to ascertain actual field conditions of the

existing circuits, equipment and wiring. The CONTRACTOR may request copies of as built drawings and data that the OWNER can provide that show such existing conditions. Lack of such drawings shall not alleviate the contractual responsibility to ascertain and implement interfaces and modifications to existing measurement and control circuits, equipment and wiring.

- Surge protection and signal and safety grounding circuits
  - Wiring type and piping size and material
  - Terminal block numbers and wire numbers
- c. Panel Drawings: Panel drawings, including console, and cabinet layout drawings, shall be prepared and submitted for each panel and shall include the following information: These drawings shall include enough other details to define exactly the style, the contents, and overall appearance of the panel assembly.
- Name of Panel.
  - Panel Dimensions; front, side, and plan views and layout to scale.
  - Arrangement of internally and externally mounted instruments and equipment to scale. Note: Control panel layouts shown on the Contract Drawings are diagrammatic.
  - Location of terminal blocks, electrical devices, and conduit entry location(s).
  - Tag number or item number and functional name of items mounted in and on panel, console, or cabinet.
  - Nameplate legend which includes text, letter size, and colors to be used.
  - Complete and detailed Bills of Materials shall include all items within a panel and shall be presented on the panel layout drawing. The bill of material list shall include quantity, description, manufacturer, and part number.
  - Panel mounting information, including conduit entrance location.
  - Communication hardware installation, such as radio, mast and antenna.
  - Assembly and construction drawings. These drawings shall include dimensions, identification of all components, construction material and gauge, surface preparation and finish data, panel door locks and hinge mechanism, nameplates, and the like.

K. Factory Test Procedure Submittal:

1. Submittal Schedule: The CONTRACTOR shall submit for approval a comprehensive factory acceptance test (FAT) procedure **complete within 180 calendar days** after the date of Notice to Proceed is given to the CONTRACTOR, but not later than **60 calendar days** prior to the Factory Acceptance Test date.
2. Submittal Contents:
  - a. The CONTRACTOR shall develop and submit a factory test procedures to show that the integrated system hardware and software is fully operational and in compliance with the requirements of the Contract Documents.
  - b. The FAT procedures shall include the following tests to be conducted:
    - Hardware review and inventory

---

40 91 00-8

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

- Central computer system(s) start-up
  - Security
  - Navigation and operator's commands
  - Database definition and configuration
  - Graphic displays and editing function
  - Monitoring and alarm features and functions
  - Trending functions
  - Reports and report system functions
  - Redundancy and backup
  - Network Communication and access from all the network nodes
  - Remote access from laptops
  - PLC functionality – I/O processing
  - Site/facility/Process PLC and HMI operation including pump and valve control
- c. Procedure Format: The test procedure shall have a table of contents and each procedure shall be provided on a separate sheet or sheets. The following shall be provided for each procedure:
- Test number
  - The purpose of the test
  - The procedure
  - The expected result
  - Space to indicate "Pass" and "Fail" and explanation
  - Space for sign-off Signature for the Contractor/System Supplier, the ENGINEER, the OWNER, and DATE
  - Space to provide comments and punch list items

#### **1.07 CLOSEOUT SUBMITTALS**

- A. In addition to the requirements specified in Division 01, provide the following information:
1. Information in the Technical Manual shall be based upon the approved Shop Drawing submittals as modified for conditions encountered in the field during the WORK. The Technical Manuals shall therefore contain the as-built drawings and information.
  2. The Technical Manuals shall include installation, connection, operating, calibration, set points (e.g., pressure, pump control, time delays, etc.) adjustment, test, troubleshooting, maintenance, and overhaul instructions in complete detail.
  3. The Manuals shall have the following material organized in volumes and divided by subject and tabs The Technical Manual shall have the following organization for each process (the number and the enumeration of the sections shall be project specific):
    - a. Section A - Process and Instrumentation Diagrams (as built copy)
    - b. Section B - System Architecture and Communication System Block Diagram(s)

---

40 91 00-9

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- c. Section C - Wiring Diagrams. A separate set of drawings shall be provided for each site. Each set shall be arranged in a separate tab (drawings shall also be provided in PDF).
- d. Section D – Functional design report. It shall include a copy of the site graphic display(s) and description how the site is controlled and any special control strategies specific for each site. Special control functions in the server shall also be included. Calibration, set points (e.g., pressure, pump control, time delays, etc.) shall also be included.
- e. Section E - Instrument Data Sheets and corresponding manufacturer's data sheet/catalog cuts/brochure that was used in the hardware submittal and the operation and maintenance/user manual.
- f. Section F - Calibration Documentation
- g. Section G – Communication survey and test results
- h. Section H - Loop, Commissioning and Performance Test Results

#### **1.08 MAINTENANCE MATERIAL SUBMITTALS**

- A. The CONTRACTOR shall provide the specified spare parts and tools. In addition, The ENGINEER and the OWNER will select from the priced list of "Additional Recommended Spare Parts" in the Hardware Equipment Submittal. The CONTRACTOR shall furnish these parts and will be paid for them from the corresponding allowance item in the Bid. The total price will not exceed the amount of the allowance item.
- B. The CONTRACTOR shall furnish a priced list of special tools required to calibrate and maintain the instrumentation provided from which the ENGINEER or the OWNER will select the needed tools. After approval the CONTRACTOR shall furnish tools on that list. The cost of these tools will be included in the allowance.
- C. The CONTRACTOR shall furnish one (1) portable instrument loop calibrator with current simulator with charger and carrying case. The calibrator shall be Fluke 709H series, Ametek AccuPro Calibrator CL-9005, or equal.

#### **1.09 COORDINATION**

- A. The CONTRACTOR shall examine the drawings and specifications of each division associated with this work. Before commencing work, obtain a ruling from the ENGINEER any conflicts between divisions.
- B. The drawings and specifications shall be read and interpreted in conjunction with other Divisions.
- C. The responsibility to determine which Division provides various products and work rests with the Contractor. Additional compensation will not be considered because of differences in interpretation of specifications.
- D. Provide work plan and identify methodologies for equipment installation with provision made for the most expeditious means to complete the work.
- E. Treat any item or subject omitted from this Division's specifications, but which is mentioned or reasonably specified in other Divisions' specifications or drawings and pertains to the instrumentation and control system, as being integral to the overall system. Provide such specified items or subjects.
- F. Structural members shall not be cut without prior approval of the ENGINEER.
- G. The Contractor is responsible to coordinate their work with other trades, and the OWNER'S Representative.

---

40 91 00-10  
Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

- H. The Contractor is responsible for determining cable lengths for manufacturer supplied equipment and devices with integrated cables.

## **1.10 QUALITY ASSURANCE**

### **A. Factory Acceptance Tests (FAT)**

1. Prior to shipment, the I&CS including all panels, integrated SCADA system, PLCs, peripherals, communications equipment, etc. provided under this Division, shall be assembled, connected, and all software loaded for a full functional factory acceptance test (FAT) of the integrated system. Existing equipment is not required to be included in this test.
  2. In preparation for the FAT, the CONTRACTOR shall check, troubleshoot, debug and test the I&CS prior to arrival of the ENGINEER in order for the I&CS to be ready for the FAT, minimize testing time, and minimize re-testing during the visit. Similar testing shall be performed even if the ENGINEER chooses not to witness the FAT.
  3. The CONTRACTOR shall allow the ENGINEER and OWNER to inspect the I&CS and witness the functional testing of the system at the site of assembly and integration of the system.
  4. A minimum of 21 Days notification shall be given to the ENGINEER prior to testing. No shipments shall be made without the ENGINEER's approval. A successful completion of the test is a prerequisite to the shipment of the system.
  5. The factory test will be witnessed by the ENGINEER and the OWNER. The CONTRACTOR shall pay and provide for travel, food, and lodging for all the test witnesses.
  6. The factory acceptance test shall be conducted at the place where the system was engineered, fabricated, assembled, and programmed.
  7. It is considered reasonable that once scheduled, the system will be ready for the test and the test will be successfully completed in one session. If during the test, at the opinion of the ENGINEER and in accordance with the test procedure, the system is not ready for the test or has failed, and the ENGINEER and the OWNER must extend their stay or leave and arrive at another date, the OWNER reserves the right to withhold monies due to the CONTRACTOR to cover additional costs of the ENGINEER's time, travel, food, and lodging and associated project cost.
  8. During the factory acceptance test, the CONTRACTOR's Project Manager and software engineers (HMI application software and PLC programming) who worked on the I&CS shall be available on the premises where the test is being conducted for explanation, demonstration or corrections.
  9. After the successful completion of the test, the ENGINEER will generate a punch list. The list may include items that must be corrected or addressed prior to the shipment of the system, and/or items that must be corrected later in the field during installation and startup.
- B. Field Tests: The CONTRACTOR's attention is directed to the Article "EXECUTION" of this Section which delineates all the tests that are required to be performed in the field in order to demonstrate compliance with the Contract Documents.
- C. Prior to final acceptance of the I&CS System and related equipment, the CONTRACTOR shall propose and present in writing to the OWNER a one-year maintenance contract and quotation which will become effective upon the expiration of the warranty. The maintenance contract is an option that the OWNER may purchase from the System Supplier. The contract shall offer different maintenance, site visit and help-desk with options each with its respective cost.

---

40 91 00-11

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

### **1.11 FIELD SITE CONDITIONS**

- A. The I&CS shall be designed and constructed for satisfactory operation and long, low maintenance service under the following environmental conditions:
  - 1. Sewage Lift Station
- B. Site Equipment:
- C. Ambient temperature range: -18° through 60° C
- D. Thermal shock: 1.0° (1.8° F) per minute maximum
- E. Relative humidity: 95 percent maximum non-condensing.
- F. Unless specified otherwise, provide equipment and instrumentation suitable for continuous operation at an elevation of 1000 feet above sea level.
- G. Classification of Plant Areas.
  - 1. Refer to Division 16.

### **1.12 WARRANTY**

- A. All parts, material labor, travel, subsistence, or other expenses incurred in providing services and service visits during the warranty period shall be borne by the CONTRACTOR under the guarantee specified in Division 1. Equipment, software, and materials that do not achieve their intended purpose shall be replaced by the CONTRACTOR to attain compliance, at no additional cost to the OWNER.
- B. Extended Period for Correction of Defects: The CONTRACTOR shall correct defects in the I&CS upon notification from the OWNER within 2 years from the date of Substantial Completion. Corrections shall be completed within 5 Days after notification.
- C. The performance of the servers and workstations hardware shall be guaranteed (repair of parts and labor at the owner's site including travel expenses) for a period of three (3) years following the date of completion and formal acceptance of the work (next business day on-site service).
- D. Software Upgrades: During the warrantee period, the CONTRACTOR shall furnish and install at no additional cost to the OWNER any application software upgrades published applicable to OWNER's applications and compatible with OWNER's hardware and operating system.

## **PART 2 - PRODUCTS**

### **2.01 GENERAL**

- A. Standard and Current Technology: All I&CS hardware, software, materials, and equipment furnished under this contract shall be new, free from defects, and shall be standard products and technology produced by manufacturers regularly engaged in the manufacture of these products. Meters, instruments, and other components shall be the most recent field-proven models marketed by their manufacturers at the time of submittal of the Shop Drawings unless otherwise required to match existing equipment.
- B. The CONTRACTOR shall submit a Substitute Item Request Form in case of discontinued or upgraded product or other cases where changing technology requires changes in equipment or software.
- C. Adverse Environmental Impact: No component of an instrumentation system shall contain liquid mercury.

- D. Hardware Commonality and Modularity: Instruments which utilize a common measurement principle shall be furnished by a single manufacturer. Panel mounted instruments shall have matching style and general appearance. Instruments performing similar functions shall be of the same type, model, or class, and shall be from a single manufacturer. All equipment shall be of modular design to facilitate interchangeability of parts to assure ease of servicing and expandability.
- E. Instrument and Loop Power: Power requirements and input/output connections for components shall be verified. Power for transmitted signals shall, in general, originate in and be supplied by the control panel devices. The use of "2 wire" transmitters is preferred, and use of "4 wire" transmitters shall be minimized. Individual loop or redundant power supplies shall be provided as specified and/or as required by the manufacturer's instrument load characteristics to ensure sufficient power to each loop component. Power supplies shall be mounted within control panels or in the field at the point of application.
- F. Loop Isolators and Converters: The CONTRACTOR is responsible to resolve any signal level incompatibilities where required.
- G. Signal Levels: Analog measurements and control signals shall be as indicated herein, and unless otherwise indicated, shall vary in direct linear proportion to the measured variable. Electrical signals outside control panels shall be 4 to 20 milliampères DC except as indicated. Signals within enclosures may be 1 to 5 volts DC. Electric signals shall be electrically or optically isolated from other signals. Pneumatic signals shall be 3 to 15 psig with 3 psig equal to 0 percent and 15 psig equal to 100 percent.
- H. Alternative Equipment and Methods: Equipment or methods requiring redesign of any project details are not acceptable without prior written approval of the ENGINEER through the "or equal" process of [[[Section 016000 - Products, Materials, Equipment, and Substitutions.]]] [[[The Bid Forms.]]] Any proposal for approval of alternative equipment or methods shall include evidence of improved performance, operational advantage, and maintenance enhancement over the equipment or method indicated, or shall include evidence that an indicated component is not available.

## **PART 3 - EXECUTION**

### **3.01 EXAMINATION**

- A. Refer to the requirements of Division 01 for additional requirements.
- B. Shipping
  - 1. After completion of shop assembly, factory test, and approval, the tested I&CS equipment, cabinets, panels, and computer hardware shall be packed in protective crates and enclosed in heavy duty polyethylene envelopes or secured sheeting to provide complete protection from damage, dust, and moisture. Dehumidifiers shall be placed inside the polyethylene coverings. The equipment shall then be skid-mounted for final transport. Lifting rings shall be provided for moving without removing protective covering. Boxed weight shall be shown on shipping tags together with instructions for unloading, transporting, storing, and handling at the Site.
- C. Special Instructions

---

40 91 00-13

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

1. Special instructions for proper field handling, storage, and installation required by the manufacturer shall be securely attached to each piece of equipment prior to packaging and shipment.

**D. Tagging**

1. A permanent stainless steel or other non-corrosive material tag marked with the instrument or equipment tag number shall be provided on each piece of equipment in the I&CS. Identification shall be prominently displayed on the outside of the package.

**E. Storage**

1. It is the CONTRACTOR's responsibility to assure proper handling and on-site storage of instrumentation and control equipment in accordance with the System Supplier's recommendations. All equipment and materials delivered to the jobsite shall be stored in a location which will not interfere with the operations of other contractors or the OWNER. Equipment shall not be stored outdoors. Storage and handling will be performed in manners which will afford maximum protection to the equipment and materials.
2. Equipment shall be stored in dry shelters, including in-line equipment, and shall be adequately protected against mechanical damage. If any apparatus has been damaged, such damage shall be repaired by the CONTRACTOR. If any apparatus has been subject to possible damage by water, it shall be thoroughly dried out and put through tests as directed by the ENGINEER. If such tests reveal defects, the equipment shall be replaced.

**3.02 PRODUCT HANDLING**

- A. Use all means necessary to protect the installation and to protect products and installed work of all other trades.
- B. Any damage to the products and/or installed work shall be repaired or replaced by the contractor, to the satisfaction of the OWNER and ENGINEER, at no additional cost to the OWNER.

**3.03 INSTALLATION**

- A. All systems and instrumentation, including instrumentation furnished under other Divisions, shall be installed, connected calibrated, tested, started, and placed into operation in accordance with CONTRACT documents under Division 40 and the manufacturers' instructions. The installation shall be coordinated with the ENGINEER and the OWNER. This shall include final integration in concert with equipment specified and provided by others.
- B. The CONTRACTOR shall employ installers who are skilled and experienced in the installation and connection of all I&CS equipment.
- C. Equipment Locations: The monitoring and control system configurations indicated in the contract documents are diagrammatic. The locations of equipment are approximate unless dimensioned. The exact locations and routing of wiring and cables shall be governed by structural conditions and physical interferences and by the location of electrical terminations on equipment. Equipment shall be located and installed so that it will be readily accessible for operation and maintenance. Where job conditions require reasonable changes in approximated locations and arrangements, or when the OWNER exercises the right to require changes in location of equipment which do not impact material quantities or cause material rework, the CONTRACTOR shall make such changes without additional cost to the OWNER.

- D. The CONTRACTOR shall review the existing site conditions and examine all shop drawings for the various items of equipment in order to determine exact routing and final terminations for all wiring and cables.
- E. The Contract Documents identify conduits and instruments required to make a complete I&CS. The CONTRACTOR shall be responsible for providing any reasonable additional or different type connections as required by parts of the I&CS' specific installation requirements, or as practical.

### **3.04 CONDUIT, CABLES, AND FIELD WIRING**

- A. Conduits, process equipment control wiring, 4 to 20 mA signal circuits, signal wiring to field instruments and to control panels, PLC input and output wiring, and other field wiring and cables shall be provided under Division 26 and without delay to the WORK of Division 40.
- B. PLC equipment cables, communication networks shall be provided under Division 40, but the installation in the field shall be under Division 26.
- C. Terminations and wire identification inside I&CS equipment and panels furnished under this or any other Division shall be provided under Division 40.
- D. The CONTRACTOR shall supervise and coordinate installation and termination and identification of field signals, power, and utilities associated with the I&CS. Resolve signal, power, or functional incompatibilities between the I&CS and new and existing interfacing devices.

### **3.05 EQUIPMENT CONNECTIONS AND INSTALLATIONS**

- A. Instruments, control panels, and equipment shall be anchored by methods that comply with seismic requirements applicable to the Site. Appropriate mounting stands and bracket materials and workmanship shall be provided and shall comply with requirements of the Contract Documents.
- B. Existing Instruments that are to be removed and reinstalled shall be cleaned, reconditioned, and recalibrated by an authorized service facility of the instrument manufacturer. The CONTRACTOR shall provide certification of this WORK prior to reinstallation of each instrument.
- C. The Contract Documents show necessary conduit and instruments required to make a complete instrumentation. The CONTRACTOR shall be responsible for providing any additional or different type connections as required by the instruments and specific installation requirements. Such additions and such changes, including the proposed method of installation, shall be submitted to the ENGINEER for approval prior to commencing that WORK. Such changes shall not be a basis of claims for extra WORK or delay.
- D. Field Connection Panels and Interface Terminal Blocks: In cases where field I/O wiring has to be extended to a control panel or from enclosures or devices that are removed, the CONTRACTOR shall provide separate enclosures or junction boxes with interface terminal blocks that will serve as a field connection panel (FCP). The FCP and the terminal block shall be shown on the project-wide wiring diagrams.
- E. Conduits and/or raceways in building interior locations shall be surface mounted on walls or ceilings wherever possible and run perpendicular and parallel to building lines. Conduits shall not be routed on floors in areas subject to foot traffic. In exterior locations conduit shall be routed below grade.
- F. Wires and cables shall be arranged in a neat manner and securely supported in cable groups and connected from terminal to terminal without splices unless specifically approved by the ENGINEER. Wiring shall be protected from sharp edges and corners.

---

40 91 00-15

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

- G. Signal and 24VDC low voltage wiring shall be run in a separate conduit from power and 120-volt control wiring.
- H. Field wiring shall terminate at terminal blocks in the control panel. Field wiring shall not be wired directly to equipment in the control panel except communication and specialty cables that must be wired directly to their respective equipment.
- I. Wires shall be marked clearly with an identification wire number labels that are of a permanent nature.
- J. Connectors shall be, as a minimum, water tight.
- K. Flexible cables and capillary tubing shall be installed in flexible conduits. The lengths shall be sufficient to withdraw the element for periodic maintenance.
- L. Differential pressure elements shall have 3 valve manifolds.
- M. The CONTRACTOR shall verify the correctness of each installation, including polarity of electric power and signal connections. The CONTRACTOR shall certify in writing all discrepancies have been corrected for each loop or system checked out. In addition, the CONTRACTOR shall make sure process connections are free of leaks.
- N. Moisture barriers shall be provided with enclosure rated for area installation.

### **3.06 SEALING OF WALL AND FLOOR OPENINGS**

- A. The CONTRACTOR shall seal all conduit and cable entries passing through outside walls of buildings, through partition walls separating electrical rooms from other areas, through fire separations, and through floors above grade.
- B. Sealing material shall be fire resistant and not contain any compounds which will chemically affect the wiring jacket or insulating material. Cable penetrations through fire separations, if required, are to be sealed. Acceptable methods are Canstrut "Fire Stop", Electrovert "Multi-Cable Transit" or Dow Corning RTV Silicone Foam.
- C. Cable transit blocks (with knock out blocks) are also acceptable as long as they have capability to be sealed.

### **3.07 SLEEVES**

- A. Provide sleeves of galvanized steel pipe with machine cut ends of ample size to accommodate conduits passing through walls, partitions, ceilings, floors, etc.
- B. For wall, partitions and ceilings the sleeve ends are to be flush with the finish on both sides. For floors the ends shall extend 4" above finished floor level.
- C. Fill the space between the sleeve and the conduit with fire stop material and caulked around the top and bottom with approved permanently resilient, non-flammable and weatherproof silicone base compound. Ensure that the seal is compatible with the floor and ceiling finishes.
- D. Locate the sleeves and position exactly prior to construction of the walls and floors.
- E. Failure to comply with the above requirements shall be remedied at the Contractor's expense.

### **3.08 TAGGING STANDARDS FOR DEVICES AND WIRING**

- A. Tag all devices, wires and I/O using the assigned loop, equipment or device tag name. Where tag naming and numbering is not defined, the Engineer will provide naming and numbering that is consistent with the plant naming conventions.

### 3.09 FIELD QUALITY CONTROL

- A. Devices provided under Division 40 shall be initially calibrated by the manufacturer at the manufacturer's facility prior to shipment. Following installation, the devices shall be field calibrated according to the manufacturer's recommended procedures to verify operational readiness and ability to meet the indicated functional and tolerance requirements.
- B. Each instrument shall be field tested, inspected, and adjusted to the indicated performance requirement in accordance its manufacturer's specifications and instructions. Any instrument which fails to meet any contract requirement, or, in the absence of a contract requirement, any published manufacturer performance specification for functional and operational parameters, shall be repaired or replaced, at the discretion of the ENGINEER.
- C. Calibration Points: During bench and field calibration each instrument shall be calibrated at least at 0, 25, 50, 75, and 100 percent of span using test instruments to simulate inputs and outputs. The test instruments shall have accuracies traceable to National Institute of Standards and Testing.
- D. Bench Calibration: Instruments that have been bench-calibrated by the manufacturer shall be verified in the field after installation to determine whether any of the calibrations are in need of adjustment.
- E. Field Calibration: Instruments which were not bench-calibrated shall be calibrated in the field to insure proper operation in accordance with the instrument loop diagrams or specification data sheets.
- F. Analyzer Calibration: Each analyzer system shall be calibrated and tested as a workable system after installation. Testing procedures shall be directed by the manufacturers' technical representatives. Samples and sample gases shall be furnished by the manufacturers.
- G. Calibration Sheets: Each instrument calibration sheet shall provide the following information and a space for sign-off on individual items and on the completed unit:
  - 1. Project name
  - 2. Loop number and site or process name and number
  - 3. Tag number
  - 4. Manufacturer
  - 5. Model number
  - 6. Serial number
  - 7. Calibration range
  - 8. Calibration data: Input, output, and error at 0 percent, 50 percent, and 100 percent of span
  - 9. Switch setting, contact action, and dead-band for discrete elements
  - 10. Space for comments
  - 11. Space for sign-off by System Supplier and when applicable by the manufacturer and date
  - 12. Test equipment used and associated serial numbers
  - 13. Calibration Tags: A calibration and testing tag shall be attached to each piece of equipment or system at a location determined by the ENGINEER. The CONTRACTOR shall have the System Supplier sign the calibration sheet when calibration is complete. The ENGINEER will sign the calibration sheet when the calibration and testing has been accepted.

---

40 91 00-17

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

14. Loop Testing: The Contractor shall test newly installed loops for continuity and functionality. The up-to-date wiring diagrams shall be used as reference. The ENGINEER and/or the OWNER shall witness the loop testing.
- H. The CONTRACTOR shall notify the ENGINEER of scheduled tests minimum of 30 calendar days prior to the estimated completion date of installation and wiring of the I&CS. After the ENGINEER's review of the submitted loop diagrams for correctness and compliance with the specifications, loop testing shall proceed. The loop testing shall be witnessed by the ENGINEER and/or the OWNER.
- I. Control Valve Tests: Control valves, cylinders, drives and connecting linkages shall be stroked from the operator interface units as well as local control devices and adjusted to verify proper control action, hand switch action, limit switch settings, torque settings, remote control actions, and remote feedback of valve status and position. Control valve actions and positioner settings shall be checked with the valves in place to insure that no changes have occurred since the bench calibration.
- J. Interlocks: Hardware and software interlocks between the instrumentation and the motor control circuits, control circuits of variable-speed controllers, and packaged equipment controls shall be checked to the maximum extent possible.
- K. Loop Validation:
1. Control loops shall be checked under simulated operating conditions by impressing input signals at the primary control elements and observing appropriate responses of the respective control and monitoring elements, final control elements, and the HMI displays associated with the PLC or DCS. Actual signals shall be used wherever available. Following any necessary corrections, the loops shall be retested.
  2. Accuracy tolerances for each analog network are defined as the root-mean-square (RMS) summation of individual component accuracy requirements. Individual component accuracy requirements shall be as indicated by contract requirements or by published manufacturer accuracy specifications, whenever contract accuracy requirements are not indicated. Each analog loop shall be tested by applying simulated analog or discrete inputs to the first element of an analog loop. For loops which incorporate analog elements, simulated sensor inputs corresponding to 0, 25, 50, 75, and 100 percent of span shall be applied, and the resulting element outputs monitored to verify compliance to calculated RMS summation accuracy tolerance requirements. Continuously variable analog inputs shall be applied to verify the proper operation and setting of discrete devices. Provisional settings shall be made on controllers and alarms during analog loop tests. Analog loop test data, including calculated RMS summation system accuracy tolerance, shall be documented by the CONTRACTOR on the loop validation sheets. The validation sheets shall be included in the O&M Manuals.
- L. Loop Validation and Certification Sheets:
1. Loop Validation: The CONTRACTOR shall prepare loop validation sheets for each loop covering each active instrumentation and control device except simple hand switches and lights. Loop validation sheets shall form the basis for operational tests and documentation. Each loop validation sheet shall cite the following information and shall provide spaces for sign-off on individual items and on the complete loop by the System Supplier:
    - a. Project name
    - b. Loop number

- c. Tag number, description, manufacturer, and model number for each element
  - d. Installation bulletin number
  - e. Specification sheet number
  - f. Loop description number
  - g. Adjustment check
  - h. Space for comments
  - i. Space for loop sign-off by the System Supplier and date
  - j. Space for ENGINEER witness signature and date
2. Loop Certification: A certified copy of each loop test validation sheet signed by the System Supplier, the ENGINEER or the ENGINEER's representative as a witness, with test data entered, shall be submitted to the ENGINEER together with a clear and unequivocal statement that the loops have been tested and the instrumentation in the loop has been successfully calibrated, inspected, and tested.
- M. Manufacturer's Services
- 1. The CONTRACTOR shall provide jobsite visits and services of a manufacturer's technical field representative for supervision of the following:
    - a. Oversee installation: Supervise installation and connection of all instruments, elements, and components of every system, including connection of instrument signals to primary measurement elements and to final control elements such as VFD, smart starters, pumps, valves, engines and chemical feeders
    - b. Verify that installed instrument and software meet manufacturer's recommendations
    - c. Certify installation and reconfirm manufacturer's accuracy statement
    - d. Oversee loop testing, prepare loop validation sheets, and certify loop testing
    - e. Certify when testing is completed.
    - f. Training the OWNER's personnel

### **3.10 COMMISSIONING**

- A. Commissioning is the verification that the complete WORK functions on an extended basis are in full conformance with the Contract requirements.
- B. As part of the commissioning, the entire I&CS shall operate continuously without failure for 30 consecutive days without failure (see test details below), thus extending its operation test longer than the commissioning period specified in Division 01.
- C. Refer to the requirements of Division 01 for additional commissioning requirements.
- D. The CONTRACTOR shall submit a report/letter states that CONTRACT requirements have been met and the I&CS is ready (2) weeks prior to energizing any system to allow inspections by ENGINEER.
- E. The entire I&CS shall go through a final 30-day acceptance test. For the purpose of this CONTRACT, the terms "Final Acceptance Test" and "Final Performance Test" are synonymous and are used interchangeably. The 30-day test must be successfully completed prior to the date of and as a condition to substantial completion of the entire project WORK. During the testing period, all system functions shall be exercised, and any system interruption and accompanying

component, subsystem, software, or program failure shall be logged for cause of failure, as well as time of occurrence and duration of each failure.

- F. In addition to the requirements of Division 01, the CONTRACTOR shall furnish support staff as required to operate the system and to satisfy the repair or replacement requirements. The CONTRACTOR shall also provide a competently programmer on call during all normal working days and hours from the start of the acceptance test until final acceptance of the system. The on-call programmers shall be ready to respond within two hours of the notification of the problem.

G. Testing

1. The entire I&CS shall be tested and shall include, but not limited to the following:
  - a. Verify instrument calibration and provide written report.
  - b. Verify signal levels and wiring connections to control panels for all instrumentation and control equipment.
  - c. Function check and adjust under operational conditions the instruments and control equipment.
  - d. Coordinate instruments and control equipment supplier's service personnel as required for complete system testing.
  - e. The CONTRACTOR shall make provision to be available and coordinate with the Plant Control System programming team, and the commissioning team to check the sensor signals from source to destination.
  - f. Instruct plant personnel in correct method of operation of instruments and control equipment.
  - g. Direct plant personnel at hand-over as to final adjustment of the system for correct operation of plant.
- H. Failure During Testing: Failure of the system during the testing shall be considered as indicating that part of the I&CS does not meet the requirements of the specifications and corrective action shall be required before restarting the acceptance test.
- I. Technician Report: Each time a technician is required to respond to a malfunction in the I&CS he/she must complete a report which shall include details concerning the nature of the complaint or malfunction and the resulting repair action required and taken. If a malfunction occurs which clears itself or which the operator on duty is able to correct, no report shall be required (logged as specified above). Each report shall be submitted within 24 hours to the ENGINEER or its representative, and the OWNER.

### 3.11 TRAINING

- A. The CONTRACTOR shall train the OWNER'S personnel on the I&CS operation, maintenance, calibration, and repair of equipment provided under this Contract. The training shall be by qualified instructors. The training courses shall be given on-site to a minimum of Four (4) people of the OWNER's personnel. All instruction, tools and training material shall be provided by the CONTRACTOR.
- B. These courses shall be designed to provide the operations, maintenance and supervisory personnel with training in routine and preventive maintenance of all the I&CS including instrumentation, communication, PLCs software, and HMI. The training course shall include instruction on the use of all maintenance equipment and special tools provided under the contract.

---

40 91 00-20

Instrumentation and Control Process Systems

Pump Station 26 Improvement Project

City of Roseville

WWE Project: 21-060

April 2023

REVISED BID SET

C. Instructions

1. The training shall be performed by qualified instructors. The training shall be performed by qualified representatives of the equipment manufacturers and shall be specific to each piece of equipment.

D. Training Manuals and Material

1. The CONTRACTOR shall use the approved Training syllabus and Training Manuals to develop training material. The training material shall be designed to provide the operations, maintenance and supervisory personnel with training in routine operation procedures, and preventive maintenance and troubleshooting of the I&CS, PLCs and the computer monitoring and control systems.

E. Schedule

1. Training shall be performed on-site during the calibration, loop and functional testing of the I&CS prior to the 30-day Final Acceptance Test. The training sessions shall be scheduled a minimum of 3 weeks in advance of when the courses are to be initiated. The ENGINEER will review the course outline for suitability and provide comments that shall be incorporated. Due to availability and scheduling of the OWNER's staff, the CONTRACTOR shall coordinate with the OWNER the schedule of the classes. The OWNER reserves the right to videotape the training sessions for later use. Due to possible limited availability of the OWNER's staff, the CONTRACTOR shall provide the number of identical courses/sessions of each of the following training courses as indicated, each up to four (4) people of the OWNER's staff.

- F. Training Subjects, Duration, and Agenda: The training shall include operation and maintenance procedures, troubleshooting with necessary test equipment, and changing set points, and calibration for that specific piece of equipment. During the course, hands-on experience with the system equipment shall be provided. Maintenance classes shall stress troubleshooting, repair, calibration, and other technical aspects of the I&CS and the PLCs. Operator classes shall stress operational theory and use of the I&CS and the PLCs.

1. Field Instruments

- a. Duration – an average of half hour (1/2) hours per each type of instrument
- b. Subjects - installation, setup, configuration, maintenance, calibration, and troubleshooting:
  - Level transmitter
  - Flow measuring device and transmitter
  - Power monitoring equipment
  - Uninterruptible power supply (UPS)

G. Programmable Logic Controller (PLC)

1. The training for the PLC and SCADA software shall be performed by OTHERS.

END OF SECTION

**SECTION 40 91 06  
LEVEL MEASURING**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. General: The CONTRACTOR shall provide level measuring systems, complete and operable in accordance with the Contract Documents.

**1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS**

- A. Section 40 91 00 - Instrumentation and Controls for Process Systems.  
B. Applicable Sections in Division 40 – Instrumentation and Control for Process Systems.  
C. Division 26 – Electrical.

**1.03 SUBMITTALS**

- A. Submittals shall be provided in accordance with the requirements specified in Section 40 91 00 – Instrumentation and Controls for Process Systems.

**PART 2 - PRODUCTS**

**2.01 SUBMERSIBLE TRANSDUCER TYPE LEVEL MEASUREMENT**

A. Manufacturers:

1. Submersible level transducers/transmitters manufacturer and model shall be Keller America Level Rat, Dwyer Series PBLT2, TE KPSI 750, or Approved Equal.
2. Termination enclosure shall be of same manufacturer as level transducer.

- B. Description: The submersible level measurement system shall be designed for level and depth measurements, such as wells, where small transducer size is required. The level measurement system shall consist of a submersible transducer, electronic transmitter, support cable, and interconnecting cable with cable shield, termination enclosure, and vent tube for atmospheric reference. The installation shall allow easy removal of the transducer and cable assembly for maintenance purposes

C. Performance / Design Criteria:

1. The transducer shall be the strain gauge type suitable for sensing pressure equivalent to the measured liquid level range. Various pressure ranges shall be available from 1 to 900 psig and shall be provided as indicated in the data sheet.
2. The transducer' shall be less than 1-inch in diameter and shall be integral to and suspended by a corrosion resistant cable, as recommended by the manufacture
3. The transmitter shall produce a 24 VDC, 4 - 20 mA DC signal linearly proportional to the required level range as indicated in the data sheet. The measurement system shall operate over a temperature range of -5 to 140 degrees F with an accuracy of plus or minus 0.1 percent of full scale. Local indication shall be provided, unless otherwise indicated in the data sheet.

D. Materials / Components:

1. Submersible Transducer/Transmitter:

Level Measuring

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- a. The wetted parts of the transducer/transmitter's body assembly shall be as recommended by the manufacturer. The transducer/transmitter shall be provided with a lightning surge arrestor. It shall be rated IP68/Type 6. Based on installation location rating, the unit shall be intrinsically safe and rated for Class I Div. II area. Intrinsically safe barriers shall be provided as required.
- b. Vent Tube: The vent tube shall be used for atmospheric reference and terminated in a sensor termination enclosure. Vent tube shall be able to support a load of up to 115 lb. and its material shall be compatible with the measured liquid level as recommended by the manufacturer for the intended service and as indicated in the data sheet.
- c. Termination Enclosure: The vent tube and the pressure transducer shall be terminated in an enclosure rated for the installation location. The enclosure shall contain a replaceable desiccant module with an integral moisture status indicator, and a replaceable micro filter assembly against ingress of dust. A DIN standard terminal block shall also be included. Mounting hardware shall be included for the required installation requirements.

### **PART 3 - EXECUTION**

#### **3.01 FIELD QUALITY CONTROL**

- A. Level measuring systems shall be handled, installed, calibrated, loop-tested, pre-commissioned, and performance tested in accordance with Section 40 91 00 - Instrumentation and Controls for Process Systems. Manufacturer's service, supervision, and training shall also be in accordance with Section 40 91 00 - Instrumentation and Controls for Process Systems.

**SECTION 40 91 07  
LEVEL DETECTION**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. General: The CONTRACTOR shall provide level detection switches, complete and operable, in accordance with the Contract Documents.

**1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS**

- A. Section 40 91 00 - Instrumentation and Controls for Process Systems.
- B. Applicable Sections in Division 40 – Instrumentation and Control for Process Systems.
- C. Division 26 – Electrical.

**1.03 SUBMITTALS**

- A. Submittals shall be provided in accordance with the requirements specified in Section 40 91 00 – Instrumentation and Controls for Process Systems.

**PART 2 - PRODUCTS**

**2.01 TIPPING FLOAT TYPE LEVEL SWITCHES**

- A. **Manufacturers: Tipping float type level switch manufacturers shall be MJK 7030, MAGNETROL T10, FLYGT ENM-10, or Approved Equal.**
- B. Description: Tipping float level switch shall consist of a switch, a moving float, and a connecting cable that is anchored at the midpoint of a differential band. As the level rises and falls the float rights itself or inverts causing switching actions. The cable anchoring point shall be protected by strain relief.
- C. Performance / Design Criteria: The hermetically sealed switches shall have a SPDT output with a minimum rating of 10 Amps at 120 VAC.
- D. Materials / Components: The float switch shall be mercury-free. Float material shall be in accordance with the manufacturer's recommendations for the intended service and installation application and as indicated in the data sheet.

**2.02 VERTICAL FLOAT TYPE LEVEL SWITCHES**

- A. Manufacturers: Vertical float type level switch manufacturers shall be APG FS-400, Gems EW-xx or Approved Equal.
- B. Description: Vertical float level switch shall consist of a switch, a moving float, and a connecting cable that is sealed for NEMA4X environmental rating. As the level rises and falls the float actuates a magnetic switch contained within a stainless-steel housing.
- C. Performance / Design Criteria: The hermetically sealed switches shall have a SPST output with a minimum rating of 0.8 Amps @ 120 VAC/1Amp @ 100VDC or less. Float shall be field reversible to change from N.C. to N.O. contacts
- D. Materials / Components: The float switch shall be stainless steel with 1/4" NPTM threads and 24" integrated cable

40 91 07-2  
Level Detection

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

**SECTION 40 95 10**  
**PLC-BASED CONTROL SYSTEM HARDWARE**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR through the use of the System Supplier shall provide the programmable logic controllers (PLC)-based control system (PBCS) hardware for the I&CS, complete and operable, in accordance with the Contract Documents. The PBCS shall be furnished complete with all system hardware as indicated in the I-Series Contract Drawings.
- B. The System Supplier shall be responsible for selecting, sizing, and providing the correct and necessary type and quantity of hardware for the entire PBCS. The necessary hardware shall include but not limited to network hardware, PLC input/output (I/O) modules, interconnecting cables, accessories, communication ports, adapters and cards, and all appurtenances for proper operation of the PBCS and to meet the functional requirements described in these specifications, and as shown on the system architecture diagram or network diagram.

**1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS**

- A. Section 40 91 00 - Instrumentation and Controls for Process Systems
- B. Applicable Sections in Division 40 – Instrumentation and Control for Process Systems
- C. Division 26 – Electrical
- D. The PBCS equipment, materials, and other work shall conform to the specifications; codes and standards requirements specified Section 40 91 00 - Instrumentation and Controls for Process Systems.

**1.03 SUBMITTALS**

- A. The PLC submittal shall be provided in accordance with the requirements specified in Section 40 91 00 - Instrumentation and Controls for Process Systems.

**1.04 MAINTENANCE MATERIAL SUBMITTALS**

- A. Spare Parts:
  - 1. It is intended that sufficient spare parts and supplies necessary to support the operation and maintain the system shall be furnished with the system. These spare parts are in addition to the "spare" I/Os listed in the I/O list. PLC system spare parts shall be furnished in accordance with Section 40 91 00 - Instrumentation and Controls for Process Systems.
  - 2. As a minimum, the spare parts listed below are required to be furnished under this contract
    - a. One (1) PLC I/O module of each type.
    - b. One (1) PLC CPU
    - c. One (1) PLC communication module (if a separate module is required)
    - d. One (1) PLC power supply
    - e. One (1) Firewall appliance

**1.05 WARRANTY**

- A. The CONTRACTOR shall guarantee the performance of all the new PLCs and the programming software for them as specified elsewhere in the Contract Documents.

- B. All parts, material labor, travel, subsistence, or other expenses incurred in providing services and service visits during the warranty period shall be borne by the CONTRACTOR under the guarantee. Equipment, software, and materials that do not achieve their intended purpose shall be replaced by the CONTRACTOR to attain compliance, at no additional cost to the OWNER.
- C. Guarantee and special corrections of defects and software upgrade requirements and warrantee shall be in accordance with Section 40 91 00 - Instrumentation and Controls for Process Systems.

## **PART 2 - PRODUCTS**

### **2.01 REFER TO BILL OF MATERIALS ON I-SERIES DRAWINGS**

## **PART 3 - EXECUTION**

### **3.01 FIELD QUALITY CONTROL**

- A. The CONTRACTOR shall provide the OWNER with training on the subjects of use, maintenance, operation, troubleshooting and repair of all the components of the PLCs and the rest of the PBCS hardware. The training shall be specifically tailored to this project and reflect the hardware and the installation. All training shall be conducted on site unless another location is approved by the ENGINEER and OWNER. Hardware training subjects and the allocated hours for each class shall be in accordance with Section 40 91 00 - Instrumentation and Controls for Process Systems.

**END OF SECTION**

**SECTION 40 95 13  
CONTROL PANEL**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR through the System Supplier shall provide all labor, materials, equipment, and incidentals as shown, specified, and required to furnish and install control panels for the PLC-based control system, complete and operable, in accordance with the Contract Documents.
- B. The system Supplier shall be responsible for selecting, sizing, and providing the required type and quantity of the panels for each process control applications. The hardware and responsibilities shall include but not limited to:
  - 1. The selection of all accessories, materials and methods of fabrication not specifically covered by these specifications, but which are necessary to complete the fabrication of the panels. Installation of all equipment shall be performed in accordance with good engineering and industry best practices.
  - 2. Mounting enclosures.
  - 3. Locating and mounting interior/exterior instrumentation, hardware and equipment in the control panel.
  - 4. Field interface terminal blocks
  - 5. Terminating panel internal wiring and signals.
  - 6. Terminating communication and network cabling and wiring.
- C. The requirements of Section 26 00 00 – General Electrical Work, apply to the WORK of this Section

**1.02 RELATED WORK**

- A. Division 26                      Electrical Specifications
- B. Section 40 91 00              Instrumentation and Control for Process Systems
- C. Section 40 95 10              PLC-Based Control System Hardware
- D. All electrical work required under this section shall conform to the requirements of Division 40 and the applicable requirements of Division 01, Division 26.

**1.03 REFERENCE CODES AND STANDARDS**

- A. Reference Standards:
  - 1. NFPA 70, National Electric Code
  - 2. ANSI/UL 1449, Fourth Edition, Safety Surge Protective Devices
  - 3. IEEE C62.41.1, Guide on the Surge Environment in Low-Voltage (1000V and Less) AC Power Circuits
  - 4. IEEE C62.45, Recommended Practice on Surge Testing for Equipment Connect to Low-Voltage (1000V and Less) AC Power Circuits
  - 5. UL 1283, Safety Electromagnetic Interference Filters
  - 6. NFPA 70, National Electric Code
  - 7. National Standards Institute (ANSI) / Institute of Electrical and Electronic Engineers (IEEE):

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

## **1.05 QUALITY ASSURANCE**

- A. Factory and field tests shall be performed in accordance with 40 91 00 - Instrumentation and Control for Process Systems.

## **PART 2 - PRODUCTS**

### **2.01 GENERAL**

- A. All control panel assemblies for PLC's, Remote I/O, analyzer systems, communication systems, etc., shall be mounted within NEMA-rated enclosure suitable and designed for the process application, as specified in the Contract Drawings.
- B. Reference Contract Drawings for control panel layouts and product requirements. The control panel layouts shown on the Contract Drawings are diagrammatic. The control panel submittal shop drawing shall reflect the accurate layout of the equipment in the panel. It is not the intent of this specification to completely specify all details of the design and construction of each panel.
- C. Control panels shall be either freestanding, pedestal-mounted or equipment skid-mounted.
- D. The enclosures shall be suitable for carrying the weight of the equipment mounted inside the panel and on the doors without any distortion or warping. The CONTRACTOR shall supply all equipment and components mounted on or within panels unless otherwise noted. Spare space shall be kept clear of wiring, etc., to give contiguous clear space for future additions.
- E. When required, PLC-based control system panel assemblies shall be mounted in existing enclosures.
  - 1. The CONTRACTOR shall review the available space in the field or in the existing panel to determine the proper size of back panel suitable to accommodate the required equipment for the facility.
- F. Environmental Suitability and NEMA Rating:
  - 1. Indoor and outdoor control panels and instrument enclosures shall be suitable for operation in the ambient conditions associated with the locations designated in the Contract Documents.
  - 2. Provide heating, cooling, and dehumidifying equipment required to maintain instrumentation devices 20-percent within the minimums and maximums of their rated environmental operating ranges. Provide power wiring for these heating, cooling and dehumidifying devices.
  - 3. Enclosures shall be suitable for the environment that they are installed. Panel instruments and equipment in hazardous areas shall be suitable for use in the particular hazardous or classified location in which it is to be installed.
  - 4. Control panels shall be sized to adequately dissipate heat generated by equipment mounted in or on the panel.
  - 5. Enclosure Ratings:
    - a. NEMA 12: Suitable for enclosures located in the Electrical Room and Control Room.
    - b. NEMA 4X: Suitable for enclosures located outdoors and in damp and corrosive process areas.
    - c. NEMA 7X (explosion proof and corrosion resistant): Suitable for enclosures located in classified areas.

---

40 95 13-3  
Control Panel

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- d. ALL modifications to the panel enclosure including device penetrations shall not compromise the enclosure rating.

## **2.02 ENCLOSURE CONTRUCTION**

### **A. Approved enclosure manufacturers**

1. Hoffman
2. Tesco
3. Or approved equal.

### **B. Material and Fabrication**

1. Wall mounted type enclosure shall be constructed of a minimum of 12-gauge, depending of the size of the enclosure, application, environment, and the project requirements.
2. Floor mounted free-standing enclosures shall be made of 12-gauge, depending of the size of the enclosure, application, and the project requirements.
3. Seams shall be continuously welded and ground smooth. Corners shall be welded and ground smooth.
4. Each enclosure shall have a heavy gauge, continuous piano hinge pin which shall support each door.
5. Door and body stiffeners shall be provided where required. The stiffeners shall be welded to the inside of enclosures to prevent deformation due to the weight of face-mounted instruments.
6. Doors shall be sealed with a closed cell neoprene gasket.
7. The interior rear and sides of each enclosure shall have steel mounting channels for supporting mounting panels.
8. Enclosures shall be provided with external mounting feet when shown, as well as door clamps, hasp and staple for padlocking, data pocket, and closed-cell oil-resistant gasket. Removable lifting lugs to facilitate handling shall be provided on large enclosures.

### **C. Back and Side Panels**

1. Each enclosure shall be provided with a removable back panel. Depending on the size of the enclosure more than one back panel may be required. Removable side panels shall be provided as required for additional mounting space.

### **D. Control Panel Finish**

1. Non-stainless-steel enclosures shall have an ANSI 61 gray polyester urethane powder coating electrostatically applied to inside and outside surfaces. Enclosure interior, and back and side panels shall be white.
2. Stainless Steel enclosures shall be Type 316 and have a brush finish.

### **E. Ventilation, Louvers, and Vents**

1. All enclosures rated NEMA 12 shall be provided with ventilation louvers, exhaust fan and thermostat. The perimeters of the louver plate shall be sealed with a gasket. Louver shall be of the same material and finish as the enclosure. The louver shall be sized for effective heat rejection.

---

40 95 13-4  
Control Panel

Pump Station 26 Improvement Project

2. All Control Panels installed outside or inside non-air-conditioned environments shall have an integral heater c/w thermostat.
3. All enclosures shall be provided with a corrosion inhibitor size per manufacture recommendations.
4. Each panel enclosure shall be provided with a data pocket for storing wiring diagrams, operation manuals and other documentation inside the enclosure.

F. Air Conditioning

1. NEMA 4X enclosures and enclosures with VFD's shall be provide with Air Conditioning Units, size as recommended by the manufacturer to accommodate for heat dissipated by electrical equipment.

G. Accessories

1. The CONTRACTOR shall provide additional panel accessories to meet the specifications, such as floor stand and mounting kits, door handle and lock kits (common key shall be provided for all doors), 3-point latch, etc. Provide panels with front access only. Doors shall be key/pad lockable (as required) and fitted with 3-point heavy duty latching assemblies.

H. Instruments Mounting

1. Equipment mounted at the rear of enclosure shall be installed to allow for commissioning adjustments, operation and servicing requirements. The CONTRACTOR shall arrange components and wiring to meet UL requirements.
2. Spare space shall be kept clear of wiring, etc., to give maximum space for future additions.
3. For front mounted hardware, cutouts and holes may be cut or drilled by any standard method that does not cause deformation. Burrs shall be ground smooth. Mounting the instruments shall not degrade the NEMA rating of the enclosure.
4. Each enclosure shall be provided with interior nameplates to identify equipment tags and functions.

## **2.03 ELECTRICAL REQUIREMENTS**

- A. The main power supply to the control panel controls shall be 120 VAC, 60 Hz. The CONTRACTOR shall provide the main power supply from an external source. The CONTRACTOR shall provide a step-down transformer as required to power the panel.
- B. Each source of foreign voltage shall be isolated by providing disconnect type terminal blocks Weidler or approved equal.
- C. The CONTRACTOR shall provide wireways, wire, and electrical fittings and components for 120V and 24VDC circuits to instruments and other electrical devices in the panel for a complete and operable installation. Wiring methods and materials for all panels shall be in accordance with the NEC requirements.
- D. The circuits for 24VDC shall run in separate wireways from the 120 VAC circuits.
- E. If required by the contract documents, the control panel shall be the source of power for any 120 VAC solenoid valves interconnected with the control panel.
- F. Wiring and Accessories

---

40 95 13-5  
Control Panel

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

1. Run all wiring in enclosed plastic wireways such as Panduit. Size all wireways so that the total cross-sectional area of the insulated wire and cable does not exceed forty (40%) percent of the cross-sectional area of the wireway.
2. Provide a minimum clearance of 1.5" between wireways and any point of wire termination.
3. Control wiring to be a minimum of #14 AWG tinned stranded copper; insulation rated at 600V.
4. Wiring for power distribution shall be a minimum of #12 AWG tinned stranded copper; insulation rated at 600 V.
5. Analog wiring to be a minimum of #16 single pair copper 300V CIC white/black cable with overall foil shield and the drain wire. The black wire shall be positive and white wire shall be negative. Drain wires shall be clipped in the field and terminated on individual green/yellow terminal blocks in the control panel. The shield shall be grounded at only one end in the control panel grounding terminals, and cut back and insulated at the instrument end.
6. Cable routing and requirements shall be installed in accordance with Division 26 – Electrical Specifications.
7. All wiring entering or leaving the enclosure shall be labeled with permanent marking identification subject to the review by the Engineer.

#### G. Terminal Blocks

1. The control panel shall be provided with sufficient terminal blocks for the connection of external field conductors, signals, and power and for use inside the panel for power distribution and for future expansion. In order to facilitate easy and safe loop maintenance, each analog input loop shall have a disconnect with test plugs built into its field terminal block.
2. Spare Terminal Blocks for Signals: The CONTRACTOR shall provide sufficient spare terminal blocks to connect additional signals for future use (implemented and future spares). Implemented spare signals shall be wired to terminal blocks and the percent of these terminals shall be in accordance with the growth requirements specified in Section 40 95 10 – PLC-Based Control System Hardware. For future signals (i.e. the source of inputs or final control elements are not yet known or available in the field), the CONTRACTOR shall provide 25-percent spare terminals in the panel for each type of actual I/O in the PLC. The number of terminals shall take in account the types of I/O for which spares are provided (Three (3) terminal for each AI or AO shall be provided).
3. Spare Terminal Blocks for Power and Other Applications: In addition to the spare terminals for signals, The CONTRACTOR shall provide spare terminals for 3 additional power distribution and grounding applications circuits.
4. Terminal blocks for all wiring shall be modular terminals, DIN rail mounted strap screw type rated at 15 amperes at 600VAC and suitable for No. 12 AWG. stranded wire.
5. Identify each terminal block within an enclosure with a unique machine printed terminal block number. Cabinet chassis grounding terminal blocks to be identified by the electrical ground symbol.
6. Connections to screw terminals to be locking fork tongue insulated crimp type wire connectors equal to Panduit PAN-TERM series or T&B STA-KON series.
7. Terminals to be Weidmuller terminal blocks or engineer approved equal.

---

40 95 13-6  
Control Panel

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- a. WDU4 Feed through Terminal Block.
  - b. WPE4 Ground Block.
  - c. WTR4 Disconnect terminal.
  - d. WDK4N Two Level Terminal Block.
  - e. WTR 4/SI LED Fused Terminal Block - for 24 V DC rated circuits c/w all required fuses.
  - f. WTR 6/2 SI LED Fused Terminal Block - for 120 V AC rated circuits c/w all required fuses.
  - g. WAP End Bracket.
8. Provide a group of terminals for each of 120 V AC hot and neutral and 24 V DC positive and negative power. Distribution wiring to have a thermal magnetic circuit breaker upstream of all major blocks of loads, adequately sized to protect the connected load while not causing nuisance tripping. Provide nickel-plated terminals for all high-capacity applications in excess of 15 A.
9. Provide Weidmuller disconnect type terminal blocks c/w fuses for each load or loop powered instrument from the control panels.
- H. Electrical Hardware Accessories: The control panel shall be equipped with minimum provisions listed below:
- 1. Duplex 15-amp, 120 VAC GCFI type receptacles for service and maintenance use. The receptacle shall be 2-pole, 3-wire grounding, and heavy-duty industrial grade by Hubbell, Leviton, or approved equal.
  - 2. Simplex 15-amp 120 VAC GCFI type receptacle dedicated for a powering an uninterruptible power supply (UPS). The receptacle shall be color coded, 2-pole, 3-wire grounding, heavy duty industrial grade by Hubbell, Leviton, or approved equal.
  - 3. A 120 VAC LED light strip lamp with guards and a toggle switch (Hoffman Panelite LED Series, or approved equal) mounted on the top of the enclosure or on the part the side or back panel shall be provided for panel lighting. A separate fuse/circuit breaker shall be provided for the lamp mounted inside and in the top of the back-of-panel area. Provide (2) two lamps for Control Panels that are longer than 72-inches
  - 4. A one (1)-inch by eight (8)-inch copper grounding bus mounted in each Control Panel including grounding lugs, suitable for termination of up to #2 AWG copper grounding conductor. The grounded bus shall be bonded to the ground.
    - a. The grounding bus shall be complete with solderless connector for one 2 AWG bare stranded copper cable and with tapped holes to accommodate ground connections from various devices in the enclosure.
    - b. Provide ground connections for different AWG wires and shield connection clamps by Phoenix Contact, or approved equal.
    - c. Provide separate ground buses for analog and discrete/digital signals. The copper cable shall be provided by the CONTRACTOR and be connected to a system ground loop.
    - d. Bond each enclosure door to the grounding lug.
  - 5. Provide Hoffman 120 VAC Heater and thermostat. Heater shall be DAH1001A and thermostat shall be Stego model KTO-011, or approved equal, if required.

Control Panel

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

6. Provide ventilation system sized for heat dissipation. The ventilation system shall be by Hoffman, Cooling kit with removable filter or approved equal.
- I. Circuit Breakers, Fuses, and Disconnects
    1. Provide circuit breakers, fuses and disconnects installed in the control panel to protect against fault current the 120 VAC and 24 VDC branch circuits. Circuit breakers shall be installed as disconnects of external power feeds for control circuits from outside the enclosure and branch circuits within the enclosure.
    2. The circuit breakers, fuses and disconnects shall also allow disconnecting the power from these instruments in a safe manner. Each circuit breaker and fuse shall be clearly identified by a unique service nametag.
    3. The fuses shall be DIN rail mounted with fuse holder terminal block and shall have a blown fuse indicator light.
      - a. The fuse holders for 120 VAC applications shall have a neon light indicator. Provide Entrelec part number 0115-661.21, or equal.
      - b. The fuse holders for 24 VDC applications shall have an LED indicator light. Provide Entrelec part number 0115-663.23, or equal.
    4. The circuit breakers shall be DIN rail mounted type. The 120 VAC breakers shall be Square D model QUO-120 and QUO-115, amperage rating as required, or approved equal.
      - a. 20-Amp main circuit breaker for the 120 VAC control panel power supply and the distribution of the power.
      - b. 15-Amp circuit breaker for the duplex 15-amp, 120 VAC GCFI type receptacle for service and maintenance, and the LED light.
      - c. 15-Amp circuit breaker (or as required by the UPS manufacturer) for the dedicated simplex GCFI type receptacle for UPS.
      - d. 15-Amp circuit breaker for the heater and thermostat and ventilation fan.
      - e. 5-Amp fuse, 120 VAC for each of the 120 VAC power input circuits to the two(2) redundant 24 VDC power supplies
  - J. Uninterrupted Power Supply
    1. The CONTRACTOR shall provide an uninterruptible AC power supply (UPS) system for each control panel to back up the power for the panel in case utility power fails. The UPS shall be a "smart" type, use on-line, high frequency, double-conversion technology. The batteries shall be integral to the UPS enclosure.
    2. Capacity and Duration
      - a. The continuous output capacity of the UPS shall be at least 1,000 VA. It shall be sufficient to supply the computers, interface and peripheral equipment (present and future) with regulated AC power for a minimum of thirty (30) minutes from batteries only. Additional batteries or larger UPS size shall be provided to meet the specified backup time.
    3. The CONTRACTOR shall submit load calculations and size each UPS to justify the selection of present and future load requirements, as well as overload and inrush capacity requirements.

---

40 95 13-8  
Control Panel

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

#### 4. Features and Options

- a. Input Power Range: 120 VAC, 60 Hertz  $\pm$  5 Hertz.
- b. Output Power Range: 120 VAC,  $\pm$  3 percent of nominal, 60 Hertz  $\pm$  0.5 percent.
- c. Output Receptacles: Minimum of six (6) built-in outlets.
- d. Overload Capacity: The UPS shall have the ability to supply 110 percent of system requirements for 10 seconds, without degradation of the service life.
- e. Operating Temperature: 0-to-40-degree C.
- f. Protection: The UPS output shall be protected (IEEE standards) from lightning, surges overload, and short circuit. The input shall be protected by a circuit breaker, sized in accordance with manufacturer's recommendations.
- g. Battery: Lead acid type, maintenance free, sealed suspended electrolyte, and leak-proof. Recharge Time (with half load): three (3) hours.
- h. Alarms and Status: The UPS shall be provided with a relay output card in a combination with a network management card (NMC) to provide a common dry contact output that represents the health/status of the UPS and battery functions (i.e. low battery, UPS on batteries, UPS fault, batteries failed on battery self-test). The NMC shall be configured to provide the above alarms/status listed above.

5. Manufacturer: Schneider Electric APC model Smart-UPS with communication and relay interface cards, or approved equal.

#### K. 24VDC Power Supplies

1. Control panels shall be provided with redundant power supplies which shall be configured in a fault-tolerant manner to prevent interruption of service upon failure and interruption of service necessitated by the replacement of a power supply.
2. The CONTRACTOR shall size the power supplies to meet the control panel requirement and the instruments and loops they support. Power supplies shall have an excess rated capacity of 40 percent. The failure of a power supply shall be alarmed at the SCADA System.
3. The failure of a power supply shall generate a dry relay contact output that can be used as an input to the PLC/ SCADA system.
4. 5. Power supplies shall be Phoenix Contact 24 VDC Quint series, or equal.

#### L. Wire Labeling

#### M. Surge Protection Devices

#### N. Signal, Control, and Power Wiring

### 2.04 ELECTRICAL COMPONENTS

#### A. General Purpose Relays

1. General purpose relays in the control panel(s) shall be compact plug-in type with contacts rated 10-Amps at 120 VAC; or 24 VDC.
  - a. Quantity and form of contacts shall be as required by the application.
  - b. The relay shall have a minimum of two (2)-form C contacts (double pole-double throw), except when used as interpose relay for the PLC's DO modules.

---

40 95 13-9  
Control Panel

Pump Station 26 Improvement Project

- c. Interpose relay for the PLC's DO modules shall have a minimum of one (1)-form C (single pole single throw) contacts. Each relay shall be provided with a neon light to indicate energized state.
  2. The relay socket and mounting shall be a standard DIN rail mount with pullover wire spring.
  3. Relays shall be IDEC compact relays 2213, or approved equal.
- B. Interpose Relays
1. Additional relays shall be provided when the number or type of contacts required exceed the contact capacity and/or rating of the specified relays and timers.
  2. Additional relays shall be provided when higher contact rating is required in order to interface with starter circuits or other equipment.
  3. The interpose relays shall be as the general-purpose relays specified above.
- C. Time Delay Relays
1. Time delay relays shall be plug-in electronic type with on-delay or off-delay actuation as required. Output contacts shall be double-pole double-throw (DPDT) rated 10-Amps at 120 VAC minimum. Each unit shall include an adjustable time delay with a time range scale. Operating temperature range of the units shall be -20 to +120 degrees-F minimum and each device shall be rated for 10,000,000 mechanical operations and 500,000 electrical operations.
  2. Provide Idec RTE multi-function series, Schneider Electric, or approved equal.
- D. Indicating Pilot Lights
1. Indicating lights shall be ultra-bright multiple LED cluster lamps, push-to-test full voltage and shall be heavy-duty, oil-tight construction. Operators shall be nickel or chrome plated. Each light shall have a screwed-on prismatic lens approximately 1-inch in diameter. Miniature style devices are not acceptable.
  2. Lens colors shall be GREEN for "run," "open," or "on"; RED for "stopped," "closed," or "off"; and AMBER for alarm.
  3. Indicating lights shall be Square D Company, Class 9001 Type K, General Electric Company Type CR104P, or approved equal. Each light shall have a factory-engraved legend plate, as shown on the Contract Documents.
- E. Selector and Pushbutton Switches
1. Selector and pushbutton switches shall be rated 10-amperes at 600 volts; shall be heavy-duty, oil-tight construction; and shall have the number of positions and poles required. Miniature style devices are not acceptable. Operators shall be nickel or chrome plated. Switches shall be Square D Company, Class 9001 Type K, General Electric Company Type CR104P, or approved equal. Each switch shall have a factory-engraved legend plate as shown on the Contract Documents.
- F. Signal Isolators, Conditioners and Converters
1. Signal isolators conditioners and converters shall be provided as required to resolve any signal level incompatibilities, to ensure adjacent component impedance match where feedback paths may be generated, or to maintain loop integrity during the removal of a loop component.

Control Panel

Pump Station 26 Improvement Project

2. Signal isolators, integrators and converters shall be 24 VDC or 120 VAC powered as applicable, and shall DIN rail mounted. Isolators shall be by Phoenix Contact, or approved equal.

G. Nameplates

1. Provide nameplates for each device on or within the panels and enclosures. Nameplates shall be black laminated with white lettering, a minimum of 1" x 3" in size with up to three lines of 1/4" lettering. Securely fasten nameplates in and situate them in a visible location.

## **2.05 SPARE PARTS AND SPECIAL TOOLS**

A. Control panels

## **PART 3 - EXECUTION**

### **3.01 EXAMINATION**

A. Preparation for Shipment and Shipping

1. Control panels shall be crated for shipment using a heavy framework and skids as required and cushioned to protect the finish and the instruments during shipment. Provide sufficient cushioning material to protect interior hardware that could be damaged due to mechanical vibrations.
2. Each panel unit shall be provided with removable lifting lugs to facilitate handling.

### **3.02 INSTALLATION**

A. Control panels shall be installed in accordance with Section 40 91 00 – Instrumentation and Controls for Process System and located as indicated in the Contract Drawings.

B. All conduit and cable entrance shall be from bottom entry only, unless otherwise specified by the Contract Drawings.

C. Wire Installation Requirements

1. Wiring methods and materials for panels shall be in accordance with the NEC requirements and industry best practices.
2. Wires shall be neatly grouped using nylon tie straps, and shall be fanned out to terminals. Wiring run from components on a swing out panel to other components on a fixed panel shall be made up in tied bundles. These bundles shall be tied with nylon wire ties and shall be secured to panels at both sides of the hinge loop so that conductors are not strained at the terminals.
3. Wiring run to control devices on the front panels shall be tied together at short intervals with nylon wire ties and be secured to the inside face of the panel using adhesive mounts.

D. Wire Terminations

1. Spare I/O shall be wired to a terminal strip and clearly marked.
2. All field wiring shall terminate at a terminal block in the enclosure. Field wiring shall be terminated first at the field interface terminal block and then wired to the devices/instrument or PLC inside the panel.

Control Panel

Pump Station 26 Improvement Project

City of Roseville  
WWE Project: 21-060

April 2023  
REVISED BID SET

- a. Except for antenna cable, Cat 5e cables and other specialty cables, such as thermocouples and data cables, field wiring shall not be wired directly to the panel mounted device.
3. Terminals and fuses for each conductor and shield drain wire of a twisted shielded pair or triad cable shall be mounted consecutively next to each other.
4. Terminal blocks shall be grouped based on their function and voltage. Each group of terminal blocks shall be located in the panel to provide easy access, safety, practicality, and minimization of internal wiring.
5. Terminal blocks for 24 VDC signals shall be grouped separate from the power and other 120 VAC terminals.
6. Terminal blocks for 24 VDC signals shall be grouped separate from the 24VDC power as well. Likewise, terminal blocks for 120 VAC power and distribution shall be grouped separate from the 120 VAC terminals for control signals.
7. Each terminal and wire connection shall be tagged in accordance with the approved shop drawings or Facility standard tagging/numbering, if available.

### **3.03 IDENTIFICATION**

#### **A. Nameplates**

1. Provide nameplates for each device on or within the panels and enclosures. Nameplates shall be black laminated with white lettering, a minimum of 1" x 3" in size with up to three lines of 1/4" lettering. Securely fasten nameplates in and situate them in a visible location and mechanically attached with self-tapping stainless-steel screws to the panel door. The nameplate to indicate panel name as indicated on drawings.
- B. If more than one power source is present in a panel, a separate warning nameplate with red face and white core, mechanically attached with self-tapping screws to the panel door shall be provided. The nameplate to indicate the number of power sources and their origin.
- C. All instruments within the panel shall be identified.
- D. Provide a list of all circuit breakers and fuses laminated in plastic. The list shall be located in each associated enclosure.
- E. All wires shall be identified.

### **3.04 FIELD QUALITY CONTROL**

- A. Calibration and testing shall be performed in accordance with Section 40 91 00 – Instrumentation and Controls for Process Systems.

### **3.05 ADJUSTMENTS**

- A. Analog Loops: Whenever an existing analog loop is modified, the CONTRACTOR shall ensure that the integrity and isolation of the loop is maintained and the shield is grounded correctly. In modifying the analog loop, the CONTRACTOR shall also modify the 24 VDC to that loop so that the power supply source of that loop is part of the control panel and backed up by the UPS in it.
- B. Field Connection Panels and Interface Terminal Blocks: In cases where field I/O wiring has to be extended to the control panel from enclosures that are removed or modified, the CONTRACTOR shall provide separate enclosures/field connection panel (FCP), as required, to which field I/O are wired, and from which the signals shall be wired to the control panel.

**SECTION 40 98 30  
INSTRUMENTATION AND CONTROL TEST FORMS**

**PART 1 - GENERAL**

**1.01 SCOPE OF WORK**

- A. The CONTRACTOR, in cooperation with ENGINEER and System Supplier, shall perform commissioning and start-up testing to verify the operation of all the systems as described herein after the installation is completed.
- B. The Sytem Supplier, under the direction of the General Contractor, will coordinate and schedule all activities associated with testing and commissioning in accordance with Section 17010 - Instrumentation and Controls for Process Systems.

**1.02 REFERENCE SPECIFICATIONS, CODES AND STANDARDS**

- A. Section 40 91 00 - Instrumentation and Controls for Process Systems
- B. Applicable Sections in Division 40 – Instrumentation and Control for Process Systems for related testing, commissioning and start-up requirements of the I&CS.
- C. Division 26 – Electrical.

**1.03 SUBMITTALS**

- A. Furnish submittals in accordance with the requirements of Section 01 33 03 – Submittal Procedures and 40 91 00 - Instrumentation and Control for Process Systems.
- B. The CONTRACTOR shall furnish all Instrumentation and Control Test Forms as required by Section 40 91 00 – 1.07 Closeout Submittals.

**1.04 QUALITY ASSURANCE**

- A. The CONTRACTOR shall use only approved forms by the ENGINEER to perform loop testing.
- B. The CONTRACTOR and System Supplier shall be responsible to provide a coordinated commissioning and start-up program. The overall program will be presented to the owner and ENGINEER for approval prior to testing and commissioning activities as part of the shop drawings approval process.

WWE Project: 21-060

April 2023  
REVISED BID SET

**409830-A: LOOP WIRING AND INSULATION RESISTANCE TEST DATA FORM**

LOOP TAG: \_\_\_\_\_

List each conductor of all cables associated with a loop in table below. Ensure end devices are disconnected prior to making measurements. Perform continuity measurements with a 4,000 count DVM. Perform insulation resistance measurements with an insulation tester with energization voltage of 250V DC or less. Do not use a high voltage or hand-crank megohmmeter for this test.

Submit up to 5% of conductor recorded retest results when requested by the Engineer.

| CABLE NO. | CONDUCTOR NO.<br>(OR COLOUR) | CONTINUITY RESISTANCE <sup>A</sup> | SHIELD CONTINUITY<br>INSULATION RESISTANCE <sup>B</sup> |
|-----------|------------------------------|------------------------------------|---------------------------------------------------------|
|           |                              |                                    |                                                         |
|           |                              |                                    |                                                         |

|           |                              |                                    |                                                         |
|           |                              |                                    |                                                         |
|           |                              |                                    |                                                         |
|           |                              |                                    |                                                         |

A Continuity Test: Connect ohm meter leads between conductors 1 and 2 and jumper opposite ends together. Record resistance in table. Repeat procedure between conductors 1 and 3, and 4, etc. and finally between conductor 1 and cable shield. Any deviation of  $\pm 2$  ohms between any reading and the average of a particular run indicates a poor conductor. Take corrective action before continuing with the loop test.

B Insulation Test: With all conductors open, measure the insulation resistance between conductor 1 and shield. Repeat procedure for each conductor and record reading.

**Micro-Surfacings**

## DIVISION V SURFACINGS AND PAVEMENTS

### 37 BITUMINOUS SEALS

#### 37-3 SLURRY SEALS AND MICRO-SURFACINGS

Replace section 37-3.03 with:

#### 37-3.03 MICRO-SURFACINGS

##### 37-3.03A General

##### 37-3.03A(1) Summary

Section 37-3.03 includes specifications for applying micro-surfacings.

Applying a micro-surfacing shall consist of mixing a polymer modified, cationic micro-surfacing emulsion (MSE), aggregate, mineral filler, set-control additives, and water and spreading the mixture on a pavement surface where shown on the plans, in conformance with the provisions in these Special Provisions and State Revised Standard Specifications, and as directed by the Engineer.

##### 37-3.03B Material

##### 37-3.03B(1) Micro-surfacing Emulsion (MSE)

Micro-surfacing emulsion (MSE) shall be homogenous and shall conform to the provisions of these Special Provisions. The polymer shall be milled or blended into the asphalt or blended into the emulsifier solution prior to the emulsification process.

The MSE shall conform to the following requirements when tested in conformance with the following test methods:

##### Polymer Modified, Cationic Micro-Surfacing Emulsion (MSE)

| Specific Designation                                            | Test Method              | Requirement     |
|-----------------------------------------------------------------|--------------------------|-----------------|
| Viscosity SSF @ 25°C                                            | AASHTO T59               | 15 – 90 seconds |
| Sieve, max                                                      | AASHTO T59               | 0.30 percent    |
| Settlement, 5 days, max                                         | ASTM D6930 or AASHTO T59 | 5 percent       |
| Storage Stability, 1 day, max                                   | AASHTO T59               | 1 percent       |

| Polymer Content, % (by weight)                                  | California Test 402      | >3.5%           |
| 25mm plates for the 50°C test.<br>8mm plates for the 20°C test. |                          |                 |

##### 37-3.03B(2) Water and Additives

Water shall be of such quality that the asphalt will not separate from the MSE before the micro-surfacing is placed on the pavement. If necessary for workability, a set-control agent that will not adversely affect the micro-surfacing product may be used.

### 37-3.03B(3) Mineral Filler

Mineral filler shall be Portland cement or hydrated lime that is free of lumps. Portland cement shall be either Type I, Type II, or combination thereof. The type of mineral filler shall be determined by the Contractor based on laboratory mix designs. The mineral filler will be considered part of the aggregate gradation requirement.

### 37-3.03B(4) Aggregate

The aggregate used for micro-surfacing shall be Type II. The material shall be free from vegetation matter and other deleterious substances. Aggregate shall be free of lumps and oversize particles. The aggregate shall be 100% crushed with no rounded particles, volcanic in origin and black in color. The use of gray or light-colored aggregate shall not be allowed. The Contractor shall specify in the bid proposal the name and location of the black rock aggregate quarry and shall provide certification at the preconstruction conference that the rock was crushed a minimum of 90 days prior. The Contractor shall submit samples of the black rock aggregate to the Engineer for review and acceptance.

Aggregate, prior to the addition of the MSE, shall conform to the provisions of these Special Provisions. If aggregates are blended, each component aggregate shall conform to the Sand Equivalent and Durability Index requirements of these Special Provisions when tested in conformance with the respective California Tests.

The percentage composition by mass of the aggregate (including mineral filler) shall conform to the following grading requirements when tested in conformance with California Test 202:

| Type II           |                 |
|-------------------|-----------------|
| Sieve Size        | Percent Passing |
| 3/8 inch (9.5 mm) | 100             |
| #4 (4.75 mm)      | 94 – 100        |
| #8 (2.36 mm)      | 65 – 90         |
| #16 (1.18 mm)     | 40 – 70         |
| #30 (600 µm)      | 25 – 50         |
| #200 (75 µm)      | 5 – 15          |

The aggregate (excluding mineral filler) shall conform to the following quality requirements:

| Type II                                                                                                                                                          |                 |             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-------------|
| Test                                                                                                                                                             | California Test | Requirement |
| Sand Equivalent (min)                                                                                                                                            | 217             | 70          |
| Durability Index (min)                                                                                                                                           | 229             | 75          |
| Percentage of Crushed Particles (min) <sup>1</sup>                                                                                                               | 205             | 100%        |
| Los Angeles Rattler Loss at 500 Rev. (max) <sup>2</sup>                                                                                                          | 211             | 35%         |
| <sup>1</sup> CT205, Section D, is amended to read: "Any particle having 2 or more freshly, mechanically fractured faces shall be considered a crushed particle." |                 |             |
| <sup>2</sup> Los Angeles Rattler shall be performed on the parent aggregate before crushing.                                                                     |                 |             |

If the results of the aggregate grading do not meet the specified gradation, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a percentage passing (PP) range value +/- 1 in any of the Sieve sizes, but not greater than +/-4, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

| Sieve Sizes       | Percentage Passing | Allowable Tolerances | Allowable Tolerances | Allowable Tolerances | Allowable Tolerances |
|-------------------|--------------------|----------------------|----------------------|----------------------|----------------------|
| 3/8 inch (9.5 mm) | 100                | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #4 (4.75 mm)      | 94 – 100           | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #8 (2.36 mm)      | 65 – 90            | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #16 (1.18 mm)     | 40 – 70            | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #30 (600 µm)      | 25 – 50            | PP +/- 1             | PP +/- 1             | PP +/- 1             | PP +/- 1             |
| #200 (75 µm)      | 5 – 15             | PP +/- 1             | PP +/- 1             | PP +/- 1             | PP +/- 1             |
| PAYMENT TO CITY   |                    | \$5.00 per ton       | \$7.50 per ton       | \$10.00 per ton      | \$15.00 per ton      |

If the results of the Sand Equivalent test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the Micro-surfacing represented by the tests containing a sand equivalent Value below 70, but not less than 65, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

| Sand Equivalent | Payment to City |
|-----------------|-----------------|
| 70 or over      | NONE            |
| 68 – 69         | \$5.00 per ton  |
| 66 – 67         | \$7.50 per ton  |
| 65              | \$10.00 per ton |

If the results of the Durability Index test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a durability index value below 75, but not less than 70, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

| Durability Index | Payment to City |
|------------------|-----------------|
| 75 or over       | NONE            |
| 73 – 74          | \$5.00 per ton  |
| 71 – 72          | \$7.50 per ton  |
| 70               | \$10.00 per ton |

When the results of 2 or all 3 of the aggregate grading, the Sand Equivalent, and Durability Index tests do not conform to the specified requirements, both or all three payments to the City shall apply. The City shall deduct these amounts from any moneys due or to become due to the Contractor.

Any progress payment made after the completion date shall not be construed as a waiver of material deductions.

No single aggregate grading, durability index or Sand Equivalent test shall represent more than 300 tons or one day's production, whichever is smaller.

### **37-3.03B(4)(a) Aggregate for Rut filling**

Micro-surfacing (Type III) shall be used for rut filling and shall conform to these Special Provisions.

The aggregate used for Type III shall be grey rock aggregate. The grey rock aggregate shall be 100% crushed with no rounded particles. The material shall be free from vegetation and other deleterious substances. The Contractor shall submit samples and test results of the grey rock aggregate to the Engineer for review and acceptance.

Aggregate, prior to the addition of the MSE, shall conform to the provisions of these Special Provisions. If aggregates are blended, each component aggregate shall conform to the Sand Equivalent and Durability Index requirements of these Special Provisions when tested in conformance with the respective California Tests.

The percentage composition by mass of the aggregate (including mineral filler) shall conform to the following grading requirements when tested in conformance with California Test 202:

| <b>Type III</b>   |                 |
|-------------------|-----------------|
| Sieve Size        | Percent Passing |
| 3/8 inch (9.5 mm) | 100             |
| #4 (4.75 mm)      | 70 – 90         |
| #8 (2.36 mm)      | 45 – 70         |
| #16 (1.18 mm)     | 28 – 50         |
| #30 (600 µm)      | 19 – 34         |
| #200 (75 µm)      | 5 – 15          |

The aggregate (excluding mineral filler) shall conform to the following quality requirements:

| <b>Type III</b>                                                                                                                                                  |                 |             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-------------|
| Test                                                                                                                                                             | California Test | Requirement |
| Sand Equivalent (min)                                                                                                                                            | 217             | 70          |
| Durability Index (min)                                                                                                                                           | 229             | 70          |
| Percentage of Crushed Particles (min) <sup>1</sup>                                                                                                               | 205             | 100%        |
| Los Angeles Rattler Loss at 500 Rev. (max) <sup>2</sup>                                                                                                          | 211             | 35%         |
| <sup>1</sup> CT205, Section D, is amended to read: "Any particle having 2 or more freshly, mechanically fractured faces shall be considered a crushed particle." |                 |             |
| <sup>2</sup> Los Angeles Rattler shall be performed on the parent aggregate before crushing.                                                                     |                 |             |

If the results of the aggregate grading do not meet the specified gradation, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a percentage passing (PP) range value +/- 1 in any of the Sieve sizes, but not greater than +/-4, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

| Sieve Sizes       | Percentage Passing | Allowable Tolerances | Allowable Tolerances | Allowable Tolerances | Allowable Tolerances |
|-------------------|--------------------|----------------------|----------------------|----------------------|----------------------|
| 3/8 inch (9.5 mm) | 100                | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #4 (4.75 mm)      | 70 – 90            | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #8 (2.36 mm)      | 45 – 70            | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #16 (1.18 mm)     | 28 – 50            | PP +/- 1             | PP +/- 2             | PP +/- 3             | PP +/- 4             |
| #30 (600 µm)      | 19 – 34            | PP +/- 1             | PP +/- 1             | PP +/- 1             | PP +/- 1             |
| #200 (75 µm)      | 5 – 15             | PP +/- 1             | PP +/- 1             | PP +/- 1             | PP +/- 1             |
| PAYMENT TO CITY   |                    | \$5.00 per ton       | \$7.50 per ton       | \$10.00 per ton      | \$15.00 per ton      |

If the results of the Sand Equivalent test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a sand equivalent Value below 70, but not less than 65, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

| Sand Equivalent | Payment to City |
|-----------------|-----------------|
| 70 or over      | NONE            |
| 68 – 69         | \$5.00 per ton  |
| 66 – 67         | \$7.50 per ton  |
| 65              | \$10.00 per ton |

If the results of the Durability Index test for aggregate do not meet the specified requirement, the micro-surfacing represented by the test shall be removed within 5 working days of the Engineer's written notice. However, if requested in writing by the Contractor and approved by the Engineer, the micro-surfacing represented by the tests containing a durability index value below 70, but not less than 65, may remain in place. The Contractor shall pay to the City the following amount for the screenings represented by the test and left in place:

| Durability Index | Payment to City |
|------------------|-----------------|
| 75 or over       | NONE            |
| 73 – 74          | \$5.00 per ton  |
| 71 – 72          | \$7.50 per ton  |
| 70               | \$10.00 per ton |

When the results of 2 or all 3 of the aggregate grading, the Sand Equivalent, and Durability Index tests do not conform to the specified requirements, both or all three payments to the City shall apply. The City shall deduct these amounts from any moneys due or to become due to the Contractor.

Any progress payment made after the completion date shall not be construed as a waiver of material deductions.

No single aggregate grading, durability index, or Sand Equivalent test shall represent more than 300 tons or one day's production, whichever is smaller.

### **37-3.03B(5) Mix Design**

At least 7 working days before the micro-surfacing placement commences, the Contractor shall submit for approval of the Engineer a laboratory report of tests and a proposed mix design covering the specific materials proposed for use on the project.

The percentages of each individual material proposed in the mix design shall be shown in the laboratory report. Individual materials shall be within the following limits:

| <b>Micro-surfacing Mix Design</b> |                                        |
|-----------------------------------|----------------------------------------|
| Material                          | Proportion Limits                      |
| Residual Asphalt                  | 7.5% to 10.5% by dry mass of aggregate |
| Mineral Filler                    | 0% to 3% by dry mass of aggregate      |
| Additive                          | As needed                              |
| Water                             | As needed                              |

Adjustments may be required during construction based on field conditions.

The mix design and aggregate tests shall be performed by a laboratory capable of performing the applicable International Slurry Surfacing Association (ISSA) tests. The proposed micro-surfacing mixture shall conform to the specified requirements when tested in conformance with the following tests:

| Test                                                                   | ISSA Test Method | Requirements         |
|------------------------------------------------------------------------|------------------|----------------------|
| Wet Cohesion<br>@ 30 minute (Set) (min)<br>@ 60 minute (Traffic) (min) | TB* 139          | 12 kg-cm<br>20 kg-cm |
| Excess Asphalt                                                         | TB* 109          | 540 g/m <sup>2</sup> |
| Wet Stripping (min)                                                    | TB* 114          | 90%                  |

TB\* = Technical Bulletin

| Test                                                                                    | ISSA Test Method | Requirements                                 |
|-----------------------------------------------------------------------------------------|------------------|----------------------------------------------|
| Wet Track Abrasion<br>6-day soak loss (max)<br>1-hour soak                              | TB* 100          | 810 g/m <sup>2</sup><br>538 g/m <sup>2</sup> |
| Displacement<br>Lateral (max)<br>Specific Gravity after 1000<br>cycles of 56.8 kg (max) | TB* 147A         | 5%<br>2.10                                   |
| Classification Compatibility                                                            | TB* 144          | (AAA, BAA) 11 Grade Points                   |
| Mix Time @ 25°C                                                                         | TB* 113          | Controllable to 120 seconds                  |

TB\* = Technical Bulletin

The laboratory that performed the tests and designed the mixture shall sign the laboratory report. The report shall show the results of the tests on individual materials and shall compare their values to those required by these Special Provisions. The report shall clearly show the proportions of aggregate, filler (minimum and maximum), water (minimum and maximum), set control additive, and MSE solids content (minimum and maximum) based on the dry mass of aggregate. The laboratory shall report the quantitative effects of moisture content on the unit mass of the aggregate (bulking effect) in conformance with the requirements of ASTM Designation C 29M. Previous laboratory reports covering the same materials may be accepted provided the material test reports were completed within the previous 12 months. The mix design shall further show the recommended changes in mineral filler, water, and additive proportions for high temperature weather conditions by reporting proportions of materials required for 60 seconds of mix time with materials heated to 100°F. This 100°F mixing report will not be required for projects requiring nighttime application.

The component materials used in the mix design shall be representative of the micro-surfacing materials proposed by the Contractor for use on the project.

Once the mix design is approved by the Engineer, no substitution of other material will be permitted unless the materials proposed for substitution are first tested and a laboratory report is submitted for the substituted design in conformance with the provisions of these Special Provisions. Substituted materials shall not be used until the mix design for those materials has been approved by the Engineer.

The completed mixture, after addition of water and set control agent, if used, shall be such that the micro-surfacing mixture has proper workability. At the expiration of the road closure hours, in conformance with the provisions in these Special Provisions, the micro-surfacing mixture shall be sufficiently cured to support unrestricted traffic.

### **37-3.03C Construction**

#### **37-3.03C(1) Surface Preparation**

Before placing the micro-surfacing, the pavement surface shall be cleaned by sweeping, flushing or by other means necessary to remove loose particles of paving, dirt, vegetation, and other extraneous material. When required, the roadway surface may be fogged with water ahead of the spreader box. The application of the fog spray may be adjusted to suit temperatures, surface texture, humidity and dryness of pavement.

### **37-3.03C(2) Weather Conditions**

The micro-surfacing mixture shall not be placed when the ambient temperature is below 50°F or during unsuitable weather. Micro-surfacing shall not be placed if rain is imminent or if there is the possibility that there will be freezing temperatures within 24 hours.

### **37-3.03C(3) Equipment**

#### **37-3.03C(3)(a) General**

The equipment used by the Contractor for pavement cleaning and excess aggregate removal shall include a self-propelled rotary power broom, mobile pick-up broom or top dumping mobile pick-up broom.

#### **37-3.03C(3)(b) Mixing and Spreading Equipment**

The micro-surfacing shall be mixed in continuous pugmill mixers of adequate size and power for the type of micro-surfacing to be placed. All indicators shall be in conformance with the provisions of these Special Provisions and shall be in working order prior to commencing mixing and spreading operations.

Mixer-spreader trucks shall be equipped to proportion the MSE, water, aggregate, mineral filler, and set-control additives by volume. Rotating and reciprocating equipment on mixer-spreader trucks shall be covered with metal guards.

The mixer-spreader truck shall not be operated unless low-flow and no-flow devices and revolution counters are in good working condition and functioning and metal guards are in place. Indicators required by these Special Provisions shall be visible while walking alongside the mixer-spreader truck.

Aggregate feeders shall be connected directly to the drive on the emulsion pump. The drive shaft of the aggregate feeder shall be equipped with a revolution counter reading to the nearest one-tenth of a revolution.

In addition to the requirements of the fourth paragraph of section 5-1.33, "Equipment," of the State Standard Specifications, the identifying number of mixer-spreader trucks shall be at least 3 inches in height, located on the front and rear of the vehicle.

The micro-surfacing mixture shall be spread by means of a spreader box conforming to sections 37-3.03C(3)(b)(i) and 37-3.03C(3)(b)(ii).

#### **37-3.03C(3)(b)(i) Spreader Box**

The mixture shall be agitated and spread uniformly in the surfacing box by means of motor driven twin-shafted paddles or spiral augers fixed in the spreader box. A front seal shall be provided to insure no loss of the mixture at the road contact point. The rear seal shall act as a final strike-off and shall be adjustable. The spreader box and rear strike-off shall be so designed and operated that a uniform consistency is achieved to produce a free flow of material to the rear strike-off. The spreader box shall have suitable means provided to side shift the box to compensate for variations in the pavement geometry, the box shall be adjustable. Spreader box skids shall be maintained in such manner as to prevent chatter (wash boarding) in the finished mat. The spreader box in use shall be clean and free of micro-surfacing and MSE at the start of each work shift.

The spreader box shall have a series of strike-off devices at the rear of the box. The leading strike-off device shall be fabricated of steel, stiff rubber or other suitable material. The number of strike-off devices shall be determined by the Contractor. The first strike-off device shall be designed to maintain close contact with the pavement during the spreading operations, shall obtain the thickness required, and shall be capable of being adjusted to the various pavement cross sections for application of a uniform micro-surfacing finished surface. The final strike-off device shall be fabricated of flexible material suitable for the intended use and shall be designed and operated to ensure a uniform texture is achieved in the finished surface of the micro-surfacing. The final strike-off device shall be cleaned or changed daily if problems with longitudinal scouring occur.

Flexible fabric drags attached to the rear of the spreader box shall not be used.

### **37-3.03C(3)(b)(ii) Wheel Path Depression (Rut) Box**

The wheel path depression (rut) box shall be designed to have adjustable strike-off devices to regulate the depth and shall have a width of between 5 feet and 6 feet. Hydraulic augers, or similar devices, shall be installed and shall be capable of moving the mixed material from the rear to the front of the filling chamber. These devices shall also be capable of guiding the larger aggregate into the center, deeper section of the wheel path depression, and forcing the finer material toward the outer edges of the spreader box.

The micro-surfacing mixture, to be spread in areas inaccessible to the controlled spreader box, may be spread by other methods upon approval of the Engineer.

Flexible fabric drags attached to the rear of the wheel path depression (rut) box shall not be used.

### **37-3.03C(3)(c) Mixer and Spreader Truck Calibration**

Each mixer/spreader truck used on the project shall be calibrated in accordance with California Test 109. The trucks shall be calibrated for rock, emulsion, cement, additives, and any mineral filler used. Calibrations shall take place a maximum of 10 days prior to application of micro-surfacing. The Contractor shall notify the Engineer a minimum of 3 working days prior to calibration so that City representatives may make arrangements to observe.

For all material calibrated, 3 consecutive runs per gate setting shall be completed and these 3 test runs must not deviate from their combined mathematical average by more than 2.0%.

Calibrations will take place at most once a week or as required by the Engineer and no machine will be allowed to work on the project until the calibration has been completed and/or accepted 3 working days before the start of work. Weigh back tickets shall be submitted at the end of each work day that micro-surfacing is placed.

### **37-3.03C(4) Proportioning**

Aggregate, mineral filler, MSE, water, and additives, including the set-control agent, if used, shall be proportioned by volume utilizing the mix design approved by the Engineer. If more than 1 kind of aggregate is used, the correct amount of each kind of aggregate to produce the required grading shall be proportioned separately, prior to adding the other materials of the mixture, in a manner that will result in a uniform and homogeneous blend.

The aggregate shall be proportioned using a belt feeder operated with an adjustable cutoff gate. The height of the gate opening shall be determinable. The MSE shall be proportioned by a positive displacement pump. Variable rate emulsion pumps, if used, shall be calibrated and sealed in the pump's calibrated condition in conformance with California Test 109 prior to usage.

The delivery rate of aggregate and MSE per revolution of the aggregate feeder shall be calibrated at the appropriate gate settings for each mixer-spreader truck used on the project in conformance with California Test 109 and in conformance with the provisions of these Special Provisions.

The aggregate belt feeder shall deliver aggregate to the pugmill with such volumetric consistency that the deviation for any individual aggregate delivery rate check-run shall not exceed 2.0 percent of the mathematical average of 3 runs of at least 3 tons each. The emulsion pump shall deliver MSE to the pugmill with such volumetric consistency that the deviation for any individual delivery rate check-run shall be within 2.0 percent of the mathematical average of 3 runs of at least 300 gallons each. The water pump shall deliver water to the pugmill with such volumetric consistency that the deviation for any individual delivery rate check-run shall be within 2.0 percent of the mathematical average of 3 runs of at least 300 gallons each.

The MSE storage tank shall be located immediately before the emulsion pump and shall be equipped with a device which will automatically shut down the power to the emulsion pump and aggregate belt feeder when the MSE level is lowered to a point where the pump suction line is exposed.

A temperature-indicating device shall be installed in the emulsion storage tank at the pump suction level. The device shall indicate the temperature of the MSE and shall be accurate to within 10°F.

The belt delivering the aggregate to the pugmill shall be equipped with a device to monitor the depth of aggregate being delivered to the pugmill. The device for monitoring the depth of aggregate shall automatically shut down the power to the aggregate belt feeder whenever the depth of aggregate is less than the target depth of flow. A second device shall be located where the device will monitor the movement of the aggregate belt by detecting revolutions of the belt feeder. The devices for monitoring no flow or belt movement shall automatically shut down the power to the aggregate belt when the aggregate belt movement is interrupted. The device to detect revolutions of the belt feeder will not be required where the aggregate delivery belt is an integral part of the drive chain. To avoid erroneous shutdown by normal fluctuation, a delay of 3 seconds will be permitted between sensing and shutdown of the operation.

### **37-3.03C(5) Application Rate of Aggregate**

Micro-surfacing spread rates must be within the ranges shown on the following table:

| Micro-surfacing Type | Application Range<br>(lb of dry aggregate/sqyd) |
|----------------------|-------------------------------------------------|
| Type II              | 15 – 18                                         |
| Type III             | 20 – 30                                         |

The micro-surfacing mixture shall be uniformly spread on the existing surfacing within the rate specified without spotting, re-handling, or otherwise shifting of the mixture.

### **37-3.03C(6) Repair Wheel Path Depressions**

When wheel path depressions have a cross section that is deformed 1/2 inch or more, the individual wheel paths shall first be filled utilizing a wheel path depression (rut) box. The depth of the wheel path depression shall be determined after the adjacent ridges have been removed, when applicable. The maximum single application for wheel path depressions shall be 1 inch. Wheel path depressions of depths greater than 1 inch shall require multiple applications in each depression. A pneumatic tired roller shall be used after all rut filling operations. The roller shall make 2 passes at slow speed no more than 7 mph. Wheel path depressions having a cross section greater than 1/2 inch and less than 1 inch shall be paid for under the contract bid item "Micro-surfacing (Type III)".

Wheel path depression repair shall be constructed with a slight crown to allow for initial compaction by traffic on the micro-surfacing.

Freshly filled wheel path depressions shall be compacted by traffic for a minimum of 12 hours before additional lifts of micro-surfacing material are placed for rut filling purposes or as surface courses.

### **37-3.03C(7) Placement**

Micro-surfacing shall be placed no earlier than 7 calendar days after Chip Seal operation on roads to receive the Roseville Cape Seal as shown on the plans.

Longitudinal joints shall correspond with the edges of the traffic lanes. The Engineer may permit other patterns of longitudinal joints if the patterns will not adversely affect the quality of the finished product, this shall be required for approval in writing 5 working days prior to the start of work.

Through traffic lanes shall be spread in full lane widths only. Longitudinal joints common to 2 traffic lanes shall be butt joints with overlaps not to exceed 3 inches. Building paper shall be placed at the transverse joints to avoid double placement of the micro-surfacing. Other suitable methods to avoid double placement of the micro-surfacing will be allowed. Hand tools shall be available to remove spillage.

The mixture shall be uniform and homogeneous after placing on the surfacing and shall not show separation of the MSE and aggregate after setting. The completed surface shall be of uniform texture and free from ruts, humps, depressions, or irregularities.

Adequate means shall be provided to protect the micro-surfacing from damage by traffic until such time that the mixture has cured sufficiently so that the micro-surfacing will not adhere to or be picked up by the tires of vehicles.

If the micro-surfacing is not capable of supporting unrestricted traffic at the expiration of the road closure hours, the Contractor shall pay the liquidated damages per the provisions of these Special Provisions. Placement of the micro-surfacing shall cease before the expiration of road closure hours as specified in these Special Provisions.

### **37-3.03C(8) Sweeping**

Initial sweeping shall begin 1 day after the micro-surfacing placement. Care shall be taken to avoid unraveling the micro-surfacing. Excessive sweeping will not be allowed.

Seven sweepings shall be considered as included in the contract price paid for micro-surfacing. The first sweeping shall be performed the day after the application is applied. The second sweeping shall be performed 3 days after the micro-surfacing application is applied. The third sweeping shall be performed 5 days after the micro-surfacing application is applied. The fourth sweeping shall be performed 7 days after the micro-surfacing is applied. The fifth sweeping shall be performed 10 days after the micro-surfacing is applied. The sixth sweeping shall be performed 15 days after the micro-surfacing is applied. The seventh sweeping shall be performed during the punch list process.

Prior to each sweeping, the Contractor shall contact the Engineer with the street's sweeping schedule. After sweeping takes place, the Contractor shall contact the Engineer for acceptance of the street sweeping.

If the sweeping is not done to the schedule listed above, the Contractor shall pay the liquidated damages per the provisions of these Special Provisions.

The Contractor shall remove all loose aggregate from the curbs, gutters, driveways, and sidewalks prior to sweeping the roadway surface. The Contractor will be responsible to sweep abutting adjacent areas and haul routes. The Contractor shall have 1 working day to sweep the adjacent areas and haul route when requested in writing by the Engineer.

The Contractor shall sweep the micro-surfaced streets and adjacent areas with a self-propelled vacuum or regenerative air sweeper. Any additional sweepings required to remove excess material shall be performed as directed by the Engineer at no additional expense to the City.

If rain is anticipated on sweeping days, the contractor shall re-schedule sweeping and notify the Engineer of the rescheduled date.

### **37-3.03C(9) Test Strip**

The Contractor shall construct a test strip for evaluation by the Engineer 10 working days prior to the micro-surfacing application. The test strip shall be 500 feet to 1000 feet long and shall consist of the application courses specified. The test strip shall be constructed at the same time of day or night that the full production of micro-surfacing will be placed and may be constructed in 2 days or nights when multiple course applications are specified. The location of the test strip shall be specified by the City. The crew utilized to place the test strip shall be same as the crew that places microsurfacing for the remainder of the project.

The micro-surfacing test strip shall have a break time and shall be able to be open to cross traffic no greater than 1 hour after the micro-surfacing is placed. This time will be reflected on the global projects break time and capability of being open to cross traffic. The global project shall have this break time and shall be able to be open to cross traffic no greater than 1 hour after placement of the micro-surfacing. If the test strip does not meet this requirement the test strip will be rejected and shall be removed at the Contractor's expense.

The Engineer will evaluate the completed test strip after 12 hours of traffic on the completed test strip to determine if the mix design and placement procedure are acceptable. If the mix design or the placement procedure is determined by the Engineer to be unacceptable, the test strip will be rejected, the Contractor

shall make modifications, and a new test strip shall be constructed and evaluated by the Engineer. The cost of materials and placement of the test strips, which have been rejected, shall be borne by the Contractor and will not be considered as part of the contract work. If ordered by the Engineer, rejected test strips shall be removed at the Contractors expense.

#### **37-3.03C(10) Repair of Early Distress**

If bleeding, raveling, delamination, rutting, or washboarding occurs within 60 days after placing the micro-surfacing, the Contractor shall diligently pursue repairs by any method approved by the Engineer. The Contractor shall not be relieved from maintenance until repairs have been completed.

#### **37-3.03D Payment**

The payment quantity for micro-surfacing bid items paid for by weight is the weight determined by combining the weights of the aggregate and micro-surfacing emulsion. The payment quantity for micro-surfacing does not include the weights of added water, mineral filler, and additives.

Weight shall be determined from calibrations and revolutions per day and verified with weight back tickets. The revolutions for each truck shall be submitted to the construction inspector prior to the start of work and the final revolution count shall be submitted to the construction inspector at the end of the day for every day micro-surfacing is applied, work shall not be permitted until these requirements are met.

All weight tickets including aggregate and emulsion tickets shall be turned in on a daily basis. For materials that is stockpiled prior to the start of the project, those tickets are required on a daily basis and at the end of the business day. In that case, upon project completion, weight back tickets are required for the emulsion and leftover stockpile aggregate shall be deducted and removed.

Full compensation for conforming to all requirements specified in section 37-3.03, "Micro-Surfacings" shall be considered as included in the contract unit price paid per ton for "Micro-Surfacing (Type II)".

The Contractor shall use a spread rate of 17 pounds of dry aggregate per square yard to determine the contract bid item for "Micro-surfacing Type II".

## CITY NOTES

- CONTRACTOR SHALL SUBMIT TRAFFIC CONTROL PLAN AND DETOUR PLAN TO CITY PRIOR TO ANY WORK. TRAFFIC CONTROL DESIGN REQUIRES RED FLASH FORM (STANDARD DETAIL TS-21 ON DRAWING SD-05) FOR SIERRA COLLEGE BLVD. AND E. ROSEVILLE PARKWAY.
- CONTRACTOR SHALL CCTV GRAVITY LINES WITHIN THE AREA OF POTENTIAL EFFECT OF PIPE BURSTING OPERATION, BEFORE AND AFTER CONSTRUCTION. CONTRACTOR SHALL PROVIDE A COPY OF THE BEFORE AND AFTER OF THE STORM DRAIN LINES TO PUBLIC WORKS.
- CONTRACTOR TO COORDINATE WITH THE TRAFFIC/TRAFFIC SIGNAL TEAMS AS DURATION DETECTION WILL BE IMPACTED AT THE INTERSECTION OF SIERRA COLLEGE BLVD. AND E. ROSEVILLE PARKWAY.
- SIERRA COLLEGE BLVD. IS A MORATORIUM STREET DUE TO ITS RECENT RESURFACING. CONTRACTOR SHALL REFERENCE "TRENCH RESTORATION FOR MORATORIUM STREET" DETAIL ON DRAWING SD-03 AND CITY OF ROSEVILLE SPECIFICATION "DIVISION V - SURFACING AND PAVEMENTS".
- TRENCHING ON SIERRA COLLEGE BLVD. SHALL BE PER CITY OF ROSEVILLE STANDARD DETAIL SS-1, TB-1.
- CONTRACTOR SHALL OBTAIN AN ENCROACHMENT PERMIT TO BE PAID FOR BY CITY OF ROSEVILLE.
- CONTRACTOR SHALL MAKE EFFORTS TO AVOID IMPACTING EXISTING TRAFFIC LOOPS. SHOULD IMPACT BE NECESSARY, CONTRACTOR TO COORDINATE WITH CITY.
- UTILITY VERIFICATION POTHOLES SHALL BE RESTORED PER CITY OF ROSEVILLE STANDARD DETAIL TB-5.

## CIVIL PATTERNS

|  |                                         |
|--|-----------------------------------------|
|  | BEDROCK                                 |
|  | ROCKS OR RIPRAP                         |
|  | SAND                                    |
|  | AGGREGATE BASE                          |
|  | NATURAL SOIL                            |
|  | COMPACTED SOIL                          |
|  | CONCRETE                                |
|  | GROUT                                   |
|  | CONTROLLED LOW STRENGTH MATERIAL (CLSM) |
|  | PAVEMENT                                |
|  | GRATING                                 |

## CIVIL NOTES

- EXISTING PIPING, EQUIPMENT AND TOPOGRAPHY ARE SHOWN SCREENED AND/OR LIGHT-LINED. NEW PIPING, EQUIPMENT, STRUCTURES AND FINISHED GRADE ARE SHOWN HEAVY-LINED.
- THIS IS A STANDARD LEGEND DRAWING. SOME SYMBOLS MAY APPEAR ON THIS DRAWING BUT MAY NOT BE USED.

## CIVIL ABBREVIATIONS

| ABBREVIATION | DEFINITION                                          |
|--------------|-----------------------------------------------------|
| AB           | AGGREGATE BASE, ANCHOR BOLT                         |

L:\CAD\PROJECTS\21-060 ROSEVILLE ON-CALL SERVICES 2021-2022\21-060 PS26\DELIVERABLES\2060D-G-06.DWG

CIVIL GENERAL NOTES

1. **CONTRACTOR RESPONSIBILITY:** ALL CONSTRUCTION WORK AND INSTALLATIONS SHALL CONFORM TO THE CITY OF ROSEVILLE (OWNER) STANDARDS AND SPECIFICATIONS WHICH ARE SUBJECT TO APPROVAL FROM THE CITY ENGINEER (OWNER). IN ADDITION, ALL WORK SHALL CONFORM WITH THE CONTRACT DOCUMENTS AND COMPLY WITH APPLICABLE STATE, FEDERAL, AND LOCAL CODES. ALL NECESSARY LICENCES AND PERMITS SHALL BE OBTAINED BY THE CONTRACTOR AT NO EXPENSE TO THE OWNER, UNLESS OTHERWISE SPECIFIED IN THE CONTRACT DOCUMENTS.
2. **WORK DEVIATION:** DEVIATION FROM THESE PLANS WITHOUT THE PRIOR WRITTEN CONSENT OF THE ENGINEER MAY BE CAUSE FOR THE WORK TO BE UNACCEPTABLE. MINOR CHANGES IN THE HORIZONTAL AND VERTICAL ALIGNMENT OF MAIN PIPELINES & YARD PIPING MAY BE PROPOSED BY THE CONTRACTOR AND SUBMITTED TO THE ENGINEER FOR APPROVAL TO FACILITATE CONSTRUCTION AND AVOID FIELD CONFLICTS. THE CONTRACTOR SHALL NOTIFY THE ENGINEER IMMEDIATELY SHOULD ANY FIELD CONDITIONS BE ENCOUNTERED THAT VARY FROM THE INFORMATION PROVIDED IN THE CONTRACT DOCUMENTS.
3. **CONTRACT DOCUMENT PRECEDENCE:** ORDER OF PRECEDENCE OF CONTRACT DOCUMENTS AND OTHER PROVISIONS ARE LISTED IN VOLUME 1.
4. **EXISTING CONDITIONS:** EXISTING OR ORIGINAL CONDITION IS DEFINED AS A PRE-CONSTRUCTION CONDITION. IF PROVIDED, AERIAL ORTHO-RECTIFIED PHOTO IMAGERY IN THE BACKGROUND OF A DRAWING IS INTENDED TO CLARIFY THE WORK SITE AT THE TIME OF THE DESIGN. EXISTING CONDITIONS MAY VARY FROM THE CONDITIONS DEPICTED IN THE ORTHO IMAGERY. CONTRACTOR SHALL VERIFY EXISTING SURFACE CONDITIONS WHEN FEASIBLE PRIOR TO BIDDING. THE CONTRACTOR SHALL NOTIFY THE ENGINEER IMMEDIATELY SHOULD ANY FIELD CONDITIONS BE ENCOUNTERED THAT VARY FROM THE INFORMATION PROVIDED IN THE CONTRACT DOCUMENTS.
5. **REFERENCE ALIGNMENT & CONSTRUCTION SURVEY:** ALL ALIGNMENT LENGTHS AND DISTANCES BETWEEN STRUCTURES ARE MEASURED FROM CENTER OF STRUCTURE TO CENTER OF STRUCTURE ALONG A HORIZONTAL PLANE. ALL EXISTING OR FINISHED GRADE ELEVATIONS DEPICTED IN PROFILE VIEW ARE ELEVATIONS ALONG THE CENTER LINE OF THE REFERENCE ALIGNMENT UNLESS OTHERWISE INDICATED. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS PRIOR TO STARTING CONSTRUCTION AND SHALL NOTIFY THE ENGINEER TO ANY DISCREPENCIES. A POSITIVE OFFSET STATION IS THE PERPENDICULAR OFFSET DISTANCE TO THE RIGHT OF AN ALIGNMENT IN THE DIRECTION OF THE INCREASING STATION. THE CONTRACTOR SHALL PROVIDE ALL CONSTRUCTION SURVEYING WHICH SHALL BE PERFORMED BY A LICENSED SURVEYOR.
6. **TYPICAL DETAILS AND TRENCH DETAIL CONTINUITY:** TYPICAL DETAILS AND SCHEDULES INDICATED MAY NOT BE SPECIFICALLY REFERENCED ON THE PLANS. THE CONTRACTOR IS RESPONSIBLE TO DETERMINE WHERE EACH TYPICAL DETAIL OR SCHEDULE APPLIES. THE ENGINEER SHALL BE NOTIFIED IF LOCATIONS ARE FOUND WHERE NO TYPICAL DETAIL, SCHEDULE, OR SPECIFIC DETAIL APPLIES. THE CONTRACTOR SHALL ADAPT AND TRANSITION BETWEEN CONTINUOUS TRENCH DETAILS BASED ON PLAN AND PROFILE.
7. **PRESERVATION OF PROPERTY:** PRIVATE AND PUBLIC PROPERTY SHALL BE PROTECTED DURING CONSTRUCTION AND IF DAMAGED DURING EXECUTION OF WORK SHALL BE REPLACED AND/OR RESTORED TO MATCH EXISTING CONDITIONS OR UPDATED STANDARDS IF REQUIRED BY THE OWNER.
8. **CONCRETE FLATWORK REPLACEMENT:** ALL TRAFFIC ISLANDS, CURBS, CONCRETE DRIVEWAYS AND SIDEWALKS EXCAVATED OR DAMAGED DURING EXECUTION OF WORK SHALL BE REPLACED TO THE FIRST EXPANSION JOINT BEYOND THE TRENCH AND TO THE FULL WIDTH AND SHALL MATCH EXISTING CONDITIONS OR UPDATED STANDARDS IF REQUIRED BY THE OWNER. UNLESS OTHERWISE DIRECTED, ADA-ACCESSIBILITY CURB RAMPS SHALL BE REPLACED IN FULL TO THEIR FUNCTIONAL LIMITS AND MODIFIED TO COMPLY WITH OWNER STANDARD DETAILS.
9. **MONUMENT CONSERVATION:** PRIOR TO COMMENCEMENT OF WORK, ALL SURVEY MONUMENTS IN THE PROJECT AREA SHALL BE LOCATED AND TIED OUT. ALL CENTERLINE MONUMENTS OR TIES LOST OR DESTROYED BY THIS WORK SHALL BE REPLACED EITHER BY A LICENSED SURVEYOR OR A CIVIL ENGINEER REGISTERED PRIOR TO JANUARY 1, 1982 AND NEW TIE SHEETS PROVIDED. METHOD OF ESTABLISHMENT SHALL BE STATED ON THE TIE SHEET.
10. **SALVAGING OWNER EQUIPMENT & DEBRIS DISPOSAL:** SALVAGED OWNER EQUIPMENT SUCH AS PUMPS SHALL BE RETURNED TO THE OWNER AT THE PROJECT CONCLUSION OR UPON REQUEST. NO SALVAGED ITEMS SHALL BE RE-INCORPORATED INTO THE NEW WORK, UNLESS OTHERWISE DIRECTED. ALL CONSTRUCTION DEBRIS, UNSUITABLE AND SURPLUS MATERIAL, AND CLEARED/GRUBBED VEGETATIVE MATERIAL SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND REMOVED FROM THE SITE UNLESS OTHERWISE DIRECTED BY THE OWNER.
11. **PIPELINE PROTECTION FROM DEBRIS:** THE CONTRACTOR SHALL PREVENT ACCUMULATION OF DEBRIS OR SOILS WITHIN NEW PIPELINES DURING INSTALLATION AND SHALL PLUG THE ENDS OF PIPELINES WITH APPROVED PLUGS AT THE END OF THE DAY. USE OF A PIPELINE DURING CONSTRUCTION TO STORE OR CONVEY SCREENED DEWATERED GROUNDWATER OR ACCUMULATED STORM RUNOFF IS ONLY PERMISSIBLE FOR PIPELINES INTENDED FOR NON-POTABLE SERVICE WITH PRIOR APPROVAL FROM ENGINEER. AFTER FINAL ACCEPTANCE, USE OF ANY PIPELINE FOR PURPOSES OTHER THAN START-UP AND OPERATION ARE RESTRICTED UNLESS APPROVED BY THE OWNER.
12. **EXISTING UTILITIES:** THE CONTRACTOR IS REQUIRED TO CONTACT UNDERGROUND SERVICE ALERT TWO (2) TO FOURTEEN (14) DAYS PRIOR TO BEGINNING ANY EXCAVATION. THE LOCATIONS OF EXISTING UTILITIES SHOWN ON THE PLANS ARE BASED ON AVAILABLE RECORDS, ARE APPROXIMATE, AND ARE DEPICTED FOR THE CONTRACTOR'S CONVENIENCE. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR THE COMPLETENESS AND ACCURACY OF UTILITIES SHOWN. THE CONTRACTOR SHALL NOTE THAT SMALL-DIAMETER IRRIGATION PIPELINES ARE NOT DEPICTED HEREIN. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE THE SIZE, DEPTH, ORIENTATION, MATERIAL, AND LOCATION OF ALL EXISTING UNDERGROUND UTILITIES WITHIN WORK AREAS PRIOR TO CONSTRUCTION AND SUBMIT THIS INFORMATION TO THE ENGINEER IF IT DEVIATES FROM THE PROJECT PLANS. THE CONTRACTOR SHALL PROVIDE FOR THE PROTECTION OF EXISTING UTILITIES AND REPAIR OR REPLACE UTILITIES THAT ARE DAMAGED BY THE CONTRACTOR AT NO EXPENSE TO THE OWNER. THE CONTRACTOR SHALL MAKE SUCH REPAIRS OR REPLACEMENTS TO A SATISFACTORY CONDITION THAT MEETS THE CURRENT UTILITY COMPANY STANDARD. THE CONTRACTOR SHALL COORDINATE WORK WITH CONFLICTING UTILITY OWNERS AND PROVIDE FOR REMOVAL, RELOCATION, AND REPLACEMENT AS NECESSARY FOR INSTALLATION OF THE PROPOSED FACILITIES AT NO EXPENSE TO THE OWNER

13. **UTILITY VERIFICATION REQUIREMENTS:** CONTRACTOR SHALL DEVELOP AND SUBMIT TO THE ENGINEER FOR APPROVAL A UTILITY VERIFICATION PLAN WITHIN 30 DAYS OF PROJECT COMMENCEMENT. THE PLAN SHALL DESCRIBE THE PROPOSED VERIFICATION METHODOLOGY, BACKFILL AND/OR TEMPORARY PAVEMENT REPLACEMENT PROCEDURES, IMPLEMENTATION SCHEDULE, AND TRAFFIC CONTROL PLAN. ACCEPTABLE VERIFICATION METHODOLOGIES ARE NON-MECHANICAL VACUUM POTHOLING AND HAND EXCAVATION THAT EXPOSE THE UTILITY FOR VISUAL CONFIRMATION AND ALLOW FOR DOCUMENTATION WITH PHOTO/VIDEO AND SURVEY. MECHANICAL EXPLORATORY TRENCHING SHALL ONLY BE APPROVED IN SPECIAL CIRCUMSTANCES WHERE IT BENEFITS THE OWNER AND PROJECT SCHEDULE AND MAY BE SUBJECT TO CULTURAL MONITORING PROCEDURES. CITY-OWNED GRAVITY UTILITIES SUCH AS SERVICE LATERALS MAY REQUIRE CCTV CONFIRMATION OF HORIZONTAL PLACEMENT PRIOR TO UTILITY VERIFICATION.
- THE CONTRACTOR SHALL VERIFY ADDITIONAL UTILITIES MARKED BY THE LOCATING COMPANY AND/OR SHOWN IN CONFORMED DRAWINGS WITHIN 3.0-LF OF THE EXCAVATION LIMITS A MINIMUM OF 2 WEEKS PRIOR TO EXCAVATON AND WITHIN 200-LF OF THE ADVANCING LINEAR CONSTRUCTION ACTIVITY
14. **TIE-IN CONNECTIONS:** OPERATION OF ANY EXISTING FACILITIES SHALL ONLY OCCUR UNDER THE DIRECT OBSERVATION AND PRIOR APPROVAL OF THE OWNER. THE CONTRACTOR SHALL NOTIFY THE OWNER AT LEAST TWO (2) WEEKS IN ADVANCE OF ANY NECESSARY SHUTDOWN AND/OR TIE-IN CONNECTION AND EACH INDIVIDUAL EVENT SHALL BE IDENTIFIED ON CONTRACTOR'S THREE (3) WEEK LOOK AHEAD SCHEDULE AS SUBMITTED WEEKLY TO THE OWNER. SHUTDOWNS AND TIE-INS MAY NOT OCCUR ON THE WEEKEND OR HOLIDAYS UNLESS PRE-APPROVED BY THE OWNER. ALL PREPARATORY WORK SHALL BE COMPLETED TO THE SATISFACTION OF THE OWNER PRIOR TO INITITATING SHUTDOWN AND STARTING WORK ON THE TIE-IN. CONTRACTOR SHALL VERIFY CONNECTION POINTS AND PIPE MATERIAL IN ADVANCE AND HAVE ALL PIPE, FITTINGS, VALVES, HARDWARE, GASKETS AND OTHER MATERIALS READY ON-SITE. THE CONTRACTOR SHALL COMPLY WITH OWNER STANDARDS, AND WASTEWATER DISPOSAL REQUIREMENTS.
15. **SHUTDOWNS:** THE CONTRACTOR SHALL NOT CAUSE ANY SERVICE INTERRUPTIONS WITHOUT PRIOR OWNER APPROVAL AND SHALL MAKE EVERY EFFORT TO MINIMIZE LENGTH OF ANY NECESSARY SEWER SERVICE INTERRUPTIONS. ANY AND EACH SHUTDOWN SHALL BE INDIVIDUALLY PLANNED AND SCHEDULED AT LEAST TWO (2) WEEKS IN ADVANCE OF WORK.
16. **RECORD DRAWINGS:** PRIOR TO BACKFILLING THE CARRIER THE CONTRACTOR SHALL SURVEY THE CL @ CROWN OF EVERY PIPELINE FITTING, HORIZONTAL AND VERTICAL ELBOWS, AND EVERY 50-FT THROUGH A HORIZONTAL CURVE. IN ADDITION, THE CONTRACTOR SHALL SURVEY THE GEOMETRIC CENTER @ FG OF ALL INSTALLED STRUCTURES SUCH AS BUT NOT LIMITED TO MANHOLES, VALVE VAULTS/BOXES, PULLBOXES, TRACER WIRE TERMINALS, AND GROUND ROD TERMINALS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO MAINTAIN AND SUBMIT TO THE ENGINEER A SET OF RECORD DRAWINGS IN ACCORDANCE WITH SECTION 01 33 03 AND SECTION 01 77 03.

17. **PROJECT BACKGROUND DOCUMENTATION:**  
THE CONTRACTOR SHALL FAMILIARIZE THEMSELVES WITH THE FOLLOWING PROJECT BACKGROUND DOCUMENTATION:
- APPENDIX A: DRAFT GEOTECHNICAL REPORT FOR SEWER PUMP STATION NO. 26 IMPROVEMENTS (BAJA GEOSCIENCES, INC. MARCH 2022)
  - APPENDIX B: 9713 SIERRA COLLEGE BLVD. BIOLOGICAL FIELD REVIEW (MADRONE ECOLOGICAL CONSULTING, AUGUST 2022)

PRECONSTRUCTION SURVEYS:

1. IF THE LAYDOWN AREA IS ESTABLISHED BY CONTINUING THE EASTERN FENCING OF THE PS-26 FACILITY DUE SOUTH AND THEN USING THE AREA BETWEEN THAT LINE AND SIERRA COLLEGE BLVD. (STAGING AREA 'A' ON DRAWING WZ-1), THEN THE ONLY FOLLOW UP WOULD BE CONDUCT A PRE-CONSTRUCTION NESTING BIRD SURVEY. THE NESTING BIRD SURVEY WOULD ONLY BE NEEDED IF CONSTRUCTION OCCURS BETWEEN FEBRUARY 1ST AND AUGUST 30TH.
2. IF STAGING AREA 'B' (PER DRAWING WZ-1) IS REQUIRED, A BIOLOGICAL REVIEW OF THE WORK AREA SHALL BE ESTABLISHED TO EXCLUDE DRIPLINE OF NATIVE OAKS, A MINIMUM OF 50-FOOT BUFFER FROM WETLANDS LOCATED TO THE EAST, AND AREAS OF NON-REDERAL VEGETATION THAT COULD BE HABITAT FOR SPECIAL STATUS PLANTS.

ENVIRONMENTAL AWARENESS TRAINING:

1. PRIOR TO COMMENCEMENT OF GRADING OPERATIONS, THE PROJECT APPLICANT SHALL EMPLOY A QUALIFIED BIOLOGIST TO CONDUCT ENVIRONMENTAL AWARENESS TRAINING FOR CONSTRUCTION EMPLOYEES. THE TRAINING WILL DESCRIBE THE IMPORTANCE OF ON-SITE BIOLOGICAL RESOURCES AND WILL EXPLAIN THE IMPORTANCE OF OTHER RESPONSIBILITIES RELATED TO THE PROTECTION OF WILDLIFE DURING CONSTRUCTION. THE ENVIRONMENTAL AWARENESS PROGRAM SHALL BE PROVIDED TO ALL CONSTRUCTION PERSONNEL TO BRIEF THEM ON THE LIFE HISTORY OF SPECIAL-STATUS SPECIES IN OR ADJACENT TO THE PROJECT AREA, THE NEED TO AVOID IMPACTS ON SENSITIVE BIOLOGICAL RESOURCES, ANY TERMS AND CONDITIONS REQUIRED BY STATE AND FEDERAL AGENCIES, AND THE PENALTIES FOR NOT COMPLYING WITH BIOLOGICAL MITIGATION REQUIREMENTS, IF NEW CONSTRUCTION PERSONNEL RECEIVE THE MANDATORY TRAINING BEFORE STARTING WORK. AND ENVIRONMENTAL AWARENESS HANDOUT THAT DESCRIBES AND ILLUSTRATES SENSITIVE RESOURCES TO BE AVOIDED DURING PROJECT CONSTRUCTION AND IDENTIFIES ALL RELEVANT PERMIT CONDITIONS SHALL BE PROVIDED TO EACH PERSON.

CONSTRUCTION WORK PLANS

1. THE CONTRACTOR SHALL DEVELOP, SUBMIT TO ENGINEER FOR APPROVAL, AND IMPLEMENT ALL WORK PLANS REQUIRED BY THE CONTRACT DOCUMENTS. PROJECT CONSTRUCTION WORK PLANS MAY INCLUDE BUT ARE NOT LIMITED TO THE FOLLOWING ITEMS, WHICH HAVE BEEN DELINEATED FOR THE CONTRACTOR'S CONVENIENCE.

| MAJOR CONSTRUCTION WORK PLANS |                                                                | REFERENCE                        |
|-------------------------------|----------------------------------------------------------------|----------------------------------|
| 1.                            | PROJECT PUBLIC COMMUNICATION PLAN                              | OWNER SHALL DEVELOP PRIOR TO NTP |
| 2.                            | TRAFFIC CONTROL PLAN                                           | TRAFFIC CONTROL DWGS             |
| 3.                            | UTILITY SHUTDOWN PLAN                                          | SEE NOTE 15                      |
| 4.                            | SITE ACCESS, STAGING, SAFETY & SECURITY PLAN                   | 01 51 03                         |
| 5.                            | SHEETING & SHORING PLAN                                        | 31 05 03                         |
| 6.                            | UTILITY VERIFICATION PLAN                                      | SEE NOTE 13                      |
| 7.                            | SEWER BYPASSING PLAN                                           | 01 57 03                         |
| 8.                            | SOIL TESTING QUALITY CONTROL PLAN                              | 31 05 03                         |
| 9.                            | START-UP PLAN & PROCEDURES FOR PUMP STATION(S) AND PIPELINE(S) | 01 75 06 & 01 77 03              |
| 10.                           | EROSION AND SEDIMENT CONTROL PLAN                              | SEE BELOW                        |

EROSION AND SEDIMENTATION CONTROL NOTES:

1. AN EROSION AND SEDIMENT CONTROL PLAN SHALL BE SUBMITTED TO THE CITY OF ROSEVILLE FOR APPROVAL.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CONSTRUCTED AND MAINTAINED IN ACCORDANCE WITH THE LATEST EDITION OF THE CITY OF ROSEVILLE STORMWATER QUALITY BMP GUIDANCE MANUAL FOR CONSTRUCTION OR AS OTHERWISE DIRECTED BY THE SPECIAL PROVISIONS FOR THIS PROJECT.
3. EROSION CONTROL BEST MANAGEMENT PRACTICES (BMPS) SHALL BE INSTALLED AND MAINTAINED YEAR ROUND AND AN EFFECTIVE COMBINATION OF EROSION AND SEDIMENT CONTROL BMPS SHALL BE INSTALLED AND MAINTAINED DURING THE WET SEASON (OCTOBER 1 THROUGH APRIL 30) AND PRIOR TO THE ONSET OF ANY STORM.
4. ALL STORM DRAIN INLETS WITHIN THE WORK AREA, AND OFFSITE STORM DRAIN INLETS WITH THE POTENTIAL TO RECEIVE RUNOFF FROM THE PROJECT SITE, SHALL BE ADEQUATELY PROTECTED WITH SEDIMENT CONTROL BMPS TO EFFECTIVELY REMOVE SEDIMENT FROM RUNOFF PRIOR TO DISCHARGE TO THE STORM DRAIN. ADDITIONAL BMPS SHALL BE USED AS NEEDED TO REMOVE SEDIMENT FROM RUNOFF. UPON COMPLETION OF THE PROJECT AND ACCEPTANCE OF THE IMPROVEMENTS BY THE CITY, ALL SEDIMENT CONTROL BMPS SHALL BE REMOVED
5. PROTECTED AREAS AND AREAS WHERE EXISTING VEGETATION IS BEING PRESERVED SHALL BE PROTECTED WITH ORANGE CONSTRUCTION FENCING. ADDITIONAL SIGNAGE MAY BE REQUIRED TO IDENTIFY THE RESOURCE BEING PROTECTED AND/OR PROVIDE ADDITIONAL INSTRUCTIONS TO CONSTRUCTION PERSONNEL. EROSION, SEDIMENT, AND DIVERSION CONTROL BMPS SHALL BE INSTALLED AND MAINTAINED TO ENSURE THAT CONSTRUCTION RUNOFF DOES NOT ENTER PROTECTED AREAS.
6. SEDIMENT CONTROL BMPS SHALL BE PLACED ALONG THE PROJECT PERIMETER WHEREVER THERE IS A POTENTIAL FOR DRAINAGE TO LEAVE THE PROJECT SITE. PERIMETER SEDIMENT CONTROL BMPS SHALL BE MAINTAINED YEAR ROUND UNTIL THE CONSTRUCTION IS COMPLETE OR THE DRAINAGE PATTERN HAS BEEN CHANGED AND NO LONGER LEAVES THE SITE AT THOSE LOCATIONS.
7. CONTRACTOR SHALL MAINTAIN A LOG AT THE SITE OF ALL INSPECTIONS OR MAINTENANCE OF BMPS, AS WELL AS ANY CORRECTIVE CHANGES TO THE BMPS OR TO THE EROSION AND SEDIMENT CONTROL PLAN.
8. THE CONTRACTOR SHALL ESTABLISH A SPECIFIC SITE WITHIN THE DEVELOPMENT FOR MAINTENANCE AND STORAGE OF EQUIPMENT OR ANY OTHER ACTIVITY THAT MAY ADVERSELY CONTRIBUTE TO THE WATER QUALITY OF THE RUNOFF. THIS AREA SHALL HAVE A BERM LOCATED AROUND ITS PERIMETER. THIS AREA SHALL BE RESTORED TO ACCEPTABLE CONDITION UPON COMPLETION OF PROJECT.
9. FIBER ROLLS MAY BE USED ALONG THE TOP, FACE AND AT GRADE BREAKS OF EXPOSED AND ERODIBLE SLOPES, PLACED BEHIND CURBS OR WALKWAYS, AND USED AS CHECK DAMS WHEN PROPERLY ANCHORED.
10. LOCATE FIBER ROLLS ON LEVEL CONTOURS SPACED AS FOLLOWS:
- A. SLOPE INCLINATION OF 4:1 (H:V) OR FLATTER: FIBER ROLLS SHOULD BE PLACED AT A MAXIMUM INTERVAL OF 20FT.
- B. SLOPE INCLINATION BETWEEN 4:1 AND 2:1 (H:V): FIBER ROLLS SHOULD BE PLACED AT A MAXIMUM INTERVAL OF 15FT. (A CLOSER SPACING IS MORE EFFECTIVE).
- C. SLOPE INCLINATION OF 2:1 (H:V): FIBER ROLLS SHOULD BE PLACED AT A MAXIMUM INTERVAL OF 10FT. (A CLOSER SPACING IS MORE EFFECTIVE).

- PREDL PVC MANHOLE SPECIFICATIONS  
ALL "PIPE TO MANHOLE" CONNECTIONS SHALL HAVE GASKETS AS SHOWN IN THE DRAWINGS UNLESS OTHERWISE NOTED. PREDL SYSTEMS OR APPROVED EQUAL WILL ONLY RECOMMEND WHAT TYPE OF GASKET SHALL BE USED.
1. ALL PIPE GASKETS SHALL BE INSTALLED USING THE MANDREL RECOMMENDED BY THE GASKET MANUFACTURER.
  2. ONLY PREDL CERTIFIED WELDERS AND FABRICATORS ARE AUTHORIZED TO FABRICATE, REPAIR, WELD, OR TEST THE BASELINER, TELESCOPIC ACCESS COLLAR, AND LID LINERS.
  3. ALL SECTIONS SHALL BE SEALED TOGETHER AS PER THE MANUFACTURER INSTRUCTIONS UNLESS OTHERWISE NOTED.
  4. LINER AND PVC RISER ARE NOT TO BE COMPROMISED BY DRILLING OR PUNCTURING UNLESS SPECIFIED AND APPROVED BY PREDL LINER MANUFACTURER OR APPROVED EQUAL. PERFORATION OF LINER TO INSTALL LADDER RUNGS IS NOT RECOMMENDED.
  5. ROUND PRECAST MANHOLES TYPICALLY DESIGNED TO ASTM C478. NON-ROUND MANHOLE STRUCTURES TYPICALLY DESIGNED TO ASTM C913.
  6. PRECAST CONCRETE STRUCTURE WITH INTEGRAL PREDL CPL OR APPROVED EQUAL TO BE VACUUM TESTED IN ACCORDANCE WITH ASTM C1244 PRIOR TO FINAL INSTALLATION AND SPARK TESTING OF CPL.

EXCAVATION NOTES:  
1. IF SUBGRADE IS FOUND TO BE SOFT, LOOSE, DISTURBED BY CONSTRUCTION, YIELDING, OR UNSTABLE, SUBGRADE SHALL BE OVEREXCAVATED TO SUCH A DEPTH THAT FIRM AND UNYIELDING SUBGRADE CAN BE ESTABLISHED BY INSTALLING A MINIMUM OF 12 INCHES OF CLEAN, DURABLE, NATURAL, 1.5-INCH CRUSHED DRAIN ROCK WRAPPED WITH GEOTEXTILE FABRIC (MIRAFI 140N OR EQUAL).

- NOTES:
1. 18 INCH KEY OUTSIDE TRENCH LINE
  2. FINAL LIFT, MINIMUM 2" THICK, SHALL EXTEND 12" BEYOND KEY LOCATION IDENTIFIED IN NOTE 1 OR ADJACENT LANE LINE AS DETERMINED BY THE STREETS DEPARTMENT.
  3. COAT ALL EXISTING VERTICAL FACES WITH ASPHALTIC EMULSION (TACK) PRIOR TO PAVING
  4. EXISTING PAVING
  5. PATCH SHALL BE THICKNESS OF EXISTING SECTION PLUS 2 1/2 INCHES. PER CITY TRENCH CUT ORDINANCE (6 INCH MINIMUM THICKNESS).
  6. AGGREGATE BASE/SUBBASE: RECOMPACT DISTURBED SURFACE AREAS TO 95%.
  7. UTILITY TRENCH, CONSTRUCTED AS REQUIRED BY CITY STANDARDS
  8. NATIVE SOIL
  9. UTILITY

THE CONTRACTOR SHALL COORDINATE WITH STREETS DEPARTMENT PRIOR TO START OF RESTORATION WORK TO DETERMINE EXACT LIMITS OF RESTORATION.

WHERE ADJACENT SURFACE IS MICROSURFACED, CONTRACTOR SHALL MICROSURFACE AREA IDENTIFIED BY THE STREETS DEPARTMENT AND REPAIR STRIPING AS NECESSARY.

THE STREETS DEPARTMENTS RETAINS ALL RIGHTS TO INCREASE THE EXTENTS OF REPAIRS IDENTIFIED ABOVE.

Roseville, California 95678-2649

INTERSECTION RED FLASH APPROVAL

With stamped approval of this letter by the Traffic Section, Red Flash/Dark Signal is approved for the following intersection as specified below:

LOCATION: \_\_\_\_\_

PROJECT ACCOUNT NUMBER: \_\_\_\_\_

DATE: \_\_\_\_\_

TIME/DURATION: \_\_\_\_\_

☐ RED FLASH APPROVED:

- Contractor shall submit the completed Intersection Red Flash Approval Form to the City Inspector and to [RedFlashRequests@roseville.ca.us](mailto:RedFlashRequests@roseville.ca.us) 72 hours prior to needing the intersection in red flash. Signal shutdown shall be performed only by City personnel, unless otherwise directed by the Engineer.
- During normal working hours (M-F, 7am-5pm) the contractor shall contact the Traffic Signal Technician either by telephone at (916) 746-1760 or by email or text message at [pagesignaltechnicians@roseville.ca.us](mailto:pagesignaltechnicians@roseville.ca.us) one hour prior to needing the traffic signal placed into or removed from red flash. Outside of normal working hours - no phone call required.
- The traffic signal will not be permitted to be placed in red flash during rain, lightning, or inclement weather conditions (including wet pavement conditions).
- The Contractor shall reimburse the City for the actual cost of all inspection, including City Traffic Signal Technician time as required.
- "Road Work Ahead" Signs required at all approaches to intersection when in red flash.
- The Contractor shall furnish and place 36" "Stop" signs on arterial roadway approaches. Signs shall be mounted at a height of 84".

☐ DARK SIGNAL APPROVED – ADDITIONAL REQUIREMENTS

- The Contractor shall place "Stop Ahead" C-W17 and "Stop" R-1 signs to direct vehicle and pedestrian traffic through the intersection during traffic signal system shutdown. Temporary "Stop Ahead" and "Stop" signs shall be removed when the system is turned on.
- "Stop Ahead" and "Stop" signs shall be furnished by the Contractor. Minimum size of "Stop" signs shall be 36" for single sign placements and 24" for dual sign placements. Signs shall be mounted at a height of 84".
- One "Stop Ahead" sign and one "Stop" sign shall be placed for each direction of traffic. For approaches with two or more through or left turn lanes, two "Stop" signs shall be placed. Typical sign placement should be between the left turn and through lanes. Additional "Stop" signs should be placed on the shoulder. No "Stop" signs shall be placed in a manner that blocks bike lanes.
- "Stop Ahead" and "Stop" signs shall be in place in each direction immediately prior to the intersection going dark and removed immediately after the intersection is placed back into red flash.
- Red flashing beacons or flares shall be placed and maintained at each "Stop" sign during nighttime (dark) hours.
- Traffic control must be verified by the Public Works Construction Inspector prior to the signal being deactivated.

☐ I have read the above Intersection Red Flash Approval requirements.

ALL RACEWAYS AND EQUIPMENT SHALL BE INSTALLED AND GROUNDED IN ACCORDANCE WITH THE 2020 EDITION OF THE NATIONAL ELECTRICAL CODE AND APPLICABLE LOCAL CODES.</p> <p>2. THE CONTRACTOR SHALL VERIFY THE EXACT LOCATION OF TERMINAL BOXES AND CONDUIT ENTRANCES OF ALL EQUIPMENT AGAINST APPROVED SHOP DRAWINGS BEFORE STUBBING UP CONDUITS.</p> <p>3. REFER TO SPECIFICATION SECTION 260533 FOR REQUIREMENTS RELATED TO FLEXIBLE CONDUIT INSTALLATION.</p> <p>4. CONDUIT RUNS ARE SHOWN DIAGRAMMATICALLY ONLY AND SHALL BE INSTALLED IN A MANNER TO PREVENT CONFLICTS WITH EQUIPMENT OR STRUCTURAL CONDITIONS. EXPOSED CONDUIT SHALL BE INSTALLED PARALLEL OR PERPENDICULAR TO BEAMS AND WALLS. REFER TO SPECIFICATION SECTION 16110.</p> <p>5. CONDUIT STUB-UPS SHALL NOT BE MORE THAN 6 INCHES FROM THE CENTERLINE OF TERMINAL BOXES.</p> <p>6. IN THE EVENT OF INTERFERENCE BETWEEN ELECTRICAL EQUIPMENT SHOWN ON THE DRAWINGS AND OTHER EQUIPMENT, THE CONTRACTOR SHALL NOTIFY THE ENGINEER IN WRITING.</p> <p>7. ALL SURFACE MOUNTED PANELS AND PANELBOARDS ON THE INTERIOR OF EXTERIOR WALLS ABOVE GRADE OR IN OTHER LOCATIONS CONSIDERED DAMP OR WET SHALL BE MOUNTED SO AS TO MAINTAIN A 1/4 INCH (MINIMUM) AIR SPACE BETWEEN THE ENCLOSURE AND THE WALL.</p> <p>8. LOCATION OF PULLBOXES ARE APPROXIMATE. THE CONTRACTOR SHALL COORDINATE EXACT LOCATION WITH MECHANICAL PIPING AND SHALL BE 6 INCHES (MINIMUM) AWAY FROM MECHANICAL PIPING FLOW LINES.</p> <p>9. ONLY MAJOR PULLBOXES ARE SHOWN. THE CONTRACTOR SHALL PROVIDE ADDITIONAL PULLBOXES WHERE REQUIRED TO MAKE A WORKABLE INSTALLATION.</p> <p>10. THE WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE DETAILS WHETHER OR NOT THEY ARE REFERENCED ON THE DRAWINGS.</p> <p>11. ALL CONDUIT RUNS CROSSING EXPANSION JOINTS SHALL HAVE EXPANSION OR EXPANSION AND DEFLECTION TYPE FITTINGS. FOR LOCATIONS OF EXPANSION JOINTS, REFER TO THE CIVIL DWGS.</p> <p>12. LUMINAIRES SHALL BE MOUNTED ACCORDING TO THE MOUNTING HEIGHT GIVEN ON THE DRAWINGS, WITH THE DISTANCE BEING MEASURED FROM THE BOTTOM OF THE LUMINAIRE TO THE FINISHED FLOOR. THE APPROPRIATE MOUNTING BRACKETS AND HARDWARE SHALL BE SUPPLIED.</p> <p>13. ALL PANELBOARDS SHALL BE MOUNTED SO THAT THE DISTANCE FROM THE CENTERLINE OF THE TOP CIRCUIT BREAKER OPERATING HANDLE IN THE UPPERMOST POSITION TO THE FINISHED FLOOR SHALL NOT EXCEED 6'-7".</p> <p>14. THE WIRING DIAGRAMS, QUANTITY AND SIZE OF WIRES AND CONDUIT REPRESENT A SUGGESTED ARRANGEMENT BASED UPON SELECTED STANDARD COMPONENTS OF ELECTRICAL EQUIPMENT. MODIFICATIONS ACCEPTABLE TO THE ENGINEER MAY BE MADE BY THE CONTRACTOR TO ACCOMMODATE EQUIPMENT ACTUALLY PURCHASED. THE BASIC SEQUENCE AND METHOD OF CONTROL MUST BE MAINTAINED AS INDICATED ON THE DRAWINGS AND/OR SPECIFICATIONS.</p> <p>15. CONNECTIONS BETWEEN RIGID CONDUIT AND MOTOR TERMINAL BOXES OR SIMILAR EQUIPMENT SUBJECT TO VIBRATION SHALL BE FLEXIBLE LIQUID-TIGHT CONDUIT.</p> <p>16. CONDUITS SHALL BE TERMINATED SO AS TO PERMIT NEAT CONNECTION TO MOTORS AND OTHER EQUIPMENT.</p> <p>17. CONDUITS FOR FUTURE EQUIPMENT OR EXTENSIONS SHALL BE TERMINATED AS SHOWN IN DETAIL OR AS SPECIFIED.</p> <p>18. MCC AND SWITCHGEAR COMPARTMENT DESIGNATIONS SHALL BE AS FOLLOWS:</p> <p>BLANK/SPACE: CONTAINS NECESSARY BUS AND HARDWARE FOR FUTURE ADDITION OF BREAKERS OR STARTERS.</p> <p>SPARE: CONTAINS A COMPLETE INSTALLED BREAKER OR STARTER AVAILABLE FOR FUTURE USE.</p> <p>19. ALL MOTOR STARTER CONTROL POWER TRANSFORMERS SHALL BE SIZED TO PROVIDE SUFFICIENT VOLT-AMPERE CAPACITY FOR OPERATING ALL LOCAL AND REMOTE ELECTRICAL DEVICES ASSOCIATED WITH CONTROL OF THE MOTOR IN ADDITION TO THE STARTER COIL.</p> <p>20. MOTOR CONTROL CENTERS AND ALL FREE STANDING PANELS SHALL BE SET ON CONCRETE HOUSEKEEPING PADS WITH LEVELING CHANNELS EMBEDDED IN THE PAD.</p> <p>21. ALL RECEPTACLES IN OUTDOOR AND ANTICIPATED WET AREAS SHALL BE GROUND FAULT CIRCUIT INTERRUPTER RECEPTACLES WITH WEATHERPROOF COVERS.</p> |  |   | <p>22. ELECTRICAL CONTRACTOR SHALL VISIT THE SITE PRIOR TO BIDDING THE PROJECT TO VERIFY THE SCOPE OF WORK WITH FIELD CONDITIONS. PARTICULAR ATTENTION SHOULD BE GIVEN TO NEW CONDUIT RUNS IN EXISTING BUILDINGS.</p> <p>23. EQUIPMENT LOCKOUTS SHALL BE IN STRICT ACCORDANCE WITH OWNER'S REQUIREMENTS.</p> <p>24. FOR LIGHTING AND RECEPTACLE SYSTEMS, ONLY CIRCUIT NUMBERS ARE SHOWN. CONTRACTOR SHALL PROVIDE ALL NECESSARY CONDUITS, WIRES, FITTINGS, JUNCTION BOXES AND ALL NECESSARY COMPONENTS SHOWN OR NOT SHOWN ON THE DRAWINGS, TO MAKE THE ELECTRICAL INSTALLATION COMPLETE AND OPERATIONAL. ALL CONDUIT RUNS SHALL BE CONCEALED UNLESS INDICATED OTHERWISE. CIRCUIT LOADING SHALL BE AS INDICATED IN THE PANEL SCHEDULES. ALL LIGHTING AND RECEPTACLE CIRCUITS SHALL INCLUDE GROUND WIRE.</p> <p>25. CONTRACTOR SHALL BE ADVISED THAT EVERY ATTEMPT HAS BEEN MADE TO INCLUDE ALL CONDUITS IN THE DUCTBANK SCHEDULES AND CONDUIT DEVELOPMENT DRAWINGS FOR SPECIFIC FACILITIES, HOWEVER THE CONTRACTOR IS RESPONSIBLE FOR ANY CONDUIT/WIRE THAT IS NOT SHOWN.</p> <p>26. ALL UNDERGROUND FACILITIES SHALL BE PROTECTED FROM DAMAGE. IF ANY UNDERGROUND FACILITIES ARE DAMAGED, IT SHALL BE REPORTED TO THE ENGINEER AND CONTRACTOR SHALL REPLACE OR REPAIR FACILITIES AT NO COST TO THE OWNER.</p> |   |  |
| BIDDING CONTRACTORS SHALL VISIT THE SITE TO ASSESS THE SCOPE OF DEMOLITION, REMOVAL AND MODIFICATION WORK.</p> <p>2. THE ELECTRICAL CONTRACTOR AND THE OWNER SHALL DE-ENERGIZE ALL WIRING PRIOR TO REMOVAL OF EQUIPMENT, DEVICES, MOTORS INSTRUMENTATION, CONTROL PANELS, ETC. CONTRACTOR SHALL OBTAIN PRIOR APPROVAL FROM THE OWNER.</p> <p>3. EXPOSED RACEWAYS: REMOVE CONDUIT, WIRES, AND BOXES. PATCH TO MATCH EXISTING. FINISH-ALL OPENINGS IN WALLS AND FLOORS.</p> <p>4. CONCEALED CONDUITS IN THE SLAB: REMOVE EXISTING WIRES TO THE EXTENT POSSIBLE AND ABANDON CONDUITS IN THE SLAB. CUT CONDUIT FLUSH AND PATCH THE FLOOR TO MATCH EXISTING.</p> <p>5. CONTROL PANEL: ELECTRICAL CONTRACTOR SHALL DE-ENERGIZE AND REMOVE ALL CONDUIT AND WIRE AS DESCRIBED IN NOTE 2. CONTRACTOR SHALL REMOVE PANELS AS NOTED ON THE CONTRACT DRAWINGS. REFER TO NOTE 4 ABOVE FOR DISPOSITION OF ENCASED CONDUITS.</p> <p>6. MOTOR CONTROL CENTERS: DISCONNECT AND REMOVE ALL CONDUITS AND WIRING TO EXISTING STARTERS AND/OR BREAKERS, PANELBOARDS, BRANCH CIRCUITS, INTERLOCKS AND STATUS WIRING WITHIN MCC. REFER TO SECTION 260000 FOR ADDITIONAL ELECTRICAL DEMOLITION AND REMOVAL REQUIREMENTS.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |   |  |

SHEET NUMBER 30

- PEDESTAL PANEL SPECIFICATIONS:
1. NEMA 3R WEATHERPROOF FOR OUTDOOR INSTALLATION.
  2. OUTER DOORS SHALL BE SEALED WITH RUBBERIZED FOAM GASKET.
  3. EXTERIOR FABRICATED FROM GALVANIZED SHEET STEEL.
  4. 12 GAUGE EXTERIOR AND 14 GAUGE INTERIOR.
  5. ALL SEAMS SHALL HAVE CONTINUOUS WELD GROUND SMOOTH.
  6. OUTER DOORS TO BE PADLOCKABLE WITH HEAVY DUTY PADLOCK HASPS.
  7. DOOR HANGES AND PINS SHALL BE 316 STAINLESS STEEL.
  8. NO SCREWS, RIVETS OR BOLTS SHALL PROTRUDE EXTERNALLY.
  9. INTERNAL SCREWS, RIVETS, BOLTS AND NUTS SHALL BE STAINLESS STEEL.
  10. FABRICATION SHALL CONFORM TO UL, NEC AND NEMA STANDARDS.

- PEDESTAL PANEL PAINT APPLICATION:
1. TWO STAGE CHEMICAL BATH CLEANING.
  2. ELECTROSTATICALLY APPLIED POWER COAT PAINT FINISH.
  3. OVEN CURED FOR TWO HOURS.
  4. INTERIOR DEADFRONT DOOR COLOR: WHITE.
  5. EXTERIOR COLOR SHALL BE ANSI 61 GRAY.

GENERAL NOTES

- A. GENERAL NOTES APPLY TO ALL DRAWINGS UNLESS OTHERWISE SPECIFIED.
- B. ALL CONTACTS ARE SHOWN IN THEIR DE-ENERGIZED STATE.
- C. WIRE IDENTIFICATION NUMBERS CORRESPOND WITH TERMINAL BLOCK NUMBERS.
- D. WHEN WIRES CROSS ON A DRAWING, THERE IS NO CONNECTION UNLESS INDICATED WITH A DOT.
- E. DEVICES SHOWN WITH DASHED LINES ARE LOCATED IN DIFFERENT PANEL OR FIELD LOCATION.
- F. CONTROL WIRING #14 AWG TYPE THHN 600 VOLT CLASS B STRANDED.
- G. PLC I/O WIRING #16 AWG TYPE THHN 600 VOLT CLASS B STRANDED.
- H. ANALOG WIRING #18 TWISTED SHIELD PAIR.
- I. WIRE MARKERS ARE MACHINE IMPRINTED, HEAT-SHRINKABLE, WHITE WITH BLACK TEXT.
- J. PLASTIC SHIELDING ON TRANSFORMERS.

MOTOR RVSS SECTION

PUMP CONTROL SECTION

PLC SECTION

- PANEL SIZING AND BUILD REQUIREMENTS:
- ENCLOSURE SHALL BE SIZED TO MEET SPECIFIC PROJECT REQUIREMENTS CONSIDERING PANEL PURPOSE AND SPACE CONSTRAINTS.
  - PANEL ENCLOSURE SHALL ADHERE TO THE FOLLOWING SPECIFIC DEPTH REQUIREMENTS:
    - PLC PANEL SHALL BE NO GRATER THAN 16-INCH DEEP, WITH PLC MOUNTED BETWEEN 42-INCHES AND 60-INCHES ABOVE FINISHED FLOOR.
    - OTHER CONTROL PANEL, NOT CONTAINING PLC'S, SHALL BE A MAXIMUM OF 18-INCHES DEEP WHEREVER POSSIBLE.
  - PANEL SHALL BE DESIGNED SUCH THAT THERE IS SUFFICIENT CLEARANCE TO ALLOW AIR FLOW FOR COOLING, HEATING, AND CONDENSATE PREVENTION, WITHIN THE MAXIMUM DEPTH REQUIREMENT.
  - PANELS SHALL BE SIZED SUCH THAT ALL TERMINAL STRIPS AND COMPONENTS SUCH AS RELAYS AND ISOLATORS ARE MOUNTED ON THE ENCLOSURE BACK PANEL. MOUNTING OF WIRING TERMINAL STRIPS AND PANEL COMPONENTS ON SIDE WALLS IS NOT ALLOWED.
